2	Daniel S. Kirschen and Goran Strbac	Power System Economics	John Wiley & Sons	2004
3	Hadi Saadat	Power System Analysis	Second Edition, McGraw Hill Publishers, Scholarly Transaction Papers	2002

Course Objectives

- To understand the Total Quality Management concept and principles and the various tools available to achieve Total Quality Management.
- To understand the statistical approach for quality control.
- To create an awareness about the ISO and QS certification process and its need for the industries.
- To study the fundamentals of quality controls.
- To study the concepts of total quality management.
- To study the concepts of total education

Course Outcomes

At the end of this course, students will demonstrate the ability to

1. Understand the principles and basic concepts.
2. Understand the fundamentals of quality controls.
3. Explain the concepts of total quality management.
4. Explain the concepts of total education
5. Diagnose problems in the quality improvement process, SPC etc.
6. Diagnose problems in the production planning, control and decision making.

UNIT I INTRODUCTION**9**

Definition of Quality, Dimensions of Quality, Quality Planning, Quality costs – Analysis Techniques for Quality Costs, Basic concepts of Total Quality Management (TQM), Historical Review, Principles of TQM, Leadership – Concepts, Role of Senior Management, Quality Council, Quality Statements, Strategic Planning, Deming Philosophy, Barriers to TQM Implementation.

UNIT II TQM PRINCIPLES**9**

Customer satisfaction – Customer Perception of Quality, Customer Complaints, Service Quality, Customer Retention, Employee Involvement – Motivation, Empowerment, Teams, Recognition and Reward, Performance Appraisal, Benefits, Continuous Process Improvement – Juran Trilogy, PDCA Cycle, 5S Kaizen, Supplier Partnership – Partnering, sourcing, Supplier Selection, Supplier Rating, Relationship Development, Performance Measures – Basic Concepts, Strategy and Performance Measures.

UNIT III STATISTICAL PROCESS CONTROL**9**

The seven QC tools, Statistical Fundamentals – Measures of central Tendency and Dispersion, Population and Sample, Normal Curve, Control Charts for variables and attributes, Process capability, Concept of six sigma, New seven Management tools.

UNIT IV TQM TOOLS**9**

Benchmarking – Reasons to Benchmark, Benchmarking Process, Quality Function Deployment (QFD) – House of Quality, QFD Process, Benefits, Taguchi Quality Loss Function, Total Productive Maintenance – Concept, Improvement Needs, FMEA – Stages of FMEA.

UNIT V QUALITY SYSTEMS**9**

Need for ISO 9000 and Other Quality Systems, ISO 9000:2000 Quality System – Elements, Implementation of Quality System, Documentation, Quality Auditing, QS 9000, ISO 14000 – Concept, Requirements and Benefits.

WEBSITE

www.management.about.com

Course Objectives

- To study about the concept of intellectual property laws.
- To study about the trade marks and copy rights.
- To study trade marks and its importance
- To get the knowledge of principles of copyrights and the legal process
- To acquire the knowledge of Trade secrets and its security
- To gain various practical case studies of patent programme

Course Outcomes

At the end of the course the student will be able to

- understand the concepts of IPR.
- understand need of trade marks and its importance
- understand principles of copyrights and the legal process
- understand trade secrets and its security
- analysis various practical case studies of patent programmes
- handling higher level management legality in patent and trading

UNIT I INTRODUCTION**9**

Introduction to Intellectual Property Law – The Evolutionary Past - The IPR Tool Kit Para - Legal Tasks in Intellectual Property Law – Ethical obligations in Para Legal Tasks in Intellectual Property Law - Introduction to Cyber Law – Innovations and Inventions Trade related Intellectual Property Right.

UNIT II TRADE MARK**9**

Introduction to Trade mark – Trade mark Registration Process – Post registration Procedures – Trade mark maintenance - Transfer of Rights - Inter partes Proceeding – Infringement - Dilution Ownership of Trade mark – Likelihood of confusion - Trademarks claims – Trademarks Litigations – International Trade mark Law.

UNIT III COPY RIGHTS**9**

Introduction to Copyrights – Principles of Copyright Principles -The subjects Matter of Copy right – The Rights Afforded by Copyright Law – Copy right Ownership, Transfer and duration – Right to prepare Derivative works – Rights of Distribution – Rights of Perform the work Publicity Copyright Formalities and Registrations - Limitations - Copyright disputes and International Copyright Law – Semiconductor Chip Protection Act.

UNIT IV TRADE SECRET**9**

Introduction to Trade Secret – Maintaining Trade Secret – Physical Security – Employee

Limitation - Employee confidentiality agreement - Trade Secret Law - Unfair Competition – Trade Secret Litigation – Breach of Contract – Applying State Law.

UNIT V CASE STUDIES

9

Case Studies on – Patents (Basumati rice, turmeric, Neem, etc.) – Copyright and related rights – Trade Marks – Industrial design and Integrated circuits – Geographic indications – Protection against unfair competition.

WEBSITES

1. www.iitk.ac.in/infocell/announce/electric_power
2. powerquality.eaton.com/india/?cx=203

Course Objectives

- To study the production of voltages sags, over voltages and harmonics and methods of control.
- To study various methods of power quality monitoring.
- To understand the concept of power and power factor in single phase and three phase systems supplying non linear loads
- To understand the conventional compensation techniques used for power factor correction and load voltage regulation.
- To understand the active compensation techniques used for power factor correction.
- To understand the active compensation techniques used for load voltage regulation.

Course Outcomes

- At the end of the course the student will be able to
- 1.Evaluate the characteristics of ac transmission
 - 2.Reproduce the effect of shunt and series reactive compensation.
 - 3.Justify the working principles of FACTS devices and their operating characteristics.
 - 4.Reproduce the basic concepts of power quality.
 - 5.Rewrite the concept of Harmonics
 - 6.Reproduce and justify the working principles of devices to improve power quality.

UNIT I INTRODUCTION TO POWER QUALITY**9**

Terms and definitions: Overloading, under voltage, sustained interruption; sags and swells; waveform distortion, Total Harmonic Distortion (THD), Computer Business Equipment Manufacturers Associations (CBEMA) curve.

UNIT II VOLTAGE SAGS AND INTERRUPTIONS**9**

Sources of sags and interruptions, estimating voltage sag performance, motor starting sags, estimating the sag severity, mitigation of voltage sags, active series compensators, static transfer switches and fast transfer switches.

UNIT III OVER VOLTAGES**9**

Sources of over voltages: Capacitor switching, lightning, ferro resonance; mitigation of voltage swells: Surge arresters, low pass filters, power conditioners – Lightning protection, shielding, line arresters, protection of transformers and cables, computer analysis tools for transients, PSCAD and EMTP.

UNIT IV HARMONICS**9**

Harmonic distortion: Voltage and current distortion, harmonic indices, harmonic sources from commercial and industrial loads, locating harmonic sources; power system response characteristics, resonance, harmonic distortion evaluation, devices for controlling harmonic distortion, passive filters, active filters, IEEE and IEC standards.

UNIT V POWER QUALITY MONITORING**9**

Monitoring considerations: Power line disturbance analyzer, power quality measurement equipment, harmonic / spectrum analyzer, flicker meters, disturbance analyzer, applications of expert system for power quality monitoring.

TEXT BOOKS

S. No.	Author(s) Name	Title of the Book	Publisher	Year of Publication
1	Roger C Dugan, Mark, F., McGranaghan, Surya Santoso, Wayne Beaty, H	Electrical Power Systems Quality	McGraw Hill, New York	2003
2	C. Sankaran	Power Quality	CRC Press, Florida	2002

Course Objectives

- The course is designed to make the student acquire an adequate knowledge of the physiological systems of the human body and relate them to the parameters that have clinical importance
- To study about instruments for physiological measurements
- To study about devices of non-electrical devices.
- To study about modern methods of imaging techniques.
- To study about nervous system
- To study about medical assistance / techniques and therapeutic equipment.

Course Outcomes

At the end of the course the student will be to

- Acquaintance of the physiology of the heart, lung, blood circulation and circulation respiration. Methods of different transducers used.
- Understand the student to the various sensing and measurement devices of electrical origin.
- Analysis the latest ideas on devices of non-electrical devices.
- Analysis the important and modern methods of imaging techniques.
- Analysis latest knowledge of medical assistance / techniques and therapeutic equipment.
- Analysis the real time application of it

UNIT I PHYSIOLOGY AND TRANSDUCERS**9**

Cell and its structure – Action and resting potential – Potential propagation of action potential – Sodium pump – Nervous system – CNS – PNS – Nerve cell – Synapse – Cardio pulmonary system – Physiology of heart and lungs – Circulation and respiration – Transducers – Different types – Piezo electric, ultrasonic, resistive, capacitive and inductive transducers – Selection criteria.

UNIT II ELECTRO – PHYSIOLOGICAL MEASUREMENTS**9**

Basic components of a biomedical system – Electrodes – Micro, needle and surface electrodes – Amplifiers – differential, chopper, Isolation and Pre-amplifiers. ECG – EEG – EMG – ERG – Lead systems and recording methods – Typical waveforms.

UNIT III NON-ELECTRICAL PARAMETER MEASUREMENTS**9**

Measurement of blood pressure – Cardiac output – Cardiac rate – Heart sound – Respiratory rate Gas volume – Flow rate of CO₂, O₂ in exhaust air – pH of blood, ESR and GSR measurements Plethysmography.

UNIT IV MEDICAL IMAGING AND PATIENT MONITORING SYSTEM**9**

X-ray machine – Radiographic and fluoroscopic techniques – Computer Tomography – MRI – Ultrasonography – Endoscopy – Thermography – Different types of biotelemetry systems and patient monitoring – Electrical safety.

UNIT V ASSISTING AND THERAPEUTIC EQUIPMENT**9**

Pacemakers – Defibrillators – Ventilators – Nerve and muscle stimulators – Diathermy – Heart- Lung machine – Audio meters – Dializers.

WEBSITES

1. www.biopac.com
2. www.britannica.com/EBchecked/topic/674616/transducer

Course Objectives

- To study and gain knowledge about various sensors.
- To study and gain knowledge about controllers.
- To study the concept of sensors,
- To study the concept of actuators
- To study the various tuning controllers
- To study the application of SCADA.

Course Outcomes (COs)

At the end of the course the student will be able to

1. Understand the concept of sensors,
2. Understand the concept of actuators
3. Analyse the various tuning controllers
4. Analyse the various advanced control techniques used in industrial automation.
5. Understand the application of SCADA.
6. Analyse the SCADA usage in Industries.

UNIT I SENSORS, ACTUATORS**9**

Sensors, Actuators and Signal conditioning
Sensors: Displacement sensors, Force sensors, Ultrasonic sensors, Temperature sensors, Pressure sensors etc
Actuators: Dc motors, Servo motors, Stepper motors, Piezo electric actuators, Pneumatic actuators etc.
Signal Conditioning: Filtering, Amplifying, Isolation, ADC, DAC, Sensor protection circuits, Signal transmission and noise suppression, Estimation of errors and calibration.

UNIT II CONTROLLER TUNING**9**

PI controller, PD controller, PID controller and tuning methods: Ziegler-Nichols tuning method, Cohen coon tuning method, Implementation of PID controllers (digital and analog).

UNIT III AUTOMATION**9**

PLC (Programmable logic controllers): Overview, operation and architecture, PLC programming, Application examples. DCS (Distributed control systems): Overview, Advantages, Functional requirements of Distributed control systems, Communication for distributed control

UNIT IV APPLICATIONS**9**

Application examples SCADA (supervisory control and data acquisition): Introduction to SCADA, SCADA system components, architecture and communication, SCADA applications.

UNIT V ADVANCED CONTROL TECHNIQUES**9**

Feed forward control, Ratio control, Cascade control, Adaptive control, Duplex or split range control, Override control, internal mode control.

1	Muhammad Abdelati	Modern Automation Systems	University Science Press	2009
2	Ogata	Modern Control Engineering	5 th edition, , Prentice Hall of India	2010

Course Objectives

- To study the structure and behaviour of processors, memories and input and output units and to study their interactions.
- To get basic knowledge on geometric modeling
- To study the graphic transformation needs
- To study about the basics of parametric design and object representation
- To get basic knowledge in product design and development.
- To study about 3D design introduction

Course Outcomes

At the end of the course the student will be able to

- draw electrical drawings using CAD.
- Acquire basic knowledge on geometric modeling
- Acquire knowledge on graphic transformation needs
- Gaining CAD software application in engineering
- Gaining basics of parametric design and object representation
- Understand the real time application of it

UNIT I INTRODUCTION

9

Conventional design methodology overview – Computer aided design aspects – Need for CAD – Nature of design problems- Analysis and synthesis approaches-advantages.

UNIT II FINITE ELEMENT ANALYSIS

9

Mathematical formulation – Discretisation – Shape functions – Stiffness matrix – Solution techniques – Post processing.

UNIT III CAD PACKAGES

9

Recent developments – Preprocessing – Modeling - Meshing – Boundary conditions -Material characteristics – Problem formulation – Solution – Post processing.

UNIT IV CAD SOFTWARE

9

Program files – Installation – Screen menu structure_ Fixing the size of a drawing – Set up option- On line help- Text fonts, Shapes – Blocks – Copy – Array- Erasing facilities -Editing – Fill – Zoom pan – Hatching – Isoplane – Elevation – View point – Dimension techniques – Introduction to 3D drawing.

UNIT V DESIGN EXAMPLES

9

Design of actuator – Solenoid -Transformer - Induction motor – Synchronous machines - Switched reluctance motor.

TEXT BOOKS

S. No.	Author(s) Name	Title of the Book	Publisher	Year of Publication
1	P.P. Silvester and Ferrari	Finite Element for Electrical Engineers	Cambridge University Press, 3 rd edition	2012
2	D.A. Lowther and P.P. Silvester	Computer Aided Design in Magnetics	Springer; Softcover reprint of the original 1st ed. 1986 edition	2011

REFERENCES

S. No.	Author(s) Name	Title of the Book	Publisher	Year of Publication
1	Sham Tickoo	AutoCAD 2002 with applications	Tata McGraw Hill Publishing Company limited, New Delhi	2001

Course Objectives

- To learn about the controlling of excitation system and speed governing system.
- To impart knowledge on dynamic modeling of a synchronous machine in detail
- To describe the modeling of excitation and speed governing system in detail.
- To understand the fundamental concepts of stability of dynamic systems and its classification.
- To understand and enhance small signal stability problem of power systems. Model different power system components for the study of stability
- To Study the methods to improve stability.

Course Outcomes

- At the end of this course, students will demonstrate the ability to
1. Understand the problem of power system stability and its impact on the system.
 2. Analyse linear dynamical systems and use of numerical integration methods.
 3. Model different power system components for the study of stability.
- Understand the methods to improve stability.
4. Understand real time difficulties in machine analysis
 5. To get known about modeling system and its control
 6. To understand the transient and dynamic stability of power systems.

UNIT I INTRODUCTION**9**

Concept and importance of stability in power system operation and design- distinction between transient and dynamic stability- complexity of stability problem in large system- Need for reduced models- stability of interconnected systems.

UNIT II MACHINE MODELING**9**

Park's transformation- flux linkage equations, current space model- per unit conversion- normalizing the equations- equivalent circuit- flux linkage state space model- Simplified models (one axis and constant flux linkage)- steady state equations and phasor diagrams.

UNIT III MACHINE CONTROLLERS**9**

Exciter and voltage regulators- function of excitation systems, types of excitation systems- typical excitation system configuration-block diagram and state space representation of IEEE type 1 excitation system- saturation function- stabilizing circuit- Function of speed governing systems-block diagram and state space representation of IEEE mechanical hydraulic governor and electrical hydraulic governors for hydro turbines and steam turbines.

UNIT IV TRANSIENT STABILITY**9**

State equation for multi machine simulation with one axis model- transient stability simulation of multi machine power system with one axis machine model including excitation system and speed governing system using R-K method of fourth order (Gill's technique)- power system stabilizer.

UNIT V DYNAMIC STABILITY**9**

System response to small disturbances- Linear model of the unregulated synchronous machine and its modes of oscillation- regulated synchronous machine- distribution of power impact- linearization of the load equation for the one machine problem – Simplified linear model- effect

of excitation on dynamic stability- approximate system representation- supplementary stabilizing signals- dynamic performance measure- small signal performance measures.

1	Pai. M.A and Sauer.W	Power System Dynamics and Stability	Pearson Education Asia, India	2002

Course Objectives

- To introduce the technology and concepts of VLSI.
- To introduce MOS theory / Manufacturing Technology.
- To introduce FPGA architecture / principles / system design
- To study inverter / counter logic / stick / machine diagram
- To introduce sequential circuits / address / memory / arithmetic circuits
- To get familiarized with VHDL programming behavioral/Structural / concurrent / process.

Course Outcomes

At the end of the course the Outcomes will be able

- Fabrication of MOS Transistor
- Design of combinational circuits
- Program using VLSI for MOS Transistor
- Program using VLSI for NMOS and CMOS Inverter
- Program using VLSI for Subsystem design

UNIT I BASIC MOS TRANSISTOR**9**

Enhancement mode and Depletion mode – Fabrication (nMOS, pMOS, CMOS, BiCMOS) Technology – nMOS transistor current equation – second order effects – MOS Transistor Model.

UNIT II NMOS AND CMOS INVERTER**9**

nMOS and CMOS inverter – Determination of pull up / pull down ratios – stick diagram – λ based rules – super buffers – BiCMOS and steering logic.

UNIT III SUB SYSTEM DESIGN AND LAYOUT**9**

Structured design of combinational circuits – Dynamic CMOS and clocking – Tally circuits – (NAND–NAND, NOR–NOR and AOI logic) – EXOR structure – Multiplexer structures – Barrel shifter.

UNIT IV DESIGN OF COMBINATIONAL ELEMENTS AND REGULAR ARRAY LOGIC**9**

nMOS PLA – Programmable Logic Devices – Finite State Machine – PLA – Introduction to FPGA.

UNIT V VHDL PROGRAMMING**9**

RTL Design – combinational logic – Types – Operators – Packages – Sequential circuit – Sub programs – Test benches. (Examples: address, counters, flip–flops, FSM, Multiplexers / Demultiplexers).

1. esd.cs.ucr.edu
2. vhdlguru.blogspot.com/

Course Objectives

- To learn generation of electrical power from different types of power plants like thermal nuclear and hydro power stations.
- To understand the concepts of generation of electrical power using non conventional energy resources.
- To learn the economics connected with power generation.
- To understand the measurements of various parameter in power plant and their control.
- To study about Powerplant instrumentation
- To acquire knowledge of renewable power system

Course Outcomes

- At the end of the course the student will gain knowledge about economics of power generation, layout and working of thermal, nuclear and hydropower plants.
- The student also gain knowledge about distributed generation, boiler turbine monitoring system.
- To get knowledge in Powerplant instrumentation
- Students acquire knowledge of renewable power system
- Acquire knowledge about economics in power generation
- Knowledge in Load demand and factor

UNIT I ECONOMICS OF GENERATION**9**

Load and load duration curve – Load, demand and diversity factors – Plant capacity and plant use factors – choice of type of generation – choice of size and number of unit – cost of energy generated – Tariffs.

UNIT II THERMAL, NUCLEAR AND HYDRO POWER PLANTS**9**

Location, Layout and working of steam, diesel and gas power plants - Principles of nuclear power generation, Types of nuclear power plants and their comparison, Layout and working of nuclear power plants, Advantages and disadvantages of nuclear energy- Layout and working, Types of hydroelectric power plants, Advantages of hydro generation, Environmental issues.

UNIT III POWERPLANT INSTRUMENTATION**9**

Importance of instrumentation in power plants, UP & I diagram of boiler- Measurements of non electrical parameters, flow of feed water, air, steam, radiation detector, smoke density measurement-analyzers, flue gas oxygen analyzer, chromatography, PH meter, pollution monitoring instruments.

UNIT IV BOILER, TURBINE-MONITORING AND CONTROL**9**

Combustion control - furnace draft control-drum level control- de-aerator control- boiler interlocks-speed, vibration, temperature monitoring control of turbine lubrication and cooling system of turbine.

UNITV DISTRIBUTED GENERATION AND NON CONVENTIONAL PLANTS 9

Introduction to the concept of distributed generation –basics on distributed generation Technologies- Effect on system operation. Basic concepts, Principle of working and layout of MHD, Solar, Wind, Tidal, Biomass and Geothermal Power Generation Systems.

TOTAL: 45 HOURS

Course Objectives

- To study the power semiconductor switches.
- To study about the characteristics and applications of Power diode, power BJT, Thyristor, GTO, IGBT, MOSFET.
- To study the real time application of it.
- To study the basics of thyristor technologies
- To study the new semiconductor material of power devices
- To study the safe operating area of the power devices

Course Outcomes

At the end of the course the student will be able to

- Understand the concepts of modern semiconductor devices
- Understand the different characteristics of conductor devices
- Analysis the real time application of it.
- To learn deep knowledge of thyristor technologies
- To study about real time applications of inverters and rectifiers
- To learn about protection of device circuits

UNIT I OVERVIEW OF POWER SEMICONDUCTOR SWITCHES 9

Introduction - Diodes, Thyristors, BJTs, JFETs, MOSFETs, GTOs, IGBTs, Comparison of these as switching devices, Drive and Protection circuit for these devices – New Semiconductor materials for Power devices.

UNIT II POWER DIODE AND POWER BJT 9

Basic structure and I-V & Switching characteristics of Power diode, Schottky diode - Structure and switching characteristics of Power BJT - Breakdown voltage considerations - Safe operating area - Drive circuits for BJT – Snubber design for Power diode.

UNIT III THYRISTORS AND GTOs 9

Basic structures - I-V characteristics - Physics of device operation - Switching characteristics of Thyristors and GTOs – Drive circuits - Snubber circuits for Thyristors and GTOs - Over current protection of GTO.

UNIT IV IGBT AND POWER JFET & MOSFETS 9

Basic structures - I-V characteristics, physics of device operation - Switching characteristics – Safe operating area of IGBT and Power JFET & MOSFET - Drive circuits and Protection.

UNIT V APPLICATIONS 9

Single phase rectifiers and Three phase rectifiers using Diodes and Thyristors, Choppers, Inverters using GTOs-IGBTs and power JFETs & MOSFETs.

Course Objectives

- To have knowledge on optimization techniques applied to power systems
- To understand the different evolutionary computation techniques
- To study about optimal power flow problems
- To study about evolution computation techniques
- To study about the basics of MOOP
- To study about the solution of OPF

Course Outcomes

- At the end of the course the students will be able to understand the various optimization techniques.
- To get knowledge in optimization problems
- Acquire knowledge about power flow problem and solutions
- Experience in various algorithm and programming
- Gaining knowledge in velocity updation principle
- Gain knowledge about Economic emission dispatch

UNIT I OPTIMIZATION FUNDAMENTALS**9**

Definition- Classification of optimization problems- Unconstrained and Constrained optimization-Optimality conditions- Classical Optimization techniques.

UNIT II OPTIMAL POWER SYSTEM OPERATION**9**

Economic Dispatch problem-Unit commitment-Optimal Power Flow Problem- Solution Using Classical methods

UNIT III EVOLUTIONARY COMPUTATION TECHNIQUES**9**

Evolution in nature-Fundamentals of Evolutionary algorithms-Working Principles of Genetic Algorithm- Evolutionary Strategy and Evolutionary Programming-Genetic Operators-Selection, Crossover and Mutation-Issues in GA implementation-GA solution of economic dispatch and unit commitment.

UNIT IV PARTICLE SWARM OPTIMIZATION**9**

Fundamental principle-Velocity Updating-Advanced operators-Hybrid approaches Implementation issues-Solution of OPF problem

UNIT V MULTI Course Objectives OPTIMIZATION**9**

Concept of pareto optimality-Conventional approaches for MOOP-Multi Course Objectives GA-Fitness assignment-Sharing function-Economic Emission dispatch using MOGA

2	Kwang Y.Lee,Mohammed A.El Sharkawi	Modern heuristic optimization techniques	John Wiley and Sons	2008

Course Objectives

- To create an awareness on Operating Systems.
- To introduce devices and buses used for embedded networking.
- To study about task management
- To study about memory management
- To study about integration of hardware and software
- To know about application procedures of RTOS

Course Outcomes

At the end of the course the students will be able to

- Understand overview of embedded systems architecture
- Acquire knowledge on embedded system, its hardware and software.
- Gain knowledge on overview of Operating system
- Discuss about task Management
- Gain knowledge about semaphore management and message passing.
- Gain knowledge about memory management.

UNIT I INTRODUCTION TO EMBEDDED SYSTEM**9**

Introduction - Embedded systems description, definition, design considerations & requirements - Overview of Embedded system Architecture (CISC and RISC) -Categories of Embedded Systems - Embedded processor selection & tradeoffs - Embedded design life cycle - Product specifications - Hardware/software partitioning - Iterations and implementation - Hardware software integration - Product testing techniques – ARM 7.

UNIT II OPERATING SYSTEM OVERVIEW**9**

Introduction –Advantage and Disadvantage of Using RTOS – Multitasking – Tasks - Real Time Kernels – Scheduler - Non-pre-emptive Kernels - Pre-emptive Kernels – Re-entrancy- Re-entrant Functions – Round Robin Scheduling - Task Priorities - Static Priorities – Mutual Exclusion – Deadlock – Intertask Communication – Message Mailboxes – Message Queues

Interrupts - Task Management – Memory Management -Time Management – Clock Ticks.

UNIT III TASK MANAGEMENT**9**

Introduction - μ C/OS-II Features - Goals of μ C/OS-II - Hardware and Software Architecture – Kernel Structures: Tasks –Task States – Task Scheduling – Idle Task – Statistics Task – Interrupts Under μ C/OS-II – Clock Tick - μ C/OS-II Initialisation. Task Management: Creating Tasks – Task Stacks – Stack Checking – Task's Priority – Suspending Task – Resuming Task. Time Management: Delaying a Task – Resuming a Delayed Task – System Time. Event Control Blocks- Placing a Task in the ECB Wait List – Removing a Task from an ECB wait List.

UNIT IV SEMAPHORE MANAGEMENT**9**

Semaphore Management Overview – Signaling a Semaphore. Message Mailbox Management: Creating a Mailbox – Deleting Mailbox – Waiting for a Message box – Sending Message to a

Mailbox- Status of Mailbox Message Queue Management: Creating Message Queue – Deleting a Message Queue – Waiting for a Message at a Queue – Sending Message to a Queue – Flushing a Queue.

UNIT V MEMORY MANAGEMENT

9

Memory Control Blocks – Creating Partition- Obtaining a Memory Block – Returning a Memory Block .Getting Started with μ C/OS-II – Installing μ C/OS-II – Porting μ C/OS-II: Development Tools – Directories and Files – Testing a Port - IAR Workbench with μ C/OS-II -
 μ C/OS-II Porting on a 8051 CPU – Implementation of Multitasking - Implementation of Scheduling and Rescheduling – Analyze the Multichannel ADC with help of μ C/OS-II.

15BEEE8E17 ADVANCES IN SOFT COMPUTING L T P C 3 0 0 3

Course Objectives

- To study basics of Fuzzy logic and modeling.
- To study various Genetic algorithms
- To educate how to use Soft Computing to solve real-world problems
- To study about the perception concept in design
- To study basics of various Neural networks.
- To expose the students to Neuro fuzzy modeling and its applications.

Course Outcomes

- At the end of the course the students will gain knowledge in various soft computing techniques and also analyse the genetic algorithm approach.
- The students will know the applications of various soft computing techniques.
- Gaining knowledge about use of Soft Computing to solve real-world problems
- Acquire knowledge about the perception concept in design
- Experience in fuzzy models preparation
- Experience about automobile fuel efficiency improvements

UNIT I FUZZY LOGIC

9

Introduction to Neuro – Fuzzy and soft Computing – Fuzzy Sets – Basic Definition and Terminology – Set-theoretic operations – Member Function Formulation and parameterization – Fuzzy Rules and Fuzzy Reasoning - Extension principle and Fuzzy Relations

Fuzzy If-Then Rules – Fuzzy Reasoning – Fuzzy Inference Systems – Mamdani Fuzzy Models- Sugeno Fuzzy Models – Tsukamoto Fuzzy Models – Input Space Partitioning and Fuzzy Modeling.

UNIT II GENETIC ALGORITHM

9

Derivative-based Optimization – Descent Methods – The Method of steepest Descent – Classical Newton's Method – Step Size Determination – Derivative-free Optimization – Genetic Algorithms – Simulated Annealing – Random Search – Downhill Simplex Search.

UNIT III NEURAL NETWORKS

9

Introduction -Supervised Learning Neural Networks – Perceptrons - Adaline – Back propagation Multilayer perceptrons – Radial Basis Function Networks – Unsupervised Learning and Other Neural Networks – Competitive Learning Networks – Kohonen Self – Organizing Networks – Learning Vector Quantization – Hebbian Learning.

UNIT IV NEUROFUZZY MODELING

9

Adaptive Neuro-Fuzzy Inference Systems – Architecture – Hybrid Learning Algorithm – learning Methods that Cross-fertilize ANFIS and RBFN – Coactive Neuro-Fuzzy Modeling –

Framework – Neuron Functions for Adaptive Networks – Neuro Fuzzy Spectrum.

UNIT V APPLICATIONS

9

Printed Character Recognition – Inverse Kinematics Problems – Automobile Fuel

Efficiency prediction – Soft Computing for Color Recipe Prediction.

TEXT BOOKS

S. No.	Author(s) Name	Title of the Book	Publisher	Year of Publication
1	J.S.R.Jang, C.T.Sun and E.Mizutani	Neuro-Fuzzy and Soft Computing	PHI, Pearson Education	2004
2	Davis E.Goldberg	Genetic Algorithms:Search, Optimization and Machine Learning	Addison Wesley, N.Y	2004

REFERENCES

S. No.	Author(s) Name	Title of the Book	Publisher	Year of Publication
1	S.Rajasekaran and G.A.V.Pai	Neural Networks, Fuzzy Logic and Genetic Algorithms	PHI, Pearson Education	2003

Course Objectives

- To introduce design concept and VHDL.
- To study implementation techniques using various PLDs.
- To study the design of various combinational, synchronous and asynchronous circuits.
 - To study about design combinational and sequential circuits.
- To study about CAD tools
- To expose the students to design and testing.

Course Outcomes

- At the end of the course the student will be able to understand the VHDL principles.
- Students will be able to design combinational and sequential circuits.
- Understand the implementation techniques using various PLDs.
- To analysis the design of various combinational, synchronous and asynchronous circuits.
- To analysis the students to design and testing.
- Analysis the real time application of it

UNIT I INTRODUCTION TO DESIGN**9**

Design concepts – Design Process, design of Digital hardware, Variables and functions, truth tables, Boolean Algebra – Synthesis using Gates – Introduction to CAD Tools – VHDL.

UNIT II IMPLEMENTATION TECHNOLOGY**9**

MOS Logic gates – PLDs – practical aspects, implementation details for SPLDs, CPLDs and FPGAs, optimized implementation of logic functions - multilevel synthesis, analysis of multilevel circuits – minimization techniques.

UNIT III DESIGN OF COMBINATIONAL CIRCUITS**9**

Number representation – signed, unsigned, combinational circuits – adder, multiplier, multiplexer, decoder and encoder, code converters - using signal assignment statements - concurrent and sequential – process and case statements, operators.

UNIT IV DESIGN OF SEQUENTIAL CIRCUITS**9**

Latch – Flip-flops, registers and counters, finite state machines using CAD tools. Basic design steps with examples - Design of simple processor, vending machine controller.

UNIT V DIGITAL SYSTEM DESIGN**9**

Building block circuits – Design examples – clock synchronization, testing of logic circuits – fault model, test set – path sensitizing, testing of sequential circuits.

TOTAL: 45 HOURS

TEXT BOOKS

S. No.	Author(s) Name	Title of the Book	Publisher	Year of Publication
1	Stephen Brown, Zvonko Vranesic	Fundamentals of digital logic design with VHDL	Tata McGraw-Hill Publishing company limited	2009
2	Volnei.A.Pedroni	Circuit design with VHDL	PHI Learning Private Limited	2009

REFERENCES

S. No.	Author(s) Name	Title of the Book	Publisher	Year of Publication
1	Douglas L. Perry	VHDL Programming by example	Tata McGraw-Hill Publishing company limited	2009
2	J.Bhasker	A VHDL primer	Prentice-Hall India Learning Private Limited	2003

Course Objectives

- To introduce concepts of Labview software.
- To study graphical programming, interfacing instruments and its protocols.
- To introduce data acquisition methods.
- To introduce signal processing and network automation tools.
- To study about data cards in instrumentation
- To study the interface bus and signals

Course Outcomes

- At the end of the course the student will be able understand the concepts of virtual instrumentation.
- Knowledge about VI programming
- Gain experience in Standards and protocols of instrumentation
- Real time automation activity in instrumentation
- DSP based instrumentation control and its applications
- Gain Knowledge of automated control in instrumenation

UNIT I REVIEW OF DIGITAL INSTRUMENTATION**9**

Representation of analog signals in the digital domain – Review of quantization in amplitude and time axes, sample and hold, sampling theorem, ADC and DAC.

UNIT II GRAPHICAL PROGRAMMING AND LABVIEW**9**

Concepts of graphical programming – LABVIEW software – Concept of VIs and sub VI - Display types – Digital – Analog – Chart and Graphs. Loops - structures - Arrays – Clusters. Local and global variables – String and file I/O. Timers and dialog controls.

UNIT III INSTRUMENT INTERFACES AND PROTOCOLS**9**

RS232, RS 422, RS 485 and USB standards - IEEE 488 standard – Introduction to bus protocols of MOD bus and CAN bus. Electronic standards for signals – noise and EMI effects. Signal conditioning chassis and extension modules. Image acquisition cards.

UNIT IV PC BASED DATA ACQUISITION**9**

Concept of PC based data acquisition – Typical on board DAQ card – Resolution and sampling frequency - analog inputs and outputs – Single-ended and differential inputs –DAQ cards terminal boxes - Use of timer-counter and analog outputs on the universal DAQ card.

UNIT V SIGNAL PROCESSING AND NETWORK BASED AUTOMATION**9**

Mathematical tools for statistical calculation – Signal processing tools- Windowing and filtering tools –Control system tools – PID controller – CRO – function generator –illustration and case study – Web publishing tool –configuring VI server.

LIST OF OPEN ELECTIVE

LIST OF OPEN ELECTIVES OFFERED BY OTHER

DEPARTMENTS DEPARTMENT OF SCIENCE AND HUMANITIES

15BESHOE01

INDUSTRIAL MATHEMATICS – I

L T P C 3 0 0 3

Course Objectives

- To develop analytical skills for solving engineering problems
- To teach the students the basic concepts of LPP,
- To learn the techniques to solve transportation and Assignment problems
- To make the students to study about the Integer Programming and Network Analysis
- Analyse the results and propose recommendations to the decision-making processes in Management Engineering
- To learn the knowledge about application of it

Course Outcomes

- To define and formulate linear programming problems and appreciate their limitations.
- To solve linear programming problems using appropriate techniques and optimization solvers, interpret the results obtained and translate solutions into directives for action.
- To be able to build and solve Transportation Models, Assignment Models,
- To construct linear integer programming models and discuss the solution techniques.
- To formulate and solve problems as networks and graphs.
- To be able to solve problems in different environments and develop critical thinking

UNIT I LINEAR PROGRAMMING PROBLEM

9

Formulation of LPP - Graphical Method - Simplex Method - Artificial variable technique and two phase simplex method. Duality - Dual and simplex method - Dual Simplex Method .

UNIT II TRANSPORTATION PROBLEM

9

Transportation Model, finding initial basic feasible solutions, moving towards optimality, Degeneracy.

UNIT III ASSIGNMENT PROBLEM

9

Solution of an Assignment problem, Multiple Solution, Hungarian Algorithm, Maximization in Assignment Model, Impossible Assignment.

UNIT IV INTEGER PROGRAMMING

9

Integer Programming Problem – Gomory's fractional cut Method – Branch Bound Method

UNIT V NETWORK ANALYSIS

9

PERT & CPM- network diagram-probability of achieving completion date- crash time- cost analysis.

2. www.mit.edu
3. www.nptel.com

Course Objectives

- To kindle analytical skills for solving engineering problems
- To impart the knowledge about inventory models
- To learn replacement models and simulation models
- To provide techniques for effective methods to solve nonlinear programming and decision making.
- To analyse the results and propose recommendations to the decision-making processes in Management Engineering
- To learn the knowledge about application of it

Course Outcomes

The students will

- To be able to solve simple models in Inventory problems and Replacement problems.
- To understand different queuing situations and find the optimal solutions using models for different situations.
- Simulate different real life probabilistic situations using Monte Carlo simulation technique.
- To be able to understand the characteristics of different types of decision-making environments and the appropriate decision making approaches and tools to be used in each type.
- **Convert** and solve the practical situations into replacement mod
- To understand how to model and solve problems using non integer programming.

UNIT-1 INVENTORY MODELS 9

Economic order quantity models-techniques in inventory management-ABC analysis.

UNIT – II NON LINEAR PROGRAMMING 9

Khun-tucker conditions with non-negative constraints- Quadratic programming- Wolf's modified simplex method.

UNIT – III SIMULATION MODELS 9

Elements of simulation model -Monte Carlo technique – applications. Queuing model: problems involving $(M/M/1): (\infty/FIFO)$, $(M/M/c): (\infty/FIFO)$ Models.

UNIT –IV DECISION MODELS 9

Decision Analysis – Decision Making environment – Decisions under uncertainty – Decision under risk – Decision – Tree Analysis.

UNIT –V REPLACEMENT MODELS 9

Models based on models that gradually deteriorate with time-whose maintenance cost increase with time-Replacement of items that fail suddenly and completely.

WEBSITES

1. www.mathworld.Wolfram.com
2. www.mit.edu
3. www.nptel.com

Course Objectives

- To gain knowledge in measures of central tendency.
- To provide necessary basic concepts in probability and random processes for applications such as random signals, linear systems in communication engineering.
- To understand the basic concepts of probability, one and two dimensional random variables and to introduce some standard distributions applicable to engineering which can describe real life phenomenon.
- To understand the basic concepts of random processes which are widely used in IT fields.
- To understand the concept of correlation and spectral densities.
- To learn the knowledge about application of it

Course Outcomes

- Learners acquire skills in handling situations involving more than one random variable and functions of random variables.
- The students will have an exposure of various distribution functions, correlation and spectral densities.
- To understand the fundamental knowledge of the concepts of probability and have knowledge of standard distributions which can describe real life phenomenon.
- To understand the basic concepts of one and two dimensional random variables and apply in engineering applications.
- To apply the concept random processes in engineering disciplines.
- To understand and apply the concept of correlation and spectral densities.

UNIT I MEASURES OF CENTRAL TENDENCY AND PROBABILITY 9

Measures of central tendency – Mean, Median, Mode - Standard Deviation

Probability - Random variable - Axioms of probability - Conditional probability - Total probability – Baye's theorem.

UNIT II STANDARD DISTRIBUTIONS 9

Functions of a random variable - Binomial, Poisson, Uniform, Exponential, Gamma(one Parameter only) and Normal distributions - Moment generating functions, Characteristic function and their properties – **Chebyshev's inequality**.

UNIT III TWO DIMENSIONAL RANDOM VARIABLES 9

Joint distributions - Marginal and conditional distributions - Probability mass function - Probability density functions – Covariance - Correlation and regression

UNIT IV CLASSIFICATION OF RANDOM PROCESS 9

Definition and examples - first order, second order, strictly stationary, wide – sense stationary and Ergodic processes - Markov process - Binomial, Poisson and Normal processes - Sine wave process.

UNIT V CORRELATION AND SPECTRAL DENSITIES

9

Auto correlation - Cross correlation - Properties – Power spectral density – Cross spectral density - Properties – Wiener-Khintchine relation – Relationship between cross power spectrum and cross correlation function - Linear time invariant system - System transfer function –Linear systems with random inputs – Auto correlation and cross correlation functions of input and output.

WEBSITES

1. www.cut-theknot.org/probability.shtml
2. www.mathcentre.ac.uk
3. www.mathworld.Wolfram.com

Course Objectives

- To gain knowledge in measures of central tendency and probability.
- To introduce the concept of random variable and functions of random variables.
- To introduce the basic concepts of two dimensional random variables.
- To acquaint the knowledge of testing of hypothesis for small and large samples which plays an important role in real life problems
- To introduce the basic concepts of classifications of design of experiments
- To learn the knowledge about application of it

Course Outcomes

- The student gain the knowledge in measures of central tendency and probability
- Understand the fundamental knowledge of the concepts of probability and have knowledge of standard distributions which can describe real life phenomenon.
- Understand the basic concepts of two dimensional random variables and apply in engineering applications.
- Apply the concept of testing of hypothesis for small and large samples in real life problems.
- Apply the basic concepts of classifications of design of experiments and statistical quality control.
- Have the notion of sampling distributions and statistical techniques used in engineering and management problems.

UNIT I MEASURES OF CENTRAL TENDENCY AND PROBABILITY 12

Measures of central tendency – Mean, Median, Mode and Standard Deviation – SPSS Software Demonstration. Probability - Random variable - Axioms of probability - Conditional probability Total probability – Baye’s theorem - Probability mass function - Probability density function.

UNIT II STANDARD DISTRIBUTIONS 12

Functions of a random variable - Binomial, Poisson, Uniform, Exponential, Gamma, and Normal distributions - Moment generating functions, Characteristic function and their properties.

UNIT III TWO DIMENSIONAL RANDOM VARIABLES 12

Joint distributions - Marginal and conditional distributions – Covariance - Correlation and Regression - Transformation of random variables - Central limit theorem.

UNIT IV TESTING OF HYPOTHESIS 12

Sampling distributions – Testing of hypothesis for mean, variance, proportions and differences using Normal, t, Chi-square and F distributions - Tests for independence of attributes and Goodness of fit.

UNIT V DESIGN OF EXPERIMENTS 12

Analysis of variance – One way classification – CRD – Two way classification – RBD -

Latin square.

Note: Use of approved statistical tables permitted in the examination.

3. [www.mathworld. Wolfram.com](http://www.mathworld.Wolfram.com)

Course Objectives

- To understand the fundamental knowledge of probability theory.
- To introduce the concept of random variable and functions of random variables.
- To introduce the basic concepts of two dimensional random variables.
- To introduce the concepts of random processes and Markov chain
- To understand the different Queuing models and solve problems
- To learn the knowledge about application of it

Course Outcomes

- The student gain the knowledge in measures of central tendency and probability
- Understand the fundamental knowledge of the concepts of probability and have knowledge of standard distributions which can describe real life phenomenon.
- Understand the basic concepts of two dimensional random variables and apply in engineering applications.
- Understand the concepts of random process and markov chains
- They will be able to solve the Queuing models
- The students understand and characterize phenomena which evolve with respect to time in a probabilistic manner.

UNIT I PROBABILITY AND RANDOM VARIABLE**9**

Axioms of probability - Conditional probability - Total probability – Baye's theorem- Random variable - Probability mass function - Probability density function - Properties - Moments - Moment generating functions and their properties.

UNIT II STANDARD DISTRIBUTIONS**9**

Functions of a random variable - Binomial, Poisson, Geometric, Negative Binomial, Uniform, Exponential, Gamma, Weibull and Normal distributions and their properties.

UNIT III TWO DIMENSIONAL RANDOM VARIABLES**9**

Joint distributions - Marginal and conditional distributions – Covariance - Correlation and Regression - Transformation of random variables - Central limit theorem.

UNIT I RANDOM PROCESS AND MARKOV CHAINS**9**

Classification - Stationary process - Markov process - Poisson process - Birth and death process - Markov chains - Transition probabilities - Limiting distributions.

UNIT QUEUEING THEORY**9**

Markovian models - M/M/1, M/M/C, finite and infinite capacity - M/M/ ∞ queues - Finite source model - M/G/1 queue (steady state solutions only) - Pollaczek - Khintchine formula - Special cases.

WEBSITES

1. www.mathcentre.ac.uk
2. www.mathworld.Wolfram.com
3. www.mit.edu

Course Objectives

- Be able to understand basic knowledge of fuzzy sets and fuzzy logic
- Be able to apply basic knowledge of fuzzy operations.
- To know the basic definitions of fuzzy relations
- Be able to apply basic fuzzy inference and approximate reasoning
- To know the applications of fuzzy Technology.
- To learn the knowledge about application of it

COURSE OUTCOME:

- To gain the main subject of fuzzy sets.
- To understand the concept of fuzziness involved in various systems and fuzzy set theory.
- To gain the methods of fuzzy logic.
- To comprehend the concepts of fuzzy relations.
- To analyze the application of fuzzy logic control to real time systems.
- The Engineers will have an exposure on various topics such as fuzzy algebra, fuzzy theory and fuzzy technology.

UNIT I FUZZY SETS

9

Fuzzy Sets : Basics Classical sets vs Fuzzy Sets – Need for fuzzy sets – Definition and Mathematical representations – Level Sets – F u z z y functions - Zadeh's Extension Principle

UNIT II OPERATIONS ON FUZZY SETS

9

Operations on Fuzzy Sets Operations on $[0,1]$ – Fuzzy negation, triangular norms, tconorms, fuzzy implications, Aggregation Operations, Fuzzy Functional Equations

UNIT III FUZZY RELATIONS

9

Fuzzy Relations Fuzzy Binary and n-ary relations – composition of fuzzy relations – Fuzzy Equivalence Relations – Fuzzy Compatibility Relations – Fuzzy Relational Equations

UNIT IV FUZZY MEASURES

9

Possibility Theory Fuzzy Measures – Evidence Theory – Necessity and Belief Measures – Probability Measures vs Possibility Measures

UNIT V FUZZY INFERENCE

9

Approximate Reasoning Fuzzy Decision Making - Fuzzy Relational Inference – Compositional rule of Inference - Efficiency of Inference - Hierarchical

3. www.calvin.edu/~pribeiro/othrlnks/Fuzzy/fuzzysets.htm

Course Objectives

- To know the fundamentals of Tensors.
- To know the series solutions to differential equations.
- To introduce the concepts of special functions.
- To study about Calculus of variations and integral equations
- To learn the knowledge about application of it

Course Outcomes

- Students will demonstrate proficiency in mathematics and the mathematical concepts needed for a proper understanding of physics.
- Learn about special type of matrices that are relevant in physics and then learn about tensors.
- Get introduced to Special functions like Bessel, Legendre , Hermite and Laguerre functions and their recurrence relations
- Learn different ways of solving second order differential equations and familiarized with singular points and Frobenius method.
- Students will master in calculus of variations and linear integral equations.
- The students will have the knowledge on Mathematical Physics and that knowledge will be used by them in different engineering and technology applications.

UNIT I TENSORS**8**

Definition of tensor - rank, symmetric tensors, contraction, quotient rule - tensors with zero components, tensor equations, metric tensors and their determinants - pseudo tensors

UNIT II DIFFERENTIAL EQUATIONS-SERIES SOLUTIONS

Series Solution : Classification of singularities of an ordinary differential equation - Series solution-Method of Frobenius - indicial equation – example

UNIT III SPECIAL FUNCTIONS 8

Basic properties (Recurrence and Orthogonality relations, series expansion) of Bessel, Legendre , Hermite and Laguerre functions – Generating Function

UNIT IV CALCULUS OF VARIATIONS**9**

Concept of variation and its properties – Euler's equation – Functional dependant on first and higher order derivatives – Functional dependant on functions of several independent variables – Variational problems with moving boundaries – Isoperimetric Problems – Direct methods – Ritz and Kantorovich methods.

UNIT V LINEAR INTEGRAL EQUATIONS**12**

Introduction – conversion of a linear differential equation to an integral equations and vice versa

15BESHOE07

MATHEMATICAL PHYSICS

L T P C 3 0 0 3

– conversion of boundary value problem to integral equations using Green's function – solution of a integral equation – integral equations of the convolution type – Abel's integral equations – integro-differential equations – integral equations with separable kernels – solution of Fredholm equations with separable kernels.

TOTAL: 45 HOURS

REFERENCES

S. No.	Author(s) Name	Title of the Book	Publisher	Year of Publication
1	Dr. Grewal B.S.	Higher Engineering Mathematics	Khanna Publishers, New Delhi	2013

WEBSITES

1. www.mathcentre.ac.uk
2. [www.mathworld. Wolfram.com](http://www.mathworld.Wolfram.com)
3. www.nptel.ac.in

Course Objectives

- To introduce the concepts of special functions.
- To find the solutions to partial differential equations and their applications
- To study about mathematical physics and perturbation techniques
- To learn replacement models and simulation models
- To provide techniques for effective methods to solve nonlinear programming and decision making
- To learn the knowledge about application of it

Course Outcomes

- Students know the concepts of improper integrals, Beta and Gamma functions.
- The students acquire sound knowledge of techniques in solving PDE that model engineering problems.
- Identify the situations where singular perturbations are needed. They will be able to use various modifications of matched asymptotic expansions techniques to derive asymptotic solutions.
- To be able to understand the characteristics of different types of decision-making environments and the appropriate decision making approaches and tools to be used in each type.
- **Convert** and **solve** the practical situations into replacement models.
- To understand how to model and solve problems using non integer programming.

UNIT I INTRODUCTION TO SOME SPECIAL FUNCTIONS**9**

Gamma function, Beta function, Bessel function, Error function and complementary Error function, Heaviside's function, pulse unit height and duration function, Sinusoidal Pulse function, Rectangle function, Gate function, Dirac's Delta function, Signum function, Saw tooth wave function, Triangular wave function, Half wave rectified sinusoidal function, Full rectified sine wave, Square wave function.

UNIT II PARTIAL DIFFERENTIAL EQUATIONS AND APPLICATIONS**9**

Formation PDEs, Solution of Partial Differential equations $f(x,y,z,p,q) = 0$, Nonlinear PDEs first order, Some standard forms of nonlinear PDE, Linear PDEs with constant coefficients, Equations reducible to Homogeneous linear form, Classification of second order linear PDEs. Separation of variables use of Fourier series, D'Alembert's solution of the wave equation, Heat equation: Solution by Fourier series and Fourier integral

UNIT III PERTURBATION TECHNIQUES**9**

Singular perturbations (algebraic example). Notion of the boundary layer. Inner and outer solutions. Overlap region. Matching of the asymptotic expansions. Ordinary differential equations with singular perturbations. Methods to determine location of the boundary layer.

UNIT IV SIMULATION MODELS

9

Elements of simulation model -Monte Carlo technique – applications. Queuing model: problems involving $(M/M/1): (\infty/FIFO)$, $(M/M/c): (\infty/FIFO)$ Models.

UNIT V DECISION MODELS

9

Decision Analysis – Decision Making environment – Decisions under uncertainty – Decision under risk – Decision – Tree Analysis.

Course Objectives

- To introduce the basic concepts of vector space
- To know the fundamentals of linear Algebra
- To solve system of linear equations
- To study about the linear transformations
- To introduce the concepts of inner product spaces
- To learn the knowledge about application of it

Course Outcomes

The student will be able to

- To explain the fundamental concepts of advanced algebra and their role in modern mathematics and applied contexts.
- To apply the fundamental concepts in their respective engineering fields
- To visualize linear transformations as matrix form
- To recognize the underlying theory of vector spaces over a field and inner product spaces over real or complex numbers
- To articulate the importance of Linear Algebra and its applications in branches of Mathematics
- To analysis the real time application

UNIT I VECTOR SPACES**9**

General vector spaces, real vector spaces, Euclidean n -space, subspaces, linear independence, basis and dimension, row space, column space and null space, UNIT II EIGEN VALUES AND EIGEN VECTORS

Eigen values and Eigen vectors - Diagonalization - Power method - QR decomposition

UNIT III SYSTEM OF LINEAR EQUATIONS**9**

Direct methods, Gauss elimination method, Gauss Jordan method, Crout's method, iterative methods, Gauss-Jacobi method, Gauss-Seidel method, convergence criteria.

UNIT IV LINEAR TRANSFORMATIONS**9**

Linear Transformations - The Null Space and Range - Isomorphisms - Matrix Representation of Linear Transformations – Similarity - Eigenvalues and Eigenvectors Eigen values and Eigen vectors - Diagonalization

UNIT V INNER PRODUCT SPACES**9**

The Dot Product on \mathbb{R}^n and Inner Product Spaces - Orthonormal Bases - Orthogonal Complements - Application : Least Squares Approximation - Diagonalization of Symmetric M - Application: Quadratic Forms

• **TOTAL: 45 HOURS**

2. www.nptel.ac.in
3. www.mathworld.wolfram.com

Course Objectives

- To introduce Fourier series analysis which is central to many applications in engineering apart from its use in solving boundary value problems
- To acquaint the student with Fourier series techniques in solving heat flow problems used in various situations.
- To acquaint the student with Fourier transform techniques used in wide variety of situations.
- To introduce the basic concepts of PDE for solving standard partial differential equations
- To introduce the effective mathematical tools for the solutions of partial differential equations that model several physical processes and to develop Z transform techniques for discrete time systems.

Course Outcomes:

- Solve differential equations using Fourier series analysis which plays a vital role in engineering applications.
- The learners can equip themselves in the transform techniques and solve partial differential equations
- Understand how to solve the given standard partial differential equations.
- Understand the mathematical principles on transforms and partial differential equations would provide them the ability to formulate and solve some of the physical problems of engineering.
- Appreciate the physical significance of Fourier series techniques in solving one and two dimensional heat flow problems and one dimensional wave equations.
- Use the effective mathematical tools for the solutions of partial differential equations by using Z transform techniques for discrete time systems.

UNIT I FOURIER SERIES**10**

Dirichlet's conditions – General Fourier series – Odd and even functions – Half range sine series – Half range cosine series – Complex form of Fourier Series – Parseval's identity – Harmonic Analysis.

UNIT II FOURIER TRANSFORM**9**

Fourier integral theorem (without proof) – Fourier transform pair – Sine and Cosine transforms – Properties – Transforms of simple functions – Convolution theorem – Parseval's identity.

UNIT III PARTIAL DIFFERENTIAL EQUATIONS**9**

Formation of partial differential equations by elimination of arbitrary constants and arbitrary functions – Solution of standard types of first order partial differential equations – Lagrange's linear equation – Linear partial differential equations of second and higher order with constant coefficients.

UNIT IV APPLICATIONS OF PARTIAL DIFFERENTIAL EQUATIONS 9

Classification of second order quasi linear partial differential equations – Solutions of one dimensional wave equation – One dimensional heat equation – Steady state solution of two-dimensional heat equation (Insulated edges excluded) – Fourier series solutions in Cartesian coordinates.

UNIT- V Z -TRANSFORM AND DIFFERENCE EQUATIONS 8

Z-transform - Elementary properties – Inverse Z – transform – Convolution theorem -Formation of difference equations – Solution of difference equations using Z - transform.

2. <http://mathworld.wolfram.com/FourierSeries.html>
3. www.nptel.ac.in

Course Objectives

- To Develop abilities to write technically and expressively,
- To Recognize writing as a constructive, meaningful process,
- To Practise using reading strategies for effective writing.
- To equip them to write for academic as well as work place context.
- To enable students to be familiar with structure and style of formal written communication
- To learn the knowledge about application of it

Course Outcomes

- Construct simple sentences, correct common grammatical errors in written English.
- Build confidence in English language by imbibing lexical and syntax rules.
- Enrich their reading ability for effective writing.
- Know the value of LSRW skills in document writing.
- Understand the structure, content and format of technical documents.
- Improve their writing skills and be ready with documents related ideas and notions.

UNIT I BASICS OF WRITING**7**

Introduction to Technical Writing – Importance of Writing – Characteristics of Writing– Audience Recognition/ Analysis – Appropriateness of language — Conciseness and Flow– Bias free and plain writing – Impersonal and Formal Language -Techniques of Technical Writing– Overcoming writer's block – Prioritizing for effective writing– Avoiding plagiarism.

UNIT 2 PARAGRAPHS AND ESSAYS**9**

Expressing Ideas – Paragraph construction – Cohesion and Coherence – Adequate development – Kinds of paragraphs – Writing drafts – Paragraph length and pattern – Types of Essays – Characteristics of Essays – Salient point of sentence constructions.

UNIT 3 MEMOS AND EMAIL**9**

Formal written correspondence – Types of messages – Business letters – Structure of letters – Language in letters – Tense in letters – Cover letters – Resumes – Curriculum vitae – Memos – Emails – Email Etiquette – Effectiveness and purpose.

UNIT 4 THE ART OF CONDENSATION AND TECHNICAL PROPOSALS**9**

Steps to Effective précis writing – Guidelines – Technical Proposals – Types of Proposals – Characteristics – Body of the Proposals – Style and appearance – Evaluation of proposals – Proof Reading – Book /Film Review – Travelogue – Dialogue Writing.

UNIT 5 REPORTS AND RESEARCH ARTICLES**11**

Discussion of newspaper articles -Course Objectives of Reports – Characteristics of Reports – Structure of Reports – Types of Reports – Writing an article – Writing research articles – Essential features of Dissertation – Organizing the structure of thesis and articles – Writing technical description.

Course Objectives

- To inculcate the basics of brief history of Earth sciences
- To divulge knowledge on the basics of structure of earth and earth's gravitational field.
- To disseminate the fundamentals of magnetic field and thermal distribution of earth.
- To introduce the concepts of seismology and seismic waves .
- To impart the basic knowledge of oceans
- To learn the knowledge about application of it

Course Outcomes

- Gain knowledge on the basics of history of Earth sciences.
- Acquire knowledge on concepts of structure of earth and earth's gravitational field.
- Have adequate knowledge on the concepts of magnetic field and thermal distribution of earth
- Obtain knowledge on the basics of seismic waves.
- Understand the basics of oceans and properties of sea water.
- Apply the knowledge gained from this course to solve the relevant problems in engineering stream.

UNIT I ORIGIN OF EARTH**9**

A brief history of the development of Earth Sciences . An overview of Geophysical methods and their essential features, Problems of inversion and non-uniqueness in Geophysics, Origin & evolution of Solar system, Earth and Moon structure,. Kepler's law of planetary motion, A review of the Earth's structure and composition.

UNIT II STRUCTURE OF EARTH**9**

Chemical composition of Earth, Rheological behavior of crust and upper mantle, viscoelasticity and rock failure criteria, Geochronology: Radiometric dating and their advantages, meaning of radiometric ages, Major features of the Earth's gravitational field and relationship with tectonic processes in the crust and upper mantle, concept of isostasy, mathematical concept of Airy and Pratt hypotheses of isostasy.

UNIT III MAGNETIC FIELD AND THERMAL DISTRIBUTION OF EARTH**9**

Origin of geomagnetic field, polar wandering, secular variations and westward drift, reversals of geomagnetic field, sun spot, solar flares, geomagnetic storms, sea-floor spreading, Paleomagnetism and its uses, Thermal history of the Earth, sources of heat generation and temperature distribution inside the earth, convection in the mantle.

UNIT IV SEISMOLOGY**9**

Earthquake seismology, Earthquakes and its classifications, Global seismicity and tectonics, Earth's internal structure derived from seismology, Earthquake mechanism and Anderson's theory of faulting, Continental drift and plate tectonics: its essential features, present day plate motions, Triple junctions, oceanic ridges, Benioff zones, arcs, hot spots, Mantle Plume, Mountain building, origin of Himalaya, Geodynamics of Indian subcontinent.

UNIT V OCEANS**9**

Physical properties of seawater and methods of determination, distribution of salinity in the oceans, factors affecting salinity, water masses and water type, TS Diagram, Circulation of currents in major ocean waves. Tides: Dynamical and equilibrium theory of tides. Marine pollution, steps to control marine pollution, Laws of seas, Coastal zone management

4. www.physics.org

Course Objectives

- To disseminate the fundamentals of acoustic waves. (K)
- To inculcate the characteristics of radiation and reception of acoustic waves. (K)
- To divulge knowledge on the basics of pipe resonators and filters.(S)
- To introduce the features of architectural acoustics.(S)
- To impart the basic knowledge of transducers and receivers.(K)
- To learn the knowledge about application of it

Course Outcomes

- Develop the idea of the fundamentals of acoustic waves.
- Apply the concepts of radiation and reception of acoustic waves.
- Explain the basic ideas of pipe resonators and filters.
- Illustrate the basics of architectural acoustics..
- Illustrate the transducers and receivers and its applications in various electronic devices.
- Apply the knowledge inputs of the course for engineering applications.

UNIT I INTRODUCTION**9**

Acoustics waves – Linear wave equation – sound in fluids – Harmonic plane waves - Acoustics intensity – Specific acoustic impedance – spherical waves – Describer scales. Reflection and Transmission: Transmission from one fluid to another normal and oblique incidence –method of images.

UNIT II RADIATION AND RECEPTION OF ACOUSTIC WAVES**9**

Radiation from a pulsating sphere – Acoustic reciprocity – continuous line source radiation impedance - Fundamental properties of transducers. Absorption and attenuation of sound. Absorption from viscosity – complex sound speed and absorption – classical absorption coefficient.

UNIT III PIPES RESONATORS AND FILTERS**9**

Resonance in pipes - standing wave pattern absorption of sound in pipes – long wavelength limit – Helmholtz resonator - acoustic impedance - reflection and transmission of waves in pipe - acoustic filters – low pass, high pass and band pass. Noise, Signal detection, Hearing and speech. Noise, spectrum level and band level – combining band levels and tones – detecting signals in noise – fundamental properties of hearing – loudness level and loudness – pitch and frequency – voice.

UNIT IV ARCHITECTURAL ACOUSTICS**9**

Sound in endosure – A simple model for the growth of sound in a room – reverberation time - Sabine, sound absorption materials – measurement of the acoustic output of sound sources in live rooms – acoustics factor in architectural design. Environmental Acoustics: Highway noise – noise induced hearing loss – noise and architectural design specification and measurement of some isolation design of portions.

UNIT V TRANSDUCTION**9**

Transducer as an electives network – canonical equation for the two simple transducers transmitters – moving coil loud speaker– horn loud speaker, receivers – condenser – microphone – moving coil electrodynamics microphone piezoelectric microphone – calibration of receivers.

Course Objectives

- To understand about the fuel
- To study about the alcohols and its importance in engine
- To gain knowledge on the fuel gas and oils
- To get the information on fuel cell
- To understand electric, hybrid and solar cars
- To learn the knowledge about application of it

Course Outcomes

- Students will know about the basic concepts of alternate fuels
- Students will know about the basic concepts of alcohols.
- Students will understand about fuel gas and oils
- Students can enrich their knowledge about the alternate fuels and energy systems
- Develop their knowledge in studies of vegetable oils
- Students knows about the importance of electric, hybrid and solar cars

UNIT I INTRODUCTION

9

Need for alternate fuel, availability and properties of alternate fuels, general use of alcohols, LPG, hydrogen, ammonia, CNG and LNG, vegetable oils and biogas, merits and demerits of various alternate fuels, introduction to alternate energy sources and significance.

UNIT II ALCOHOLS

9

Properties as engine fuel, alcohols and gasoline blends, performance in SI engines, methanol and gasoline blends, combustion characteristics in CI engines, emission characteristics, DME, DEE properties performance analysis, performance in SI & CI Engines.

UNIT III NATURAL GAS, LPG, HYDROGEN AND BIOGAS

10

Availability of CNG, properties, modification required to use in engines, performance and emission characteristics of CNG & LPG in SI & CI engines, performance and emission of LPG. Hydrogen storage and handling, performance and safety aspects. Production of Biogas and its applications.

UNIT IV VEGETABLE OILS

8

Various vegetable oils for engines, esterification, performance in engines, performance and emission characteristics, biodiesel and its characteristics.

UNIT V ELECTRIC, HYBRID, FUEL CELL AND SOLAR CARS

9

Layout of an electric vehicle, advantage and limitations, specifications, system components, electronic control system, high energy and power density batteries, hybrid vehicle, fuel cell vehicles, solar powered vehicles.

Course Objectives

- To make the students conversant with basics of Solid wastes and its classification.
- To make the student acquire sound knowledge of different treatments of solid wastes.
- To acquaint the student with concepts of waste disposals.
- To develop an understanding of the basic concepts of Hazardous waste managements.
- To acquaint the students with the basics of energy generation from waste materials.
- To get the information on energy conservation.

Course Outcomes

- Property – Collection – Transfer Stations – Waste Minimization and Recycling of Outline the basic principles of Solid waste and separation of wastes (K)
- Identify the concepts of treatment of solid wastes (S)
- Identify the methods of wastes disposals. (S)
- Examine the level of Hazardousness and its management. (S)
- Examine the possible of the energy production using waste materials. (S)
- Integrate the chemical principles in the projects undertaken in field of engineering and technology (A)

UNIT I SOLID WASTE 9

Definitions – Sources, Types, Compositions, Properties of Solid Waste – Municipal Solid Waste – Physical, Chemical and Biological Municipal Waste.

UNIT II WASTE TREATMENT 9

Size Reduction – Aerobic Composting – Incineration – batch type and continuous flow type, Medical/ Pharmaceutical Waste Incineration – Environmental Impacts – Measures of Mitigate Environmental Effects due to Incineration.

UNIT III WASTE DISPOSAL 9

Sanitary Land Fill Method of Solid Waste Disposal – Land Fill Classification, Types, Methods & Siting Consideration – Layout & Preliminary Design of Land Fills – Composition, Characteristics generation, Movement and Control of Landfill Leachate & Gases – Environmental Monitoring System for Land Fill Gases, Waste landfill Remediation.

UNIT IV HAZARDOUS WASTE MANAGEMENT 9

Definition & Identification of Hazardous Waste – Sources and Nature of Hazardous Waste – Impact on Environment – Hazardous Waste Control – Minimization and Recycling -Assessment of Hazardous Waste Sites – Disposal of Hazardous Waste, Underground Storage Tanks Construction, Installation & Closure, Remediation, risk assessment.

UNIT V ENERGY GENERATION FROM WASTE 9

Thermal conversion Technologies – Pyrolysis systems, Combustion systems, Gasification systems, Environment control systems, Energy recovery systems. Biological & Chemical conversion technologies – Aerobic composting, low solids. Anaerobic digestion, high solids anaerobic digestion, Energy production from biological conversion products, other biological transformation processes. Chemical transformation processes.

Course Objectives

- To make the students conversant about the green chemistry
- To make the student acquire sound knowledge of the atom efficient process and synthesis elaborately.
- To acquaint the student with concepts of green technology.
- To develop an understanding of the basic concepts of renewable energy resources.
- To acquaint the students with the basic information on catalysis.
- To learn the knowledge about application of it

Course Outcomes

- Outline the basic principles of green chemistry (K)
- Examine the different atom efficient process and synthesis elaborately (S)
- Apply the concepts combustion of green technology (S)
- Identify and apply the concepts of renewable energy (S) Apply the concepts of green catalysts in the synthesis (S)
- Integrate the chemical principles in the projects undertaken in field of engineering and technology (A)
- Analysis the real time application of it

UNIT I INTRODUCTION TO GREEN CHEMICAL PRINCIPLES**9**

Definition, tools, and twelve principles of green chemistry, solvent-less reactions and reactions in water, microwaves and fluorosolvents, green resolution of racemic mixtures, materials for a sustainable economy, chemistry of longer wear, agrochemicals: problems and green alternate solutions.

UNIT II ATOM EFFICIENT PROCESSES**9**

Atom efficient processes, evaluating chemical reagents according to their yield and atom efficiency, examples of efficient stoichiometric and catalytic processes, atom economy and homogeneous catalysis, halide-free synthesis and alternatives to Strecker synthesis.

UNIT III BIOTECHNOLOGY AND GREEN CHEMISTRY**9**

Bio technology and its applications in environmental protection-Bio informatics-Bio remediation, biological purification of contaminated air. Green chemistry for clean technology-Significance of green chemistry-Basic components of green chemistry, Industrial applications of green chemistry, green fuels-e-green propellants and bio catalysts.

UNIT IV RENEWABLE RESOURCES**9**

Use of renewable materials, evaluating feedstock and starting materials and their origins, toxicity, sustainability and the downstream implications of the choice of feedstock, commodity chemicals from glucose and biomass conversion.

UNIT V CATALYSIS IN GREEN CHEMISTRY**9**

Catalysis, energy requirements and usage, optimization of the reaction by minimizing the energy requirements, examples of efficient catalytic reactions including the use of heterogeneous catalysis, zeolites, oxidation using molecular oxygen.

Course Objectives

- To make the students conversant with **the information on electrochemical material**.
- To make the student acquire sound knowledge of **conducting polymers**.
- To acquaint the student with concepts of Energy storage devices.
- To develop energy storage devices.
- To impart knowledge on basic principles of solar cells and its application.
- To learn the knowledge about application of it

Course Outcomes

- Outline the basic principles of chemistry in **electrochemical material (K)**
- Examine the properties of conducting polymers (S)
- Apply the concepts of electrochemistry in storage devices. (S)
- Identify the concepts of storage devices and its applications. (S)
- Apply the suitable materials for the manufacturing of storage devices. (S)
- Integrate the chemical principles in the projects undertaken in field of engineering and technology (A)

UNIT I METAL FINISHING**9**

Fundamental principles, surface preparation-Electroplating of copper, nickel, chromium, zinc and precious metals (gold & silver)- Electroplating for electronic industry- Alloy plating, brass plating- Electro less plating of nickel- anodizing – Electroforming – Electro winning.

UNIT II CONDUCTING POLYMERS AND ELECTROCHEMICALS**9**

lectropolymerisation- anodic and cathodic polymerization-effect of reaction parameters on the course of the reaction- Electrochemical preparation of conducting polymers- poly acetylene- Electrolytic production of perchlorates and manganese dioxide- Electro organic chemicals- constant current electrolysis.

UNIT III BATTERIES AND POWER SOURCES-I**9**

Principles of energy conservation- electrochemical energy conservation- thermodynamic reversibility, Gibbs equation. EMF- battery terminology, energy and power density- Properties of anodes, cathodes, electrolytes and separators- Types of electrolytes.

UNIT IV BATTERIES AND POWER SOURCES-II**9**

Primary batteries- Dry Leclanche cells, alkaline primary batteries, Lithium batteries- construction, characteristics, problems associated with system- Secondary batteries- Lead acid, nickel cadmium- Fuel cells- Introduction, types of fuel cells, advantages.

UNIT V ELECTROCHEMICAL MATERIAL SCIENCE**9**

Solar cells- Preparation of CdS/Cu₂S solar cells by screen printing techniques and their characteristics - Amorphous silicon solar cells - Photo electrochemical cells(PEC) for conversion of light energy to electrical energy - PEC cells based on Cd/Se and Ga/As characteristics.

Course Objectives

- To make the students conversant with **cement and lime** and its uses.
- To make the student acquire sound knowledge of abrasives and refractories.
- To acquaint the student with concepts of inorganic chemicals.
- To develop an understanding of the basic concepts **explosives**.
- To acquaint the students with the basics of **agriculture chemicals**.
- To learn the knowledge about application of it

Course Outcomes

- Outline the basic chemistry of **cement and lime (K)**
- Examine the uses of abrasives and refractories (S)
- Identify the usage of the inorganic chemicals. (S)
- Identify the concepts of explosives and smoke screens (S)
- Identify the usage of the **agriculture chemicals (S)**
- Integrate the chemical principles in the projects undertaken in field of engineering and technology (A)

UNIT I CEMENT AND LIME**9**

Manufacture of Portland cement – setting and hardening of portland cement – regauging cement – effect of fineness on setting and hardening – freezing – high early strength cement – high alumina cement Lime – raw materials- manufacture – slaking – lime mortar – types of lime – high – calcium or fat lime – calcium lime or lean lime – magnesian lime – dolomitic lime – hydraulic lime.

UNIT II ABRASIVES AND REFRACTORIES**9**

Abrasives – hard abrasives – siliceous abrasives – soft abrasives – artificial abrasives – uses. Refractories – definition – classification – acid refractories – basic refractories – neutral refractories – properties – uses.

UNIT III INORGANIC CHEMICALS**9**

Common salt and soda ash – manufacture – different grades – products – alkalis – Na_2CO_3 , caustic soda and chlor-alkali industry – manufacture principles of electrolytic process – chlorine – storage. Hydrochloric acid – manufacture – absorption – uses, sulphur and sulphuric acid – extraction of sulphur – manufacture of H_2SO_4 – chamber – contact processes – industrial uses.

UNIT IV EXPLOSIVES**9**

Explosives – uses – properties and tests – explosives for war – nitrocellulose – picric acid and T.N.T. – industrial explosives – nitroglycerin and dynamites – black powder – smoke screens – incendiaries – gas mask.

UNIT V AGRICULTURE CHEMICALS**9**

Fertilizers – organic and inorganic – ammoniated superphosphates, sodium nitrate, solid pellets – potassium salts – pesticides – fungicides – herbicides – their preparations and characteristics – environmental impacts.

COMPUTER SCIENCE ENGINEERING

15BEC SOE01

PYTHON PROGRAMMING

L T P C 3 0 0 3

COURSE OBJECTIVES:

- To learn how to use and manipulate several core data structures: Lists, Dictionaries, Tuples, and Strings
- To study decision structures and loops
- To understand the process and skills necessary to effectively deal with problem solving in relation to writing programs
- To understand the process and skills necessary to effectively deal with problem solving
- To discuss in relation to writing programs
- To study various program object and graphics based on python

COURSE OUTCOMES:

Upon completion of the course, students will be able to:

- Develop algorithmic solutions to simple computational problems Read, write, execute by hand simple Python programs
- Structure simple Python programs for solving problems
- Decompose a Python program into functions.
- Represent compound data using Python lists, tuples, dictionaries
- Read and write data from/to files in Python Programs
- Understand various program object and graphics based on python

UNIT I FUNDAMENTALS

9

The Universal Machine-Program power- What is Computer Science?-Hardware Basics- Programming Languages-Python-Inside Python program-Software Development Process- Example program-Elements of programs- Output statements- Assignment Statements- Data types-Type conversions

UNIT II DECISION STRUCTURES AND LOOPS

9

Simple Decisions-Two-way decisions-Multi-way decisions-Exception handling-for loops-indefinite loops-common loop patterns-Booleans

UNIT III FUNCTIONS

9

Function of functions-Functions and Parameters-Function that returns values-Function that modifies parameters-Functions and program structures

UNIT IV SEQUENCES

9

String data type- String Processing-List as sequences-String Representation-String Methods-I/O as String manipulation-File Processing

UNIT V OBJECTS AND GRAPHICS

9

Overview-Object of Objects-Simple Graphics Programming-Using Graphical Objects-Choosing Coordinates- Interactive Graphics-Graphics module reference

TOTAL: 45 HOURS

COURSE OBJECTIVES:

- To study concepts of Internet, IP addresses and protocols
- To explain the concept of web page development through HTML
- To introduce the PERL and explore its current strengths and Weaknesses
- To write working Java code to demonstrate the use of applets for client-side programming
- To study Internet telephony and various multimedia applications
- To Elaborate on the principles of web page development

COURSE OUTCOMES:

Upon completion of this course, the student will be able to:

- Learn the advanced concepts & techniques of Internet and Java.
- Analyze the requirements for and create and implement the principles of web page development
- Understand the concepts of PERL
- Implement client-side programming using java applets
- Generate internet telephony based upon advanced concepts
- Develop applications on internet programming based on java applets and scripts

UNIT I INTRODUCTION**9**

Introduction - Network of Networks, Intranet, Extranet and Internet. World Wide Web- Domain and Sub domain, Address Resolution, DNS, Telnet, FTP, HTTP. TCP/IP- Features, Segment, Three-Way Handshaking, Flow Control, Error Control, Congestion control, IP Datagram, IPv4 and IPv6. IP Subnetting and addressing- Classful and Classless Addressing, Subnetting

UNIT II HTML**9**

Introduction, Editors, Elements, Attributes, Heading, Paragraph. Formatting, Link, Head, Table, List, Block, Layout, CSS. Form, IFrame, Colors, Colorname, Colorvalue. Image Maps- map, area, attributes of image area- Extensible Markup Language (XML)- Introduction, Tree, Syntax, Elements, Attributes, Validation, Viewing. XHTML in brief. CGI Scripts- Introduction- Environment Variable, GET and POST Methods.

UNIT III PERL**9**

Introduction, Variable, Condition, Loop, Array, Implementing data structure, Hash, String, Regular Expression, File handling, I/O handling- JavaScript- Basics, Statements, comments, variable, comparison, condition, switch, loop, break. Object – string, array, Boolean, reg-ex. Function, Errors, Validation. Cookies- Definition of cookies, Create and Store a cookie with example. Java Applets- Container Class, Components, Applet Life Cycle, Update method, Applications.

UNIT IV CLIENT-SERVER PROGRAMMING**9**

Client-Server programming In Java - Java Socket, Java RMI. Threats - Malicious code-viruses, Trojan horses, worms; eavesdropping, spoofing, modification, denial of service attacks- Network security techniques- Password and Authentication- VPN, IP Security, security in electronic transaction, Secure Socket Layer (SSL), Secure Shell (SSH). Firewall- Introduction, Packet filtering, Stateful, Application layer, Proxy.

UNIT V INTERNET TELEPHONY**9**

Introduction, VoIP- Multimedia Applications- Multimedia over IP: RSVP, RTP, RTCP and RTSP-

Streaming media, Codec and Plugins, IPTV- Search Engine and Web Crawler- Definition, Meta data, Web Crawler, Indexing, Page rank, overview of SEO.

TOTAL: 45 HOURS

S. No.	Author(s) Name	Title of the book	Publisher	Year of Publication
1	N.P. Gopalan and J. Akilandeswari	Web Technology: A Developer's Perspective	PHI Learning, Delhi	2013
2	Rahul Banerjee	Internetworking Technologies, An Engineering Perspective	PHI Learning, Delhi	2011

COURSE OBJECTIVES:

- To impart the fundamental concepts of Computer Animation and Multimedia
- To study the graphic techniques and algorithms using flash
- Explain various concepts available in 3D animation
- Explain various devices available for animation
- To study the multimedia concepts and various I/O technologies for concept development
- To understand the three-dimensional graphics and their transformations

COURSE OUTCOMES

Upon completion of this course, the student will be able to:

- Develop their creativity using animation and multimedia
- Understand the concepts of Flash and able to develop animation using it
- Understand about various latest interactive 3D animation concepts
- Know the various devices and software available in motion capture
- Understand the concept development process
- Develop an interactive multimedia presentation by using multimedia devices and identify theoretical and practical aspects in designing multimedia applications surrounding the emergence of multimedia technology.

UNIT I**INTRODUCTION****9**

What is mean by Animation – Why we need Animation – History of Animation– Uses of Animation – Types of Animation – Principles of Animation – Some Techniques of Animation – Animation on the WEB – 3D Animation – Special Effects -Creating Animation.

UNIT II CREATING ANIMATION IN FLASH**9**

Introduction to Flash Animation – Introduction to Flash – Working with the Timeline and Frame-based Animation - Working with the Timeline and Tween-based Animation – Understanding Layers - Action script.

UNIT III 3D ANIMATION & ITS CONCEPTS**9**

Types of 3D Animation – Skeleton & Kinetic 3D Animation – Texturing & Lighting of 3D Animation – 3D Camera Tracking – Applications & Software of 3D Animation.

UNIT IV MOTION CAPTION**9**

Formats – Methods – Usages – Expression – Motion Capture Software's – Script Animation Usage – Different Language of Script Animation Among the Software.

UNIT V CONCEPT DEVELOPMENT**9**

Story Developing –Audio & Video – Color Model – Device Independent Color Model – Gamma and Gamma Correction - Production Budgets- 3D Animated Movies.

15BEC SOE04 PC HARDWARE AND TROUBLE SHOOTING L T P C 3 0 0 3

COURSE OBJECTIVES:

- To study the basic parts of computer in detail
- Introduce various peripheral devices available for computer and its detailed working concepts
- Overview of various interfaces and other hardware overview
- Assemble/setup and upgrade personal computer systems and discuss about power supplies and the skills to trouble-shoot various power-related problems.
- To study basic concepts and methods in troubleshooting
- To study the installation/connection and maintenance of computer and its associated peripherals.

COURSE OUTCOME:

Upon completion of this course, the student will be able to:

- Identify the main components for the PC, familiarize themselves with PC memories such as RAM and ROM devices and so on.
- Identify various peripheral devices available and its working
- Understand various concepts of hardware and its interface and control
- Perform basic installation of PC. Importance of maintenance is understood
- Understand Various faults and failures are identified and troubleshooting in detail
- Understand overall PC hardware, interfacing, maintenance and troubleshooting

UNIT I INTRODUCTION

9

Introduction - Computer Organization – Number Systems and Codes – Memory – ALU – CU – Instruction prefetch – Interrupts – I/O Techniques – Device Controllers – Error Detection Techniques – Microprocessor – Personal Computer Concepts – Advanced System Concepts – Microcomputer Concepts – OS – Multitasking and Multiprogramming – Virtual Memory – Cache Memory – Modern PC and User.

UNIT II PERIPHERAL DEVICES

9

Introduction – Keyboard – CRT Display Monitor – Printer – Magnetic Storage Devices – FDD – HDD

– Special Types of Disk Drives – Mouse and Trackball – Modem – Fax-Modem – CD ROM Drive – Scanner – Digital Camera – DVD – Special Peripherals.

UNIT III PC HARDWARE OVERVIEW

9

Introduction – Hardware BIOS DOS Interaction – The PC family – PC hardware – Inside the System Box – Motherboard Logic – Memory Space – Peripheral Interfaces and Controllers – Keyboard Interface – CRT Display interface – FDC – HDC.

UNIT IV INSTALLATION AND PREVENTIVE MAINTENANCE

9

Introduction – system configuration – pre installation planning – Installation practice – routine checks – PC Assembling and integration – BIOS setup – Engineering versions and compatibility – preventive maintenance – DOS – Virus – Data Recovery.

UNIT V TROUBLESHOOTING**9**

Introduction – computer faults – Nature of faults – Types of faults – Diagnostic programs and tools – Microprocessor and Firmware – Programmable LSI's – Bus Faults – Faults Elimination process – Systematic Troubleshooting – Symptoms observation and analysis – fault diagnosis – fault rectification– Troubleshooting levels – FDD, HDD, CD ROM Problems.

COURSE OBJECTIVES:

- To understand the basic requirements, installation and structure of gaming using Java
- Discuss various aspects of safe cracker projects
- Discuss various aspects of match game projects
- Discuss various aspects of pizza delivery projects
- Discuss various aspects of moon landing projects
- Discuss the process of development of gaming using Java

COURSE OUTCOMES:

Upon completion of the course, students will be able to:

- Interpret various concepts of gaming based on Java
- Design the frame and code to develop safe cracker project
- Design the frame and code to develop match game project
- Design the frame and code to develop pizza delivery project
- Design the frame and code to develop moon landing project
- Design and develop various games using Java

UNIT I INTRODUCTION**9**

Introducing Games with Java- Requirements-Installing Netbeans IDE-Structure of Java Program-Structure of Java GUI-Swing controls-Stopwatch Project-Creating Frames-Adding Controls-Adding Event methods-Writing Code

UNIT II SAFECRACKER PROJECT**9**

Frame design-Grid Bag Layout Manager-Code Design-Adding Sounds-Tic Tac Toe Project-Frame Design-Code Design-Adding Events-Adding Sounds

UNIT III MATCH GAME PROJECT**9**

Preview-Frame Design-Photo Selection-Code Design-Timer Objects- Adding Delays-one player Solitaire game-Computer Moves

UNIT IV PIZZA DELIVERY PROJECT**9**

Preview- Frame Design-Adding Clock-Game Design-Multiple Frames GUI- Leap Frog Project-Preview-Frame Design-Code Design- Introduction to OOP-Sprite Class-Collision detection between objects- Updating Scores

UNIT V MOON LANDING PROJECT**9**

Preview-Frame Design- Code Design- Graphics Methods- Graphics 2D Objects-Stroke and Paint Objects-Shapes and Drawing Methods-Line, Rectangle and Ellipse-Scrolling Background-Sprite Animation

TOTAL: 45 HOURS

2	Timothy M.Right	Fundamental 2D Game Programming with Java	Cengage Learning PTR	2013
3	Wayne Holder,Doug Bell	Java Game Programming for Dummies		

Course Objectives

- To introduce students to the embedded systems, its hardware and software.
- To introduce devices and buses used for embedded networking.
- To study about task management
- To learn about semaphore management and message passing
- To study about memory management
- To imparts knowledge on

Course Outcomes

At the end of the course the students will be able to

- Understand overview of embedded systems architecture
- Acquire knowledge on embedded system, its hardware and software.
- Gain knowledge on overview of Operating system
- Discuss about task Management
- Gain knowledge about semaphore management and message passing.
- Gain knowledge about memory management.

UNIT I INTRODUCTION TO EMBEDDED SYSTEM**9**

Introduction - Embedded systems description, definition, design considerations & requirements - Overview of Embedded system Architecture (CISC and RISC) - Categories of Embedded Systems - embedded processor selection & tradeoffs - Embedded design life cycle - Product specifications - hardware/software partitioning - iterations and implementation - hardware software integration - product testing techniques – ARM 7

UNIT II OPERATING SYSTEM OVERVIEW**9**

Introduction – Advantage and Disadvantage of Using RTOS – Multitasking – Tasks - Real Time Kernels – Scheduler - Non-preemptive Kernels - Preemptive Kernels – Reentrancy- Reentrant Functions – Round Robin Scheduling - Task Priorities - Static Priorities – Mutual Exclusion – Deadlock – Intertask Communication – Message Mailboxes – Message Queues - Interrupts - Task Management – Memory Management - Time Management – Clock Ticks.

UNIT III TASK MANAGEMENT**9**

Introduction - μ C/OS-II Features - Goals of μ C/OS-II - Hardware and Software Architecture – Kernel Structures: Tasks – Task States – Task Scheduling – Idle Task – Statistics Task – Interrupts Under μ C/OS-II – Clock Tick - μ C/OS-II Initialization. Task Management: Creating Tasks – Task Stacks – Stack Checking – Task's Priority – Suspending Task – Resuming Task. Time Management: Delaying a Task – Resuming a Delayed Task – System Time. Event Control Blocks- Placing a Task in the ECB Wait List – Removing a Task from an ECB wait List .

UNIT IV SEMAPHORE MANAGEMENT AND MESSAGE PASSING**9**

Semaphore Management: Semaphore Management Overview – Signaling a Semaphore. Message Mailbox Management: Creating a Mailbox – Deleting Mailbox – Waiting for a Message box – Sending Message to a Mailbox- Status of Mailbox. Message Queue Management: Creating Message Queue – Deleting a Message Queue – Waiting for a Message at a Queue – Sending Message to a Queue – Flushing a Queue.

UNIT V MEMORY MANAGEMENT

9

Memory Management: Memory Control Blocks – Creating Partition- Obtaining a Memory Block – Returning a Memory Block .Getting Started with μ C/OS-II – Installing μ C/OS-II – Porting μ C/OS-II: Development Tools – Directories and Files – Testing a Port - IAR Workbench with μ C/OS-II - μ C/OS-II Porting on a 8051 CPU – Implementation of Multitasking - Implementation of Scheduling and Rescheduling – Analyze the Multichannel ADC with help of μ C/OS-II.

Course Objectives

- To study about various speakers and microphone
- To learn the fundamental of television systems and standards
- To learn the process of audio recording and reproduction
- To study various telephone networks
- To discuss about the working of home appliances
- To familiarize with TV services like ISDN.

Course Outcomes

At the end of the course the students will be able to

- Understand working of various type of loud speakers
- Acquire knowledge on various types of picture tubes
- Demonstrate the working of various optical recording systems
- Distinguish various standards for color TV system
- Acquire knowledge on various telecommunication networks
- Demonstrate the working of various home appliances

UNIT I LOUDSPEAKERS AND MICROPHONES**9**

Dynamic Loudspeaker, Electrostatic loudspeaker, Permanent Magnet Loudspeaker, Woofers and Tweeters - Microphone Characteristics, Carbon Microphones, Dynamic Microphones and Wireless Microphones.

UNIT II TELEVISION STANDARDS AND SYSTEMS**9**

Components of a TV system – interlacing – composite video signal. Colour TV – Luminance and Chrominance signal; Monochrome and Colour Picture Tubes - Colour TV systems – NTSC, PAL, SECAM - Components of a Remote Control.

UNIT III OPTICAL RECORDING AND REPRODUCTION**9**

Audio Disc – Processing of the Audio signal –read out from the Disc – Reconstruction of the audio signal – Video Disc – Video disc formats- recording systems – Playback Systems.

UNIT IV TELECOMMUNICATION SYSTEMS**9**

Telephone services - telephone networks – switching system principles – PAPX switching – Circuit, packet and message switching, LAN, MAN and WAN, Integrated Services Digital Network. Wireless Local Loop. VHF/UHF radio systems, Limited range Cordless Phones; cellular modems

UNIT V HOME APPLIANCES**9**

Basic principle and block diagram of microwave oven; washing machine hardware and software; components of air conditioning and refrigeration systems.

TOTAL: 45 HOURS

TEXT BOOK

S.NO	Author(s) Name	Title of the book	Publisher	Year of Publication
1	S.P.Bali	Consumer Electronics	Pearson Education	2005

Course Objectives

- To introduce the basic concepts of neural networks and its applications in various domain
- To educate how to use Soft Computing to solve real-world problems
- To have a solid understanding of Basic Neural Network.
- To provide students with a sound and comprehensive understanding of artificial neural networks and machine learning.
- To gain exposure in the field of neural networks and relate the human neural system into the digital world
- To provide knowledge of computation and dynamical systems using neural networks

Course Outcomes

At the end of the course the students will be able to

- Understand the basic concepts of neural networks and its applications in various domains
- Gain knowledge about learning process in Neural Networks
- Apply perception concept in design
- Design using ART phenomena
- Gain knowledge on SOM concepts
- Ability to develop the use of Soft Computing to solve real-world problems

UNIT I LIMITATIONS OF CMOS**9**

Fundamentals of MOSFET devices - Scaling of CMOS – Limitations – Alternative concepts in materials – **Structures of MOS devices:** SOI MOSFET, FINFETS, Dual Gate MOSFET, Ferro electric FETs.

UNIT II MICRO AND NANO FABRICATION**9**

Optical Lithography – Electron beam Lithography – Atomic Lithography – Molecular beam epitaxy - Nano lithography.

UNIT III CHARACTERIZATION EQUIPMENTS**9**

Principles of Electron Microscopes – Scanning Electron Microscope – Transmission Electron Microscope - Atomic Force Microscope – Scanning Tunneling Microscope.

UNIT IV NANO DEVICES – I**9**

Resonant tunneling diodes – Single electron devices – Josephson junction – Single Flux Quantum logic – Molecular electronics.

UNIT V NANO DEVICES – II**9**

Quantum computing: principles – Qbits – Carbon nanotubes (CNT): Characteristics, CNTFET, Application of CNT - Spintronics: Principle, Spin valves, Magnetic Tunnel Junctions, SpinFETs, MRAM

TOTAL: 45 HOURS

TEXT BOOK

S.NO.	Author(s) Name	Title of the book	Publisher	Year of publication
1	Rainer Waser (Ed)	Nano electronics and information technology	Wiley- VCH. 3 rd Edition	2012

REFERENCES

S.NO.	Author(s) Name	Title of the book	Publisher	Year of publication

2	Mick Wilson, Kamali Kannangara, Geoff Smith, Michelle Simmons, Burkhard Raguse	Nanotechnology – (Basic Science and Emerging Technologies	Overseas Press	2002
3	Mark Ratner, Daniel Ratner	Nanotechnology: A Gentle introduction to the Next Big idea	Pearson education	2003

Course Objectives

- To study the image fundamentals and mathematical transforms necessary for image processing.
- To study the image enhancement techniques
- To study the image compression procedures.
- To study the image segmentation and representation techniques.
- To study the video processing fundamentals
- To know the concepts of motion estimation

Course outcomes

- Understand the image fundamentals and mathematical transforms necessary for image processing.
- Understand the image enhancement techniques
- Understand the image compression procedures.
- Understand the image segmentation and representation techniques.
- Understand the video processing fundamentals
- Understand motion estimation concepts

UNIT I FUNDAMENTALS OF IMAGE PROCESSING AND IMAGE TRANSFORMS 9

Basic steps of Image processing system sampling and quantization of an Image – Basic relationship between pixels Image Transforms: 2 – D Discrete Fourier Transform, Discrete Cosine Transform, Discrete Wavelet transforms.

UNIT II IMAGE PROCESSING TECHNIQUES 9

Image Enhancement: Spatial Domain methods: Histogram Processing, Fundamentals of Spatial Filtering, Smoothing Spatial filters, Sharpening Spatial filters, Frequency Domain methods: Basics of filtering in frequency domain, image smoothing, image sharpening, selective filtering.

UNIT III IMAGE SEGMENTATION AND COMPRESSION 9

Segmentation concepts, point, line and Edge detection, Thresholding, region based segmentation Image Compression Image compression fundamentals – coding Redundancy, spatial and temporal redundancy. Compression models : Lossy and Lossless, Huffman coding, Arithmetic coding, LZW coding, run length coding, Bit Plane coding, transform coding, predictive coding , wavelet coding, JPEG standards.

UNIT IV BASICS OF VIDEO PROCESSING 9

Analog video, Digital Video, Time varying Image Formation models : 3D motion models, Geometric Image formation , Photometric Image formation, sampling of video signals, filtering operations.

UNIT V 2-D MOTION ESTIMATION 9

Optical flow, general methodologies, pixel based motion estimation, Block matching algorithm, Mesh based motion Estimation, global Motion Estimation, Region based motion estimation, multi resolution motion estimation. Waveform based coding, Block based transform coding, predictive coding, Application of motion estimation in video coding.

TOTAL: 45 HOURS

TEXTBOOKS

1. Gonzalez and Woods ,”Digital Image Processing “, 3rd edition Pearson.
2. Yao wang, Joem Ostarmann and Ya – quin Zhang, ”Video processing and communication “,1st edition PHI.

REFERENCES

1. M. Tekalp ,”Digital video Processing”, Prentice ll International.
2. Aner ozdemi R, "Inverse Synthetic Aperture Radar Imaging with MATLAB Algorithms", JohnWiley & Sons.
3. Chris Solomon, Toby Breckon , "Fundamentals of Digital Image Processing A Practical Approach with Examples in Matlab", John Wiley & Sons.

Course Objectives

- To learn the processing steps in fabrication of VLSI devices.
- To learn the concepts of assembling and packaging for VLSI devices.
- To impart a good knowledge in reactive plasma etching techniques and equipment.
- To familiarize the students with the NMOS and CMOS IC technology.
- To make the student acquire reactive Plasma Etching techniques and Equipment.
- To acquaint the student with the VLSI assembly technology and package fabrication technology

Course outcomes

After completing this course, the students will be able to

- List out various fabrication techniques
- Understand the etching principle in IC fabrication
- Gain knowledge on deposition and diffusion methods
- Understand the process simulation and integration.
- Assembling and packing techniques
- various technologies used for fabricating VLSI devices

UNIT 1**9**

Introduction to MOS Technologies: MOS, CMOS, BiCMOS Technology, Trends and Projections. Basic Electrical Properties of MOS, CMOS & BiCMOS Circuits: I_{ds} - V_{ds} relationships, Threshold Voltage V_t , G_m , G_{ds} and ω_o , Pass Transistor, MOS, CMOS & Bi CMOS Inverters, Z_{pu}/Z_{pd} , MOS Transistor circuit model, Latch-up in CMOS circuits.

UNIT II**9**

Layout Design And Tools: Transistor structures, Wires and Vias, Scalable Design rules, Layout Design tools.

Logic Gates & Layouts: Static Complementary Gates, Switch Logic, Alternative Gate circuits, Low power gates, Resistive and Inductive interconnect delays.

UNIT III**9**

Combinational Logic Networks: Layouts, Simulation, Network delay, Interconnect design, Power optimization, Switch logic networks, Gate and Network testing.

UNIT IV**9**

Sequential Systems: Memory cells and Arrays, Clocking disciplines, Design, Power optimization, Design validation and testing.

UNIT V**9**

Floor Planning & Architecture Design: Floor planning methods, off-chip connections, High-level synthesis, Architecture for low power, SOCs and Embedded CPUs, Architecture testing.

TOTAL: 45 HOURS

REFERENCES

1. Principals of CMOS VLSI Design – N.H.E Weste, K.Eshraghian, 2nd ed., Adisson Wesley.

15BEECOE06 FUNDAMENTALS OF MEMS L T P C 3 0 0 3

Course Objectives

- To study materials used for MEMS and its working
- To study the fabrication process used for MEMS
- To study the packaging process used for MEMS
- To familiarize the students with various micro actuators and micro sensors.
- To learn the survey of materials central to micro engineering.
- To impart good knowledge in micro system packaging materials

Course Outcomes

At the end of the course the students will be able to

- Appreciate the underlying working principles of MEMS devices.
- Understand the working of Micro sensors and actuators
- Explain the IC fabrication processes
- Gain knowledge on bulk manufacturing
- Understand the Design of Micro systems.
- Design and model MEMS devices.

UNIT I INTRODUCTION TO MEMS AND MICRO FABRICATION

9

History of MEMS Development, Characteristics of MEMS-Miniaturization - Micro electronics integration - Mass fabrication with precision. Sensors and Actuators- Energy domain. Sensors, actuators Micro fabrication - microelectronics fabrication process- Silicon based MEMS processes- New material and fabrication processing- Points of consideration for processing. Anisotropic wet etching, Isotropic wet etching, Dry etching of silicon, Deep reactive ion etching (DRIE), and Surface micromachining process- structural and sacrificial material.

UNIT II ELECTRICAL AND MECHANICAL CONCEPTS OF MEMS

9

Conductivity of semiconductors, crystal plane and orientation, stress and strain - definition - Relationship between tensile stress and strain- mechanical properties of Silicon and thin films, Flexural beam bending analysis under single loading condition- Types of beam- longitudinal strain under pure bending -deflection of beam- Spring constant, torsional deflection, intrinsic stress, resonance and quality factor.

UNIT III ELECTROSTATIC AND THERMAL PRINCIPLE SENSING AND ACTUATION

9

Electrostatic sensing and actuation-Parallel plate capacitor - Application- Inertial, pressure and tactile sensor parallel plate actuator- comb drive Thermal sensing and Actuators-Thermal sensors- Actuators- Applications Inertial, flow and infrared sensors.

UNIT IV PIEZORESISTIVE, PIEZOELECTRIC AND MAGNETIC PRINCIPLE SENSORS AND ACTUATOR

9

Piezoresistive sensors- piezoresistive sensor material- stress in flexural cantilever and membrane- Application-Inertial, pressure, flow and tactile sensor. Piezoelectric sensing and actuation- piezoelectric material properties-quartz- PZT-PVDF -ZnO- Application-Inertial, Acoustic, tactile, flow-surface elastic waves Magnetic actuation- Micro magnetic actuation principle- Deposition of magnetic materials-Design and fabrication of magnetic coil.

UNIT V POLYMER AND OPTICAL MEMS**9**

Polymers in MEMS- polyimide-SU-8 Liquid crystal polymer(LCP)- PDMS – PMMA – Parylene - Fluorocarbon, Application-Acceleration, pressure, flow and tactile sensors. Optical MEMS-passive MEMS optical components-lenses-mirrors-Actuation for active optical MEMS.

Course Objectives

- To introduce the basic concepts of neural networks and its applications in various domain
- To educate how to use Soft Computing to solve real-world problems
- To have a solid understanding of Basic Neural Network.
- To provide students with a sound and comprehensive understanding of artificial neural networks and machine learning.
- To gain exposure in the field of neural networks and relate the human neural system into the digital world
- To provide knowledge of computation and dynamical systems using neural networks

Course Outcomes

At the end of the course the students will be able to

- Understand the basic concepts of neural networks and its applications in various domains
- Gain knowledge about learning process in Neural Networks
- Apply perception concept in design
- Design using ART phenomena
- Gain knowledge on SOM concepts
- Ability to develop the use of Soft Computing to solve real-world problems

UNIT I INTRODUCTION TO NEURAL NETWORKS**9**

Introduction - biological neurons and their artificial models - learning, adaptation and neural network's learning rules - types of neural networks- single layer, multiple layer- feed forward, feedback networks.

UNIT II LEARNING PROCESS**9**

Error – correction learning – memory based learning - hebbian learning-competitive learning-Boltzmann learning- supervised and unsupervised learning-adaptation-statistical learning theory.

UNIT III PERCEPTION**9**

Single layer perception-Adaptive filtering-unconstrained optimization-Least-mean square algorithm-Leaning curve-Annealing Technique-perception convergence theorem-Relationship between perception and Baye's classifier-Back propagation algorithm.

UNIT IV ATTRACTOR NEURAL NETWORK AND ART**9**

Hopfield model-BAM model- BAM stability-Adaptive BAM -Lyapunov function-effect of gain-Hopfield design-Application to TSP problem-ART- layer 1-layer 2-orienting subsystem- ART algorithm-ARTMAP.

UNIT V SELF ORGANIZATION**9**

Self organizing map-SOM Algorithm-properties of the feature map-LVQ-Hierarchical vector Quantization. Applications of self-organizing maps: The Neural Phonetic Typewriter Learning Ballistic Arm Movements.

Course Objectives

- To introduce the basic concepts of Fuzzy logic and its applications in various domain
- To educate how to use Fuzzy computation to solve real-world problems
- To have a solid understanding of Basic fuzzy models.
- Provide an understanding of the basic mathematical elements of the theory of fuzzy sets.
- To learn about applications on Fuzzy based systems
- To familiarize with fuzzy inference and defuzzy inference procedures

Course Outcomes

At the end of the course the students will be able to

- Understand the basic concepts of Fuzzy logic and its applications in various domain
- Gain knowledge on theory of Reasoning
- Develop fuzzy controllers
- Understand concepts of adaptive fuzzy control
- Ability to develop how to use Fuzzy computation to solve real- world problems
- Design fuzzy based model for any application

UNIT I**9**

Basics Of Fuzzy Logic: Fuzzy sets, Properties of fuzzy sets, operation in fuzzy sets, fuzzy relations, the extension principle

UNIT II**9**

Theory Of Approximate Reasoning: Linguistic variables, Fuzzy proportions, Fuzzy if- then statements, inference rules, compositional rule of inference-fuzzy models

UNIT III**9**

Fuzzy Knowledge Based Controllers (Fkbc): Basic concept structure of FKBC, choice of membership functions, scaling factors, rules, fuzzyfication and defuzzyfication procedures – Design of Fuzzy Logic Controller

UNIT IV**9**

Adaptive Fuzzy Control: Process performance monitoring, adaption mechanisms, membership functions, tuning using gradient descent and performance criteria. Set organizing controller model based controller.

UNIT V**9****FUZZY BASED SYSTEMS**

Simple applications of FKBC -washing machines- traffic regulations -lift control-fuzzy in medical applications-Introduction to ANFIS.

TOTAL: 45 HOURS

Course Objectives

- To impart basic knowledge in bioprocess Engineering
- To design the bioreactors for various operations.
- To understand the principle and working of heat transfer equipment.
- To extend the knowledge in principle of heat transfer inside a bioreactor
- To construct the equipment's used in mass transfer operations.
- To learn the equipment's used in separation process.

Course Outcomes

- Summarize the basic concepts in bioprocess Engineering.
- Ability to design the bioreactors for various operations.
- Ability to develop the heat transfer equipment's for Bioprocess Engineering.
- Ability to construct the equipment's used in mass transfer operations.
- To acquire the knowledge of regulatory constraints in bioprocess
- Categorize the equipment's used in separation process.

UNIT I ENGINEERING PROPERTIES AND STORAGE TANK**9**

Introduction to various mechanical properties of material to be used material of construction, design of cylindrical storage tank.

UNIT II REACTOR DESIGN**9**

Design of Airlift fermentor, Bubble column reactor and Continuous stirred tank reactor.

UNIT III HEAT TRANSFER EQUIPMENTS**9**

Design of Shell and tube Heat exchanger, Double pipe heat exchanger, long tube vertical evaporator and forced circulation evaporator.

UNIT IV MASS TRANSFER EQUIPMENTS**9**

Design of Bollmann extractor, fractionating column, packed tower and spray tray absorber

UNIT V SEPERATION EQUIPMENTS**9**

Design of plate and frame filter press, leaf filter, rotary drum filter, disc bowl centrifuge, rotart drum drier and Swenson –walker crystallizer.

Course Objectives

- To learn the scope and importance of food processing.
- To impart basic knowledge in different food processing methods carried out in the food tech companies.
- To extend the brief knowledge in food conservation operations.
- To study the methods of food preservation by cooling.
- To familiarize the students on the concepts of preservation methods for fruits.
- To create deeper understanding on preservation methods for vegetables.

Course Outcomes

- Describe the scope and importance of food processing.
- Outline the various processing methods for foods.
- Extend the knowledge in food conservation operations.
- Describe the methods of food preservation by cooling.
- Summarize the preservation methods for fruits.
- Demonstrate the preservation methods for vegetables.

UNIT I SCOPE AND IMPORTANCE OF FOOD PROCESSING**9**

Properties of food- Physical, thermal, mechanical, sensory. Raw material Preparation - Cleaning, sorting, grading, peeling.

UNIT II PROCESSING METHODS**9**

Heating- Blanching and Pasteurization. Freezing- Dehydration- canning- additives- fermentation- extrusion cooking- hydrostatic pressure cooking- dielectric heating- micro wave processing and aseptic processing – Infra red radiation processing- Concepts and equipment used.

UNIT III FOOD CONVERSION OPERATIONS**9**

Size reduction- Fibrous foods, dry foods and liquid foods- Theory and equipments- membrane separation- filtration- equipment and application.

UNIT IV FOOD PRESERVATION BY COOLING**9**

Refrigeration, Freezing-Theory, freezing time calculation, methods of freezing, freezing equipments, freeze drying, freeze concentration, thawing, effect of low temperature on food. Water activity, methods to control water activity.

UNIT V PRESERVATION METHODS FOR FRUITS AND VEGETABLES**9**

Pre processing operations - preservation by reduction of water content: drying / dehydration and concentration – chemical preservation – preservation of vegetables by acidification, preservation with sugar - Heat preservation– Food irradiation- Combined preservation techniques.

2	B. Sivasankar	Food processing and preservation	PHI Learning Pvt. Ltd	2002

COURSE OBJECTIVES

1. To understand the theoretical foundation of computational chemistry, with an emphasis on electronic structure calculations using quantum chemistry and classical molecular dynamics simulation techniques
2. To use computational chemistry software to simulate chemical processes, quantify and rationalise reactivity.
3. To study reaction mechanisms, relative free energies and structural dynamics
4. To compute different experimental properties and spectra using computational techniques.
5. To understand how to construct, interpret and utilise potential energy surfaces.
6. To understand the theoretical and practical challenges associated with computational modeling.

COURSE OUTCOMES

1. Understand the theoretical foundation of computational chemistry, with an emphasis on electronic structure calculations using quantum chemistry and classical molecular dynamics simulation techniques
2. Can use computational chemistry software to simulate chemical processes, quantify and rationalise reactivity.
3. Study reaction mechanisms, relative free energies and structural dynamics
4. Compute different experimental properties and spectra using computational techniques.
5. Understand how to construct, interpret and utilise potential energy surfaces.
6. Understand the theoretical and practical challenges associated with computational modeling.

UNIT I MOLECULAR MODELLING**9**

Introduction to concept of molecular modeling, molecular structure and internal energy, applications of molecular graphics, coordinate systems, potential energy surfaces, discussion of local and global energy minima.

UNIT II QUANTUM MECHANICS**9**

Introduction to the computational quantum mechanics; one electron atom, many electronic atoms and molecules, Hartree Fock equations; calculating molecular properties using ab initio and semi empirical methods.

UNIT III MOLECULAR MECHANICS**9**

Molecular mechanics; general features of molecular mechanics force field, bond stretching, angle bending, torsional terms, non – bonded interactions; force field parameterization and transferability; energy minimization; derivative and non – derivative methods, applications of energy minimization.

UNIT IV MOLECULAR DYNAMICS**9**

Molecular dynamics simulation methods; molecular dynamics using simple models, molecular dynamics with continuous potential, setting up and running a molecular dynamic simulation, constraint dynamics; Monte Carlo simulation; Monte Carlo simulation of molecules.

UNIT V MODELLING AND DRUG DESIGN**9**

Macromolecular modeling, design of ligands for known macro molecular target sites, Drug-receptor interaction, classical SAR /QSAR studies and their implications to the 3 D modeler, 2-D and 3-D database searching, pharmacophore identification and novel drug design, molecular docking, Structure-based drug design for all classes of targets.

TOTAL: 45 HOURS**TEXTBOOKS**

S.No.	Author(s) Name	Title of the book	Publisher	Year of Publications
1	Andrew Leach	Molecular Modelling: Principles and Applications	Prentice Hall	2001
2	N. Claude Cohen	Guidebook on Molecular Modeling in Drug Design	Academic Press	1996

REFERENCE BOOKS

S.No.	Author(s) Name	Title of the book	Publisher	Year of Publications
1	Yvonne C. Martin, editor, Peter Willett	Designing bioactive molecules : three- dimensional techniques and applications	Washington, DC : American Chemical Society	1998
2	Matthew F. Schlecht	Molecular Modeling on the PC	Wiley- Blackwell; Har	1998

COURSE OBJECTIVES

1. To understand the basics of biology
2. To gain knowledge about different biomolecules
3. To get familiarize with human diseases.
4. To learn about DNA & RNA.
5. To learn about different clinical investigations
6. To know the recent advances in biology

COURSE OUTCOMES

At the end of the course

1. Summarize the cell structures and its functions
2. Explain the Biomolecules functions
3. Classify the communicable and non-communicable human diseases
4. Illustrate the different organ function tests
5. Tell the applications of biology in environmental applications
6. Describe the concept of biomechanics

UNIT I OVERVIEW OF BIOREMEDIATION**9**

Pollution : Types and its consequences, History of bioremediation, Sources of contamination, Bioremediation processes, Environments where bioremediation is used, Microbiology of bioremediation.

UNIT II BIOFILM PROCESSES**9**

Trickling Filters and Biological Towers, Rotating Biological Contactors, Granular Media Filters, Fluidized-bed Reactors, Hybrid Biofilm Processes.

UNIT III BIOREMEDIATION FOR SOIL ENVIRONMENT**9**

Environment of Soil Microorganisms, Soil Organic Matter and Characteristics, Soil Microorganisms Association with Plants, Pesticides and Microorganisms, Petroleum Hydrocarbons and Microorganisms, Industrial solvents and Microorganism, Biotechnologies for Ex-Situ Remediation & in-Situ Remediation of Soil Phytoremediation Technology for Soil Decontamination.

UNIT IV BIOREMEDIATION FOR AIR AND WATER ENVIRONMEN**9**

Atmospheric Environment for Microorganisms, Microbial Degradation of Contaminants in Gas Phase, Biological Filtration Processes for Decontamination of Air Stream-Biofiltration, Biotrickling Filtration, Bioscrubbers, Contaminants in Groundwater, Landfill Leachate Biotreatment Technologies, Industrial Wastewater Biotreatment Technologies, Biotreatment of Surface Waters.

UNIT V BIOREMEDIATION OF METALS**9**

Microbial Transformation of Metals, Biological Treatment Technologies for Metals Remediation, Bioleaching and Biobenification, Bioaccumulation, Oxidation/Reduction Processes, Biological Methylation

TEXT BOOKS

S.No.	Author(s) Name	Title of the book	Publisher	Year of Publications
1	Rittmann, B.E., and McCarty, P.L.,	Environmental Biotechnology : Principles and Applications.	McGraw Hill,	2001
2	John Cookson	Bioremediation Engineering: Design and Applications	McGraw- Hill	1995

REFERENCES

S.No.	Author(s) Name	Title of the book	Publisher	Year of Publications
1	Prescott, L. M., Harley, and Klein, D. A	Microbiology	McGraw- Hill Higher Education	2008

COURSE OBJECTIVES

1. To study selected biological phenomena using physical principles.
2. To understand the biological and environmental sciences.
3. To gain the knowledge on technical enormous impact of the biological sciences.
4. To acquire the knowledge about molecular structure of biological systems.
5. To know the uses of proteins and its functions.
6. To understand the biological structure & function: Size and shape of macromolecules.

COURSE OUTCOMES

1. Study selected biological phenomena using physical principles.
2. Understand the biological and environmental sciences.
3. Gain the knowledge on technical enormous impact of the biological sciences.
4. Acquire the knowledge about molecular structure of biological systems.
5. Know the uses of proteins and its functions.
6. Understand the biological structure & function: Size and shape of macromolecules.

UNIT I MOLECULAR STRUCTURE OF BIOLOGICAL SYSTEMS 9

Intramolecular bonds – covalent – ionic and hydrogen bonds – biological structures -general features – water structure – hydration – interfacial phenomena and membranes – self assembly and molecular structure of membranes.

UNIT II CONFORMATION OF NUCLEIC ACIDS 9

Primary structure – the bases – sugars and the phosphodiester bonds- double helical structure – A, B and Z forms – properties of circular DNA – topology – polymorphism and flexibility of DNA – structure of ribonucleic acids – hydration of nucleic acids.

UNIT III CONFORMATION OF PROTEINS 9

Conformation of the peptide bond – secondary structures – ramachandran plots – use of potential functions – tertiary structure – folding – hydration of proteins – hydrophathy index.

UNIT IV ENERGETICS & DYNAMICS OF BIOLOGICAL SYSTEMS 9

Kinetics of ligand interactions; Biochemical kinetics studies, uni-molecular reactions, simple bi molecular multiple intermediates, steady state kinetics, catalytic efficiency, relaxation spectrometry, ribonuclease as an example.

UNIT V APPLIED TECHNIQUES 9

Techniques for the study of biological structure & function: Size and shape of macromolecules – methods of direct visualization macromolecules as hydrodynamic particles – macromolecules diffusion – ultra centrifugation – viscometry x-ray crystallography determination of molecular structures, X-ray fibre diffraction electron microscopy neutron scattering – light scattering.

TOTAL: 45 HOURS

TEXT BOOKS

S.No	Author(s) Name	Title of the book	Publisher	Year of Publications
1	Roland Glaser	Biophysics	Springer Science & Business Media	2001
2	Michel Daune	Molecular Biophysics: Structures in Motion	Oxford University Press	1999
3	Charles R. Cantor	Biophysical Chemistry, Part 2: Techniques for the Study of Biological Structure and Function	W. H. Freeman and Company	1980

COURSE OBJECTIVES

1. To understand the available tools and databases for performing research in bioinformatics.
2. To expose students to sequence alignment tool in bioinformatics.
3. To construct the phylogenetic trees for evolution.
4. To get familiar with the 3D structure of protein and classification.
5. To acquire basic knowledge in protein secondary structure prediction.
6. To extend the brief knowledge in Micro array data analysis.

COURSE OUTCOMES

Upon completion of this course, the students will be able to

1. Summarize the basic concepts and importance of Bioinformatics in various sectors.
2. Demonstrate the sequence alignment tool in bioinformatics.
3. Construct the phylogenetic trees for evolution.
4. Analyze the three dimensional protein structure and classification using various tools.
5. Illustrate the protein secondary structure prediction by comparative modeling.
6. Extend the knowledge in micro array technology and applications of bioinformatics in various sectors.

UNIT I OVERVIEW OF BIOINFORMATICS**9**

The scope of bioinformatics; bioinformatics & the internet; useful bioinformatics sites. Data acquisition: sequencing DNA, RNA & proteins; determination of protein structure; gene & protein expression data; protein interaction data. Databases – contents, structure & annotation: file formats; annotated sequence databases; miscellaneous databases.

UNIT II RETRIEVAL OF BIOLOGICAL DATA**9**

Data retrieval with Entrez & DBGET/ LinkDB; data retrieval with SRS (sequence retrieval system). Searching sequence databases by sequence similarity criteria: sequence similarity searches; amino acid substitution matrices; database searches, FASTA & BLAST; sequence filters; iterative database searches & PSI-BLAST. Multiple-sequence alignment, gene & protein families: multiple-sequence alignment & family relationships; protein families & pattern databases; protein domain families.

UNIT III PHYLOGENETICS**9**

Phylogenetics, cladistics & ontology; building phylogenetic trees; evolution of macromolecular sequences. Sequence annotation: principles of genome annotation; annotation tools & resources.

UNIT IV STRUCTURAL BIOINFORMATICS**9**

Conceptual models of protein structure; the relationship of protein three-dimensional structure to protein function; the evolution of protein structure & function; obtaining, viewing & analyzing structural data; structural alignment; classification of proteins of known three-dimensional structure: CATH & SCOP; introduction to protein structure prediction; structure prediction by comparative modeling; secondary structure prediction; advanced protein structure prediction & prediction strategies.

UNIT V MICROARRAY DATA ANALYSIS**9**

Microarray data, analysis methods; microarray data, tools & resources; sequence sampling & SAGE. Bioinformatics in pharmaceutical industry: informatics & drug discovery; pharmainformatics resources. Basic principles of computing in bioinformatics: running computer software; computer operating systems; software downloading & installation; database management.

COURSE OBJECTIVES

1. To impart the skills in the field of nano biotechnology and its applications.
2. To acquire knowledge in the nano particles and its significance in various fields.
3. To extend the knowledge in types and application of nano particles in sensors.
4. To define the concepts of biomaterials through molecular self assembly.
5. To equip students with clinical applications of nano devices.
6. To describe deeper understanding of the socio-economic issues in nanobiotechnology.

COURSE OUTCOMES

Upon completion of this course, the students will be able to

1. Develop skills in the field of nano biotechnology and its applications.
2. Summarize the nanoparticles and its significance in various fields.
3. Extend the knowledge in types and application of nano particles in sensors.
4. Define the concepts of biomaterials through molecular self assembly.
5. Outline the clinical applications of nano devices.
6. Describe the socio-economic issues in nanobiotechnology.

UNIT I INTRODUCTION**9**

Introduction, Scope and Overview, Length scales , Importance of Nanoscale and Technology, History of Nanotechnology, Future of Nanotechnology: Nano Technology Revolution, Silicon based Technology, Benefits and challenges in Molecular manufacturing: The Molecular assembler concept, Controversies and confusions, Understanding advanced capabilities, Nanotechnology in Different, Fields: Nanobiotechnology, Materials, Medicine, Dental care.

UNIT II NANO PARTICLES**9**

Introduction, Types of Nanoparticles, Techniques to Synthesize Nanoparticles, Characterization of Nanoparticles, Applications, Toxic effects of Nanomaterials, Significance of Nanoparticles Nanofabrications- MEMS/NEMS, Atomic Force Microscopy, Self assembled monolayers/ Dip- pen Nanolithography, Soft Lithography, PDMS Molding, Nano Particles, Nano wires and Nanotubes.

UNIT III APPLICATIONS**9**

Nanomedicine, Nanobiocensor and Nanofluidics. Nanocrystals in biological detection, Electrochemical DNA sensors and Integrated Nanoliter systems. Nano-Biodevices and Systems. Fabrication of Novel Biomaterials through molecular self assembly- Small scale systems for in vivo drug delivery- Future nanomachine.

UNIT IV NANOBIOTECHNOLOGY**9**

Clinical applications of nanodevices. Artificial neurons. Real-time nanosensors- Applications in cancer biology. Nanomedicine. Synthetic retinyl chips based on bacteriorhodopsins. High throughput DNA sequencing with nanocarbon tubules. Nanosurgical devices.

UNIT V ETHICAL ISSUES IN NANOTECHNOLOGY**9**

Introduction, Socioeconomic Challenges, Ethical Issues in Nanotechnology: With Especial Reference to Nanomedicine, Nanomedicine Applied in Nonmedical Contexts, Social Issues Relating to Nanomedicine. Social and Ethical Issues, Economic Impacts, Other Issues, Nanotechnology and Future Socio-economic challenges.

2	Bhushan, B.	Springer Handbook of Nanotechnology	Springer- Verlag Berlin Heidelberg	2004
3	FreitasJr R.A	Nanomedicine	Landes Biosciences	2004
4	Kohler, M. and Fritzsche, W.	Nanotechnology – An Introduction to Nanostructuring Techniques	Wiley- VCH	2004

Course Objective

1. To explain to the students about MEMS Technology, Present, Future and Challenges.
2. To gain a knowledge of basic approaches for microsystem design.
3. To gain a knowledge of state-of-the-art lithography techniques for microsystems.
4. To learn new materials, science and technology for microsystem applications.
5. To understand materials science for microsystem applications.
6. To understand state-of-the-art micromachining and packaging technologies.

Course Outcome

1. Students will explain MEMS Technology, Present, Future and Challenges.
2. Gain a knowledge of basic approaches for microsystem design
3. Gain a knowledge of state-of-the-art lithography techniques for microsystems
4. Learn new materials, science and technology for microsystem applications
5. Understand materials science for microsystem applications
6. Understand state-of-the-art micromachining and packaging technologies

UNIT I INTRODUCTION**9**

Intrinsic Characteristics of MEMS – Energy Domains and Transducers- Sensors and Actuators – Introduction to Micro fabrication - Silicon based MEMS processes – New Materials – Review of Electrical and Mechanical concepts in MEMS – Semiconductor devices – Stress and strain analysis – Flexural beam bending- Torsional deflection.

UNIT II SENSORS AND ACTUATORS-I**9**

Electrostatic sensors – Parallel plate capacitors – Applications – Interdigitated Finger capacitor – Comb drive devices – Micro Grippers – Micro Motors - Thermal Sensing and Actuation – Thermal expansion – Thermal couples – Thermal resistors – Thermal Bimorph - Applications – Magnetic Actuators – Micromagnetic components – Case studies of MEMS in magnetic actuators- Actuation using Shape Memory Alloys

UNIT III SENSORS AND ACTUATORS-II**9**

Piezoresistive sensors – Piezoresistive sensor materials - Stress analysis of mechanical elements – Applications to Inertia, Pressure, Tactile and Flow sensors – Piezoelectric sensors and actuators – piezoelectric effects – piezoelectric materials – Applications to Inertia , Acoustic, Tactile and Flow sensors.

UNIT IV MICROMACHINING**9**

Silicon Anisotropic Etching – Anisotropic Wet Etching – Dry Etching of Silicon – Plasma Etching – Deep Reaction Ion Etching (DRIE) – Isotropic Wet Etching – Gas Phase Etchants – Case studies - Basic surface micro machining processes – Structural and Sacrificial Materials – Acceleration of sacrificial Etch – Striction and Antistraction methods – LIGA Process - Assembly of 3D MEMS – Foundry process.

UNIT V POLYMER AND OPTICAL MEMS**9**

Polymers in MEMS– Polimide - SU-8 - Liquid Crystal Polymer (LCP) – PDMS – PMMA – Parylene – Fluorocarbon - Application to Acceleration, Pressure, Flow and Tactile sensors- Optical MEMS – Lenses and Mirrors – Actuators for Active Optical MEMS.

TOTAL: 45 HOURS

4	James J.Allen	Micro Electro Mechanical System Design	CRC Press Publisher	2010
5	Thomas M.Adams and Richard A.Layton	Introduction MEMS, Fabrication and Application	Springer	2012

Course Objective

1. To develop the student's knowledge in various robot structures and their workspace.
2. To develop student's skills in performing spatial transformations associated with rigid body motions.
3. To develop student's skills in perform kinematics analysis of robot systems.
4. To provide the student with knowledge of the singularity issues associated with the operation of robotic systems.
5. To provide the student with some knowledge and analysis skills associated with trajectory planning.
6. To provide the student with some knowledge and skills associated with robot control.

Course Outcome

1. Develop the student's knowledge in various robot structures and their workspace.
2. Develop student's skills in performing spatial transformations associated with rigid body motions.
3. Develop student's skills in perform kinematics analysis of robot systems.
4. Provide the student with knowledge of the singularity issues associated with the operation of robotic systems.
5. Provide the student with some knowledge and analysis skills associated with trajectory planning.
6. Provide the student with some knowledge and skills associated with robot control.

UNIT I FUNDAMENTALS OF ROBOT 9

Robot – Definition, Need for Robots, Robot Anatomy, Co-ordinate systems, Work Envelope, types and classification – specifications – Pitch, yaw, Roll, Joint Notations, Speed of Motion, Pay Load – Robot Parts and their functions, grippers types. Forward kinematics, inverse kinematics- Manipulators with two, three degrees of freedom in 2D - Derivations and problems.

UNIT II DRIVES AND SENSORS 9

Drives- hydraulic, pneumatic and electrical. Force sensing, touch and tactile sensors, proximity sensors, non contact sensors and Machine vision sensors. Safety considerations in robotic cell, proximity sensors, fail safe hazard sensor systems, and compliance mechanism.

UNIT III PROGRAMMING AND APPLICATIONS 9

Robot programming languages – VAL programming – Motion Commands, Sensorscommands. Role of robots in inspection, assembly, material handling, underwater, space, nuclear, defence and medical fields.

UNIT IV MACHINE VISION 9

Machine Vision - Sensing - Low and higher level vision - Image acquisition and digitization - Cameras, CCD,CID, CPD, etc., - Illumination and types - Image processing and analysis - Feature extraction - Applications.

UNIT V IMPLEMENTATION AND ROBOT ECONOMICS 9

RGV, AGV; Implementation of Robots in Industries-Various Steps; Safety Considerations for Robot Operations - Economic Analysis of Robots.

6	Rajput R.K	Robotics and Industrial Automation	S.Chand and Company	2008
7	Surender Kumar	Industrial Robots and Computer Integrated Manufacturing	Oxford and IBH Publishing Co. Pvt. Ltd	1991

Course Objective

1. To recognize and evaluate occupational safety and health hazards in the workplace.
2. To determine appropriate hazard controls following the hierarchy of controls.
3. To analyse the effects of workplace exposures, injuries and illnesses, fatalities.
4. To prevent incidents using the hierarchy of controls, effective safety and health management systems and task-oriented training.
5. To teach student the concept of Industrial Safety & provide useful practical knowledge for workplace safety.
6. To prevent or mitigate harm or damage to people, property, or the environment.

Course Outcome

1. Recognize and evaluate occupational safety and health hazards in the workplace.
2. Determine appropriate hazard controls following the hierarchy of controls.
3. Analyse the effects of workplace exposures, injuries and illnesses, fatalities.
4. Prevent incidents using the hierarchy of controls, effective safety and health management systems and task-oriented training.
5. Understand the concept of Industrial Safety & provide useful practical knowledge for workplace safety.
6. Prevent or mitigate harm or damage to people, property, or the environment.

UNIT I INTRODUCTION TO LOGISTICS**9**

Logistics - concepts, definitions and approaches, factors influencing logistics - Supply chain: basic tasks, definitions and approaches, influencing supply chain - a new corporate model.

UNIT II PHASES OF SUPPLY CHAIN**9**

The new paradigm shift - The modular company - The network relations - Supply processes - Procurement processes - Distribution management.

UNIT III EVOLUTION OF SUPPLY CHAIN MODELS**9**

Strategy and structure - Factors of supply chain - Manufacturing strategy stages - Supply chain progress - Model for competing through supply chain management - PLC grid, supply chain redesign - Linking supply chain with customer.

UNIT IV SUPPLY CHAIN ACTIVITIES**9**

Structuring the SC, SC and new products, functional roles in SC - SC design frame- work - Collaborative product commerce (CPC).

UNIT V SCM ORGANISATION AND INFORMATION SYSTEM**9**

The management task - Logistics organization - The logistics information systems - Topology of SC application - Product Data Management - Warehouse management system MRP- I, MRP - II, ERP,. - Case study, ERP Software's

2	Steudel.H.J and Desruelle.P	Manufacturing in the nineteen - How to become a mean, lean and world class competitor	Van No strand Reinhold, New York	1992

Course Objective

1. To generalized equations for mass, momentum and heat.
2. To understand the concepts of Reynolds and Gauss theorems.
3. To learn combined diffusive and convective transport.
4. To apply Film- and penetration models for mass and heat transfer.
5. To apply Stefan-Maxwells equations for multi-component diffusion.
6. To Solve the given set of equations either analytically or numerically.

Course Outcome

1. Generalized equations for mass, momentum and heat.
2. Understand the concepts of Reynolds and Gauss theorems.
3. Learn combined diffusive and convective transport.
4. Apply Film- and penetration models for mass and heat transfer.
5. Apply Stefan-Maxwells equations for multi-component diffusion.
6. Solve the given set of equations either analytically or numerically.

UNIT I INTRODUCTION AND BASIC CONCEPTS**9**

General overview of transport phenomena including various applications, Transport of momentum, heat and mass , Transport mechanism, Level of transport, Driving forces, Molecular transport (diffusion), convective transport (microscopic)

UNIT II PROPERTIES, UNITS AND OTHER PHYSICAL PARAMETERS**9**

Unit systems, temperature, mole, concentration, pressure, Gas laws, laws of conservation, energy and heat units

UNIT III MOMENTUM TRANSPORT**9**

Basic concepts in fluid mechanics, Force, unit and dimensions, pressure in fluid, head of fluid, Molecular transport for momentum, heat and mass transfer, Viscosity of fluids, Newton's law, Momentum transfer, Newtonian and non- Newtonian fluids, Fluid flow and Reynolds number, Overall mass balance, Control volume and Continuity equation, Overall energy balance, Bernoulli's equation, Overall momentum balance, Drag coefficient, Stokes law, Flow in packed beds, Flow in fluidized bed

UNIT IV ENERGY TRANSPORT**9**

Basic concepts in heat transfer, Heat transfer mechanisms, Fourier's law of heat conduction, thermal conductivity, convective heat transfer coefficient, Conduction heat transfer - through flat slab/wall and through hollow cylinder, Conduction through solids in series, Forced convection heat transfer inside pipes, Heat transfer outside various geometries in forced convection, General discussion on natural convection heat transfer, Heat exchangers, General discussion on radiation heat transfer

UNIT V MASS TRANSPORT**9**

Basic concepts in mass transport, Some application examples, Modes of mass transfer, Molecular diffusion- Fick's law, Analogy between mass, heat and momentum transfer, Dispersion, Hydraulic or Darcy's flow in porous media, Chemical kinetics and activation energy, Film theory, Convective mass transfer, Liquid-solid mass transfer, Liquid-liquid mass transport, Gas-liquid mass transfer, Aeration and oxygen transport, Air stripping

TOTAL: 45 HOURS

REFERENCES

1. Geankoplis, C. J. 2003. Transport Processes and Separation Processes Principles. 4th Edition. Prentice Hall.
2. <https://laulima.hawaii.edu/portal>

Course Objective

1. To describe the principles of the study of human movement.
2. To describe the range of factors that influence the initiation, production and control of human movement.
3. To identify the body's lever systems and their relationship to basic joint movement and classification.
4. To distinguish between biomechanical principles of kinetics and kinematics when applied to the analysis of human movement.
5. To explain joint and muscle function and the forces acting upon the human body during various sporting activities.
6. To relate the different body systems necessary for human movement to occur.

Course Outcome

1. Describe the principles of the study of human movement.
2. Describe the range of factors that influence the initiation, production and control of human movement.
3. Identify the body's lever systems and their relationship to basic joint movement and classification.
4. Distinguish between biomechanical principles of kinetics and kinematics when applied to the analysis of human movement.
5. Explain joint and muscle function and the forces acting upon the human body during various sporting activities.
6. Relate the different body systems necessary for human movement to occur.

UNIT I INTRODUCTION**9**

Biomechanics - Improving Performance – Applications - Preventing And Treating Injury - Qualitative And Quantitative Analysis - Scholarly Societies - Computer Searches – Biomechanical Knowledge versus Information - Kinds of Sources - Evaluating Sources

UNIT II KEY MECHANICAL CONCEPTS**9**

Mechanics - Basic Units - Nine Fundamentals of Biomechanics - Principles and Laws - Nine Principles for Application of Biomechanics

UNIT III HUMAN ANATOMY AND SOME BASIC TERMINOLOGY**9**

Gross (Whole-Body) Modeling - Position and Direction Terminology - Terminology for Common Movements - Skeletal Anatomy - Major Joints - Major Muscle Groups - Anthropometric Data

UNIT IV ANATOMICAL DESCRIPTION**9**

Key Anatomical Concepts - Directional Terms - Joint Motions - Muscle Actions - Active and Passive Tension of Muscle - Limitations of Functional Anatomical Analysis - Mechanical Method of Muscle Action Analysis - The Need for Biomechanics to Understand Muscle Actions - Sports Medicine and Rehabilitation Applications

UNIT V MECHANICS OF THE MUSCULOSKELETAL SYSTEM**9**

Tissue Loads - Response of Tissues To Forces - Biomechanics of The Passive Muscle–Tendon Unit - Biomechanics of Bone - Biomechanics of Ligaments - Three Mechanical Characteristics of Muscle - Stretch-Shortening Cycle (SSC) - Force–Time Principle - Neuromuscular Control

REFERENCES

1	Duane Knudson	Fundamentals of Biomechanics	Springer Science Business Media, LLC	2007
2	C. Ross Ethier Craig A. Simmons	Introductory Biomechanics	Cambridge University Press	2007

Course Objectives:

- To impart knowledge on the constructional details and principle of operation of various automobile components.
- To learn the function and working of various components in transmission and drive lines.
- To study the concept and working of steering and suspension systems in an automobile.
- To give knowledge on the wheels, tyres and brakes of automobiles.
- To provide information on the current and future trends in automobiles.
- Identify and explain the types of steering system.

Course Outcomes:

Upon successful completion of the course, the students should be able to:

- Demonstrate the operating principles and constructional details of various automobile components.
- Explain the function and working of components in transmission and drive lines.
- Identify and explain the types of steering system.
- Identify and explain the types of suspension system.
- Classify and describe the types of wheels, tyres and brakes of automobiles.
- Discuss the current and future trends in the automobiles.

UNIT I	ENGINE AND FUEL FEED SYSTEMS	9
---------------	-------------------------------------	----------

Classification of Engine , construction and working of four stroke petrol and diesel engine, firing order and its significance. Carburettor working principle, requirements of an automotive carburettor, Petrol injection Systems (MPFI, TBI), Diesel fuel injection systems (CRDI).

UNIT II TRANSMISSION SYSTEMS 9

Requirements of transmission system. Flywheel. Different types of clutches, principle, Construction, torque capacity and design aspects. Objective of the gearbox - Determination of gear ratios for vehicles. Performance characteristics at different speeds. Different types of gearboxes - operation. Function of Propellar Shaft Construction details of multi drive axle vehicles. Different types of final drive. Differential principles. Constructional details of differential unit. Non-slip differential. Differential lock

UNIT III SUSPENSION SYSTEM 9

Need of suspension system - Types of suspension - Suspension springs - Constructional details and characteristics of leaf, coil and torsion bar springs - Independent suspension - Rubber suspension – Pneumatic suspension – Hydro Elastic suspension - Shock absorbers. Vibration and driving comfort.

UNIT IV BRAKES 9

Necessity of brake, stopping distance and time, brake efficiency, weight transfer, shoe brake and disc brake theory Brake actuating systems - Mechanical, Hydraulic and Pneumatic. Parking and engine exhaust brakes. Power and power assisted brakes. Antilock Braking System (ABS).

UNIT -V ELECTRICAL SYSTEM 9

Principle and construction of lead acid battery. Lighting system: details of head light and side light, LED lighting system, head light dazzling and preventive methods – Horn, wiper system and trafficator. Starting System and charging system.

Course Objectives

- The objective of this course is to make the students to know and understand the constructional details, operating characteristics and design aspects of Two and Three wheelers.
- Construct the frames of two and three wheelers of different layouts.
- Demonstrate the constructional details and principle of operation of various engine components.
- Identify and explain the types of transmission systems.
- Identify and explain the types of steering and suspension systems.
- Classify and describe the types of wheels, tyres and brakes for two and three wheelers.

Course Outcomes

Upon successful completion of the course, the students should be able to:

- Construct the frames of two and three wheelers of different layouts.
- Demonstrate the constructional details and principle of operation of various engine components.
- Identify and explain the types of transmission systems.
- Identify and explain the types of steering and suspension systems.
- Classify and describe the types of wheels, tyres and brakes for two and three wheelers.
- Explain the servicing of two and three wheelers.

UNIT I INTRODUCTION**9**

Classifications- design considerations –weight and dimension limitations – requirements stability problems, gyroscopic effect- pendulum effect of two and three wheelers.

UNIT II POWER UNITS, IGNITION SYSTEMS AND OTHER ELECTRICAL SYSTEMS**9**

2 stroke and 4 stroke SI engines and CI engines design criteria– design of cylinders, cylinder head, cooling fins, crank case, connecting rod and crank shaft. Carburettor types and design. Battery coil ignition, magneto ignition and electronic ignition. Lighting and other electrical system.

UNIT III CLUTCHES AND TRANSMISSION**9**

Types of clutches for 2 and 3 wheelers. Design of clutch system. Gears for two and three wheelers. Design of gear box and gear change mechanism. Belt, chain and shaft drive. Freewheeling devices, starting systems.

UNIT IV FRAMES, SUSPENSION, WHEELS AND TYRES**9**

Types of frames used for two wheelers and three wheelers. Wheel frames- construction design of frames for fatigue strength torsional stiffness and lateral stability. Front and rear forks. Springs for suspension, Dampers, constructional details of wheel and tyres.

UNIT V THREE WHEELERS**9**

Auto rickshaws, different types, Pick-Ups and delivery type vehicle, frames and transmission for 3 wheelers wheel types, wheel attachment tyre types. Brakes and their operating mechanism.

TOTAL: 45 HOURS

TEXT BOOKS

Course Objectives

- The objective of this course is to make the students to know and understand the maintenance and fault diagnosis of basic systems in Automobile.
- Describe and differentiate the types of maintenance.
- List the procedure for dismantling, servicing and assembling of engine components.
- Demonstrate the servicing of transmission and driveline components.
- Discuss the procedure for steering and suspension
- Discuss the procedure for wheel and brake maintenance.

Course Outcomes

Upon successful completion of the course, the students should be able to:

- Describe and differentiate the types of maintenance.
- List the procedure for dismantling, servicing and assembling of engine components.
- Demonstrate the servicing of transmission and driveline components.
- Discuss the procedure for steering and suspension
- Discuss the procedure for wheel and brake maintenance.
- Explain the fault diagnosis in the electrical and air conditioner systems.

UNIT I MAINTENANCE OF RECORDS AND SCHEDULES**9**

Importance of maintenance, preventive (scheduled) and breakdown (unscheduled) maintenance, requirements of maintenance, preparation of check lists, Inspection schedule, maintenance of records, log sheets and other forms, safety precautions in maintenance.

UNIT II ENGINE MAINTENANCE**9**

Dismantling of engine components and cleaning, cleaning methods, visual and dimensional inspections, minor and major reconditioning of various components, reconditioning methods, engine assembly, special tools used for maintenance overhauling, engine tune up.

UNIT III CHASSIS MAINTENANCE**9**

Mechanical and automobile clutch and gear box, servicing and maintenance, maintenance servicing of propeller shaft and differential system, Maintenance servicing of suspension systems. Brake systems, types and servicing techniques, Steering systems, overhauling and maintenance. Wheel alignment, computerized alignment and wheel balancing.

UNIT IV ELECTRICAL SYSTEM MAINTENANCE**9**

Testing methods for checking electrical components, checking battery, starter motor, charging systems, DC generator and alternator, ignitions system, lighting systems, Fault diagnosis and maintenance of modern electronic controls, checking and servicing of dash board instruments.

UNIT V MAINTENANCE OF FUEL SYSTEM, COOLING SYSTEMS, LUBRICATION SYSTEM AND VEHICLE BODY**9**

Servicing and maintenance of fuel system of different types of vehicles, calibration and tuning of engine for optimum fuel supply, Cooling systems, water pump, radiator, thermostat, anticorrosion and antifreeze additives, Lubrication maintenance, lubricating oil changing, greasing of parts, Vehicle body maintenance, minor and major repairs. Door locks and window glass actuating system maintenance.

2.	James D Halderman	Advanced Engine Performance Diagnosis	Prentice Hall Publications	2011
3.	Service Manuals from Different Vehicle Manufacturers			

LTPC3003

- To impart knowledge on trends in the vehicle power plants.
- To learn the various advanced driver assistance systems.
- To study the working of advanced suspension and braking systems in an automobile.
- To give information about motor vehicle emission and noise pollution control.
- To provide knowledge of the vehicle telematics.
- To give information about the noise control techniques

- Distinguish and describe the various modern vehicle power plant systems.
- List and explain the various driver assistant mechanisms.
- Identify and describe the working of advanced suspension and braking systems.
- Apply the knowledge of motor vehicle emission and noise pollution control.
- Describe the noise control techniques
- Describe the vehicle telematics and its applications.

COURSE OBJECTIVES

1. Defining and identifying of eng. services systems in buildings.
2. The role of eng. services systems in providing comfort and facilitating life of users of the building.
3. The basic principles of asset management in a building & facilities maintenance environment
4. Importance of Fire safety and its installation techniques
5. To Know the principle of Refrigeration and application
6. To Understand Electrical system and its selection criteria

COURSE OUTCOME

The students will be able to

1. Machineries involved in building construction
2. Understand Electrical system and its selection criteria
3. Use the Principles of illumination & design
4. Know the principle of Refrigeration and application
5. Importance of Fire safety and its installation techniques
6. Know the principle behind the installation of building services and to ensure safety in buildings

UNIT I MACHINERIES**9**

Hot Water Boilers – Lifts and Escalators – Special features required for physically handicapped and elderly – Conveyors – Vibrators – Concrete mixers – DC/AC motors – Generators – Laboratory services – Gas, water, air and electricity

UNIT II ELECTRICAL SYSTEMS IN BUILDINGS**9**

Basics of electricity – Single / Three phase supply – Protective devices in electrical installations – Earthing for safety – Types of earthing – ISI specifications – Types of wires, wiring systems and their choice – Planning electrical wiring for building – Main and distribution boards – Transformers and switch gears – Layout of substations

UNIT III PRINCIPLES OF ILLUMINATION & DESIGN**9**

Visual tasks – Factors affecting visual tasks – Modern theory of light and colour – Synthesis of light – Additive and subtractive synthesis of colour – Luminous flux – Candela – Solid angle illumination – Utilisation factor – Depreciation factor – MSCP – MHCP – Laws of illumination – Classification of lighting – Artificial light sources – Spectral energy distribution – Luminous efficiency – Colour temperature – Colour rendering. Design of modern lighting – Lighting for stores, offices, schools, hospitals and house lighting. Elementary idea of special features required and minimum level of illumination required for physically handicapped and elderly in building types.

UNIT IV REFRIGERATION PRINCIPLES & APPLICATIONS**9**

Thermodynamics – Heat – Temperature, measurement transfer – Change of state – Sensible heat – Latent heat of fusion, evaporation, sublimation – saturation temperature – Super heated vapour – Subcooled liquid – Pressure temperature relationship for liquids – Refrigerants – Vapour compression cycle – Compressors – Evaporators – Refrigerant control devices – Electric motors – Starters – Air handling units – Cooling towers – Window type and packaged air-conditioners – Chilled water plant – Fan coil systems – Water piping – Cooling load – Air conditioning systems for different types of buildings – Protection against fire to be caused by A.C. Systems

UNIT V FIRE SAFETY INSTALLATION**9**

Causes of fire in buildings – Safety regulations – NBC – Planning considerations in buildings like non-combustible materials, construction, staircases and lift lobbies, fire escapes and A.C. systems. Special features required for physically handicapped and elderly in building types – Heat and smoke detectors – Fire alarm system, snorkel ladder – Fire lighting pump and water storage – Dry and wet risers – Automatic sprinklers

TOTAL: 45 HOURS**TEXT BOOKS**

S. No.	Author(s) Name	Title of the Book	Publisher	Year of Publication
1	E.R.Ambrose	Heat Pumps and Electric Heating	John and Wiley and Sons, Inc., New York	2002
2		Handbook for Building Engineers in Metric systems	NBC, New Delhi	2005

REFERENCES

1. Philips Lighting in Architectural Design, McGraw-Hill, New York, 2000.
2. A.F.C. Sherratt, “Air-conditioning and Energy Conservation”, The Architectural Press, London, 2005.
3. National Building Code.

OBJECTIVES:

1. To understand the coastal processes, coastal dynamics, impacts of structures like docks, harbours and quays leading to simple management perspectives along the coastal zone.
2. To describe the Coastal zone regulations, coastal processes and wave dynamics.
3. To forecast waves and tides and plan coastal structures including harbours.
4. To explain which scientific background values that are necessary for a successful planning,
5. To apply knowledge about ecosystem values and management in the planning process,
6. To plan and carry out a simplified consultation process for activities in the coastal zone

OUTCOMES:

1. Understand the coastal processes, coastal dynamics, impacts of structures like docks, harbours and quays leading to simple management perspectives along the coastal zone.
2. The Coastal zone regulations, coastal processes and wave dynamics.
3. Forecast waves and tides and plan coastal structures including harbours.
4. To explain which scientific background values that are necessary for a successful planning,
5. To apply knowledge about ecosystem values and management in the planning process,
6. To plan and carry out a simplified consultation process for activities in the coastal zone

UNIT I COASTAL ZONE

9

Coastal zone – Coastal zone regulations – Beach profile – Surf zone – Off shore – Coastal waters – Estuaries – Wet lands and Lagoons – Living resources – Non living resources.

UNIT II WAVE DYNAMICS

9

Wave classification – Airy's Linear Wave theory – Deep water waves – Shallow water waves – Wave pressure – Wave energy – Wave Decay – Reflection, Refraction and Diffraction of waves – Breaking of waves – Wave force on structures – Vertical – Sloping and stepped barriers – Force on piles.

UNIT III WAVE FORECASTING AND TIDES

9

Need for forecasting - SMB and PNJ methods of wave forecasting – Classification of tides – Darwin's equilibrium theory of tides – Effects on structures – seiches, Surges and Tsunamis.

UNIT IV COASTAL PROCESSES

9

Erosion and depositional shore features – Methods of protection – Littoral currents – Coastal aquifers – Sea water intrusion – Impact of sewage disposal in seas.

UNIT V HARBOURS

9

Types of classification of harbours – Requirements of a modern port – Selection of site – Types and selection of break waters – Need and mode of dredging – Selection of dredgers.

TOTAL: 45 HOURS

15BECEO04 EXPERIMENTAL METHODS AND MODEL ANALYSIS L T P C 3 0 0 3

OBJECTIVE:

1. To Describe some of the factors affecting reproducibility and external validity.
2. To List the different types of formal experimental designs (e.g. completely randomised, randomised block, repeated measures, Latin square and factorial experimental designs).
3. To explain the concept of variability, its causes and methods of reducing it
4. To describe possible causes of bias and ways of alleviating it
5. To identify the experimental unit and recognise issues of non-independence (pseudo-replication).
6. To describe the six factors affecting significance, including the meaning of statistical power and “p-values”.

OUTCOMES:

1. Describe some of the factors affecting reproducibility and external validity.
2. List the different types of formal experimental designs (e.g. completely randomised, randomised block, repeated measures, Latin square and factorial experimental designs).
3. Explain the concept of variability, its causes and methods of reducing it
4. Describe possible causes of bias and ways of alleviating it
5. Identify the experimental unit and recognise issues of non-independence (pseudo-replication).
6. Describe the six factors affecting significance, including the meaning of statistical power and “p-values”.

UNIT I MEASUREMENTS

9

Basic Concept in Measurements, Measurement of displacement, strain pressure, force, torque etc, Type of strain gauges (Mechanical, Electrical resistance, Acoustical etc..).

UNIT II GAUGING

9

Strain gauge circuits – The potentiometer and Wheatstone bridge – use of lead wires switches etc. Use of electrical resistance strain gauges in transducer applications.

UNIT III RECORDING DEVICES

9

Indicating and recording devices - Static and dynamic data recording –Data (Digital and Analogue) acquisition and processing systems. Strain analysis methods – Rosette analysis. Static and dynamic testing techniques. Equipment for loading-Moire’s techniques.

UNIT IV NON DESTRUCTIVE TESTING TECHNIQUES

9

Non destructive testing techniques. Photoelasticity – optics of photoelasticity – Polariscope – Isoclinics and Isochromatics - methods of stress separation.

UNIT V LAWS OF SIMILITUDE

9

Laws of similitude - model materials – model testing – testing large scale structures – holographic techniques

TOTAL: 45 HOURS

TEXT BOOKS

S. No.	Author(s) Name	Title of the Book	Publisher	Year of Publication
1	Dally J W and Riley W.F	Experimental stress Analysis	McGraw-Hill, Inc. New York	2005
2	Srinath L S et al	Experimental Stress Analysis	Tata McGraw-Hill Publishing co., Ltd., New Delhi	2006

REFERENCE BOOKS

1	Rangan C S et al	Instrumentation – Devices and Systems	Tata McGraw-Hill Publishing Co., Ltd., New Delhi	2002
2	Sadhu Singh	Experimental Stress Analysis	Khanna Publishers, New Delhi	2006

OBJECTIVES

1. To enable the students for a successful career as water management professionals.
2. To create a potential among students in the area of irrigation management with specific enrichment to synthesis of data and their analysis.
3. To expose the students the need for an interdisciplinary approach in irrigation water management
4. To providing a platform to work in an interdisciplinary team.
5. To provide students an ability to understand the applications of mathematical and scientific concepts to analyse intricate technical, social and environmental problems in irrigation water management and finding solutions for them.
6. To promote student awareness for a life-long learning process and inculcate professional ethics and codes of professional practice in water management.

OUTCOME

At the end of this the students will be in a capacity to

1. Understand the concepts of soil-water-plant relationship as well as to expose them to the principles and practices of crop production.
2. Exposure to ground water, hydraulics of ground water related to drainage, drainage concepts, planning, design and management of drainage related irrigation system management
3. Understand the various principles of irrigation management and to analyse the different types of irrigation systems and their performances based on service oriented approach.
4. Gain insight on local and global perceptions and approaches to participatory water resource management
5. Learn from successes and failures in the context of both rural and urban communities of water management.
6. Exposure on the use of economic concepts in irrigation development and to impart knowledge on economic planning so as to enable viable allocation of resources in the irrigation sector._

UNIT I IRRIGATION SYSTEM REQUIREMENTS**9**

Irrigation systems – Supply and demand of water – Cropping pattern – Crop rotation – Crop diversification – Estimation of total and peak crop water requirements – Effective and dependable rainfall – Irrigation efficiencies.

UNIT II IRRIGATION SCHEDULING**9**

Time of irrigation – Critical stages of water need of crops – Criteria for scheduling irrigation – Frequency and interval of irrigation.

UNIT III MANAGEMENT**9**

Structural and non-structural strategies in water use and management – Conjunctive use of surface and ground waters – Quality of irrigation water.

UNIT IV OPERATION**9**

Operational plans – Main canals, laterals and field channels – Water control and regulating structures – Performance indicators – Case study.

UNIT V INVOLVEMENT OF STAKE HOLDERS**9**

Farmer's participation in System operation – Water user's associations – Farmer councils – Changing paradigms on irrigation management – Participatory irrigation management

TOTAL: 45 HOURS

TEXT BOOKS

S. No.	Author(s) Name	Title of the Book	Publisher	Year of Publication

2	R.T. Gandhi, et. al	Hand book on Irrigation Water Requirement	Water Management Division, Department of Agriculture, Ministry of Agriculture, New Delhi	

REFERENCES

1. Hand Book on Irrigation System Operation Practices, Water Resources Management and Training Project, Technical report No. 33, CWC, New Delhi, 2000
2. Maloney, C. and Raju, K.V., “Managing Irrigation Together”, Practice and Policy in India, Stage Publication, New Delhi, India, 2000

OBJECTIVE

At the end of this course, the students should have learnt the fundamentals of CAD, computer graphics, fundamentals of finite elements analysis, design and optimization and expert systems.

UNIT I INTRODUCTION**9**

Fundamentals of CAD - Hardware and software requirements -Design process - Applications and benefits.

UNIT II COMPUTER GRAPHICS**9**

Graphic primitives - Transformations -Wire frame modeling and solid modeling -Graphic standards – Drafting packages

UNIT III STRUCTURAL ANALYSIS**9**

Fundamentals of finite element analysis - Principles of structural analysis -Analysis packages and applications.

UNIT IV DESIGN AND OPTIMISATION**9**

Principles of design of steel and RC Structures -Applications to simple design problems – Optimisation techniques - Algorithms - Linear Programming – Simplex method

UNIT V EXPERT SYSTEMS**9**

Introduction to artificial intelligence - Knowledge based expert systems -Rules and decision tables – Inference mechanisms - Simple applications.

TOTAL: 45 HOURS**TEXT BOOKS**

S. No.	Author(s) Name	Title of the Book	Publisher	Year of Publication

2	Rao S.S	Optimisation Theory and Applications	Wiley Eastern Limited, New Delhi	2002
3	Richard Forsyth (Ed)	Expert System Principles and Case Studies	Chapman and Hall, London	2000

OBJECTIVES:

1. To understand the importance of transportation and characteristics of road transport
2. To know about the history of highway development, surveys and classification of roads
3. To study about the geometric design of highways
4. To study about traffic characteristics and design of intersections
5. To know about the pavement materials and design
6. To design flexible and rigid pavements as per IRC.

COURSE OUTCOMES

On completion of the course, the students will be able to:

1. Carry out surveys involved in planning and highway alignment.
2. Design cross section elements, sight distance, horizontal and vertical alignment.
3. Implement traffic studies, traffic regulations and control, and intersection design.
4. Determine the characteristics of pavement materials.
5. Design flexible and rigid pavements as per IRC.
6. Will gain the knowledge of horizontal and vertical curves.

UNIT I TYPE OF PAVEMENT AND STRESS DISTRIBUTION ON LAYERED SYSTEM**9**

Introduction - Pavement as layered structure - Pavement types - rigid and flexible - Stress and deflections in pavements under repeated loading

UNIT II DESIGN OF FLEXIBLE PAVEMENTS**9**

Flexible pavement design - Empirical - Semi empirical and theoretical Methods - Design procedure as per latest IRC guidelines – Design and specification of rural roads

UNIT III DESIGN OF RIGID PAVEMENTS**9**

Cement concrete pavements - Modified Westergard approach - Design procedure as per latest IRC guidelines - Concrete roads and their scope in India.

UNIT IV PERFORMANCE EVALUATION AND MAINTENANCE**9**

Pavement Evaluation [Condition and evaluation surveys (Surface Appearance, Cracks, Patches And Pot Holes, Undulations, Ravelling, Roughness, Skid Resistance), Structural Evaluation By Deflection Measurements, Present Serviceability Index] Pavement maintenance. [IRC Recommendations Only]

UNIT V STABILISATION OF PAVEMENTS**9**

Stabilisation with special reference to highway pavements - Choice of stabilisers - Testing and field control – Stabilisation for rural roads in India - use of Geosynthetics (geotextiles & geogrids) in roads.

OBJECTIVES:

1. To understand the role of geology in the design and construction process of underground openings in rock.
2. To apply geologic concepts and approaches on rock engineering projects
3. To identify and classify rock using basic geologic classification systems.
4. To use the geologic literature to establish the geotechnical framework needed to properly design and construct heavy civil works rock projects.
5. To sequential design process used in geotechnical engineering practice.
6. To Require civil engineering students to read and summarize geologic literature for site specific projects.

OUTCOMES:

1. Understand the role of geology in the design and construction process of underground openings in rock.
2. Geologic concepts and approaches on rock engineering projects
3. Identify and classify rock using basic geologic classification systems.
4. Use the geologic literature to establish the geotechnical framework needed to properly design and construct heavy civil works rock projects.
5. Sequential design process used in geotechnical engineering practice.
6. Require civil engineering students to read and summarize geologic literature for site specific projects.

UNIT I CLASSIFICATION AND INDEX PROPERTIES OF ROCKS 9

Geological classification – Index properties of rock systems – Classification of rock masses for engineering purpose.

UNIT II ROCK STRENGTH AND FAILURE CRITERIA 9

Modes of rock failure – Strength of rock – Laboratory and field measurement of shear, tensile and compressive strength – Stress strain behaviour in compression – Mohr-coulomb failure criteria and empirical criteria for failure – Deformability of rock.

UNIT III INITIAL STRESSES AND THEIR MEASUREMENTS 9

Estimation of initial stresses in rocks – influence of joints and their orientation in distribution of stresses – technique for measurements of insitu stresses.

UNIT IV APPLICATION OF ROCK MECHANICS IN ENGINEERING 9

Simple engineering application – Underground openings – Rock slopes – Foundations and mining subsidence.

UNIT V ROCK BOLTING 9

Introduction – Rock bolt systems – rock bolt installation techniques – Testing of rock bolts – Choice of rock bolt based on rock mass condition.

TOTAL: 45 HOURS

TEXT BOOKS

S. No.	Author(s) Name	Title of the Book	Publisher	Year of Publication

OBJECTIVE:

1. To learnt the design of various steel water tanks, concrete water tanks, steel bunkers and silos, concrete bunkers and silos and pre stressed concrete water tanks
2. To design the storage structures.
3. To gain knowledge of steel water tanks and their design.
4. To get a brief idea about concrete water tanks.
5. To design steel bunkers and silos
6. To design pre stressed concrete water tanks

OUTCOMES:

1. The design of various steel water tanks, concrete water tanks, steel bunkers and silos, concrete bunkers and silos and pre stressed concrete water tanks
2. Design the storage structures.
3. Gain knowledge of steel water tanks and their design.
4. Get a brief idea about concrete water tanks.
5. Design steel bunkers and silos
6. Design pre stressed concrete water tanks

UNIT I STEEL WATER TANKS**9**

Design of rectangular riveted steel water tank – Tee covers – Plates – Stays – Longitudinal and transverse beams – Design of staging – Base plates – Foundation and anchor bolts – Design of pressed steel water tank – Design of stays – Joints – Design of hemispherical bottom water tank – side plates – Bottom plates – joints – Ring girder – Design of staging and foundation

UNIT II CONCRETE WATER TANKS**9**

Design of Circular tanks – Hinged and fixed at the base – IS method of calculating shear forces and moments – Hoop tension – Design of intze tank – Dome – Ring girders – Conical dome – Staging – Bracings – Raft foundation – Design of rectangular tanks – Approximate methods and IS methods – Design of under ground tanks – Design of base slab and side wall – Check for uplift.

UNIT III STEEL BUNKERS AND SILOS**9**

Design of square bunker – Jansen's and Airy's theories – IS Codal provisions – Design of side plates – Stiffeners – Hooper – Longitudinal beams – Design of cylindrical silo – Side plates – Ring girder – stiffeners.

UNIT IV CONCRETE BUNKERS AND SILOS**9**

Design of square bunker – Side Walls – Hopper bottom – Top and bottom edge beams – Design of cylindrical silo – Wall portion – Design of conical hopper – Ring beam at junction.

UNIT V PRESTRESSED CONCRETE WATER TANKS**9**

Principles of circular prestressing – Design of prestressed concrete circular water tanks.

OBJECTIVES:

1. To understand the need of energy conversion and the various methods of energy storage
2. To explain the field applications of solar energy
3. To identify Winds energy as alternate form of energy and to know how it can be tapped
4. To explain bio gas generation and its impact on environment
5. To understand the Geothermal & Tidal energy, its mechanism of production and its applications
6. To illustrate the concepts of Direct Energy Conversion systems & their applications.

OUTCOMES:

1. Understand the need of energy conversion and the various methods of energy storage
2. Explain the field applications of solar energy
3. Identify Winds energy as alternate form of energy and to know how it can be tapped
4. Explain bio gas generation and its impact on environment
5. Understand the Geothermal & Tidal energy, its mechanism of production and its applications
6. Illustrate the concepts of Direct Energy Conversion systems & their applications.

UNIT I INTRODUCTION**9**

Terminology – Wind Data – Gust factor and its determination - Wind speed variation with height – Shape factor – Aspect ratio – Drag and lift.

UNIT II EFFECT OF WIND ON STRUCTURES**9**

Static effect – Dynamic effect – Interference effects (concept only) – Rigid structure – Aeroelastic structure (concept only).

UNIT III EFFECT ON TYPICAL STRUCTURES**9**

Tall buildings – Low rise buildings – Roof and cladding – Chimneys, towers and bridges.

UNIT IV APPLICATION TO DESIGN**9**

Design forces on multistorey building, towers and roof trusses.

UNIT V INTRODUCTION TO WIND TUNNEL**9**

Types of models (Principles only) – Basic considerations – Examples of tests and their use.

TOTAL: 45 HOURS**TEXT BOOKS**

15BECEO11 ADVANCED CONSTRUCTION TECHNOLOGY L T P C 3 0 0 3

OBJECTIVE:

1. To give an experience in the implementation of new technology concepts which are applied in field of Advanced construction.
2. To study different methods of construction to successfully achieve the structural design with recommended specifications.
3. To involve the application of scientific and technological principles of planning, analysis, design and management to construction technology.
4. To study of construction equipment's, and temporary works required to facilitate the construction process
5. To provide a coherent development to the students for the courses in sector of Advanced construction technology.
6. To present the new technology of civil Engineering and concepts related Advanced construction technology.

OUTCOMES:

1. Implementation of new technology concepts which are applied in field of Advanced construction.
2. Different methods of construction to successfully achieve the structural design with recommended specifications.
3. Application of scientific and technological principles of planning, analysis, design and management to construction technology.
4. Will gain the Knowledge of construction equipment's, and temporary works required to facilitate the construction process
5. Development to the students for the courses in sector of Advanced construction technology.
6. The new technology of civil Engineering and concepts related Advanced construction technology.

UNIT I MODERN CONSTRUCTION METHODS 9

Open Excavation, Shafts and Tunnels- Preparation of foundation, Cofferdams, Caisson, Piled Foundation, Prestressed Concrete Construction, Pre-cast Concrete Construction.

UNIT II CONSTRUCTION METHODS FOR SPECIAL STRUCTURES 9

Construction Methods For Bridges, Construction Methods for Roads, Construction Methods For Special Structures for Railways, Construction Methods for Dams, Construction Methods for Harbour, Construction Methods for River Works Pipelines.

UNIT III MODERN CONSTRUCTION EQUIPEMENTS -I 9

Construction Equipment used for Earth Moving, Excavating, Drilling, Blasting, Tunneling and hoisting.

UNIT IV MODERN CONSTRUCTION EQUIPEMENTS -II 9

Construction Equipment used for Conveying, Hoisting, Dredging, Dewatering Systems, Paving and concreting Plant.

UNIT V PRINCIPLES AND PRACTICES OF TEMPORARY STRUCTURES 9

Principles and Practices of Temporary structures, Shoring, and Strutting, Underpinning, Principles and

Design of Formwork, Scaffolding, Operation and maintenance of construction equipments.

**LIST OF OPEN ELECTIVES OFFERED BY
ELECTRICAL AND ELECTRONICS ENGINEERING DEPARTMENT**

15BEEEOE01

ELECTRIC HYBRID VEHICLE

L T P C 3 0 0 3

Course Objectives

- To understand the basic concepts of electric hybrid vehicle.
- To gain the knowledge about electric propulsion unit.
- To gain the concept of Hybrid Electric Drive-Trains.
- To gain the different Energy Management Strategies.
- To study about the efficiency manipulation in drives
- To understand and gain the knowledge about various energy storage devices

Course Outcomes:

- Summarize the basic concepts in bioprocess Engineering.
- Explain the concept of Hybrid Electric Vehicles.
- Understand the concept of Hybrid Electric Drive-Trains.
- Identify the different Energy Management Strategies.
- Understand the concept of different Energy Storage devices.
- Analyze the different motor drives used in Hybrid Electric Vehicles.

UNIT I INTRODUCTION

9

History of hybrid and electric vehicles, social and environmental importance of hybrid and electric vehicles, impact of modern drive-trains on energy supplies.

UNIT II HYBRID ELECTRIC DRIVE-TRAINS

9

Basic concept of hybrid traction, introduction to various hybrid drive-train topologies, power flow control in hybrid drive-train topologies, fuel efficiency analysis.

UNIT III ELECTRIC PROPULSION UNIT

9

Introduction to electric components used in hybrid and electric vehicles, Configuration and control of DC Motor drives, Configuration and control of Induction Motor drives, configuration and control of Permanent Magnet Motor drives, Configuration and control of Switch Reluctance Motor drives, drive system efficiency.

UNIT IV ENERGY STORAGE

9

Introduction to Energy Storage Requirements in Hybrid and Electric Vehicles, Battery based energy storage and its analysis, Fuel Cell based energy storage and its analysis, Super Capacitor based energy storage and its analysis, Flywheel based energy storage and its analysis, Hybridization of different energy storage devices.

UNIT V ENERGY MANAGEMENT STRATEGIES

9

Introduction to energy management strategies used in hybrid and electric vehicles, classification of different energy management strategies, comparison of different energy management strategies, implementation issues of energy management strategies.

15BEEEOE02 ENERGY MANAGEMENT AND ENERGY AUDITING L T P C 3 0 0 3

Course Objectives:

- To gain the knowledge about energy management.
- To understand the basic concepts in economic analysis in energy management.
- To understand the basic principles of energy audit.
- To gain the knowledge about the basic concept of types of Energy Audit
- To gain and Evaluate the different energy efficient motors
- Understand the concept of Energy conservation.

Course Outcomes:

At the end of this course, students will demonstrate the ability to

- Understand the concept of Energy Management.
- Analyze the different methods for economic analysis
- Knowledge about the basic concept of Energy Audit and types.
- Evaluate the different energy efficient motors
- Understand the concept of Energy conservation.
- Investigate the different methods to improve power factor.

UNIT I ENERGY MANAGEMENT

9

Principles of energy management, organizing energy management program, initiating, planning, controlling, promoting, monitoring, reporting –Energy Auditor and Energy Manager – Eligibility, Qualification and functions - Questionnaire and check list for top management.

UNIT II ECONOMIC ASPECTS AND ANALYSIS

9

Economics analysis – Depreciation Methods, time value of money, rate of return, present worth method, replacement analysis, life cycle costing analysis - Calculation of simple payback method, net present worth method.

UNIT III BASIC PRINCIPLES OF ENERGY AUDIT

9

Energy audit – definition, concept, type of audit, energy index, cost index, pie charts, Sankey diagrams, load profiles, Energy conservation schemes – Energy audit of industries – energy saving potential, energy audit of process industry, thermal power station, building energy audit.

UNIT IV ENERGY EFFICIENT MOTORS

9

Electric Motors: Factors affecting efficiency - Energy efficient motors - constructional details, characteristics - voltage variation –over motoring – motor energy audit-

Energy conservation: Importance-energy saving measures in DG set-fans and blowers pumps- air conditioning system- energy efficient transformers.

UNIT V POWER FACTOR IMPROVEMENT, LIGHTING AND ENERGY INSTRUMENTS

9

Power factor - methods of improvement, location of capacitors, p.f with non linear loads, effect of harmonics on p.f,- p.f motor controllers –Energy efficient lighting system design and practice- lighting control– Measuring Instruments – wattmeter, data loggers, thermocouples, pyrometers, lux meters, tong testers, application of PLCs.

TEXT BOOK

S. No.	Author(s) Name	Title of the Book	Publisher	Year of Publication
1	Murphy W.R. and G.Mckay Butter worth	Energy Management	Heinemann Publications	2007

REFERENCES

S. No.	Author(s) Name	Title of the Book	Publisher	Year of Publication
1	John.C.Andreas	Energy Efficient Electric Motors	Marcel Dekker Inc Ltd – 3rd edition	2005
2	W.C.Turner Steve Doty	Energy Management Handbook	▪ Lulu Enterprises, Inc. - 8th Edition Volume II	2013

Course Objectives

- It deals with various types of Sensors & Transducers and their working principle
- It deals with resistive transducers
- It deals with capacitive transducers
- It deals with inductive transducers
- It deals with some of the miscellaneous transducers
- It deals with characteristics of transducers

Course Outcomes (COs)

At the end of the course the student will be able to

1. understand all types of sensors and transducers.
2. Justify the concept and working principle of different transducers and sensors
- 3 Justify the transducers that will be utilised in the electrical industries
4. Identify recent developments in transducer domain
5. Discover the knowledge for small technology up gradations in it
6. Analysis the real time application.

UNIT I INTRODUCTION OF TRANSDUCERS**9**

Transducer – Classification of transducers – Basic requirement of transducers.

UNIT II CHARACTERISTICS OF TRANSDUCERS**9**

Static characteristics – Dynamic characteristics – Mathematical model of transducer – Zero, first order and second order transducers – Response to impulse, step, ramp and sinusoidal inputs.

UNIT III RESISTIVE TRANSDUCERS**9**

Potentiometer –Loading effect – Strain gauge – Theory, types, temperature compensation – Applications – Torque measurement – Proving Ring – Load Cell – Resistance thermometer – Thermistors materials – Constructions, Characteristics – Hot wire anemometer.

UNIT IV INDUCTIVE AND CAPACITIVE TRANSDUCER**9**

Self inductive transducer – Mutual inductive transducers– LVDT Accelerometer – RVDT – Synchros – Microsyn – Capacitive transducer – Variable Area Type – Variable Air Gap type – Variable Permittivity type – Capacitor microphone.

UNIT V MISCELLEANEOUS TRANSDUCERS**9**

Piezoelectric transducer – Hall Effect transducers – Smart sensors – Fiber optic sensors – Film sensors – MEMS – Nano sensors, Digital transducers.

4	Murthy.D.V.S	Transducers and Instrumentation	PHI Learning Pvt. Ltd 2 nd edition	2010

Course Objectives

- To understand the basic principles of PLC systems.
- To gain the knowledge about data handling functions.
- To gain the knowledge of storage techniques in PLC
- To acquire the knowledge about how to handle the data and functions
- To study about flowcharts of ladder and spray process system
- To understand the principles of PID.

Course Outcome

- At the end of the course the student will be able to understand the registers and functions in PLC and they are able to do the program.
- To acquire the knowledge of storage techniques in PLC
- Students know how to handle the data and functions
- Students known about advanced controller in PLC applications
- Students gather real time industrial application of PLC
- Students gathered and evaluate the flow charts of ladder and spray process system

UNIT I INTRODUCTION**9**

PLC Basics PLC system, I/O modules and interfacing CPU processor programming equipment
Programming formats, construction of PLC ladder diagrams, devices connected to I/O modules.

UNIT II PLC PROGRAMMING**9**

PLC Programming input instructions, outputs, operational procedures, programming examples using contacts and coils. Drill-press operation. Digital logic gates programming in the Boolean algebra system, conversion examples Ladder diagrams for process control Ladder diagrams and sequence listings, ladder diagram construction and flow chart for spray process system.

UNIT III REGISTERS AND PLC FUNCTIONS**9**

PLC Registers: Characteristics of Registers module addressing holding registers input registers, output registers. PLC Functions Timer functions and industrial applications counters counter function industrial applications, Architecture functions, Number comparison functions, number conversion functions.

UNIT IV DATA HANDLING FUNCTIONS**9**

Data handling functions: SKIP, Master control Relay Jump Move FIFO, FAL, ONS, CLR and Sweep functions and their applications. Bit Pattern and changing a bit shift register, sequence functions and applications, controlling of two axes and three axis Robots with PLC, Matrix functions.

UNIT V PID PRINCIPLES**9**

Analog PLC operation: Analog modules and systems Analog signal processing multi bit data processing , analog output application examples, PID principles position indicator with PID control, PID modules, PID tuning, PID functions

Course Objectives

- To gain the knowledge about environmental aspects of energy utilization.
- To understand the basic principles of wind energy conversion, solar cells, photovoltaic conversion.
- To study about solar energy collectors and its storages
- To study about the inter connected system in wind power
- To understand the basic principles fuel cell, Geo thermal power plants.
- To gain the knowledge about hydro energy.

Course Outcomes

At the end of this course, students will demonstrate the ability to

- Analyze the Energy Scenario in India
- Understand the concept of Solar Energy
- Understand the concept of Wind Energy
- Understand the concept of Hydro Energy
- Analyze the different energy sources
- Students gathered the real time inter connected system modelling in wind power

UNIT I INTRODUCTION**9**

Energy scenario - Different types of Renewable Energy Sources - Environmental aspects of energy utilization - Energy Conservation and Energy Efficiency - Needs and Advantages, Energy Conservation Act 2003.

UNIT II SOLAR ENERGY**9**

Introduction to solar energy: solar radiation, availability, measurement and estimation– Solar thermal conversion devices and storage – solar cells and photovoltaic conversion – PV systems – MPPT. Applications of PV Systems – solar energy collectors and storage.

UNIT III WIND ENERGY**9**

Introduction – Basic principles of wind energy conversion- components of wind energy conversion system - site selection consideration – basic–Types of wind machines. Schemes for electric generation – generator control, load control, energy storage – applications of wind energy – Inter connected systems.

UNIT IV HYDRO ENERGY**9**

Hydropower, classification of hydro power, Turbine selection, Ocean energy resources, ocean energy routes. Principles of ocean thermal energy conversion systems, ocean thermal power plants. Principles of ocean wave energy conversion and tidal energy conversion.

UNIT V OTHER SOURCES**9**

Bio energy and types –Fuel cell, Geo-thermal power plants; Magneto-hydro-dynamic (MHD) energy conversion.

WEBSITES

1. www.energycentral.com
2. www.catelectricpowerinfo.com

Course Objectives

- To study the state variable analysis
- To provide adequate knowledge in the phase plane analysis and also describing function analysis.
- To study the analysis discrete time systems using conventional techniques.
- To analyze the stability of the systems using different techniques.
- To study the design of optimal controller.
- To study the types of compensators

Course Outcomes

At the end of the course the student will be able to

- understand the state variable analysis, Z- transform, state equation
- Construct the frequency response of the system using various plots
- Correlate the time and frequency domain specifications and effect of compensation
- Design the different types of compensators using frequency response plots to stabilize the control system
- Explain the state variable representation of physical systems with the effects of
 - state feedback its assessment for linear-time invariant systems.

UNIT 1 STATE VARIABLE ANALYSIS**9**

Concept of state – State Variable and State Model – State models for linear and continuous time systems – Solution of state and output equation – controllability and observability - Pole Placement –State observer Design of Control Systems with observers

UNIT II PHASE PLANE AND DESCRIBING FUNCTION ANALYSIS**9**

Features of linear and non-linear systems - Common physical non-linearities – Methods of linearizing non-linear systems - Construction of phase portraits – Singular points – Limit cycles Basic concepts, derivation of describing functions for common non-linearities – Describing function analysis of non-linear systems – Conditions for stability – Stability of oscillations.

UNIT III Z-TRANSFORM AND DIGITAL CONTROL SYSTEM**9**

Z transfer function – Block diagram – Signal flow graph – Discrete root locus – Bode plot.

UNIT IV STATE-SPACE DESIGN OF DIGITAL CONTROL SYSTEM**9**

State equation – Solutions – Realization – Controllability – Observability – Stability – Jury's test.

UNIT V OPTIMAL CONTROL**9**

Introduction -Decoupling - Time varying optimal control – LQR steady state optimal control – Optimal estimation – Multivariable control design.

Total number of credits: 187

L: Lecture Hour

T: Tutorial Hour

CIA: Continuous Internal

Assessment P: Practical Hour

C: No. of Credits

ESE: End Semester Examinations

Note:

- The passing minimum for value added course is 50 marks out of 100 marks. There will be two tests, of which one will be class test covering 50% of syllabus for 50 marks and other for 50 marks.
- Credits for value added courses are not counted for computation of CGPA.
- Interested students can opt one self study course in eighth semester from open electives which will be reflected in the mark sheet only if he / she passes.

Programme Educational Objectives (PEO's)

- 1:** Graduates will more conscious about their profession with social awareness and responsibility.
- 2:** Graduates will be engineering experts, who would help solve industry's technological problems.
- 3:** Graduates will be engineering professionals, consultants or entrepreneurs engaged in technology development.
- 4:** Graduates will interact with their peers in other disciplines in industry and society and contribute to the economic growth of the country.

Programme Outcomes (PO's)

- 1:** Ability to apply knowledge of mathematics and science in solving engineering problems.
- 2:** In-depth knowledge on the fundamental principles, construction and auxiliary systems of mechanical sciences.
- 3:** To understand the principles involved in evaluating the structural, functional and safety requirements of mechanical systems.
- 4:** Hands on knowledge to develop analytical skills for designing and analyzing various mechanical components and processes.
- 5:** To understand and apply appropriate techniques and IT tools for the design and analysis of mechanical systems.
- 6:** Understanding the mechanism of pollutant formation and its control techniques.
- 7:** Understanding of human and ethical responsibilities towards the profession and society.
- 8:** Ability to understand the economics and cost analysis in order to take economically sound decisions.
- 9:** Ability to apply modern techniques and tools necessary for engineering practice with appropriate considerations for public health, safety, cultural and environmental limitations.
- 10:** Understand the impact of engineering solutions in a societal context and to be able to respond effectively to the needs for sustainable development.
- 11:** Function effectively as an individual, and as a member or a leader in diverse teams, and in multi-disciplinary situations.
- 12:** To recognize the need for, and have the ability to engage in independent and lifelong learning.

Programme Specific Outcomes (PSO's)

- 13:** Ability to design a mechanical system, component, or process to meet desired needs of the nation, industries, institutions within realistic constraints such as economic, environmental, social, political, ethical, health care, and safety, manufacturability, and sustainability.
- 14:** Ability to develop and use of software tools and Information Technology for mechanical engineering domain.
- 15:** Ability to perform effectively first level managerial responsibilities for large or medium engineering organizations.

4								✓			✓				✓

COURSE OBJECTIVES

1. To enable students to attain fluency and accuracy to inculcate proficiency in professional communication.
2. To make the students to meet the growing demand in the field of Global communication.
3. To help students acquire their ability to speak effectively in real life situations.
4. To inculcate the habit of reading and to develop their effective reading skills.
5. To ensure that students use dictionary to improve their active and passive vocabulary.
6. To enable students to improve their lexical, grammatical and communicative competence.

COURSE OUTCOMES

Students undergoing this course will be able to

1. Use English language for communication: verbal & non-verbal.
2. Enrich comprehension and acquisition of speaking & writing ability.
3. Ensure students proficiency in professional communication.
4. Developed their active and passive vocabulary.
5. Gain confidence in using English language in real life situations.
6. Improve word power: lexical, grammatical and communication competence.

UNIT I

9

Listening – Types of listening - Listening to class reading - Video tapes/ audio tapes. **Speaking** – Introduction on self - Introduction on one's friend. **Reading** - Reading for comprehension – Reading different kind of passages like descriptive, narrative, objective, conversational and argumentative. **Writing** – Free writing on any topic – My favorite place, hobbies, dreams, goals, etc- Writing short messages - To fill in different application forms. **Grammar** – Articles- WH questions – Yes/No Question - Subject Verb agreement. **Vocabulary** - Word Formation – Word expansion (Root word) - Prefix and Suffix.

UNIT II

10

Listening – Understanding the passage in English – Pronunciation Practice. **Speaking** – Asking and answering questions - Telephone etiquette. **Reading** – Critical Reading – Finding key information in a given text (Skimming - scanning). **Writing** – Coherence and cohesion in writing – Short paragraph writing – Letters to the Editor. **Grammar** – Parts of Speech – Noun – Verb – Adjectives - Adverbs. **Vocabulary** – Compound Nouns/Adjectives – Irregular verbs.

UNIT III

10

Listening – Listening for specific task – Fill in the gaps. **Speaking** – Phonemes – Syllables – Role play – Conversation Practice. **Reading** – Reading and Comprehension. **Writing** - Autobiographical writing – Biographical writing - Instruction Writing. **Grammar** – Preposition – Infinitive – Gerund – Tenses. **Vocabulary** – Foreign words used in English – British and American usage.

UNIT IV

8

Listening – Responding to questions – Reading in class for complete understanding and for better pronunciation. **Speaking** – Debate, Presentations in seminars. **Reading** – Making inference from the reading passage – Predicting the content of reading passages. **Writing** - Interpreting visual materials (tables, graphs, charts, etc) – Formal and Informal letters. **Grammar** – Sentence Pattern – Voice (active and passive voice). **Vocabulary** – One word substitution.

UNIT V

8

Listening -Listening to different accents, speeches/presentations. **Speaking**- Extempore talk –Just-a-minute talk. **Reading**-Reading strategies–Intensive reading – Text analysis. **Writing** - Creative writing – Writing circulars and notices –Writing proposal. **Grammar**–Direct and Indirect speech–Conditionals sentences-Auxiliary verbs. **Vocabulary**– Abbreviations & Acronyms.

Note: Students shall have hands on training in improving listening skill in the language laboratory @ 2 periods per each unit.

COURSE OBJECTIVES

The objective of this course is

1. To familiarize the prospective engineers with techniques in calculus, and multivariate analysis.
2. To familiarize the prospective engineers with techniques in linear algebra.
3. To equip the students with standard concepts and tools at an intermediate to advanced level.
4. To equip the students will serve them to wards tackling more advanced level of mathematics.
5. To make the students will serve them to find the useful applications in their disciplines.
6. To make the students to solve the real time problems using standard concepts and tools.

COURSE OUTCOMES

The students will learn:

1. To apply differential and integral calculus to notions of curvature and to improper integrals.
2. Apart from some other applications they will have a basic understanding of Beta and Gamma functions.
3. The tool of power series and Fourier series for learning advanced Engineering Mathematics.
4. To deal with functions of several variables that are essential in most branches of engineering.
5. The essential tool of matrices and linear algebra in a comprehensive manner.
6. Students can solve real time problems using standard concepts and tools.

UNIT I MATRICES**12**

Review of Matrix Algebra - Characteristic equation – Eigenvalues and Eigenvectors of a real matrix – Properties – Cayley-Hamilton theorem (excluding proof) – Orthogonal transformation of a symmetric matrix to diagonal form – Quadratic forms – Reduction to canonical form through orthogonal reduction.

UNIT II DIFFERENTIAL CALCULUS**12**

Overview of Derivatives - Curvature in Cartesian co-ordinates – Centre and radius of curvature – Circle of curvature – Evolutes – Envelopes- Evolutes as Envelope of normals – Maxima and Minima of functions of two or more Variables – Method of Lagrangian Multipliers

UNIT III SEQUENCES AND SERIES**13**

Sequences: Definition and examples – Series: Types and Convergence – Series of positive terms – Tests of convergence: Comparison test, Integral test and D'Alembert's ratio test – Alternating series – Leibnitz's test – Series of positive and negative terms – Absolute and conditional convergence.

UNIT IV HYPERBOLIC FUNCTIONS, BETA AND GAMMA FUNCTIONS**12**

Hyperbolic functions: Hyperbolic functions and Inverse Hyperbolic functions – Identities – Real and imaginary parts – solving problems using hyperbolic functions.

Beta And Gamma Functions : Definitions – Properties – Relation between beta and gamma integrals – Evaluation of definite integrals in terms of beta and gamma functions.

UNIT V DIFFERENTIAL EQUATIONS**11**

Linear Differential equations of second and higher order with constant coefficients - Euler's form of Differential equations – Method of variation parameters.

2. www.mathcentre.ac.uk
3. www.intmath.com/matrices-determinants

COURSE OBJECTIVES

1. To introduce the basic physics concepts relevant to different branches of Engineering and Technology.
2. To acquire the knowledge of Electromagnetic field theory.
3. To make the student to learn scientific, mathematical and engineering principles.
4. To make the students to understand the basics of vacuum science.
5. To make the students to understand the process of production and measurement.
6. To make the students to understand the working of Gauges like Pirani, McLeod and Penning

COURSE OUTCOMES

1. Formulate potential problems within electrostatics, magneto statics.
2. Formulate stationary current distributions in linear, isotropic media.
3. Acquire knowledge on properties of matter, quantum physics.
4. Understand the basics of vacuum science.
5. Understand the process of production and measurement.
6. Understand the working of Gauges like Pirani, McLeod and Penning.

UNIT I PROPERTIES OF MATTER AND THERMODYNAMICS 9

Three types of modulus of elasticity – basic definitions, relation connecting the moduli (Derivation), poisson ratio- Torsional pendulum- bending of beams- bending moment – basic assumption of moment – uniform and non uniform bending

Concept of entropy- change of entropy in reversible and irreversible processes – refrigeration.

UNIT II LASER AND FIBER OPTICS 9

Introduction – emission and absorption process- Einstein's coefficients derivation. Types of LASER -CO₂, Semiconductor LASER Applications of LASER in industry and Medicine.

Total internal reflection – modes of propagation of light in optical fibers – numerical aperture and acceptance angle – derivations, types of optical fibers (Material, refractive index and mode) – fiber optical communication system (Block diagram)

UNIT III QUANTUM PHYSICS 9

Introduction to quantum theory – Compton effect- dual nature of matter and radiation – de Broglie wavelength, uncertainty principle – physical significance of wave function, Schrödinger's wave equation – time dependent and time independent equations – particle in one dimensional box. Scanning electron microscope.

UNIT IV CRYSTAL PHYSICS 9

Lattice – unit cell – Bravais lattice – lattice planes – Miller indices – calculation of number of atoms per unit cell, atomic radius, coordination number, packing factor for SC, BCC, FCC and HCP structures- crystal defects – point, line and surface defects

UNIT V NUCLEAR PHYSICS 9

Introduction – basics about nuclear fission and fusion, nuclear composition – stable nuclei- liquid drop model, Radiation detectors – scintillation counter, semi conductor detector, cloud chamber. Reactors – essentials of nuclear reactor- power reactor, pressurized water reactor, Fast breeder reactor.

1	Serway and Jewett	Physics for Scientists and Engineers with Modern Physics	Thomson Brooks/Cole, Indian reprint, New Delhi	2010
2	Gaur, R.K. and Gupta. S.C	Engineering Physics	Dhanpat Rai Publications, New Delhi.	2011

WEB REFERENCES

1. www.nptel.ac.in
2. www.physicsclassroom.com
3. www.oyc.yale.edu
4. www.physics.org

COURSE OBJECTIVES

1. To understand the terminologies of atomic and molecular structure
2. To study the basics of Periodic properties, Intermolecular forces
3. To study about spectroscopic technique
4. To understand the working of electromagnetic spectrum and spectroscopic techniques
5. To understand the thermodynamic functions
6. To comprehend the basic organic chemistry and to synthesis simple drug.

COURSE OUTCOMES

1. Analyse microscopic chemistry in terms of atomic and molecular orbitals and intermolecular forces.
2. Rationalise periodic properties such as ionization potential, electronegativity, oxidation states and electronegativity.
3. Understand the ranges of the electromagnetic spectrum used for exciting different molecular energy levels.
4. Understand the concept of various spectroscopic techniques.
5. Rationalise bulk properties and processes using thermodynamic considerations.
6. List major chemical reactions that are used in the synthesis of molecules.

UNIT I WATER TECHNOLOGY**9**

Characteristics – Alkalinity – Types of alkalinity and determination – Hardness – Types and estimation by EDTA method (problems) - Domestic water treatment – Disinfection methods (Chlorination, Ozonation, UV treatment) – Boiler feed water – Requirements – Disadvantages of using hard water in boilers – Internal conditioning (Phosphate, Calgon and Carbonate conditioning methods) – External conditioning – Demineralization process – Desalination and Reverse osmosis.

UNIT II ELECTROCHEMISTRY AND STORAGE DEVICES**9**

Electrochemical cells – Reversible and irreversible cells – EMF – Measurement of emf – Single electrode potential – Nernst equation – Reference electrodes – Standard Hydrogen electrode – Calomel electrode – Ion selective electrode – Glass electrode and measurement of pH – Electrochemical series – Significance – Potentiometric titrations (Redox - Fe^{2+} vs dichromate) – Batteries - Primary batteries - Leclanche cell - Secondary batteries - Lead acid battery.

UNIT III FUELS AND ROCKET PROPELLANTS**9**

Coal - Proximate and Ultimate analysis - Metallurgical coke - Manufacture by Otto-Hoffman method - Petroleum processing and fractions - Synthetic petrol - Bergius and Fischer-Tropsch method - Knocking - Octane number and Cetane number - Gaseous fuels - Water gas, Producer gas, An introduction to Fuel Cell, H_2 - O_2 Fuel Cell - Rocket engines - Types of rocket engines, Basic principles, Mass fraction.

UNIT IV CORROSION SCIENCE**9**

Chemical and Electrochemical corrosion - Galvanic corrosion - Differential aeration corrosion - Corrosion control - Sacrificial anode and Impressed current cathodic methods - Corrosion inhibitors - Protective coatings - Paints - Constituents and functions — Metallic coatings - Electroplating (Au) and Electroless plating (Ni) - Surface conversion coating and Hot dipping.

UNIT V SURFACE CHEMISTRY**9**

Introduction - Adsorption - Types, adsorption of gases on solids, adsorption of solutes from solutions, Adsorption isotherms - Freundlich adsorption isotherm - Langmuir adsorption isotherm - Industrial adsorbent materials - Role of adsorbents in catalysis and water softening - Emulsion - Types - water/oil, oil/water - Applications of adsorption.

3. <http://www.learnerstv.com/Free-chemistry-Video-lectures-ltv044-Page1.htm>

COURSE OBJECTIVES

1. To impart the basic knowledge about the Electric circuits.
2. To understand the working of Electrical Machines and Transformers.
3. To understand the working of Power Converters and components of low-voltage electrical installations.
4. To understand and analyze basic electric and magnetic circuits.
5. To study the working principles of electrical machines and power converters.
6. To introduce the components of low-voltage electrical installations.

COURSE OUTCOMES

1. Gain the basic knowledge about the Electric circuits.
2. Understand the working of Electrical Machines and Transformers.
3. Understand the working of Power Converters and components of low-voltage electrical installations
4. Understand and analyze basic electric and magnetic circuits.
5. Acquire knowledge on the working principles of electrical machines and power converters.
6. Understand the components of low-voltage electrical installations.

UNIT I ELECTRIC CIRCUITS & MEASUREMENTS 9

Ohm's Law – Kirchoff's Laws – Steady State Solution of DC Circuits – Introduction to AC Circuits Waveforms and RMS Value – Power and Power factor – Single Phase and Three Phase balanced Circuits.

UNIT II ELECTRICAL MACHINES 9

Construction, Principle of Operation, Basic Equations and Applications of DC Generators, DC Motors, Single Phase Transformer, single phase induction Motor.

UNIT III MEASURING INSTRUMENTS 9

Operating Principles of Moving Coil and Moving Iron Instruments (Ammeters and Voltmeters), Dynamometer type Watt meters and Energy meters.

UNIT IV SEMICONDUCTOR DEVICES AND APPLICATIONS 9

Characteristics of PN Junction Diode – Zener Effect – Zener Diode and its Characteristics – Half wave and Full wave Rectifiers – Voltage Regulation. Bipolar Junction Transistor – CB, CE, CC Configurations and Characteristics

UNIT V DIGITAL ELECTRONICS 9

Binary Number System – Logic Gates – Boolean Algebra – Half and Full Adders – Flip-Flops – Registers and Counters – A/D and D/A Conversion (single concepts).

TOTAL 45 PERIODS

TEXTBOOKS

S. No.	Author(s) Name	Title of the book	Publisher	Year of Publication
1	Mittle, V.M	Basic Electrical Engineering	Tata McGraw Hill Edition, New Delhi	2004
2	Sedha R.S	Applied Electronics	S. Chand & Co	2006

REFERENCES

S. No.	Author(s) Name	Title of the book	Publisher	Year of Publication
1	Muthusubramanian R, and Muraleedharan K A	Basic Electrical, Electronics and Computer Engineering	Tata McGraw Hill, Second Edition	2006
2	Nagsarkar T K and Sukhija M S	Basics of Electrical Engineering	Oxford press	2005
3	Mahmood Nahvi and Joseph A. Edminister	Electric Circuits	Schaum' Outline Series, McGraw Hill	2002
4	Premkumar N	Basic Electrical Engineering	Anuradha Publishers	2003

COURSE OBJECTIVES

1. To learn the basic concepts in physics relevant to different branches of Engineering and Technology.
2. To study the concept of semiconductor and conductivity.
3. To learn the properties of materials.
4. To understand the working of electromagnetic spectrum and spectroscopic techniques.
5. To understand the thermodynamic functions.
6. To comprehend the basic organic chemistry and to synthesis simple drug.

COURSE OUTCOMES

1. Understand the basic concepts in physics relevant to different branches of Engineering and Technology.
2. Understand the concept of semiconductor and conductivity.
3. Acquire knowledge on the properties of materials.
4. Understand the concept of various spectroscopic techniques.
5. Rationalize bulk properties and processes using thermodynamic considerations.
6. List major chemical reactions that are used in the synthesis of molecules.

LIST OF EXPERIMENTS**PHYSICS**

1. Determination of velocity of sound and compressibility of liquid – Ultrasonic interferometer.
2. Determination of wavelength of mercury spectrum – spectrometer grating.
3. Determination of Young's modulus of the material – Non uniform bending or Uniform bending.
4. Determination of Viscosity of liquid – Poiseuille's method.
5. Spectrometer Dispersive power of a prism.
6. Torsional pendulum – Determination of Rigidity modulus.
7. Particle size determination using Diode Laser
8. Determination of Laser parameters – Wavelength, and angle of divergence.
9. Determination of acceptance angle in an optical fiber.
10. Determination of thickness of a thin wire – Air wedge method
11. Determination of Band Gap of a semiconductor material.
12. Determination of Specific resistance of a given coil of wire – Carey Foster Bridge

CHEMISTRY

1. Estimation of alkalinity of Water sample
2. Estimation of hardness of Water by EDTA
3. Estimation of Chloride in Water sample (Argentometric method)
4. Determination of corrosion rate by weight loss method.
5. Determination of molecular weight and degree of polymerization using viscometry.
6. Conductometric Titration (Simple acid base).
7. Conductometric Titration (Mixture of weak and strong acids).
8. Conductometric Titration using BaCl_2 vs Na_2SO_4 .
9. pH Titration (acid & base).
10. Potentiometric Titration (Fe^{2+} / KMnO_4 or $\text{K}_2\text{Cr}_2\text{O}_7$).
11. Determination of water of crystallization of a crystalline salt (Copper sulphate).
12. Estimation of Ferric ion by spectrophotometry.
13. Determination of Chemical Oxygen Demand.

TOTAL**45 PERIODS**

COURSE OBJECTIVES

1. To prepare the students to design a system, component, or process.
2. To meet desired needs within realistic constraints such as economic, environmental, social, and ethical.
3. To make the component with health and safety, manufacturability, and sustainability
4. To prepare the students to communicate effectively and to use the techniques, and skills.
5. To make the students to use modern engineering tools necessary for engineering practice.
6. To make the students to assemble different components.

COURSE OUTCOMES

1. The students will gain knowledge of the different manufacturing processes.
2. To fabricate components using different materials.
3. Students will be able to fabricate components with their own hands.
4. They will also get practical knowledge of the dimensional accuracies and dimensional tolerances
5. By assembling different components with different processes.
6. They will be able to produce small devices of their interest.

PART – A (CIVIL & MECHANICAL)

- | | | |
|-----------|--|----------|
| 1. | WELDING | 6 |
| | i. Preparation of arc welding of butt joints, lap joints and tee joints. | |
| 2. | BASIC MACHINING | 6 |
| | i. Simple Turning and Tap turning | |
| | ii. Drilling and Tapping | |
| 3. | SHEET METAL WORK | 6 |
| | i. Model making – Trays, funnels, etc. | |
| 4. | DEMONSTRATION | 4 |
| | i. Smithy operations | |
| | ii. Foundry operations | |
| | iii. Plumbing Works | |
| | iv. Carpentry Works | |

PART – B (ELECTRICAL & ELECTRONICS)

- | | | |
|-----------|---|-----------|
| 5. | ELECTRICAL ENGINEERING | 10 |
| | i. Study of electrical symbols and electrical equipments. | |
| | ii. Construct the wiring diagram for Stair case wiring and Fluorescent lamp wiring. | |
| | iii. Construct the wiring diagram for Residential house wiring using switches, fuse, indicator, lamp and energymeter. | |
| | iv. Measurement of electrical quantities – voltage, current, power & power factor in R load. | |
| | v. Measurement of energy using single phase energymeter. | |
| 6. | ELECTRONICS ENGINEERING | 13 |
| | i. Study of Electronic components – Resistor (color coding), capacitors and inductors. | |
| | ii. Soldering practice – Components Devices and Circuits – Using general purpose PCB. | |
| | iii. Study of logic gates AND, OR, NOT, NOR and NAND. | |
| | iv. Study of HWR and FWR. | |

TOTAL 45 PERIODS

REFERENCES

S. No.	Author(s) Name	Title of the book	Publisher	Year of Publication
1	Jeyachandran, K. and Balasubramanian, S	A Premier on Engineering Practices Laboratory	Anuradha Publications, Kumbakonam	2007
2	Jeyapoovan, T., Saravanapandian, M	Engineering Practices Lab Manual	Vikas Puplishing House Pvt. Ltd, Chennai	2006
3	Bawa, H.S	Workshop Practice	Tata McGraw – Hill Publishing Company Limited, New Delhi	2007

COURSE OBJECTIVES

1. To make the students to design a system, component, or process to meet desired needs.
2. To prepare the students to design the components with realistic constraints.
3. To make the students to consider economic, environmental, ethical, health and safety when they design.
4. To make the students to design the components with considering manufacturability, and sustainability
5. To prepare the students to communicate effectively using the techniques, skills, and modern engineering tools.
6. To make the students to understand to use necessary for engineering practice.

COURSE OUTCOMES

The student will also learn:

1. Introduction to engineering design and its place in society
2. Exposure to the visual aspects of engineering design and engineering graphics standards
3. Exposure to engineering communication effectively.
4. Exposure to 3D free hand sketching.
5. Acquired the knowledge of projections of points, lines and plane surfaces.
6. Understand the basic concept of projection of solids.

UNIT I INTRODUCTION**3 + 10**

Introduction to Engineering Drawing, Bureau of Indian Standards (BIS), Layout of drawing sheets, sizes of drawing sheets, different types of lines used in drawing practice geometric constructions, principles of dimensioning – linear, angular, aligned system, unidirectional system, parallel dimensioning, chain dimensioning, location dimension and size dimension.

UNIT II SCALES AND PLANE CURVES**3 + 10**

SCALES: Reducing Scale, Enlarging Scale, Plain Scale, Diagonal Scale and Vernier Scale. Conics – Construction of Ellipse, Parabola and Hyperbola by eccentricity method

UNIT III FREE HAND SKETCHING**3 + 12**

Representation of Three Dimensional objects – General principles of orthographic projection – Need for importance of multiple views and their placement – First angle projection – layout views – Developing visualization skills through free hand sketching of multiple views from pictorial views of objects.

UNIT IV PROJECTION OF POINTS, LINES AND PLANE SURFACES**3 + 12**

Projection of points and straight lines located in the first quadrant – Determination of true lengths and true inclinations – Traces – Projection of polygonal surface and circular lamina inclined to both reference planes.

UNIT V PROJECTION OF SOLIDS**3 + 12**

Projection of simple solids like prisms, pyramids, cylinder and cone when the axis is inclined to one reference plane by change of position method.

Introduction to Drafting Software/Package (Not for Exam)**0 + 4**

Basic operation of drafting packages, use of various commands for drawing, dimensioning, editing, modifying, saving and printing/plotting the drawings. Introduction to 3D primitives.

WEB REFERENCES

1. IS 10711 – 2001: Technical products Documentation – Size and lay out of drawingsheets.
2. IS 9609 (Parts 0 and 1) – 2001: Technical products Documentation –Lettering.
3. IS 10714 (Part 20) – 2001 and SP 46 – 2003: Lines for technicaldrawings.
4. IS 11669 – 1986 and SP 46 – 2003: Dimensioning of TechnicalDrawings.
5. IS 15021 (Parts 1 to 4) – 2001: Technical drawings – ProjectionMethods.

COURSE OBJECTIVES

1. To know the value of being a human being and the value of being a useful citizen
2. To develop a critical ability to distinguish between essence and form, or between what is of value and what is superficial, in life.
3. To move from discrimination to commitment.
4. To recognize and determine the role of engineers in the economic and social development of the society.
5. To develop social responsibility & human professional ethics.
6. To develop the knowledge of social impact of economic liberalization and technology.

COURSE OUTCOMES

1. Identify and analyze an ethical issue in the subject matter under investigation or in a relevant field
2. Identify the multiple ethical interests at stake in a real-world situation or practice
3. Articulate what makes a particular course of action ethically defensible Assess their own ethical values and the social context of problems
4. Identify ethical concerns in research and intellectual contexts, including academic integrity, use and citation of sources, the objective presentation of data, and the treatment of human subjects
5. Demonstrate knowledge of ethical values in non-classroom activities, such as service learning, internships, and field work
6. Integrate, synthesize, and apply knowledge of ethical dilemmas and resolutions in academic settings, including focused and interdisciplinary research.

UNIT I**4**

Human life on Earth - Concept of Human Values - Value Education - Aim of education and value education - Types of values - Components of values – Attitudes – types of attitudes

UNIT II**4**

Self Development :Self analysis – Goal Setting - Thought Analysis – Guarding against Anger - Respect to age, experience, maturity, family members, neighbors, co-workers

UNIT III**5**

Individual Qualities– Truthfulness – Constructivity – Sacrifice – Sincerity - Self Control – Altruism– Tolerance - Scientific Vision – Regulating Desire

UNIT IV**4**

Mind Culture - Modern Challenges of Adolescent - Emotions and behavior - Sex and spirituality - Adolescent Emotions - Meditation

UNIT V**3**

Body and Mind Fitness : (a) Physical Exercises (b) Activities: (i) Moralization of Desires (ii) Neutralization of Anger (iii) Eradication of Worries (iv) Benefits of Blessings

TOTAL**20 PERIODS**

SEMESTER II

15BECC201

COMMUNICATIVE ENGLISH-II

3 0 0 3100

COURSE OBJECTIVES

1. To enable students to attain fluency and accuracy to inculcate proficiency in professional communication.
2. To make the students to meet the growing demand in the field of Global communication.
3. To help students acquire their ability to speak effectively in real life situations.
4. To inculcate the habit of reading and to develop their effective reading skills.
5. To ensure that students use dictionary to improve their active and passive vocabulary.
6. To enable students to improve their lexical, grammatical and communicative competence.

COURSE OUTCOMES

Students undergoing this course will be able to

1. Use English language for communication: verbal & non-verbal.
2. Enrich comprehension and acquisition of speaking & writing ability.
3. Ensure students proficiency in professional communication.
4. Developed their active and passive vocabulary.
5. Gain confidence in using English language in real life situations.
6. Improve word power: lexical, grammatical and communication competence.

UNIT I

10

Listening - Difference between Hearing & Listening –Listening to informal conversation. **Speaking** - Spoken structures on different situations - Introduction, Greeting, Comments on topics like Films, Games etc, Excuse, Request, Agreement, Disagreement, etc., **Reading** – Extensive and Intensive reading. **Writing** – Report writing - Writing a Covering letter. **Grammar** – Regular & Irregular verbs - Kinds of sentence - Question tags. **Vocabulary** – Homonyms and Homophones.

UNIT II

8

Listening – Note Taking- Improving grasping ability. **Speaking** – Welcome Address - Vote of thanks - Master of ceremony. **Reading** – Active and Passive reading - Reading for vocabulary- Reading for a purpose. **Writing** - Writing a review (Film review) - Summary of a story. **Grammar** - Modal verbs – Conjunction - Expression of cause and effect. **Vocabulary** - Phrasal verbs - Idioms.

UNIT III

9

Listening - Barriers to listening (Physical, Psychological, Linguistic & Cultural). **Speaking** – Stress, Pause and Intonation. **Reading** – Rapid Reading – Skimming, Scanning and Surveying. (SQ3R) **Writing**- Essay writing -Minutes of Meeting - Agenda – **Grammar** - Active and Passive voice - Purpose Expression. **Vocabulary** - Same words used as noun and verb - often misspelt and confused words.

UNIT IV

8

Listening – Listening to telephone conversation - Viewing model interviews. **Speaking** – Group Discussion - Correlation between verbal & non-verbal communication. **Reading** – Reading Comprehension (short & long text) - Reading job advertisements and profile of a company. **Writing** – Job Application - Resume Writing - Checklist Preparation. **Grammar** - Numerical Expressions – Collocations - **Vocabulary** - Singular and Plural (Nouns)

UNIT V

10

Listening – Types of Listening- Improving listening comprehension. **Speaking** - Oral presentation - Vocal communication techniques - voice, quality, volume, pitch etc., **Reading** -Note Making - Making notes from books/ any forms of writing materials. **Writing** - Describing process & products - Recommendation Writing – Short Essays Writing- **Grammar**- Transformation of sentences (Simple, Compound & Complex). **Vocabulary** - Collection of Technical Vocabulary with their meanings.

TOTAL 45 PERIODS

Note: Students shall have hands on training in improving listening skill in the language laboratory @ 2 periods per each unit.

COURSE OBJECTIVES

The objective of this course is

1. To familiarize the prospective engineers with techniques in Multivariate integration.
2. To familiarize the concept of ordinary and partial differential equations and complex variables.
3. To equip the students to deal with advanced level of mathematics and applications.
4. To make the students to formulate and solve problems involving random variables.
5. To equip the students to Understand the basic concepts of one- and two-dimensional random variables.
6. To understand the concept of testing of hypothesis for small and large samples in real life problems.

COURSE OUTCOME

The students will learn:

1. The mathematical tools needed in evaluating multiple integrals and their usage.
2. The effective mathematical tools for the solutions of differential equations that model physical processes.
3. The tools of differentiation and integration of functions of a complex variable that are used in various techniques dealing engineering Problems.
4. Understand the basic concepts of one- and two-dimensional random variables and apply in engineering applications.
5. They can also formulate and solve problems involving random variables and apply statistical methods for analyzing experimental data
6. Apply the concept of testing of hypothesis for small and large samples in real life problems.

UNIT I PARTIAL DIFFERENTIAL EQUATIONS**11**

Formation of partial differential equations by elimination of arbitrary constants and arbitrary functions – Solution of standard types of first order partial differential equations – Lagrange's linear equation – Linear partial differential equations of second and higher order with constant coefficients.

UNIT II MULTIPLE INTEGRALS**11**

Double integral – Cartesian coordinates – Polar coordinates – Change of order of integration – Triple integration in Cartesian co-ordinates – Area as double integrals.

UNIT III VECTOR CALCULUS**13**

Gradient, Divergence and Curl – Directional derivative – Irrotational and Solenoidal vector fields – Vector integration – Green's theorem, Gauss divergence theorem and Stoke's theorems (Statement Only)- Surfaces : hemisphere and rectangular parallelepipeds.

UNIT IV ANALYTIC FUNCTIONS**12**

Analytic functions - Cauchy-Riemann equations in Cartesian and polar forms – Sufficient condition for an analytic function (Statement Only) - Properties of analytic functions – Constructions of an analytic function - Conformal mapping: $w = z+a$, az , $1/z$, z^2 and bilinear transformation.

UNIT V COMPLEX INTEGRATION**13**

Complex Integration - Cauchy's integral theorem and integral formula (Statement Only) – Taylor series and Laurent series - Residues – Cauchy's residue theorem (Statement Only) - Applications of Residue theorem to evaluate real integrals around unit circle and semi circle (excluding poles on the real axis).

2. www.mathcentre.ac.uk
3. www.sosmath.com/diffeq/laplace/basic/basic.html
4. www.mathworld.wolfram.com

COURSE OBJECTIVES

1. To impart knowledge on metallurgical aspects of metals.
2. To understand heat treatment processes on different grades of steel.
3. To familiarize on selection of ferrous and non-ferrous materials for various applications.
4. To impart knowledge on non-metallic materials.
5. To learn about the strengthening mechanisms for Non-ferrous alloys.
6. To comprehend the significance of Non Destructive Testing (NDT) methods.

COURSE OUTCOMES

Learners should be able to

1. Identify the metallurgical aspects of metals.
2. Identify suitable heat treatment processes for various applications.
3. Select appropriate ferrous and non-ferrous materials for various applications.
4. Identify and select suitable non-metallic materials.
5. Identify suitable strengthening mechanisms for Non-ferrous alloys.
6. Work with non destructive testing methods.

UNIT I CONDUCTING MATERIALS**9**

Conductors – classical free electron theory of metals – Electrical and thermal conductivity – Wiedemann – Franz law – Lorentz number – Drawbacks of classical theory – Quantum theory – Fermi distribution function – Effect of temperature on Fermi Function – Density of energy states – carrier concentration in metals.

UNIT II SEMICONDUCTING MATERIALS**9**

Intrinsic semiconductor – carrier concentration derivation – Fermi level – Variation of Fermi level with temperature – electrical conductivity – band gap determination – extrinsic semiconductors – carrier concentration derivation in n-type semiconductor – variation of Fermi level with temperature and impurity concentration – compound semiconductors – Hall effect – Determination of Hall coefficient – Applications.

UNIT III MAGNETIC AND SUPERCONDUCTING MATERIALS**9**

Origin of magnetic moment – Dia and para magnetism – Ferro magnetism – Domain theory – Hysteresis – soft and hard magnetic materials – anti – ferromagnetic materials – Ferrites – applications. Superconductivity : properties - Types of super conductors – BCS theory of superconductivity (Qualitative) - High Temperature superconductors – Applications of superconductors – magnetic levitation.

UNIT IV DIELECTRIC MATERIALS**9**

Electrical susceptibility – dielectric constant – electronic, ionic, orientational and space charge polarization – frequency and temperature dependence of polarisation – internal field – Clausius – Mosotti relation (derivation) – dielectric loss – dielectric breakdown – Applications of dielectric materials – ferroelectricity and applications.

UNIT V ADVANCED MATERIALS**9**

Metallic glasses: preparation, properties and applications. Shape memory alloys (SMA): Characteristics, properties of NiTi alloy, application. Composite materials, Aircraft materials and non-metallic materials. Nano materials: synthesis – Physical and chemical vapour deposition – ball milling - properties of nanoparticles and applications. Carbon nanotubes: structure – properties and applications.

3. www.oyc.yale.edu
4. www.physics.org

COURSE OBJECTIVES

1. To create the awareness about environmental problems among people.
2. To develop an attitude of concern for the environment.
3. To motivate public to participate in environment protection and improvement.
4. To demonstrate proficiency in quantitative methods, qualitative analysis, and critical thinking.
5. To develop writing and oral communication needed to conduct high-level work as interdisciplinary scholars and / or practitioners.
6. To Learn about the systems concepts and methodologies to analyze and understand interactions.

COURSE OUTCOME

1. Master core concepts and methods from ecological and physical sciences and their application in environmental problem solving.
2. Master core concepts and methods from economic, political, and social analysis as they pertain to the design and evaluation of environmental policies and institutions.
3. Appreciate the ethical, cross-cultural, and historical context of environmental issues and the links between human and natural systems.
4. Understand the transnational character of environmental problems and ways of addressing them, including interactions across local to global scales.
5. Apply systems concepts and methodologies to analyze and understand interactions between social and environmental processes.
6. Reflect critically about their roles and identities as citizens, consumers and environmental actors in a complex, interconnected world.

UNIT I INTRODUCTION TO ENVIRONMENTAL STUDIES AND NATURAL RESOURCES 9

Definition, Scope and Importance – Need for public awareness -Forest resources: Use and over-exploitation, deforestation- Water resources-Use and over-utilization of surface and ground water, floods, drought, conflicts over water- Land resources- Land as a resource, land degradation, man induced landslides, soil erosion and desertification –Mineral resources: Use and exploitation, environmental effects of extracting and using mineral resources- Food resources-World food problems, changes caused by agriculture and overgrazing, effects of modern agriculture- Energy resources-Growing energy needs, renewable and non renewable energy sources, use of alternate energy sources- role of an individual in conservation of natural resources.

UNIT II ECOSYSTEM 9

Chemistry and Environment- Environmental segments, Composition and Structure of atmosphere- Concept of an ecosystem- Structure, components and function of an ecosystem Energy flow in the ecosystem – Food chain, food web and ecological pyramids, Structure and function of Terrestrial ecosystem (Forest, Desert and Grassland ecosystem) and Aquatic ecosystem (Fresh water and Marine ecosystem)

UNIT III BIODIVERSITY 9

Introduction to biodiversity, Definition- Genetic diversity, Species diversity and Ecosystem diversity, Biogeographical classification of India, Importance of biodiversity-Value of biodiversity - Hot Spots of biodiversity-Threats to biodiversity - Endangered and Endemic Species of India – Conservation of biodiversity- In-Situ and Ex-Situ conservation of biodiversity.

UNIT IV ENVIRONMENTAL POLLUTION 9

Definition – Causes, effects and control Measures of Air pollution, Water pollution, Soil pollution, Marine pollution, Noise pollution and Thermal pollution. Solid waste management- Causes, effects and control measures of urban and industrial wastes– Role of an individual in prevention of pollution–Disaster management:-earthquake, tsunami, cyclone and landslides.

UNIT V SOCIAL ISSUES AND ENVIRONMENT 9

From unsustainable to Sustainable development, Urban problems related to energy sources, water conservation, Rain water harvesting and watershed management, Resettlement and rehabilitation of people, its problems and concerns, Environmental ethics- Issues and possible solutions- Climate change- Green house effect and global warming, acid rain, ozone layer depletion, Wasteland reclamation- Environment Protection Act- Human Rights-Value Education, Role of Information Technology in Environment and human health-Population growth, variation of population among nations-Population explosion.

3. www.unesco.org/ext/field/beijing/scienceb.htm,
4. www.infinitepower.org/education.htm

COURSE OBJECTIVES

1. To know about different materials and their properties
2. To know about engineering aspects related to buildings
3. To know about importance of surveying and the transportation systems
4. To get exposed to the rudiments of engineering related to dams, water supply, and sewage disposal
5. To know about importance of drawings
6. To know about importance of electrical fittings.

COURSE OUTCOMES

1. Students are able to understand the property, use, advantage and disadvantage of different material used in construction
2. Students are able to understand the component of building with their function
3. Students are able to understand construction procedure of different components
4. After completion of this students will be able to understand basic principles of building design and planning.
5. They will explore building drawing as a way of discovering and developing ideas for designing residential, commercial and public buildings.
6. Students will identify suitable method of irrigation and drainage of waterlogged area.

UNIT I BUILDING MATERIALS**9**

Introduction – Civil Engineering – Materials: Bricks – composition – classifications – properties – uses. Stone – classification of rocks – quarrying – dressing – properties – uses. Timber – properties – uses – ply wood. Cement – grades – types – properties – uses. Steel – types – properties – uses – market forms. Concrete – grade – properties – uses.

UNIT II BUILDING COMPONENTS**9**

Building – selection of site – classification – components. Foundations – functions – classifications – bearing capacity. Flooring – requirements – types – cement concrete – marble – terrazzo floorings. Roof – types and requirements.

UNIT III SURVEYING**9**

Surveying – objectives – classification – principles of survey – survey instruments, their care and adjustments – Ranging and Chaining. Compass – types – Prismatic Compass. Bearing – types. Levelling – Levels and staves – types. Contouring

UNIT IV WATER SUPPLY AND SEWAGE DISPOSAL**9**

Dams – purpose – selection of site – types – gravity dam (cross section only). Water supply – objective – quantity of water – sources – standards of drinking water – distribution system. Sewage – classification – septic tank – components and functions.

UNIT V BUILDING DRAWING**9**

Types of drawing with appropriate scale & Uses of index map, key plan, village map, site plan, Layout plan – Types of Projection adopted in Building Drawing – Scales for various types of Drawings – Working drawing, large scale drawing – Symbols, Conventions and Abbreviations for – Electrical fittings, water supply, sanitary fittings, materials of construction – Sizes of various standard papers.

TOTAL 45 PERIODS**TEXT BOOKS**

S. No.	Author(s) Name	Title of the book	Publisher	Year of Publication
1	Raju K.V.B, Ravichandran P.T	Basics of Civil Engineering	Ayyappa Publications, Chennai	2012
2	V. B. Sikka	Civil engineering drawing	B. D. Kataria Sons, Ludhiana	2009

REFERENCES

S. No.	Author(s) Name	Title of the book	Publisher	Year of Publication
1	Civil Engineering	Ramesh Babu	VRB Publishers, Chennai	2010
2	-	Building Materials	National Building Code of India, Part V	2005
3	Engineering Materials	Rangwala S.C	Charotar Publishing House, Anand	2012

COURSE OBJECTIVES

1. Identify and understand the working of key components of a computer program.
2. Identify and understand the various kinds of keywords and different data types of C programming
3. Understand, analyze and implement software development tools like algorithm,
4. pseudo codes and programming structure
5. Study, analyze and understand logical structure of a computer program, and different construct to develop a program in "C" language
6. Programming to solve matrix addition and multiplication problems and searching and sorting problems.

COURSE OUTCOMES

The course will enable the students

1. To formulate simple algorithms for arithmetic and logical problems
2. To translate the algorithms to programs (in C language)
3. To test and execute the programs and correct syntax and logical errors
4. To implement conditional branching, iteration and recursion
5. To decompose a problem into functions and synthesize a complete program using divide and conquer approach
6. To use arrays, pointers and structures to formulate algorithms and programs

UNIT I OVERVIEW OF COMPUTER**8**

What is computer- Computer Components-Generation of Computers- Memory Organization-Memory Types- Input and Output Devices- Concepts of Hardware and Software- What is OS-Windows and Unix OS- Programming Languages- Basics of Computer Networks- LAN, WAN-Concept of Internet- ISP- Basics of word processing- Basics of spreadsheet – Basics of presentation Software

UNIT II OVERVIEW OF 'C'**8**

Algorithms-Representation of Algorithms-Flowchart- Introduction to programming Languages-What is C- C Character set- Constants, Variables and Keywords-General form of C Program-The First C Program-Data types-Arithmetic Instructions- Type conversions- Relational and Logical Operators-Hierarchy and associativity

UNIT III SELECTION AND ITERATION**9**

Selection Structures- If and nested if - Loops-Definition and types-While loop-for loop- do-while loop- break and continue- Nested loops- Advantages of iteration-Menu driven programs-Switch Case

UNIT IV FUNCTIONS**10**

Functions- Definition-types-Functions without arguments- Functions with Input arguments- Functions with output parameters-local and global variables- advantages of functions- Call by value and Call by reference- Recursion- Function as an argument

UNIT V ARRAYS AND STRINGS**10**

Arrays-definition- Declaring and referencing arrays- Array initialization- Using for loops for accessing arrays- Passing array elements as function arguments-2D Array - Matrix Addition and multiplication- Introduction to Strings- declaration and Initialization--String constant -Strings as Array of Character

TOTAL 45 PERIODS**REFERENCES**

S. No.	Author(s) Name	Title of the book	Publisher	Year of Publication
1	E. Balagurusamy	Computing Fundamentals and C Programming	TMH Education	2014
2	Yashavant Kanetkar	Let us C	BPB Publications	2013
3	H. M. Deitel and D. J. Deitel	C: How to Program'	Prentice Hall	2012
4	E. Balagurusamy	Programming in ANSI C	TMH Education	2012

COURSE OBJECTIVES

1. To provide an awareness to Computing and C Programming
2. To know the correct and efficient ways of solving problems
3. To learn to develop algorithm for simple problem solving.
4. To Study, analyze and understand logical structure of a computer program
5. To be able to declare pointers of different types and use the mind defining self-referential structures.
6. To be able to create, read and write to and from simple textfiles.

COURSE OUTCOMES

1. To formulate the algorithms for simple problems
2. To translate given algorithms to a working and correct program
3. To be able to correct syntax errors as reported by the compilers
4. To be able to identify and correct logical errors encountered at runtime
5. To be able to write iterative as well as recursive programs
6. To be able to represent data in arrays, strings and structures and manipulate them through a program

LIST OF EXPERIMENTS

1. Working with word Processing, Spreadsheet and presentation software in Linux
2. Programming in Scratch:
Practicing fundamental concepts of programming like sequence, selection decision statements, working of loops and event driven programming
3. C Programming:
Practicing programs to get exposure to basic data types, algebraic expressions, Conditional statements, Input and Output Formatting, Decision Statements, Switch Case, Control structures, arrays, Strings and funct

TOTAL 45 PERIODS

COURSE OBJECTIVES

1. To prepare the students to make section of solids like Prism, Cylinder, and Pyramid.
2. To prepare true shape of section.
3. To gain the knowledge on lateral surfaces.
4. To acquire the knowledge about development of surfaces like Prisms, pyramids, cylinders and cones.
5. To gain the knowledge on 2D drawing using CAD software.
6. To acquire the knowledge on basics of 3D modeling packages.

COURSE OUTCOMES

1. The students to draw section of solids like Prism, Cylinder, and Pyramid.
2. Students can prepare true shape of section.
3. Students gain the knowledge on lateral surfaces.
4. Students acquire the knowledge about development of surfaces like Prisms, pyramids, cylinders and cones.
5. Students gain the knowledge on 2D drawing using CAD software.
6. Students acquire the knowledge on basics of 3D modeling packages.

UNIT I SECTION OF SOLIDS**3 + 12**

Sectioning of above solids in simple vertical position by cutting planes inclined to one reference plane and perpendicular to the other – Obtaining true shape of section.

UNIT II DEVELOPMENT OF SURFACES**3 + 12**

Development of lateral surfaces of simple and truncated solids – Prisms, pyramids, cylinders and cones – Development of lateral surfaces of solids with cylindrical cutouts, perpendicular to the axis.

UNIT III ISOMETRIC PROJECTIONS**3 + 12**

Principles of isometric projection – isometric scale – isometric projections of simple solids, truncated prisms, pyramids, cylinders and cones.

UNIT IV PERSPECTIVE PROJECTIONS**3 + 12**

Perspective projection of prisms, pyramids, cylinders and cone by visual ray method and vanishing point method.

UNIT V COMPUTER GRAPHICS**3 + 12**

Introduction to 3D modeling packages. Drafting practices - modeling of simple engineering components, sections and extraction of 2D drawings.

TOTAL 15 + 60 = 75 PERIODS**TEXT BOOKS**

3. IS 10714 (Part 20) – 2001 and SP 46 – 2003: Lines for technical drawings.
4. IS 11669 – 1986 and SP 46 – 2003: Dimensioning of Technical Drawings.
5. IS 15021 (Parts 1 to 4) – 2001: Technical drawings – Projection Methods.

COURSE OBJECTIVES

1. To understand the basics of biology
2. To gain knowledge about different biomolecules
3. To get familiarize with human diseases.
4. To learn about DNA & RNA.
5. To learn about different clinical investigations
6. To know the recent advances in biology

COURSE OUTCOMES

At the end of the course

1. Summarize the cell structures and its functions
2. Explain the Biomolecules functions
3. Classify the communicable and non-communicable human diseases
4. Illustrate the different organ function tests
5. Tell the applications of biology in environmental applications
6. Describe the concept of biomechanics

UNIT I BASICS OF CELL BIOLOGY

4

History, Cell theory, Cell Structure-Prokaryotic and Eukaryotic cells, Animal and Plant Cell. Cell cycle, Mitosis, Meiosis and Reproductive cycle.

UNIT II BIOMOLECULES

4

Carbohydrates-Classification, Qualitative tests for sugars, Lipids-Definition, Classification; Proteins-classification and functions; Nucleic acids-basic structure; Hormones-definition, importance; Vitamins.

UNIT III HUMAN ANATOMY AND PHYSIOLOGY

5

Levels of Structural organization, the eleven systems of human body, central nervous system- cardiovascular system and immune system.

UNIT IV GENETICS AND GENETIC DISORDERS

4

History of genetics-Scope and Importance of genetics, Mendel and his work, DNA stores genetic information- gene mutation, disorders due to mutant genes.

UNIT V TECHNOLOGICAL ADVANCES IN BIOLOGY

3

Biopharmaceuticals, Gene therapy, genetically modified crops, probiotics.

SEMESTER III**15BEME301****METHODS OF APPLIED MATHEMATICS****3 2 0 4100****COURSE OBJECTIVES**

1. To introduce the basic concepts of PDE for solving standard partial differential equations
2. To acquaint the student with Fourier series techniques in solving heat flow problems used in various situations.
3. To provide an overview of probability and statistics to engineers
4. To introduce the basic concepts of two-dimensional random variables
5. To acquaint the knowledge of testing of hypothesis for small and large samples.
6. To apply testing of hypothesis in important role in real life problems.

COURSE OUTCOMES

After successfully completing the course, the student will have a good understanding of the following topics and their applications

1. The fundamental concepts of partial differential equations and the various solution procedures for solving the first order non-linear partial differential equations.
2. Appreciate the physical significance of Fourier series techniques in solving one- and two-dimensional heat flow problems and one-dimensional wave equations.
3. Understand the basic concepts of one knowledge of the concepts of probability and have knowledge of standard distribution which can describe real life phenomenon.
4. Understand the basic concepts of one- and two-dimensional random variables and apply in engineering applications.
5. They can also formulate and solve problems involving random variables and apply statistical methods for analyzing experimental data
6. Apply the concept of testing of hypothesis for small and large samples in real life problems

UNIT I LAPLACE TRANSFORM**13**

Transforms of elementary functions – Basic properties – Transforms of derivatives and integrals – Initial and final value theorems. Inverse Laplace transforms – Convolution theorem (statement only) – Solution of Ordinary Differential Equations with constant coefficients using Laplace transforms – Transform of periodic functions

UNIT II FOURIER SERIES**12**

Dirichlet's conditions – General Fourier series – Odd and even functions – Half range sine series – Half range cosine series – Complex form of Fourier Series – Parseval's identity – Harmonic Analysis.

UNIT III FOURIER TRANSFORM**12**

Fourier integral theorem (Statement Only) – Fourier transform pair – Sine and Cosine transforms – Properties – Transforms of simple functions – Convolution theorem – Parseval's identity – Relation between Fourier and Laplace transforms

UNIT IV APPLICATIONS OF PARTIAL DIFFERENTIAL EQUATIONS**12**

Classification of second order quasi linear partial differential equations – Solutions of one dimensional wave equation – One dimensional heat equation – Steady state solution of two-dimensional heat equation (Insulated edges excluded)

UNIT V Z-TRANSFORM AND DIFFERENCE EQUATIONS**11**

Z-transform - Elementary properties – Inverse Z – transform – Convolution theorem - Formation of difference equations – Solution of difference equations using Z - transform.

4. <http://tutorial.math.lamar.edu/classes/DE/IntroPDE.aspx>

COURSE OBJECTIVES

1. To develop capacity to predict the effect of force and motion.
2. To understand the importance of free body diagram for complex machine structure.
3. To perform force analysis using law of mechanics.
4. To introduce the concepts of static equilibrium condition for particles and rigid bodies
5. To Understand the concepts of kinematics of particles and friction.
6. To make the students conversant to solve the problems using equation of motions.

COURSE OUTCOMES

At the end of the course the students will be able to

1. Understand the basic concepts of force and laws of mechanics.
2. Develop free body diagram for complex machine structure and to perform force analysis.
3. Apply static equilibrium condition for particles and rigid bodies.
4. Locate the center of gravity and moment of inertia for planes and solids.
5. Understand the concepts of kinematics of particles and friction.
6. Solve the problems using equation of motions.

UNIT I STATICS OF PARTICLES**9 +3**

Forces – system of forces – concurrent forces in plane and space– resultant – problems involving the equilibrium of a particle–free body diagram–equilibrium of particle in space.

UNIT II STATICS OF RIGID BODIES IN TWO DIMENSIONS**9 +3**

Rigid bodies–moment of force about an axis–moments and couples–equivalent system of coplanar forces–
Rigid body in equilibrium–problems involving equilibrium of rigid body–types of supports–reactions of beams.

UNIT III CENTROID, CENTRE OF GRAVITY AND MOMENT OF INERTIA**9 +3**

Centroids of areas, composite areas, determination of moment of inertia of plane figures, polar moment of inertia – radius of gyration – mass moment of inertia of simple solids.

UNIT IV KINEMATICS OF PARTICLES**9 +3**

Introduction – plane, rectilinear motion – time dependent motion – rectangular coordinates – projectile motion.

IMPULSE AND MOMENTUM: Concept of conservation of momentum – Impulse–Momentum principle– Impact – Direct central impact – Oblique central impact – Impact of elastic bodies.

UNIT V KINETICS OF PARTICLES AND FRICTION**9 +3**

KINETICS OF PARTICLES: Equations of motion–rectilinear motion–Newton's II law – D'Alembert's principle – Energy – potential energy–kinetic energy–conservation of energy–work done by a force – work energy method.

Laws of friction – coefficient of friction–problems involving dry friction – wedge and ladder friction.

COURSE OBJECTIVE

1. To familiarize the students to apply suitable molding and casting methods for producing components.
2. To develop an understanding of types of metal joining processes.
3. To explain types of deformation processes.
4. To understand the concept of sheet metal operations and metal forming processes.
5. To provide an overview of various plastic component manufacturing processes for various applications.
6. To Study and acquire knowledge of process variables to manufacture defect free products.

COURSE OUTCOMES

Upon completion of this course, the students can able to

1. Apply suitable molding and casting methods for producing components.
2. Decide the type of metal joining processes.
3. Select the type of deformation processes.
4. Work with various sheet metal operations and metal forming processes.
5. Select the various plastic component manufacturing processes for various applications.
6. Identify the effect of process variables to manufacture defect free products.

UNIT I METALCASTING PROCESSES**9**

Introduction to Sand casting – Sand moulds – Type of patterns – Pattern materials – Pattern allowances – Types of Moulding sand – Properties – Core making – Types – CO₂ process - Moulding machines – Types of moulding machines – Types of melting furnaces (cupola, induction) – Working principle of Special casting processes – Shell moulding, Investment casting, Pressure die casting, Centrifugal casting – Casting defects – Inspection methods.

UNIT II JOINING PROCESSES**9**

Fusion welding processes – Types of Gas welding – Equipments used – Flame characteristics – Filler and Flux materials and properties – Arc welding equipments – Electrodes – Coating and specifications – Principles of Resistance welding – Gas metal arc welding – Submerged arc welding – TIG, MIG welding – Friction Stir Welding – Weld defects – Brazing and soldering process.

UNIT III BULK DEFORMATION PROCESSES**9**

Hot working and cold working of metals – Ingots – Forging processes – Open, impression and closed die forging – Types of Forging Machines – Rolling of metals – Types of Rolling mills – Defects in rolled parts – Principle of rod and wire drawing – Tube drawing – Principles of Extrusion – Types of Extrusion – Hot and Cold extrusion – Equipments used.

UNIT IV SHEET METAL PROCESSES**9**

Sheet metal characteristics – Press – Types of press – Principle of punching, blanking, coining, piercing, notching, embossing – Typical shearing operations, bending, drawing and deep drawing operations – Metal spinning, Stretch forming operations – Formability of sheet metal – Test methods.

UNIT V MANUFACTURING OF PLASTIC COMPONENTS**9**

Types of plastics – Characteristics of the forming and shaping processes – Moulding of Thermoplastics – Working principles and typical applications of – Injection moulding – Plunger and screw machines – Compression moulding, Transfer moulding – Typical industrial applications – Introduction to Blow moulding – Rotational moulding – Film blowing – Extrusion – Thermoforming – Bonding of Thermoplastics.

COURSE OBJECTIVES

1. To enrich the understanding of fluid properties
2. To make the students conversant with types of flow and calculate Major and minor losses in pipes.
3. To acquaint the student with the concepts of Buckingham's π theorem.
4. To explain the working of different pumps
5. To explain the working of different turbines.
6. To equip students with skills to produce analytical solutions to various simple problems

COURSE OUTCOMES

Upon completion of this course, the students can able to

1. Demonstrate basic knowledge of fluid properties
2. Find types of flow and calculate Major and minor losses in pipes.
3. Apply Buckingham's π theorem for problem solving.
4. Understand the working of different pumps
5. Understand the working of different turbines.
6. produce analytical solutions to various simple problems

UNIT I FLUID PROPERTIES AND FLOW CHARACTERISTICS**9 +3**

Fluid properties: Mass density, weight density, specific gravity, viscosity, compressibility, surface tension and capillarity. Buoyancy and floatation – metacentre and metacentric height (definition only)

Flow characteristics: concepts of system and control volume, application of control volume to continuity equation, energy equation, momentum equation and moment of momentum equation.

UNIT II FLOW THROUGH CIRCULAR PIPES**9 +3**

Hydraulic and energy gradient – Types of fluid flow – Laminar flow through circular conduits – Boundary layer concepts – types of boundary layer thickness – Darcy Weisbach equation – friction factor – Moody diagram – commercial pipes – minor losses – Flow through pipes in series and parallel.

UNIT III DIMENSIONAL ANALYSIS**9 +3**

Dimension and units, dimensional homogeneity, applications of Buckingham's π theorem, model and similitude, similarity laws.

UNIT IV HYDRAULIC TURBINES**9 +3**

Classification of turbines – heads and efficiencies – velocity triangles. Axial, radial and mixed flow turbines. Pelton wheel, Francis turbine and Kaplan turbines- working principles - work done by water on the runner – draft tube. Specific speed - unit quantities – performance curves for turbines – governing of turbines.

UNIT V HYDRAULIC PUMPS**9 +3**

Classification of pumps – centrifugal pump – working principle – head, discharge, efficiencies and losses – performance curves – specific speed. Reciprocating pump – components and working – slip – indicator diagram – air vessel – Jet pump – Gear pump – Submersible pump.

3. nptel.iitg.ernet.in
4. www.tecquipment.com

COURSE OBJECTIVES

1. To understand the basic concepts of different types of electrical machines and their performance.
2. To study the different methods of starting D.C motors and induction motors.
3. To study the conventional and solid-state drives
4. To expose students to the operation, application and control of power conversion systems employing electric drive to cater to industrial needs.
5. To familiarize the operation principles, and design of starting, braking, and speed control arrangements for electric motors and their applications.
6. To provide strong foundation to assess performance of different industrial drives considering issues such as, energy efficiency, power quality, economic justification, environmental issues, and practical viabilities.

COURSE OUTCOMES

1. Examine various applications in industrial and domestic areas where use of electric drives is essential.
2. Classify types of electric drives systems based on nature of loads, control objectives, performance and reliability.
3. Combine concepts of previously learnt courses such as, electrical machines, Control and power electronics to cater to the need of automations in industries.
4. Select most suitable type and specification of motor drive combination for efficient conversion and control of electric power.
5. Identify the critical areas in application levels, and derive typical solutions.
6. Design and justify new control and power conversion schemes for implementing alternative solutions considering the critical and contemporary issues.

UNIT I INTRODUCTION**9**

Basic Elements – Types of Electric Drives – factors influencing the choice of electrical drives – Loading conditions and classes of duty – Selection of power rating for drive motors with regard to thermal overloading and Load variation factors. Multi quadrant operation.

UNIT II DRIVEMOTOR CHARACTERISTICS**9**

Mechanical and electrical characteristics of various types of load and drive motors – Braking of Electrical motors – DC Shunt, series Motors – Three phase induction motors.

UNIT III STARTING METHODS**9**

Types of D.C Motor starters – Typical control circuits for shunt and series motors – Three phase squirrel cage and slip ring induction motors.

UNIT IV SPEED CONTROL OF D.C. DRIVES**9**

Speed control of DC series and shunt motors – Armature and field control, Ward-Leonard control system – Using controlled rectifiers and DC choppers – applications.

UNIT V SPEED CONTROL OF A.C. DRIVES**9**

Speed control of three phase induction motor – Voltage control, voltage / frequency control, Rotor resistance control – slip power recovery scheme – Using inverters, Cyclo converter and AC voltage regulators – static slip power recovery schemes – applications.

TOTAL 45 PERIODS**TEXT BOOKS**

S. No.	Author(s) Name	Title of the book	Publisher	Year of Publication
1	Vedam Subramaniam	Electric Drives (concepts and applications)	Tata McGraw-Hill, New Delhi.	2001
2	Nagrath I.J. and Kothari D.P,	Electrical Machines	Tata McGraw- Hill, New Delhi	2004

REFERENCES

S. No.	Author(s) Name	Title of the book	Publisher	Year of Publication
1	Pillai.S.K,	A first course on Electric drives	Wiley Eastern Limited, New Delhi.	1998.
2	Singh M.D and Khanchandani K.B,	Power Electronics	Tata McGraw-Hill, New Delhi.	2003
3.	Gopal K.Dubey	Fundamentals of Electrical drives	Narosa Publishing House	2003

COURSE OBJECTIVE

1. To supplement the theoretical knowledge gained in Fluid Mechanics and Machinery with practical testing
2. To understand the concepts of coefficient of discharge for Orifice meter and Venturi meter.
3. To explain the Calibration of Rotameter.
4. To understand the importance of friction factor for flow through pipes.
5. To impart knowledge on the performance of various pumps.
6. To impart knowledge on the performance of turbines.

COURSE OUTCOMES

1. Calculate the coefficient of discharge for Orifice meter and Venturimeter.
2. Calibrate the Rotameter
3. Estimate the friction factor for flow through pipes.
4. Asses the performance of centrifugal pump and submergible pump.
5. Asses the performance of reciprocating pump and gear pump.
6. Asses the performance of turbines.

LIST OF EXPERIMENTS

1. Determination of the Coefficient of discharge of given Orificemeter.
2. Determination of the Coefficient of discharge of givenVenturimeter.
3. Calculation of the rate of flow using Rotameter.
4. Determination of friction factor for a given set ofpipes.
5. Conducting experiments and drawing the characteristic curves of centrifugalpump
6. Conducting experiments and drawing the characteristic curves of submersiblepump.
7. Conducting experiments and drawing the characteristic curves of reciprocatingpump.
8. Conducting experiments and drawing the characteristic curves of Gearpump.
9. Conducting experiments and drawing the characteristic curves of Peltonwheel.
10. Conducting experiments and drawing the characteristics curves of Francisturbine.

TOTAL 45PERIODS

COURSE OBJECTIVES:

1. To explain the surfaces for sheet metal working applications.
2. To Understand the representation of details in machine drawing.
3. To introduce tolerances and fits of machine elements.
4. To equip them with skills to Construct an assembly drawing using part drawings of machine components.
5. To equip them with skills to Construct an assembly drawing of machine components using 2D drafting.
6. To equip them with skills to develop employability.

COURSE OUTCOMES:

Learners should be able to

1. Express the importance of machine drawing and GD&T.
2. Interpret drawings of machine components.
3. Create assembled machine drawings.
4. Make part drawings from an assembly drawing.
5. Interpret the details of complex parts in cross section views.
6. Sketch production drawing from assembly drawing.

INTRODUCTION

3

Introduction to machine drawing. Importance of sectional views. Computer-aided drafting.

CONVENTIONS

6

Code of practice for engineering drawing-conventional representation of details- drilled and tapped holes, countersunk and counter bored holes, internal and external threads, undercuts, grooves, chamfers, fillet radii and keyways. Conventions to represent standard components-bolts, nuts, washers, screws, cotters, pins, circlips, bearings, gears, springs and flanges.

FITS AND TOLERANCES

6

Limits, fits and tolerances-need, types, representation of tolerances on drawing, calculation of minimum and maximum clearances and allowances. Geometric tolerance-uses, types of form and position tolerances, symbols, method of indicating geometric tolerances on part drawings. Surface finish symbols- methods of indicating the surface roughness. Blue print reading exercises.

ASSEMBLY DRAWING PRACTICE

15

Making free hand sketches of typical subassemblies-flange coupling, stuffing box, journal bearings, rolling element bearings, keyed joints, cotter joints, C clamp.

ASSEMBLY USING 2D DRAFTING

15

Assembly drawing with sectioning and bill of materials from given detailed drawings of assemblies: Lathe Tail stock, Machine vice, Pedestal bearing and Drill jigs and Milling fixture.

TOTAL 45 PERIODS

REFERENCES

S. No.	Author(s) Name	Title of the book	Publisher	Year of Publication
1	Gopalakrishna K R	Machine Drawing	Subhas Stores, Bangalore	2003
2	Bhatt N. D and Panchal V.M	Machine Drawing	Charotar Publishing House, Chennai	2007
3	ASME Y 14.5M-1994	Dimensioning and Tolerancing	ASME, New York	1995

COURSE OBJECTIVES

1. To understand the basic concepts of different types of electrical machines and their performance.
2. To study the different methods of starting D.C motors and induction motors.
3. To study the conventional and solid-state drives
4. To expose students to the operation, application and control of power conversion systems employing electric drive to cater to industrial needs.
5. To familiarize the operation principles, and design of starting, braking, and speed control arrangements for electric motors and their applications.
6. To provide strong foundation to assess performance of different industrial drives considering issues such as, energy efficiency, power quality, economic justification, environmental issues, and practical viabilities.

COURSE OUTCOMES

1. Examine various applications in industrial and domestic areas where use of electric drives is essential.
2. Classify types of electric drives systems based on nature of loads, control objectives, performance and reliability.
3. Combine concepts of previously learnt courses such as, electrical machines, Control and power electronics to cater to the need of automations in industries.
4. Select most suitable type and specification of motor drive combination for efficient conversion and control of electric power.
5. Identify the critical areas in application levels, and derive typical solutions.
6. Design and justify new control and power conversion schemes for implementing alternative solutions considering the critical and contemporary issues.

LIST OF EXPERIMENTS

1. Load Test on DC Shunt Motor
2. Load Test on DC Series Motor
3. Load Test on DC Compound Motor
4. Speed control of D.C. motor. (Armature and Field control)
5. Speed control of D.C. motor. (Ward–Leonard Method)
6. Speed control of three phase Induction motor. (Voltage Control)
7. Speed control of three phase Induction motor. (Voltage / frequency Control)
8. Load test on single phase Induction Motor.
9. Load test on three phase Induction Motor.
10. Speed control of three phase slip ring Induction Motor.

TOTAL 45 PERIODS

COURSE OBJECTIVES

1. To understand the basic concepts of QUANTITATIVE ABILITY
2. To understand the basic concepts of LOGICAL REASONING Skills
3. To acquire satisfactory competency in use of VERBAL REASONING
4. To solve campus placements aptitude papers covering Quantitative Ability, Logical Reasoning and Verbal Ability.
5. To solve off-campus placements aptitude papers covering Quantitative Ability, Logical Reasoning and Verbal Ability.
6. To compete in various competitive exams like CAT, CMAT, GATE, GRE, GATE, UPSC, GPSC etc.

COURSE OUTCOMES

1. Understand the basic concepts of QUANTITATIVE ABILITY
2. Understand the basic concepts of LOGICAL REASONING Skills
3. Acquire satisfactory competency in use of VERBAL REASONING
4. Solve campus placements aptitude papers covering Quantitative Ability, Logical Reasoning and Verbal Ability.
5. Solve off-campus placements aptitude papers covering Quantitative Ability, Logical Reasoning and Verbal Ability.
6. Compete in various competitive exams like CAT, CMAT, GATE, GRE, GATE, UPSC, GPSC etc.

UNIT I**6**

Introduction, Speed Math's, Problems on Numbers, Averages, Ratios and Proportions, Problems on Ages

UNIT II**6**

Percentage, Data Interpretation, Profit and loss, Simple and Compound Interest

UNIT III**8**

Time Speed and Distance, Time and Work, Pipes and Cistern, Geometry, Probability, Permutation and Combination

TOTAL 20PERIODS**REFERENCES**

SEMESTER IV

15BEME401

STRENGTH OF MATERIALS

3 2 0 4100

COURSE OBJECTIVES

1. To understand the concepts of stress and strain on deformation of solids.
2. To introduce the Concepts of safe working stresses and load carrying capacity of beams.
3. To enrich the understanding of deflection in beams and columns in engineering applications.
4. To understand the importance of the effect of torsion on shafts and springs.
5. To provide knowledge on principal stresses and analyze thin cylinders and shells subjected to pressure forces.
6. To provide knowledge on components subjected to various loadings with the help of various theories of failures.

COURSE OUTCOMES

Upon completion of this course, the students can able to

1. Determine stress and strain on deformation of solids.
2. Compute safe working stresses and load carrying capacity of beams.
3. Estimate the deflection in beams and columns in engineering applications.
4. Analyze the effect of torsion on shafts and springs.
5. Determine principal stresses and analyze thin cylinders and shells subjected to pressure forces.
6. Design the components subjected to various loadings with the help of various theories of failures.

UNIT I STRESS, STRAIN AND DEFORMATION OF SOLIDS

9 + 3

Rigid and Deformable bodies – Strength, Stiffness and Stability – Stresses; Tensile, Compressive and Shear – Deformation of simple and compound bars under axial load – Thermal stress – Elastic constants – Strain energy and unit strain energy – Strain energy in uniaxial loads.

UNIT II BEAMS – LOADS AND STRESSES

9 + 3

Types of beams: Supports and Loads – Shear force and Bending Moment in beams – Cantilever, Simply supported and Overhanging beams – Relationship between load, shear force and bending moment – Stresses in beams – Theory of simple bending – Stress variation along the length and in the beam section – Effect of shape of beam section on stress induced – Shear stresses in beams – Shear flow.

UNIT III BEAM DEFLECTION

9 + 3

Elastic curve of Neutral axis of the beam under normal loads – Evaluation of beam deflection and slope: Macaulay Method – Columns – End conditions – Equivalent length of a column – Euler equation – Slenderness ratio – Rankine's formula for columns

UNIT IV TORSION

9 + 3

Analysis of torsion of circular bars – Torsional Shear stress – Bars of solid and hollow circular section – Stepped shaft – Torsional rigidity – Compound shafts – Fixed and simply supported shafts – Application to close-coiled helical springs – Maximum shear stress in spring section including Wahl Factor – Deflection of helical coil springs under axial loads – Design of helical coil springs – stresses in helical coil springs under torsion loads

UNIT V ANALYSIS OF STRESSES IN TWO DIMENSIONS

9 + 3

Biaxial state of stresses – Thin cylindrical and spherical shells – Deformation in thin cylindrical and spherical shells – Biaxial stresses at a point – Stresses on inclined plane – Principal planes and stresses – Mohr's circle for biaxial stresses – Maximum shear stress – Strain energy in bending and torsion.

3. www.globalsources.com
4. www.dspspace.cusat.ac.in

COURSE OBJECTIVE

1. To Explain the mechanics of metal cutting, cutting tool materials, tool wear and cutting fluids.
2. To understand the concept of constructional features of different types of lathe and their operations.
3. To provide knowledge on construction & working of shaping, milling & drilling machines and gear cutting & finishing process.
4. To expose students to various types of grinding machines and broaching machines.
5. To Explain the construction features of different types of CNC machine and manual part programming for a given component.
6. To Perform part programming for CNC machines.

COURSE OUTCOMES

Upon completion of this course, the students will be able to

1. Explain the mechanics of metal cutting, cutting tool materials, tool wear and cutting fluids.
2. Discuss about the constructional feature of different types of lathe and their operations.
3. Describe the construction & working of shaping, milling & drilling machines and gear cutting & finishing process.
4. Illustrate the various types of grinding machines and broaching machines.
5. Explain the construction feature of different types of CNC machine and manual part programming for a given component.
6. Perform part programming for CNC machines.

UNIT I THEORY OF METAL CUTTING AND CUTTING TOOLS**9**

Introduction: material removal processes, types of machine tools – theory of metal cutting: chip formation, orthogonal cutting, oblique cutting – Cutting tool materials, tool wear, tool life, surface finish, cutting fluids, heat generation, Merchant circle.

UNIT II CENTRE LATHE AND SEMIAUTOMATIC LATHES**9**

Centre lathe– constructional features, various operations, taper turning methods, thread cutting methods, special attachments, machining time and power estimation. Capstan and turret lathes – automats – single spindle, Swiss type, automatic screw type, multi spindle – Tool layout for Capstan, Turret and Automats.

UNIT III RECIPROCATING MACHINE TOOLS & MILLING MACHINES**9**

Shaper – construction, working, work and tool holding device, quick return mechanism, planer – construction, working, mechanism, operations. **Slotter – construction, working.**

Milling machine – constructions, types, Indexing mechanism, operations, milling cutter, gear hobbing – principle.

UNIT IV OTHER MACHINE TOOLS**9**

Drilling – types, radial drilling machine, construction, operations, Boring, types, Jig boring machine – construction, operations, Broaching – types, construction, **Grinding – grinding wheel, specifications and selection, cylindrical grinding, surface grinding, centreless grinding – honing, lapping, super finishing, polishing and buffing.**

UNIT V CNC MACHINES**9**

CNC Machines – Construction – Types of control systems, Manual Part Programming – Computer assisted part programming – Computer aided part programming, Machining centers – principle, Turning centers – principle, CAD/CAM & Integration, Application of CNC Machines.

COURSE OBJECTIVES

1. To understand the Model of physical systems into relevant thermodynamic system and apply energy balance equation for closed and open system.
2. To provide knowledge on entropy change in thermodynamic processes.
3. To Study and acquire knowledge on various thermodynamic properties of pure substances in real time problems.
4. To establish the basic thermodynamic relations and properties of ideal and real gases for physical systems.
5. To facilitate the understanding of properties of air using psychometric chart.
6. To acquaint the student with the concepts and applications of the thermodynamics to the various real-life systems.

COURSE OUTCOMES

Upon completion of this course, the students will be able to

1. Model the physical systems into relevant thermodynamic system and apply energy balance equation for closed and open system.
2. Determine entropy change in thermodynamic processes.
3. Identify the various thermodynamic properties of pure substances in real time problems.
4. Establish the basic thermodynamic relations and properties of ideal and real gases for physical systems.
5. Calculate the properties of air using psychometric chart.
6. Explain the basic principles and applications of the thermodynamics to the various real life systems..

UNIT I BASIC CONCEPTS AND FIRST LAW**9 + 3**

Basic concepts - Classical and Statistical approaches - Thermodynamic systems - closed, open, isolated. Property – State - Process-adiabatic - Quasi-static process – Cycle - Point and Path function – Energy - Work transfer - Concept of temperature and heat- Zeroth law of thermodynamics - Concept of ideal gases - First law of thermodynamics –PMM1, internal energy, specific heat capacities, enthalpy, and its application to closed system and open system-steady flow energy equation.

UNIT II SECOND LAW AND ENTROPY**9 + 3**

Physical description of the second law - Kelvin-Planck and Clausius statements –Equivalence - Reversible processes and cycles- Carnot cycle – Corollaries - Absolute temperature scale – Clausius Theorem, inequality - **Entropy- Principle, transfer, generation, balance - Third law of thermodynamics**

UNIT III PROPERTIES OF PURE SUBSTANCE AND GAS MIXTURES**9 + 3**

Pure substance-Phase change process-Property diagrams-PVT surface-Steam-types, dryness fraction-Avogadro's law - Ideal Gas - Equations of state-Vander Waal's equation - Real Gas - Compressibility and its chart - Mixtures of Gases – Properties.

UNIT IV THERMODYNAMIC AVAILABILITY AND RELATIONS**9 + 3**

Basics-Dead state, quality of energy, degradation of energy - Reversible processes – Maximum work - Exergy – Closed system - Steady flow system – **Irreversibility - Exergy Balance - Second law efficiency – Exact differentials - Tds Relations - Maxwell's Relation – Clausius – Clapeyron Equation - Joule-Thompson Coefficient.**

UNIT V PSYCHROMETRY**9 + 3**

Psychrometry - Psychrometric charts - Property calculations of air vapour mixtures- Psychrometric process-Adiabatic mixing - Evaporative cooling.

TOTAL 45 + 15 = 60 PERIODS

(Permitted to use standard thermodynamic table, Mollier diagram, and Psychometric chart in the examination)

3. <http://web.mit.edu/emech/dontindex-build/index.html>
4. <http://www.indiabix.com/engineering-mechanics/questions-and-answers/>

COURSE OBJECTIVES

1. To impart knowledge on metallurgical aspects of metals.
2. To understand heat treatment processes on different grades of steel.
3. To familiarize on selection of ferrous and non-ferrous materials for various applications.
4. To impart knowledge on non-metallic materials
5. To learn about the strengthening mechanisms for Non-ferrous alloys.
6. To comprehend the significance of Non-Destructive Testing (NDT) methods

COURSE OUTCOMES

Learners should be able to

1. Identify the metallurgical aspects of metals.
2. Identify suitable heat treatment processes for various applications.
3. Select appropriate ferrous and non-ferrous materials for various applications.
4. Identify and select suitable non-metallic materials.
5. Identify suitable strengthening mechanisms for Non-ferrous alloys.
6. Work with non-destructive testing methods.

UNIT I CONSTITUTION OF ALLOYS AND PHASE DIAGRAMS**9**

Constitution of alloys – Solid solutions, substitutional and interstitial – phase diagrams, Isomorphous, eutectic, peritectic, eutectoid and peritectoid reactions, Iron – Iron carbide equilibrium diagram - Classification of steel and cast Iron, microstructure, properties and applications.

UNIT II HEAT TREATMENT**9**

Definition – Full annealing, stress relief, recrystallisation and spheroidizing – normalising, hardening and tempering of steel. Isothermal transformation diagrams – cooling curves superimposed on TTT diagram, CCT - Hardenability, Jominy end quench test – Austempering, martempering – case hardening - carburising, nitriding, cyaniding, carbonitriding – Flame and Induction hardening.

UNIT III FERROUS AND NONFERROUS METALS**9**

Effect of alloying elements on steel (Mn, Si, Cr, Mo, V, Ti & W) - stainless and tool steels – HSLA - maraging steels – Gray, White malleable, Spheroidal Graphite irons - Copper and Copper alloys – Brass, Bronze and Cupronickel – Aluminum and Al-Cu – precipitation, strengthening treatment – Bearing alloys.

UNIT IV NON-METALLIC MATERIALS**9**

Polymers – types of polymer, commodity and engineering polymers – **Properties and Applications of thermoplastics (PP, PVC, ABS, and PMMA) and thermosetting plastics (PF, UF, MF) – Engineering Ceramics.**

UNIT V TESTING OF MECHANICAL PROPERTIES AND INSPECTION**9**

Mechanism of plastic deformation, slip and twinning – Types of fracture – Testing of materials under tension, compression and **shear loads – Hardness tests (Brinell, Vickers and Rockwell), Impact test - Izod and Charpy, Fatigue and creep test, S-N curve.**

Non Destructive Testing: Non Destructive Testing basic principles and testing method of Radiographic testing, Ultrasonic testing, Magnetic particle test and Liquid penetrant test, Eddy current testing.

TOTAL 45 PERIODS**TEXTBOOKS**

3. www.istl.org
4. metalurgy-screw-tutorial.tobyavujo.com

COURSE OBJECTIVES

1. To understand the mobility of mechanism in practice.
2. To understand the mechanism for displacement, velocity and acceleration at any point in a link.
3. To enrich the understanding of cam-follower principles for practical applications.
4. To make the students conversant in selecting appropriate gear trains for engineering applications.
5. To understand the friction concepts in machine parts and assembly.
6. To give exposure to the basic components and layout of linkages in the assembly of a system.

COURSE OUTCOMES

1. Compute the mobility of mechanism in practice.
2. Analyze a mechanism for displacement, velocity and acceleration at any point in a link.
3. Apply cam-follower principles for practical applications.
4. Select appropriate gear trains for engineering applications.
5. Analyze friction concepts in machine parts and assembly.
6. Understand the basic components and layout of linkages in the assembly of a system

UNIT I BASICSOFMECHANISMS**9**

Terminology and Definitions–Degree of Freedom – Mobility–Kutzbach criterion–Grashoff's law–Kinematic Inversions of four bar chain and slider crank –Mechanical Advantage–Transmission angle –Single, double and offset slider mechanisms – Quick return mechanisms – Ratchets and escapements – Indexing Mechanisms – Straight line generators.

UNIT II KINEMATICS**9**

Displacement, velocity and acceleration – analysis in simple mechanisms – Graphical Method –velocity and acceleration polygons – Kinematic analysis by Complex Algebra methods–**Vector Approach, Instantaneous center – Coriolis Acceleration.**

UNIT III KINEMATICSOFCAM**9**

Classifications – Displacement diagrams–parabolic, Simple harmonic and Cycloidal motions – Layout of plate cam profiles – Derivatives of Follower motion – High speed cams – circular arc and tangent cams – Standard cam motion – Pressure angle and undercutting.

UNIT IV GEARS**9**

Spur gear - Terminology and definitions–Fundamental Law of toothed gearing and involute gearing–Interchangeable gears–gear tooth action – Terminology – Interference and undercutting–**Non standard gear teeth– Helical, Bevel, Worm, Rack and Pinion gears (Basics only)–Gear trains–Parallel axis gear trains–Epicyclic gear trains.**

UNIT V FRICTIONINDRIVES**9**

Surface contacts–Sliding and Rolling friction – Friction drives – Friction in screw threads – Friction clutches–Belt and rope drives, Friction aspects in Brakes.

TOTAL 45PERIODS**TEXT BOOKS**

STANDARDS

IS 2458 : 2001, Vocabulary of Gear Terms – Definitions Related to Geometry

IS 3756 : 2002, Method of Gear correction – Addendum modification for External Cylindrical Gears with Parallel Axes.

IS 5267 : 2002 Vocabulary of Gear Terms – Definitions Related to Worm Gear Geometry.

IS 12328 : Part 1: 1988 Bevel Gear Systems Part – 1 Straight Bevel Gears.

IS 12328 : Part 2: 1988 Bevel Gear Systems Part – 2 Spiral Bevel Gears

COURSE OBJECTIVES

1. To provide knowledge on various Metrological equipments available to measure the dimension of the components.
2. To provide knowledge on the correct procedure to be adopted to measure the dimension of the components.
3. To enrich the understanding of principles of measuring instruments and gauges
4. To give exposure to inspection of spur gear and thread elements.
5. To equip them with skills to linear measurements using various measuring instruments
6. To give exposure to procedures involved in erecting machineries

COURSE OUTCOMES

Upon completion of this course, the students will be able to

1. Understand the basics of measurements and quality standards.
2. Perform linear measurements using various measuring instruments
3. Perform the geometrical measurements of various components
4. Measure the various dimensions of a screw thread
5. Measure the dimensions of the simple spur gear.
6. Know the procedures involved in erecting machineries.

UNIT I CONCEPT OF MEASUREMENT**9**

General concept – Generalised measurement systems – units and standards – measuring instruments – sensitivity, readability, range of accuracy, precision – static and dynamic response – repeatability – systematic and random errors – correction, calibration, interchangeability – Basics of Measurement System Analysis.

UNIT II LINEAR AND ANGULAR MEASUREMENT**9**

Definition of metrology – Linear measuring instruments: Vernier, micrometer, interval measurement, Slip gauges and classification, limit gauges – Comparators: Mechanical, pneumatic and electrical types, applications – Angular measurements: – Sine bar, auto-collimator, angle Decker.

UNIT III FORM MEASUREMENT**9**

Measurement of screw threads – Thread gauges, floating carriage micrometer – measurement of gears – tooth thickness – constant chord and base tangent method – Eccentricity Measurements – radius measurements – surface finish, straightness, flatness and roundness measurements.

UNIT IV LASER AND ADVANCES IN METROLOGY**9**

Precision instruments based on laser – Principles – laser interferometer – application in linear, angular measurements and machine tool metrology – Coordinate measuring machine (CMM) – computer aided inspection – Nano metrology, techniques and applications – TEM, SEM, STM, XRD, AFM.

UNIT V MEASUREMENT OF POWER, FLOW AND TEMPERATURE RELATED PROPERTIES**9**

Force, torque, strain: – mechanical and electrical type – Flow measurement: Venturi, orifice, rotometer, – Electrical pressure transducers, Temperature: Thermocouples, Resistance temperature detectors, bimetallic strip thermometers, thermistor, pyrometry

COURSE OBJECTIVE

1. To perform different destructivetesting
2. To learn the characteristicmaterials.
3. To understand the stress and strain relationship.
4. To determine the shear force for various materials.
5. To determine the impact load for various materials.
6. To determine the hardness for various materials

COURSE OUTCOMES

1. Ability to perform different destructivetesting
2. Ability to characteristicmaterials
3. Understand the stress and strain relationship.
4. Determine the shear force for various materials.
5. Determine the impact load for various materials.
6. Determine the hardness for various materials

LIST OF EXPERIMENTS

1. Tensile test on metals–stress straincharacteristics
2. Cupping test on metal sheets–load deformation characteristics, cupping load, cuppingnumber.
3. Hardness test on metals–Brinell and Rockwell Hardnesstests.
4. Impact test on metals–Charpy, Izod impacttests.
5. Shear test on metals–direct shear strength, single shear, doubleshear.
6. Tests on helical springs–compression, tension springs–load deformation characteristics, stiffness, shear stress, modulus of rigidity,energy.
7. Torsion test on beams–torque and angle of twist characteristics, shear stress, modulus of rigidity,energy.
8. Microscopic examination of i) Hardened samples ii) Hardened and temperedsamples.
9. Tempering – Improvement of Mechanical properties –Comparison for i) Unhardenedspecimen ii) Quenched specimen iii) Quenched and tempered specimen.
10. Study of low carbon steel and medium carbonsteel.

TOTAL 45PERIODS

COURSE OBJECTIVES

1. To facilitate the understanding of shaping operation in shaper.
2. To provide practical knowledge on Preparing a flat and contour surface using milling machine.
3. To provide practical knowledge on Preparing holes with higher finish by Drilling / Tapping / Reaming.
4. To facilitate the understanding of surface and cylindrical grinding operations for surface finish.
5. To introduce single and multi-point cutting tools.
6. To impart knowledge on the operations in Capstan and Turret Lathe

COURSE OUTCOMES

Upon completion of this course, the students will be able to

1. Perform shapingoperation
2. Perform milling & slottingoperation
3. Perform drilling, tapping and reamingoperation
4. Perform grindingoperations
5. Work with tool grindingmachine
6. Work in a capstan and turretlathe

LIST OF EXERCISES

1. Exercises inshaping.
2. Exercises inMilling.
3. Exercises inslotting.
4. Exercises in Drilling / Tapping /Reaming.
5. Exercises in Surface grinding and cylindrical grindingprocess.
6. Exercises in Tool grinding – single point and multi pointtools.
7. Exercises in Capstan and TurretLathe.

TOTAL 45PERIODS

COURSE OBJECTIVES

1. To help students comprehend the role of listening skills in effective communication.
2. To familiarize students with verbal and non-verbal communication.
3. To expose students to neutral accent.
4. To develop emotional intelligence skills in them for enhancing their self-esteem.
5. To assist them in setting goals and developing positive attitude.
6. To enable students to acquire decision making skills, problem solving skills and assertive skills.

COURSE OUTCOMES

1. Equip students of engineering and technology with effective speaking, writing and listening and reading skills in English.
2. Develop their soft skills and inter personal skills, which will make the transition from college to workplace smoother and help them excel in their job.
3. Equip students of engineering and technology with group discussion and other recruitment exercises.
4. Use both verbal and non-verbal skills cohesively and develop confidence in participating in seminars, conferences, technical and extracurricular activities for lifelong learning.
5. Overall attitude of students will enhanced and know the social responsibilities.
6. Understand the importance of Human values for the betterment of society and nation.

UNIT I**6**

Overview to communication, self Introduction, Presentation on their own topic, Extempore, Group Activity

UNIT II**6**

Group Discussion, Do's and Don'ts of Group Discussion, Body language, Grooming and Resume, Resume correction

UNIT III**8**

Introduction to HR, HR questions and Do's and Don't's in HR, HR Interview, Mock GD & HR, Stress Management

TOTAL 20PERIODS**REFERENCES**

S. No.	Author(s) Name	Title of the book	Publisher	Year of Publication
1	Agarwal.R.S	Quantitative Aptitude for Competitive Examinations	S.Chand Limited	2011
2	Abhijit Guha	Quantitative Aptitude for Competitive Examinations	Tata McGraw Hill	2011
3	Edgar Thrope	Test Of Reasoning for Competitive Examinations	Tata McGraw Hill, 4th Edition	2012

COURSE OBJECTIVES

1. To incorporate the concepts and laws in thermodynamic analysis of cyclic processes.
2. To impart the mechanisms of combustion of fuels.
3. To apply the thermodynamic concepts in steam turbines and nozzles.
4. To learn about the performance of compressors.
5. To understand the concept of cogeneration and waste heat recovery in engineering applications.
6. To introduce concepts of refrigeration and air conditioning in engineering applications

COURSE OUTCOMES

Learners should be able to

1. Calculate the efficiency of various gas power cycles.
2. Calculate the performance characteristics of engines.
3. Analyze combustion mechanism in IC engines.
4. Evaluate the characteristic of steam turbines and nozzles.
5. Evaluate the performance characteristics of compressors.
6. Identify and utilize the concepts of refrigeration and air conditioning in engineering applications

UNIT I GAS POWER CYCLES AND IC ENGINES**9**

Otto, Diesel, Dual, Brayton cycles – Calculation of mean effective pressure and air standard efficiency – actual and theoretical PV and TS diagrams of two stroke and four stroke engines – valve timing diagram and port timing diagram – calculation of engine performance, heat balance sheet, retardation – Morse test.

UNIT II BOILER AND STEAM POWER CYCLES**9**

Generation of steam, Boiler – Classification, fire tube boiler, water tube boiler, comparison, boiler mountings and accessories, performance of steam boilers – dryness fraction, properties of steam, T–S diagram, Mollier diagram, steam tables, Rankine Cycle – incomplete evaporation – superheated steam – modified cycle.

UNIT III STEAM NOZZLES AND STEAM TURBINES**9**

Steam nozzles – flow through steam nozzles, effect of friction, critical pressure ratio, super saturated flow – Steam turbines – impulse and reaction turbine, compounding, velocity diagram, condition for maximum efficiency – multi stage turbines, cycles with reheating and regenerating heating – reheat factor, degree of reaction – governing of turbines.

UNIT IV AIR COMPRESSORS**9**

Classifications of compressors – Reciprocating air compressor – performance characteristics, effect of clearance volume, free air delivery and displacement, intercooler, after cooler – Rotary compressor – vane type, centrifugal and axial, flow performance characteristics.

UNIT V REFRIGERATION AND AIR CONDITIONING**9**

Fundamentals of refrigeration – COP – Vapour compression refrigeration system – cycle, p–h chart, Vapour absorption system – comparison, properties of refrigerants. Fundamentals of air conditioning system, cycle, controls, air handling and distribution, simple cooling and heat load estimation

TOTAL 45 PERIODS

(Permitted to use standard thermodynamic table, Mollier diagram, Psychometric chart and Refrigeration property table in the examination)

2. www.grc.nasa.gov
3. www.poweronsite.org
4. www.machinerylubrication.com
5. www.tpub.com

COURSE OBJECTIVES

1. To understand the various types of stresses induced in different machine members.
2. To Study and acquire knowledge on design shaft and couplings for effective transmission of power.
3. To study the features of welded joints and fasteners required for various industrial applications.
4. To give exposure to design springs and flywheels for various engineering applications.
5. To understand the importance design bearings and levers for engineering applications.
6. To make the students conversant to implement design procedure for designing a machine.

COURSE OUTCOME

Upon completion of this course, the students will be able to

1. Determine various types of stresses induced in different machine members.
2. Design shaft and couplings for effective transmission of power.
3. Select the type of welded joints and fasteners required for various industrial applications.
4. Design springs and flywheels for various engineering applications.
5. Design bearings and levers for engineering applications.
6. Implement design procedure for designing a machine.

UNIT I STEADY STRESSES AND VARIABLE STRESSES IN MACHINE MEMBERS
9 + 3

Introduction to the design process – factors influencing machine design, selection of materials based on mechanical properties – Factor of safety. Direct, Bending and torsional stress equations – Impact and shock loading – calculation of principle stresses for various load combinations, eccentric loading – Design of curved beams – crane hook and ‘C’ frame – theories of failure – stress concentration – design for variable loading – Soderberg, Goodman and Gerber relations.

UNIT II DESIGN OF SHAFTS AND COUPLINGS
9 + 3

Design of solid and hollow shafts based on strength, rigidity and critical speed – Design of keys and keyways – *Design of rigid and flexible couplings – Introduction to gear and shock absorbing couplings – design of knuckle joints.*

UNIT III DESIGN OF FASTENERS AND WELDED JOINTS
9 + 3

Threaded fasteners – Design of bolted joints including eccentric loading – Design of welded joints for pressure vessels and structures – theory of bonded joints.

UNIT IV DESIGN OF SPRINGS AND FLYWHEEL
9 + 3

Design of helical, leaf, disc and torsional springs under constant loads and varying loads – Concentric torsion springs – Belleville springs – *Design of flywheels involving stresses in rim and arm.*

UNIT V DESIGN OF BEARINGS AND LEVERS
9 + 3

Selection of bearings – sliding contact and rolling contact types – Cubic mean load – Selection of journal bearings – McKees equation – Lubrication in journal bearings – calculation of bearing dimensions – Design of Levers.

TOTAL 45 + 15 = 60 PERIODS

(Permitted to use PSG design data book in the examination)

4. www.bearings.machinedesign.com
5. www.efunda.com

COURSE OBJECTIVES

1. To make the student acquire sound knowledge on the types of vehicle structures, cooling and lubrication systems required.
2. To acquaint the student with the concepts of type of engines to be used for modern automobiles.
3. To familiarize the students to Distinguish between the manual transmissions systems with automatic transmission systems.
4. To provide knowledge on appropriate transmission systems for the optimal power transmission.
5. To provide knowledge on steering, brakes and suspension systems for effective functioning.
6. To acquaint the student with advanced technologies in automotive Engineering.

COURSE OUTCOMES

Upon completion of this course, the students will be able to

1. Identify the types of vehicle structures, cooling and lubrication systems required.
2. Determine the type of engines to be used for modern automobiles.
3. Distinguish between the manual transmissions systems with automatic transmission systems.
4. Select appropriate transmission systems for the optimal power transmission.
5. Select steering, brakes and suspension systems for effective functioning.
6. Implement the advanced technologies in automotive.

UNIT I AUTOMOBILE ARCHITECTURE AND PERFORMANCE 9

Automotive components, subsystems and their positions – Chassis, frame and body, front, rear and four wheel drives – Operation and performance – Traction force and traction resistance, Power required for automobile – Rolling, air and gradient resistance.

UNIT II TYPES OF ENGINES 9

Types of engines – multi valve engine – in-line engine, vee-engine, Petrol engine – direct – single point and multipoint injection, diesel engine – common rail diesel injection, supercharging and turbo charging –

alternate fuels – ethanol and ethanol blend, compressed natural gas, fuel cells, hybrid vehicles.

UNIT III TRANSMISSION SYSTEMS 9

Clutch : Types – coil spring and diaphragm type clutch, single and multi plate clutch, centrifugal clutch, Gear box : Types – constant mesh, sliding mesh and synchromesh gear box, layout of gear box, gear selector and shifting mechanism, overdrive, automatic transmission, Propeller shaft, universal joint, slip joint, differential and real axle arrangement, hydraulic coupling.

UNIT IV WHEEL AND TYRES AND SUSPENSION SYSTEM 9

Types of wheels, construction, wired wheels, Tyres – construction, Radial, bias and belted bias, slip angle, Tread patterns, Tyre retreading - cold and hot, Tubeless tyres, Types – front and rear suspension, conventional and independent type suspension, leaf springs, coil springs, dampers, torsion bars, stabilizer bars, arms, air suspension systems – Balancing of Wheels.

UNIT V STEERING SYSTEM AND BRAKING SYSTEM 9

Types of steering systems, Ackermann principle, Davis steering gear, steering gear boxes, steering linkages, power steering, wheel geometry – caster, camber, toe-in, toe out etc., wheel Alignment. Braking System – Forces on vehicles, tyre grip, load transfer, braking distribution between axles, stopping distance, Types of brakes, Mechanical, Hydraulic, Air brakes, Disc and Drum brakes, Engine brakes and Anti lock braking system.

4. <http://www.rqriley.com/suspensn.htm>
5. [http://en.wikipedia.org/wiki/Transmission_\(mechanics\)](http://en.wikipedia.org/wiki/Transmission_(mechanics))

COURSE OBJECTIVES

1. To provide knowledge on the static and dynamic forces in various mechanisms.
2. To study the features of determine the rotating masses in dynamic balancing.
3. To familiarize the students to understand free and forced vibration for practical applications.
4. To understand the importance torsional vibrations in mechanical components.
5. To explain principles and mechanisms used for speed control and stability control.
6. To impart knowledge on type of governors and gyroscopes for different applications

COURSE OUTCOMES

1. Analyze the static and dynamic forces in various mechanisms.
2. Determine the rotating masses in dynamic balancing.
3. Calculate free and forced vibration for practical applications.
4. Analyze torsional vibrations in mechanical components.
5. Understand the principles in mechanisms used for speed control and stability control.
6. Select the type of governors and gyroscopes for different applications.

UNIT I FORCE ANALYSIS**9 + 3**

Rigid Body dynamics in general plane motion – Equations of motion – Dynamic force analysis – Inertia force and Inertia torque – D'Alemberts principle – The principle of superposition – Dynamic Analysis in Reciprocating Engines – Gas Forces – Equivalent masses – Bearing loads – Crank shaft Torque – Turning moment diagrams – Fly wheels.

UNIT II BALANCING**9 + 3**

Static and dynamic balancing – Balancing of rotating masses – Balancing a single cylinder Engine – Balancing Multi-cylinder Engines – Partial balancing in locomotive Engines.

UNIT III FREE VIBRATION**9 + 3**

Basic features of vibratory systems – idealized models – Basic elements and lumping of parameters – Degrees of freedom – Single degree of freedom – Free vibration – Equations of motion – natural frequency – **Damping Types of Damping – Damped vibration, critical speeds of simple shaft.**

UNIT IV FORCED VIBRATION AND TORSIONAL VIBRATION**9 + 3**

Response to periodic forcing – Harmonic Forcing – Forcing caused by unbalance – Support motion – Force transmissibility and amplitude transmissibility – Vibration isolation.

Torsional systems; Natural frequency of free torsional vibrations, Natural frequency of two and three rotor systems.

UNIT V MECHANISMS FOR CONTROL**9 + 3**

Governors – Types – Centrifugal governors – Gravity controlled and spring controlled centrifugal governors – Characteristics – Effect of friction – Controlling Force – other Governor mechanisms.

Gyroscopes – Gyroscopic forces and Torques – Gyroscopic stabilization – Gyroscopic effects in Automobiles, ships and airplanes

4. http://www.roymech.co.uk/Useful_Tables/Vibrations/Free_Vibrations.html

COURSE OBJECTIVES:

1. The objective of this course is to familiarize the students with statistical techniques.
2. To find the solutions for transcendental equations using different methods
3. It aims to equip the students with standard concepts and tools at an intermediate to advanced level that will serve them well towards tackling various problems in the discipline.
4. To introduce students to numerical methods used to solve engineering problems.
5. Fundamentals of numerical methods/algorithms to solve systems of different mathematical equations (e.g. linear/ non-linear algebraic equations, ordinary /partial differential equations), will be introduced.
6. The course would enable students to write their own computer programs using programming languages like C and software like Excel.

COURSE OUTCOMES:

1. To solve engineering problems involving Linear and non-linear equations.
2. Hands-on experience will be provided to apply these computer programs to solve problems in different areas of engineering.
3. To acquire skills in handling situations involving linear/ non-linear algebraic equations, ordinary /partial differential equations
4. To solving actual engineering problems through computer programming and coding.
5. To solve ordinary and partial differential equations using programming languages like C and software like Excel.
6. Student will understand procedure-oriented Excel concepts. Student will be capable of writing C and Excel programs efficiently.

LIST OF EXPERIMENTS

1. Finding solution of Transcendental equation
 - i) Newton – Raphson Method
 - ii) Bisection method
 - iii) Iterative method by reducing the equation to the form $x=f(x)$
2. Finding the dominant eigenvalue and eigenvector by power method
3. Numerical integration
 - i) Gauss 2 point and 3 point formulae
 - ii) Trapezoidal method
 - iii) Simpson's 1/3 rule
4. Solution of initial value problems governed by ODE
 - i) Runge - Kutta 4th order method
 - ii) Modified Euler's method
 - iii) Milne's method
 - iv) Adam – Bashforth method
5. Solution of BVP governed by PDE
 - i) Laplace Equation
 - ii) One – dimensional heat equation
 - a) Explicit method : Bender – Schmidt's method
 - b) Implicit method : Crank - Nicolson's method
 - iii) One dimensional wave equation Implicit method

TOTAL 30 + 30 = 60 PERIODS

REFERENCES

S. No.	Author(s) Name	Title of the book	Publisher	Year of Publication
1	Curtis F. Gerald and Patrick O. Wheatley	Applied Numerical Analysis	Pearson Education, South Asia	2009
2	Steven C. Chapra, Raymond P. Canale	Numerical Methods for Engineers	McGraw - Hill Pub. Co. Ltd	2014

COURSE OBJECTIVES

1. To Understand the working of various governors.
2. To introduce jump speed and profile of the cam
3. To understand the importance of moment of inertia by oscillation method for connecting rod and flywheel.
4. To introduce the concepts to Characterize and calibrate measuring devices.
5. To expose students to measuring taper angle straightness, flatness, surface finish and thread parameters.
6. To explain the limits of dimensional tolerances using comparators

COURSE OUTCOMES

1. Understand the working of various governors.
2. Determine of jump speed and profile of the cam
3. Determine moment of inertia by oscillation method for connecting rod and flywheel.
4. Characterize and calibrate measuring devices.
5. Measure taper angle straightness, flatness, surface finish and thread parameters.
6. Examine the limits of dimensional tolerances using comparators.

LIST OF EXPERIMENTS**DYNAMICS**

1. Governors–Determination of sensitivity, effort, etc. for Watt, Porter, Proell, and spring controlled Governors
2. Cam – Determination of jump speed and profile of the cam.
3. Motorized Gyroscope–Verification of laws –Determination of gyroscopic couple.
4. Whirling of shaft–Determination of critical speed of shaft with concentrated loads.
5. Balancing of rotating and reciprocating masses.
6. Determination of moment of inertia by oscillation method for connecting rod and flywheel.
7. Vibrating system – spring mass system – Determination of damping coefficient of single degree of freedom system
8. Determination of torsional frequencies for compound pendulum and flywheel system with lumped moment of inertia.
9. Transverse vibration –free– Beam. Determination of natural frequency and deflection of beam.
10. Strain gauge measurement system.

METROLOGY

1. Calibration of Vernier / Micrometer / Dial gauge
2. Checking dimensions of part using slip gauges
3. Measurement of gear tooth dimensions – addendum, dedendum, pitch circle diameter and tooth thickness
4. Measurement of taper angle using sine bar / tool makers microscope
5. Measurement of straightness and flatness
6. Measurement of thread parameters
7. Checking the limits of dimensional tolerances using comparators (Mechanical / Pneumatic / Electrical)
8. Surface finish measurement

TOTAL 45 PERIODS

COURSE OBJECTIVES

1. Ability to conduct experiment on IC engine to study the characteristic and performance of IC design/ steam turbines.
2. To appreciate concepts learnt in fundamental laws of thermodynamics.
3. To learn ideas how to sustain in energy crisis and think beyond curriculum in the field of alternative and renewable sources of energy.
4. To communicate effectively the concepts of internal combustion engines.
5. To make the students to prepare them to carry out experimental investigation and analysis at later stages of graduation.
6. To make the students to think beyond curriculum in alternative sources of energy.

COURSE OUTCOMES

Upon completion of this course, the students will be able to

1. conduct experiment on IC engine to study the characteristic and performance of IC Engine
2. conduct experiment to find the thermo physical properties of given fluid.
3. Understand the knowledge of mathematics, science and engineering fundamentals to model the energy conversion phenomenon.
4. Can formulate power production based on the fundamental laws of thermal engineering.
5. Understand instill upon to envisage appropriate experiments related to heat engines.
6. Understand and investigate the effectiveness of energy conversion process in mechanical power generation for the benefit of mankind.

LIST OF EXPERIMENTS

1. Valve Timing and Port Timing Diagrams.
2. Performance Test on 4-stroke Diesel Engine.
3. Heat Balance Test on 4-stroke Diesel Engine.
4. Load test on 4-stroke Diesel Engine.
5. Morse Test on multicylinder Petrol Engine.
6. Retardation Test to find Frictional Power of a Diesel Engine.
7. Determination of Viscosity – Red Wood Viscometer.
8. Determination of Flash Point and Fire Point.
9. Study of Steam Generators and Turbines.
10. Performance and energy balance test on a steam generator

TOTAL 45 PERIODS

COURSE OBJECTIVES

1. To expose students to problem definitions
2. To understand the Fabricate device/system/component (s) for problem solving.
3. To equip them subject knowledge to solve real world problems.
4. To acquaint the student to newer techniques to improve the performance of a device/system.
5. To develop the skill to prepare the project reports
6. To develop the skill to prepare power point presentation and to face reviews and viva voce examination.

COURSE OUTCOMES

1. Formulate problem definitions
2. Fabricate device/system/component (s) for problem solving.
3. Apply subject knowledge to solve real world problems.
4. Implement newer techniques to improve the performance of a device/system.
5. Develop the skill to prepare the project reports
6. Develop the skill to prepare power point presentation and to face reviews and viva voce examination.

Students will undergo industrial training for four weeks during the vacation at the end of IV semester and a report with the training completion certificate from the industry will be subsequently submitted to the department within a week after completion. Viva – Voce exam will be conducted at the end of V semester and 100 marks will be awarded.

COURSE OBJECTIVES

1. To understand the concepts of geometrical dimensioning and Tolerancing
2. To study the physical importance of them in industrial point of view
3. To know the various types of Tolerancing, its measurement and design.
4. To translate geometric callouts into plain English with one meaning.
5. To explain the major rules found in ASME Y14.5-2009
6. To understand the hierarchy of geometric tolerancing.

COURSE OUTCOMES

1. Ability to learn and apply geometric dimensioning and tolerance standards to communicate design intent
2. Ability to Learn how the knowledge of certain processes can affect part design and documentation
3. Gain added insight on working in a team design environment.
4. Translate geometric callouts into plain English with one meaning.
5. Explain the major rules found in ASME Y14.5-2009
6. Understand the hierarchy of geometric tolerancing.

UNIT I INTRODUCTION TO GD&T**6**

Introduction to Geometric dimensioning and Tolerancing – working of geometric system – Terms and definitions – Common symbols and Terminology – Fundamental Rules (Drawing)– Feature definition – With Size and Without Size – Material Condition (Maximum, Least, Regard of Material Condition)– Limit Tolerancing – Dimension Origin – Limits of Size, Rule 1 or Envelope Principle – Go– No Go Gauges.

UNIT II FORM AND ORIENTATION TOLERANCE**6**

and design considerations – Flatness and Circularity measurement concepts – Orientation tolerance specification and application design.

UNIT III POSITION AND RUNOUT TOLERANCE**8**

Profile of surface and line tolerance design and application – Location tolerance, Position, applied and material condition consideration – Coaxial controls and design – Concentricity, Symmetry – Measurement and application – Design considerations – Position, Composite tolerance concept, design and Measurement – Runout, Total Runout tolerances – Measurement and considerations.

COURSE OBJECTIVE

1. To Formulate and solve engineering and managerial situations as LPP.
2. To understand the Engineering and Managerial situations in Transportation.
3. To Study and acquire knowledge on engineering and Managerial solutions in Assignment and scheduling problems.
4. To give exposure to inventory in industry.
5. To make the student acquire sound knowledge on sequences to perform operation among various alternatives.
6. To provide an overview of various tools in various sections of industries like marketing, material handling etc.

COURSE OUTCOMES

At the end of the course, student will be able to understand the

1. Formulate and solve engineering and managerial situations as LPP.
2. Solve Engineering and Managerial situations in Transportation.
3. Give Engineering and Managerial solutions in Assignment and scheduling problems.
4. Manage inventory in industry.
5. Select better sequence to perform operation among various alternatives.
6. Apply the various tools in various sections of industries like marketing, material handling etc.

UNIT I INTRODUCTION TO OPERATIONS RESEARCH 9 + 3

Operations research and decision-making – types of mathematical models and constructing the model – Role of computers in operations research – Linear Programming Techniques: Formulation of linear programming problem, applications and limitations, graphical method, simplex method – The Big –M method – the two-phase method.

UNIT II TRANSPORTATION PROBLEMS 9 + 3

Least cost method, North west corner rule, Vogel's approximation method, modified distribution method, optimization models, unbalance and degeneracy in transportation model.

UNIT III ASSIGNMENT MODELS AND SCHEDULING 9 + 3

Assignment models - Hungarian algorithm, unbalanced assignment problems - maximization case in assignment problems, traveling salesman problem. Scheduling – processing n jobs through two machines, processing n jobs through three machines, processing two jobs through 'm' machines, processing n jobs through m machines.

UNIT IV INVENTORY CONTROL AND QUEUING THEORY 9 + 3

Variables in inventory problems, inventory models with penalty, shortage and quantity discount, safety stock, multi item deterministic model.

Queuing Models: Queues – Notation of queues, performance measures, The M/M/1 queue, The M/M/m queue, batch arrival queuing system, queues with breakdowns.

UNIT V PROJECT MANAGEMENT, GAME THEORY, REPLACEMENT MODELS 9 + 3

Basic terminologies, constructing a project network, network computations in CPM and PERT, cost crashing – Replacement Models: Replacement of Items due to deterioration with and without time value of Money, Group replacement policy, Staff replacement

COURSE OBJECTIVES

1. To Study and acquire knowledge on design the power transmission components like belts, pulleys, ropes, chains and sprockets.
2. To Study and acquire knowledge on design spurs and parallel axis helical gears.
3. To give exposure to dimensions for bevel and worm gears.
4. To provide an overview of design procedures of gear boxes for industrial applications.
5. To provide an overview of clutches and brakes for engineering applications.
6. To make the student acquire sound knowledge of mechanical system

COURSE OUTCOMES

Upon completion of this course, the students will able to

1. Design the power transmission components like belts, pulleys, ropes, chains and sprockets.
2. Design spurs and parallel axis helical gears.
3. Estimate the dimensions for bevel and worm gears.
4. Practice the design procedures of gear boxes for industrial applications.
5. Design clutches and brakes for engineering applications.
6. Design a mechanical system

UNIT I DESIGN OF TRANSMISSION SYSTEMS FOR FLEXIBLE ELEMENTS 9

Design of V belts and pulleys – Selection of Flat belts and pulleys – Wire ropes and pulleys – Selection of Transmission chains and Sprockets – Design of sprockets.

UNIT II DESIGN OF SPUR AND HELICAL GEARS 9

Gear Terminology – Speed ratios and number of teeth – Force analysis – Tooth stresses – Dynamic effects – Fatigue strength – Factor of safety – Gear materials – Module and Face width – power rating calculations based on strength and wear considerations – **Parallel axis Helical Gears – Pressure angle in the normal and transverse plane – Equivalent number of teeth – forces and stresses – Estimating the size of the helical gears.**

UNIT III DESIGN OF BEVEL AND WORM GEARS 9

Straight bevel gear: Tooth terminology, tooth forces and stresses, equivalent number of teeth. Estimating the dimensions of pair of straight bevel gears. **Worm Gear: Merits and demerits – terminology – Thermal capacity, materials – forces and stresses, efficiency, estimating the size of the worm gear pair – Cross helical: Terminology – helix angles – Estimating the size of the pair of cross helical gears.**

UNIT IV DESIGN OF GEARBOXES 9

Geometric progression – Standard step ratio – Ray diagram, kinematics layout – Design of sliding mesh gear box – Constant mesh gear box. – Design of multi speed gear box.

UNIT V DESIGN OF CLUTCHES AND BRAKES 9

Design of plate clutches – axial clutches – cone clutches – internal expanding rim clutches – internal and external shoe brakes.

TOTAL 45 PERIODS

(Permitted to use PSG design data book in the examination)

TEXTBOOKS

4. <http://www.cs.cmu.edu/~rapidproto/mechanisms/chpt6.htm>

COURSE OBJECTIVES

1. To Study and acquire knowledge on heat transfer for conduction.
2. To introduce the concepts of heat transfer coefficients for natural and forced convection for different fluid flows.
3. To understand the performance of heat exchanger.
4. To study the features of radiation heat transfer between the surfaces.
5. To give exposure to mass transfer.
6. To make the students conversant to solve complex problems where heat and mass transfer takes place.

COURSE OUTCOMES

Upon completion of this course, the students will be able to

1. Determine the rate of heat transfer for conduction.
2. Evaluate heat transfer coefficients for natural and forced convection for different fluid flows.
3. Analyze performance of heat exchanger.
4. Estimate the radiation heat transfer between the surfaces.
5. Calculate the coefficient of mass transfer.
6. Solve complex problems where heat and mass transfer takes place.

UNIT I CONDUCTION**9 +3**

Basic Concepts – Mechanism of Heat Transfer – Conduction, Convection and Radiation – General Differential equation of Heat Conduction – Fourier Law of Conduction – Cartesian and Cylindrical Coordinates – One Dimensional Steady State Heat Conduction – Conduction through Plane Wall, Cylinders and Spherical systems – Composite Systems – Conduction with Internal Heat Generation – Extended Surfaces – Unsteady Heat Conduction – Lumped Analysis – Use of Heislers Chart.

UNIT II CONVECTION**9 +3**

Basic Concepts – Convective Heat Transfer Coefficients – Boundary Layer Concept – Types of Convection – Forced Convection – Dimensional Analysis – External Flow – Flow over Plates, Cylinders and Spheres – Internal Flow – Laminar and Turbulent Flow – Combined Laminar and Turbulent – Flow over Bank of tubes – Free Convection – Dimensional Analysis – Flow over Vertical Plate, Horizontal Plate, Inclined Plate, Cylinders and Spheres.

UNIT III PHASE CHANGE HEAT TRANSFER AND HEAT EXCHANGERS**9 +3**

Nusselts theory of condensation – pool boiling, flow boiling, correlations in boiling and condensation. Types of Heat Exchangers – LMTD Method of heat Exchanger Analysis – Effectiveness – NTU method of Heat Exchanger Analysis – Overall Heat Transfer Coefficient – Fouling Factors.

UNIT IV RADIATION**9 +3**

Basic Concepts, Laws of Radiation – Stefan Boltzman Law, Kirchoff Law – Black Body Radiation – Grey body radiation - Shape Factor Algebra – Electrical Analogy – Radiation Shields – Introduction to Gas Radiation.

UNIT V MASS TRANSFER**9 +3**

Basic Concepts – Diffusion Mass Transfer – Fick's Law of Diffusion – Steady state Molecular Diffusion – Convective Mass Transfer – Momentum, Heat and Mass Transfer Analogy – Convective Mass Transfer Correlations

TOTAL 45 + 15 = 60 PERIODS

(Permitted to use standard Heat and Mass Transfer Table in the examination)

TEXTBOOKS

3. http://en.wikipedia.org/wiki/Heat_transfer

COURSE OBJECTIVE

1. To give exposure to accessories and layout required for a steam power plant depending upon the requirements.
2. To study performance of steam power plant.
3. To make the student acquire sound knowledge of working of nuclear and hydel power plant.
4. To study the features of gas turbine power plant.
5. To make the student acquire sound knowledge of economics of the power plant.
6. To make the student acquire sound knowledge on renewable energy technologies and availability.

COURSE OUTCOME

1. Select the accessories and layout required for a steam power plant depending upon the requirements.
2. Compute performance of steam power plant.
3. Explain the working of nuclear and hydel power plant.
4. Compute performance of gas turbine power plant.
5. Calculate the economics of the power plant.
6. Apply appropriate type of renewable energy technologies depending upon the application and availability.

UNIT I FUNDAMENTALS OF ENGINEERING ECONOMICS**9**

Introduction to Engineering Economics – Definition, Scope and Significance – Demand and supply analysis – Definition – Law of Demand – Elasticity of Demand – Demand Forecasting – Supply – Law of supply – Elasticity of Supply.

UNIT II COMMERCIAL BANKING**9**

Law of contracts, negotiable instruments, its types and regulations there on – New Industrial Policy – MSME sector – Development financial institutions and their relevance – Export Promotion - DICGC, ECGCI, EXIM Bank - Import and export concepts - Letter of credit, forward contracts / hedging.

UNIT III CAPITAL MARKET**9**

Stock Exchanges – Functions – Listing of Companies – Role of SEBI – Capital Market Reforms. Money and banking - Money – Functions – Inflation and deflation – Commercial Bank and its functions – Central bank and its functions.

UNIT IV FINANCIAL CONCEPTS**9**

Introduction, scope and objectives of basic financial concepts – time value of money – Interest - simple & compound interest, annuity and effective rate of interests. Appraisal of project for profitability, internal rate of return – payback period – net present value. NPV comparison – cost benefit analysis. Sources of finance – internal and external.

UNIT V COST ANALYSIS AND BREAK-EVEN ANALYSIS**9**

Cost analysis - Basic cost concepts – FC, VC, TC, MC – Cost output in the short and long run. Depreciation - meaning – Causes – Methods of computing Depreciation (simple problems in Straight Line Method, Written Down Value Method). Meaning – Break Even Analysis - Managerial uses of BEA.

**15BEME611 COMPUTER AIDED MODELINGANDSIMULATION
LABORATORY**
0 0 3 2100**COURSE OBJECTIVE**

1. To gain practical experience in handling 2D drafting and 3D modeling softwaresystems.
2. To impart training on SOLID WORKS for modelling
3. To provide knowledge on assembly ofcomponents
4. To facilitate the understanding of manufacturing drawings from the modelscreated
5. To understand the importance of MAT Lab for simulating different systems
6. To acquaint the student with the concepts of mat lab for performing various mathematical operations

COURSE OUTCOME

Upon completion of this course, the students can able to

1. use computer and CAD software's for modeling of mechanicalcomponents
2. use various options in SolidWorks for modeling of givencomponents
3. create assembly ofcomponents
4. prepare manufacturing drawings from the modelscreated
5. Use MAT Lab for simulating different systems like hydraulic and pneumaticcircuits
6. Use mat lab for performing various mathematicaloperations

COMPUTER AIDED DESIGN

1. 3D modeling of various machine elements using various options like protrusion, cut,sweep, draft, loft, blend,rib.
2. Assembly – creating assembly from parts – assemblyconstraints
3. Conversion of 3D solid model to 2D drawing – different views, sections, isometric view and dimensioning.
4. Introduction to SurfaceModeling.
5. Introduction to File Import, Export – DXF, IGES, STL,STEP

Note: Any one of the 3D MODELING software's like SOLIDWORKS, CREO, CATIA, NX Software, AutoCADetc.

COMPUTER AIDED SIMULATION

1. Simulation of Air conditioning system with condenser temperature and evaporator temperatures as input to get COP usingSoftware
2. Simulation of Hydraulic / Pneumatic cylinder usingSoftware
3. Simulation of cam and follower mechanism usingSoftware
4. MATLAB basics, Dealing with matrices, Graphing-Functions of one variable and two variables
5. Use of MATLAB to solve simple problems invibration

TOTAL 45PERIODS

COURSE OBJECTIVE

1. To ability to conduct experiment on IC engine to study the characteristic and performance of IC design/ steamturbines.
2. To apply Fourier's law to validate the theoretical over all heat transfer coefficient.
3. To apply Stefan-Boltzmann law of radiation and emissivity relation.
4. To determine thermal properties of material by applying 1-D steady state heat transfer equation.
5. To apply non-dimensional numbers to evaluate and validate heat transfer parameters.
6. To ability to understand and solve conduction, convection and radiation problems.

COURSE OUTCOME

1. Ability to conduct experiment on IC engine to study the characteristic and performance of IC design/ steamturbines.
2. Apply Fourier's law to validate the theoretical over all heat transfer coefficient.
3. Apply Stefan-Boltzmann law of radiation and emissivity relation.
4. Determine thermal properties of material by applying 1-D steady state heat transfer equation.
5. Apply non-dimensional numbers to evaluate and validate heat transfer parameters.
6. Ability to understand and solve conduction, convection and radiation problems.

LIST OF EXPERIMENTS HEAT TRANSFER

1. Heat transfer through a compositewall
2. Thermal conductivity measurement by guarded platemethod
3. Natural convection heat transfer from a verticalcylinder
4. Heat transfer from pin-fin (natural and forced convectionmodes)
5. Effectiveness of Parallel/counter flow heatexchanger
6. Determination of Stefan-Boltzmannconstant
7. Determination of emissivity of a greysurface

REFRIGERATION AND AIR CONDITIONING

1. Performance test on single/two stage reciprocating aircompressor.
2. Determination of COP of a refrigerationsystem
3. Experiments on air-conditioningsystem

TOTAL 45PERIODS

COURSE OBJECTIVE

1. To expose students to problem definitions
2. To understand the Fabricate device/system/component (s) for problem solving.
3. To equip them subject knowledge to solve real world problems.
4. To acquaint the student to newer techniques to improve the performance of a device/system.
5. To develop the skill to prepare the project reports
6. To develop the skill to prepare power point presentation and to face reviews and viva voce examination.

COURSE OUTCOMES

1. Formulate problem definitions
2. Fabricate device/system/component (s) for problem solving.
3. Apply subject knowledge to solve real world problems.
4. Implement newer techniques to improve the performance of a device/system.
5. Develop the skill to prepare the project reports
6. Develop the skill to prepare power point presentation and to face reviews and viva voce examination.

The students may be grouped into 2 to 4 and work under a project supervisor. The device/system/component(s) to be fabricated may be decided in consultation with the supervisor and if possible with an industry. A project report to be submitted by the group and the fabricated model, which will be reviewed and evaluated for internal assessment by a Committee constituted by the Head of the Department. At the end of the semester examination the project work is evaluated based on oral presentation and the project report jointly by external and internal examiners constituted by the Head of the Department.

TOTAL 30PERIODS

COURSE OBJECTIVES

1. To equip the students with effective technicalpresentation
2. To understand the barriers and bridges tocommunication
3. To improve the public speaking capabilities, body language andposture.
4. To improve the literature survey skill.
5. To develop presentation skill using power point presentation
6. To improve skill to face viva voce examination.

COURSE OUTCOMES

1. Develop the ability to fabrication skill.
2. Ability to make literature review till the successful solution.
3. Ability to identify specific problems.
4. Gain the knowledge about data collection and conducting experiments.
5. Develop the skill to prepare the project reports
6. Develop the skill to prepare power point presentation and to face reviews and viva voce examination.

During the seminar session each student is expected to prepare and present a topic on engineering/ technology, for duration of about 8 to 10 minutes. In a session of three periods per week, 15 students are expected to present the seminar. A faculty guide is to be allotted and he / she will guide and monitor the progress of the student and maintain attendance also.

Students are encouraged to use various teaching aids such as over head projectors, power point presentation and demonstrative models.

TOTAL 20PERIODS

SEMESTER VII

15BEME701 PROFESSIONAL ETHICS, PRINCIPLES OF MANAGEMENT AND ENTREPRENEURSHIP DEVELOPMENT 3 0 0 3100

COURSE OBJECTIVE

1. To understand objectives, Strategies, Policies and Plan.
2. To introduce plans by directing and controlling.
3. To Understand the need of Engineering Ethics.
4. To Understand the forces that shape culture.
5. To develop the entrepreneurial skills.
6. To make the students conversant to execute an engineering plan with ethics.

COURSE OUTCOME

1. Prepare objectives, Strategies, Policies and Plan.
2. Execute plans by directing and controlling.
3. Understand the need of Engineering Ethics.
4. Understand the forces that shape culture.
5. Show the entrepreneurial skills.
6. Execute an engineering plan with ethics.

UNIT I HISTORICAL DEVELOPMENT, PLANNING, ORGANISING 9

Definition of Management – Management and Administration – Development of Management Thought – Contribution of Taylor and Fayol – Functions of Management – Steps involved in Planning – Objectives – Setting Objectives – Process of Managing by Objectives – Strategies, Policies and Planning Premises – Forecasting – Decision-making – Formal and informal organization – Organization Chart –.

UNIT II DIRECTING AND CONTROLLING 9

Human Factors – Creativity and Innovation – Harmonizing Objectives – Leadership – Types of Leadership Motivation – Hierarchy of needs – Motivation theories – Motivational Techniques – Job Enrichment – Process of Communication – System and process of Controlling – Requirements for effective control – Control of Overall Performance – Direct and Preventive Control – Reporting

UNIT III ENGINEERING ETHICS 9

Senses of 'Engineering Ethics' – variety of moral issues – types of inquiry – moral dilemmas – moral autonomy – Kohlberg's theory – Gilligan's theory – consensus and controversy – Models of Professional Roles – theories about right action – Self-interest – customs and religion – uses of ethical theories.

UNIT IV FACTORS OF CHANGES 9

Forces that shape culture, social control – Meaning, Agencies, Institution, Customs, Values, Folkways, Norms and Laws. Social changes – Meaning and nature – Theories.

UNIT V ENTREPRENEURSHIP AND MOTIVATION 9

Entrepreneur – Types of Entrepreneurs – Difference between Entrepreneur and Intrapreneur – Entrepreneurship in Economic Growth – Major Motives Influencing an Entrepreneur – Achievement Motivation Training, self Rating, Business Game, Thematic Apperception Test – Stress management, Entrepreneurship Development Programs – Need, Objectives.

3. <http://lfkfb.tripod.com/eng24/gilliganstheory.html>
4. <http://www.developingeyes.com/five-types-of-entrepreneurs/>

COURSE OBJECTIVE

1. To explain the steps involved in FEA and also the types of weight residual methods
2. To impart knowledge to formulate and solve problems in one dimensional structures including trusses, beams and frames.
3. To enrich the understanding of two dimensional thermal and torsion problems.
4. To enrich the understanding of axisymmetric bodies, plate and shell.
5. To develop an understanding of the standard techniques on matrix solution techniques to dynamic problems.
6. To impart knowledge on FE equation for structural, heat transfer and vibration problems.

COURSE OUTCOME

1. Explain the steps involved in FEA and also the types of weight residual methods
2. Formulate and solve problems in one dimensional structures including trusses, beams and frames.
3. Predict finite element equations for two dimensional thermal and torsion problems.
4. Predict finite element equations for axisymmetric bodies, plate and shell.
5. Apply matrix solution techniques to dynamic problems.
6. Formulate FE equation for structural, heat transfer and vibration problems.

UNIT I INTRODUCTION**9 + 3**

Historical background – Matrix approach – Application to the continuum – Discretization – Matrix algebra – Governing equations for continuum – Classical Techniques in FEM – Weighted residual method – Ritz method

UNIT II ONEDIMENSIONAL PROBLEMS**9 + 3**

Finite element modeling – Coordinates and shape functions – Potential energy approach – Galerkin approach – Assembly of stiffness matrix and load vector – Finite element equations – Quadratic shape functions – Applications to plane trusses

UNIT III TWODIMENSIONAL CONTINUUM**9 + 3**

Introduction – Finite element modeling – Scalar valued problem – Poisson equation – Laplace equation – Triangular elements – Element stiffness matrix – Force vector – Galerkin approach – Stress calculation – Temperature effects

UNIT IV AXISYMMETRIC CONTINUUM**9 + 3**

Axisymmetric formulation – Element stiffness matrix and force vector – Galerkin approach – Body forces and temperature effects – Stress calculations – Boundary conditions – Applications to cylinders under internal or external pressures

UNIT V ISOPARAMETRIC ELEMENTS FOR TWODIMENSIONAL CONTINUUM**9 + 3**

The four node quadrilateral – Shape functions – Element stiffness matrix and force vector – Numerical integration – Stiffness integration – Stress calculations – Four node quadrilateral element.

COURSE OBJECTIVE

1. To impart knowledge about the elements and techniques involved in Mechatronics systems which are very much essential to understand the emerging field of automation.
2. To understand the concepts of sensors and transducers.
3. To provide an overview of actuation systems.
4. To expose students to controller model for electrical, mechanical and thermal systems.
5. To provide knowledge about various types of controllers.
6. To facilitate the understanding of PLC program using ladder logic.

COURSE OUTCOME

Upon completion of this course, the students can able to

1. Implement the concepts of sensors and transducers.
2. Design the actuation systems.
3. Develop the controller model for electrical, mechanical and thermal systems.
4. Explain about various types of controllers.
5. Create the PLC program using ladder logic.
6. Design Mechatronic system.

UNIT I MECHATRONICS SENSORS AND TRANSducers 9

Introduction to Mechatronics – Systems – Measurement Systems – Control Systems – Traditional design – Microprocessor based Controllers. Introduction to sensors – Performance Terminology – Static and Dynamic characteristics – Displacement – Position and Proximity – Velocity and Motion – Fluid Pressure – Temperature Sensors – Light Sensors – Selection of Sensors – Signal processing – Servo systems.

UNIT II ACTUATORS AND SYSTEM MODELS 9

Pneumatic and Hydraulic Systems – Directional Control Valves – Rotary Actuators. Mechanical Actuation Systems – Cams – Gear Trains – Ratchet and pawl – Belt and Chain Drives – Bearings. Electrical Actuation Systems – Mechanical Switches – Solid State Switches – Solenoids – D.C Motors – A.C Motors – Stepper Motors.

Introduction to system models – Building block of Mechanical, Electrical, Fluid and Thermal Systems.

UNIT III MICROPROCESSORS IN MECHATRONICS 9

Introduction – Architecture – pin configuration Instruction set – Programming of Microprocessors using 8085 instructions – Interfacing. **Input and output devices – interfacing D/A converters and A/D converters – Application – Temperature control – Stepper motor control.**

UNIT IV CONTROLLERS 9

Introduction – Continuous and discrete process Controllers – Control Mode – Two – Step mode – Proportional Mode – Derivative Mode – Integral Mode – PID Controllers – Digital Controllers – Adaptive Control – Digital Logic Control – Micro Processors Control. **Introduction to PLC – Basic Structure – Input / Output Processing – Programming – Mnemonics – Timers, Internal relays and counters – Data Handling – Analog Input / Output – Selection of a PLC.**

UNIT V DESIGN OF MECHATRONIC SYSTEMS 9

Stages in designing Mechatronic Systems – Traditional and Mechatronic Design – Possible Design Solutions – Case Studies of Mechatronics Systems, Pick and place robot – automatic Car Park Systems – Engine Management Systems – Introduction to MEMS.

COURSE OBJECTIVES		
<ol style="list-style-type: none"> 1. To study the features of the software tools needed to analyze engineering problems. 2. To introduce the concepts of the different applications of simulation and analysis tools. 3. To familiarize the students to understand the features of CNC Machine Tool. 4. To make the student acquire sound knowledge on part programming for machining a work. 5. Perform operations in CNC machines like CNC lathe, 6. Perform operations in CNC Vertical Machining Centre 		
COURSE OUTCOME		
Upon completion of this course, the Students will be able to		
<ol style="list-style-type: none"> 1. Perform structural analysis of bars andtrusses 2. Perform structural analysis of beams andframes 3. Perform 2d analysis of plate andshells 4. Perform modal analysis of simplesystems 5. Perform thermal analysis of simplesystems 6. Perform fluid and failure analysis of simplesystems 		
LIST OF EXPERIMENTS		
COMPUTER AIDED ENGINEERING (Simple Analysis using ANSYS Tool)		
<ol style="list-style-type: none"> 1. Stress analysis of rectangular Lbracket 2. Stress analysis of beams (Cantilever, Simply supported, Fixedends) 3. Mode frequency analysis of beams (Cantilever, Simply supported, Fixedends) 4. Harmonic analysis of a 2Dcomponent 5. Thermal stress analysis of a 2Dcomponent 6. Modeling a 3D component. (Single point cutting tool, I beams,etc.,) 		
COMPUTER AIDED MANUFACTURING (CAM)		
<ol style="list-style-type: none"> 1. MANUAL PART PROGRAMMING (Using G and M Codes) in CNCMachine. 2. Part programming for Linear, Circular interpolation, and Contourmotions. 3. Part programming using standard canned cycles for Thread cutting, Drilling, Peck drilling, andBoring. 4. NC code generation using software's like Edge CAM, CREO, etc. CNC Controllers likeFANUC, Siemens, and Hiedenhain etc. 		
TOTAL		45PERIODS

OBJECTIVE

1. To introduce the program for arithmetic functions and the program for sorting, code conversion functions.
2. To enrich the understanding of the program codes to interface with stepper motor.
3. To understand the importance of set speed with actual speed of DC motor by interfacing suitable speed sensors.
4. To introduce the concepts of all the hydraulic, pneumatic and electro pneumatic circuits by using simulation software.
5. To understand the concept of displacement, force and temperature measurement
6. To understand about the controllers

OUTCOME

1. Create the program for arithmetic functions and the program for sorting, code conversion functions.
2. Formulate the program codes to interface with stepper motor.
3. Compare the set speed with actual speed of DC motor by interfacing suitable speed sensors.
4. Integrate all the hydraulic, pneumatic and electro pneumatic circuits by using simulation software.
5. Able to recognize the controllers and their applications
6. Perform the displacement, force and temperature measurement.

LIST OF EXPERIMENTS

1. Design and testing of fluid power circuits to control
(i) Velocity (ii) direction and (iii) force of single and double acting actuators
2. Design of circuits with logic sequence using Electro pneumatic trainer kits.
3. Simulation of basic Hydraulic, Pneumatic and Electric circuits using software
4. Circuits with multiple cylinder sequences in Electro pneumatic using PLC.
5. Servo controller interfacing for open loop
6. PID controller interfacing
7. Stepper motor interfacing with 8051 Microcontroller
(i) Full step resolution (ii) Half step resolution
8. Modeling and analysis of basic electrical, hydraulic and pneumatic systems using LABVIEW
9. Computerized data logging system with control for process variables like pressure, flow and temperature
10. Measurement of displacement using LVDT
11. Measurement of temperature using Thermocouples
12. Measurement of Force using Strain Gage

TOTAL 45 PERIODS

COURSE OBJECTIVES

1. To develop the student's knowledge in various robot structures and their workspace.
2. To develop student's skills in performing spatial transformations associated with rigid body motions.
3. To develop student's skills in perform kinematics analysis of robot systems.
4. To provide the student with knowledge of the singularity issues associated with the operation of robotic systems.
5. To provide the student with some knowledge and analysis skills associated with trajectory planning.
6. To provide the student with some knowledge and skills associated with robot control.

COURSE OUTCOMES

Upon completion of this course, the students will be able to

1. Understand the fundamentals of therobots
2. Describe the robot celldesign
3. Know the safety considerations in roboticapplications.
4. The student with knowledge of the singularity issues associated with the operation of robotic systems.
5. The student with some knowledge and analysis skills associated with trajectory planning.
6. The student with some knowledge and skills associated with robot control.

UNIT I FUNDAMENTALS OF ROBOT**6**

Robot – Definition – Robot Anatomy – Co-ordinate Systems, Work Envelope, types and classification – Specifications – Pitch, Yaw, Roll, Joint Notations, Speed of Motion, Pay Load – Robot Parts and Their Functions – Need for Robots – Different Applications. Pneumatic Drives – Hydraulic Drives – Mechanical Drives – Electrical Drives – D.C. Servo Motors, Stepper Motor, A.C. Servo Motors – Salient Features. End Effectors – Grippers. Requirements of a sensor, Principles and Applications of sensors – Position of sensors, Proximity Sensors, Touch Sensors – Camera, Frame Grabber, Sensing and Digitizing Image.

UNIT II ROBOT CELL DESIGN**6**

Robot cell design – simulation software (RoboWave). Robot cell layouts – Multiple robots and machine interference – robot cell planning – robot cycle time analysis for assembly, welding and painting shop.

UNIT III SAFETY CONSIDERATIONS**8**

Safety Considerations for Robot Operations, Economic Analysis of Robots – Pay back Method, EUAC Method, Rate of Return Method.

TOTAL 20 PERIODS**REFERENCES**

S. No.	Author(s) Name	Title of the book	Publisher	Year of Publication
1	Klafter R.D., and Negin M	Robotic Engineering - An Integrated Approach	Prentice Hall	2003
2	Groover M.P	Industrial Robotics - Technology Programming and Applications	McGraw Hill	2001

COURSE OBJECTIVES

1. To understand the working principles of pumps
2. To understand the working principles and motors
3. To develop the system curve
4. To calculate the Net Positive Suction Head
5. To calculate the pump Total Head versus Rate of Flow characteristic
6. To match pumps to variable, parallel and series pumping systems

COURSE OUTCOMES

1. Understand the working principles of pumps.
2. Understand the working principles and motors.
3. Develop the system curve.
4. Calculate the Net Positive Suction Head.
5. Calculate the pump Total Head versus Rate of Flow characteristic.
6. Match pumps to variable, parallel and series pumping systems.

UNIT I SINGLE PHASE INDUCTION MOTOR**6**

Constructional details of single phase induction motor – Principle of operation – Types – Losses and Efficiency – Performance analysis – Starting methods of single-phase induction motors. – Design aspects of motors for usage in submersible pumps – Motors Rating and selection criteria.

UNIT II THREE PHASE INDUCTION MOTOR**6**

Constructional details – Types of rotors – Principle of operation – Need for starters – Types of starters – DOL, Stator resistance and reactance, rotor resistance, autotransformer and star-delta starters – Speed control – Change of voltage, torque, number of poles and slip – Losses and Efficiency – Performance analysis – Design aspects of motors for usage in submersible pumps – Motors Rating and selection criteria.

UNIT III PUMPS**8**

Pumps: definition and classifications – Centrifugal pump: classifications, working principle, velocity triangles, specific speed, efficiency and performance curves – Reciprocating pump: classification, working principle, indicator diagram, work saved by air vessels and performance curves – cavitations in pumps – rotary pumps: working principles of gear and vane pumps

SEMESTER VIII

15BEME801

TOTALQUALITYMANAGEMENT

3 0 0 3100

COURSE OBJECTIVE

1. To introduce the concepts of essentiality of quality.
2. To understand the importance of various TQM principles.
3. To introduce the concepts of the various TQM principles.
4. To Understand the techniques for quality management.
5. To introduce the standard quality systems in industries.
6. To familiarize the students to understand the various techniques to improve the quality in industries.

COURSE OUTCOMES

At the end of the course the student would be able to

1. Understand the essentiality of quality.
2. Summarize various TQM principles.
3. Understand the various TQM principles.
4. Understand the techniques for quality management.
5. Implement standard quality systems in industries.
6. Apply various techniques to improve the quality in industries.

UNIT I ESSENTIALS OF TQM

9

Definition of Quality, Dimensions of Quality, Quality Planning, Quality costs – Analysis Techniques for Quality Costs, Basic concepts of Total Quality Management, Historical Review, Principles of TQM, Leadership – Concepts, Role of Senior Management, Quality Council, Quality Statements, Strategic Planning, Deming Philosophy, Barriers to TQM Implementation.

UNIT II TQM PRINCIPLES

9

Customer satisfaction – Customer Perception of Quality, Customer Complaints, Service Quality, Customer Retention, Employee Involvement – Motivation, Empowerment, Teams, Recognition and Reward, Performance Appraisal, Benefits, Continuous Process Improvement – Juran Trilogy, PDCA Cycle, 5S, Kaizen, Performance Measures – Basic Concepts, Strategy, Performance Measure.

UNIT III TQM TOOLS

9

The new seven management tools of quality, Statistical Fundamentals – Measures of central Tendency and Dispersion, Population and Sample, Normal Curve, Control Charts for variables and attributes, Process capability, Concept of six sigma – APQP.

UNIT IV TQM TECHNIQUES

9

Benchmarking – Reasons to Benchmark, Benchmarking Process, Quality Function Deployment (QFD) – House of Quality, QFD Process, Benefits, Taguchi Quality Loss Function, Total Productive Maintenance (TPM) – Concept, Improvement Needs, FMEA – Stages of FMEA.

UNIT V QUALITY AND ENVIRONMENT SYSTEMS

9

Need for ISO 9000 and Other Quality Systems, ISO 9000:2002 Quality System – Elements, Implementation of Quality System, Documentation, Quality Auditing, TS 16949, ISO 14000 and ISO 18001 – Concept, Requirements and Benefits.

COURSE OBJECTIVE

1. To understand the concept and basics of thrust areas of Mechanical Engineering.
2. To explain the Review literature to identify gaps and define objectives & scope of the work.
3. To make the student appreciate the purpose of innovative ideas for social benefit.
4. To understand the importance of a prototypes/models, experimental set-up and software systems necessary to meet the objectives.
5. To familiarize the students to understand the methods and materials to carry out experiments/develop code.
6. To Reorganize the procedures with a concern for society, environment and ethics

COURSE OUTCOME

1. Identify thrust areas of Mechanical Engineering.
2. Review literature to identify gaps and define objectives & scope of the work.
3. Generate and implement innovative ideas for social benefit.
4. Develop a prototypes/models, experimental set-up and software systems necessary to meet the objectives.
5. Identify methods and materials to carry out experiments/develop code.
6. Reorganize the procedures with a concern for society, environment and ethics

The students in a group of 3 to 4 works on a topic approved by the head of the department under the guidance of a faculty member and prepares a comprehensive project report after completing the work to the satisfaction of the supervisor. The progress of the project is evaluated based on a minimum of three reviews. The review committee may be constituted by the Head of the Department. A project report is required at the end of the semester. The project work is evaluated based on oral presentation and the project report jointly by external and internal examiners constituted by the Head of the Department.

TOTAL 360PERIODS

DEPARTMENT ELECTIVES

15BEME5E01

COMPUTERAIDED DESIGN

3 0 0 3100

COURSE OBJECTIVE

1. To apply basic concepts to develop construction (drawing) techniques.
2. To ability to manipulate drawings through editing and plotting techniques.
3. To understand geometric construction and Produce template drawings.
4. To understand and demonstrate dimensioning concepts and techniques.
5. To understand Section and Auxiliary Views.
6. To become familiar with Solid Modelling concepts and techniques.

COURSE OUTCOMES:

Upon completion of the course, the students will be able to

1. Apply basic concepts to develop construction (drawing) techniques.
2. Ability to manipulate drawings through editing and plotting techniques.
3. Understand geometric construction and Produce template drawings.
4. Understand and demonstrate dimensioning concepts and techniques
5. Understand Section and Auxiliary Views
6. Become familiar with Solid Modelling concepts and techniques.

UNIT I OVERVIEW OF CAD SYSTEMS

9

Conventional and computer aided design processes-advantages and disadvantages. Subsystems of CAD-CAD hardware and software, analytical and graphics packages, CAD workstations. Networking of CAD systems.

UNIT II INTERACTIVE COMPUTER GRAPHICS AND GRAPHIC TRANSFORMATIONS

9

Generative, cognitive and image processing graphics. Static and dynamic data graphics. Transport of graphics data. Graphic standards. Generation of graphic primitives - display transformation in Two- and Three – Dimensional graphics concepts, Graphical input technique, Geometric transformations, Visual Realism, Computer animation, customizing graphics software.

UNIT III GEOMETRIC MODELING

9

Wireframe, surface, NURBS and solid modeling-applications and advantages. Creating primitive solids, sweeping solids, boolean operations. Extracting entities from a solid. Filleting of edges of solids. Boundary representation (B-rep) Constructive Solid Geometry(CSG) and Analytical Solid Modeling(ASM)

UNIT IV PARAMETRIC DESIGN AND OBJECT REPRESENTATION

9

Types of co-ordinate systems. Parametric design - definition and advantages. Parametric representation of analytic and synthetic curves. Parametric representation of surfaces and solids - manipulations.

UNIT V PRODUCT DESIGN AND DEVELOPMENT

9

Automated 2D drafting - basics, mechanical assembly - bill of materials generation. Mass property calculations.

5	Sadhu Singh	Computer-Aided Design and Manufacturing	Khanna Publishers, New Delhi	1998
6	Rao S S	Optimisation Techniques	Wiley Eastern, New Delhi	2003

COURSE OBJECTIVES

1. To understand the application of computers in various aspects of Manufacturing viz., Design, proper planning, Manufacturing cost, Layout & Material Handlingsystem.
2. To know the application of principles of group technology in computer aided processplanning.
3. To impart knowledge on working of the shop floorcontrol
4. To Study and acquire knowledge on data collection system in FMS.
5. To familiarize the students to understand CIM architecture for practicalapplication.
6. To expose students to generate database for computer integrated manufacturingprocesses.

COURSE OUTCOMES

Upon completion of this course, the student can able to

1. Implement computer integrated manufacturing concepts in industries.
2. Apply the principles of group technology in computer aided processplanning.
3. Understand the working of the shop floorcontrol
4. Implement automated data collection system in FMS.
5. Develop CIM architecture for practicalapplication.
6. Generate database for computer integrated manufacturingprocesses.

UNIT I INTRODUCTION**9**

The meaning and origin of CIM– the changing manufacturing and management scene – External communication – islands of automation and software–dedicated and open systems–manufacturing automation protocol – product related activities of a company– marketing engineering – production planning – plant operations – physical distribution– business and financial management.

UNIT II GROUP TECHNOLOGY**9**

Group technology– – part families – Classification and coding – Approaches to computer aided process planning –variant approach and generative approaches

UNIT III SHOP FLOOR CONTROL AND INTRODUCTION OF FMS**9**

Shop floor control–phases –factory data collection system –automatic identification methods– Bar code technology–automated data collection system. **FMS–components of FMS – types –FMS workstation –material handling and storage systems– FMS layout –computer control systems–application and benefits.**

UNIT IV CIM IMPLEMENTATION AND DATA COMMUNICATION**9**

CIM and company strategy – system modeling tools –IDEF models – activity cycle diagram – CIM open system architecture (CIMOSA)– manufacturing enterprise wheel–CIM architecture – Product data management–CIM implementation software. **Communication fundamentals– local area networks –topology – LAN implementations – network management and installations –MRP, ERP concepts**

UNIT V OPEN SYSTEM AND DATABASE FOR CIM**9**

Open systems–open system inter connection – manufacturing automations protocol and technical office protocol (MAP /TOP).

Development of databases –database terminology– architecture of database systems–data modeling and data associations –relational data bases – database operators – advantages of data base and relational database.

3. <http://www.computerintegratedmanufacturing.com/>

COURSE OBJECTIVES

1. To provide knowledge on different aspects of powder metallurgy parameters.
2. To understand the importance of principle of advanced welding processes and its application.
3. To understand the importance of advanced forming processes and its application.
4. To familiarize the students to advanced manufacturing process for processing of different materials.
5. To acquaint the student to apply the suitable rapid prototyping mechanism for industry need.
6. To provide knowledge on optimum parametric for advanced manufacturing process.

COURSE OUTCOMES

Upon the completion of this course, the students will be able to

1. Understand different aspects of powder metallurgy parameters.
2. Understand basic principle of advanced welding processes and its application.
3. Understand basic principle of advanced forming processes and its application.
4. Select the best suitable advanced manufacturing process for processing of different materials.
5. Apply the suitable rapid prototyping mechanism for industry need.
6. Select the optimum parametric for advanced manufacturing process.

UNIT I POWDERMETALLURGYPROCESS 9

Introduction to powder metallurgy process – preparation of powders – types and functions of binders – green compaction – sintering process and its effect on the product.

UNIT II ADVANCEDWELDINGPROCESSES 9

Percussion Welding– Electro Slag Welding, Plasma Arc Welding – Thermit Welding – Electron Beam Welding – Friction and Inertia Welding – Friction Stir Welding – Under Water WeldingProcess.

UNIT III SHEET METAL ANDFORMINGPROCESS 9

Working principle and application of special forming process – Hydro Forming– Rubber Pad Forming– Explosive Forming – Magnetic Pulse Forming– Peen Forming – Super Plastic Forming – Deep Drawing Process.

UNIT IV ADVANCEDMACHININGPROCESS 9

Modern machining process: Abrasive Jet Machining, Water Jet Machining, Abrasive Water Jet Machining, Ultrasonic Machining, Electro chemical Machining, Electro chemical Grinding, Electro Discharge Machining, wire cut EDM, Electron Beam Machining, plasma arc machining, Laser Beam Machining. Ultrasonic Machining, High speed machining process – deep hole drilling process

UNIT V RAPIDPROTOTYPING 9

Introduction to Rapid Prototyping – Need for RPT– Stereo–lithography – Selective Laser Sintering, Fused Deposition Modeling, Laminated Object Manufacturing, Solid Ground Curing, Ballistic Particle Manufacturing

COURSE OBJECTIVES

1. To recognize symbols and fundamentals in fluid power generation and distribution.
2. To identify power source for hydraulic systems.
3. To select appropriate components used in various hydraulic systems.
4. To design hydraulic circuits for given applications.
5. To distinguish the components used in pneumatic circuits.
6. To create the logic circuits for controlling electro-hydraulic/ pneumatic systems.

COURSE OUTCOMES

At the end of the course, the students will be able to

1. Recognize symbols and fundamentals in fluid power generation and distribution.
2. Identify power source for hydraulic systems.
3. Select appropriate components used in various hydraulic systems.
4. Design hydraulic circuits for given applications.
5. Distinguish the components used in pneumatic circuits.
6. Create the logic circuits for controlling electro-hydraulic/ pneumatic systems.

UNIT I FLUID POWER SYSTEMS AND FUNDAMENTALS**9**

Introduction to fluid power, Advantages of fluid power, Application of fluid power system. Types of fluid power systems, Properties of hydraulic fluids – General types of fluids – Fluid power symbols. Basics of Hydraulics–Applications of Pascals Law– Laminar and Turbulent flow – Reynold's number – Darcy's equation – Losses in pipe, valves and fittings.

UNIT II HYDRAULIC SYSTEM AND COMPONENTS**9**

Sources of Hydraulic Power: Pumping theory – Pump classification – Gear pump, Vane Pump, piston pump, Pressure boosting pumps, construction and working of pumps – pump performance – Variable displacement pumps. Fluid Power Actuators: Linear hydraulic actuators – Types of hydraulic cylinders – Single acting, Double acting special cylinders like tandem, Rodless, Telescopic, Cushioning mechanism, Construction of double acting cylinder, Rotary actuators – Fluid motors, Gear, Vane and Piston motors.

UNIT III DESIGN OF HYDRAULIC CIRCUITS**9**

Construction of Control Components : Direction control valve – 3/2 way valve – 4/2 way valve – Shuttle valve – check valve – pressure control valve – pressure reducing valve, sequence valve, Flow control valve – Fixed and adjustable, electrical control solenoid valves, Relays, ladder diagram. Accumulators and Intensifiers: Types of accumulators – Accumulators circuits, sizing of accumulators, intensifier – Applications of Intensifier – Intensifier circuit.

UNIT IV PNEUMATIC SYSTEMS AND COMPONENTS**9**

Pneumatic Components: Properties of air – Compressors – Filter, Regulator and Lubricator UNIT Air control valves, Quick exhaust valves, pneumatic actuators. Fluid Power Circuit Design, Speed control circuits, synchronizing circuit, Pneumatic hydraulic circuit, Sequential circuit design for simple applications using cascade method.

UNIT V DESIGN OF PNEUMATIC CIRCUITS**9**

Servo systems – Hydro Mechanical servo systems, Electro hydraulic servo systems and proportional valves. Fluidics – Introduction to fluidic devices, simple circuits, Introduction to Electro Hydraulic Pneumatic logic circuits, ladder diagrams, PLC applications in fluid power control. Fluid power circuits; failure and troubleshooting.

COURSE OBJECTIVES

1. To give exposure to accessories and layout required for a steam power plant depending upon the requirements.
2. To study performance of steam power plant.
3. To make the student acquire sound knowledge of working of nuclear and hydel power plant.
4. To study the features of gas turbine power plant.
5. To make the student acquire sound knowledge of economics of the power plant.
6. To make the student acquire sound knowledge on renewable energy technologies and availability.

COURSE OUTCOMES

Upon completion of this course, the students can able to

1. Select the accessories and layout required for a steam power plant depending upon the requirements.
2. Compute performance of steam power plant.
3. Explain the working of nuclear and hydel power plant.
4. Compute performance of gas turbine power plant.
5. Calculate the economics of the power plant.
6. Apply appropriate type of renewable energy technologies depending upon the application and availability.

UNIT I INTRODUCTION TO POWER PLANTS AND BOILERS**9**

Layout of Steam, Hydel, Diesel, MHD, Nuclear and Gas Turbine Power Plants – Combined Power Cycles – Comparison and Selection, Load Duration Curves.

Steam Boilers and Cycles – High Pressure and Super Critical Boilers – Fluidised Bed Boilers – Industrial Standards.

UNIT II STEAM POWER PLANT**9**

Fuel and Ash Handling, Combustion Equipment for burning coal, Mechanical Stokers, Pulveriser, Electrostatic Precipitator, Draught – different types, Surface Condenser Types, Cooling Towers

UNIT III NUCLEAR AND HYDEL POWER PLANTS**9**

Nuclear Energy – Fission, Fusion Reaction, Types of Reactors, pressurized water reactor, Boiling Water Reactor, Waste Disposal and safety.

Hydel Power Plant – Essential Elements, Selection of Turbines, Governing of Turbines – Micro Hydel developments.

UNIT IV DIESEL AND GAS TURBINE POWER PLANT**9**

Types of Diesel Plants, Components, Selection of Engine Type, Applications Gas Turbine Power Plant – Fuels – Gas Turbine Material – Open and Closed Cycles – Reheating – Regeneration and Intercooling – Combined Cycle.

UNIT V OTHER POWER PLANTS AND ECONOMICS OF POWER PLANTS**9**

Geo thermal – OTEC – Tidal – Pumped storage – Solar thermal central receiver system.

Cost of Electric Energy – Fixed and operating Costs – Energy Rates – Types of Tariffs – Economics of load sharing, comparison of economics of various power plants.

COURSE OBJECTIVES

1. To impart knowledge on the principles of locating and clamping devices in machining process.
2. To familiarize the students to understand design of jigs for a given component.
3. To Study and acquire knowledge on design fixtures for a given component.
4. To make the student acquire sound knowledge on appropriate type of press tool for a given component.
5. To expose students to drawing die for a given component.
6. To give exposure to the use computer aids for sheet metal forming analysis

COURSE OUTCOMES

Upon the completion of this course the students will be able to

1. Summarize the principles of locating and clamping devices in machining process.
2. Design jigs for a given component.
3. Design fixtures for a given component.
4. Design an appropriate type of press tool for a given component.
5. Develop a drawing die for a given component.
6. Use computer aids for sheet metal forming analysis

UNIT I PURPOSE TYPES AND FUNCTIONS OF JIGS AND FIXTURES**9**

Tool design objective – Production devices – Inspection devices – Materials used in Jigs and Fixtures – Types of Jigs – Types of Fixtures–Mechanical actuation–pneumatic and hydraulic actuation–Analysis of clamping force–Tolerance and error analysis.

UNIT II JIGS**9**

Drill bushes –different types of jigs–plate latch, channel, box, post, angle plate, angular post, turnover, pot jigs–Automatic drill jigs–Rack and pinion operated. Air operated Jigs components. Design and development of Jigs for given components.

UNIT III FIXTURES**9**

General principles of boring, lathe, milling and broaching fixtures– Grinding, planning and shaping fixtures, assembly, Inspection and welding fixtures– Modular fixtures. Design and development of fixtures for given component.

UNIT IV PRESS WORKING TERMINOLOGIES AND ELEMENTS OF DIES AND STRIP LAY OUT**9**

Press working terminology–Presses and press accessories–Computation of capacities and tonnage requirements. Elements of progressive combination and compound dies:Die block–die shoe. Bolster plate–punch plate–punch holder–guide pins and bushes – strippers – knockouts–stops –pilots–Selection of standard die sets strip lay out–strip lay out calculations

UNIT V DESIGN AND DEVELOPMENT OF DIES**9**

Design and development of progressive and compound dies for Blanking and piercing operations. Bending dies – development of bending dies–forming and drawing dies–Development of drawing dies. Design considerations in forging, extrusion, casting and plastic dies.

COURSE OBJECTIVES

1. To introduce Governing Equations of viscous fluidflows
2. To introduce numerical modeling and its role in the field of fluid flow and heattransfer
3. To enable the students to understand the various discretization methods, solution procedures and turbulence modeling.
4. To create confidence to solve complex problems in the field of fluid flow and heat transfer by using high speed computers.
5. To equip them with skills to solve convection and diffusion problems
6. To understand the importance continuity and momentum equations for different types of fluid flow

COURSE OUTCOMES

Upon completion of this course, the students can able

1. Identify, solve engineering problems by computational fluid dynamics.
2. Understand the importance of governing equations involved in CFD
3. Formulate and solve problems in the field of fluid flow and heat transfer.
4. Solve the heat conduction problems using finite difference method.
5. Analyze and provide solutions for convection and diffusion problems.
6. Develop continuity and momentum equations for different types of fluid flow.

UNIT I GOVERNING EQUATIONS AND BOUNDARY CONDITIONS**9**

Basics of computational fluid dynamics – Governing equations of fluid dynamics – Continuity, Momentum and Energy equations – Chemical species transport – Physical boundary conditions – Time-averaged equations for Turbulent flow – Turbulence – Kinetic – Energy Equations – mathematical behavior of PDEs on CFD: Elliptic, Parabolic and Hyperbolic equations.

UNIT II DISCRETIZATION AND SOLUTION METHODOLOGIES**9**

Methods of Deriving the Discretization Equations – Taylor Series formulation – Finite difference method – Control volume Formulation – Spectral method.

Solution methodologies: Direct and iterative methods, Thomas algorithm, Relaxation method, Alternating Direction Implicit method.

UNIT III HEAT CONDUCTION**9**

Finite difference and finite volume formulation of steady/transient one-dimensional conduction equation, Source term linearization, Incorporating boundary conditions, Finite volume formulations for two and three dimensional conduction problems

UNIT IV CONVECTION AND DIFFUSION**9**

Finite volume formulation of steady one-dimensional convection and Diffusion problems, Central, upwind, hybrid and power-law schemes – Discretization equations for two dimensional convection and diffusion.

UNIT V CALCULATION OF FLOW FIELD**9**

Representation of the pressure – Gradient term and continuity equation – Staggered grid – Momentum equations – Pressure and velocity corrections – Pressure – Correction equation, SIMPLE algorithm and its variants. Turbulence models: mixing length model, two equation ($k-\epsilon$) models.

COURSE OBJECTIVES

1. To provide an overview of factors affecting the behavior of materials in components.
2. To expose students to understand the mechanism of fracture.
3. To Study and acquire knowledge on Dynamic and Time-dependent fracture.
4. To study the features of fracture toughness values.
5. To provide an overview of life prediction
6. To Study and acquire knowledge on failure analysis tools in industries

COURSE OUTCOMES

1. Identify the Factors affecting the behavior of materials in components.
2. Understand the mechanism of fracture.
3. Understand the Dynamic and Time-dependent fracture.
4. Determine the fracture toughness values.
5. Improve the life of product through life prediction
6. Use various failure analysis tools in industries.

UNIT I MATERIALS AND DESIGN PROCESS**9**

Factors affecting the behavior of materials in components, effect of component geometry and shape factors, design for static strength, stiffness, designing with high strength and low toughness materials, designing for hostile environments, material processing and design, processes and their influence on design, process attributes, systematic process selection, screening, process selection diagrams, ranking, process cost.

UNIT II FRACTURE MECHANICS**9**

Ductile fracture, brittle fracture, Cleavage-fractography, ductile-brittle transition-Fracture mechanics approach to design-energy criterion, stress intensity approach, time dependent crack growth and damage. Linear Elastic Fracture Mechanics - Griffith theory, Energy release rate, instability and R-curve, stress analysis of cracks-stress intensity factor, K-threshold, crack growth instability analysis, crack tip stress analysis. Elastic Plastic Fracture Mechanics - Crack tip opening displacement(CTOD), J integral, relationship between J and CTOD,

UNIT III DYNAMIC AND TIME-DEPENDENT FRACTURE**9**

Dynamic fracture, rapid loading of a stationary crack, rapid crack propagation, dynamic contour integral, Creep crack growth-C Integral, Visco elastic fracture mechanics, viscoelastic J integral

UNIT IV DETERMINATION OF FRACTURE TOUGHNESS VALUES**9**

Experimental determination of plane strain fracture toughness, K- R curve testing, J measurement, CTOD testing, effect of temperature, strain rate on fracture toughness.

UNIT V FAILURE ANALYSIS TOOLS**9**

Reliability concept and hazard function, life prediction, life extension, application of poisson, exponential and Weibull distribution for reliability, bath tub curve, parallel and series system, MTBF, MTTR, FMEA definition- Design FMEA, Process FMEA , analysis causes of failure, modes, ranks of failure modes, fault tree analysis, industrial case studies/projects on FMEA.

15BEME6E04**FAILURE ANALYSIS AND DESIGN****3 0 0 3100**

1	Shigley and Mische	Mechanical Engineering Design	McGraw Hill Inc., New York	1992
2	Mahmoud M Farag	Material Selection for Engineering Design	Prentice Hall, New Delhi	1997
3	Faculty of Mechanical Engineering	Design Data Book	PSG College of Technology, DPV Printers, Coimbatore	1993
4	ASM Metals Handbook	Failure Analysis and Prevention	ASM Metals Park, Ohio, USA,	1995

COURSE OBJECTIVES

1. To explain importance of renewable energy resources.
2. To understand the importance of basic concepts of solar radiation and analyze the working of solar PV and thermal systems.
3. To understand the importance of principles of energy conversion from alternate sources including wind, geothermal, ocean, biomass, biogas and hydrogen.
4. To study the features of design principles of biogas plants.
5. Understand the concepts and applications of fuel cells, thermoelectric convertor and MHD generator.
6. To give exposure to power plants working with non-conventional energy.

COURSE OUTCOMES

Upon completion of this course, the students can able to

1. Understand the importance of renewable energy resources.
2. Understand the basic concepts of solar radiation and analyze the working of solar PV and thermal systems.
3. Understand principles of energy conversion from alternate sources including wind, geothermal, ocean, biomass, biogas and hydrogen.
4. Implement design principles of biogas plants.
5. Understand the concepts and applications of fuel cells, thermoelectric convertor and MHD generator.
6. Able to classify and select the best renewable energy sources for the system under analysis.

UNIT I ENERGY AND ENVIRONMENT**9**

Primary energy sources – world energy resources – Indian energy scenario – energy cycle of the earth – environmental aspects of energy utilisation, CO₂ emissions and Global warming – renewable energy resources and their importance. Potential impacts of harnessing the different renewable energy resources.

UNIT II SOLAR ENERGY**9**

Principles of solar energy collection – solar radiation – measurements – instruments – data and estimation – types of collectors – characteristics and design principles of different type of collectors – performance of collectors – testing of collectors. Solar thermal applications – water heaters and air heaters – performance and applications – simple calculations – solar cooling – solar drying – solar ponds – solar tower concept – solar furnace.

UNIT III WIND, TIDAL AND GEOTHERMAL ENERGY**9**

Energy from the wind – general theory of windmills – types of windmills – design aspects of horizontal axis windmills – applications. Energy from tides and waves – working principles of tidal plants and ocean thermal energy conversion plants – power from geothermal energy – principle of working of geothermal power plants.

UNIT IV BIOENERGY**9**

Energy from bio mass and bio gas plants – various types – design principles of biogas plants – applications. Energy from wastes – waste burning power plants – utilization of industrial and municipal wastes – energy from the agricultural wastes.

UNIT V OTHER RENEWABLE ENERGY SOURCES**9**

Direct energy conversion (Description, principle of working and basic design aspects only) – Magneto hydrodynamic systems (MHD) – thermoelectric generators – thermionic generators – fuel cells – solar cells – types, Emf generated, power output, losses and efficiency and applications. Hydrogen conversion and storage systems

TOTAL 45 PERIODS**TEXT BOOKS**

2. <http://www.solarserver.de/wissen/sonnenkollektoren-e.html>
3. <http://earthsci.org/mineral/energy/wind/wind.html>
4. <http://www.biomassgasification.com/>

COURSE OBJECTIVES

1. To familiarize the students in the Science of Precision Engineering.
2. To provide and enhance the technical knowledge in precision manufacturing and error control.
3. To create the awareness among students about new trends in manufacturing and its precise control.
4. To learn micro electro mechanical systems.
5. To learn bulk micro machining and Nano technology.
6. To acquire knowledge about accuracy, micro finishing processes and unconventional machining.

COURSE OUTCOMES

The students would be able to understand

1. The meaning precision machining and the importance of it.
2. The requirements of machine network elements to achieve precision in the components.
3. The principles of various precision engineering processes and apply them in actual field.
4. Various method of micromachining using LASER and other processes.
5. Learn micro electro mechanical systems.
6. Learn bulk micro machining and Nano technology.

UNIT I ACCURACY**9**

Concept of accuracy – accuracy of numeric control systems, acceptance test for machine tools. Factors Affecting Accuracy - Static stiffness and its influence on machining accuracy, inaccuracies due to thermal effects, influence of forced vibrations on accuracy, dimensional wear of cutting tools and its influence on accuracy.

UNIT II MICROFINISHING PROCESS**9**

Surface roughness, bearing area curves, surface texture measurement, methods of improving accuracy and surface finish, finish boring, finish grinding, precision cylindrical grinding, micro machining, precision micro drilling.

UNIT III UNCONVENTIONAL MACHINING**9**

Precision, cut in wire, EDM machining, electro mechanical grinding, electron beam machining, laser beam machining.

UNIT IV MICRO ELECTROMECHANICAL SYSTEMS**9**

Introduction to silicon processing, wafer cleaning, diffusion and ion implantation, oxidation, photolithography, photo resist, resist strip, electron beam and X-ray lithography, thin film deposition, evaporation, sputtering, molecular beam epitaxy, chemical vapour deposition, electro plating.

UNIT V BULK MICRO MACHINING AND NANOTECHNOLOGY**9**

Wet etching, isotropic etching, anisotropic etching, dry etching, physical etching, reactive ion etching, Nano Technology, nano-grating system, nano-lithography, fabrication of CCDs, nano processing of materials for super high density ICs, nano-mechanical parts.

TOTAL 45 PERIODS**TEXT BOOKS**

S. No.	Author(s) Name	Title of the book	Publisher	Year of Publication
1	Murthy R L	Precision Engineering in Manufacturing	New Age International Publishers, Chennai	1996
2	Mark J Madou	Fundamentals of Micro Fabrication	CRC Press, New York	2002

REFERENCES

S. No.	Author(s) Name	Title of the book	Publisher	Year of Publication
1	Davidson	Handbook of Precision Engineering Vol. 1, 12	McMillan	1972
2	Jaeger R C	Introduction to Micro Electronics Fabrication	Addison Wesley, England	1988
3	Chang C V, Sze S M	VLSI Technology	Tata McGraw Hill, New Delhi	2003
4	BhartBhusshan	Handbook of Nano Technology	Springer Verlag, Germany	2004
5	Nano Tanigudi	Nanotechnology	Oxford University Press, New York	2003

COURSE OBJECTIVES

1. To understand objectives, Strategies, Policies and Plan.
2. To introduce plans by directing and controlling.
3. To Understand the need of Engineering Ethics.
4. To Understand the forces that shape culture.
5. To develop the entrepreneurial skills.
6. To make the students conversant to execute an engineering plan with ethics

COURSE OUTCOMES

1. Prepare objectives, Strategies, Policies and Plan.
2. Execute plans by directing and controlling.
3. Understand the need of Engineering Ethics.
4. Understand the forces that shape culture.
5. Show the entrepreneurial skills.
6. Execute an engineering plan with ethics

UNIT I ENTREPRENEURSHIP**9**

Entrepreneur – Types of Entrepreneurs – Difference between Entrepreneur and Intrapreneur Entrepreneurship in Economic Growth, Factors Affecting Entrepreneurial Growth.

UNIT II MOTIVATION**9**

Major Motives Influencing an Entrepreneur – Achievement Motivation Training, Self Rating, Business Games, Thematic Apperception Test – Stress Management, Entrepreneurship Development Programs – Need, Objectives.

UNIT III BUSINESS**9**

Small Enterprises – Definition, Classification – Characteristics, Ownership Structures – Project Formulation – Steps involved in setting up a Business – identifying, selecting a Good Business opportunity, Market Survey and Research, Techno Economic Feasibility Assessment – Preparation of Preliminary Project Reports – Project Appraisal – Sources of Information – Classification of Needs and Agencies.

UNIT IV FINANCING AND ACCOUNTING**9**

Need – Sources of Finance, Term Loans, Capital Structure, Financial Institution, Management of working Capital, Costing, Break Even Analysis, Taxation – Income Tax, Excise Duty – Sales Tax.

UNIT V SUPPORT TO ENTREPRENEURS**9**

Sickness in small Business – Concept, Magnitude, Causes and Consequences, Corrective Measures - Business Incubators – Government Policy for Small Scale Enterprises – Growth Strategies in small industry – Expansion, Diversification, Joint Venture, Merger and Sub Contracting.

TOTAL 45 PERIODS**TEXTBOOKS**

S. No.	Author(s) Name	Title of the book	Publisher	Year of Publication
1	Khanka. S.S	Entrepreneurial Development	S.Chand & Co. Ltd., New Delhi	2013
2	Donald F Kuratko	Entrepreneurship – Theory, Process and Practice	Cengage Learning	2014

1	Hisrich R D, Peters M	Entrepreneurship	Tata McGraw-Hill	2013
2	Mathew J Manimala	Enterprenuership theory at cross roads: paradigms and praxis	Dream tech	2005
3	Rajeev Roy	Entrepreneurship	Oxford University Press	2011

COURSE OBJECTIVES

1. To Understand and apply the principles of science, technology, engineering, and math to solve industry–related problems.
2. To Understand the concepts and terminologies in Industries
3. To Study and acquire knowledge in creating an industrial design layout
4. To introduce the methods involved in materials handling
5. To understand the knowledge in analysis of work processing happening in industries
6. To equip them with skills to perform work measurement in an industry

COURSE OUTCOMES

Upon completion of this course, the student can able to

1. Understand the concepts and terminologies in Industries
2. apply their knowledge in creating an industrial design layout
3. understand the methods involved in materials handling
4. apply their knowledge in analysis of work processing happening in industries
5. perform work measurement in an industry
6. understand the role of human involvement in industrial work system design

UNIT I INTRODUCTION TO INDUSTRIAL ENGINEERING 9

for layout study – types of layout. Plant location analysis – factors, costs, location decisions – simple problems in single facility location models, network location problems.

UNIT II LAYOUT DESIGN 9

Design cycle – SLP procedure manpower, machinery requirements – computer algorithms – ALDEP, CORELAP, CRAFT

UNIT III QUANTITATIVE METHODS AND MATERIAL HANDLING 9

Group technology – Production Flow analysis (PFA), ROC (Rank Order Clustering) – Line balancing. Principles, unit load concept, material handling system design, handling equipment types, selection and specification, containers and packaging.

UNIT IV OPERATIONS ANALYSIS AND WORK MEASUREMENT 9

Productivity and living standards, Productivity measurement, work design and Productivity – process planning – types. Total time for a job or operation, total work content and ineffective time, methods and motions, graphic tools. Stop watch time study – time study through video graphy, Standard data, methods time measurement (MTM), Development of Production Standards, learning effect.

UNIT V HUMAN FACTORS IN WORK SYSTEM DESIGN 9

Human factors Engineering/Ergonomics, human performance in physical work, anthropometry, design of work station, design of displays and controls.

5. <http://www.wrebn.nl/16.pdf>

COURSE OBJECTIVES

1. To understand the importance of the DFM approach and guidelines
2. To enrich the understanding of the selective assembly and Datum systems
3. To introduce the concepts of demonstrate true Position tolerancing theory.
4. To develop an understanding of the standard techniques and redesigning cast members using weldments and plastic component manufacturing.
5. To equip them with skills on Tolerance Charting Technique.
6. To Study and acquire knowledge of the various factors influencing the manufacturability of components and the use of tolerances in manufacturing

COURSE OUTCOMES

Upon completion of this course, the students will be able to,

1. Understand the DFM approach and guidelines
2. Understand the selective assembly and Datum systems
3. Demonstrate true Position tolerancing theory.
4. Understand redesigning cast members using weldments and plastic component manufacturing.
5. Demonstrate the Tolerance Charting Technique.
6. Know the various factors influencing the manufacturability of components and the use of tolerances in manufacturing

UNIT I DFM APPROACH, SELECTION AND SUBSTITUTION OF MATERIALS IN INDUSTRY 9

DFM approach, DFM guidelines, standardisation, group technology, value engineering, comparison of materials on cost basis, design for assembly, DFA index, Poka – Yoke principle; 6σ concept; Tolerance Analysis: Process capability, process capability metrics, Cp, Cpk, cost aspects, feature tolerances, geometric tolerances, surface finish, review of relationship between attainable tolerance grades and different machining process, cumulative effect of tolerances, sure fit law, normal law and truncated normal law.

UNIT II SELECTIVE ASSEMBLY 9

Interchangeable and selective assembly, deciding the number of groups, Model–I: group tolerances of mating parts equal; Model–II: total and group tolerances of shaft, control of axial play.

Datum Systems: Grouped datum systems—different types, two and three mutually perpendicular grouped datum planes, grouped datum system with spigot and recess, pin and hole, and tongue–slot pair, computation of translational and rotational accuracy.

UNIT III TRUE POSITION TOLERANCING THEORY 9

Comparison between co–ordinate and convention method of feature location tolerancing and true position tolerancing, zero true position tolerance, virtual size concept, floating and fixed fasteners, projected tolerance zone, functional gauges, paper layout gauging, compound assembly, examples.

UNIT IV FORM DESIGN OF CASTINGS AND WELDMENTS 9

Redesign of castings based on parting line considerations, minimising core requirements, redesigning cast members using weldments, use of welding symbols – design considerations for plastic component manufacturing.

UNIT V TOLERANCE CHARTING 9

Tolerance Charting Technique: Operation sequence for typical shaft type of components, preparation of process drawings for different operations, tolerance worksheets and centrality analysis, examples, design features to facilitate machining. **Datum features – functional and manufacturing, component design–machining considerations, redesign for manufacture, examples.**

WEB REFERENCES

1. www.dfma.com
2. www.design4manufacturability.com

COURSE OBJECTIVES

1. To understand the basic difference between incompressible and compressible flow.
2. To understand the phenomenon of shock waves and its effect on flow. To gain some basic knowledge about jet propulsion and Rocket Propulsion.
3. To introduce the concepts of various conditions of compressible fluid flows
4. To Study and acquire knowledge on performance analysis of subsonic and supersonic inlets, combustors, afterburners and exhaust nozzles
5. To understand the concept of working of various types of rocket engines
6. To study the features of thrust equation for rocket propulsion system

COURSE OUTCOMES

Upon completion of this course, the students can able to

1. Analyze various conditions of compressible fluid flows.
2. Calculate mass flow rate in flow through variable area ducts.
3. Carry out simple performance analysis of subsonic and supersonic inlets.
4. Perform performance analysis of combustors, afterburners and exhaust nozzles.
5. Understand the working of various types of rocket engines
6. Use thrust equation for rocket propulsion system.

UNIT I BASIC CONCEPTS AND ISENTROPIC FLOWS**9**

Energy and momentum equations of compressible fluid flows – Stagnation states, Mach waves and Mach cone – Effect of Mach number on compressibility – Isentropic flow through variable area ducts – Nozzle and Diffusers – area ratio as a function of Mach number, mass flow rate through nozzles and diffusers, effect of friction in flow through nozzles. Use of Gas tables.

UNIT II FLOW THROUGH DUCTS**9**

Flow through constant area ducts with heat transfer (Rayleigh flow) and Friction (Fanno flow) – Variation of flow properties – Isothermal flow with friction in constant area ducts – Use of tables and charts – Generalised gas dynamics.

UNIT III NORMAL AND OBLIQUE SHOCKS**9**

Governing equations – Variation of flow parameters across the normal and oblique shocks – Prandtl – Meyer relations – Use of table and charts – Applications.

UNIT IV JET PROPULSION**9**

Theory of jet propulsion – Thrust equation – Thrust power and propulsive efficiency – Operation principle, cycle analysis and use of stagnation state performance of ram jet, turbojet, turbofan and turbo prop engines – Aircraft combustors.

UNIT V ROCKET PROPULSION**9**

Types of rocket engines – Propellants – Ignition and combustion – Theory of rocket propulsion – solid and liquid propellants, comparison of different propulsion systems .Performance study – Staging – Terminal and characteristic velocity – Applications – Space flights.

TOTAL 45 PERIODS

(Permitted to use standard Gas Tables in the examination)

COURSE OBJECTIVES

1. To understand the anatomy, basic concepts and applications of robot.
2. To learn the drives and end effectors used in robot.
3. To study the various types of sensors used in robot.
4. To familiarize robot kinematics and robot programming
5. To provide knowledge on simple offline robot program
6. To impart knowledge on economic analysis of robots

COURSE OUTCOMES

Upon completion of this course, the students can able to

1. Identify the various types of robots.
2. Select appropriate drive systems and end effectors for industrial application.
3. Decide the types of sensors required according to the applications of robot.
4. To identify the different types of machine vision technologies
5. Develop simple offline robot program for different applications.
6. Calculate the economic analysis of robots.

UNIT I FUNDAMENTALS OF ROBOT**9**

Robot – Definition – Robot Anatomy – Co-ordinate Systems, Work Envelope, types and classification – Specifications – Pitch, Yaw, Roll, Joint Notations, Speed of Motion, Pay Load – Robot Parts and Their Functions – Need for Robots – Different Applications

UNIT II ROBOT DRIVE SYSTEMS AND END EFFECTORS**9**

Pneumatic Drives – Hydraulic Drives – Mechanical Drives – Electrical Drives – D.C. Servo Motors, Stepper Motor, A.C. Servo Motors – Salient Features, Applications and Comparison of all these Drives
End Effectors – Grippers – Mechanical Grippers, Pneumatic and Hydraulic Grippers, Magnetic Grippers, Vacuum Grippers; Two Fingered and Three Fingered Grippers; Internal Grippers and External Grippers; Selection and Design Considerations

UNIT III SENSORS AND MACHINE VISION**9**

Requirements of a sensor, Principles and Applications of the following types of sensors – Position sensors (Piezo Electric Sensor, LVDT, Resolvers, Optical Encoders, Pneumatic Position Sensors), Range Sensors (Triangulation Principle, Structured, Lighting Approach, Time of Flight Range Finders, Laser Range Meters), Proximity Sensors (Inductive, Hall Effect, Capacitive, Ultrasonic and Optical Proximity Sensors), Touch Sensors, (Binary Sensors, Analog Sensors), Wrist Sensors, Compliance Sensors, Slip Sensors
Camera, Frame Grabber, Sensing and Digitizing Image Data – Signal Conversion, Image Storage, Lighting Techniques. Image Processing and Analysis – Data Reduction, Segmentation, Feature Extraction, Object Recognition, Other Algorithms. Applications – Inspection, Identification, Visual Servoing and Navigation.

UNIT IV ROBOT KINEMATICS AND ROBOT PROGRAMMING**9**

Forward Kinematics, Inverse Kinematics and Differences; Forward Kinematics and Reverse Kinematics of Manipulators with Two, Three Degrees of Freedom (In 2 Dimensional), Four Degrees of Freedom (In 3 Dimensional) – Deviations and Problems.
Teach Pendant Programming, Lead through programming, Robot programming Languages – VAL Programming – Motion Commands, Sensor Commands, End effector commands, and Simple programs

UNIT V IMPLEMENTATION AND ROBOT ECONOMICS**9**

RGV, AGV; Implementation of Robots in Industries – Various Steps; Safety Considerations for Robot Operations; Economic Analysis of Robots – Pay back Method, EUAC Method, Rate of Return Method.

WEB REFERENCE

1. www.learnaboutrobots.com/industrial.htm

COURSE OBJECTIVES

1. To provide foundations on design of experiments and statistical analysis of experimental data obtained from laboratory and/or industrial processes.
2. To understand the important concepts of single factorial designs
3. To Study and acquire knowledge on various methodologies involved in single factorial designs
4. To know the application of testing of factorial experiment
5. To enrich the understanding of special experimental designs
6. To impart knowledge on basic concepts of Taguchi method in parameter design

COURSE OUTCOMES

Upon successful completion of the course, students will be able to:

1. Understand the knowledge of various techniques for experimental planning
2. Understand the concepts of single factorial designs
3. List the various methodologies involved in single factorial designs
4. Apply the concept of testing of factorial experiment
5. Solve the partial and ordinary differential equations special experimental designs
6. Apply the basic concepts of Taguchi method in parameter design

UNIT I INTRODUCTION**9**

Planning of experiments – Steps – Need - Terminology: Factors, levels, variables, experimental error, replication, Randomization, Blocking, Confounding.

UNIT II SINGLE FACTOR EXPERIMENTS**9**

ANOVA rationale - Sum of squares – Completely randomized design, Randomized block design, effect of coding, Comparison of treatment means – Newman Kuel's test, Duncan's Multiple Range test, Latin Square Design, Graeco-Latin Square Design, Balanced incomplete design.

UNIT III FACTORIAL EXPERIMENTS**9**

Main and interaction effects – Two and three Factor full factorial Designs, 2 k designs with Two and Three factors – Unreplicated design – Yate's Algorithm

UNIT IV SPECIAL EXPERIMENTAL DESIGNS**9**

Blocking in factorial design, Confounding of 2k design, nested design – Response Surface Methods.

UNIT V TAGUCHI TECHNIQUES**9**

Fundamentals of Taguchi methods, Quality Loss function, orthogonal designs, application to Process and Parameter design.

2. <http://www.itl.nist.gov/div898/handbook/>
3. <http://home.ubalt.edu/ntsbarsh/stat-data/Topics.htm>

COURSE OBJECTIVES

1. To understand the underlying principles of operation of different IC Engines and components.
2. To provide knowledge on pollutant formation, control, alternate fuels etc.
3. To Study and acquire knowledge to Identify parts, terminology and fuel supply system of internal combustion engine
4. To introduce the concepts of cooling and lubrication systems of IC Engines
5. To make the student acquire sound knowledge on combustion, knocking and super charging of internal combustion engines
6. To expose students to recent trends associated with IC Engines

COURSE OUTCOMES

Upon completion of this course, the students can able to

1. Explain the construction and operation of internal combustion engine.
2. Identify parts, terminology and fuel supply system of internal combustion engine.
3. Recognize the component used in cooling and lubrication systems of IC Engines.
4. Describe the function of combustion, knocking and super charging of internal combustion engines.
5. Implement strategies for pollution control.
6. Know about the recent trends associated with IC Engines

UNIT I SPARK IGNITION ENGINES**9**

Mixture requirements – Fuel injection systems – Monopoint, Multipoint & Direct injection - Stages of combustion – Normal and Abnormal combustion – Knock - Factors affecting knock – Combustion chambers.

UNIT II COMPRESSION IGNITION ENGINES**9**

Diesel Fuel Injection Systems - Stages of combustion – Knocking – Factors affecting knock – Direct and Indirect injection systems – Combustion chambers – Fuel Spray behaviour – Spray structure and spray penetration – Air motion - Introduction to Turbocharging.

UNIT III POLLUTANT FORMATION AND CONTROL**9**

Pollutant – Sources – Formation of Carbon Monoxide, Unburnt hydrocarbon, Oxides of Nitrogen, Smoke and Particulate matter – Methods of controlling Emissions – Catalytic converters, Selective Catalytic Reduction and Particulate Traps – Methods of measurement – Emission norms and Driving cycles.

UNIT IV ALTERNATIVE FUELS**9**

Alcohol, Hydrogen, Compressed Natural Gas, Liquefied Petroleum Gas and Bio Diesel - Properties, Suitability, Merits and Demerits - Engine Modifications.

UNIT V RECENT TRENDS**9**

Air assisted Combustion, Homogeneous charge compression ignition engines – Variable Geometry turbochargers – Common Rail Direct Injection Systems - Hybrid Electric Vehicles – NO_x Adsorbers - Onboard Diagnostics.

TOTAL 45 PERIODS**TEXTBOOKS**

3	Eric Chowenitz	Automobile Electronics	SAE Publications	1995

COURSE OBJECTIVES

1. To know the principle methods, areas of usage, possibilities and limitations as well as environmental effects of the Additive Manufacturing technologies
2. To be familiar with the characteristics of the different materials those are used in Additive Manufacturing.
3. To introduce process involved in Additive manufacturing technology
4. To understand the importance of knowledge on software's used in additive manufacturing technology
5. To enrich the understanding of the working of SLS and other techniques
6. To provide an overview of additive manufacturing technology in medical field and biostream

COURSE OUTCOMES

On completion of this course, students will be able to

1. Understand the need for additive manufacturing technology
2. Explain the process involved in Additive manufacturing technology
3. Get knowledge on software's used in additive manufacturing technology
4. Describe the working of SLS and other techniques
5. Apply the additive manufacturing technology in medical field
6. Applications of additive manufacturing technology in biostream.

UNIT I INTRODUCTION**9**

Overview – History - Need-Classification -Additive Manufacturing Technology in product development- Materials for Additive Manufacturing Technology – Tooling - Applications.

UNIT II CAD & REVERSE ENGINEERING**9**

Basic Concept – Digitization techniques – Model Reconstruction – Data Processing for Additive Manufacturing Technology: CAD model preparation – Part Orientation and support generation – Model Slicing – Tool path Generation – Softwares for Additive Manufacturing Technology: MIMICS, MAGICS.

UNIT III LIQUID BASED AND SOLID BASED ADDITIVE MANUFACTURING SYSTEMS**9**

Classification – Liquid based system – Stereolithography Apparatus (SLA)- Principle, process, advantages and applications - Solid based system – Fused Deposition Modeling - Principle, process, advantages and applications, Laminated Object Manufacturing

UNIT IV POWDER BASED ADDITIVE MANUFACTURING SYSTEMS**9**

Selective Laser Sintering – Principles of SLS process - Process, advantages and applications, Three Dimensional Printing - Principle, process, advantages and applications- Laser Engineered Net Shaping (LENS), Electron Beam Melting.

UNIT V MEDICAL AND BIO-ADDITIVE MANUFACTURING**9**

Customized implants and prosthesis: Design and production. Bio-Additive Manufacturing- Computer Aided Tissue Engineering (CATE) – Case studies

COURSE OBJECTIVES

1. To gain knowledge in production, gear material selection
2. To introduce the concepts of gear manufacturing
3. To Study and acquire knowledge on mechanism involve in conical gears
4. To Study and acquire knowledge on the procedures that involves in gear material selection
5. To expose students to detailed view of gear finishing methods
6. To impart knowledge modern gear production methods

COURSE OUTCOMES

Upon the completion of this course the students will be able to

1. Understand the overview on classification of gears and its terminology
2. Explain the various methods of gear manufacturing
3. Understands the concepts and mechanism involve in conical gears
4. Understand the procedures that involves in gear material selection
5. Attain a detailed view of gear finishing methods
6. Understanding the modern gear production methods

UNIT I INTRODUCTION TO GEARS**9**

Types of gears-classification, application of gears, gearboxes, drawings for gears, gear production method an overview, types of blanks and blank preparation. Production Of Cylindrical Gears: Procedure of cutting gears and obtainable quality in hobbing and gear shaping, cutter selection and work holding methods, setting calculations. Rack type gear shaping machine description and application. Internal gear cutting methods, CNC gear hobbing and gear shaping machines.

UNIT II PRODUCTION OF CONICAL GEARS**9**

Production of straight bevel gears by bevel gear generator, duplex rotary cutter method, Gleason Reva cycle method, spiral and hybrid bevel gear generation. Description of machine, cutter and machine setting.

UNIT III GEAR MATERIAL SELECTION AND HARDENING METHODS**9**

Properties of gear materials-non-metallic, non-ferrous and plastic gears, selection of material for power transmission, high speed application. Selection of material for worm and wheel. Hardening by through hardening, case hardening, induction hardening, flame hardening, nitriding and carburizing, hardening defects.

UNIT IV GEAR FINISHING METHODS**9**

Gear finishing advantages, finishing of gears by grinding, shaving, lapping and honing methods, cold rolling of gears - description of process, machine, cutters and process parameters setting.

Gear Inspection: Type of gear errors-gear quality standards and allowable limits-tooth thickness, base tangent length measurement, pitch error, radial run out, involute profile error measurements methods and analysis, composite error measurement, computerized gear inspection, gear failure reasons and remedies.

UNIT V MODERN GEAR PRODUCTION METHODS**9**

Gear production by stamping, die casting, powder metal process, injection and compression moulding of plastic gears, cold and hot rolling. Mass production methods, shear speed shaping, gear broaching, Gleason G-TRAC – gear generation methods. Economical and Quality Production of Gears: Gear production systems – batch production, gear production cells, lean and agile production practices, automobile gear and gear boxes, heavy engineering gear production, gear for instruments and appliances, process and cutter selection for quantity, cost and quality criteria.

2. www.gearsolutions.com

COURSE OBJECTIVES

1. To understand the underlying principles of operations in different Refrigeration & Air conditioning systems and components.
2. To provide knowledge on design aspects of Refrigeration & Air conditioning systems
3. To introduce the concepts on use of unconventional refrigerant system for industrial application
4. To expose students to properties of air using psychrometric chart
5. To provide knowledge on cooling load for a given system
6. To know the application of air conditioning system for industrial and domestic purpose

COURSE OUTCOMES

Learners should be able to

1. Calculate COP of various refrigeration cycles.
2. Choose appropriate refrigerants for various applications.
3. Identify the use of unconventional refrigerant system for industrial application.
4. Calculate the properties of air using psychrometric chart.
5. Calculate cooling load for a given system
6. Select the appropriate air conditioning system for industrial and domestic applications.

UNIT I REFRIGERATION CYCLE**9**

Review of thermodynamic principles of refrigeration. Concept of refrigeration system. Vapour compression refrigeration cycle – use of P–H charts – multistage and multiple evaporator systems – cascade system – COP comparison. Vapor absorption refrigeration system. Ammonia water and Lithium Bromide water systems. Steam jet refrigeration system

UNIT II REFRIGERANTS, SYSTEM COMPONENTS AND BALANCING**9**

Compressors – reciprocating and rotary (elementary treatment.) – Condensers – evaporators – cooling towers. Refrigerants – properties – selection of refrigerants, Alternate Refrigerants, Refrigeration plant controls – testing and charging of refrigeration units. Balancing of system components. Applications to refrigeration systems – ice plant – food storage plants – milk – chilling plants – refrigerated cargo ships.

UNIT III PSYCHROMETRY**9**

Psychrometric processes – use of psychrometric charts – Grand and Room Sensible Heat Factors – bypass factor – requirements of comfort air conditioning – comfort charts – factors governing optimum effective temperature, recommended design conditions and ventilation standards

UNIT IV COOLING LOAD CALCULATIONS**9**

Types of load – design of space cooling load – heat transmission through building. Solar radiation – infiltration – internal heat sources (sensible and latent) – outside air and fresh air load – estimation of total load – Domestic, commercial and industrial systems – central air conditioning systems.

UNIT V AIR CONDITIONING**9**

Air conditioning equipments – air cleaning and air filters – humidifiers – dehumidifiers – air washers – condenser – cooling tower and spray ponds – elementary treatment of duct design – air distribution system. Thermal insulation of air conditioning systems. – Applications: car, industry, stores, and public buildings

COURSE OBJECTIVES

1. To gain knowledge in design and material selection of various machinetools.
2. To provide an overview of regulation of speeds and feeds
3. To study the features of machine toolstructures
4. To understand the importance of constructional features of machine toolstructures
5. To expose students to design in machine tool structures, guide ways, power screws andspindles
6. To expose students to design spindles and spindlesupports

COURSE OUTCOMES

Upon the completion of this course the students will be able to

1. Discuss the basics machine tool drives andmechanisms
2. Get knowledge on regulation of speeds and feeds
3. Understand the importance of machine toolstructures
4. Explain the constructional features of machine toolstructures
5. Design in machine tool structures, guide ways, power screws andspindles
6. Design spindles and spindlesupports

UNIT I INTRODUCTION TO MACHINE TOOL DRIVESANDMECHANISMS 9
Introduction to the course, Working and Auxiliary Motions in Machine Tools, Kinematics of Machine Tools, Motion Transmission

UNIT II REGULATION OF SPEEDSANDFEEDS 9
Aim of Speed and Feed Regulation, Stepped Regulation of Speeds, Multiple Speed Motors, Ray Diagrams and Design Considerations, Design of Speed Gear Boxes, Feed Drives, Feed Box Design

UNIT III DESIGN OF MACHINETOOLSTRUCTURES 9
Functions of Machine Tool Structures and their Requirements, Design for Strength, Design for Rigidity, Materials for Machine Tool Structures, Machine Tool Constructional Features, Beds and Housings, Columns and Tables, Saddles and Carriages

UNIT IV DESIGN OF GUIDEWAYS, POWER SCREWSANDSPINDLES 9
Functions and Types of Guideways, Design of Guideways, Design of Aerostatic Slideways, Design of Anti-Friction Guideways, Combination Guideways, Design of Power Screws.

UNIT V DESIGN OF SPINDLES AND SPINDLESUPPORTS 9
Functions of Spindles and Requirements, Effect of Machine Tool Compliance on Machining Accuracy, Design of Spindles, Antifriction Bearings. Dynamics of Machine Tools - Machine Tool Elastic System, Static and Dynamic Stiffness

TOTAL 45PERIODS

TEXTBOOKS

S. No.	Author(s) Name	Title of the book	Publisher	Year of Publication
1	Sen, G.C. and Bhattacharya, A	Principles of machine tools	New Central Book Agency, Calcutta	2006

REFERENCES

S. No.	Author(s) Name	Title of the book	Publisher	Year of Publication
1	Chernov N	Machine Tools	Mir publishers Moscow	1984
2	N.K. Mehta	Machine Tool Design and Numerical Control	TMH, New Delhi	2010
3	G.C. Sen and A. Bhattacharya	Principles of Machine Tools	New Central Book Agency	2009
4	D. K Pal, S. K. Basu	Design of Machine Tools	Oxford IBH	2008
5	N. S. Acherkhan	Machine Tool Design	MIR publications	1968

COURSE OBJECTIVES

1. To gain knowledge in sequence of process planning and cost estimation of various products.
2. To introduce the concepts of dimensional and tolerance analysis
3. To expose students to manufacturing drawings
4. To equip them with skills to apply their knowledge in re-dimensioning and tolerance charting
5. To understand the process chart for a given component
6. To Estimate the cost of a given component

COURSE OUTCOMES

Upon completion of this course, the student can able to

1. Apply the various standards and conventions used in a drawingsheet
2. Perform dimensional and tolerance analysis
3. Understand the manufacturing drawings
4. Apply their knowledge in re-dimensioning and tolerance charting
5. Prepare process chart for a given component
6. Estimate the cost of a given component

UNIT I STANDARDS AND CONVENTIONS**9**

Current international standards (ISO) and Indian Standards (IS)- types of lines - principles of presentation - dimensioning - conventional representation of threaded parts, springs, and gears.

UNIT II DIMENSIONAL AND FORM TOLERANCES**9**

Limits and fits IT system of tolerances, deviation of fit - geometric tolerance-tolerancing of form, orientation, location and runout - datums and Datum systems-Dimensioning and tolerancing of profiles

UNIT III MANUFACTURING DRAWINGS**9**

Surface texture indication on drawing - welds symbolic representation of drawings. Given a sub-assembly/assembly to prepare manufacturing drawings of components, Sample exercises on CAD- preparation of manufacturing Drawings.

UNIT IV RE-DIMENSIONING AND TOLERANCE CHARTING**9**

Introduction to re-dimensioning to suit manufacturing requirements-manufacturing datum-functional datum. Introduction to tolerance charting

UNIT V COST ESTIMATION**9**

Preparation of Process chart for a given component-estimation of setting time and machining time-estimation of material cost, labour cost and overhead cost based on supplied data.

COURSE OBJECTIVES

1. To Understand the concept of SQC.
2. To enrich the understanding of control charts to analyze for improving the process quality.
3. To familiarize the students to understand different sampling plans
4. To Understand the importance of need and types of life testing.
5. To introduce the reliability of a system.
6. To introduce the concepts of quality control and reliability techniques in industries.

COURSE OUTCOMES

Upon the completion of this course the students will be able to

1. Understand the concept of SQC.
2. Use control charts to analyze for improving the process quality.
3. Describe different sampling plans
4. Understand the need and types of life testing.
5. Improve the reliability of a system.
6. Implement quality control and reliability techniques in industries.

UNIT I INTRODUCTION AND PROCESS CONTROL FOR VARIABLES 9

Introduction, definition of quality, basic concept of quality, definition of SQC, benefits and limitation of SQC, Quality assurance, Quality cost–Variation in process– factors – process capability – process capability studies and simple problems – Theory of control chart– uses of control chart – Control chart for variables – X chart, R chart and σ chart.

UNIT II PROCESS CONTROL FOR ATTRIBUTES 9

Control chart for attributes –control chart for proportion or fraction defectives – P chart and NP chart – control chart for defects – C and U charts, State of control and process out of control identification in charts.

UNIT III ACCEPTANCE SAMPLING 9

Lot by lot sampling – Types – probability of acceptance in single, double, multiple sampling techniques – O.C. curves – producer's Risk and consumer's Risk. AQL, LTPD, AOQL concepts–standard sampling plans for AQL and LTPD– uses of standard sampling plans.

UNIT IV LIFE TESTING– RELIABILITY 9

Life testing – objective: – failure data analysis, Mean failure rate, mean time to failure, mean time between failure, hazard rate, system reliability, series, parallel and mixed configuration – simple problems. Maintainability and availability – simple problems. Acceptance sampling based on reliability test – O.C Curves.

UNIT V QUALITY AND RELIABILITY 9

Reliability improvements – techniques– use of Pareto analysis – design for reliability – redundancy unit and standby redundancy – Optimization in reliability – Product design – Product analysis – Product development – Product life cycles – Maintenance.

TOTAL 45 PERIODS

Note: Permitted to use approved statistical table in the examination.

6. <http://www.designinindia.net/everywhere/disciplines/product-design/index.html>

COURSE OBJECTIVES

1. To understand the fundamentals of composite material strength and its mechanical behavior
2. Understanding the analysis of fiber reinforced Laminate design for different combinations of plies with different orientations of the fiber.
3. Thermo-mechanical behavior and study of residual stresses in Laminates during processing.
4. Implementation of Classical Laminate Theory (CLT) to study and analysis for residual stresses in an isotropic layered structure such as electronic chips.
5. To introduce the concepts of carbon-carbon composite for different industrial application
6. To impart knowledge on various advances in composites

COURSE OUTCOMES

Learners should be able to

1. Select the various types of composite matrix required for an application.
2. Choose appropriate manufacturing process for polymer matrix composite.
3. Opt appropriate manufacturing process for metal matrix composite.
4. Use the concepts of ceramic composites and its production techniques.
5. Identify the type of carbon-carbon composite for different industrial application.
6. Explain the various advances in composites

UNIT I INTRODUCTION TO COMPOSITES

9

Fundamentals of composites – need for composites – Enhancement of properties – classification of composites

– Matrix-Polymer matrix composites (PMC), Metal matrix composites (MMC), Ceramic matrix composites (CMC) – Reinforcement – Particle reinforced composites, Fibre reinforced composites. Applications of various types of composites.

UNIT II POLYMER MATRIX COMPOSITES

9

Polymer matrix resins – Thermosetting resins, thermoplastic resins – Reinforcement fibres – Rovings – Woven fabrics – Non woven random mats – various types of fibres. PMC processes - Hand lay up processes – Spray up processes – Compression moulding – Reinforced reaction injection moulding - Resin transfer moulding – Pultrusion – Filament winding – Injection moulding. Fibre reinforced plastics (FRP), Glass fibre reinforced plastics (GRP).

UNIT III METAL MATRIX COMPOSITES

9

Characteristics of MMC, Various types of Metal matrix composites Alloys - MMC, Advantages of MMC, Limitations of MMC, Metal Matrix, Reinforcements – particles – fibres. Effect of reinforcement - Volume fraction – Rule of mixtures. Processing of MMC – Powder metallurgy process - diffusion bonding – stir casting – squeeze casting.

UNIT IV CERAMIC MATRIX COMPOSITES

9

Engineering ceramic materials – properties – advantages – limitations – Monolithic ceramics – Need for CMC

– Ceramic matrix - Various types of Ceramic Matrix composites- oxide ceramics – non oxide ceramics – aluminium oxide – silicon nitride – reinforcements – particles- fibres- whiskers. Sintering - Hot pressing – Cold isostatic pressing (CIPing) – Hot isostatic pressing (HIPing).

UNIT V ADVANCES IN COMPOSITES

9

Carbon /carbon composites – Advantages of carbon matrix – limitations of carbon matrix Carbon fibre – chemical vapour deposition of carbon on carbon fibre perform. Sol gel technique. Composites for aerospace applications.

4. <http://www.virginia.edu/bohr/mse209/chapter10.htm>

COURSE OBJECTIVES

1. To impart knowledge of need for planning and control in various aspects.
2. To develop an understanding of the standard techniques in various work study methodologies.
3. To familiarize the students to understand the product and process plan.
4. To introduce the concepts of a production schedule based on different facets.
5. To enrich the understanding of the level of inventory
6. To understand the importance the recent advancements in production planning and control.

COURSE OUTCOMES

Student will be able to

1. Indicate the need for planning and control in various aspects.
2. Understand various work study methodologies.
3. Construct product and process plan.
4. Prepare a production schedule based on different facets.
5. Estimate the level of inventory
6. Understand the recent advancements in production planning and control.

UNIT I INTRODUCTION**9**

Objectives: and benefits of planning and control–Functions of production control–Types of production–job–batch and continuous–Product development and design–Marketing aspect – Functional aspects–Operational aspect–Durability and dependability aspect–aesthetic aspect. Profit consideration–Standardization, Simplification and specialization–Break even analysis–Economics of a new design.

UNIT II WORKSTUDY**9**

Method study, basic procedure–Selection–Recording of process – Critical analysis, Development – Implementation – Micro motion and memo motion study – work measurement – Techniques of work measurement – Time study – Production study – Work sampling – Synthesis from standard data – Predetermined motion time standards.

UNIT III PRODUCT PLANNING AND PROCESS PLANNING**9**

Product planning–Extending the original product information–Value analysis–Problems in lack of product planning–Process planning and routing–Pre requisite information needed for process planning–Steps in process planning–Quantity determination in batch production–Machine capacity, balancing–Analysis of process capabilities in a multi product system.

UNIT IV PRODUCTION SCHEDULING**9**

Production Control Systems–Loading and scheduling–Master Scheduling–Scheduling rules–Gantt charts–Perpetual loading–Basic scheduling problems – Line of balance – Flow production scheduling–Batch production scheduling–Product sequencing – Production Control systems–Periodic batch control–Material requirement planning Kanban –Dispatching–Progress reporting and expediting–Manufacturing lead time–Techniques for aligning completion times and due dates.

UNIT V INVENTORY CONTROL AND RECENT TRENDS IN PPC**9**

Inventory control–Purpose of holding stock–Effect of demand on inventories–Ordering procedures. Two bin system –Ordering cycle system–Determination of Economic order quantity and economic lot size–ABC analysis–Recorder procedure–Introduction to computer integrated production planning systems–elements of JIT Systems–Fundamentals of MRP and ERP.

3. <http://thequalityportal.com/articles/value.htm>

COURSE OBJECTIVES

1. To study the significance of waste heat recovery systems and carry out its economic analysis
2. To know the concepts of cogeneration, its types and probable areas of applications
3. To enrich the understanding of thermodynamics, heat transfer, and fluid Mechanics principles to design and analysis of this emerging technology.
4. To impart knowledge on operational issues and challenges cogeneration technologies.
5. To Understand the impact of this technology in waste heat recovery systems
6. To introduce the concepts of various systems involved in waste heat recovery process

COURSE OUTCOMES

The student will be able to

1. Understand the various methods of cogeneration.
2. Apply knowledge of thermodynamics, heat transfer, and fluid Mechanics principles to design and analysis of this emerging technology.
3. Have thorough understanding, operational issues and challenges cogeneration technologies.
4. Understand the impact of this technology in waste heat recovery systems
5. Get the knowledge over various systems involved in waste heat recovery process
6. Begin a career as an engineer in an organization economic analysis

UNIT I INTRODUCTION**9**

Introduction – principles of thermodynamics – cycles – topping - bottoming – combined cycle - organic rankine cycles – performance indices of cogeneration systems – waste heat recovery – sources and types – concept of trigeneration.

UNIT II COGENERATION TECHNOLOGIES**9**

Configuration and thermodynamic performance – steam turbine cogeneration systems – gas turbine cogeneration systems – reciprocating IC engines cogeneration systems – combined cycles cogeneration systems – advanced cogeneration systems: fuel cell, Stirling engines etc.,

UNIT III ISSUES AND APPLICATIONS OF COGENERATION TECHNOLOGIES**9**

Cogeneration plants electrical interconnection issues – utility and cogeneration plant interconnection issues – applications of cogeneration in utility sector – industrial sector – building sector – rural sector – impacts of cogeneration plants – fuel, electricity and environment

UNIT IV WASTE HEAT RECOVERY SYSTEMS**9**

Selection criteria for waste heat recovery technologies - recuperators - Regenerators - Economizers - plate heat exchangers - thermic fluid heaters - Waste heat boilers classification, location, service conditions, design Considerations - fluidized bed heat exchangers - heat pipe exchangers - heat pumps – sorption systems.

UNIT V ECONOMIC ANALYSIS**9**

Investment cost – economic concepts – measures of economic performance – procedure for economic analysis – examples – procedure for optimized system selection and design – load curves - sensitivity analysis – regulatory and financial frame work for cogeneration and waste heat recovery systems.

TOTAL 45 PERIODS**TEXT BOOKS**

S. No.	Author(s) Name	Title of the book	Publisher	Year of Publication
1	R.Kehlhofer, B. Rukes, F. Stirnimann	Combined-cycle gas & steam turbine power plants	PennWell Books	2009

REFERENCES

S. No.	Author(s) Name	Title of the book	Publisher	Year of Publication

2	A.Thumann, D. Paul Mehta	Handbook of energy engineering	The Fairmont Press Inc	2008
3	B.F.Kolanowski	Small-scale cogeneration handbook	Fairmont Press	2003
4	M.P. Boyce	Handbook for cogeneration and combined cycle power plants	ASME Press	2002
5	Educogen	The European Educational tool for cogeneration	Fairmont Press	2001

COURSE OBJECTIVES

1. To understand and analyze the energy data of industries
2. To carry out energy accounting and balancing
3. To conduct energy audit and suggest methodologies for energy savings
4. To utilize the available resources in optimal ways
5. To make the students conversant with concepts of industrial furnaces
6. To equip them with skills to perform Energy audit

COURSE OUTCOMES:

At the end of the course, student will be able to

1. Understand the Environmental aspects of energy utilization
2. Perform combustion analysis
3. Explain the concepts of industrial boiler
4. understand how to work with the steam generated from the boilers in the industrial point of view
5. Explain the concepts of industrial furnaces
6. Perform Energy audit

UNIT I ENERGY SCENARIO**9**

Present status, rate of growth, energy utilization (sector wise), concept of energy conservation, energy economics.

COMBUSTION: Fuel analysis, combustion calculations, air requirements, theoretical and excess air requirements, excess air control, flue gas analysis and measurement, types of draught, draught calculations, chimney size calculations. F.D and I.D fan draught requirements and power requirements, furnace pressure requirements.

UNIT II INDUSTRIAL BOILERS**9**

Types and characteristics of industrial boilers, heat balance in boilers, efficiency trials in boilers, energy conservation opportunities in boilers operation and maintenance, water treatment requirements, soot blowing requirements, super heaters and superheat controls, waste heat recovery systems.

STEAM: Distribution requirements of steam and streamlines, efficient utilization of steam, steam trapping and air venting, flash steam recovery, condensate recovery, thermal insulation for systems including HVAC, steam balance calculations.

UNIT III INDUSTRIAL FURNACES**9**

Furnace types and characteristics, heat balance in furnaces, furnace efficiency calculations, energy conservation opportunities in furnaces, refractories types and properties, waste heat recovery system, insulating refractories, ceramic fibers, heat loss reduction calculations, wall and stored heat loss reduction.

UNIT IV DRYING**9**

Principle of drying and types of driers, mass and heat balance in driers, energy conservation opportunities in drying operations.

EVAPORATION: Principle of evaporation and types of evaporations, mass and heat balance, single and multiple effect evaporation, capacity and steam economy calculations, vapour recompression system.

UNIT V ENERGY AUDIT AND APPLICATIONS**9**

Types, methodology, questionnaire development, specific energy consumption (unit wise/section wise), identification of energy conservation measures/ technologies, economic and cost benefit analysis, case studies.

TOTAL 45 PERIODS**TEXTBOOKS**

2. [www.energymanagertraining.com\](http://www.energymanagertraining.com/)
3. www.nrel.gov
4. www.aerfindia.org
5. www.gvepinternational.org

COURSE OBJECTIVES

1. To provide in-depth knowledge on various techniques of non-destructive testing
2. To provide an overview of destructive and non destructive tests and state their applications
3. To study the features of NDT techniques for various products.
4. To expose students to skills needed for selection of appropriate NDT technique(s) for new inspection jobs
5. To understand the established NDE techniques and basic familiarity of emerging NDE techniques.
6. To facilitate the understanding of standard application area of NDET

COURSE OUTCOMES

Student will be able to

1. Understand the codes, standards and specifications related to NDT
2. Classify the destructive and non destructive tests and state their applications
3. Develop NDT techniques for various products.
4. Acquire skills needed for selection of appropriate NDT technique(s) for new inspection jobs
5. Acquire sound knowledge of established NDE techniques and basic familiarity of emerging NDE techniques.
6. Make use of standards application area of NDET

UNIT I BASIC CONCEPTS AND VISUAL INSPECTION 9

Concepts of Non-Destructive Testing - Relative merits and limitations - NDT versus mechanical testing, Unaided and aided visual inspection testing.

UNIT II LIQUID PENETRANT INSPECTION 9

Principle, applications, advantages and limitations, dyes, developers and cleaners, fluorescent, penetrant test.

UNIT III MAGNETIC PARTICLE INSPECTION 9

Principles, applications, magnetisation methods, magnetic particles, dry technique and wet technique, demagnetization, advantages and limitations.

UNIT IV EDDY CURRENT AND ULTRASONIC TESTING 9

Principle, applications and instrumentation of eddy current testing. Types of ultrasonic waves, principles of wave propagation, characteristics of ultrasonic waves, Attenuation, couplants. Inspection methods - pulse echo, Transmission and resonance techniques, thickness measurement. Types of scanning, test block, IIW - reference blocks.

UNIT V RADIOGRAPHY TESTING 9

X-rays and Gamma rays, properties of X-rays relevant to NDE, absorption of rays, scattering, types and use of filters and screens, characteristics of films - graininess, density, speed, contrast, characteristic curves, penetrameters, exposure charts, radiographic equivalence. Fluoroscopy- Xero-Demerits of Radiography.

OPEN ELECTIVES
(COURSES OFFERED BY OTHER DEPARTMENTS)
SCIENCE AND HUMANITIES

15BESH0E01

INDUSTRIAL MATHEMATICS I

3 0 0 3100

COURSE OBJECTIVES:

1. To develop analytical skills for solving engineering problems
2. To teach the students the basic concepts of LPP,
3. To learn the techniques to solve transportation problems
4. To learn the techniques to solve Assignment problems
5. To make the students to study about the Integer Programming and Network Analysis
6. Analyse the results and propose recommendations to the decision-making processes in Management Engineering

COURSE OUTCOMES:

1. To define and formulate linear programming problems and appreciate their limitations.
2. To solve linear programming problems using appropriate techniques and optimization solvers, interpret the results obtained and translate solutions into directives for action.
3. To be able to build and solve Transportation Models, Assignment Models,
4. To construct linear integer programming models and discuss the solution techniques.
5. To formulate and solve problems as networks and graphs.
6. To be able to solve problems in different environments and develop critical thinking

UNIT I LINEAR PROGRAMMING PROBLEM

9

Formulation of LPP - Graphical Method - Simplex Method - Artificial variable technique and two phase simplex method. Duality - Dual and simplex method - Dual Simplex Method.

UNIT II TRANSPORTATION PROBLEM

9

Transportation Model, finding initial basic feasible solutions, moving towards optimality, Degeneracy.

UNIT III ASSIGNMENT PROBLEM

9

Solution of an Assignment problem, Multiple Solution, Hungarian Algorithm, Maximization in Assignment Model, Impossible Assignment.

UNIT IV INTEGER PROGRAMMING

9

Integer Programming Problem – Gomory's fractional cut Method – Branch Bound Method

UNIT V NETWORK ANALYSIS

9

PERT & CPM- network diagram-probability of achieving completion date- crash time- cost analysis.

2. www.mathworld.Wolfram.com
3. www.mit.edu

COURSE OBJECTIVES

1. To kindle analytical skills for solving engineering problems
2. To impact the knowledge about inventory models
3. To learn replacement models
4. To learn about simulation models
5. To provide techniques for effective methods to solve nonlinear programming and decision making.
6. To analyse the results and propose recommendations to the decision-making processes in Management Engineering

COURSE OUTCOMES

The students will

1. To be able to solve simple models in Inventory problems and Replacement problems.
2. To understand different queuing situations and find the optimal solutions using models for different situations.
3. Simulate different real life probabilistic situations using Monte Carlo simulation technique.
4. To be able to understand the characteristics of different types of decision-making environments and the appropriate decision making approaches and tools to be used in each type.
5. **Convert** and **solve** the practical situations into replacement models.
6. To understand how to model and solve problems using non integer programming.

UNIT I INVENTORY MODELS

9

Economic order quantity models-techniques in inventory management-ABC analysis.

UNIT II NONLINEAR PROGRAMMING

9

Khun-tucker conditions with non-negative constraints- Quadratic programming- Wolf's modified simplex method.

UNIT III SIMULATION MODELS

9

Elements of simulation model -Monte Carlo technique – applications. Queuing model: problems involving $(M/M/1): (\infty/FIFO)$, $(M/M/c): (\infty/FIFO)$ Models.

UNIT IV DECISION MODELS

9

Decision Analysis – Decision Making environment – Decisions under uncertainty – Decision under risk– Decision – Tree Analysis.

UNIT V REPLACEMENT MODELS

9

Models based on models that gradually deteriorate with time-whose maintenance cost increase with time- Replacement of items that fail suddenly and completely.

TOTAL 45 PERIODS

2. www.mathworld.Wolfram.com
3. www.mit.edu

COURSE OBJECTIVES

1. To provide necessary basic concepts in probability and random processes for applications such as random signals, linear systems in communication engineering.
2. To understand the basic concepts of probability, one- and two-dimensional random variables
3. To introduce some standard distributions applicable to engineering which can describe real life phenomenon.
4. To understand the basic concepts of random processes which are widely used in IT fields.
5. To understand the concept of correlation and spectral densities.
6. To understand the significance of linear systems with random inputs.

COURSE OUTCOMES

Upon successful completion of the course, students should be able:

1. To understand the fundamental knowledge of the concepts of probability and have knowledge of standard distributions which can describe real life phenomenon.
2. To understand the basic concepts of one- and two-dimensional random variables and apply in engineering applications.
3. To apply the concept random processes in engineering disciplines.
4. To understand and apply the concept of correlation and spectral densities.
5. The students will have an exposure of various distribution functions and help in acquiring skills in handling situations involving more than one variable.
6. To analyze the response of random inputs to linear time invariant systems.

UNIT I MEASURES OF CENTRAL TENDENCY AND PROBABILITY**9**

Measures of central tendency – Mean, Median, Mode - Standard Deviation Probability - Random variable - Axioms of probability - Conditional probability - Total probability – Baye's theorem.

UNIT II STANDARD DISTRIBUTIONS**9**

Functions of a random variable - Binomial, Poisson, Uniform, Exponential, Gamma (one Parameter only) and Normal distributions - Moment generating functions, Characteristic function and their properties – Chebyshev's inequality.

UNIT III TWO DIMENSIONAL RANDOM VARIABLES**9**

Joint distributions - Marginal and conditional distributions - Probability mass function - Probability density functions – Covariance - Correlation and regression

UNIT IV CLASSIFICATION OF RANDOM PROCESS**9**

Definition and examples - first order, second order, strictly stationary, wide – sense stationary and Ergodic processes - Markov process - Binomial, Poisson and Normal processes - Sine wave process.

UNIT V CORRELATION AND SPECTRAL DENSITIES**9**

Autocorrelation-Crosscorrelation-Properties-Power spectral density-Cross spectral density-Properties – Wiener-Khinchine relation – Relationship between cross power spectrum and cross correlation function Linear time invariant system - System transfer function – Linear systems with random inputs – Auto correlation and cross correlation functions of input and output.

2. www.mathcentre.ac.uk
3. www.mathworld.Wolfram.com

1. This course aims at providing the required skill to apply the statistical tools in engineering problems.
2. To introduce the basic concepts of probability and random variables.
3. To introduce about the concepts of random distributions
4. To introduce the basic concepts of two dimensional random variables.
5. To acquaint the knowledge of testing of hypothesis for small and large samples which plays an important role in real life problems.
6. To introduce the basic concepts of classifications of design of experiments which plays very important roles in the field of agriculture and statistical quality control.

COURSE OUTCOMES

1. To understand the fundamental knowledge of the concepts of probability and have knowledge of standard distributions which can describe real life phenomenon.
2. To understand the basic concepts of one and two dimensional random variables and apply in engineering applications.
3. To apply the concept of testing of hypothesis for small and large samples in real life problems.
4. To apply the basic concepts of classifications of design of experiments in the field of agriculture and statistical quality control.
5. To have the notion of sampling distributions and statistical techniques used in engineering and management problems.
6. To make the student acquire sound knowledge of techniques in quality control that model engineering problems.

UNIT I MEASURES OF CENTRAL TENDENCY AND PROBABILITY 9

Measures of central tendency – Mean, Median, Mode and Standard Deviation – SPSS Software Demonstration.

Probability - Random variable - Axioms of probability - Conditional probability - Total probability – Baye's theorem - Probability mass function - Probability density functions.

UNIT II STANDARD DISTRIBUTIONS 9

Functions of a random variable - Binomial, Poisson, Uniform, Exponential, Gamma, and Normal distributions - Moment generating functions, Characteristic function and their properties.

UNIT III TWO DIMENSIONAL RANDOM VARIABLES 9

Joint distributions - Marginal and conditional distributions – Covariance - Correlation and Regression - Transformation of random variables - Central limit theorem.

UNIT IV TESTING OF HYPOTHESIS 9

Sampling distributions – Testing of hypothesis for mean, variance, proportions and differences using Normal, t, Chi-square and F distributions - Tests for independence of attributes and Goodness of fit.

UNIT V DESIGN OF EXPERIMENTS 9

Analysis of variance – One way classification – CRD – Two way classification – RBD - Latin square.

TOTAL 45 PERIODS

Note: Use of approved statistical tables permitted in the examination.

2. www.mathcentre.ac.uk
3. [www.mathworld. Wolfram.com](http://www.mathworld.Wolfram.com)

COURSE OBJECTIVES

1. To understand the fundamental knowledge of probability theory.
2. To introduce the concept of random variable and functions of random variables.
3. To introduce the basic concepts of two dimensional random variables.
4. To introduce the concepts of random processes and Markov chain
5. To understand the different Queuing models
6. To understand how to solve problems using various models

COURSE OUTCOMES

1. The student gain the knowledge in measures of central tendency and probability
2. Understand the fundamental knowledge of the concepts of probability and have knowledge of standard distributions which can describe real life phenomenon.
3. Understand the basic concepts of two dimensional random variables and apply in engineering applications.
4. Understand the concepts of random process and markov chains
5. They will be able to solve the Queuing models
6. The students understand and characterize phenomena which evolve with respect to time in a probabilistic manner.

UNIT I PROBABILITY AND RANDOM VARIABLE**9**

Axioms of probability - Conditional probability - Total probability – Baye's theorem- Random variable - Probability mass function - Probability density function - Properties - Moments - Moment generating functions and their properties.

UNIT II STANDARD DISTRIBUTIONS**9**

Functions of a random variable - Binomial, Poisson, Geometric, Negative Binomial, Uniform, Exponential, Gamma, Weibull and Normal distributions and their properties.

UNIT III TWO DIMENSIONAL RANDOM VARIABLES**9**

Joint distributions - Marginal and conditional distributions – Covariance - Correlation and regression - Transformation of random variables - Central limit theorem.

UNIT IV RANDOM PROCESS AND MARKOV CHAINS**9**

Classification - Stationary process - Markov process - Poisson process - Birth and death process - Markov chains - Transition probabilities - Limiting distributions.

UNIT V QUEUEING THEORY**9**

Markovian models - M/M/1, M/M/C, finite and infinite capacity - M/M/ ∞ queues - Finite source model - M/G/1 queue (steady state solutions only) - Pollaczek - Khintchine formula - Special cases.

1. www.mathcentre.ac.uk
2. www.mathworld.Wolfram.com
3. www.mit.edu

COURSE OBJECTIVES

Students should

1. Be able to understand basic knowledge of fuzzy sets and fuzzy logic
2. Be able to apply basic knowledge of fuzzy operations.
3. Able to know the basic definitions of fuzzy relations
4. Be able to know about the fuzzy measures
5. Be able to apply basic fuzzy inference and approximate reasoning
6. To know the applications of fuzzy Technology.

COURSE OUTCOMES

1. To gain the main subject of fuzzy sets.
2. To understand the concept of fuzziness involved in various systems and fuzzy set theory.
3. To gain the methods of fuzzy logic.
4. To comprehend the concepts of fuzzy relations.
5. To analyze the application of fuzzy logic control to real time systems.
6. The Engineers will have an exposure on various topics such as fuzzy algebra, fuzzy theory and fuzzy technology.

UNIT I FUZZYSETS

9

Fuzzy Sets: Basics Classical sets vs Fuzzy Sets – Need for fuzzy sets – Definition and Mathematical representations – Level Sets – Fuzzy functions - Zadeh's Extension Principle

UNIT II OPERATIONS ON FUZZYSETS

9

Operations on Fuzzy Sets Operations on $[0,1]$ – Fuzzy negation, triangular norms, tconorms, fuzzy implications, Aggregation Operations, Fuzzy Functional Equations

UNIT III FUZZYRELATIONS

9

Fuzzy Relations Fuzzy Binary and n-ary relations – composition of fuzzy relations – Fuzzy Equivalence Relations – Fuzzy Compatibility Relations – Fuzzy Relational Equations

UNIT IV FUZZYMEASURES

9

Possibility Theory Fuzzy Measures – Evidence Theory – Necessity and Belief Measures – Probability Measures vs Possibility Measures

UNIT V FUZZYINFERENCE

9

Approximate Reasoning Fuzzy Decision Making - Fuzzy Relational Inference – Compositional rule of Inference - Efficiency of Inference - Hierarchical

2. www.mathworld.Wolfram.com
3. www.doc.ic.ac.uk
4. www.calvin.edu/~pribeiro/othrlnks/Fuzzy/fuzzysets.htm

COURSE OBJECTIVES

1. To know the fundamentals of Tensors
2. To know the series solutions to differential equations
3. To introduce the concepts of special functions
4. To study about Calculus of variations
5. To study about the integral equations
6. To know how to solve problems for above functions and equations

COURSE OUTCOMES

1. Students will demonstrate proficiency in mathematics and the mathematical concepts needed for a proper understanding of physics.
2. Learn about special type of matrices that are relevant in physics and then learn about tensors.
3. Get introduced to Special functions like Bessel, Legendre, Hermite and Laguerre functions and their recurrence relations
4. Learn different ways of solving second order differential equations and familiarized with singular points and Frobenius method.
5. Students will master in calculus of variations and linear integral equations.
6. The students will have the knowledge on Mathematical Physics and that knowledge will be used by them in different engineering and technology applications.

UNIT I TENSORS**8**

Definition of tensor - rank, symmetric tensors, contraction, quotient rule - tensors with zero components, tensor equations, metric tensors and their determinants - pseudotensors

UNIT II DIFFERENTIAL EQUATIONS-SERIES SOLUTIONS**8**

Series Solution : Classification of singularities of an ordinary differential equation - Series solution-Method of Frobenius - indicial equation -examples

UNIT III SPECIAL FUNCTIONS**8**

Basic properties (Recurrence and Orthogonality relations, series expansion) of Bessel, Legendre, Hermite and Laguerre functions – Generating Function

UNIT IV CALCULUS OF VARIATIONS**9**

Concept of variation and its properties – Euler's equation – Functional dependant on first and higher order derivatives – Functional dependant on functions of several independent variables – Variational problems with moving boundaries – Isoperimetric Problems – Direct methods – Ritz and Kantorovich methods.

UNIT V LINEAR INTEGRAL EQUATIONS**12**

Introduction – conversion of a linear differential equation to an integral equations and vice versa – conversion of boundary value problem to integral equations using Green's function – solution of a integral equation – integral equations of the convolution type – Abel's integral equations – integro-differential equations – integral equations with separable kernels – solution of Fredholm equations with separable kernels.

3. <http://www.math.umn.edu/~olver/pdn.html>
4. <http://tutorial.math.lamar.edu/classes/DE.aspx>

COURSE OBJECTIVES

1. To introduce the concepts of special functions.
2. To find the solutions to partial differential equations and their applications
3. To study about mathematical physics and perturbation techniques
4. To learn replacement models and simulation models
5. To provide techniques for effective methods to solve nonlinear programming
6. To provide techniques for decision making

COURSE OUTCOMES

1. Students know the concepts of improper integrals, Beta and Gamma functions.
2. The students acquire sound knowledge of techniques in solving PDE that model engineering problems.
3. Identify the situations where singular perturbations are needed. They will be able to use various modifications of matched asymptotic expansions techniques to derive asymptotic solutions.
4. To be able to understand the characteristics of different types of decision-making environments and the appropriate decision-making approaches and tools to be used in each type.
5. **Convert** and **solve** the practical situations into replacement models.
6. To understand how to model and solve problems using non-integer programming.

UNIT I INTRODUCTION TO SOME SPECIAL FUNCTIONS**9**

Gamma function, Beta function, Bessel function, Error function and complementary Error function, Heaviside's function, pulse unit height and duration function, Sinusoidal Pulse function, Rectangle function, Gate function, Dirac's Delta function, Signum function, Saw tooth wave function, Triangular wave function, Half wave rectified sinusoidal function, Full rectified sine wave, Square wave function.

UNIT II PARTIAL DIFFERENTIAL EQUATIONS AND APPLICATIONS**9**

Formation PDEs, Solution of Partial Differential equations $f(x,y,z,p,q) = 0$, Nonlinear PDEs first order, Some standard forms of nonlinear PDE, Linear PDEs with constant coefficients, Equations reducible to Homogeneous linear form, Classification of second order linear PDEs. Separation of variables use of Fourier series, D'Alembert's solution of the wave equation, Heat equation: Solution by Fourier series and Fourier integral

UNIT III PERTURBATION TECHNIQUES**9**

Singular perturbations (algebraic example). Notion of the boundary layer. Inner and outer solutions. Overlap region. Matching of the asymptotic expansions. Ordinary differential equations with singular perturbations. Methods to determine location of the boundary layer.

UNIT IV SIMULATION MODELS**9**

Elements of simulation model - Monte Carlo technique – applications. Queuing model: problems involving $(M/M/1)$: $(\infty/FIFO)$, $(M/M/c)$: $(\infty/FIFO)$ Models.

UNIT V DECISION MODELS**9**

Decision Analysis – Decision Making environment – Decisions under uncertainty – Decision under risk – Decision – Tree Analysis.

2. www.maths.manchester.ac.uk/~bl/teaching/math34011/
3. pubsonline.informs.org/journal/opre

COURSE OBJECTIVES

1. To introduce the basic concepts of vector space
2. To know the fundamentals of linear Algebra
3. To solve system of linear equations
4. To study about the linear transformations
5. To study about the eigen values and eigen vectors
6. To introduce the concepts of inner product spaces

COURSE OUTCOMES

The student will be able to

1. To explain the fundamental concepts of advanced algebra
2. To explain their role in modern mathematics and applied contexts.
3. To apply the fundamental concepts in their respective engineering fields
4. To visualize linear transformations as matrix form
5. To recognize the underlying theory of vector spaces over a field and inner product spaces over real or complex numbers
6. To articulate the importance of Linear Algebra and its applications in branches of Mathematics

UNIT I VECTORS SPACES**9**

General vector spaces, real vector spaces, Euclidean n-space, subspaces, linear independence, basis and dimension, row space, column space and null space

UNIT II EIGEN VALUES AND EIGEN VECTORS**9**

Eigen values and Eigen vectors - diagonalization - Power method - QR decomposition

UNIT III SYSTEM OF LINEAR EQUATIONS**9**

Direct methods, Gauss elimination method, Gauss Jordan method, Crout's method, iterative methods, Gauss- Jacobi method, Gauss-Seidel method, convergence criteria.

UNIT IV LINEAR TRANSFORMATIONS**9**

Linear Transformations - The Null Space and Range - Isomorphisms - Matrix Representation of Linear Transformations – Similarity - Eigenvalues and Eigenvectors Eigen values and Eigen vectors - Diagonalization

UNIT V INNER PRODUCT SPACES**9**

The Dot Product on \mathbb{R}^n and Inner Product Spaces - Orthonormal Bases - Orthogonal Complements - Application : Least Squares Approximation - Diagonalization of Symmetric M - Application: Quadratic Forms

TOTAL 45 PERIODS**REFERENCES**

WEB REFERENCES

1. www.sosmath.com
2. www.linear.ups.edu
3. www.mathworld.wolfram.com
4. www.tutorial.math.lamar.edu

COURSE OBJECTIVES

1. To introduce Fourier series analysis which is central to many applications in engineering apart from its use in solving boundary value problems
2. To acquaint the student with Fourier series techniques in solving heat flow problems used in various situations.
3. To acquaint the student with Fourier, transform techniques used in wide variety of situations.
4. To introduce the basic concepts of PDE for solving standard partial differential equations
5. To introduce the effective mathematical tools for the solutions of partial differential equations that model several physical processes
6. To develop Z transform techniques for discrete time systems.

COURSE OUTCOMES

1. Solve differential equations using Fourier series analysis which plays a vital role in engineering applications.
2. The learners can equip themselves in the transform techniques and solve partial differential equations
3. Understand how to solve the given standard partial differential equations.
4. Understand the mathematical principles on transforms and partial differential equations would provide them the ability to formulate and solve some of the physical problems of engineering.
5. Appreciate the physical significance of Fourier series techniques in solving one and two dimensional heat flow problems and one dimensional wave equations.
6. Use the effective mathematical tools for the solutions of partial differential equations by using Z transform techniques for discrete time systems.

UNIT I FOURIER SERIES**9**

Dirichlet's conditions – General Fourier series – Odd and even functions – Half range sine series – Half range cosine series – Complex form of Fourier Series – Parseval's identity – Harmonic Analysis.

UNIT II FOURIER TRANSFORM**9**

Fourier integral theorem (without proof) – Fourier transform pair – Sine and Cosine transforms – Properties – Transforms of simple functions – Convolution theorem – Parseval's identity.

UNIT III PARTIAL DIFFERENTIAL EQUATIONS**9**

Formation of partial differential equations by elimination of arbitrary constants and arbitrary functions – Solution of standard types of first order partial differential equations – Lagrange's linear equation – Linear partial differential equations of second and higher order with constant coefficients.

UNIT IV APPLICATIONS OF PARTIAL DIFFERENTIAL EQUATIONS**9**

Classification of second order quasi linear partial differential equations – Solutions of one dimensional wave equation – One dimensional heat equation – Steady state solution of two-dimensional heat equation (Insulated edges excluded) – Fourier series solutions in Cartesian coordinates.

UNIT V Z - TRANSFORM AND DIFFERENCE EQUATIONS**9**

Z-transform - Elementary properties – Inverse Z – transform – Convolution theorem - Formation of difference equations – Solution of difference equations using Z - transform.

3. <http://www.math.umn.edu/~olver/pdn.html>
4. <http://tutorial.math.lamar.edu/classes/DE/IntroPDE.aspx>

COURSE OBJECTIVES

1. Develop abilities to write technically and expressively,
2. Recognize writing as a constructive, meaningful process,
3. Practice using reading strategies for effective writing.
4. Design effective technical documents for both print and digital media
5. Identify the qualities of good technical writing
6. To lean avoiding similarity index.

COURSE OUTCOMES

1. Construct simple sentences, correct common grammatical errors in written English.
2. Develop confidence in English language by imbibing lexical and syntax rules.
3. Enrich their reading ability for effective writing.
4. Elevate them to minimize word, sentence, and paragraph length without sacrificing clarity or substance
5. Familiarize with basic technical writing concepts and terms, such as audience analysis, jargon, format, visuals, and presentation.
6. Demonstrate the basic components of definitions, descriptions, process explanations, and other common forms of technical writing.

UNIT I BASICSOFWRITING**9**

Introduction to Technical Writing – Importance of Writing – Characteristics of Writing– Audience Recognition/ Analysis – Appropriateness of language — Conciseness and Flow– Bias free and plain writing – Impersonal and Formal Language -Techniques of Technical Writing– Overcoming writer’s block – Prioritizing for effective writing– Avoiding plagiarism.

UNIT II PARAGRAPHS ANDESSAYS**9**

Expressing Ideas – Paragraph construction – Cohesion and Coherence – Adequate development – Kinds of paragraphs – Writing drafts – Paragraph length and pattern – Types of Essays – Characteristics of Essays – Salient point of sentence constructions.

UNIT III LETTERS, MEMOS ANDEMAIL**9**

Formal written correspondence – Types of messages – Business letters – Structure of letters – Language in letters – Tense in letters – Cover letters – Resumes – Curriculum vitae – Memos – Emails – Email Etiquette – Effectiveness and purpose.

UNIT IV THE ART OF CONDENSATION ANDTECHNICALPROPOSALS**9**

StepstoEffectivepréciswriting–Guidelines–TechnicalProposals–TypesofProposals–Characteristics– Body of the Proposals – Style and appearance – Evaluation of proposals – Proof Reading – Book /FilmReview – Travelogue – DialogueWriting.

UNIT V REPORTS ANDRESEARCHARTICLES**9**

Discussion of newspaper articles -Objectives of Reports – Characteristics of Reports – Structure of Reports – Types of Reports – Writing an article – Writing research articles – Essential features of Dissertation – Organizing the structure of thesis and articles – Writing technical description.

1	Crème, P. and M. Lea.	Writing at University: A guide for students.	OUP	2003
2	Graham King	Collins Improve Your Writing	Collins; First edition	2009
3	David Morley	The Cambridge Intro. To Creative Writing	Cambridge	2010

COURSE OBJECTIVES

1. To inculcate the basics of brief history of Earth sciences
2. To divulge knowledge on the basics of structure of earth and earth's gravitational field.
3. To disseminate the fundamentals of magnetic field and thermal distribution of earth.
4. To introduce the concepts of seismology and seismic waves
5. To impart the basic knowledge of oceans
6. To Apply the knowledge gained from this course to solve the relevant problems in engineering stream.

COURSE OUTCOMES

1. Gain knowledge on the basics of history of Earth sciences.
2. Acquire knowledge on concepts of structure of earth and earth's gravitational field.
3. Have adequate knowledge on the concepts of magnetic field and thermal distribution of earth
4. Obtain knowledge on the basics of seismic waves.
5. Understand the basics of oceans and properties of sea water.
6. Apply the knowledge gained from this course to solve the relevant problems in engineering stream.

UNIT I ORIGIN OF EARTH**9**

A brief history of the development of Earth Sciences and of Geophysics in particular, An overview of Geophysical methods and their essential features, Problems of inversion and non-uniqueness in Geophysics, Origin & evolution of Solar system, Earth and Moon structure,. Kepler's law of planetary motion, A review of the Earth's structure and composition

UNIT II STRUCTURE OF EARTH**9**

Chemical composition of Earth, Rheological behavior of crust and upper mantle, viscoelasticity and rock failure criteria, Geochronology: Radiometric dating and their advantages, meaning of radiometric ages, Major features of the Earth's gravitational field and relationship with tectonic processes in the crust and upper mantle, concept of isostasy, mathematical concept of Airy and Pratt hypotheses of isostasy

UNIT III MAGNETIC FIELD AND THERMAL DISTRIBUTION OF EARTH**9**

Origin of geomagnetic field, polar wandering, secular variations and westward drift, reversals of geomagnetic field, sun spot, solar flares, geomagnetic storms, sea-floor spreading, Paleomagnetism and its uses, Thermal history of the Earth, sources of heat generation and temperature distribution inside the earth, convection in the mantle

UNIT IV SEISMOLOGY**9**

Earthquake seismology, Earthquakes and its classifications, Global seismicity and tectonics, Earth's internal structure derived from seismology, Earthquake mechanism and Anderson's theory of faulting, Continental drift and plate tectonics: its historical perspective and essential features, present day plate motions, Triple junctions, oceanic ridges, Benioff zones, trenches and island arcs, hot spots, Mantle Plume, Mountain building, origin of Himalaya, Geodynamics of Indian subcontinent.

UNIT V OCEANS**9**

Physical properties of seawater and methods of determination, distribution of salinity in the oceans, factors affecting salinity, water masses and water type, TS Diagram, Circulation of currents in major ocean waves. Tides: Dynamical and equilibrium theory of tides. Marine pollution, steps to control marine pollution, Laws of seas, Coastal zone management

COURSE OBJECTIVES

1. To disseminate the fundamentals of acoustic waves.
2. To inculcate the characteristics of radiation and reception of acoustic waves.
3. To teach the concepts of radiation and reception of acoustic waves
4. To divulge knowledge on the basics of pipe resonators and filters.
5. To introduce the features of architectural acoustics.
6. To impart the basic knowledge of transducers and receivers.

COURSE OUTCOMES

1. Develop the idea of the fundamentals of acoustic waves.
2. Apply the concepts of radiation and reception of acoustic waves.
3. Explain the basic ideas of pipe resonators and filters.
4. Illustrate the basics of architectural acoustics.
5. Illustrate the transducers and receivers and its applications in various electronic devices.
6. Apply the knowledge inputs of the course for engineering applications.

UNIT I INTRODUCTION**9**

Acoustics waves – Linear wave equation – sound in fluids – Harmonic plane waves -Energy density – Acoustics intensity – Specific acoustic impedance – spherical waves – Describer scales. Reflection and Transmission: Transmission from one fluid to another normal and oblique incidence –method of images.

UNIT II RADIATION AND RECEPTION OF ACOUSTIC WAVES**9**

Radiation from a pulsating sphere – Acoustic reciprocity – continuous line source radiation impedance - Fundamental properties of transducers. Absorption and attenuation of sound. Absorption from viscosity – complex sound speed and absorption – classical absorption coefficient

UNIT III PIPES RESONATORS AND FILTERS**9**

Resonance in pipes - standing wave pattern absorption of sound in pipes – long wavelength limit – Helmholtz resonator - acoustic impedance - reflection and transmission of waves in pipe - acoustic filters – low pass, high pass and band pass. Noise, Signal detection, Hearing and speech. Noise, spectrum level and band level – combining band levels and tones – detecting signals in noise – detection threshold – the ear – fundamental properties of hearing – loudness level and loudness – pitch and frequency – voice.

UNIT IV ARCHITECTURAL ACOUSTICS**9**

Sound in endosse – A simple model for the growth of sound in a room – reverberation time - Sabine, sound absorption materials – measurement of the acoustic output of sound sources in live rooms – acoustics factor in architectural design. Environmental Acoustics: Weighted sound levels speech interference – highway noise – noise induced hearing loss – noise and architectural design specification and measurement of some isolation design of portions.

UNIT V TRANSDUCTION**9**

Transducer as an electrical network – canonical equation for the two simple transducers transmitters – moving coil loud speaker – loudspeaker cabinets – horn loud speaker, receivers – condenser – microphone – moving coil electrodynamics microphone piezoelectric microphone – calibration of receivers

TOTAL 45 PERIODS**TEXTBOOK**

3. www.nptel.ac.in
4. www.ocw.mit.edu

COURSE OBJECTIVES

1. To understand about the fuel
2. To study about the alcohols
3. To study importance of alcohols in engine
4. To gain knowledge on the fuel gas and oils
5. To get the information on fuel cell
6. To understand electric, hybrid and solar cars

COURSE OUTCOMES

1. Students will know about the basic concepts of alternate fuels
2. Students will know about the basic concepts of alcohols.
3. Students will understand about fuel gas and oils
4. Students can enrich their knowledge about the alternate fuels and energy systems
5. Develop their knowledge in studies of vegetable oils
6. Students knows about the importance of electric, hybrid and solar cars

UNIT I INTRODUCTION**9**

Need for alternate fuel, availability and properties of alternate fuels, general use of alcohols, LPG, hydrogen, ammonia, CNG and LNG, vegetable oils and biogas, merits and demerits of various alternate fuels, introduction to alternate energy sources and significance.

UNIT II ALCOHOLS**9**

Properties as engine fuel, alcohols and gasoline blends, performance in SI engines, methanol and gasoline blends, combustion characteristics in CI engines, emission characteristics, DME, DEE properties performance analysis, performance in SI & CI Engines.

UNIT III NATURAL GAS, LPG, HYDROGEN AND BIOGAS**9**

Availability of CNG, properties, modification required to use in engines, performance and emission characteristics of CNG & LPG in SI & CI engines, performance and emission of LPG. Hydrogen storage and handling, performance and safety aspects. Production of Biogas and its applications

UNIT IV VEGETABLE OILS**9**

Various vegetable oils for engines, esterification, performance in engines, performance and emission characteristics, biodiesel and its characteristics.

UNIT V ELECTRIC, HYBRID, FUEL CELL AND SOLAR CARS**9**

Layout of an electric vehicle, advantage and limitations, specifications, system components, electronic control system, high energy and power density batteries, hybrid vehicle, fuel cell vehicles, solar powered vehicles.

3. <http://www.alternative-energy-news.info/technology/transportation/hybrid-cars/>

COURSE OBJECTIVES:

1. To make the students conversant with basics of Solid wastes and its classification.
2. To make the student acquire sound knowledge of different treatments of solid wastes.
3. To acquaint the student with concepts of waste disposals.
4. To develop an understanding of the basic concepts of Hazardous waste managements.
5. To acquaint the students with the basics of energy generation from waste materials.
6. To get the information on energy conservation.

COURSE OUTCOMES:

1. Outline the basic principles of Solid waste and separation of wastes (K)
2. Identify the concepts of treatment of solid wastes (S)
3. Identify the methods of wastes disposals. (S)
4. Examine the level of Hazardousness and its management. (S)
5. Examine the possible of the energy production using waste materials. (S)
6. Integrate the chemical principles in the projects undertaken in field of engineering and technology (A)

UNIT I SOLIDWASTE**9**

Definitions – Sources, Types, Compositions, Properties of Solid Waste – Municipal Solid Waste – Physical, Chemical and Biological Property – Collection – Transfer Stations – Waste Minimization and Recycling of Municipal Waste

UNIT II WASTETREATMENT**9**

Size Reduction – Aerobic Composting – Incineration – batch type and continuous flow type, Medical/ Pharmaceutical Waste Incineration – Environmental Impacts – Measures of Mitigate Environmental Effects due to Incineration

UNIT III WASTEDISPOSAL**9**

Sanitary Land Fill Method of Solid Waste Disposal – Land Fill Classification, Types, Methods & Siting Consideration – Layout & Preliminary Design of Land Fills – Composition, Characteristics generation, Movement and Control of Landfill Leachate & Gases – Environmental Monitoring System for Land Fill Gases, Waste landfill Remediation

UNIT IV HAZARDOUS WASTEMANAGEMENT**9**

Definition & Identification of Hazardous Waste – Sources and Nature of Hazardous Waste – Impact on Environment – Hazardous Waste Control – Minimization and Recycling -Assessment of Hazardous Waste Sites – Disposal of Hazardous Waste, Underground Storage Tanks Construction, Installation & Closure, Remediation, risk assessment.

UNIT V ENERGY GENERATION FROM WASTE**9**

Thermal conversion Technologies – Pyrolysis systems, Combustion systems, Gasification systems, Environment control systems, energy recovery systems. Biological & chemical conversion technologies – Aerobic composting, low solids. Anaerobic digestion, high solids anaerobic digestion, Energy production from biological conversion products, other biological transformation processes. Chemical transformation processes.

4. nzic.org.nz/ChemProcesses/environment/

COURSE OBJECTIVES:

1. To make the students conversant about the green chemistry
2. To make the student acquire sound knowledge of the atom efficient process
3. Able to synthesis elaborately the atom efficient process.
4. To acquaint the student with concepts of green technology.
5. To develop an understanding of the basic concepts of renewable energy resources.
6. To acquaint the students with the basic information on catalysis.

COURSE OUTCOMES:

1. Outline the basic principles of green chemistry (K)
2. Examine the different atom efficient process and synthesis elaborately (S)
3. Apply the concepts combustion of green technology (S)
4. Identify and apply the concepts of renewable energy (S)
5. Apply the concepts of green catalysts in the synthesis (S)
6. Integrate the chemical principles in the projects undertaken in field of engineering and technology (A)

UNIT I INTRODUCTION TO GREENCHEMICALPRINCIPLES 9

Definition, tools, and twelve principles of green chemistry, solvent-less reactions and reactions in water, microwaves and fluorous solvents, green resolution of racemic mixtures, materials for a sustainable economy, chemistry of longer wear, agrochemicals: problems and green alternate solutions.

UNIT II ATOM EFFICIENTPROCESSES 9

Atom efficient processes, evaluating chemical reagents according to their yield and atom efficiency, examples of efficient stoichiometric and catalytic processes, atom economy and homogeneous catalysis, halide-free synthesis and alternatives to Strecker synthesis

UNIT III BIOTECHNOLOGY AND GREENCHEMISTRY 9

Bio technology and its applications in environmental protection-Bio informatics-Bio remediation, biological purification of contaminated air. Green chemistry for clean technology-Significance of green chemistry-Basic components of green chemistry, Industrial applications of green chemistry, green fuels-e-green propellants and bio catalysts.

UNIT IV RENEWABLE RESOURCES 9

Use of renewable materials, evaluating feedstock and starting materials and their origins, toxicity, sustainability and the downstream implications of the choice of feedstock, commodity chemicals from glucose and biomass conversion

UNIT V CATALYSIS IN GREENCHEMISTRY 9

Catalysis, energy requirements and usage, optimization of the reaction by minimizing the energy requirements, examples of efficient catalytic reactions including the use of heterogeneous catalysis, zeolites, oxidation using molecular oxygen.

5. <http://www.amazon.in/Green-Chemistry-Catalysis>

COURSE OBJECTIVES:

1. To make the students conversant with **the information on electrochemical material**.
2. To make the student acquire sound knowledge of **conducting polymers**.
3. To acquaint the student with concepts of Energy storage devices.
4. To develop energy storage devices.
5. To impart knowledge on basic principles of solar cells
6. To know the applications of energy storage

COURSE OUTCOMES:

1. Outline the basic principles of chemistry in electrochemical material (K)
2. Examine the properties of conducting polymers (S)
3. Apply the concepts of electrochemistry in storage devices. (S)
4. Identify the concepts of storage devices and its applications. (S)
5. Apply the suitable materials for the manufacturing of storage devices. (S)
6. Integrate the chemical principles in the projects undertaken in field of engineering and technology (A)

UNIT I METALFINISHING**9**

Fundamental principles, surface preparation-Electroplating of copper, nickel, chromium, zinc and precious metals (gold & silver)- Electroplating for electronic industry- Alloy plating, brass plating- Electro less plating of nickel- anodizing – Electroforming – Electro winning

UNIT II CONDUCTING POLYMERS AND ELECTROCHEMICALS**9**

Electropolymerisation- anodic and cathodic polymerization-effect of reaction parameters on the course of the reaction- Electrochemical preparation of conducting polymers-poly acetylene- Electrolytic production of perchlorates and manganese dioxide- Electro organic chemicals- constant current electrolysis.

UNIT III BATTERIES AND POWER SOURCES-I**9**

Principles of energy conservation- electrochemical energy conservation- thermodynamic reversibility, Gibbs equation. EMF- battery terminology, energy and power density- Properties of anodes, cathodes, electrolytes and separators- Types of electrolytes.

UNIT IV BATTERIES AND POWER SOURCES-II**9**

Primary batteries- Dry Leclanche cells, alkaline primary batteries, Lithium batteries- construction, characteristics, problems associated with system- Secondary batteries- Lead acid, nickel cadmium- Fuel cells- Introduction, types of fuel cells, advantages.

UNIT V ELECTROCHEMICAL MATERIAL SCIENCE**9**

Solar cells- Preparation of CdS/Cu₂S solar cells by screen printing techniques and their characteristics - Amorphous silicon solar cells - Photo electrochemical cells(PEC) for conversion of light energy to electrical energy - PEC cells based on Cd/Se and Ga/As characteristics.

COURSE OBJECTIVES:

1. To make the students conversant with **cement and lime** and its uses.
2. To make the student acquire sound knowledge of abrasives
3. To make the student acquire sound knowledge of refractories.
4. To acquaint the student with concepts of inorganic chemicals.
5. To develop an understanding of the basic concepts of **explosives**.
6. To acquaint the students with the basics of **agriculture chemicals**.

COURSE OUTCOMES:

1. Outline the basic chemistry of **cement and lime (K)**
2. Examine the uses of abrasives and refractories (S)
3. Identify the usage of the inorganic chemicals. (S)
4. Identify the concepts of explosives and smoke screens (S)
5. Identify the usage of the **agriculture chemicals** (S)
6. Integrate the chemical principles in the projects undertaken in field of engineering and technology (A)

UNIT I CEMENT AND LIME**9**

Manufacture of Portland cement – setting and hardening of Portland cement – regauging cement – effect of fineness on setting and hardening – freezing – high early strength cement – high alumina cement Lime – raw materials- manufacture – slaking – lime mortar – types of lime – high – calcium or fat lime – calcium lime or lean lime – magnesian lime – dolomitic lime – hydraulic lime.

UNIT II ABRASIVES AND REFRACTORIES**9**

Abrasives – hard abrasives – siliceous abrasives – soft abrasives – artificial abrasives – uses. Refractories – definition – classification – acid refractories – basic refractories – neutral refractories – properties – uses.

UNIT III INORGANIC CHEMICALS**9**

Common salt and soda ash – Manufacture – Different grades – products – alkalis – Na_2CO_3 , Caustic soda and chlor-alkali industry – manufacture principles of electrolytic process – chlorine – storage. Hydrochloric acid – manufacture – absorption – uses, Sulphur and sulphuric acid – extraction of sulphur – manufacture of H_2SO_4 – chamber – contact processes – industrial uses.

UNIT IV EXPLOSIVES**9**

Explosives – uses – properties and tests – explosives for war – nitrocellulose – picric acid and T.N.T. – industrial explosives – nitroglycerin and dynamites – black powder – smoke screens – incendiaries – gas mask.

UNIT V AGRICULTURE CHEMICALS**9**

Fertilizers – organic and inorganic – ammoniated superphosphates, sodium nitrate, solid pellets – potassium salts – pesticides – fungicides – herbicides – their preparations and characteristics – environmental impacts.

COMPUTER SCIENCE AND ENGINEERING

15BEC SOE01

PYTHON PROGRAMMING

3 0 0 3100

COURSE OBJECTIVES:

1. To learn how to use and manipulate several core data structures: Lists, Dictionaries, Tuples, and Strings
2. To study decision structures and loops
3. To understand the process and skills necessary to effectively deal with problem solving in relation to writing programs
4. To understand the process and skills necessary to effectively deal with problem solving
5. To discuss in relation to writing programs
6. To study various program object and graphics based on python

COURSE OUTCOMES:

Upon completion of the course, students will be able to:

1. Develop algorithmic solutions to simple computational problems Read, write, execute by hand simple Python programs
2. Structure simple Python programs for solving problems
3. Decompose a Python program into functions.
4. Represent compound data using Python lists, tuples, dictionaries
5. Read and write data from/to files in Python Programs
6. Understand various program object and graphics based on python

UNIT I FUNDAMENTALS

9

The Universal Machine-Program power- What is Computer Science?-Hardware Basics- Programming Languages-Python-Inside Python program-Software Development Process- Example program-Elements of programs- Output statements- Assignment Statements- Data types-Type conversions

UNIT II DECISION STRUCTURES AND LOOPS

9

Simple Decisions-Two-way decisions-Multi-way decisions-Exception handling-for loops-indefinite loops-common loop patterns-Booleans

UNIT III FUNCTIONS

9

Function of functions-Functions and Parameters-Function that returns values-Function that modifies parameters-Functions and program structures

UNIT IV SEQUENCES

9

String data type- String Processing - List as sequences-String Representation-String Methods-I/O as String manipulation-File Processing

UNIT V OBJECTS AND GRAPHICS

9

Overview - Object of Objects - Simple Graphics Programming - Using Graphical Objects - Choosing Coordinates - Interactive Graphics-Graphics module reference

TOTAL 45 PERIODS

REFERENCES

S. No.	Author(s) Name	Title of the book	Publisher	Year of Publication
1	John Zelle	Python Programming: An Introduction to Computer Science	Franklin & Associates	2009
2	Mark Lutz	Learning Python	OREily	2013
3	David Beazly & Brian K. Jones	Python Cookbook	OREily	2013

COURSE OBJECTIVES:

1. To study concepts of Internet, IP addresses and protocols
2. To explain the concept of web page development through HTML
3. To introduce the PERL and explore its current strengths and Weaknesses
4. To write working Java code to demonstrate the use of applets for client-side programming
5. To study Internet telephony and various multimedia applications
6. To Elaborate on the principles of web page development

COURSE OUTCOMES:

Upon completion of this course, the student will be able to:

1. Learn the advanced concepts & techniques of Internet and Java.
2. Analyze the requirements for and create and implement the principles of web page development
3. Understand the concepts of PERL
4. Implement client-side programming using java applets
5. Generate internet telephony based upon advanced concepts
6. Develop applications on internet programming based on java applets and scripts

UNIT I INTRODUCTION

9

Introduction - Network of Networks, Intranet, Extranet and Internet. World Wide Web- Domain and Sub domain, Address Resolution, DNS, Telnet, FTP, HTTP. TCP/IP- Features, Segment, Three-Way Handshaking, Flow Control, Error Control, Congestion control, IP Datagram, IPv4 and IPv6. IP Subnetting and addressing- Classful and Classless Addressing, Subnetting

UNIT II HTML

9

Introduction, Editors, Elements, Attributes, Heading, Paragraph. Formatting, Link, Head, Table, List, Block, Layout, CSS. Form, Iframe, Colors, Colorname, Colorvalue. Image Maps- map, area, attributes of image area- Extensible Markup Language (XML)- Introduction, Tree, Syntax, Elements, Attributes, Validation, Viewing. XHTML in brief. CGI Scripts- Introduction- Environment Variable, GET and POST Methods.

UNIT III PERL

9

Introduction, Variable, Condition, Loop, Array, Implementing data structure, Hash, String, Regular Expression, File handling, I/O handling- JavaScript- Basics, Statements, comments, variable, comparison, condition, switch, loop, break. Object – string, array, Boolean, reg-ex. Function, Errors, Validation. Cookies- Definition of cookies, Create and Store a cookie with example. Java Applets- Container Class, Components, Applet Life Cycle, Update method, Applications.

UNIT IV CLIENT-SERVER PROGRAMMING

9

Client-Server programming In Java - Java Socket, Java RMI. Threats - Malicious code-viruses, Trojan horses, worms; eavesdropping, spoofing, modification, denial of service attacks- Network security techniques- Password and Authentication- VPN, IP Security, security in electronic transaction, Secure Socket Layer (SSL), Secure Shell (SSH). Firewall- Introduction, Packet filtering, Stateful, Application layer, Proxy.

UNIT V INTERNET TELEPHONY

9

Introduction, VoIP- Multimedia Applications- Multimedia over IP: RSVP, RTP, RTCP and RTSP- Streaming media, Codec and Plugins, IPTV- Search Engine and Web Crawler- Definition, Meta data, Web Crawler, Indexing, Page rank, overview of SEO.

TOTAL 45 PERIODS

REFERENCES

S. No.	Author(s) Name	Title of the book	Publisher	Year of Publication
1	N.P. Gopalan and J. Akilandeswari	Web Technology: A Developer's Perspective	PHI Learning, Delhi	2013
2	Rahul Banerjee	Internetworking Technologies, An Engineering Perspective	PHI Learning, Delhi	2011

COURSE OBJECTIVES:

1. To impart the fundamental concepts of Computer Animation and Multimedia
2. To study the graphic techniques and algorithms using flash
3. Explain various concepts available in 3D animation
4. Explain various devices available for animation
5. To study the multimedia concepts and various I/O technologies for concept development
6. To understand the three-dimensional graphics and their transformations

COURSE OUTCOMES

Upon completion of this course, the student will be able to:

1. Develop their creativity using animation and multimedia
2. Understand the concepts of Flash and able to develop animation using it
3. Understand about various latest interactive 3D animation concepts
4. Know the various devices and software available in motion capture
5. Understand the concept development process
6. Develop an interactive multimedia presentation by using multimedia devices and identify theoretical and practical aspects in designing multimedia applications surrounding the emergence of multimedia technology.

UNIT I INTRODUCTION**9**

What is mean by Animation – Why we need Animation – History of Animation– Uses of Animation – Types of Animation – Principles of Animation – Some Techniques of Animation – Animation on the WEB – 3D Animation – Special Effects -Creating Animation.

UNIT II CREATING ANIMATION IN FLASH**9**

Introduction to Flash Animation – Introduction to Flash – Working with the Timeline and Frame-based Animation - Working with the Timeline and Tween-based Animation – Understanding Layers - Action script.

UNIT III 3D ANIMATION & ITS CONCEPTS**9**

Types of 3D Animation – Skeleton & Kinetic 3D Animation – Texturing & Lighting of 3D Animation – 3D Camera Tracking – Applications & Software of 3D Animation.

UNIT IV MOTION CAPTION**9**

Formats – Methods – Usages – Expression – Motion Capture Software's – Script Animation Usage – Different Language of Script Animation Among the Software.

UNIT V CONCEPT DEVELOPMENT**9**

Story Developing –Audio & Video – Color Model – Device Independent Color Model – Gamma and Gamma Correction - Production Budgets- 3D Animated Movies.

3	Malay K. Pakhira	Computer Graphics, Multimedia and Animation	PHI Learning	2010
4	Pankaj Dhaka	Encyclopedia of Multimedia and Animations	Anmol Publications	2011

COURSE OBJECTIVES:

1. To study the basic parts of computer in detail
2. Introduce various peripheral devices available for computer and its detailed working concepts
3. Overview of various interfaces and other hardware overview
4. Assemble/setup and upgrade personal computer systems and discuss about power supplies and the skills to trouble-shoot various power-related problems.
5. To study basic concepts and methods in troubleshooting
6. To study the installation/connection and maintenance of computer and its associated peripherals.

COURSE OUTCOME:

Upon completion of this course, the student will be able to:

1. Identify the main components for the PC, familiarize themselves with PC memories such as RAM and ROM devices and so on.
2. Identify various peripheral devices available and its working
3. Understand various concepts of hardware and its interface and control
4. Perform basic installation of PC. Importance of maintenance is understood
5. Understand Various faults and failures are identified and troubleshooting in detail
6. Understand overall PC hardware, interfacing, maintenance and troubleshooting

UNIT I INTRODUCTION**9**

Introduction - Computer Organization – Number Systems and Codes – Memory – ALU – CU – Instruction prefetch – Interrupts – I/O Techniques – Device Controllers – Error Detection Techniques – Microprocessor – Personal Computer Concepts – Advanced System Concepts – Microcomputer Concepts – OS – Multitasking and Multiprogramming – Virtual Memory – Cache Memory – Modern PC and User.

UNIT II PERIPHERAL DEVICES**9**

Introduction – Keyboard – CRT Display Monitor – Printer – Magnetic Storage Devices – FDD – HDD – Special Types of Disk Drives – Mouse and Trackball – Modem – Fax-Modem – CD ROM Drive – Scanner – Digital Camera – DVD – Special Peripherals.

UNIT III PC HARDWARE OVERVIEW**9**

Introduction – Hardware BIOS DOS Interaction – The PC family – PC hardware – Inside the System Box – Motherboard Logic – Memory Space – Peripheral Interfaces and Controllers – Keyboard Interface – CRT Display interface – FDC – HDC.

UNIT IV INSTALLATION AND PREVENTIVE MAINTENANCE**9**

Introduction – system configuration – pre installation planning – Installation practice – routine checks – PC Assembling and integration – BIOS setup – Engineering versions and compatibility – preventive maintenance – DOS – Virus – Data Recovery.

UNIT V TROUBLESHOOTING**9**

Introduction – computer faults – Nature of faults – Types of faults – Diagnostic programs and tools – Microprocessor and Firmware – Programmable LSI's – Bus Faults – Faults Elimination process – Systematic Troubleshooting – Symptoms observation and analysis – fault diagnosis – fault rectification – Troubleshooting levels – FDD, HDD, CD ROM Problems.

COURSE OBJECTIVES:

1. To understand the basic requirements, installation and structure of gaming using Java
2. Discuss various aspects of safe cracker projects
3. Discuss various aspects of match game projects
4. Discuss various aspects of pizza delivery projects
5. Discuss various aspects of moon landing projects
6. Discuss the process of development of gaming using Java

COURSE OUTCOMES:

Upon completion of the course, students will be able to:

1. Interpret various concepts of gaming based on Java
2. Design the frame and code to develop safe cracker project
3. Design the frame and code to develop match game project
4. Design the frame and code to develop pizza delivery project
5. Design the frame and code to develop moon landing project
6. Design and develop various games using Java

UNIT I INTRODUCTION**9**

Introducing Games with Java- Requirements-Installing Netbeans IDE-Structure of Java Program-Structure of Java GUI-Swing controls-Stopwatch Project-Creating Frames-Adding Controls-Adding Event methods-Writing Code

UNIT II SAFECRACKER PROJECT**9**

Frame design-Grid Bag Layout Manager-Code Design-Adding Sounds-Tic Tac Toe Project-Frame Design-Code Design-Adding Events-Adding Sounds

UNIT III MATCH GAME PROJECT**9**

Preview-Frame Design-Photo Selection-Code Design-Timer Objects- Adding Delays-one player Solitaire game-Computer Moves

UNIT IV PIZZA DELIVERY PROJECT**9**

Preview- Frame Design-Adding Clock-Game Design-Multiple Frames GUI- Leap Frog Project-Preview Frame Design-Code Design- Introduction to OOP-Sprite Class-Collision detection between objects- Updating Scores

UNIT V MOON LANDING PROJECT**9**

Preview-Frame Design- Code Design- Graphics Methods- Graphics 2D Objects-Stroke and Paint Objects-Shapes and Drawing Methods-Line, Rectangle and Ellipse-Scrolling Background-Sprite Animation

ELECTRICAL AND ELECTRONICS ENGINEERING

15BEEEOE01

ELECTRICHYBRIDVEHICLES

3 0 0 3100

Course Objectives

1. To understand the basic concepts of electric hybrid vehicle.
2. To gain the knowledge about electric propulsion unit.
3. To gain the concept of Hybrid Electric Drive-Trains.
4. To gain the different Energy Management Strategies.
5. To study about the efficiency manipulation in drives
6. To understand and gain the knowledge about various energy storage devices

Course Outcomes:

1. Summarize the basic concepts in bioprocess Engineering.
2. Explain the concept of Hybrid Electric Vehicles.
3. Understand the concept of Hybrid Electric Drive-Trains.
4. Identify the different Energy Management Strategies.
5. Understand the concept of different Energy Storage devices.
6. Analyze the different motor drives used in Hybrid Electric Vehicles.

UNIT I INTRODUCTION

9

History of hybrid and electric vehicles, social and environmental importance of hybrid and electric vehicles, impact of modern drive-trains on energy supplies.

UNIT II HYBRIDELECTRICDRIVE-TRAINS

9

Basic concept of hybrid traction, introduction to various hybrid drive-train topologies, power flow control in hybrid drive-train topologies, fuel efficiency analysis.

UNIT III ELECTRICPROPULSIONUNIT

9

Introduction to electric components used in hybrid and electric vehicles, Configuration and control of DC Motor drives, Configuration and control of Induction Motor drives, configuration and control of Permanent Magnet Motor drives, Configuration and control of Switch Reluctance Motor drives, drive system efficiency.

UNIT IV ENERGYSTORAGE

9

Introduction to Energy Storage Requirements in Hybrid and Electric Vehicles, Battery based energy storage and its analysis, Fuel Cell based energy storage and its analysis, Super Capacitor based energy storage and its analysis, Flywheel based energy storage and its analysis, Hybridization of different energy storage devices.

UNIT V ENERGYMANAGEMENTSTRATEGIES

9

Introduction to energy management strategies used in hybrid and electric vehicles, classification of different energy management strategies, comparison of different energy management strategies, implementation issues of energy management strategies.

TOTAL 45PERIODS

TEXT BOOK

S. No.	Author(s) Name	Title of the book	Publisher	Year of Publication
1	Iqbal Hussein	Electric and Hybrid Vehicles: Design Fundamentals	CRC Press	2010

REFERENCES

S. No.	Author(s) Name	Title of the book	Publisher	Year of Publication

2	James Larminie, John Lowry	Electric Vehicle Technology Explained	Wiley	2012

COURSE OBJECTIVES:

1. To gain the knowledge about energy management.
2. To understand the basic concepts in economic analysis in energy management.
3. To understand the basic principles of energy audit.
4. To gain the knowledge about the basic concept of types of Energy Audit
5. To gain and Evaluate the different energy efficient motors
6. Understand the concept of Energy conservation.

COURSE OUTCOMES:

At the end of this course, students will demonstrate the ability to

1. Understand the concept of Energy Management.
2. Analyze the different methods for economic analysis
3. Knowledge about the basic concept of Energy Audit and types.
4. Evaluate the different energy efficient motors
5. Understand the concept of Energy conservation.
6. Investigate the different methods to improve power factor.

UNIT I ENERGY MANAGEMENT**9**

Principles of energy management, organizing energy management program, initiating, planning, controlling, promoting, monitoring, reporting –Energy Auditor and Energy Manager – Eligibility, Qualification and functions - Questionnaire and check list for top management.

UNIT II ECONOMIC ASPECTS AND ANALYSIS**9**

Economics analysis – Depreciation Methods, time value of money, rate of return, present worth method, replacement analysis, life cycle costing analysis - Calculation of simple payback method, net present worth method.

UNIT III BASIC PRINCIPLES OF ENERGY AUDIT**9**

Energy audit – definition, concept, type of audit, energy index, cost index, pie charts, Sankey diagrams, load profiles, Energy conservation schemes – Energy audit of industries – energy saving potential, energy audit of process industry, thermal power station, building energy audit.

UNIT IV ENERGY EFFICIENT MOTORS**9**

Electric Motors: Factors affecting efficiency - Energy efficient motors - constructional details, characteristics - voltage variation –over motoring – motor energy audit-

Energy conservation: Importance-energy saving measures in DG set-fans and blowers pumps- air conditioning system-energy efficient transformers.

UNIT V POWER FACTOR IMPROVEMENT, LIGHTING AND ENERGY INSTRUMENTS**9**

Power factor - methods of improvement, location of capacitors, p.f with non linear loads, effect of harmonics on p.f,- p.f motor controllers –Energy efficient lighting system design and practice- lighting control– Measuring Instruments – wattmeter, data loggers, thermocouples, pyrometers, lux meters, tong testers, application of PLCs.

TOTAL 45 PERIODS**TEXT BOOK**

S. No.	Author(s) Name	Title of the book	Publisher	Year of Publication
1	Murphy W.R. and G.Mckay Butter worth	Energy Management	Heinemann Publications	2007

REFERENCES

S. No.	Author(s) Name	Title of the book	Publisher	Year of Publication
1	John.C.Andreas	Energy Efficient Electric Motors	Marcel Dekker Inc Ltd – 3rd edition	2005
2	W.C.Turner Steve Doty	Energy Management Handbook	John Wiley and Sons, 7th Edition	2013
3	Paul o' Callaghann	Energy Management	Mc-Graw Hill Book Company – 1st edition	1998

COURSE OBJECTIVES

1. It deals with various types of Sensors & Transducers and their working principle
2. It deals with resistive transducers
3. It deals with capacitive transducers
4. It deals with inductive transducers
5. It deals with some of the miscellaneous transducers
6. It deals with characteristics of transducers

COURSE OUTCOMES

At the end of the course the student will be able to

1. understand all types of sensors and transducers.
2. Justify the concept and working principle of different transducers and sensors
3. Justify the transducers that will be utilised in the electrical industries
4. Identify recent developments in transducer domain
5. Discover the knowledge for small technology up gradations in it
6. Analysis the real time application.

UNIT I INTRODUCTION OF TRANSDUCERS**9**

Transducer – Classification of transducers – Basic requirement of transducers.

UNIT II CHARACTERISTICS OF TRANSDUCERS**9**

Static characteristics – Dynamic characteristics – Mathematical model of transducer – Zero, first order and second order transducers – Response to impulse, step, ramp and sinusoidal inputs.

UNIT III RESISTIVE TRANSDUCERS**9**

Potentiometer – Loading effect – Strain gauge – Theory, types, temperature compensation – Applications – Torque measurement – Proving Ring – Load Cell – Resistance thermometer – Thermistors materials – Constructions, Characteristics – Hot wire anemometer.

UNIT IV INDUCTIVE AND CAPACITIVE TRANSDUCER**9**

Self inductive transducer – Mutual inductive transducers – LVDT Accelerometer – RVDT – Synchros – Microsyn – Capacitive transducer – Variable Area Type – Variable Air Gap type – Variable Permittivity type – Capacitor microphone.

UNIT V MISCELLANEOUS TRANSDUCERS**9**

Piezoelectric transducer – Hall Effect transducers – Smart sensors – Fiber optic sensors – Film sensors – MEMS – Nano sensors, Digital transducers.

4	Murthy.D.V.S	Transducers and Instrumentation	Prentice Hall of India	2010

COURSE OBJECTIVES

1. To understand the basic principles of PLC systems.
2. To gain the knowledge about data handling functions.
3. To gain the knowledge of storage techniques in PLC
4. To acquire the knowledge about how to handle the data and functions
5. To study about flow charts of ladder and spray process system
6. To understand the principles of PID.

COURSE OUTCOME

1. At the end of the course the student will be able to understand the registers and functions in PLC and they are able to do the program.
2. To acquire the knowledge of storage techniques in PLC
3. Students know how to handle the data and functions
4. Students known about advanced controller in PLC applications
5. Students gather real time industrial application of PLC
6. Students gathered and evaluate the flow charts of ladder and spray process system

UNIT I INTRODUCTION**9**

PLC Basics PLC system, I/O modules and interfacing CPU processor programming equipment Programming formats, construction of PLC ladder diagrams, devices connected to I/O modules.

UNIT II PLC PROGRAMMING**9**

PLC Programming input instructions, outputs, operational procedures, programming examples using contacts and coils. Drill-press operation. Digital logic gates programming in the Boolean algebra system, conversion examples Ladder diagrams for process control Ladder diagrams and sequence listings, ladder diagram construction and flow chart for spray process system.

UNIT III REGISTERS AND PLC FUNCTIONS**9**

PLC Registers: Characteristics of Registers module addressing holding registers input registers, output registers. PLC Functions Timer functions and industrial applications counters counter function industrial applications, Architecture functions, Number comparison functions, number conversion functions.

UNIT IV DATA HANDLING FUNCTIONS**9**

Data handling functions: SKIP, Master control Relay Jump Move FIFO, FAL, ONS, CLR and Sweep functions and their applications. Bit Pattern and changing a bit shift register, sequence functions and applications, controlling of two axes and three axis Robots with PLC, Matrix functions.

UNIT V PID PRINCIPLES**9**

Analog PLC operation: Analog modules and systems Analog signal processing multi bit data processing, analog output application examples, PID principles position indicator with PID control, PID modules, PID tuning, PID functions

WEB REFERENCE

1. <http://www.mikroe.com/old/books/plcbook/chapter1/chapter1.htm>, - Introduction to programmable Logiccontroller

COURSE OBJECTIVES

1. To gain the knowledge about environmental aspects of energy utilization.
2. To understand the basic principles of wind energy conversion, solar cells, photovoltaic conversion.
3. To study about solar energy collectors and its storages
4. To study about the inter connected system in wind power
5. To understand the basic principles fuel cell, Geo thermal power plants.
6. To gain the knowledge about hydro energy.

COURSE OUTCOMES

At the end of this course, students will demonstrate the ability to

1. Analyze the Energy Scenario in India
2. Understand the concept of Solar Energy
3. Understand the concept of Wind Energy
4. Understand the concept of Hydro Energy
5. Analyze the different energy sources
6. Students gathered the real time inter connected system modelling in wind power

UNIT I INTRODUCTION**9**

Energy scenario - Different types of Renewable Energy Sources - Environmental aspects of energy utilization - Energy Conservation and Energy Efficiency - Needs and Advantages, Energy Conservation Act 2003.

UNIT II SOLAR ENERGY**9**

Introduction to solar energy: solar radiation, availability, measurement and estimation– Solar thermal conversion devices and storage – solar cells and photovoltaic conversion – PV systems – MPPT. Applications of PV Systems – solar energy collectors and storage.

UNIT III WIND ENERGY**9**

Introduction – Basic principles of wind energy conversion- components of wind energy conversion system - site selection consideration – basic–Types of wind machines. Schemes for electric generation – generator control, load control, energy storage – applications of wind energy – Inter connected systems.

UNIT IV HYDRO ENERGY**9**

Hydropower, classification of hydro power, Turbine selection, Ocean energy resources, ocean energy routes. Principles of ocean thermal energy conversion systems, ocean thermal power plants. Principles of ocean wave energy conversion and tidal energy conversion.

UNIT V OTHER SOURCES**9**

Bio energy and types –Fuel cell, Geo-thermal power plants; Magneto-hydro-dynamic (MHD) energy conversion.

WEB REFERENCE

1. www.energycentral.com
2. www.catelectricpowerinfo.com

COURSE OBJECTIVES:

1. To study the state variable analysis
2. To provide adequate knowledge in the phase plane analysis and also describing function analysis.
3. To study the analysis discrete time systems using conventional techniques.
4. To analyze the stability of the systems using different techniques.
5. To study the design of optimal controller.
6. To study the types of compensators

COURSE OUTCOMES:

At the end of the course the student will be able to

1. understand the state variable analysis, Z- transform, state equation
2. Construct the frequency response of the system using various plots
3. Correlate the time and frequency domain specifications and
4. Correlate the effect of compensation
5. Design the different types of compensators using frequency response plots to stabilize the control system
6. Explain the state variable representation of physical systems with the effects of state feedback its assessment for linear-time invariant systems.

UNIT I STATE VARIABLE ANALYSIS**9**

Concept of state – State Variable and State Model – State models for linear and continuous time systems – Solution of state and output equation – controllability and observability - Pole Placement –State observer Design of Control Systems with observers

UNIT II PHASE PLANE AND DESCRIBING FUNCTION ANALYSIS**9**

Features of linear and non-linear systems - Common physical non-linearities – Methods of linearising non- linear systems - Construction of phase portraits – Singular points – Limit cycles Basic concepts, derivation of describing functions for common non-linearities – Describing function analysis of non-linear systems – Conditions for stability – Stability of oscillations.

UNIT III Z-TRANSFORM AND DIGITAL CONTROL SYSTEM**9**

Z transfer function – Block diagram – Signal flow graph – Discrete root locus – Bode plot.

UNIT IV STATE-SPACE DESIGN OF DIGITAL CONTROL SYSTEM**9**

State equation – Solutions – Realization – Controllability – Observability – Stability – Jury's test.

UNIT V OPTIMAL CONTROL**9**

Introduction -Decoupling - Time varying optimal control – LQR steady state optimal control – Optimal estimation – Multivariable control design.

ELECTRONICS AND COMMUNICATION ENGINEERING

15BEECOE01

REAL TIME EMBEDDED SYSTEMS

3 0 0 3100

COURSE OBJECTIVES

1. To introduce students to the embedded systems, its hardware and software.
2. To introduce devices and buses used for embedded networking.
3. To study about task management
4. To learn about semaphore management and message passing
5. To study about memory management
6. To impart knowledge on

COURSE OUTCOMES

At the end of the course the students will be able to

1. Understand overview of embedded systems architecture
2. Acquire knowledge on embedded system, its hardware and software.
3. Gain knowledge on overview of Operating system
4. Discuss about task Management
5. Gain knowledge about semaphore management and message passing.
6. Gain knowledge about memory management.

UNIT I INTRODUCTION TO EMBEDDED SYSTEM

9

Introduction - Embedded systems description, definition, design considerations & requirements - Overview of Embedded system Architecture (CISC and RISC) - Categories of Embedded Systems - embedded processor selection & tradeoffs - Embedded design life cycle - Product specifications - hardware/software partitioning - iterations and implementation - hardware software integration - product testing techniques – ARM 7

UNIT II OPERATING SYSTEM OVERVIEW

9

Introduction – Advantage and Disadvantage of Using RTOS – Multitasking – Tasks - Real Time Kernels – Scheduler - Non-preemptive Kernels - Preemptive Kernels – Reentrancy- Reentrant Functions – Round Robin Scheduling - Task Priorities - Static Priorities – Mutual Exclusion – Deadlock – Intertask Communication – Message Mailboxes – Message Queues - Interrupts - Task Management – Memory Management - Time Management – Clock Ticks.

UNIT III TASK MANAGEMENT

9

Introduction - μ C/OS-II Features - Goals of μ C/OS-II - Hardware and Software Architecture – Kernel Structures: Tasks – Task States – Task Scheduling – Idle Task – Statistics Task – Interrupts Under μ C/OS-II – Clock Tick - μ C/OS-II Initialization. Task Management: Creating Tasks – Task Stacks – Stack Checking – Task's Priority – Suspending Task – Resuming Task. Time Management: Delaying a Task – Resuming a Delayed Task – System Time. Event Control Blocks- Placing a Task in the ECB Wait List – Removing a Task from an ECB wait List .

UNIT IV SEMAPHORE MANAGEMENT AND MESSAGE PASSING

9

Semaphore Management: Semaphore Management Overview – Signaling a Semaphore. Message Mailbox Management: Creating a Mailbox – Deleting Mailbox – Waiting for a Message box – Sending Message to a Mailbox- Status of Mailbox. Message Queue Management: Creating Message Queue – Deleting a Message Queue – Waiting for a Message at a Queue – Sending Message to a Queue – Flushing a Queue.

UNIT V MEMORY MANAGEMENT

9

Memory Management: Memory Control Blocks – Creating Partition- Obtaining a Memory Block – Returning a Memory Block .Getting Started with μ C/OS-II – Installing μ C/OS-II – Porting μ C/OS-II: Development Tools – Directories and Files – Testing a Port - IAR Workbench with μ C/OS-II - μ C/OS-II Porting on a 8051 CPU – Implementation of Multitasking - Implementation of Scheduling and Rescheduling – Analyze the Multichannel ADC with help of μ C/OS-II.

TOTAL 45 PERIODS

2	David Seal	ARM Architecture Reference Manual.	Addison-Wesley	2008
3	Steve Furbe,	ARM System-on-Chip Architecture,	Addison-Wesley Professional, California	2000

COURSE OBJECTIVES

1. To study about various speakers and microphone
2. To learn the fundamental of television systems and standards
3. To learn the process of audio recording and reproduction
4. To study various telephone networks
5. To discuss about the working of home appliances
6. To familiarize with TV services like ISDN.

COURSE OUTCOMES

At the end of the course the students will be able to

1. Understand working of various type of loud speakers
2. Acquire knowledge on various types of picture tubes
3. Demonstrate the working of various optical recording systems
4. Distinguish various standards for color TV system
5. Acquire knowledge on various telecommunication networks
6. Demonstrate the working of various home appliances

UNIT I LOUDSPEAKERS AND MICROPHONES 9

Dynamic Loudspeaker, Electrostatic loudspeaker, Permanent Magnet Loudspeaker, Woofers and Tweeters - Microphone Characteristics, Carbon Microphones, Dynamic Microphones and Wireless Microphones.

UNIT II TELEVISION STANDARDS AND SYSTEMS 9

Components of a TV system – interlacing – composite video signal. Colour TV – Luminance and Chrominance signal; Monochrome and Colour Picture Tubes - Colour TV systems – NTSC, PAL, SECAM - Components of a Remote Control.

UNIT III OPTICAL RECORDING AND REPRODUCTION 9

Audio Disc – Processing of the Audio signal – readout from the Disc – Reconstruction of the audio signal – Video Disc – Video disc formats - recording systems – Playback Systems.

UNIT IV TELECOMMUNICATIONS SYSTEMS 9

Telephone services - telephone networks – switching system principles – PAPX switching – Circuit, packet and message switching, LAN, MAN and WAN, Integrated Services Digital Network. Wireless Local Loop. VHF/UHF radio systems, Limited range Cordless Phones; cellular modems

UNIT V HOME APPLIANCES 9

Basic principle and block diagram of microwave oven; washing machine hardware and software; components of air conditioning and refrigeration systems.

TOTAL 45 PERIODS

TEXT BOOK

S. No.	Author(s) Name	Title of the book	Publisher	Year of Publication
1	S.P. Bali	Consumer Electronics	Pearson Education	2005

COURSE OBJECTIVES

1. To familiar with the important concepts applicable to small electronic devices, their fabrication, characterization and application
2. To have a solid understanding of Nanotechnology concepts.
3. To introduce the basic concepts of Nanotechnology and its applications in various domain
4. To understand the molecular structure of carbon nano tube
5. To educate how to use Nanotechnology to solve real-world problems
6. To familiar with the structure and application of carbon nano tube

COURSE OUTCOMES

At the end of the course the students will be able to

1. Understand the basic concepts of Nanotechnology and its applications in various domain
2. Ability to develop how to use Nanotechnology to solve real-world problems
3. Understand solid understanding of Nanotechnology concepts
4. Understand the important concepts applicable to small electronic devices, their fabrication, characterization and application
5. Understand the molecular structure of carbon nano tube
6. Familiar with the structure and application of carbon nano tube

UNIT I LIMITATIONS OF CMOS**9**

Fundamentals of MOSFET devices - Scaling of CMOS - Limitations - Alternative concepts in materials - Structures of MOS devices: SOI MOSFET, FINFETs, Dual Gate MOSFET, Ferro electric FETs.

UNIT II MICRO AND NANOFABRICATION**9**

Optical Lithography - Electron beam Lithography - Atomic Lithography - Molecular beam epitaxy - Nano lithography.

UNIT III CHARACTERIZATION EQUIPMENTS**9**

Principles of Electron Microscopes - Scanning Electron Microscope - Transmission Electron Microscope - Atomic Force Microscope - Scanning Tunneling Microscope.

UNIT IV NANO DEVICES - I**9**

Resonant tunneling diodes - Single electron devices - Josephson junction - Single Flux Quantum logic - Molecular electronics.

UNIT V NANO DEVICES - II**9**

Quantum computing: principles - Qbits - Carbon nanotubes (CNT): Characteristics, CNTFET, Application of CNT - Spintronics: Principle, Spin valves, Magnetic Tunnel Junctions, SpinFETs, MRAM

TOTAL 45 PERIODS**TEXT BOOK**

S. No.	Author(s) Name	Title of the book	Publisher	Year of Publication
1	Rainer Waser (Ed)	Nano electronics and information technology	Wiley- VCH. 3rd Edition	2012

REFERENCES

3	Mark Ratner, Daniel Ratner	Nanotechnology: A Gentle introduction to the Next Big idea	Pearson education	2003

COURSE OBJECTIVES

1. To study the image fundamentals and mathematical transforms necessary for image processing.
2. To study the image enhancement techniques
3. To study the image compression procedures.
4. To study the image segmentation and representation techniques.
5. To study the video processing fundamentals
6. To know the concepts of motion estimation

COURSE OUTCOMES:

1. Understand the image fundamentals and mathematical transforms necessary for image processing.
2. Understand the image enhancement techniques
3. Understand the image compression procedures.
4. Understand the image segmentation and representation techniques.
5. Understand the video processing fundamentals
6. Understand motion estimation concepts

UNIT I FUNDAMENTALS OF IMAGE PROCESSING AND IMAGE TRANSFORMS 9

Basic steps of Image processing system sampling and quantization of an Image – Basic relationship between pixels Image Transforms: 2 – D Discrete Fourier Transform, Discrete Cosine Transform, Discrete Wavelet transforms.

UNIT II IMAGE PROCESSING TECHNIQUES 9

Image Enhancement: Spatial Domain methods: Histogram Processing, Fundamentals of Spatial Filtering, Smoothing Spatial filters, Sharpening Spatial filters, Frequency Domain methods: Basics of filtering in frequency domain, image smoothing, image sharpening, selective filtering.

UNIT III IMAGE SEGMENTATION AND COMPRESSION 9

Segmentation concepts, point, line and Edge detection, Thresholding, region based segmentation Image Compression Image compression fundamentals – coding Redundancy, spatial and temporal redundancy. Compression models : Lossy and Lossless, Huffman coding, Arithmetic coding, LZW coding, run length coding, Bit Plane coding, transform coding, predictive coding , wavelet coding, JPEG standards.

UNIT IV BASICS OF VIDEO PROCESSING 9

Analog video, Digital Video, Time varying Image Formation models : 3D motion models, Geometric Image formation , Photometric Image formation, sampling of video signals, filtering operations.

UNIT V 2-D MOTION ESTIMATION 9

Optical flow, general methodologies, pixel based motion estimation, Block matching algorithm, Mesh based motion Estimation, global Motion Estimation, Region based motion estimation, multi resolution motion estimation. Waveform based coding, Block based transform coding, predictive coding, Application of motion estimation in video coding.

3	Chris Solomon, Toby Breckon	Fundamentals of Digital Image Processing A Practical Approach with Examples in Matlab	John Wiley & Sons	2000

Course Objectives

1. To learn the processing steps in fabrication of VLSI devices.
2. To learn the concepts of assembling and packaging for VLSI devices.
3. To impart a good knowledge in reactive plasma etching techniques and equipment.
4. To familiarize the students with the NMOS and CMOS IC technology.
5. To make the student acquire reactive Plasma Etching techniques and Equipment.
6. To acquaint the student with the VLSI assembly technology and package fabrication technology

Course outcomes

After completing this course, the students will be able to

1. List out various fabrication techniques
2. Understand the etching principle in IC fabrication
3. Gain knowledge on deposition and diffusion methods
4. Understand the process simulation and integration.
5. Assembling and packing techniques
6. various technologies used for fabricating VLSI devices

UNIT 1 INTRODUCTION TOMOS TECHNOLOGIES**9**

MOS, CMOS, BiCMOS Technology, Trends and Projections. Basic Electrical Properties of MOS, CMOS & BiCMOS Circuits: Ids-Vds relationships, Threshold Voltage V_t , G_m , G_{ds} and ω_o , Pass Transistor, MOS, CMOS & Bi CMOS Inverters, Z_{pu}/Z_{pd} , MOS Transistor circuit model, Latch-up in CMOS circuits.

UNIT II LAYOUT DESIGNANDTOOLS**9**

Transistor structures, Wires and Vias, Scalable Design rules, Layout Design tools. Logic Gates & Layouts: Static Complementary Gates, Switch Logic, Alternative Gate circuits, Low power gates, Resistive and Inductive interconnect delays.

UNIT III COMBINATIONALLOGICNETWORKS**9**

Layouts, Simulation, Network delay, Interconnect design, Power optimization, Switch logic networks, Gate and Networktesting.

UNIT IVSEQUENTIALSYSTEMS**9**

Memory cells and Arrays, Clocking disciplines, Design, Power optimization, Design validation and testing.

UNIT V FLOOR PLANNING &ARCHITECTUREDESIGN**9**

Floor planning methods, off-chip connections, High-level synthesis, Architecture for low power, SOCs and Embedded CPUs, Architecture testing.

TOTAL 45PERIODS**TEXT BOOK**

S. No.	Author(s) Name	Title of the book	Publisher	Year of Publication
1	K. Eshraghian, Eshraghian. D	Essentials of VLSI Circuits and Systems	PHI	2005
2	Wayne Wolf	Modern VLSI Design	Pearson Education	1997

REFERENCES

S. No.	Author(s) Name	Title of the book	Publisher	Year of Publication
1	N.H.EWeste, K.Eshraghian	Principals of CMOS VLSI Design	Adisson Wesley	2005

Course Objectives

1. To study materials used for MEMS and its working
2. To study the fabrication process used for MEMS
3. To study the packaging process used for MEMS
4. To familiarize the students with various micro actuators and micro sensors.
5. To learn the survey of materials central to micro engineering.
6. To impart good knowledge in micro system packaging materials

Course Outcomes

At the end of the course the students will be able to

1. Appreciate the underlying working principles of MEMS devices.
2. Understand the working of Micro sensors and actuators
3. Explain the IC fabrication processes
4. Gain knowledge on bulk manufacturing
5. Understand the Design of Micro systems.
6. Design and model MEMS devices.

UNIT I INTRODUCTION TO MEMS AND MICROFABRICATION**9**

History of MEMS Development, Characteristics of MEMS-Miniaturization - Microelectronics integration - Mass fabrication with precision. Sensors and Actuators- Energy domain. Sensors, actuators Micro fabrication - microelectronics fabrication process- Silicon based MEMS processes- New material and fabrication processing- Points of consideration for processing. Anisotropic wet etching, Isotropic wet etching, Dry etching of silicon, Deep reactive ion etching (DRIE), and Surface micromachining process- structural and sacrificial material.

UNIT II ELECTRICAL AND MECHANICAL CONCEPTS OF MEMS**9**

Conductivity of semiconductors, crystal plane and orientation, stress and strain - definition - Relationship between tensile stress and strain- mechanical properties of Silicon and thin films, Flexural beam bending analysis under single loading condition- Types of beam- longitudinal strain under pure bending -deflection of beam- Spring constant, torsional deflection, intrinsic stress, resonance and quality factor.

UNIT III ELECTROSTATIC AND THERMAL PRINCIPLE SENSING AND ACTUATION**9**

Electrostatic sensing and actuation-Parallel plate capacitor - Application- Inertial, pressure and tactile sensor parallel plate actuator- comb drive Thermal sensing and Actuators-Thermal sensors-Actuators- Applications Inertial, flow and infrared sensors.

UNIT IV PIEZORESISTIVE, PIEZOELECTRIC AND MAGNETIC PRINCIPLE SENSORS AND ACTUATOR**9**

Piezoresistive sensors- piezoresistive sensor material- stress in flexural cantilever and membrane- Application- Inertial, pressure, flow and tactile sensor. Piezoelectric sensing and actuation- piezoelectric material properties- quartz- PZT-PVDF - ZnO- Application-Inertial, Acoustic, tactile, flow-surface elastic waves Magnetic actuation- Micro magnetic actuation principle- Deposition of magnetic materials-Design and fabrication of magnetic coil.

UNIT V POLYMER AND OPTICAL MEMS**9**

Polymers in MEMS- polyimide-SU-8 Liquid crystal polymer(LCP) - PDMS - PMMA - Parylene - Fluorocarbon, Application-Acceleration, pressure, flow and tactile sensors. Optical MEMS-passive MEMS optical components-lenses-mirrors-Actuation for active optical MEMS.

TOTAL 45 PERIODS**TEXT BOOK**

S. No.	Author(s) Name	Title of the book	Publisher	Year of Publication
1	Chang Liu	Foundations of MEMS	Pearson Indian Print, 1 st Edition	2012

REFERENCES

S. No.	Author(s) Name	Title of the book	Publisher	Year of Publication

2	Charles P. Poole and Frank J. Owens	Introduction to Nanotechnology	John Wiley & Sons	2003
3	Julian W. Gardner and Vijay K. Varadhan	Microsensors, MEMS and Smart Devices	John Wiley & sons	2001

Course Objectives

1. To introduce the basic concepts of neural networks and its applications in various domain
2. To educate how to use Soft Computing to solve real-world problems
3. To have a solid understanding of Basic Neural Network.
4. To provide students with a sound and comprehensive understanding of artificial neural networks and machine learning.
5. To gain exposure in the field of neural networks and relate the human neural system into the digital world
6. To provide knowledge of computation and dynamical systems using neural networks

Course Outcomes

At the end of the course the students will be able to

1. Understand the basic concepts of neural networks and its applications in various domains
2. Gain knowledge about learning process in Neural Networks
3. Apply perception concept in design
4. Design using ART phenomena
5. Gain knowledge on SOM concepts
6. Ability to develop the use of Soft Computing to solve real-world problems

UNIT I INTRODUCTION TO NEURAL NETWORKS**9**

Introduction - biological neurons and their artificial models - learning, adaptation and neural network's learning rules - types of neural networks- single layer, multiple layer- feed forward, feedback networks

UNIT II LEARNING PROCESS**9**

Error – correction learning – memory based learning - hebbian learning-competitive learning-Boltzmann learning- supervised and unsupervised learning-adaptation-statistical learning theory.

UNIT III PERCEPTION**9**

Single layer perception-Adaptive filtering-unconstrained optimization-Least-mean square algorithm-Leaning curve-Annealing Technique-perception convergence theorem-Relationship between perception and Baye's classifier-Back propagation algorithm

UNIT IV ATTRACTOR NEURAL NETWORK AND ART**9**

Hopfield model-BAM model-BAM stability-Adaptive BAM -Lyapunov function-effect of gain-Hopfield design-Application to TSP problem-ART- layer 1-layer 2-orienting subsystem- ART algorithm-ARTMAP

UNIT V SELF ORGANIZATION**9**

Self organizing map-SOM Algorithm-properties of the feature map-LVQ-Hierarchical vector Quantization. Applications of self-organizing maps: The Neural Phonetic Typewriter Learning Ballistic Arm Movements

TOTAL 45 PERIODS**REFERENCES**

4	Laurene Fausett	Fundamentals of Neural Networks: Architectures, Algorithms, and Applications	Pearson/ Prentice Hall	1997

COURSE OBJECTIVES

1. To introduce the basic concepts of Fuzzy logic and its applications in various domain
2. To educate how to use Fuzzy computation to solve real-world problems
3. To have a solid understanding of Basic fuzzy models.
4. Provide an understanding of the basic mathematical elements of the theory of fuzzy sets.
5. To learn about applications on Fuzzy based systems
6. To familiarize with fuzzy inference and defuzzy inference procedures

COURSE OUTCOMES

At the end of the course the students will be able to

1. Understand the basic concepts of Fuzzy logic and its applications in various domain
2. Gain knowledge on theory of Reasoning
3. Develop fuzzy controllers
4. Understand concepts of adaptive fuzzy control
5. Ability to develop how to use Fuzzy computation to solve real-world problems
6. Design fuzzy based model for any application

UNIT I BASICS OF FUZZY LOGIC**9**

Fuzzy sets, Properties of fuzzy sets, operation in fuzzy sets, fuzzy relations, the extension principle

UNIT II THEORY OF APPROXIMATE REASONING**9**

Linguistic variables, Fuzzy propositions, Fuzzy if-then statements, inference rules, compositional rule of inference-fuzzy models

UNIT III FUZZY KNOWLEDGE BASED CONTROLLERS (FKBC)**9**

Basic concept structure of FKBC, choice of membership functions, scaling factors, rules, fuzzyfication and defuzzyfication procedures – Design of Fuzzy Logic Controller

UNIT IV ADAPTIVE FUZZY CONTROL**9**

Process performance monitoring, adaption mechanisms, membership functions, tuning using gradient descent and performance criteria. Set organizing controller model based controller.

UNIT V FUZZY BASED SYSTEMS**9**

Simple applications of FKBC -washing machines- traffic regulations -lift control-fuzzy in medical applications- Introduction to ANFIS.

BIOTECHNOLOGY

15BTBTOE01

BIOREACTORDESIGN

3 0 0 3100

COURSE OBJECTIVES:

1. To impart basic knowledge in bioprocessEngineering
2. To design the bioreactors for variousoperations.
3. To understand the principle and working of heat transferequipments.
4. To extend the knowledge in principle of heat transfer inside abioreactor
5. To construct the equipments used in mass transferoperations.
6. To learn the equipments used in separationprocess.

COURSE OUTCOMES:

Upon completion of this course, the students will be able to

1. Summarize the basic concepts in bioprocessEngineering.
2. Design the bioreactors for variousoperations.
3. Understand the principle and working of heat transferequipments.
4. Develop the heat transfer equipments for BioprocessEngineering.
5. Construct the equipments used in mass transferoperations.
6. Categorize the equipments used in separationprocess.

UNITI ENGINEERING PROPERTIES ANDSTORAGETANK

9

Introduction to various mechanical properties of material to be used material of construction, design of cylindrical storage tank.

UNITII REACTORDESIGN

9

Design of Airlift fermentor, Bubble column reactor and Continuous stirred tank reactor.

UNITIII HEATTRANSFEREQUIPMENTS

9

Design of Shell and tube Heat exchanger, Double pipe heat exchanger, long tube vertical evaporator and forced circulationevaporator.

UNITIV MASS TRANSFEREQUIPMENTS

9

Design of Bollmann extractor, fractionating column, packed tower and spray tray absorber

UNITV SEPERATIONEQUIPMENTS

9

Design of plate and frame filter press, leaf filter, rotary drum filter, disc bowl centrifuge, rotart drum drier and Swenson –walker crystallizer.

TOTAL 45PERIODS

TEXT BOOKS

S. No.	Author(s) Name	Title of the book	Publisher	Year of Publication
1	James Edwin Bailey, David F. Ollis	Biochemical Engineering Fundamentals	McGraw- Hill	2007
2	Don W. Green, Robert H. Perry	Chemical Engineer Hand book	The McGraw- Hill Companies, Inc.	2008

REFERENCE

S. No.	Author(s) Name	Title of the book	Publisher	Year of Publication
1	Pauline. M. Doran	Bioprocess Engineering Principles	Academic Press	2013

COURSE OBJECTIVES

1. To learn the scope and importance of food processing.
2. To impart basic knowledge in different food processing methods carried out in the food tech companies.
3. To extend the brief knowledge in food conservation operations.
4. To study the methods of food preservation by cooling.
5. To familiarize the students on the concepts of preservation methods for fruits.
6. To create deeper understanding on preservation methods for vegetables.

COURSE OUTCOMES

Upon completion of this course, the students will be able to

1. Describe the scope and importance of food processing.
2. Outline the various processing methods for foods.
3. Extend the knowledge in food conservation operations.
4. Describe the methods of food preservation by cooling.
5. Summarize the preservation methods for fruits.
6. Demonstrate the preservation methods for vegetables.

UNIT I SCOPE AND IMPORTANCE OF FOOD PROCESSING**9**

Properties of food - Physical, thermal, mechanical, sensory. Raw material Preparation - Cleaning, sorting, grading, peeling.

UNIT II PROCESSING METHODS**9**

Heating- Blanching and Pasteurization. Freezing- Dehydration- canning- additives fermentation- extrusion cooking- hydrostatic pressure cooking- dielectric heating- micro wave processing and aseptic processing – Infra red radiation processing- Concepts and equipment used.

UNIT III FOOD CONVERSION OPERATIONS**9**

Size reduction- Fibrous foods, dry foods and liquid foods- Theory and equipments- membrane separation- filtration- equipment and application.

UNIT IV FOOD PRESERVATION BY COOLING**9**

Refrigeration, Freezing-Theory, freezing time calculation, methods of freezing, freezing equipments, freeze drying, freeze concentration, thawing, effect of low temperature on food. Water activity, methods to control water activity.

UNIT V PRESERVATION METHODS FOR FRUITS AND VEGETABLES**9**

Pre processing operations - preservation by reduction of water content: drying / dehydration and concentration – chemical preservation – preservation of vegetables by acidification, preservation with sugar - Heat preservation– Food irradiation- Combined preservation techniques.

2	B. Sivasankar	Food processing and preservation	PHI Learning Pvt. Ltd	2002

COURSE OBJECTIVES

1. To understand the theoretical foundation of computational chemistry, with an emphasis on electronic structure calculations using quantum chemistry and classical molecular dynamics simulation techniques
2. To use computational chemistry software to simulate chemical processes, quantify and rationalise reactivity.
3. To study reaction mechanisms, relative free energies and structural dynamics
4. To compute different experimental properties and spectra using computational techniques.
5. To understand how to construct, interpret and utilise potential energy surfaces.
6. To understand the theoretical and practical challenges associated with computational modeling.

COURSE OUTCOMES

1. Understand the theoretical foundation of computational chemistry, with an emphasis on electronic structure calculations using quantum chemistry and classical molecular dynamics simulation techniques
2. Can use computational chemistry software to simulate chemical processes, quantify and rationalise reactivity.
3. Study reaction mechanisms, relative free energies and structural dynamics
4. Compute different experimental properties and spectra using computational techniques.
5. Understand how to construct, interpret and utilise potential energy surfaces.
6. Understand the theoretical and practical challenges associated with computational modeling.

UNIT I MOLECULAR MODELLING**9**

Introduction to concept of molecular modeling, molecular structure and internal energy, applications of molecular graphics, coordinate systems, potential energy surfaces, discussion of local and global energy minima

UNIT II QUANTUM MECHANICS**9**

Introduction to the computational quantum mechanics; one electron atom, many electronic atoms and molecules, Hartree Fock equations; calculating molecular properties using ab initio and semi empirical methods.

UNIT III MOLECULAR MECHANICS**9**

Molecular mechanics; general features of molecular mechanics force field, bond stretching, angle bending, torsional terms, non – bonded interactions; force field parameterization and transferability; energy minimization; derivative and non – derivative methods, applications of energy minimization.

UNIT IV MOLECULAR DYNAMICS**9**

Molecular dynamics simulation methods; molecular dynamics using simple models, molecular dynamics with continuous potential, setting up and running a molecular dynamic simulation, constraint dynamics; Monte Carlo simulation; Monte Carlo simulation of molecules.

UNIT V MODELLING AND DRUG DESIGN**9**

Macromolecular modeling, design of ligands for known macro molecular target sites, Drug- receptor interaction, classical SAR /QSAR studies and their implications to the 3 D modeler, 2-D and 3-D database searching, pharmacophore identification and novel drug design, molecular docking, Structure-based drug design for all classes of targets.

TOTAL 45 PERIODS**TEXTBOOKS**

S. No.	Author(s) Name	Title of the book	Publisher	Year of Publication
1	Andrew Leach	Molecular Modelling: Principles and Applications	Prentice Hall	2001

2	Matthew F. Schlecht	Molecular Modeling on the PC	Wiley- Blackwell; Har	1998

COURSE OBJECTIVES

1. To understand the basics of biology
2. To gain knowledge about different biomolecules
3. To get familiarize with human diseases.
4. To learn about DNA & RNA.
5. To learn about different clinical investigations
6. To know the recent advances in biology

COURSE OUTCOMES

At the end of the course

1. Summarize the cell structures and its functions
2. Explain the Biomolecules functions
3. Classify the communicable and non-communicable human diseases
4. Illustrate the different organ function tests
5. Tell the applications of biology in environmental applications
6. Describe the concept of biomechanics

UNIT I OVERVIEW OF BIOREMEDIATION**9**

Pollution: Types and its consequences, History of bioremediation, Sources of contamination, Bioremediation processes, Environments where bioremediation is used, Microbiology of bioremediation.

UNIT II BIOFILM PROCESSES**9**

Trickling Filters and Biological Towers, Rotating Biological Contactors, Granular Media Filters, Fluidized-bed Reactors, Hybrid Biofilm Processes

UNIT III BIOREMEDIATION FOR SOIL ENVIRONMENT**9**

Environment of Soil Microorganisms, Soil Organic Matter and Characteristics, Soil Microorganisms Association with Plants, Pesticides and Microorganisms, Petroleum Hydrocarbons and Microorganisms, Industrial solvents and Microorganism, Biotechnologies for Ex-Situ Remediation & in-Situ Remediation of Soil Phytoremediation Technology for Soil Decontamination

UNIT IV BIOREMEDIATION FOR AIR AND WATER ENVIRONMENT**9**

Atmospheric Environment for Microorganisms, Microbial Degradation of Contaminants in Gas Phase, Biological Filtration Processes for Decontamination of Air Stream-Biofiltration, Bio-trickling Filtration, Bioscrubbers, Contaminants in Groundwater, Landfill Leachate Biotreatment Technologies, Industrial Wastewater Biotreatment Technologies, Biotreatment of Surface Waters

UNIT V BIOREMEDIATION OF METALS**9**

Microbial Transformation of Metals, Biological Treatment Technologies for Metals Remediation, Bioleaching and Bioremediation, Bioaccumulation, Oxidation/Reduction Processes, Biological Methylation

TOTAL 45 PERIODS**TEXT BOOKS**

1	Rittmann, B.E., and McCarty, P.L.,	Environmental Biotechnology: Principles and Applications.	McGraw Hill,	2001
2	John Cookson	Bioremediation Engineering: Design and Applications	McGraw- Hill Education	1995

REFERENCE

S. No.	Author(s) Name	Title of the book	Publisher	Year of Publication
1	Prescott, L. M., Harley, and Klein, D. A	Microbiology	McGraw- Hill Higher Education	2008

COURSE OBJECTIVES

1. To study selected biological phenomena using physical principles.
2. To understand the biological and environmental sciences.
3. To gain the knowledge on technical enormous impact of the biological sciences.
4. To acquire the knowledge about molecular structure of biological systems.
5. To know the uses of proteins and its functions.
6. To understand the biological structure & function: Size and shape of macromolecules.

COURSE OUTCOMES

1. Study selected biological phenomena using physical principles.
2. Understand the biological and environmental sciences.
3. Gain the knowledge on technical enormous impact of the biological sciences.
4. Acquire the knowledge about molecular structure of biological systems.
5. Know the uses of proteins and its functions.
6. Understand the biological structure & function: Size and shape of macromolecules.

UNIT I MOLECULAR STRUCTURE OF BIOLOGICAL SYSTEMS 9

Intramolecular bonds – covalent – ionic and hydrogen bonds – biological structures -general features – water structure – hydration – interfacial phenomena and membranes – self assembly and molecular structure of membranes.

UNIT II CONFORMATION OF NUCLEIC ACIDS 9

Primary structure – the bases – sugars and the phosphodiester bonds- double helical structure – A, B and Z forms – properties of circular DNA – topology – polymorphism and flexibility of DNA – structure of ribonucleic acids – hydration of nucleic acids.

UNIT III CONFORMATION OF PROTEINS 9

Conformation of the peptide bond – secondary structures – Ramachandran plots – use of potential functions – tertiary structure – folding – hydration of proteins – hydrophathy index.

UNIT IV ENERGY & DYNAMICS OF BIOLOGICAL SYSTEMS 9

Kinetics of ligand interactions; Biochemical kinetics studies, uni-molecular reactions, simple bi molecular multiple intermediates, steady state kinetics, catalytic efficiency, relaxation spectrometry, ribonuclease as an example.

UNIT V APPLIED TECHNIQUES 9

Techniques for the study of biological structure & function: Size and shape of macromolecules – methods of direct visualization macromolecules as hydrodynamic particles – macromolecules diffusion – ultra centrifugation – viscometry x-ray crystallography determination of molecular structures, X-ray fibre diffraction electron microscopy neutron scattering – light scattering.

REFERENCE

S. No.	Author(s) Name	Title of the book	Publisher	Year of Publication
1	Charles R. Cantor	Biophysical Chemistry, Part 2: Techniques for the Study of Biological Structure and Function	W.H. Freeman and Company	1980

COURSE OBJECTIVES

1. To understand the available tools and databases for performing research in bioinformatics.
2. To expose students to sequence alignment tool in bioinformatics.
3. To construct the phylogenetic trees for evolution.
4. To get familiar with the 3D structure of protein and classification.
5. To acquire basic knowledge in protein secondary structure prediction.
6. To extend the brief knowledge in Micro array data analysis.

COURSE OUTCOMES

Upon completion of this course, the students will be able to

1. Summarize the basic concepts and importance of Bioinformatics in various sectors.
2. Demonstrate the sequence alignment tool in bioinformatics.
3. Construct the phylogenetic trees for evolution.
4. Analyze the three dimensional protein structure and classification using various tools.
5. Illustrate the protein secondary structure prediction by comparative modeling.
6. Extend the knowledge in micro array technology and applications of bioinformatics in various sectors.

UNIT I OVERVIEW OF BIOINFORMATICS 9

The scope of bioinformatics; bioinformatics & the internet; useful bioinformatics sites. Data acquisition: sequencing DNA, RNA & proteins; determination of protein structure; gene & protein expression data; protein interaction data. Databases – contents, structure & annotation: file formats; annotated sequence databases; miscellaneous databases.

UNIT II RETRIEVAL OF BIOLOGICAL DATA 9

Data retrieval with Entrez & DBGET/ LinkDB; data retrieval with SRS (sequence retrieval system). Searching sequence databases by sequence similarity criteria: sequence similarity searches; amino acid substitution matrices; database searches, FASTA & BLAST; sequence filters; iterative database searches & PSI-BLAST. Multiple-sequence alignment, gene & protein families: multiple-sequence alignment & family relationships; protein families & pattern databases; protein domain families.

UNIT III PHYLOGENETICS 9

Phylogenetics, cladistics & ontology; building phylogenetic trees; evolution of macromolecular sequences. Sequence annotation: principles of genome annotation; annotation tools & resources.

UNIT IV STRUCTURAL BIOINFORMATICS 9

Conceptual models of protein structure; the relationship of protein three-dimensional structure to protein function; the evolution of protein structure & function; obtaining, viewing & analyzing structural data; structural alignment; classification of proteins of known three-dimensional structure: CATH & SCOP; introduction to protein structure prediction; structure prediction by comparative modeling; secondary structure prediction; advanced protein structure prediction & prediction strategies.

UNIT V MICROARRAY DATA ANALYSIS 9

Microarray data, analysis methods; microarray data, tools & resources; sequence sampling & SAGE. Bioinformatics in pharmaceutical industry: informatics & drug discovery; pharma informatics resources. Basic principles of computing in bioinformatics: running computer software; computer operating systems; software downloading & installation; database management.

COURSE OBJECTIVES

1. To impart the skills in the field of nano biotechnology and its applications.
2. To acquire knowledge in the nano particles and its significance in various fields.
3. To extend the knowledge in types and application of nano particles in sensors.
4. To define the concepts of biomaterials through molecular self assembly.
5. To equip students with clinical applications of nanodevices.
6. To describe deeper understanding of the socio-economic issues in nanobiotechnology.

COURSE OUTCOMES

Upon completion of this course, the students will be able to

1. Develop skills in the field of nano biotechnology and its applications.
2. Summarize the nanoparticles and its significance in various fields.
3. Extend the knowledge in types and application of nano particles in sensors.
4. Define the concepts of biomaterials through molecular self assembly.
5. Outline the clinical applications of nanodevices.
6. Describe the socio-economic issues in nanobiotechnology.

UNIT I INTRODUCTION**9**

Introduction, Scope and Overview, Length scales , Importance of Nanoscale and Technology, History of Nanotechnology, Future of Nanotechnology: Nano Technology Revolution, Silicon based Technology, Benefits and challenges in Molecular manufacturing: The Molecular assembler concept, Controversies and confusions, Understanding advanced capabilities, Nanotechnology in Different, Fields: Nanobiotechnology, Materials, Medicine, Dental care.

UNIT II NANOPARTICLES**9**

Introduction, Types of Nanoparticles, Techniques to Synthesize Nanoparticles, Characterization of Nanoparticles, Applications, Toxic effects of Nanomaterials, Significance of Nanoparticles Nanofabrications- MEMS/NEMS, Atomic Force Microscopy, Self assembled monolayers/ Dip- pen Nanolithography, Soft Lithography, PDMS Molding, Nano Particles, Nano wires and Nanotubes.

UNIT III APPLICATIONS**9**

Nanomedicine, Nanobiocensor and Nanofluidics. Nanocrystals in biological detection, Electrochemical DNA sensors and Integrated Nanoliter systems. Nano-Biodevices and Systems. Fabrication of Novel Biomaterials through molecular self assembly- Small scale systems for in vivo drug delivery- Future nanomachine.

UNIT IV NANOBIOTECHNOLOGY**9**

Clinical applications of nanodevices. Artificial neurons. Real-time nanosensors- Applications in cancer biology. Nanomedicine. Synthetic retinyl chips based on bacteriorhodopsins. High throughput DNA sequencing with nanocarbon tubules. Nanosurgical devices.

UNIT V ETHICAL ISSUES IN NANOTECHNOLOGY**9**

Introduction, Socioeconomic Challenges, Ethical Issues in Nanotechnology: With Especial Reference to Nanomedicine, Nanomedicine Applied in Nonmedical Contexts, Social Issues Relating to Nanomedicine. Social and Ethical Issues, Economic Impacts, Other Issues, Nanotechnology and Future Socio-economic challenges.

4	Kohler. M. and Fritzsche. W.	Nanotechnology – An Introduction to Nanostructuring Techniques	Wiley- VCH	2004

COURSE OBJECTIVES:

1. To impart the knowledge on constructional details and principle of operation of various automobile components.
2. To learn the function and working of various components in transmission and drivelines.
3. To study the concept and working of steering and suspension systems in an automobile.
4. To give the knowledge on wheels, tyres and brakes of automobiles.
5. To provide the information on current trends
6. To provide the information on future trends in automobiles.

COURSE OUTCOMES:

Upon successful completion of the course, the students should be able to:

1. Demonstrate the operating principles and constructional details of various automobile components.
2. Explain the function and working of components in transmission and drivelines.
3. Identify and explain the types of steering system
4. Identify and explain the types of suspension system.
5. Classify and describe the types of wheels, tyres and brakes of automobiles.
6. Discuss the current and future trends in the automobiles.

UNIT I ENGINE AND FUEL FEED SYSTEMS**9**

Classification of Engine, construction and working of four stroke petrol and diesel engine, firing order and its significance. Carburettor working principle, requirements of an automotive carburettor, Petrol injection Systems (MPFI, TBI), Diesel fuel injection systems (CRDI)

UNIT II TRANSMISSION SYSTEMS**9**

Requirements of transmission system. Flywheel. Different types of clutches, principle, Construction, torque capacity and design aspects. Objective of the gearbox - Determination of gear ratios for vehicles. Performance characteristics at different speeds. Different types of gearboxes - operation. Function of Propeller Shaft. Construction details of multi drive axle vehicles. Different types of final drive. Differential principles. Constructional details of differential unit. Non-slip differential. Differential lock

UNIT III SUSPENSION SYSTEM**9**

Need of suspension system - Types of suspension - Suspension springs - Constructional details and characteristics of leaf, coil and torsion bar springs - Independent suspension - Rubber suspension - Pneumatic suspension - Hydro Elastic suspension - Shock absorbers. Vibration and driving comfort.

UNIT IV BRAKES**9**

Necessity of brake, stopping distance and time, brake efficiency, weight transfer, shoe brake and disc brake theory. Brake actuating systems - Mechanical, Hydraulic and Pneumatic. Parking and engine exhaust brakes. Power and power assisted brakes. Antilock Braking System (ABS).

UNIT V ELECTRICAL SYSTEM**9**

Principle and construction of lead acid battery. Lighting system: details of head light and side light, LED lighting system, head light dazzling and preventive methods - Horn, wiper system and trafficator. Starting System and charging system.

COURSE OBJECTIVES

1. The objective of this course is to make the students to know and understand the constructional details, operating characteristics and design aspects of Two and Three wheelers.
2. Construct the frames of two and three wheelers of different layouts.
3. Demonstrate the constructional details and principle of operation of various engine components.
4. Identify and explain the types of transmission systems.
5. Identify and explain the types of steering and suspension systems.
6. Classify and describe the types of wheels, tyres and brakes for two and three wheelers

COURSE OUTCOMES

Upon successful completion of the course, the students should be able to:

1. Construct the frames of two and three wheelers of different layouts.
2. Demonstrate the constructional details and principle of operation of various engine components.
3. Identify and explain the types of transmission systems.
4. Identify and explain the types of steering and suspension systems.
5. Classify and describe the types of wheels, tyres and brakes for two and three wheelers.
6. Explain the servicing of two and three wheelers

UNIT I INTRODUCTION**9**

Classifications- design considerations –weight and dimension limitations – requirements stability problems, gyroscopic effect- pendulum effect of two and three wheelers.

UNIT II POWER UNITS, IGNITION SYSTEMS AND OTHER ELECTRICAL SYSTEMS**9**

2 stroke and 4 stroke SI engines and CI engines design criteria– design of cylinders, cylinder head, cooling fins, crank case, connecting rod and crank shaft. Carburettor types and design. Battery coil ignition, magneto ignition and electronic ignition. Lighting and other electrical system.

UNIT III CLUTCHES AND TRANSMISSION**9**

Types of clutches for 2 and 3 wheelers. Design of clutch system. Gears for two and three wheelers. Design of gear box and gear change mechanism. Belt, chain and shaft drive. Freewheeling devices, starting systems.

UNIT IV FRAMES, SUSPENSION, WHEELS AND TYRES**9**

Types of frames used for two wheelers and three wheelers. Wheel frames- construction design of frames for fatigue strength torsional stiffness and lateral stability. Front and rear forks. Springs for suspension, Dampers, constructional details of wheel and tyres.

UNIT V THREE WHEELERS**9**

Auto rickshaws, different types, Pick-Ups and delivery type vehicle, frames and transmission for 3 wheelers wheel types, wheel attachment tyre types. Brakes and their operating mechanism.

TOTAL 45 PERIODS**TEXTBOOKS**

S. No.	Author(s) Name	Title of the book	Publisher	Year of Publication
1	Irving P.E.	Motor Cycle Engineering.	Temple Press Book, London.	1992
2	Srinivasan.S.	Motor cycle, Scooter, Mobeds.	New century book house.	1988

REFERENCES

S. No.	Author(s) Name	Title of the book	Publisher	Year of Publication
1	M.M.Griffin.	Motor cycles from inside and outside.	Prentice Hall Inc, New Jersey.	1978
2	Bruce A. Johns and Robert Scharff	Motorcycles: Fundamentals, Service, Repair	Goodheart-Willcox	1999

COURSE OBJECTIVES

1. The objective of this course is to make the students to know and understand the maintenance and fault diagnosis of basic systems inAutomobile.
2. Describe and differentiate the types of maintenance.
3. List the procedure for dismantling, servicing and assembling of engine components.
4. Demonstrate the servicing of transmission and driveline components.
5. Discuss the procedure for steering and suspension
6. Discuss the procedure for wheel and brake maintenance.

COURSE OUTCOMES

Upon successful completion of the course, the students should be able to:

1. Describe and differentiate the types of maintenance.
2. List the procedure for dismantling, servicing and assembling of engine components.
3. Demonstrate the servicing of transmission and driveline components.
4. Discuss the procedure for steering and suspension
5. Discuss the procedure for wheel and brake maintenance.
6. Explain the fault diagnosis in the electrical and air conditioner systems

UNIT I MAINTENANCE OF RECORDS AND SCHEDULES 9

Importance of maintenance, preventive (scheduled) and breakdown (unscheduled) maintenance, requirements of maintenance, preparation of check lists, Inspection schedule, maintenance of records, log sheets and other forms, safety precautions in maintenance.

UNIT II ENGINE MAINTENANCE 9

Dismantling of engine components and cleaning, cleaning methods, visual and dimensional inspections, minor and major reconditioning of various components, reconditioning methods, engine assembly, special tools used for maintenance overhauling, engine tune up.

UNIT III CHASSIS MAINTENANCE 9

Mechanical and automobile clutch and gear box, servicing and maintenance, maintenance servicing of propeller shaft and differential system, Maintenance servicing of suspension systems. Brake systems, types and servicing techniques, Steering systems, overhauling and maintenance. Wheel alignment, computerized alignment and wheelbalancing.

UNIT IV ELECTRICAL SYSTEM MAINTENANCE 9

Testing methods for checking electrical components, checking battery, starter motor, charging systems, DC generator and alternator, ignitions system, lighting systems, Fault diagnosis and maintenance of modern electronic controls, checking and servicing of dash board instruments.

UNIT V MAINTENANCE OF FUEL SYSTEM, COOLING SYSTEMS, LUBRICATION SYSTEM AND VEHICLE BODY 9

Servicing and maintenance of fuel system of different types of vehicles, calibration and tuning of engine for optimum fuel supply, Cooling systems, water pump, radiator, thermostat, anticorrosion and antifreeze additives, Lubrication maintenance, lubricating oil changing, greasing of parts, Vehicle body maintenance, minor and major repairs. Door locks and window glass actuating system maintenance.

TEXT BOOKS

S. No.	Author(s) Name	Title of the book	Publisher	Year of Publication
1	John Doke	Fleet Management	McGraw Hill Co	1984
2	James D Halderman	Advanced Engine Performance Diagnosis	Prentice Hall Publications	2011

REFERENCE

1. Service Manuals from Different VehicleManufacturers

COURSE OBJECTIVES:

1. To impart knowledge on trends in the vehicle power plants.
2. To learn the various advanced driver assistance systems.
3. To study the working of advanced suspension and braking systems in an automobile.
4. To give information about motor vehicle emission and noise pollution control.
5. To provide knowledge of the vehicle telematics.
6. To give information about the noise control techniques

COURSE OUTCOMES:

Upon successful completion of the course, the students should be able to:

1. Distinguish and describe the various modern vehicle power plant systems.
2. List and explain the various driver assistant mechanisms.
3. Identify and describe the working of advanced suspension and braking systems.
4. Apply the knowledge of motor vehicle emission and noise pollution control.
5. Describe the noise control techniques
6. Describe the vehicle telematics and its applications

UNIT I TRENDS IN POWER PLANTS**9**

Hybrid vehicles - Stratified charged / lean burn engines - Hydrogen engines - battery vehicles – Electric propulsion with cables - Magnetic track vehicles.

UNIT II DRIVER ASSISTANCE SYSTEMS**9**

Collision Avoidance Systems, Adaptive cruise control, adaptive noise control, anti spin regulation, traction control systems, cylinder cut- off technology, ABS, Driver Drowsiness Detection system

UNIT III SUSPENSION BRAKES AND SAFETY**9**

Air suspension - Closed loop suspension - antiskid braking system, Retarders, Regenerative braking safety cage - air bags - crash resistance - passenger comfort.

UNIT IV NOISE & POLLUTION**9**

Reduction of noise - Internal & external pollution control through alternate fuels/power plants – Catalytic converters and filters for particulate emission.

UNIT V TELEMATICS**9**

Global positioning systems, geographical information systems, navigation systems, automotive vision system, road recognition

HOUSING, PLAN AND MANAGEMENT

3 0 0 3100

COURSE OBJECTIVES

1. To examine the role and tasks of basic housing policies and building bye laws
2. Understand the process of integrated service delivery in the context of economic, social, environmental and institutional factors
3. Analyze the Innovative construction methods and Materials
4. Analyze city management strategies and strengthen the urban governance through a problem solving approach
5. To know the Importance of basic housing policies and building bye laws
6. To use Housing Programmes and Schemes

COURSE OUTCOMES

The students will be able to

1. Know the Importance of basic housing policies and building bye laws.
2. Use Housing Programmes and Schemes.
3. Plan and Design of Housing projects.
4. Examine Innovative construction methods and Materials.
5. Know Housing finance and loan approval procedures.
6. Understand Construction as well as managing techniques.

UNIT I INTRODUCTION TO HOUSING

9

Definition of Basic Terms – House, Home, Household, Apartments, Multi storeyed Buildings, Special Buildings, Objectives and Strategies of National Housing Policies, Principle of Sustainable Housing, Housing Laws at State level, Bye-laws at Urban and Rural Local Bodies – levels - Development Control Regulations, Institutions for Housing at National, State and Local levels

UNIT II HOUSING PROGRAMMES

9

Basic Concepts, Contents and Standards for Housing Programmes - Sites and Services, Neighbourhoods, Open Development Plots, Apartments, Rental Housing, Co-operative Housing, Slum Housing Programmes, Role of Public, Private and Non-Government Organisations.

UNIT III PLANNING AND DESIGN OF HOUSING PROJECTS

9

Formulation of Housing Projects – Site Analysis, Layout Design, Design of Housing Units (Design Problems)

UNIT IV CONSTRUCTION TECHNIQUES AND COST-EFFECTIVE MATERIALS

9

New Constructions Techniques – Cost Effective Modern Construction Materials, Building Centers – Concept, Functions and Performance Evaluation

UNIT V HOUSING FINANCE AND PROJECT APPRAISAL

9

Appraisal of Housing Projects – Housing Finance, Cost Recovery – Cash Flow Analysis, Subsidy and Cross Subsidy, Pricing of Housing Units, Rents, Recovery Pattern (Problems).

TOTAL 45 PERIODS

TEXTBOOKS

S. No.	Author(s) Name	Title of the book	Publisher	Year of Publication
1	Meera Mehta and Dinesh Mehta	Metropolitan Housing Markets	Sage Publications Pvt. Ltd., New Delhi	2002
2	Francis Cherunilam and Odeyar D Heggade	Housing in India	Himalaya Publishing House, Bombay	2001

REFERENCES

S. No.	Author(s) Name	Title of the book	Publisher	Year of Publication
1	CMA	Development Control Rules for Chennai Metropolitan Area	CMA, Chennai	2002
2	UNCHS	National Experiences with Shelter Delivery for the Poorest Groups	UNCHS (Habitat), Nairobi	2000

COURSE OBJECTIVES

1. Defining and identifying of engineering services systems in buildings.
2. The role of engineering services systems in providing comfort and facilitating life of users of the building.
3. The basic principles of asset management in a building & facilities maintenance environment
4. Importance of Fire safety and its installation techniques
5. To Know the principle of Refrigeration and application
6. To Understand Electrical system and its selection criteria

COURSE OUTCOMES

The students will be able to

1. Machineries involved in building construction
2. Understand Electrical system and its selection criteria
3. Use the Principles of illumination & design
4. Know the principle of Refrigeration and application
5. Importance of Fire safety and its installation techniques
6. Know the principle behind the installation of building services and to ensure safety in buildings

UNIT I MACHINERIES**9**

Hot Water Boilers – Lifts and Escalators – Special features required for physically handicapped and elderly – Conveyors – Vibrators – Concrete mixers – DC/AC motors – Generators – Laboratory services – Gas, water, air and electricity

UNIT II ELECTRICAL SYSTEMS IN BUILDINGS**9**

Basics of electricity – Single / Three phase supply – Protective devices in electrical installations – Earthing for safety – Types of earthing – ISI specifications – Types of wires, wiring systems and their choice – Planning electrical wiring for building – Main and distribution boards – Transformers and switch gears – Layout of substations

UNIT III PRINCIPLES OF ILLUMINATION & DESIGN**9**

Visual tasks – Factors affecting visual tasks – Modern theory of light and colour – Synthesis of light – Additive and subtractive synthesis of colour – Luminous flux – Candela – Solid angle illumination – Utilisation factor – Depreciation factor – MSCP – MHCP – Laws of illumination – Classification of lighting – Artificial light sources – Spectral energy distribution – Luminous efficiency – Colour temperature – Colour rendering. Design of modern lighting – Lighting for stores, offices, schools, hospitals and house lighting. Elementary idea of special features required and minimum level of illumination required for physically handicapped and elderly in building types.

UNIT IV REFRIGERATION PRINCIPLES & APPLICATIONS**9**

Thermodynamics – Heat – Temperature, measurement transfer – Change of state – Sensible heat – Latent heat of fusion, evaporation, sublimation – saturation temperature – Super heated vapour – Subcooled liquid – Pressure temperature relationship for liquids – Refrigerants – Vapour compression cycle – Compressors – Evaporators – Refrigerant control devices – Electric motors – Starters – Air handling units – Cooling towers – Window type and packaged air-conditioners – Chilled water plant – Fan coil systems – Water piping – Cooling load – Air conditioning systems for different types of buildings – Protection against fire to be caused by A.C. Systems

UNIT V FIRE SAFETY INSTALLATION**9**

Causes of fire in buildings – Safety regulations – NBC – Planning considerations in buildings like non-combustible materials, construction, staircases and lift lobbies, fire escapes and A.C. systems. Special features required for physically handicapped and elderly in building types – Heat and smoke detectors – Fire alarm system, snorkel ladder – Fire lighting pump and water storage – Dry and wet risers – Automatic sprinklers

TOTAL 45 PERIODS

TEXTBOOKS

S. No.	Author(s) Name	Title of the book	Publisher	Year of Publication
1	E.R.Ambrose	Heat Pumps and Electric Heating	John and Wiley and Sons, Inc., New York	2002
2	NBC	Handbook for Building Engineers in Metric systems	NBC, New Delhi	2005

REFERENCES

S. No.	Author(s) Name	Title of the book	Publisher	Year of Publication
1	-	Philips Lighting in Architectural Design	McGraw-Hill, New York	2000
2	A.F.C. Sherratt	Air-conditioning and Energy Conservation	The Architectural Press, London	2005
3	National Building Code			

COURSE OBJECTIVES

1. To understand the coastal processes, coastal dynamics, impacts of structures like docks, harbours and quays leading to simple management perspectives along the coastal zone.
2. To describe the Coastal zone regulations, coastal processes and wave dynamics.
3. To forecast waves and tides and plan coastal structures including harbours.
4. To explain which scientific background values that are necessary for a successful planning,
5. To apply knowledge about ecosystem values and management in the planning process,
6. To plan and carry out a simplified consultation process for activities in the coastal zone

COURSE OUTCOMES

1. Understand the coastal processes, coastal dynamics, impacts of structures like docks, harbours and quays leading to simple management perspectives along the coastal zone.
2. The Coastal zone regulations, coastal processes and wave dynamics.
3. Forecast waves and tides and plan coastal structures including harbours.
4. To explain which scientific background values that are necessary for a successful planning,
5. To apply knowledge about ecosystem values and management in the planning process,
6. To plan and carry out a simplified consultation process for activities in the coastal zone.

UNIT I COASTALZONE**9**

Coastal zone – Coastal zone regulations – Beach profile – Surf zone – Off shore – Coastal waters – Estuaries – Wet lands and Lagoons – Living resources – Non living resources.

UNIT II WAVEDYNAMICS**9**

Wave classification – Airy's Linear Wave theory – Deep water waves – Shallow water waves – Wave pressure – Wave energy – Wave Decay – Reflection, Refraction and Diffraction of waves – Breaking of waves – Wave force on structures – Vertical – Sloping and stepped barriers – Force on piles.

UNIT III WAVE FORECASTING AND TIDES**9**

Need for forecasting - SMB and PNJ methods of wave forecasting – Classification of tides – Darwin's equilibrium theory of tides – Effects on structures – seiches, Surges and Tsunamis.

UNIT IV COASTAL PROCESSES**9**

Erosion and depositional shore features – Methods of protection – Littoral currents – Coastal aquifers – Sea water intrusion – Impact of sewage disposal in seas.

UNIT V HARBOURS**9**

Types of classification of harbours – Requirements of a modern port – Selection of site – Types and selection of break waters – Need and mode of dredging – Selection of dredgers.

TOTAL 45 PERIODS**TEXTBOOKS**

S. No.	Author(s) Name	Title of the book	Publisher	Year of Publication
1	Richard Sylvester	Coastal Engineering, Volume I and II	Elsevier Scientific Publishing Co	2006

2	Dwivedi, S.N., and Ramachandran, S	Coastal Zone Management in Tamilnadu	McGraw-Hill Inc., New York	2000

COURSE OBJECTIVES

1. To Describe some of the factors affecting reproducibility and external validity.
2. To List the different types of formal experimental designs (e.g. completely randomised, randomised block, repeated measures, Latin square and factorial experimental designs).
3. To explain the concept of variability, its causes and methods of reducing it
4. To describe possible causes of bias and ways of alleviating it
5. To identify the experimental unit and recognise issues of non-independence (pseudo-replication).
6. To describe the six factors affecting significance, including the meaning of statistical power and “p-values”.

COURSE OUTCOMES

1. Describe some of the factors affecting reproducibility and external validity.
2. List the different types of formal experimental designs (e.g. completely randomised, randomised block, repeated measures, Latin square and factorial experimental designs).
3. Explain the concept of variability, its causes and methods of reducing it
4. Describe possible causes of bias and ways of alleviating it
5. Identify the experimental unit and recognise issues of non-independence (pseudo-replication).
6. Describe the six factors affecting significance, including the meaning of statistical power and “p-values”.

UNIT I MEASUREMENTS**9**

Basic Concept in Measurements, Measurement of displacement, strain pressure, force, torque etc, Type of strain gauges (Mechanical, Electrical resistance, Acoustical etc)

UNIT II GAUGING**9**

Strain gauge circuits – The potentiometer and Wheatstone bridge – use of lead wires switches etc. Use of electrical resistance strain gauges in transducer applications.

UNIT III RECORDING DEVICES**9**

Indicating and recording devices - Static and dynamic data recording –Data (Digital and Analogue) acquisition and processing systems. Strain analysis methods – Rosette analysis. Static and dynamic testing techniques. Equipment for loading - Moire’s techniques.

UNIT IV NON DESTRUCTIVE TESTING TECHNIQUES**9**

Non destructive testing techniques. Photoelasticity – optics of photoelasticity – Polariscope – Isoclinics and Isochromatics - methods of stress separation.

UNIT V LAWS OF SIMILITUDE**9**

Laws of similitude - model materials – model testing – testing large scale structures – holographic techniques

1	Rangan C S	Instrumentation – Devices and Systems	Tata McGraw-Hill Publishing Co., Ltd., New Delhi	2002
2	Sadhu Singh	Experimental Stress Analysis	Khanna Publishers, New Delhi	2006

COURSE OBJECTIVES

1. To enable the students for a successful career as water management professionals.
2. To create a potential among students in the area of irrigation management with specific enrichment to synthesis of data and their analysis.
3. To expose the students the need for an interdisciplinary approach in irrigation water management
4. To providing a platform to work in an interdisciplinary team.
5. To provide students an ability to understand the applications of mathematical and scientific concepts to analyse intricate technical, social and environmental problems in irrigation water management and finding solutions for them.
6. To promote student awareness for a life-long learning process and inculcate professional ethics and codes of professional practice in water management.

COURSE OUTCOMES

At the end of this the students will be in a capacity to

1. Understand the concepts of soil-water-plant relationship as well as to expose them to the principles and practices of crop production.
2. Exposure to ground water, hydraulics of ground water related to drainage, drainage concepts, planning, design and management of drainage related irrigation system management
3. Understand the various principles of irrigation management and to analyse the different types of irrigation systems and their performances based on service oriented approach.
4. Gain insight on local and global perceptions and approaches to participatory water resource management
5. Learn from successes and failures in the context of both rural and urban communities of water management.
6. Exposure on the use of economic concepts in irrigation development and to impart knowledge on economic planning so as to enable viable allocation of resources in the irrigation sector.

UNIT I IRRIGATION SYSTEM REQUIREMENTS**9**

Irrigation systems – Supply and demand of water – Cropping pattern – Crop rotation – Crop diversification – Estimation of total and peak crop water requirements – Effective and dependable rainfall – Irrigation efficiencies.

UNIT II IRRIGATION SCHEDULING**9**

Time of irrigation – Critical stages of water need of crops – Criteria for scheduling irrigation – Frequency and interval of irrigation

UNIT III MANAGEMENT**9**

Structural and non-structural strategies in water use and management – Conjunctive use of surface and ground waters – Quality of irrigation water.

UNIT IV OPERATION**9**

Operational plans – Main canals, laterals and field channels – Water control and regulating structures – Performance indicators – Case study

UNIT V INVOLVEMENT OF STAKEHOLDERS**9**

Farmer's participation in System operation – Water user's associations – Farmer councils – Changing paradigms on irrigation management – Participatory irrigation management

TOTAL 45 PERIODS**TEXTBOOKS**

S. No.	Author(s) Name	Title of the book	Publisher	Year of Publication
1	Dilip Kumar Majumdar	Irrigation Water Management – Principles and Practice	Prentice Hall of India Pvt. Ltd., New Delhi	2000
2	R.T. Gandhi	Hand book on Irrigation Water Requirement	Water Management Division, Department of Agriculture	1990

2	Maloney, C. and Raju, K.V	Managing Irrigation Together - Practice and Policy in India	, Stage Publication, New Delhi, India	2000

COURSE OBJECTIVES

1. To learn how to Develop Parametric design and the conventions of formal engineering drawing
2. To learn how to Produce and interpret 2D & 3D drawings
3. To learn about how to Communicate a design idea/concept graphically/visually
4. To know how to Examine a design critically and with understanding of CAD - The student learns to interpret drawings, and to produce designs using a combination of 2D and 3D software.
5. To discuss how to Get a Detailed study of an engineering artifact
6. To know how to Plan and design structures

COURSE OUTCOMES

The students will be able to

1. Develop Parametric design and the conventions of formal engineering drawing
2. Produce and interpret 2D & 3D drawings
3. Communicate a design idea/concept graphically/visually
4. Examine a design critically and with understanding of CAD - The student learns to interpret drawings, and to produce designs using a combination of 2D and 3D software.
5. Get a Detailed study of an engineering artifact
6. Plan and design structures

UNIT I INTRODUCTION**9**

Fundamentals of CAD - Hardware and software requirements - Design process - Applications and benefits.

UNIT II COMPUTER GRAPHICS**9**

Graphic primitives - Transformations - Wire frame modeling and solid modeling - Graphic standards - Drafting packages

UNIT III STRUCTURAL ANALYSIS**9**

Fundamentals of finite element analysis - Principles of structural analysis - Analysis packages and applications.

UNIT IV DESIGN AND OPTIMISATION**9**

Principles of design of steel and RC Structures - Applications to simple design problems - Optimisation techniques - Algorithms - Linear Programming - Simplex method

UNIT V EXPERT SYSTEMS**9**

Introduction to artificial intelligence - Knowledge based expert systems - Rules and decision tables - Inference mechanisms - Simple applications.

TOTAL 45 PERIODS**TEXTBOOKS**

S. No.	Author(s) Name	Title of the book	Publisher	Year of Publication
1	Groover M.P. and Zimmers E.W. Jr	CAD/CAM, Computer Aided Design and Manufacturing	Prentice Hall of India Ltd, New Delhi	2005

2	Rao S.S	Optimisation Theory and Applications	Wiley Eastern Limited, New Delhi	2002
3	Richard Forsyth (Ed)	Expert System Principles and Case Studies	Chapman and Hall, London	2000

COURSE OBJECTIVES

1. To discuss about the various pavement types
2. To study about the stress distribution in layered systems
3. To design the flexible pavements
4. To learn about the concepts of rigid pavements
5. To learn about the performance evaluation and maintenance of pavements
6. To know how to stabilization of pavements

COURSE OUTCOMES

Students will be able to

1. Recognize the various pavement types
2. Understand the stress distribution in layered pavements
3. Design a flexible pavement
4. Explain about the rigid pavements
5. Perform pavement performance evaluation and maintenance
6. Know how to stabilize the pavements

UNIT I TYPE OF PAVEMENT AND STRESS DISTRIBUTION ON LAYERED SYSTEM 9

Introduction - Pavement as layered structure - Pavement types - rigid and flexible - Stress and deflections in pavements under repeated loading

UNIT II DESIGN OF FLEXIBLE PAVEMENTS 9

Flexible pavement design - Empirical - Semi empirical and theoretical Methods - Design procedure as per latest IRC guidelines – Design and specification of rural roads

UNIT III DESIGN OF RIGID PAVEMENTS 9

Cement concrete pavements - Modified Westergaard approach - Design procedure as per latest IRC guidelines - Concrete roads and their scope in India.

UNIT IV PERFORMANCE EVALUATION AND MAINTENANCE 9

Pavement Evaluation [Condition and evaluation surveys (Surface Appearance, Cracks, Patches And Pot Holes, Undulations, Ravelling, Roughness, Skid Resistance), Structural Evaluation By Deflection Measurements, Present Serviceability Index] Pavement maintenance. [IRC Recommendations Only]

UNIT V STABILISATION OF PAVEMENTS 9

Stabilisation with special reference to highway pavements - Choice of stabilisers - Testing and field control - Stabilisation for rural roads in India - use of Geosynthetics (geotextiles & geogrids) in roads.

4	Ministry of rural roads	Design and Specification of Rural Roads (Manual)	Government of India, New Delhi	2001

REFERENCES

S. No.	Author(s) Name	Title of the book	Publisher	Year of Publication
1	Yoder R.J and WitczakM.W	Principles of Pavement Design	John Wiley	2003
2	IRC:37	Guidelines for the Design of Flexible Pavements	The Indian roads Congress, New Delhi	2001
3	IRC:58	Guideline for the Design of Rigid Pavements for Highways	The Indian Roads Congress, New Delhi	2001

COURSE OBJECTIVES

1. To provide the knowledge on classification of rocks
2. To learn about the properties of rocks
3. To learn about the rock failure modes
4. To learn about the initial stresses and measurements
5. To know the applications of rock mechanics
6. To understand the concepts of rock bolting

COURSE OUTCOMES**Students will be able**

1. Recognize the various forms of rocks
2. Say the various properties of rocks
3. Explain the failure modes of the rocks
4. Understand the initial stresses and how to measure the same
5. Say the various applications of rock mechanics
6. Explain the concepts of rock bolting

UNIT I CLASSIFICATION AND INDEX PROPERTIES OF ROCKS**9**

Geological classification – Index properties of rock systems – Classification of rock masses for engineering purpose.

UNIT II ROCK STRENGTH AND FAILURE CRITERIA**9**

Modes of rock failure – Strength of rock – Laboratory and field measurement of shear, tensile and compressive strength – Stress strain behaviour in compression – Mohr-coulomb failure criteria and empirical criteria for failure – Deformability of rock.

UNIT III INITIAL STRESSES AND THEIR MEASUREMENTS**9**

Estimation of initial stresses in rocks – influence of joints and their orientation in distribution of stresses – technique for measurements of in situ stresses.

UNIT IV APPLICATION OF ROCK MECHANICS IN ENGINEERING**9**

Simple engineering application – Underground openings – Rock slopes – Foundations and mining subsidence.

UNIT V ROCK BOLTING**9**

Introduction – Rock bolt systems – rock bolt installation techniques – Testing of rock bolts – Choice of rock bolt based on rock mass condition.

TOTAL 45 PERIODS**TEXTBOOKS**

S. No.	Author(s) Name	Title of the book	Publisher	Year of Publication
1	Goodman P.E	Introduction to Rock Mechanics	John Wiley and Sons	2005
2	Stillborg B	Professional User Handbook for rock Bolting	Tran Tech Publications	2006

REFERENCES

S. No.	Author(s) Name	Title of the book	Publisher	Year of Publication

2	Arogyaswamy R.N.P	Geotechnical Application in Civil Engineering	Oxford and IBH	2000
3	Hock E. and Bray J	Rock Slope Engineering	Institute of Mining and Metallurgy	1991

COURSE OBJECTIVES:

1. To build on the student's background in hydrology and hydraulics and understanding of water resources systems
2. To develop the skills in modeling of flood flows and flood routing
3. To develop skills in the ground water flow, type of aquifer and yield from the well
4. To provide the knowledge of design of reservoir, operation and sedimentation
5. To study the effect, causes and remedial measures of water logging
6. To know about various concrete bunkers and silos

COURSE OUTCOMES:

Students will be able to

1. Understand about the steel water tanks
2. Understand about the concrete water tanks
3. Explain about the steel bunkers
4. Say the working of silos
5. Give basics of concrete bunkers
6. Understand the basics of prestressed concrete water tanks

UNIT I STEEL WATER TANKS**9**

Design of rectangular riveted steel water tank – Tee covers – Plates – Stays – Longitudinal and transverse beams – Design of staging – Base plates – Foundation and anchor bolts – Design of pressed steel water tank – Design of stays – Joints – Design of hemispherical bottom water tank – side plates – Bottom plates – joints – Ring girder – Design of staging and foundation.

UNIT II CONCRETE WATER TANKS**9**

Design of Circular tanks – Hinged and fixed at the base – IS method of calculating shear forces and moments – Hoop tension – Design of intake tank – Dome – Ring girders – Conical dome – Staging – Bracings – Raft foundation – Design of rectangular tanks – Approximate methods and IS methods – Design of underground tanks – Design of base slab and side wall – Check for uplift.

UNIT III STEEL BUNKERS AND SILOS**9**

Design of square bunker – Jansen's and Airy's theories – IS Code provisions – Design of side plates – Stiffeners – Hooper – Longitudinal beams – Design of cylindrical silo – Side plates – Ring girder – stiffeners.

UNIT IV CONCRETE BUNKERS AND SILOS**9**

Design of square bunker – Side Walls – Hopper bottom – Top and bottom edge beams – Design of cylindrical silo – Wall portion – Design of conical hopper – Ring beam at junction.

UNIT V PRESTRESSED CONCRETE WATER TANKS**9**

Principles of circular prestressing – Design of prestressed concrete circular water tanks.

TOTAL 45 PERIODS**TEXTBOOKS**

S. No.	Author(s) Name	Title of the book	Publisher	Year of Publication
1	Rajagopalan K	Storage Structures	Tata McGraw-Hill, New Delhi	2002
2	Krishna Raju N	Advanced Reinforced Concrete Design	CBS Publishers and Distributors, New Delhi	2000

REFERENCES

S. No.	Author(s) Name	Title of the book	Publisher	Year of Publication
1	R.G. Hopkinson and J.D. Kay	The Lighting of buildings	Faber and Faber, London	2000
2	William H. Severns and Julian R. Fellows	Air-conditioning and Refrigeration	John Wiley and Sons, London	2000

COURSE OBJECTIVE

1. To provide knowledge on wind data
2. To explain about the various factors involved in wind engineering
3. To study about the effect on wind on various structures
4. To learn about the effect of typical buildings
5. To learn about the design of multistorey buildings
6. To know about the basics of wind tunnel

COURSE OUTCOMES

Students will be

1. Able to know about the wind data
2. Able to explain the factors involved in wind engineering
3. Able to recognize the effects of wind on various structures
4. Able to provide the details on typical buildings
5. Able to give the basics of design of multistorey buildings
6. Able to explain the basics of wind tunnel

UNIT I INTRODUCTION

9

Terminology – Wind Data – Gust factor and its determination - Wind speed variation with height – Shape factor – Aspect ratio – Drag and lift.

UNIT II EFFECT OF WIND ON STRUCTURES

9

Static effect – Dynamic effect – Interference effects (concept only) – Rigid structure – Aeroelastic structure (concept only).

UNIT III EFFECT ON TYPICAL STRUCTURES

9

Tall buildings – Low rise buildings – Roof and cladding – Chimneys, towers and bridges.

UNIT IV APPLICATION TO DESIGN

9

Design forces on multistorey building, towers and roof trusses.

UNIT V INTRODUCTION TO WIND TUNNEL

9

Types of models (Principles only) – Basic considerations – Examples of tests and their use.

TEXTBOOKS

S. No.	Author(s) Name	Title of the book	Publisher	Year of Publication
1	Peter Sachs	Wind Forces in Engineering	Pergamon Press, New York	2002
2	Lawson T.V	Wind Effects on Buildings, Vol. I & II	Applied Science and Publishers, London	2005

REFERENCES

S. No.	Author(s) Name	Title of the book	Publisher	Year of Publication
1	Devenport A.G	Wind Loads on Structures	Division of Building Research, Ottawa	2003
2	Course Notes	Wind Force on Structures	Building Technology Centre, Anna University	2002

COURSE OBJECTIVES

1. To give an experience in the implementation of new technology concepts which are applied in field of Advanced construction.
2. To study different methods of construction to successfully achieve the structural design with recommended specifications.
3. To involve the application of scientific and technological principles of planning, analysis, design and management to construction technology.
4. To study of construction equipment's, and temporary works required to facilitate the construction process
5. To provide a coherent development to the students for the courses in sector of Advanced construction technology.
6. To present the new technology of civil Engineering and concepts related Advanced construction technology.

COURSE OUTCOMES:

1. The students will gain an experience in the implementation of new construction technology on engineering concepts
2. the students will learn about how to apply in field of Advanced construction technology.
3. The students will get a diverse knowledge of Advanced technology practices applied to real life problems.
4. The students will learn to understand the theoretical and practical aspects of new technology in civil engineering
5. The students will learn to design and
6. The students will learn about management applications

UNIT I MODERN CONSTRUCTION METHODS 9

Open Excavation, Shafts and Tunnels- Preparation of foundation, Cofferdams, Caisson, Piled Foundation, Prestressed Concrete Construction, Pre-cast Concrete Construction.

UNIT II CONSTRUCTION METHODS FOR SPECIAL STRUCTURES 9

Construction Methods For Bridges, Construction Methods for Roads, Construction Methods For Special Structures for Railways, Construction Methods for Dams, Construction Methods for Harbour, Construction Methods for River Works Pipelines

UNIT III MODERN CONSTRUCTION EQUIPEMENTS-I 9

Construction Equipment used for Earth Moving, Excavating, Drilling, Blasting, Tunneling and hoisting

UNIT IV MODERN CONSTRUCTION EQUIPEMENTS-II 9

Construction Equipment used for Conveying, Hoisting, Dredging, Dewatering Systems, Paving and concreting Plant

UNIT V PRINCIPLES AND PRACTICES OF TEMPORARY STRUCTURES 9

Principles and Practices of Temporary structures, Shoring, and Strutting, Underpinning, Principles and Design of Formwork, Scaffolding, Operation and maintenance of construction equipments

INTRODUCTION TO MEMS

3 0 0 3100

COURSE OBJECTIVES

1. To know the characteristics of micro electromechanical system.
2. To understand the working of electrostatic sensors.
3. To understand the working of actuators.
4. To learn the principle of micromachining.
5. To understand the concept of polymer MEMS.
6. To understand the concept of optical MEMS.

COURSE OUTCOMES

1. Understand the characteristics of micro electromechanical system.
2. Understand the working of electrostatic sensors.
3. Understand the working of actuators.
4. Learn the principle of micromachining.
5. Understand the concept of polymer MEMS.
6. Understand the concept of optical MEMS.

UNIT I INTRODUCTION

9

Intrinsic Characteristics of MEMS – Energy Domains and Transducers- Sensors and Actuators – Introduction to Micro fabrication - Silicon based MEMS processes – New Materials – Review of Electrical and Mechanical concepts in MEMS – Semiconductor devices – Stress and strain analysis – Flexural beam bending- Torsional deflection.

UNIT II SENSORS AND ACTUATORS-I

9

Electrostatic sensors – Parallel plate capacitors – Applications – Interdigitated Finger capacitor – Comb drive devices – Micro Grippers – Micro Motors - Thermal Sensing and Actuation – Thermal expansion – Thermal couples – Thermal resistors – Thermal Bimorph - Applications – Magnetic Actuators – Micromagnetic components – Case studies of MEMS in magnetic actuators- Actuation using Shape Memory Alloys

UNIT III SENSORS AND ACTUATORS-II

9

Piezoresistive sensors – Piezoresistive sensor materials - Stress analysis of mechanical elements – Applications to Inertia, Pressure, Tactile and Flow sensors – Piezoelectric sensors and actuators – piezoelectric effects – piezoelectric materials – Applications to Inertia , Acoustic, Tactile and Flow sensors.

UNIT IV MICROMACHINING

9

Silicon Anisotropic Etching – Anisotropic Wet Etching – Dry Etching of Silicon – Plasma Etching – Deep Reaction Ion Etching (DRIE) – Isotropic Wet Etching – Gas Phase Etchants – Case studies - Basic surface micro machining processes – Structural and Sacrificial Materials – Acceleration of sacrificial Etch – Striction and Antistiction methods – LIGA Process - Assembly of 3D MEMS – Foundry process.

UNIT V POLYMER AND OPTICAL MEMS

9

Polymers in MEMS– Polyimide - SU-8 - Liquid Crystal Polymer (LCP) – PDMS – PMMA – Parylene – Fluorocarbon - Application to Acceleration, Pressure, Flow and Tactile sensors- Optical MEMS – Lenses and Mirrors – Actuators for Active Optical MEMS.

2	Stephen D Senturia	Microsystem Design	Springer Publication	2000
3	Tai Ran Hsu	MEMS & Micro systems Design and Manufacture	Tata McGraw Hill, New Delhi	2002

REFERENCES

S. No.	Author(s) Name	Title of the book	Publisher	Year of Publication
1	Nadim Maluf	An Introduction to Micro Electro Mechanical System Design	Artech House	2000
2	Mohamed Gad-el-Hak	The MEMS Handbook	CRC press Baco Raton	2000
3	Julian w. Gardner, Vijay K. Varadan	Micro Sensors MEMS andSmart Devices	John Wiley & Son LTD	2002
4	James J.Allen	Micro Electro Mechanical System Design	CRC Press Publisher	2010
5	Thomas M.Adams and Richard A.Layton	Introduction MEMS, Fabrication and Application	Springer	2012

COURSE OBJECTIVES

1. To develop the student's knowledge in various robot structures and their workspace.
2. To develop student's skills in performing spatial transformations associated with rigid body motions.
3. To develop student's skills in perform kinematics analysis of robot systems.
4. To provide the student with knowledge of the singularity issues associated with the operation of robotic systems.
5. To provide the student with some knowledge and analysis skills associated with trajectory planning.
6. To provide the student with some knowledge and skills associated with robot control.

COURSE OUTCOMES

Upon completion of this course, the students will be able to

1. Understand the fundamentals of therobots
2. Describe the robot celldesign
3. Know the safety considerations in roboticapplications.
4. The student with knowledge of the singularity issues associated with the operation of robotic systems.
5. The student with some knowledge and analysis skills associated with trajectory planning.
6. The student with some knowledge and skills associated with robot control.

UNIT I FUNDAMENTALS OFROBOT**9**

Robot – Definition, Need for Robots, Robot Anatomy, Co-ordinate systems, Work Envelope, types and classification – specifications – Pitch, yaw, Roll, Joint Notations, Speed of Motion, Pay Load – Robot Parts and their functions, grippers types. Forward kinematics, inverse kinematics- Manipulators with two, three degrees of freedom in 2D - Derivations andproblems.

UNIT II DRIVES ANDSENSORS**9**

Drives- hydraulic, pneumatic and electrical. Force sensing, touch and tactile sensors, proximity sensors, non contact sensors and Machine vision sensors. Safety considerations in robotic cell, proximity sensors, fail safe hazard sensor systems, and compliance mechanism.

UNIT III PROGRAMMINGANDAPPLICATIONS**9**

Robot programming languages – VAL programming – Motion Commands, Sensorscommands. Role of robots in inspection, assembly, material handling, underwater, space, nuclear, defence and medical fields.

UNIT IV MACHINEVISION**9**

Machine Vision - Sensing - Low and higher level vision - Image acquisition and digitization - Cameras, CCD,CID, CPD, etc., - Illumination and types - Image processing and analysis - Feature extraction - Applications.

UNIT V IMPLEMENTATION ANDROBOTECONOMICS**9**

RGV, AGV; Implementation of Robots in Industries-Various Steps; Safety Considerations for Robot Operations - Economic Analysis of Robots.

TOTAL 45PERIODS**TEXT BOOKS**

6	Rajput R.K	Robotics and Industrial Automation	S.Chand and Company	2008
7	Surender Kumar	Industrial Robots and Computer Integrated Manufacturing	Oxford and IBH Publishing Co. Pvt. Ltd	1991

COURSE OBJECTIVES

1. To recognize and evaluate occupational safety and health hazards in the workplace.
2. To determine appropriate hazard controls following the hierarchy of controls.
3. To analyse the effects of workplace exposures, injuries and illnesses, fatalities.
4. To prevent incidents using the hierarchy of controls, effective safety and health management systems and task-oriented training.
5. To teach student the concept of Industrial Safety & provide useful practical knowledge for workplace safety.
6. To prevent or mitigate harm or damage to people, property, or the environment.

COURSE OUTCOMES

At the end of the course, student will be able to

1. Recognize and evaluate occupational safety and health hazards in the workplace.
2. Determine appropriate hazard controls following the hierarchy of controls.
3. Analyse the effects of workplace exposures, injuries and illnesses, fatalities.
4. Prevent incidents using the hierarchy of controls, effective safety and health management systems and task-oriented training.
5. Understand the concept of Industrial Safety & provide useful practical knowledge for workplace safety.
6. Prevent or mitigate harm or damage to people, property, or the environment.

UNIT I INTRODUCTION TO LOGISTICS 9

Logistics - concepts, definitions and approaches, factors influencing logistics - Supply chain: basic tasks, definitions and approaches, influencing supply chain - a new corporate model.

UNIT II PHASES OF SUPPLY CHAIN 9

The new paradigm shift - The modular company - The network relations - Supply processes - Procurement processes - Distribution management.

UNIT III EVOLUTION OF SUPPLY CHAIN MODELS 9

Strategy and structure - Factors of supply chain - Manufacturing strategy stages - Supply chain progress - Model for competing through supply chain management - PLC grid, supply chain redesign - Linking supply chain with customer.

UNIT IV SUPPLY CHAIN ACTIVITIES 9

Structuring the SC, SC and new products, functional roles in SC - SC design framework - Collaborative product commerce (CPC).

UNIT V SCM ORGANISATION AND INFORMATION SYSTEM 9

The management task - Logistics organization - The logistics information systems - Topology of SC application - Product Data Management - Warehouse management system MRP- I, MRP - II, ERP, - Case study, ERP Software's

2	Steudel.H.J and Desruelle.P	Manufacturing in the nineteen - How to become a mean, lean and world class competitor	Van No strand Reinhold, New York	1992

COURSE OBJECTIVES

1. To generalized equations for mass, momentum and heat.
2. To understand the concepts of Reynolds and Gauss theorems.
3. To learn combined diffusive and convective transport.
4. To apply Film- and penetration models for mass and heat transfer.
5. To apply Stefan-Maxwells equations for multi-component diffusion.
6. To Solve the given set of equations either analytically or numerically.

COURSE OUTCOMES

1. Generalized equations for mass, momentum and heat.
2. Understand the concepts of Reynolds and Gauss theorems.
3. Learn combined diffusive and convective transport.
4. Apply Film- and penetration models for mass and heat transfer.
5. Apply Stefan-Maxwells equations for multi-component diffusion.
6. Solve the given set of equations either analytically or numerically.

UNIT I INTRODUCTION AND BASIC CONCEPTS**9**

General overview of transport phenomena including various applications, Transport of momentum, heat and mass, Transport mechanism, Level of transport, Driving forces, Molecular transport (diffusion), convective transport (microscopic)

UNIT II PROPERTIES, UNITS AND OTHER PHYSICAL PARAMETERS**9**

Unit systems, temperature, mole, concentration, pressure, Gas laws, laws of conservation, energy and heat units

UNIT III MOMENTUM TRANSPORT**9**

Basic concepts in fluid mechanics, Force, unit and dimensions, pressure in fluid, head of fluid, Molecular transport for momentum, heat and mass transfer, Viscosity of fluids, Newton's law, Momentum transfer, Newtonian and non-Newtonian fluids, Fluid flow and Reynolds number, Overall mass balance, Control volume and Continuity equation, Overall energy balance, Bernoulli's equation, Overall momentum balance, Drag coefficient, Stokes law, Flow in packed beds, Flow in fluidized bed

UNIT IV ENERGY TRANSPORT**9**

Basic concepts in heat transfer, Heat transfer mechanisms, Fourier's law of heat conduction, thermal conductivity, convective heat transfer coefficient, Conduction heat transfer - through flat slab/wall and through hollow cylinder, Conduction through solids in series, Forced convection heat transfer inside pipes, Heat transfer outside various geometries in forced convection, General discussion on natural convection heat transfer, Heat exchangers, General discussion on radiation heat transfer

UNIT V MASS TRANSPORT**9**

Basic concepts in mass transport, Some application examples, Modes of mass transfer, Molecular diffusion-Fick's law, Analogy between mass, heat and momentum transfer, Dispersion, Hydraulic or Darcy's flow in porous media, Chemical kinetics and activation energy, Film theory, Convective mass transfer, Liquid-solid mass transfer, Liquid-liquid mass transport, Gas-liquid mass transfer, Aeration and oxygen transport, Air stripping

WEB REFERENCE

1. <https://laulima.hawaii.edu/portal>

COURSE OBJECTIVES

1. To describe the principles of the study of human movement.
2. To describe the range of factors that influence the initiation, production and control of human movement.
3. To identify the body's lever systems and their relationship to basic joint movement and classification.
4. To distinguish between biomechanical principles of kinetics and kinematics when applied to the analysis of human movement.
5. To explain joint and muscle function and the forces acting upon the human body during various sporting activities.
6. To relate the different body systems necessary for human movement to occur.

COURSE OUTCOMES

1. Describe the principles of the study of human movement.
2. Describe the range of factors that influence the initiation, production and control of human movement.
3. Identify the body's lever systems and their relationship to basic joint movement and classification.
4. Distinguish between biomechanical principles of kinetics and kinematics when applied to the analysis of human movement.
5. Explain joint and muscle function and the forces acting upon the human body during various sporting activities.
6. Relate the different body systems necessary for human movement to occur.

UNIT I INTRODUCTION**9**

Biomechanics - Improving Performance – Applications - Preventing And Treating Injury - Qualitative And Quantitative Analysis - Scholarly Societies - Computer Searches – Biomechanical Knowledge versus Information - Kinds of Sources - Evaluating Sources

UNIT II KEYMECHANICALCONCEPTS**9**

Mechanics - Basic Units - Nine Fundamentals of Biomechanics - Principles and Laws - Nine Principles for Application of Biomechanics

UNIT III HUMAN ANATOMY AND SOME BASIC TERMINOLOGY**9**

Gross (Whole-Body) Modeling - Position and Direction Terminology - Terminology for Common Movements - Skeletal Anatomy - Major Joints - Major Muscle Groups - Anthropometric Data

UNIT IV ANATOMICAL DESCRIPTION**9**

Key Anatomical Concepts - Directional Terms - Joint Motions - Muscle Actions - Active and Passive Tension of Muscle - Limitations of Functional Anatomical Analysis - Mechanical Method of Muscle Action Analysis - The Need for Biomechanics to Understand Muscle Actions - Sports Medicine and Rehabilitation Applications

UNIT V MECHANICS OF THE MUSCULOSKELETAL SYSTEM**9**

Tissue Loads - Response of Tissues To Forces - Biomechanics of The Passive Muscle–Tendon Unit - Biomechanics of Bone - Biomechanics of Ligaments - Three Mechanical Characteristics of Muscle - Stretch-Shortening Cycle (SSC) - Force–Time Principle - Neuromuscular Control

OBJECTIVES:

- To enable students to attain fluency and accuracy to inculcate proficiency in professional communication to meet the growing demand in the field of Global communication.
- To help students acquire their ability to speak effectively in real life situations.
- To inculcate the habit of reading and to develop their effective reading skills.
- To ensure that students use dictionary to improve their active and passive vocabulary.
- To enable students to improve their lexical, grammatical and communicative competence
- To acquire good vocabulary for sentence structure and sentence formation.

OUTCOMES:

- Use English language for communication: verbal & non –verbal.
- Enrich comprehension and acquisition of speaking & writing ability.
- Gain confidence in using English language in real life situations.
- Improve word power: lexical, grammatical and communication competence.
- Acquire good vocabulary for easy communication.
- Be familiar with sentence structure and sentence formation.

Unit I**(9)**

Listening – Types of listening - Listening to class reading - Video tapes/ Audio tapes. **Speaking** – Introduction on self - Introduction on one's friend. **Reading** - Reading for comprehension – Reading different kind of passages like descriptive, narrative, objective, conversational and argumentative. **Writing** – Free writing on any topic –My favorite place, hobbies, dreams, goals, etc- Writing short messages - To fill in different application forms. **Grammar** – Articles- WH questions –Yes/No Question - Subject Verb agreement. **Vocabulary** - Word Formation – Word expansion (Root word) - Prefix and Suffix.

Unit II**(10)**

Listening – Understanding the passage in English –Pronunciation practice. **Speaking** – Asking and answering questions - Telephone etiquette. **Reading** – Critical reading – Finding key information in a given text (Skimming - Scanning). **Writing** – Coherence and cohesion in writing – Short paragraph writing – Letters to the Editor. **Grammar** – Parts of speech – Noun – Verb – Adjectives - Adverbs. **Vocabulary** – Compound Nouns/Adjectives – Irregular verbs.

Unit III**(10)**

Listening – Listening for specific task – Fill in the gaps. **Speaking** – Phonemes – Syllables – Role play – Conversation Practice. **Reading** – Reading and Comprehension. **Writing** - Autobiographical writing – Biographical writing - Instruction writing. **Grammar** – Preposition – Infinitive – Gerund – Tenses. **Vocabulary** – Foreign words used in English – British and American usage.

Unit IV**(8)**

Listening – Responding to questions – Reading in class for complete understanding and for better pronunciation. **Speaking** – Debate- Presentations in seminars. **Reading** – Making inference from the reading passage – Predicting the content of reading passages. **Writing** - Interpreting visual materials (tables, graphs, charts, etc) – Formal and Informal letters. **Grammar** – Sentence pattern – Voice (active and passive voice). **Vocabulary** – One word substitution.

Unit V**(8)**

Listening - Listening to different accents, speeches/presentations. **Speaking**- Extempore talk – Just-a-minute talk. **Reading**-Reading strategies–Intensive reading – Text analysis. **Writing** - Creative writing – Writing circulars and notices – Writing proposal. **Grammar** – Direct and Indirect speech – Conditional sentences - Auxiliary verbs. **Vocabulary** – Abbreviations & Acronyms.

Note: Students shall have hands on training in improving listening skill in the language laboratory @ 2 periods per each unit.

OBJECTIVES:

- To develop analytical skills for solving different engineering problems.
- To understand the concept of Matrices and Theory of equations.
- To know the basics of differential calculus and its applications.
- To impart the knowledge of integral calculus and its applications.
- To learn the basics of ordinary differential equations.
- To Apply the concept of ordinary differential Equations and solving the problems.

OUTCOMES:

- Acquire the basic knowledge and understanding of mathematics
- Apply advanced matrix knowledge to engineering problems.
- Improve their ability in evaluating problems by applying theory of equations.
- Evaluating engineering problems involving differential calculus and its applications.
- Understand the concepts involving integral calculus and its applications.
- Applying the concept of ordinary differential Equations and solving the problems.

UNIT-I MATRICES

(12)

Fundamentals of Matrix- Inverse of a matrix- Rank of a Matrix – Consistency and Inconsistency of a system of ‘m’ linear equations in ‘n’ unknowns – Eigenvalues and Eigenvectors of a real matrix .

UNIT- II THEORY OF EQUATIONS

(12)

Relations between coefficients and roots: Irrational and imaginary roots – symmetric functions of the roots – transformation of equations – reciprocal equations and formation of equations whose roots are given.

UNIT - III DIFFERENTIAL CALCULUS AND ITS APPLICATION

(12)

Differentiation and Derivatives of simple functions – Successive Differentiation – Tangent and Normal-Radius of curvature – Velocity and acceleration.

UNIT - IV INTEGRAL CALCULUS AND ITS APPLICATIONS

(12)

Various types of integration - Reduction formula for $e^{ax} x^n$, $\sin^n x$, $\cos^n x$, $\sin^n x \cos^m x$ (Statement only). – Length, Area and Volume of solid revolution.

UNIT - V ORDINARY DIFFERENTIAL EQUATIONS

(12)

Differential equations of first order and higher degree – higher order differential equations with constant coefficients.

2. www.efunda.com
3. www.mathcentre.ac.uk

OBJECTIVES:

- To enhance the fundamental knowledge in Physics and its applications relevant to various branches of Engineering and Technology
- Understand the basics of laser and optical fiber with appropriate applications.
- Introduce the concepts of quantum mechanics for diverse applications.
- Impart the basic knowledge of crystal and its various crystal structures.
- Disseminate the fundamentals of nuclear physics and their applications.
- To Illustrate the basic ideas of nuclear reactors for energy resources

OUTCOMES:

- Identify the elastic nature of materials and its thermodynamic properties.
- Infer the characteristics of laser and optical fibers for engineering applications.
- Develop the idea of quantum mechanics through applications.
- Identify the different atomic arrangements of crystals and its defects
- Make use of the concepts of sound waves for medical applications
- Illustrate the basic ideas of nuclear reactors for energy resources

UNIT I PROPERTIES OF MATTER AND THERMODYNAMICS (9)

Three types of modulus of elasticity – basic definitions, relation connecting the moduli (Derivation), poisson ratio- Torsional pendulum- bending of beams- bending moment – basic assumption of moment – uniform and non uniform bending

Concept of entropy- change of entropy in reversible and irreversible processes – refrigeration.

UNIT II LASER AND FIBER OPTICS (9)

Introduction – emission and absorption process- Einstein's coefficients derivation. Types of LASER -CO₂, Semiconductor LASER- Applications of LASER in industry and medicine.

Total internal reflection – modes of propagation of light in optical fibers – numerical aperture and acceptance angle –derivations, types of optical fibers (Material, refractive index and mode) – fiber optical communication system (block diagram).

UNIT III QUANTUM PHYSICS (9)

Introduction to quantum theory – Compton effect- dual nature of matter and radiation – de Broglie wavelength, uncertainty principle – physical significance of wave function, Schrödinger's wave equation – time dependent and time independent equations – particle in one dimensional box- scanning electron microscope.

UNIT IV CRYSTAL PHYSICS (9)

Lattice – unit cell – Bravais lattice – lattice planes – Miller indices – calculation of number of atoms per unit cell, atomic radius, coordination number, packing factor for SC, BCC, FCC and HCP structures- crystal defects – point, line and surface defects.

UNIT V ULTRASONICS AND NUCLEAR PHYSICS**(9)**

Production of ultrasonics by piezoelectric method –Non Destructive Testing – pulse echo system through transmission and reflection modes - A,B and C –scan displays, Medical applications – Sonogram Introduction – basics about nuclear fission and fusion, nuclear composition – Radiation detectors – semi conductor detector. Reactors – essentials of nuclear reactor- power reactor.

3. www.oyc.yale.edu
4. www.physics.org

OBJECTIVES:

- To gain knowledge on adsorption phenomena.
- # • To make the students conversant with basics of water technology.
- To make the student acquire sound knowledge of electrochemistry and storage devices.
- To acquaint the student with concepts of fuels and rocket propellants.
- To develop an understanding of the basic concepts of corrosion science.
- To acquaint the students with the basics of surface chemistry.

OUTCOMES:

- Outline the basic principles of chemistry for water treatment (K)
- Examine the electrochemical properties to design non – conventional energy storage devices (S)
- Apply the concepts combustion of different fuels (S)
- Identify the concepts of corrosion and its protection in the engineering field (S)
- Apply the concepts of surface chemistry in the field of engineering (S)
- Integrate the chemical principles in the projects undertaken in field of engineering and technology (A)

UNIT I WATER TECHNOLOGY**(9)**

Characteristics – Alkalinity – Types of alkalinity and determination – Hardness – Types and estimation by EDTA method (problems) - Domestic water treatment – Disinfection methods (Chlorination, Ozonation, UV treatment) – Boiler feed water – Requirements – Disadvantages of using hard water in boilers – Internal conditioning (Phosphate, Calgon and Carbonate conditioning methods) – External conditioning – Demineralization process – Desalination and Reverse osmosis.

UNIT II ELECTROCHEMISTRY AND STORAGE DEVICES**(9)**

Electrochemical cells – Reversible and irreversible cells – EMF – Measurement of emf – Single electrode potential – Nernst equation – Reference electrodes – Standard Hydrogen electrode -Calomel electrode – Ion selective electrode – Glass electrode and measurement of pH – Electrochemical series – Significance – Potentiometric titrations (Redox - Fe^{2+} vs dichromate) –Batteries- Primary batteries-Leclanche cell- Secondary batteries- Lead acid battery.

UNIT III FUELS AND ROCKET PROPELLANTS**(9)**

Coal - Proximate and Ultimate analysis - Metallurgical coke - Manufacture by Otto-Hoffman method - Petroleum processing and fractions - Synthetic petrol - Bergius and Fischer-Tropsch method - Knocking - Octane number and Cetane number - Gaseous fuels - Water gas, Producer gas, An introduction to Fuel Cell, $\text{H}_2\text{-O}_2$ Fuel Cell -Rocket engines-Types of rocket engines, Basic principles, Mass fraction.

UNIT IV CORROSION SCIENCE

(9)

Chemical and Electrochemical corrosion - Galvanic corrosion - Differential aeration corrosion - Corrosion control - Sacrificial anode and Impressed current cathodic methods - Corrosion inhibitors - Protective coatings - Paints - Constituents and functions — Metallic coatings - Electroplating (Au) and Electro less plating (Ni) - Surface conversion coating and Hot dipping.

UNIT V SURFACE CHEMISTRY

(9)

Introduction-Adsorption-Types, adsorption of gases on solids, adsorption of solutes from solutions, Adsorption isotherms-Freundlich adsorption isotherm-Langmuir adsorption isotherm- Industrial adsorbent materials- Role of adsorbents in catalysis and water softening- Emulsion- Types-water/oil, oil/water- Applications of adsorption.

Semester – I

15BTCC105 BASIC ELECTRICAL AND ELECTRONICS ENGINEERING 3 0 0 3 OBJECTIVES

1. To impart the basic knowledge about the Electric circuits.
2. To understand the working of various Electrical Machines.
3. To know about various measuring instruments.
4. To understand the basic concepts in semiconductor devices and digital electronics.
5. To understand and analyze basic electric and magnetic circuits.
6. To gain the basic knowledge about the Electric circuits

INTENDED OUTCOMES

1. The students shall develop an intuitive understanding of the circuit analysis, basic concepts of electrical machines, basics of electronics and be able to apply them in practical situation.
2. To study the working principles of electrical machines and power converters.
3. To introduce the components of low-voltage electrical installations.
4. Gained the knowledge in working of Electrical Machines and Transformers.
5. Students will gain the applications of transformers.
6. To understand and analyze basic electric and magnetic circuits.

UNIT I ELECTRIC CIRCUITS

(9)

Ohm's Law – Kirchoff's Laws – Steady State Solution of DC Circuits – Introduction to AC Circuits – Waveforms and RMS Value – Power and Power factor – Single Phase and Three Phase balanced Circuits.

UNIT II ELECTRICAL MACHINES

(9)

Construction, Principle of Operation, Basic Equations and Applications of DC Generators, DC Motors, Single Phase Transformer, Single Phase Induction Motor.

UNIT III MEASURING INSTRUMENTS

(9)

Operating Principles of Moving Coil and Moving Iron Instruments (Ammeters and Voltmeters), Dynamometer type Watt meters and Energy meters.

UNIT IV SEMICONDUCTOR DEVICES AND APPLICATIONS

(9)

Characteristics of PN Junction Diode – Zener Effect – Zener Diode and its Characteristics – Half wave and Full wave Rectifiers – Voltage Regulation, Bipolar Junction Transistor – CB, CE, CC Configurations and Characteristics.

UNIT V DIGITAL ELECTRONICS

(9)

Binary Number System – Logic Gates – Boolean Algebra – Half and Full Adders – Flip-Flops – Registers and Counter – A/D and D/A Conversion (single concepts)

Total: 45

ENGINEERING PHYSICS

OBJECTIVES:

- To develop basic laboratory skills and demonstrating the application of physical principles.
- To prepare for the lab experiment and perform individually a wide spectrum of experiments.
- To present experimental data in various appropriate forms like tabulation, and plots.
- To analyze, Interpret and Summarize experimental results.
- To communicate clearly understanding of various experimental principles, instruments/setup, and procedure.
- To develop the skills for understanding basic electric circuits.

OUTCOMES:

- The students will have the knowledge on Physics practical experiments and that knowledge will be used by them in different engineering and technology applications.
- Prepare for the lab experiment and perform individually a wide spectrum of experiments.
- Present experimental data in various appropriate forms like tabulation, and plots.
- Analyze, Interpret and Summarize experimental results.
- Communicate clearly understanding of various experimental principles, instruments/setup, and procedure.
- Prepare to develop the skills for understanding basic electric circuits.

LIST OF EXPERIMENTS – PHYSICS

1. Determination of velocity of sound and compressibility of liquid – Ultrasonic interferometer.
2. Determination of wavelength of mercury spectrum – spectrometer grating.
3. Determination of Young's modulus of the material – Non uniform bending or Uniform bending.
4. Determination of Viscosity of liquid – Poiseuille's method.
5. Spectrometer Dispersive power of a prism.
6. Torsional pendulum – Determination of Rigidity modulus.
7. Particle size determination using Diode Laser
8. Determination of Laser parameters – Wavelength, and angle of divergence.
9. Determination of acceptance angle in an optical fiber.
10. Determination of thickness of a thin wire – Air wedge method
11. Determination of Band Gap of a semiconductor material.
12. Determination of Specific resistance of a given coil of wire – Carey Foster Bridge

ENGINEERING CHEMISTRY LABORATORY

OBJECTIVES:

- To provide students with practical knowledge of quantitative analysis of materials by classical and instrumental methods for developing experimental skills in building technical competence.
- To estimate the amount of alkalinity ions, hardness, chloride in water sample
- To make the student acquire practical skills in the determination of conductance of solutions, EMF etc
- To acquaint the students with the determination of molecular weight of a polymer by viscometry
- To carried out different types of titrations for estimation of concerned in materials
- To Determine the corrosion rate of steel by weight loss method.

OUTCOMES:

- The students will be outfitted with hands-on knowledge in quantitative chemical analysis of water quality parameters and corrosion measurement.
- Estimate the amount of alkalinity ions, hardness, chloride in water sample
- Measure molecular/system properties of conductance of solutions, EMF etc
- Acquaint the students with the determination of molecular weight of a polymer by visocometry
- Determine the corrosion rate of steel by weight loss method.
- Carrying out different types of titrations for estimation of concerned in materials using comparatively more qualities and quantities of materials involved for accurate results.

LIST OF EXPERIMENTS - CHEMISTRY

1. Estimation of alkalinity of Water sample
2. Estimation of hardness of Water by EDTA
3. Estimation of chloride in Water sample (Argentometric method)
4. Determination of corrosion rate by weight loss method.
5. Conductometric Titration (Simple acid base).
6. Conductometric Titration (Mixture of weak and strong acids).
7. Conduct metric Titration using BaCl_2 vs Na_2SO_4 .
8. pH Titration (acid & base).
9. Potentiometric Titration (Fe^{2+} / KMnO_4 or $\text{K}_2\text{Cr}_2\text{O}_7$).
10. Estimation of Ferric iron by Spectrophotometry.
11. Determination of water of crystallization of a crystalline salt (Copper sulphate).
12. Determination of molecular weight and degree of polymerization using Viscometry.
13. Determination of chemical oxygen demand.

Course Objectives:

- To provide hands-on training for the fabrication of components using carpentry and welding equipment/tools.
- To gain the skills for making fitting joints and household pipeline connections using suitable tools.
- To develop the skills for preparing the green sand mould.
- To present the skills for making the simple household electrical connection.
- To develop the skills for making wood/metal models using suitable tools.
- Prepare green sand mould using suitable tools.

Course Outcomes:

- Fabricate simple components using carpentry and welding equipment/tools.
- Make fitting joints and household pipeline connections using suitable tools.
- Prepare green sand mould using suitable tools.
- Make simple household electrical connections using suitable tools.
- Make simple models using wood and metal.
- Make simple plumbing work

PART – A (CIVIL & MECHANICAL)

1. WELDING

- i. Preparation of arc welding of butt joints, lap joints and tee joints.

2. BASIC MACHINING

- i. Simple Turning and Taper turning
- ii. Drilling and Tapping

3. SHEET METAL WORK

- i. Model making – Trays, funnels, etc.

4. DEMONSTRATION ON

- i. Smithy operations
- ii. Foundry operations
- iii. Plumbing Works
- iv. Carpentry Works

PART –B (ELECTRICAL & ELECTRONICS)

5. ELECTRICAL ENGINEERING

- i. Study of electrical symbols and electrical equipments.
- ii. Construct the wiring diagram for Stair case wiring and Fluorescent lamp wiring.
- iii. Construct the wiring diagram for Residential house wiring using switches, fuse, indicator, lamp and energy meter.
- iv. Measurement of electrical quantities – voltage, current, power & power factor in R load.
- v. Measurement of energy using single phase energy meter.

6. ELECTRONICS ENGINEERING

- i. Study of Electronic components– Resistor (color coding), capacitors and inductors.
- ii. Soldering practice – Components Devices and Circuits – Using general purpose PCB.
- iii. Study of logic gates AND, OR, NOT, NOR and NAND.
- iv. Study of HWR and FWR.

REFERENCES

2. Jeyapoovan, T., Saravanapandian, M, “Engineering Practices Lab Manual”, Vikas PUBLISHING House Pvt. Ltd, Chennai, 2006.
3. Bawa, H.S, “Workshop Practice”, Tata McGraw – Hill Publishing Company Limited, New Delhi, 2007.

Course Objectives:

- To learn conventions and use of drawing tools in making engineering drawings.
- To impart knowledge on orthographic projection.
- To draw orthographic projections of points, line and plane surfaces.
- To draw orthographic projections of solids.
- To impart the basic concepts of isometric projections through simple examples.
- To impart knowledge of the CAD software

Course Outcomes:

Upon successful completion of the course, the students should be able to:

- Recognise the conventions and apply dimensioning concepts while drafting simple objects.
- Draw freehand sketching of multiple views from pictorial views of objects.
- Draw the orthographic projection of points, line and plane surfaces.
- Draw the orthographic projection of solids.
- Draw the isometric projection of the given objects.
- Demonstrate knowledge of the CAD software

UNIT I	INTRODUCTION	(3 + 10)
---------------	---------------------	-----------------

Introduction to Engineering Drawing, Bureau of Indian Standards (BIS), Layout of drawing sheets, sizes of drawing sheets, different types of lines used in drawing practice geometric constructions, principles of dimensioning– linear, angular, aligned system, unidirectional system, parallel dimensioning, chain dimensioning, location dimension and size dimension.

UNIT II SCALES AND PLANE CURVES (3 + 10)

SCALES: Reducing Scale, Enlarging Scale, Plain Scale, Diagonal Scale and Vernier Scale.
Conics – Construction of Ellipse, Parabola and Hyperbola by eccentricity method

UNIT III FREE HAND SKETCHING (3 + 12)

Representation of Three Dimensional objects – General principles of orthographic projection – Need for importance of multiple views and their placement – First angle projection – layout views – Developing visualization skills through free hand sketching of multiple views from pictorial views of objects.

UNIT IV PROJECTION OF POINTS, LINES AND PLANE SURFACES (3 + 12)

Projection of points and straight lines located in the first quadrant – Determination of true lengths and true inclinations – Traces–Projection of polygonal surface and circular lamina inclined to both reference planes.

UNIT V PROJECTION OF SOLIDS (3+12)

Projection of simple solids like prisms, pyramids, cylinder and cone when the axis is inclined to one reference plane by change of position method.

Introduction to Drafting Software/Package (Not for Exam)

(4)

Basic operation of drafting packages, use of various commands for drawing, dimensioning, editing, modifying, saving and printing/plotting the drawings. Introduction to 3D primitives.

5. IS 15021 (Parts 1 to 4) – 2001: Technical drawings – Projection Methods

OBJECTIVE:

- To know the value of being a human being and the value of being a useful citizen.

INTENDED OUTCOME:

- Educate the values and meaning of life in the young minds and to transform them as responsible citizens
- Educate the values and meaning of life
- to transform them as responsible citizens
- Types of values - Components of values
- Educate the values and meaning of Self Development : Self analysis – Goal Setting
- Individual Qualities

UNIT – I :**(4)**

Human life on Earth - Concept of Human Values - Value Education - Aim of education and value education - Types of values - Components of values – Attitudes – types of attitudes

UNIT – II :**(4)**

Self Development : Self analysis – Goal Setting - Thought Analysis – Guarding against Anger - Respect to age, experience, maturity, family members, neighbors, co-workers

UNIT – III :**(5)**

Individual Qualities – Truthfulness – Constructivity – Sacrifice – Sincerity - Self Control – Altruism – Tolerance - Scientific Vision – Regulating Desire

UNIT – IV:**(4)**

Mind Culture - Modern Challenges of Adolescent - Emotions and behavior - Sex and spirituality - Adolescent Emotions - Meditation

UNIT - V :**(3)**

Body and Mind Fitness : (a) Physical Exercises (b) Activities: (i) Moralization of Desires (ii) Neutralization of Anger (iii) Eradication of Worries (iv) Benefits of Blessings.

REFERENCE BOOKS:**Total: 20**

S.No	Author(s) Name	Title of the book	Publisher	Year of Publications
1	Subramanian. R	Professional Ethics	Oxford, New Delhi	2013
2	Govindarajan. M, Natarajan. S, Senthil Kumar. V.S	Engineering Ethics	Prentice Hall of India, New Delhi	2004
3	Tripathi. A.N	Human Values	New Age International	2009
4	Pope. G. U.	Thirukkural with English Translation	Uma Publication, Thanjavur.	2002

Course Objectives

- To motivate learners to acquire listening & speaking skills in both formal and informal context.
- To focus on question forms & to make them understand the importance of using question tags and also the functional use of transformation of sentences.
- To improve their reading habit and to train them in critical and analytical reading.
- To equip them to write for academic as well as work place context.
- To enable students to face interviews.
- To study the receptive and productive skills

Course Outcomes

Students undergoing this course will be able to

- Acquire second language: speaking convincingly, expressing their opinions clearly, negotiating and arguing using appropriate communicative strategies.
- Enhance their reading texts critically and analytically.
- Develop writing effectively, persuasively and producing different types of writing such as narration, description, exposition and argument as well as creative, critical, analytical and evaluative writing.
- Producing different types of writing such as narration, description, exposition and argument as well as creative, critical, analytical and evaluative writing.
- Enrich the ability to face interviews with confidence.
- Ensure the good communication with the society.

UNIT-1**(10)**

Listening - Difference between Hearing & Listening –Listening to informal conversation. **Speaking** - Spoken structures on different situations - Introduction, Greeting, Comments on topics like Films, Games etc, Excuse, Request, Agreement, Disagreement, etc., **Reading** – Extensive and Intensive reading. **Writing** – Report writing - Writing a covering letter. **Grammar** – Regular & Irregular verbs - Kinds of sentences - Question tags. **Vocabulary** – Homonyms and Homophones.

UNIT-II**(8)**

Listening – Note Taking- Improving grasping ability. **Speaking** – Welcome address - Vote of thanks - Master of ceremony. **Reading** – Active and Passive reading - Reading for vocabulary- Reading for a purpose. **Writing** - Writing a review (Film review) - Summary of a story. **Grammar** - Modal verbs – Conjunction - Expression of cause and effect. **Vocabulary** - Phrasal verbs - Idioms.

UNIT – III**(9)**

Listening - Barriers to listening (Physical, Psychological, Linguistic & Cultural). **Speaking** – Stress, Pause and Intonation. **Reading** – Rapid reading – Skimming, Scanning and Surveying. (SQ3R) **Writing** - Essay writing -Minutes of meeting - Agenda – **Grammar** - Active and Passive voice - Purpose expression. **Vocabulary** - Same words used as noun and verb - Often misspelt and confused words.

UNIT-IV**(8)**

Listening – Listening to telephone conversation - Viewing model interviews. **Speaking** – Group Discussion - Correlation between verbal & non - verbal communication. **Reading** – Reading comprehension (short & long text) - Reading job advertisements and profile of a company. **Writing** – Job application - Resume writing - Checklist preparation. **Grammar** - Numerical expressions – Collocations - **Vocabulary** - Singular and Plural (Nouns).

UNIT- V**(10)**

Listening – Types of listening- Improving listening comprehension. **Speaking** - Oral presentation - Vocal communication techniques - Voice, quality, volume, pitch etc., **Reading** -Note making - Making notes from books/ any forms of writing materials. **Writing** - Describing process & products - Recommendation writing – Short essays writing- **Grammar**- Transformation of sentences (Simple, Compound & Complex). **Vocabulary** - Collection of Technical Vocabularies with their meanings.

Note: Students shall have hands on training in improving listening skill in the language laboratory @ 2 periods per each unit.

OBJECTIVES:

- To impart analytical ability in solving mathematical problems as applied to the respective branches of Engineering.
- To understand the concepts of Multiple integrals, Functions of several variables and Fourier series
- To Fourier series to apply physical science and signal systems.
- To understand the concepts of Boundary value problems and Statistics.
- To acquire knowledge on the Fourier series analysis which is central to many applications in engineering apart from its use in solving boundary value problems.
- To enhance the knowledge on the various measures of central tendencies, dispersion, moments, skewness, kurtosis and to interpret them.

OUTCOMES:

- The students will be able to understand mathematical tools needed in evaluating multiple integrals and their usage
- To Calculate and establish identities connecting these quantities, to Evaluate line, surface and volume integrals in simple coordinate systems.
- The students will be able to familiarize functions of several variables which is used in many physical engineering problems. Apply differentiation to solve maxima and minima problems.
- To solve differential equations using Fourier series analysis which plays a vital role in engineering applications
- Introduce the Fourier series analysis which is central to many applications in engineering apart from its use in solving boundary value problems.
- Compute various measures of central tendencies, dispersion, moments, skewness, kurtosis and to interpret them.

UNIT -I MULTIPLE INTEGRALS**(12)**

Double integration in Cartesian – Change of order of integration – Area as a double integral – Triple integration in Cartesian coordinates.

UNIT -II FUNCTIONS OF SEVERAL VARIABLES**(12)**

Function of two variables – Taylor's expansion – maxima and minima – constrained maxima and minima by Lagrangian multiplier method – Jacobians.

UNIT- III FOURIER SERIES**(12)**

Dirichlet's conditions – statement of Fourier theorem – Fourier coefficients – change of scale – Half range series – Harmonic Analysis.

UNIT- IV BOUNDARY VALUE PROBLEMS**(12)**

Method of separation of variables – one dimensional wave equation – one dimensional heat equation – steady state conditions – zero and non – zero boundary conditions.

UNIT – V STATISTICS**(12)**

Measures of central tendency – Mean, Median, Mode, Standard deviation – moments – skewness and kurtosis-correlation – rank correlation.

OBJECTIVES:

- To enrich the understanding of various types of materials and their applications in engineering and technology
- Introduce the concepts of classical and quantum electron theories for diverse applications.
- Understand the basics of magnetic materials and its properties.
- Impart the basic knowledge of superconducting and dielectric materials.
- Inculcate the technology in synthesis of nano materials.
- To Summarize the basics of nano structures and synthesizing techniques

OUTCOMES:

- Explain the ideas of classical and quantum electron theories and energy band structures.
- Illustrate the basics of semiconductor physics and its related concepts.
- Compare the different magnetic materials, its properties and infer its role in various fields.
- Identify the properties of superconducting materials and its engineering applications.
- Extend the various polarization techniques and applications of dielectric materials.
- Summarize the basics of nano structures and synthesizing techniques

UNIT I CONDUCTING MATERIALS**(9)**

Conductors – classical free electron theory of metals – Electrical and thermal conductivity – Wiedemann – Franz law – Lorentz number – Draw backs of classical theory – Quantum theory – Fermi distribution function – Effect of temperature on Fermi Function – Density of energy states – carrier concentration in metals.

UNIT II SEMICONDUCTING MATERIALS**(9)**

Intrinsic semiconductor – carrier concentration derivation – Fermi level – Variation of Fermi level with temperature – electrical conductivity – band gap determination – extrinsic semiconductors – carrier concentration derivation in n-type semiconductor – variation of Fermi level with temperature and impurity concentration – compound semiconductors – Hall effect – Determination of Hall coefficient – Applications.

UNIT III MAGNETIC AND SUPERCONDUCTING MATERIALS**(9)**

Origin of magnetic moment – Dia and para magnetism – Ferro magnetism – Domain theory – Hysteresis – soft and hard magnetic materials – anti – ferromagnetic materials – Ferrites – applications. Superconductivity : properties - Types of super conductors – BCS theory of superconductivity(Qualitative) - High Temperature superconductors – Applications of superconductors – magnetic levitation.

UNIT IV DIELECTRIC MATERIALS**(9)**

Electrical susceptibility – dielectric constant – electronic, ionic, orientational and space charge polarization – frequency and temperature dependence of polarisation – internal field – Claussius – Mosotti relation (derivation) – dielectric loss – dielectric breakdown – Applications of dielectric materials – ferroelectricity and applications.

UNIT V ADVANCED MATERIALS**(9)**

Metallic glasses: preparation, properties and applications.

Shape memory alloys (SMA): Characteristics, properties of NiTi alloy, applications.

Composite materials, Aircraft materials and non-metallic materials.

Nano materials: synthesis – Physical and chemical vapour deposition – ball milling - properties of nanoparticles and applications. Carbon nanotubes: structure – properties and applications.

--

Course Objectives:

- To give a comprehensive insight into natural resources, ecosystem and biodiversity.
- To educate the ways and means of the environment
- To protect the environment from various types of pollution.
- To impart some fundamental knowledge on human welfare measures.
- To create the awareness about environmental problems among people.
- To motivate public to participate in environment protection and improvement.

Course Outcomes (COs)**Upon completion of the course the students will be able to**

- Master core concepts and methods from ecological and physical sciences and their application in environmental problem solving.
- Master core concepts and methods from economic, political, and social analysis as they pertain to the design and evaluation of environmental policies and institutions.
- Appreciate the ethical, cross-cultural, and historical context of environmental issues and the links between human and natural systems.
- Understand the transnational character of environmental problems and ways of addressing them, including interactions across local to global scales.
- Apply systems concepts and methodologies to analyze and understand interactions between social and environmental processes.
- Reflect critically about their roles and identities as citizens, consumers and environmental actors in a complex, interconnected world.
- Demonstrate proficiency in quantitative methods, qualitative analysis, critical thinking, and written and oral communication needed to conduct high-level work as interdisciplinary scholars and/or practitioners.

UNIT I INTRODUCTION TO ENVIRONMENTAL STUDIES AND NATURAL RESOURCES**(9)**

Definition, Scope and Importance – Need for public awareness -Forest resources: Use and over-exploitation, deforestation- Water resources-Use and over-utilization of surface and ground water, floods, drought, conflicts over water- Land resources-Land as a resource, land degradation, man induced landslides, soil erosion and desertification –Mineral resources: Use and exploitation, environmental effects of extracting and using mineral resources- Food resources-World food problems, changes caused by agriculture and overgrazing, effects of modern agriculture- Energy resources-Growing energy needs, renewable and non renewable energy sources, use of alternate energy sources- role of an individual in conservation of natural resources.

UNIT II ECOSYSTEM

(9)

Chemistry and Environment- Environmental segments, Composition and Structure of atmosphere- Concept of an ecosystem- Structure, components and function of an ecosystem Energy flow in the ecosystem – Food chain, Food web and Ecological pyramids, Structure and function of Terrestrial ecosystem (Forest, Desert and Grassland ecosystem) and Aquatic ecosystem (Fresh water and Marine ecosystem)

UNIT III BIODIVERSITY

(9)

Introduction to biodiversity, Definition- Genetic diversity, Species diversity and Ecosystem diversity, Biogeographical classification of India, Importance of biodiversity-Value of biodiversity – Hot Spots of biodiversity-Threats to biodiversity - Endangered and Endemic Species of India – Conservation of biodiversity- In-Situ and Ex-Situ conservation of biodiversity.

UNIT IV ENVIRONMENTAL POLLUTION

(9)

Definition – causes, effects and control measures of Air pollution, Water pollution, Soil pollution, Marine pollution, Noise pollution and Thermal pollution. Solid waste management-causes, effects and control measures of urban and industrial wastes– Role of an individual in prevention of pollution–Disaster management-earthquake, tsunami, cyclone and landslides.

UNIT V SOCIAL ISSUES AND ENVIRONMENT

(9)

From Unsustainable to Sustainable development, Urban problems related to energy sources, Water conservation, Rain water harvesting and Watershed management, Resettlement and rehabilitation of people, its problems and concerns, Environmental ethics- Issues and possible solutions- Climate change- Green house effect and Global warming, Acid rain, Ozone layer depletion, Wasteland reclamation- Environment Protection Act- Human Rights- Value education, Role of Information Technology in Environment and Human health-Population growth, Variation of population among nations-Population explosion.

COURSE OBJECTIVE:

- To understand the foundations of biochemistry
- To discuss the properties of water and its interactions
- To explain the structure and properties of carbohydrates
- To explain the structure and properties of amino acids, Peptides, Proteins and lipids
- To understand the chemistry and function of nucleotides and nucleic acids.
- To discuss the various functions and properties of important biomolecule.

COURSE OUTCOMES:

1. Outline the cellular foundations of Biochemistry
2. Interpret different types of biomolecules and its interaction with water.
3. Analyze the function and properties of carbohydrates.
4. Explain the importance of amino acids, Peptides, Proteins and lipids.
5. Examine the structure, function and properties of nucleotides, nucleic acid, DNA.
6. Assess various functions and properties of important biomolecule.

UNIT-I THE FOUNDATIONS OF BIOCHEMISTRY (8)

Cellular foundations: the universal features of living cells, phylogeny of three domain of life, classification of organisms based on energy. Chemical foundation: essential elements, common functional groups of biomolecules, molecular component of an *E.coli* cell, macromolecules of cells. Physical foundation: Energy interconversion in living organisms, entropy, enthalpy, Gibbs theory, Genetic foundations: DNA to RNA to protein, Evolutionary foundations: genetic mutation, role of genetic mutation, stimulation of chemical evaluation, molecular anatomy revealing evolutionary relationship.

UNIT-II WATER (9)

Weak interactions in aqueous systems, Hydrogen bonding, structure of water molecules, bond dissociation energy, common hydrogen bonds in biological systems, directionality of hydrogen bond, electrostatic interaction of water with charged solutes, Polar, Nonpolar, and Amphipathic Biomolecules, Entropy changes upon dissolving crystalline substances, clathrates, micelles, Van der Waals interaction, hydrophobic interaction, four types of non covalent interactions in biomolecules in aqueous solvent, colligative properties, osmosis and the measurement of osmotic pressure, ionization of weak acid and weak bases, buffers.

UNIT-III (a) AMINO ACIDS, PEPTIDES, PROTEINS (10)

General structure of amino acid, properties, conventions of amino acids, classification of amino acids by R group, uncommon amino acids, Zwitterion. Peptides: Peptide bond, polypeptides, oligomers, protomers. Proteins: hierarchy, four levels of structure in protein, steps in sequencing of a polypeptide, locating di sulfide bond. Chemical synthesis of a peptide.

(b) LIPIDS

Fatty acids, structural lipids in membrane, galactolipids, sphingolipids, and sterols, lipid extraction.

UNIT-IV CARBOHYDRATES AND GLYCOBIOLOGY**(9)**

Monosaccharides: aldose, ketose, epimers, pyranoses, furanoses, anomers, Haworth formula, conformation of pyranoses, sugars as reducing agents, Disaccharides: Glycosidic bonds, hydrolysis, Polysaccharides: starch, glycogen, dextran, homopolysaccharides, chitin. Glyconjugates: Glycoproteins, proteoglycan, and glycolipids. Sugar code, methods of carbohydrate analysis

UNIT-V NUCLEOTIDES AND NUCLEIC ACIDS**(9)**

Nucleotides and nucleic acid nomenclature, Phosphodiesterase Linkage, structure of purine and pyrimidine, Absorption spectra of the common nucleotide, Nucleic acid structure: DNA stores genetic information, DNA is a Double helix, Watson-Crick structure, RNA-three dimensional structure, nucleic acid chemistry: denaturation and annealing, DNA sequences determination, chemical synthesis of DNA, purine, pyrimidine synthesis.

S.N O	AUTHOR (S) NAME	TITLE OF THE BOOK	PUBLISHER	YEAR OF PUBLICATION
1	D. L. Nelson, M. Cox & M. M. Cox	Lehninger Principles of Biochemistry 4 th Edition	Freeman, W. H. & Company, New York	2004

REFERENCES:

S.N O	AUTHOR (S) NAME	TITLE OF THE BOOK	PUBLISHER	YEAR OF PUBLICATION
1	Zubay, G.L	Principles of Biochemistry	WCB Publishers, London	1996
2	Herg, J.M., J.L. Tymoczko & L. Stryer	Biochemistry. V Edition	WH-Freeman and Co, New York	2002
3	Voet, G. & A. Voet	Fundamentals of Biochemistry. II Edition	John Wiley and Sons, Inc. New York	2015

Course Objectives:

- To identify and understand the working of key components of a computer program.
- To identify and understand the various kinds of keywords and different data types of C programming.
- To understand, analyse and implement software development tools like algorithm, pseudo codes and programming structure.
- To study, analyse and understand the logical structure of a computer program, and different construct to develop a program in C language.
- Understand, analyze and implement software development tools like algorithm, pseudo codes and programming structure.
- Study, analyze and understand logical structure of a computer program, and different construct to develop a program in 'C' language

Course Outcomes:

Upon successful completion of the course, the students should be able to:

- Formulate simple algorithms for arithmetic and logical problems.
- Translate the algorithms to programs (in C language).
- Test and execute the programs and correct syntax and logical errors.
- Implement conditional branching, iteration and recursion.
- Apply programming to solve matrix addition and multiplication problems and searching and sorting problems.
- Apply programming to solve simple numerical method problems, namely root finding of function, differentiation of function and simple integration.

UNIT I OVERVIEW OF COMPUTER (8)

What is computer- Computer Components-Generation of Computers- Memory Organization-Memory Types-Input and Output Devices- Concepts of Hardware and Software- What is OS-Windows and Unix OS- Programming Languages- Basics of Computer Networks- LAN, WAN-Concept of Internet- ISP- Basics of word processing- Basics of spreadsheet – Basics of presentation Software

UNIT II OVERVIEW OF 'C' (8)

Algorithms-Representation of Algorithms-Flowchart- Introduction to programming Languages-What is C- C Character set- Constants, Variables and Keywords-General form of C Program-The First C Program-Data types-Arithmetic Instructions- Type conversions- Relational and Logical Operators- Hierarchy and associativity

UNIT III SELECTION AND ITERATION (9)

Selection Structures- If and nested if - Loops-Definition and types-While loop-for loop- do-while loop- break and continue- Nested loops- Advantages of iteration-Menu driven programs-Switch Case

UNIT IV FUNCTIONS**(10)**

Functions- Definition-types-Functions without arguments- Functions with Input arguments- Functions with output parameters-local and global variables- advantages of functions- Call by value and Call by reference- Recursion- Function as an argument

UNIT V ARRAYS AND STRINGS**(10)**

Arrays-definition- Declaring and referencing arrays- Array initialization- Using for loops for accessing arrays-Passing array elements as function arguments-2D Array - Matrix Addition and multiplication- Introduction to Strings- declaration and Initialization--String constant -Strings as Array of Characters

Semester – II
15BTCC211 COMPUTER PRACTICE AND PROGRAMMING LABORATORY 0 0 3 2

Course Objectives

- Identify and understand the working of key components of a computer program.
- Identify and understand the various kinds of keywords and different data types of C programming
- Understand, analyze and implement software development tools using algorithm
- Understand, analyze and implement software development tools using linux
- Acquire and analyse the roots of equations
- Study, analyze and understand logical structure of a computer program, and different construct to develop a program in “C” language

Course Outcomes:

The course will enable the students.

- To formulate simple algorithms for arithmetic and logical problems.
- To translate the algorithms to programs(in C language).
- To test and execute the programs and correct syntax and logical errors.
- To implement conditional branching, iteration and recursion.
- To decompose a problem in to functions and synthesize a complete program using divide and conquer approach. and use arrays, pointers and structures to formulate algorithms and programs.
- To apply programming to solve matrix addition and multiplication problems and searching and sorting problems.

LIST OF EXPERIMENTS

1. Working with word Processing, Spreadsheet and presentation software in Linux
2. Programming in Scratch:
Practicing fundamental concepts of programming like sequence, selection decision statements, working of loops and event driven programming
3. C Programming:
Practicing programs to get exposure to basic data types, algebraic expressions, Conditional statements, Input and Output Formatting, Decision Statements, Switch Case, Control structures, arrays, Strings and function

Total: 45

COURSE OBJECTIVE:

- To experiment with sugar quantification method
- To perform analysis to distinguish reducing and non-reducing sugars
- To understand the protein quantification using Lowry's method
- To explain the quantification of lipid and amino acid
- To experiment the separation of solutes through chromatography
- To demonstrate the DNA and RNA estimation through DPA and Orcinol method.

COURSE OUTCOMES:

1. Outline the sugar quantification through anthrone method
2. Illustrate the procedure for distinguishing reducing and non-reducing sugars
3. Perform the protein quantification
4. Recall the procedure for distinguishing imino and amino acids using ninhydrin test.
5. Interpret the solutes separated through chromatography
6. Discuss the DNA and RNA estimation.

LIST OF EXPERIMENTS:

1. Quantification of sugars (Anthrone method)
2. Distinguish reducing and nonreducing sugars.
3. Quantification of proteins (Lowry *et al* Method)
4. Using ninhydrin for distinguishing Imino and amino acids
5. Quantification of lipids
6. Analysis of oils- Acid number
7. Paper Chromatography
8. Estimation of DNA (DPA method)
9. Estimation of RNA (Orcinol method)

TEXT BOOKS:

S. NO.	AUTHOR (S) NAME	TITLE OF THE BOOK	PUBLISHER	YEAR OF PUBLICATION
1	Boyer, R.	Experimental Biochemistry	Benjamin Cummings, Redwood City, California, USA	2000
2	Palanivelu, P.	Analytical Biochemistry and Separation Techniques	Kalaimani Printers, Madurai	2001

REFERENCE BOOK:

S. NO.	AUTHOR (S) NAME	TITLE OF THE BOOK	PUBLISHER	YEAR OF PUBLICATION
1	Sadasivam, S. & A. Manickam	Biochemical Methods	New Age International Pvt Ltd Publishers, New Delhi	2002

OBJECTIVE:

- • To understand the basics of biomolecules, human anatomy and physiology
- To have better understanding of advancements in biology
- To understand the basics of biomolecules
- To understand the basics of human anatomy
- To understand the basics of physiology
- To have better understanding of advancements

UNIT-I BASICS OF CELL BIOLOGY**(4)**

History, Cell theory, Cell Structure-Prokaryotic and Eukaryotic cells, Animal and Plant Cell. Cell cycle, Mitosis, Meiosis and Reproductive cycle.

UNIT-II BIOMOLECULES**(4)**

Carbohydrates-Classification, Qualitative tests for sugars, Lipids-Definition, Classification; Proteins- classification and functions; Nucleic acids-basic structure; Hormones-definition, importance; Vitamins.

UNIT-III HUMAN ANATOMY AND PHYSIOLOGY**(5)**

Levels of Structural organization, the eleven systems of human body, central nervous system- cardiovascular system and immune system.

UNIT-IV GENETICS AND GENETIC DISORDERS**(4)**

History of genetics-Scope and Importance of genetics, Mendel and his work, DNA stores genetic information- gene mutation, disorders due to mutant genes.

UNIT-V TECHNOLOGICAL ADVANCES IN BIOLOGY**(3)**

Biopharmaceuticals, Gene therapy, genetically modified crops, probiotics.

OBJECTIVES

- To understand the basic laws and concepts of chemical calculations.
- To explain the first and second laws of thermodynamics.
- To explain the overall material balances of chemical reactions and its basic calculations.
- To discuss the fluid flow mechanics and its concepts.
- To understand the fluid transportation.
- To understand the basic principles of chemical calculations and measurements.

COURSE OUTCOMES

1. Outline the basic chemical calculations and the basic laws governing it.
2. Illustrate basic laws of thermodynamics.
3. Infer the overall material balances of chemical reactions and its basic calculations.
4. Outline the application of fluid flow mechanics in chemical engineering.
5. Discuss the fluid flow and its measurements.
6. Understand the basic principles of chemical calculations and measurements.

UNIT- I BASIC CHEMICAL CALCULATIONS (9)

SI units, stoichiometry, basic chemical calculations: mole, atomic mass and molar mass, equivalent mass, conversion of mass fraction to mole fraction, molarity, normality, density, specific gravity. Ideal gas law- Ideal mixtures and solutions – Dalton's law of additive volumes, Henry's law, Raoult's law, Concepts of Simpson's rule and their applications to different systems.

UNIT- II FIRST AND SECOND LAWS OF THERMODYNAMICS (8)

Energy balances, sensible heat, latent heat, vapour pressure, steady and unsteady state calculations.

UNIT- III MATERIAL BALANCES (10)

Overall and component balances, material balances without and with chemical reactions, degrees of freedom, steady and unsteady state, unit operations, recycle and bypass humidity calculations.

UNIT- IV FLUID MECHANICS (10)

Fluids; fluid statics and applications in chemical engineering; fluid flow; laminar; Turbulent pressure drops; compressible fluid flow concepts; multiphase flow concepts.

UNIT-V FLOW THROUGH PACKED COLUMNS (8)

Fluidisation, centrifugal and piston pumps, characteristics, compressors, work.

TEXT BOOKS

S.No.	Author(s) Name	Title of the book	Publisher	Year of Publications
1	Bhatt B.I., and Vora S.M.	Stoichiometry	Tata McGraw- Hill,	2010
2	McCabe W.L., Smith J.C, and Harriot P.	Unit Operations In Chemical Engineering	McGraw-Hill Inc	1993

Course Objectives:

- To understand the basics of bioenergetics
- To explain the metabolism of carbohydrate
- To explain the nucleic acid synthesis and regulations
- To discuss the synthesis and catabolism of amino acids pathways
- To understand the lipid metabolism and its associated genetic disorders
- To relate the importance of metabolism and how it leads to disorders.

Course Outcomes:

1. Outline the relationship of bioenergetics in biological reactions.
2. Examine the knowledge of carbohydrate metabolic pathways.
3. Describe the concept of nucleic acid synthesis and regulations.
4. Illustrate the synthesis and catabolism of amino acids pathways.
5. Explain the lipid metabolism and its associated genetic disorders.
6. Discuss the importance of metabolism and how it leads to disorders.

UNIT-I BIOENERGETICS (8)

Energy relationship between the catabolic and anabolic pathways, Five major reactions in living cells, Bioenergetics and thermodynamics. Phosphoryl group transfers; ATP hydrolysis in two steps, Ping-Pong mechanism of nucleoside diphosphate kinase.

UNIT-II METABOLISM OF CARBOHYDRATES (9)

Major pathways of glucose utilization: glycolysis, fermentation, gluconeogenesis: carbohydrate synthesis from simple precursors. Pentose phosphate pathway; TCA cycle: Reactions and regulations.

UNIT III METABOLISM OF NUCLEIC ACIDS (9)

Biosynthesis of nucleotides, denovo and salvage pathways for purines and pyrimidines, regulatory mechanisms: Metabolic disorders associated with nucleic acid metabolism.

UNIT-IV METABOLISM OF AMINO ACIDS (10)

Biosynthesis of amino acids from acetyl coA, Biosynthesis of essential amino acids (Met, Thr, Lys, Ile, Val, Leu, Phe, Trp, Tyr). Glucose-alanine cycle, Urea cycle. Pathways of degradation of aromatic, glucogenic and ketogenic aminoacids. Human genetic disorders affecting amino acid metabolism.

UNIT-V METABOLISM OF LIPIDS (9)

Biosynthesis of fatty acid, Triacylglycerol. Biosynthesis of cholesterol. Digestion, mobilization, and transport of fats, fatty acid entry into mitochondria via the acyl-carnitine/carnitine transporter. The β -oxidation pathway. Oxidation of a monounsaturated and polyunsaturated fatty acid. Genetic defects in fatty Acyl-CoA dehydrogenases causing serious diseases.

TEXT BOOKS

S.No.	Author(s) Name	Title of the book	Publisher	Year of Publication
1	Nelson, D. L. and Cox, M. M	Lehninger Principles Biochemistry 4 th Edition	Freeman, W. H. & Company	2004

REFERENCES

S.No.	Author(s) Name	Title of the book	Publisher	Year of Publication
1	Voet and Voet	Biochemistry	John Wiley & Sons Inc	1995
2	Murray, R. K., Granner, B.K., Mayes, P.A., and Rodwell. V.W.	Harper's Biochemistry	Prentice Hall International	2000
3	Creighton. T.E.	Proteins, Structure and Molecular Properties	Freeman and Co	1993
4	Salway, J. G.	Metabolism at a Glance	Blackwell Science Ltd	2000

Course Objectives

- To explain the cell structure of Prokaryotes and Eukaryotes
- To understand how cells undergo mitosis
- To outline the views on transport across the cell membranes.
- To explain the signaling process involved in the cell.
- To illustrate the function of mitochondria and chloroplast.
- To recall the importance of cell signaling process to understand diseases.

Course Outcomes

1. Summarize the structure and function of cell components
2. Understand the role of the cytoskeletal proteins and link it with cell cycle.
3. Illustrate the transport process across the cell membrane.
4. Outline the basic ideas on signaling process through the receptors.
5. Explain the electron transfer in mitochondria.
6. Relate the importance of cell signaling process to understand diseases.

UNIT-I CELL STRUCTURE AND CELL ORGANELLES (9)

History of cell biology, comparison of eukaryotic and prokaryotic cells, principles of membrane organisation, membrane proteins; Structure of prokaryotic cells - cilia, flagella, cell wall; Structure of eukaryotic cell organelles: cytoplasm, endoplasmic reticulum, mitochondria, chloroplast, peroxisomes, nucleus.

UNIT-II CYTOSKELETAL PROTEINS & CELL DIVISION (9)

Cytoskeletal proteins, contractile proteins – actin & myosin; extracellular matrix; Types of cell division: mitosis & meiosis, Cell cycle and molecules that control cell cycle

UNIT-III TRANSPORT ACROSS CELL MEMBRANES (9)

Passive & active transport, permeases, sodium potassium pump, Ca²⁺ ATPase pumps, lysosomal and vacuolar membrane ATP dependent proton pumps, co transport symport, antiport, active group translocation; endocytosis and exocytosis; Entry of viruses and toxins into cells.

UNIT-IV RECEPTORS AND MODES OF CELL SIGNALLING (9)

Cytosolic, nuclear and membrane bound receptors, examples of receptors, identify cation and purification of cell surface receptors, autocrine, paracrine and endocrine modes of action

UNIT- V FUNCTION OF MITOCHONDRIA AND CHLOROPLAST (9)

Electron Transport in Mitochondria: Electron transport chain, Reduction Potentials of Electron Carriers, Electron transfer from reduced cytochrome *c* to O₂, Chloroplast: photosynthetic stages and light-absorbing pigments.

REFERENECE

S.No.	Author(s) Name	Title of the book	Publisher	Year of Publications
1	S. C. Rastogi	Cell Biology	New Age International Pub. Ltd	2004
2	Karp, G and Puritt, N. L	Cell and Molecular biology, Concepts and Experiments	John Wiley and Sons Inc.,	2005
3	De Robertis, E. D. P. and De Robertis, E. M. F	Cell and Molecular biology	B. I publications pvt. Ltd.	2005

Course Objectives

- To illustrate the basic concepts of microbiology and different microbial identification techniques.
- To explain the structure and multiplication of microorganism.
- To interpret the microbial growth and its metabolism.
- To outline the mechanism for the control of microorganisms.
- To infer the application of microorganism in industries.
- To explain the role of microorganisms in bioremediation.

Course Outcomes

1. Outline the history of microbiology and microbial staining techniques.
2. Discuss the microbial structural organization and multiplication.
3. Infer the basic requirements for microbial growth towards the biosynthesis of important molecules.
4. Discuss the controlling mechanism of microorganisms.
5. Illustrate the production of various metabolites and its applications.
6. Explain the role of microorganisms in bioremediation.

UNIT-I INTRODUCTION**(8)**

History of microbiology, classification and nomenclature of microorganism, Microbes in soil, air and water microscopic examination of microorganisms, light and electron microscopy, principles of different staining techniques like gram staining, acid fast, capsular staining, flagellar staining.

UNIT-II MICROBES-STRUCTURE AND MULTIPLICATION**(10)**

Structural organization and multiplication of bacteria, viruses, algae and fungi with a special mention of life history of actinomycetes, yeast, mycoplasma and bacteriophage.

UNIT- III MICROBIAL NUTRITION, GROWTH AND METABOLISM**(10)**

The cultivation of bacteria, Nutritional requirements of bacteria and different media used for bacterial culture; growth curve and different methods to quantify the bacterial growth, aerobic and anaerobic bioenergetics and utilization of energy for biosynthesis of important molecules.

UNIT – IV CONTROL OF MICROORGANISMS**(8)**

Physical and chemical control of microorganisms, host-microbe interactions, antibacterial, anti-fungal and anti-viral agents, mode of action and resistance to antibiotics, clinically important microorganisms.

UNIT – V INDUSTRIAL AND ENVIRONMENTAL MICROBIOLOGY**(9)**

Primary metabolites; secondary metabolites and their applications-preservation of food; Microorganism used for the production of penicillin, alcohol, vit.B-12; biogas; bioremediation; mycorrhiza; Biological Nitrogen fixation, microorganisms and pollution control.

Total Hours: 45

TEXT BOOKS

S.No.	Author(s) Name	Title of the book	Publisher	Year of Publications
1	TalaronK,Casita,Pelczar And Reid.	Foundations In Microbiology	W.C.Brown Publishers	1993
2	Pelczar MJ, Chan ECS and Krein NR	Microbiology,	Tata McGraw- Hil Edition	2007
3	Prescott LM, Harley JP, Klein DA,	Microbiology, 5 th Edition	McGraw Hill	2002
4	Kolwzan, B, Adamiak, W, Grabes, K, Pawelczyk A	Introduction to Environmental Microbiology	ebook	2006

COURSE OBJECTIVES

- To explain the basic reactions in organic chemistry
- To discuss the kinetics of enzymes using different methods
- To illustrate the enzyme inhibition process
- To outline the various enzymatic reactions in relation with stereochemistry
- To determine the specific enzyme structure and mechanism
- To classify the protein folding kinetics

COURSE OUTCOMES

1. Interpret the basic reactions in stereochemistry
2. Derive and calculate the kinetics of enzymes in different orders
3. Summarize the enzymatic reactions in stereochemistry
4. Illustrate the mechanism behind specific enzymes
5. Explain the protein folding kinetics
6. Discuss the protein folding pathways

UNIT-I CONCEPTS IN ORGANIC CHEMISTRY (9)

Stereochemistry: optical activity, chiral center – enantiomers - *R*, *S* notation, stereo selective and stereospecific reactions-*Z* and *E* isomers, *Re*, *Si* faces, conformational analysis, ethane, n-butane mechanisms of S_N1 S_N2 reactions, $E1E2$ reactions, ester formation and hydrolysis, reaction rates, hammond's postulate, h/d effects, catalysis: general acid – base and covalent catalysis.

UNIT-II ENZYME KINETICS AND INHIBITION (9)

Steady state kinetics, derivation and significance of Michaelis Menten equation, Line weaver-Burke Plot, single and double displacement reactions, cooperativity with respect to oxygen binding by haemoglobin. Inhibition –reversible and irreversible – competitive, non-competitive, uncompetitive inhibition (characteristics and examples).

UNIT-III STEREOCHEMISTRY OF ENZYMATIC REACTIONS (9)

Stereospecific enzymatic reactions - fumarase catalysed reactions - NAD dependent oxidation and reduction reactions - stereochemistry of nucleophilic reactions - chiral methyl group, chiral phosphate.

UNIT-IV ENZYME STRUCTURE AND MECHANISM (9)

The dehydrogenases (alcohol dehydrogenase) - proteases (serine protease), lysozyme, Ribonucleases, Ribozymes.

UNIT-V PROTEIN FOLDING KINETICS AND FOLDING PATHWAYS (9)

Kinetics of protein folding: basic methods, two state kinetics, multistate kinetics, transition states in protein folding, $^1\text{H}/^2\text{H}$ exchange methods, folding of peptides, CI2 folding, molecular chaperones.

TEXT BOOKS

S.No.	Author(s) Name	Title of the book	Publisher	Year of Publications
1	Fersht A. R	Structure and Mechanism in Protein Science: A Guide to Enzyme Catalysis and Protein Folding	W H Freeman	1999
2	Morrison, R. T and Boyd, R. N	Organic Chemistry	Prentice Hall of India Pvt Ltd	1999

REFERENCE BOOKS

S.No.	Author(s) Name	Title of the book	Publisher	Year of Publications
1	Dugas H	Bioorganic Chemistry	Springer Verlag	1999
2	Zubay G L,	Biochemistry	WCB/McGraw- Hill publishers	1998
3	Nelson, D. L. and Cox, M. M	Lehninger Principles of Biochemistry 4 th Edition	Freeman, W. H. & Company	2004
4	Palmer, T	Enzymes	Affiliated East West Press Pvt.Ltd	2004

Course objective:

- To understand the nature of the cells present in the biological sample through microscope.
- To explain the different staining techniques.
- To understand the stages of mitosis.
- To understand the chloroplast isolation from leaves.
- To demonstrate the different types of blood cells.
- To understand about the osmosis and tonicity.

Course outcomes:

1. Illustrate the handling of microscope and categorize the cells present in the biological sample.
2. Interpret the various staining techniques to identify the cell.
3. Outline the stages of mitosis.
4. Understand the blood cell identification.
5. Understand the knowledge about the cell concentration with osmosis and tonicity.
6. Recall assay to identify the cell condition.

1. Principles of microscopy – Phase contrast and Fluorescent Microscopy.
2. Identification of given plant, animal and bacterial cells and their components by microscopy.
3. Staining Techniques: (i) Leishmann staining (ii) Giemsa staining.
4. Staining for different stages of mitosis in *Allium cepa* (Onion).
5. Separation of plant pigments by Chromatography.
6. Identification of different types of blood cells
7. Isolation of chloroplasts from spinach leaves.
8. Osmosis and Tonicity.
9. Tryphan Blue Assay.

REFERENCE BOOKS

S.No.	Author(s) Name	Title of the book	Publisher	Year of Publications
1	Bregman, A. A	Laboratory Investigations in Cell and Molecular Biology	Wiley	2001
2	Dr.S.Rajan and Mrs.R.Selvi Christy	Experimental procedures in Life Sciences	Anjanna Book House, Chennai	2011

Course objective:

- To understand the nature of the cells present in the biological sample through microscope.
- To explain the different staining techniques.
- To discuss the different culture media preparation.
- To demonstrate the culturing, growth and control of micro organisms.
- To understand about the chemicals that controls the bacterial growth.
- To optimize the parameters on bacterial growth.

Course outcomes:

1. Illustrate the handling of microscope and categorize the cells present in the biological sample.
2. Interpret the various staining techniques to identify the cell.
3. Outline the different types of media preparation techniques.
4. Understand the growth of the organism and the parameters that influences their stability to grow.
5. Understand the knowledge about the chemicals that controls the bacterial growth.
6. Recall the growth curve and the control of microorganisms.

1. Laboratory Safety and Aseptic Techniques
2. Microscopy-Light Microscopy
3. Culture media – Types, preparation of nutrient broth and nutrient agar
4. Culturing of microorganisms – in broth and in plates (spread plate, pour plate, streak plate)
5. Staining Techniques & Motility Test
6. Quantitation of Microorganisms
7. Chemical Control of Microorganisms &Antibiotic Sensitivity Assay
8. Bacterial Growth Curve
9. Effect of different parameters on bacterial growth (temperature, UV irradiation)

COURSE OBJECTIVES

- To understand the synthesis of Aspirin and p-nitroacetanilide
- To explain the preparation method for Acetanilide from Aniline
- To experiment on sucrose hydrolysis
- To perform reactions for the preparation of alpha D-glucopyranose penta acetate and 1,2:5,6-dicyclohexylidene- alpha-D glucofuranose.
- To determine the extraction procedure for lycopene
- To discuss the methods for the preparation of oleic acid and casein

COURSE OUTCOMES

1. Analyze the protocol for aspirin synthesis and p-nitroacetanilide
2. Infer the preparation of Acetanilide from Aniline
3. Outline the inference on sucrose hydrolysis
4. Determine the protocol for preparation of alpha D-glucopyranose penta acetate and 1,2:5,6-dicyclohexylidene- alpha-D glucofuranose.
5. Perform the extraction of lycopene from different sources
6. Experiment the suitable method for the preparation of casein from milk

1. Synthesis of Aspirin.
2. Synthesis of p-nitroacetanilide.
3. Preparation of Acetanilide from Aniline.
4. Hydrolysis of Sucrose.
5. Extraction of Lycopene
6. Preparation of alpha D-glucopyranose penta acetate.
7. Preparation of 1,2:5,6- dicyclohexylidene- alpha-D glucofuranose.
8. Preparation of Oleic acid.
9. Preparation of casein from milk

REFERENCE BOOKS

S.No.	Author(s) Name	Title of the book	Publisher	Year of Publications
1	Leonard, J Lygo, B and Procter, G	Advanced Practical Organic Chemistry	CRC Press	1994

OBJECTIVES:

- To assist students to understand the role of thinking in all forms of communication.
- To help students with neutral accent.
- To guide students to read and comprehend articles from newspapers and magazines.
- To equip students with oral and appropriate written communication skills.
- To assist students with employability and job search skills
- To make soft skills will be incorporated and have a good listening capability.

OUTCOMES:

- Speak clearly, confidently, comprehensibly, and communicate with one or many listeners using appropriate communicative strategies.
- Write cohesively, coherently and flawlessly avoiding grammatical errors, using a wide vocabulary range, organizing their ideas logically on a topic.
- Listen to/ view and comprehend different spoken discourses/ excerpts in different accents.
- Take national and international examination and enhance the performance at Placement Interviews.
- Be motivated to lead a group and able to guide the group with confidence.
- Soft skills will be incorporated and have a good listening capability.

UNIT - I ESSENTIALS OF COMMUNICATION

Communication: Definition-Process-Scope-Types- Barriers- Dyadic Communication exercises.

UNIT - II SPEECH PROCESS

Pronunciation – Voice quality – Vowels – Consonants – Diphthongs – Syllables – Word stress - Sentence Stress – Pause - Intonation – Accent.

UNIT - III ORAL COMMUNICATION

Distinguishing between Formal and Informal speech – Defining and Describing objects and people –Self Introduction – Extempore talk on a given topic - Asking questions politely, disagreeing politely in formal contexts – Speaking to a group - Giving oral presentations – Group discussion – Debates- Types of Interview.

UNIT - IV WRITTEN COMMUNICATION

Formal Reports - Project Proposals - Book reviews - Official Correspondence - Proof Reading & Editing.

UNIT – V ENGLISH FOR COMPETITIVE EXAMINATION

Synonyms, Antonyms –Grammar and usage – Error Identification – Reading comprehension- Verbal analogy- Verbal Test.

www.ispeakyouspeak.blogspot.com- Vocabulary Enrichment/ Speaking – Unit-II
www.teachertube.com - Writing Technically – Unit- V
www.Dictionary.com - Semantic / Grammar – Unit-IV & V

OBJECTIVES:

- This course aims at providing the required skill to apply the statistical tools in engineering problems.
- To introduce the basic concepts of probability and random variables.
- To introduce the basic concepts of two dimensional random variables.
- To acquaint the knowledge of testing of hypothesis for small and large samples which plays an important role in real life problems.
- To introduce the basic concepts of classifications of design of experiments which plays very important roles in the field of agriculture and statistical quality control.
- To acquaint the student with concepts of sampling distributions and statistical techniques used in engineering and management problems.

OUTCOMES:

- To understand the fundamental knowledge of the concepts of probability and have knowledge of standard distributions which can describe real life phenomenon.
- To understand the basic concepts of one and two dimensional random variables and apply in engineering applications.
- To apply the concept of testing of hypothesis for small and large samples in real life problems.
- To apply the basic concepts of classifications of design of experiments in the field of agriculture and statistical quality control.
- To have the notion of sampling distributions and statistical techniques used in engineering and management problems.
- To make the student acquire sound knowledge of techniques in quality control that model engineering problems.

UNIT- I PROBABILITY (11)
Probability – Definition – Law - conditional probability-Bayes theorem- Probability mass function - Probability density functions.

UNIT- II RANDOM VARIABLES (13)
Introduction to one dimensional random variables – Discrete – Continuous - Joint distributions – Marginal and conditional distributions – Covariance – Correlation and Regression.

UNIT- III TESTING OF HYPOTHESIS (12)
Sampling distributions – Testing of hypothesis for mean, variance, proportions and differences using Normal, t, Chi-square and F distributions – Tests for independence of attributes and Goodness of fit.

UNIT – IV DESIGN OF EXPERIMENTS (12)
Analysis of variance – one way classification – CRD – Two-way classification – RBD – Latin square.

UNIT – V RELIABILITY AND QUALITY CONTROL (12)
Concepts of reliability – hazard functions – Reliability of series and parallel systems – control charts for measurement (\bar{X} and R charts) - Control charts for attributes (p, c and np charts).

Total : 60

3. [www.mathworld](http://www.mathworld.wolfram.com). Wolfram.com

Course Objectives

- To outline the classical genetics concepts of eukaryotes and prokaryotes.
- To explain the structure of nucleic acids and DNA replication.
- To understand the molecular process of transcription.
- To understand the basic machinery of translation and its mechanisms.
- To understand the regulation of gene expression and various types of mutation
- To discuss the different types of mutation and DNA repair mechanisms

Course outcomes

1. Discuss the concepts related to eukaryotic and prokaryotic genetics.
2. Identify the structure of nucleic acids, DNA replication and chromosome organization.
3. Illustrate the prokaryotic and eukaryotic transcription, and its post transcriptional modifications.
4. Outline the concept of genetic code, translation process and post translational modifications.
5. Interpret the process of regulation of gene expression and its importance.
6. Identify the different types of mutation and DNA repair mechanisms.

UNIT-I CLASSICAL GENETICS**(7)**

Mendelian genetics, linkage, crossing over, classical experiments – Hershey and Chase, Avery McLeod & McCarty. Bacterial conjugation, transduction and transformation. Conformation of DNA and RNA.

UNIT- II STRUCTURE OF NUCLEIC ACIDS AND DNA REPLICATION (10)

Replication in prokaryotes, D-loop and rolling circle mode of replication, replication of linear viral DNA. Organisation of eukaryotic chromosome – cot value, replication of telomeres in eukaryotes

UNIT-III TRANSCRIPTION**(10)**

In prokaryotes and eukaryotes, features of promoters and enhancers, transcription factors, nuclear RNA splicing, regulation of transcription: prokaryote and eukaryote

UNIT-IV TRANSLATION**(9)**

Elucidation of genetic code, basic machinery of translation and its mechanism, codon usage, suppressor mutation, regulation of translation: prokaryote and eukaryote.

UNIT-V REGULATION OF GENE EXPRESSION**(9)**

Lac and trp operon, phage life cycle, mutation and repair of DNA, regulation of gene expression in eukaryotes

Total Hours: 45

15BTBT403 CHEMICAL THERMODYNAMICS AND BIO THERMODYNAMICS 3 0 0 3 100

Course Objectives

- To explain the thermodynamic properties of fluids and its calculations.
- To discuss the basic concepts of solution properties.
- To illustrate the phase equilibria concepts for various systems.
- To outline the equilibrium criteria for various chemical reactions.
- To infer the knowledge on general thermodynamic processes.
- To explain the working principles and the process involved in the refrigeration and Liquefaction system.

Course Outcomes

1. Discuss the various properties of the fluids and its calculations.
2. Explain the concept of solution thermodynamics and composition models.
3. Analyze the criteria of phase equilibria for different components system.
4. Apply the concept of chemical reaction equilibria and equilibrium conversion.
5. Analyze the thermodynamic flow process.
6. Illustrate the working principles and the process involved in the refrigeration and Liquefaction system.

UNIT-I THERMODYNAMIC PROPERTIES OF FLUIDS (9)

Volumetric properties of fluids exhibiting non ideal behavior; residual properties; estimation of thermodynamic properties using equations of state; calculations involving actual property exchanges; Maxwell's relations and applications.

UNIT- II SOLUTION THERMODYNAMICS (9)

Partial molar properties; concepts of chemical potential and fugacity; ideal and non-ideal solutions; concepts and applications of excess properties of mixtures; activity coefficient; composition models; Gibbs Duhem equation.

UNIT- III PHASE EQUILIBRIA (9)

Criteria for phase equilibria; v-l-e calculations for binary and multi component systems; liquid-liquid equilibria and solid-solid equilibria.

UNIT- IV CHEMICAL REACTION EQUILIBRIA (9)

Equilibrium criteria for homogeneous chemical reactions; evaluation of equilibrium constant; effect of temperature and pressure on equilibrium constant; calculation of equilibrium conversion and yields for single and multiple reactions.

UNIT- V THERMODYNAMIC ANALYSIS OF PROCESSES

(9)

Thermodynamics of flow processes, Concept of lost work; entropy generation; power cycle (rankine, regenerative, reheat); liquefaction.

Total Hours: 45

TEXT BOOKS

S.No.	Author(s) Name	Title of the book	Publisher	Year of Publication
1	Smith, J. M., Van Ness H.C., and Abbot M. M.	Chemical Engineering Thermodynamics	McGraw-Hill	2001
2	Narayanan K. V.	A Text Book Of Chemical Engineering Thermodynamics	Prentice Hall India	2001

REFERENCE BOOKS

S.No.	Author(s) Name	Title of the book	Publisher	Year of Publication
1	Sandler S.I.	Chemical And Engineering Thermodynamics	John Wiley	1989
2	Urs von Stockar, Luuk A. M. van der Wielen	Biothermodynamics: The Role of Thermodynamics in Biochemical Engineering	EPFL Press	2013

Course Objectives

- To explain the basic concepts of wave properties and radiation sources.
- To discuss the instrumentation and application of various molecular spectroscopy.
- To understand the concept and instrumentation of magnetic resonance spectroscopy and mass spectroscopy.
- To categorize the different separation methods for product purification.
- To outline the thermal analysis techniques and its applications.
- To understand the instrumentation and applications of different thermal analysis techniques.

Course Outcomes

1. Infer the various sources and properties of electromagnetic radiation.
2. Discuss the theory of molecular absorption spectroscopy.
3. Relate the theory, instrumentation and applications of various molecular spectroscopies.
4. Interpret the theory and instrumentation of magnetic resonance and mass spectroscopy.
5. Identify the various chromatographic and electrophoresis techniques for purification.
6. Explain the instrumentation and applications of different thermal analysis techniques.

UNIT I INTRODUCTION TO SPECTROMETRY (9)

Properties of electromagnetic radiation- wave properties – components of optical instruments – Sources of radiation – wavelength selectors – sample containers – radiation transducers – Signal process and read outs – signal to noise ratio - sources of noise – Enhancement of signal to noise - types of optical instruments – Principle of Fourier Transform optical Measurements.

UNIT II MOLECULAR SPECTROSCOPY (9)

Molecular absorption spectrometry – Measurement of Transmittance and Absorbance – Beer's law – Instrumentation - Applications -Theory of fluorescence and Phosphorescence Instrumentation – Applications – Theory of Infrared absorption spectrometry – IR instrumentation – Applications – Theory of Raman spectroscopy – Instrumentation – applications.

UNIT III MAGNETIC RESONANCE SPECTROSCOPY AND MASS SPECTROMETRY (9)

Theory of NMR – environmental effects on NMR spectra – chemical shift- NMRspectrometers – applications of ^1H and ^{13}C NMR- Molecular mass spectra – ion sources – Mass spectrometer. Applications of molecular mass - Electron paramagnetic resonance- g values – instrumentation.

UNIT IV SEPARATION METHODS (9)

General description of chromatography – Band broadening and optimization of column performance- Liquid chromatography – Partition chromatography - Adsorption chromatography – Ion exchange chromatography -size exclusion chromatographyAffinity chromatography- principles of GC and applications – HPLC- Capillary electrophoresis – Applications

UNIT V THERMAL METHODS

(9)

Different thermal analysis techniques. Differential scanning calorimetry - instrumentation & application. Differential thermal analysis - instrumentation & application, DTA curve. Thermogravimetry – instrumentation & application, TG curve.

REFERENCE BOOKS

S.No.	Author(s) Name	Title of the book	Publisher	Year of Publication
1	G. W. Ewing	Instrumental Methods of Chemical Analysis	McGraw-Hill	1985
2	Skoog, D, A. Holler, J. F and Nieman, T. A.	Instrumental Methods of Chemical Analysis	Krishna prakasan	2004

Course Objectives

- To understand the process of fermentation and basic fermentor configuration.
- To explain the medium requirements and media optimization methods for fermentation process.
- To explain the different sterilization methods and its kinetics and design.
- To discuss and solve the problems related to metabolic stoichiometry and energetics.
- To understand the modes of operations and various kinetic models for product formation.
- To analyze the different kinetic models for microbial growth and product formation.

Course outcomes

1. Discuss the general process of fermentation and fermentor configuration.
2. Analyze the medium requirements and medium formulations for fermentation process.
3. Outline the thermal death kinetics and different sterilization methods.
4. Solve problems related to stoichiometry of cell growth and energetic.
5. Illustrate the various modes of operation in fermentation process.
6. Analyze the different kinetic models for microbial growth and product formation.

UNIT-I OVERVIEW OF FERMENTATION PROCESSES**(7)**

Overview of fermentation industry, general requirements of fermentation processes, basic

configuration of Fermentor and ancillaries, main parameters to be monitored and controlled in fermentation processes.

UNIT-II RAW MATERIALS AND MEDIA DESIGN FOR FERMENTATION PROCESS**(9)**

Criteria for good medium, medium requirements for fermentation processes, carbon, nitrogen, minerals,

vitamins and other complex nutrients, oxygen requirements, medium formulation of optimal growth and product formation, examples of simple and complex media, design of various commercial media for industrial fermentations – medium optimization methods.

UNIT- III STERILIZATION KINETICS**(9)**

Thermal death kinetics of microorganisms, batch and continuous heat sterilization of liquid media,

filter sterilization of liquid media, air sterilization and design of sterilization equipment - batch and continuous.

UNIT- IV METABOLIC STOICHIOMETRY AND ENERGETICS (10)

Stoichiometry of cell growth and product formation, elemental balances, degrees of reduction of

substrate and biomass, available electron balances, yield coefficients of biomass and product formation, maintenance coefficients energetic analysis of microbial growth and product formation, oxygen consumption and heat evolution in aerobic cultures, thermodynamic efficiency of growth.

UNIT- V KINETICS OF MICROBIAL GROWTH AND PRODUCT FORMATION (10)

Modes of operation - batch, fed batch and continuous cultivation. Simple unstructured kinetic models

for microbial growth, Monod model, growth of filamentous organisms, product formation kinetics - leudeking-piret models, substrate and product inhibition on cell growth and product formation.

Total Hours: 45

3	Harvey W. Blanch, Douglas S. Clark	Biochemical Engineering	CRC Press	2014
---	--	-------------------------	-----------	------

Course Objectives

- To explain the basic idea on scope of biotechnology and its commercial production in modern biotechnology.
- To analyse the modern biotechnological processing techniques for the production of commercial bioproducts.
- To discuss the process of primary metabolite production in different industries.
- To discuss the process of secondary metabolite production.
- To explain the basic procedures for production of bioproducts.
- To illustrate the various methods for the production of recombinant products.

Course Outcomes

1. Outline the scope of biotechnology and its commercial potential.
2. Interpret the modern biotechnological processing techniques for the production of commercial bioproducts.
3. Illustrate the production methods of primary metabolites.
4. Illustrate the production methods of secondary metabolites.
5. Infer the knowledge on commercial enzyme and bioproduct production.
6. Explain the production of various commercially available products using recombinant technology.

UNIT-I INTRODUCTION TO INDUSTRIAL BIOPROCESS**(8)**

Biotechnology: Scope and importance, Commercial potential of Biotechnology in India. Traditional and modern biotechnology. products relating to modern biotechnology A brief survey of industrially important organisms, fermentation processes – modes of operation -pictorial representation of fermentation process

UNIT- II PRODUCTION OF PRIMARY METABOLITES**(10)**

A brief outline of processes for the production of some commercially important organic acids (e.g. citric acid, lactic acid, acetic acid) amino acids (glutamic acid, phenylalanine, aspartic acid) and alcohols (ethanol, butanol)

UNIT-III PRODUCTION OF SECONDARY METABOLITES**(10)**

Study of production processes for various classes of secondary metabolites: antibiotics: beta-lactams (penicillin, cephalosporin), aminoglycosides (streptomycin) macrolides (erythromycin), vitamins (B12) and steroids (progesterone).

UNIT- IV PRODUCTION OF ENZYMES AND OTHER BIOPRODUCTS**(9)**

Production of industrial enzymes such as proteases, amylases, lipases, cellulases etc., Production of biopesticides, biofertilizers, biopreservatives (Nisin), cheese, biopolymers (xanthan gum, PHB), single cell protein.

UNIT- V PRODUCTION RECOMBINANT DNA PRODUCTS**(8)**

Production of recombinant proteins having therapeutic and diagnostic applications, production of vaccines (hepatitis B vaccine), hormones (insulin). Production of monoclonal antibodies-commercial scale, products of plant (human growth hormone) and animal cell culture (interferons).

Total Hours: 45

S.No.	Author(s) Name	Title of the book	Publisher	Year of Publication
1	Casida Jr, L.E.	Industrial Microbiology	New Age International (P) Ltd	2000
2	Presscott, S. C. and Dunn, C. G	Industrial Microbiology	Agrobios (India).	2006

REFERENCE BOOKS

S.No.	Author(s) Name	Title of the book	Publisher/journal	Year of Publication
1	Cruger, W and Crueger, A	Biotechnology: A Textbook of Industrial Microbiology	Panima Publishing Corporation	2003
2	Moo, M and Young	Comprehensive Biotechnology	Pergamon	2007
3	Barta, A. <i>et al.</i>	The expression of a nopaline synthase human growth hormone chimaeric gene in transformed tobacco and sunflower callus tissue	Plant Mol. Biol	1986

Course Objectives

- To understand the basic principle of analytical techniques
- To discuss the instrumental techniques used in chemical and biochemical research labs.
- To explain the fundamentals of spectroscopy operations.
- To carry out qualitative analysis experiments using Lambert's – Beer law using absorption spectroscopy.
- To carry out different spectroscopic techniques.
- To carry out different chromatographic techniques.

Course Outcomes

1. Explain the basic principle of analytical techniques
2. Discuss the instrumental techniques used in chemical and biochemical research labs.
3. Explain the fundamentals of spectroscopy operations.
4. Perform the qualitative analysis experiments using Lambert's – Beer law using absorption spectroscopy.
5. Demonstrate the different spectroscopic techniques.
6. Demonstrate the different chromatographic techniques.

1. Precision and validity in an experiment using absorption spectroscopy and validating Lambert-Beer's law using KMnO_4
2. Determination of analytical wavelength for KMnO_4
3. Determination of iron concentration using 1,10 phenanthroline.
4. Finding the pK_a of 4-nitrophenol using absorption spectroscopy.
5. UV spectra of nucleic acids.
6. UV – spectra of proteins.
7. Estimation of Sulphate by nephelometry.
8. Estimation of AL^{+++} by fluorimetry.
9. Determination of R_f value using TLC.

Course Objectives

- To outline and evaluate the methods for isolation and purification of DNA from plant and animalsamples.
- To explain the protocol to run the agarose gel electrophoresis sampleanalysis.
- To demonstrate the DNA ligation techniques for transformation and screening ofrDNA.
- To understand the methods involved in optimization protocol for recombinant protein expression.
- To explain the procedure for competent cell preparation.
- To compile the overall structure of rDNA technology and implement its techniques in research anddevelopment.

Course Outcomes

1. Carry out agarose gel electrophoresis and isolation of DNA samplesindividually.
2. Develop the knowledge of techniques involved in DNA isolation andpurification.
3. Perform the restriction enzyme digestion and ligation of DNAsamples.
4. Produce recombinant DNA and implement blue white screening techniques to screen them.
5. Develop methods to produce competent cells.
6. Summarize the overall structure of rDNA technology and implement its techniques in research anddevelopment.

1. Agarose gel electrophoresis
2. Isolation of bacterial plasmid DNA
3. Isolation of bacterial chromosomal DNA
4. Isolation of plant cell genomic DNA
5. Isolation of animal cell genomic DNA
6. Restriction enzyme digestion
7. Competent cells preparation
8. Transformation and screening for recombinants
9. Blue and white selection for recombinants

TEXT BOOKS

S.No.	Author(s) Name	Title of the book	Publisher	Year of Publication
1	David, L. G and Michael, K. W	Basic Methods in Molecular Biology	Prentice Hall Inc	1994
2	Sambrook, J. and Russel, D. W	Molecular Cloning Laboratory Manual	Cold Spring Harbor Laboratory Press	2001

Course Objectives

- To infer the basic knowledge on agitation and its flow pattern in different systems.
- To explain the concept of filtration and its industrial application.
- To understand the different modes of heat transfer and its transfer through different dimensional surfaces.
- To discuss the types of convectional heat transfer and its application.
- To explain the different types and designing parameters of heat exchangers and evaporators.
- To explain the basics of design, equipmentation and calculations of evaporators and heat exchangers.

Course Outcomes

1. Interpret the properties of mixing and agitation in different flow systems.
2. Outline the basic principle of filtration and its application in different filtration methods.
3. Discuss the modes of heat transfer.
4. Illustrate the mechanism of heat transfer through different dimensional surfaces.
5. Infer the basics of convectional heat transfer in different surfaces.
6. Appraise the basics of design, equipmentation and calculations of evaporators and heat exchangers.

UNIT- I MIXING AND AGITATION**(8)**

Purpose of agitation, equipments for agitation, flow pattern in agitator vessels, dimensional analysis; power for agitation; agitation of liquids; gas-liquid systems; gas-solid suspensions; agitator scale up.

UNIT-II FILTRATION**(8)** Filtration-

types of filtration, filter media, selection of medium, filter aids-filter theory, constant pressure filtration, constant volume batch filtration; continuous filtration; industrial filters; settling and sedimentation; centrifugation.

UNIT- III MECHANISM OF HEAT TRANSFER**(10)** Modes of

heat transfer, principles of conduction, Fourier's Law of heat conduction, thermal conductivity, steady state conduction, combined resistances, heat flow through a cylinder, unsteady state conduction, heat transfer from extended surfaces, individual and overall heat transfer coefficients

UNIT- IV CONVECTION HEAT TRANSFER**(10)**

Dimensional analysis, forced and natural convection, convection in flow over surfaces through pipes boiling and condensation.

UNIT- V HEAT EXCHANGERS**(9)**

Heat exchanger types, Equipments; overall heat transfer coefficients; design of heat exchangers; NTU concept; Evaporators; single and multiple effects; mass and enthalpy balances.

TEXT BOOKS

S.No.	Author(s) Name	Title of the book	Publisher	Year of Publication
1	Geankoplis C.J.	Transport Process And Unit Operations	Prentice Hall India	2002
2	McCabe W.L., Smith J.C, and Harriot P.	Unit Operations In Chemical Engineering	McGraw-Hill Inc	1993

REFERENCE BOOKS

S.No.	Author(s) Name	Title of the book	Publisher	Year of Publication
1	Incropera F.P.	Fundamentals Of Heat And Mass Transfer	John Wiley and Sons	2000

Course Objectives

- To understand the basic concepts of fermentation processes.
- To apply the knowledge about the design of bioreactors
- To explain the scale up of bioreactors.
- To illustrate the bioprocess simulation and modeling
- To explain the immobilized enzyme kinetics and its significance.
- To discuss the commercial production of bioproducts.

Course outcomes

1. Understand the fermentation processes.
2. Interpret the design of bioreactors
3. Describe the scale up of bioreactors.
4. Infer the different types of bioprocess simulation and modeling
5. Examine the immobilized enzyme kinetics and its significance.
6. Outline the commercial production of bioproducts.

UNIT-I ANALYSIS OF STR**(8)**

Analysis of STR: Stirred tank reactor - non-ideality, RTD and stability analysis, tanks in series and dispersion models – application to design of continuous sterilizer.

UNIT-II ANALYSIS OF OTHER CONFIGURATIONS**(9)**

Analysis of other configurations: Packed bed reactor, airlift reactor, fluidized bed reactor bubble column reactors – non- ideality, RTD and stability analysis.

UNIT-III BIOREACTOR SCALE – UP**(8)**

Bioreactor scale-up: Regime analysis of bioreactor processes, oxygen mass transfer in bioreactors - microbial oxygen demands; methods for the determination of mass transfer coefficients; mass transfer correlations. Scale up criteria for bioreactors based on oxygen transfer, power consumption and impeller tip speed.

UNIT-IV MODELLING AND SIMULATION OF BIOPROCESSES**(10)**

Modelling and simulation of bioprocesses: Study of structured models for analysis of various bioprocess – compartmental models, models of cellular energetics and metabolism, single cell models, plasmid replication and plasmid stability model. Dynamic simulation of batch, fed batch, steady and transient culture metabolism.

UNIT-V BIOREACTOR CONSIDERATION IN ENZYME SYSTEMS**(10)**

Bioreactor consideration in enzyme systems: Analysis of film and pore diffusion effects on kinetics of immobilized enzyme reactions; formulation of dimensionless groups and calculation of effectiveness factors. Design of immobilized enzyme reactors – packed bed, fluidized bed and membrane reactors.

2	James E. Bailey & David F. Ollis	Biochemical Engineering Fundamentals	McGraw- Hill	1986
3	Shuler and Kargl	Bioprocess Engineering	Prentice Hall	1992

REFERENCE BOOKS

S.No.	Author(s) Name	Title of the book	Publisher	Year of Publications
1	James M. Lee	Biochemical Engineering	PHI	1991
2	EMT.EL- Mansi.CFA.Bryce, A.L.Demain, AR.Allman	Fermentation Microbiology And Biotechnology	CRC Press	2011
3	Harvey W. Blanch, Douglas S. Clark	Biochemical Engineering	CRC Press	2014

Course Objectives

- To understand the knowledge on enzyme mechanism of action.
- To explain the production & purification of enzymes.
- To explain about the kinetics of single substrate enzyme action
- To understand the kinetics of multi substrate enzyme action
- To illustrate on immobilization and applications.
- To understand the features of enzyme biosensors and its application.

Course Outcomes

1. Discuss the overview of enzyme mechanism of action.
2. Outline the knowledge on extraction, purification and characterization of enzymes.
3. Understand the kinetics of multi substrate enzyme action.
4. Interpret the various enzyme immobilization techniques and its application in bioreactor.
5. Summarize the basics of enzyme engineering.
6. Explain the features of enzyme biosensors and its application.

UNIT-I INTRODUCTION TO ENZYMES**(9)**

Chemical nature, apoenzyme, coenzyme, cofactor, prosthetic group. Nomenclature – IUB system of classification - Six main classes with examples. Mechanisms of enzyme action; Specificity, type of enzyme specificity, Active site, Models of enzyme action – Lock and key, induced fit, transition state theory. metal ion catalysis, proximity & orientation. metal-activated enzyme and metalloenzyme.

UNIT- II EXTRACTION, PURIFICATION AND CHARACTERIZATION OF ENZYMES (9)

Production and purification of crude enzyme extracts from plant, animal and microbial sources; methods of characterization of enzymes; development of enzymatic assays,

UNIT- III KINETICS OF MULTISUBSTRATE - ENZYME ACTION**(9)**

Kinetics of Single substrate reaction – estimation of Michaelis-Menten parameters and Multisubstrate reactions mechanisms; Turnover number; types of inhibition Allosteric regulation of enzymes, Monod - Changeux - Wyman model, pH and temperature effect on enzymes & deactivation kinetics.

UNIT- IV ENZYME IMMOBILIZATION**(9)**

Physical and chemical techniques for enzyme immobilization – adsorption, matrix entrapment, encapsulation, cross-linking, covalent binding etc., - examples, applications, advantages and disadvantages. applications. Immobilised enzyme bioreactors.

UNIT- V ENZYME ENGINEERING AND BIOSENSORS

(9)

Chemical and genetic methods, Property alteration, Prediction of enzyme structure, design and construction of novel enzymes; Classification and Design of enzyme biosensors. Application of enzyme biosensor in industry, healthcare, food and environment.

TEXTBOOKS

S.No.	Author(s) Name	Title of the book	Publisher	Year of Publications
1	Palmer, T	Enzymes	Affiliated East West Press pvt. Ltd	2004
2	Wiseman	Enzyme Biotechnology	Ellis Horwood Publishers	1995
3	Chaplin and Bucke	Enzyme Technology	Cambridge University Press	1990
4	Price and Stevens	Fundamentals of Enzymology	Oxford University Press	2002

REFERENCE BOOKS

S.No.	Author(s) Name	Title of the book	Publisher	Year of Publications
1	H. W. Blanch and D. S. Clark	Biochemical Engineering	Marcel Dekker, Inc.	1996
2	J. E. Bailey and D. F. Ollis,	Biochemical Engineering Fundamentals	McGraw Hill	1986
3	E. K. Pye and L. B. Wingard	Enzyme Engineering II,	Plenum Press	1974

Course Objectives

- To understand the basics of operating systems and biological databases.
- To explain the various methods for analysis of DNA, RNA and protein sequences.
- To explain the dynamic programming approach and methods of pair wise alignment.
- To explain the multiple sequence alignment techniques for analysis.
- To understand the machine learning techniques and protein structure analysis.
- To understand the basics on available tools and databases for performing research in bioinformatics.

Course Outcomes

1. Illustrate the basics of operating systems and biological databases.
2. Analyze the DNA, RNA AND protein sequences using common databases.
3. Discuss the different algorithms for the pairwise sequence analysis
4. Outline the various biological databases used for multiple sequence alignment.
5. Summarize the machine learning techniques and various techniques for protein structure analysis.
6. Understand the use of bioinformatics tools for research.

UNIT-I INTRODUCTION TO BIOLOGICAL DATABASES (9)

Introduction- types, Biological databases, Information Retrieval from Biological Databases: for example Nucleic acid databases: Genbank, Protein Databases- Swissprot, Sequence Formats, Sequence storage, Sequence submission to sequence Database.

UNIT-II ANALYZING DNA, RNA AND PROTEIN SEQUENCES IN DATABASES (9)

Introduction to biological databases and database technology, Genbank: organisms in Genbank, genomic DNA databases, cDNA databases corresponding to expressed genes, Expressed sequence tags, Sequence tagged sites, Genome survey sequences, High throughput genomic sequence

UNIT-III PAIRWISE SEQUENCE ALIGNMENT**(9)**

Alignment Types: Local alignment, Global alignment, Scoring matrices- PAM, BLOSUM, Gaps, Dot Plots. Dynamic programming Approach: Needleman and Wunsch Algorithm, Smith and waterman Algorithm, Heuristic Approach: BLAST, FASTA

UNIT-IV MULTIPLE SEQUENCE ALIGNMENT**(9)**

Exhaustive Algorithm- Divide and Conquer alignment, Heuristic Algorithm: Progressive Alignment- ClustalW Tcoffee, Iterative Alignment- PRRN, Block based method- Match-Box, DIALIGN2

UNIT-V INTRODUCTION TO PROTEIN STRUCTURE PREDICTION**(9)**

Secondary structure prediction for Globular and Trans-membrane proteins, 3D Protein structure file format: PDB, mmCIF, MMDB, Methods of Tertiary structure prediction: Threading and fold recognition methods, Homology modeling, Fold recognition databases.

TEXT BOOKS

S. No.	Author (s) Name	Title of the book	Publisher	Year of Publication
1	Dan E. Krane, Michael L. Rayme	Fundamental Concepts of Bioinformatics	Pearson education	2004
2	Andreas D. Baxevanis, B. F. Francis Ouellette	Bioinformatics: A Practical Guide to the Analysis of Genes and Proteins	Wiley- Interscience	2004
3	David W. Mount	Sequence and Genome Analysis	Cold Spring Harbor Laboratory	2004
4	Jonathan Pevsner	Bioinformatics and Functional Genomics	Wiley-Liss	2003

Course Objectives

- To understand chemical engineering principles and its operations.
- To understand the concept of pressure drops in pipes
- To understand the concept of pressure drops in different reactors.
- To understand the concept of filtration and heat transfer.
- To explain the different separation techniques.
- To understand the process involved in leaching

Course outcomes

Students undergoing this course will be able to

1. Outline the chemical engineering principles and operations.
 2. Calculate the flow measurements and pressure drop in pipes and different reactors.
 3. Analyze the process of filtration and heat transfer.
 4. Perform the distillation and extraction.
 5. Demonstrate the process involved in adsorption equilibrium.
 6. Demonstrate the process involved in leaching
-
1. Flow measurement and Pressure drop in pipes.
 2. Pressure drop across Fluidized bed.
 3. Pressure drop across packed column
 4. Continuous rotary filtration
 5. Heat exchanger
 6. Simple and steam distillation
 7. Liquid-liquid equilibria in extraction
 8. Adsorption equilibrium
 9. Leaching

Course Objectives

- To perform the NCBI database search.
- To understand the usage of BLAST for similar DNA sequence search.
- To predict the nucleotide and protein sequence using various database.
- To perform the gene prediction.
- To understand the protein sequence analysis tools.
- To build the phylogenetic tree

Course Outcomes

1. Discuss the database search through NCBI.
2. Perform the similar DNA sequence search using BLAST.
3. Identify the nucleotide and protein sequence.
4. Demonstrate the experiment to predict the genes.
5. Tell the method to build the phylogenetic tree.
6. Interpret the protein sequence using analysis tools.

1. NCBI database.
2. BLAST – Similar DNA sequences search
3. EMBL – Nucleotide sequence database
4. SWISSPROT/TREMBL – Protein sequence database
5. Analysis of Protein sequence using PIR database
6. Analysis of structural features of proteins using protein data bank and SWISS PDB viewer
7. Eukaryotic gene prediction
8. Phylogenetic tree.
9. Protein sequence analysis tools
10. Multiple sequence alignment

Course Objectives

- To understand the concept of thermal death kinetics.
- To understand the concept of batch sterilization.
- To predict the design for media components using Plackett Burman and RSM.
- To perform the batch cultivation and practice k_{La} estimation methods.
- To understand the procedure to calculate the residence time distribution.
- To demonstrate enzyme kinetics and enzyme immobilization techniques.

Course Outcomes

1. Evaluate the thermal death kinetics.
2. Perform the batch sterilization batch cultivation.
3. Identify and perform media optimization using Plackett Burman and RSM.
4. Demonstrate the different k_{La} estimation methods.
5. Perform the experiment on residence time distribution.
6. Interpret enzyme kinetics and enzyme immobilization techniques.

1. Thermal death kinetics
2. Batch sterilization design
3. Media designing using Plackett Burman and RSM
4. Batch cultivation, estimation of k_{La} – dynamic gassing method
5. Batch and Fed batch cultivation
6. Estimation of k_{La} – sulphite oxidation method
7. Estimation of k_{La} – power correlation method
8. Residence time distribution
9. Enzyme kinetics – Michaelis Menten parameters.
10. Enzyme immobilization

OBJECTIVES

- To equip the students for effective technical presentation
- To improve body language and posture for effective public speaking.

During the seminar session each student is expected to prepare and present a topic on biotechnology, for duration of about 8 to 10 minutes. In a session of three periods per week, 15 students are expected to present seminars. A faculty guide is to be allotted and he / she will guide and monitor the progress of the student and maintain attendance also.

Students are encouraged to use various teaching aids such as over head projectors, power point presentation and demonstrative models. This will enable them to gain confidence in facing the placement interviews.

Course Objectives

- To understand the basics of molecular diffusion and mass transfer concepts.
- To explain the gas absorption and its related concepts.
- To explain the various vapour liquid operations and its concepts.
- To understand the HETP, HTU and NTU concepts.
- To outline the extraction and leaching principles.
- To outline the Solid Fluid operations.

Course Outcomes

1. Discuss the molecular diffusions and mass transfer operation in different system.
2. Outline the absorption principles and its concepts for gas liquid operations.
3. Infer the basic concept of equilibria and distillation concepts in vapour liquid operations.
4. Understand the HETP, HTU and NTU concepts.
5. Interpret the equilibria of different systems in extraction and leaching operations.
6. Outline the concepts of adsorption and drying in solid – fluid operations.

UNIT- I DIFFUSION AND MASS TRANSFER (9)

Molecular diffusion in fluids and solids; Inter phase Mass Transfer; Mass Transfer coefficients; Analogies in Transport Phenomenon.

UNIT- II GAS LIQUID OPERATIONS (9)

Principles of gas absorption; Single and Multi component absorption; Absorption with chemical reaction; Design principles of absorbers; Industrial absorbers; HTU, NTU concepts.

UNIT- III VAPOUR LIQUID OPERATIONS (9)

V-L Equilibria; Simple, Steam and Flash Distillation; Continuous distillation; McCabe- Thiele & Ponchon-Savarit Principles; Industrial distillation equipments, HETP, HTU and NTU concepts.

UNIT- IV EXTRACTION OPERATIONS (9)

L-L equilibria, Staged and continuous extraction, Solid-liquid equilibria, Leaching principles.

UNIT- V SOLID FLUID OPERATIONS (9)

Adsorption equilibria – Batch and fixed bed adsorption; Drying-Mechanism-Drying curves -Time of Drying; Batch and continuous dryers.

TEXT BOOKS

S.No.	Author(s) Name	Title of the book	Publisher	Year of Publications
1	Treybal R.E.	Mass Transfer Operations	McGraw-Hill,	1981
2	Geankoplis C.J.	Transport Processes and Unit Operations	Prentice Hall	2002
3	Coulson and Richardson	Chemical Engineering Vol. I & II	Asian Books Pvt Ltd	1998

Course Objectives

- To understand the foundation and advanced information on biopharmaceutical aspects in relation to drug development.
- To understand the basics of pharmacokinetics.
- To discuss the drug manufacturing, process and its application.
- To explain the manufacture of solid dosage forms of drugs.
- To understand the manufacture process of liquid orals and topical.
- To discuss the legal steps involved in progressing a new drug to market.

Course Outcomes

1. Illustrate the different pharmaceutical parameters for the current and future biotechnology related products on the market.
2. Outline the concepts of Pharmacokinetics.
3. Infer the basic knowledge on drug process, manufacturing methods and its application.
4. Discuss about the solid dosage forms of drug manufacturing.
5. Explain the manufacturing process of liquid orals and topical.
6. Interpret the legal steps involved in progressing a new drug to market.

UNIT- I INTRODUCTION**(7)**

History of pharmacy, pharmacopeia, monograph, types of various dosage forms, economics and regulatory aspects.

UNIT- II BASICS OF PHARMACOKINETICS**(10)**

Mechanism of drug action; physico-chemical properties and principles of drug metabolism; pharmacokinetics.

UNIT- III MANUFACTURE OF DRUGS, PROCESS AND APPLICATIONS**(9)**

Types of reaction process and special requirements for bulk drug manufacture.

UNIT- IV MANUFACTURE OF SOLID DOSAGE FORMS**(9)**

Compressed tablets; dry and wet granulation; slugging or direct compression; tablet presses; coating of tablets; capsule preparation.

UNIT- V MANUFACTURE OF LIQUID ORALS AND TOPICALS**(10)**

Oral liquids – vegetable drugs – topical applications; preservation of drugs; analytical methods and other tests used in drug manufacture; packing techniques; quality management; GMP.

Total Hours: 45

TEXT BOOKS

S.No.	Author(s) Name	Title of the book	Publisher	Year of Publications
1	David B. Troy, Paul Beringer	Remington: The science and practice of pharmacy	Lippincott Williams & Wilkins	2006
2	Gareth Thomas	Medicinal Chemistry. An introduction	John Wiley	2000
3	Katzung B.G.	Basic and Clinical Pharmacology	Prentice Hall of Intl	1995

Course Objectives

- To understand the basic concepts in rDNA technology.
- To explain the importance of recombinant molecules in rDNA technology.
- To understand the gene libraries construction and to perform blottings.
- To outline the concepts involved in gene library construction and differentiate between different gene libraries.
- To explain about the different types of PCR, the main concept in genetic engineering.
- To understand the vast applications of rDNA technology in diverse fields.

Course Outcomes

1. Discuss the knowledge on the basics of rDNA technology.
2. Outline the usage of recombinant molecules in research and development.
3. Understand gene libraries construction and to perform blottings.
4. Interpret the in-depth knowledge acquired to perform PCR reactions and their types.
5. Infer the importance of DNA sequencing methods.
6. Summarize the concept of rDNA technology and its importance in cloning, gene therapy and relate its applications.

UNIT-I BASICS OF RECOMBINANT DNA TECHNOLOGY (6)

Role of genes within cells, genetic elements that control gene expression, restriction and modifying enzymes, safety guidelines of recombinant DNA research.

UNIT-II CREATION OF RECOMBINANT MOLECULES (9)

Creation of recombinant molecules: Restriction mapping, design of linkers and adaptors. Characteristics of plasmid and phage vectors, prokaryotic and eukaryotic expression vectors. Insect, Yeast and Mammalian vectors.

UNIT-III CONSTRUCTION OF LIBRARIES (10)

Construction of cDNA and genomic libraries. Screening of libraries with DNA probes and with antisera. Cloning : Characterization of recombinant clones by southern, Northern, western and PCR analysis.

UNIT-IV POLYMERASE CHAIN REACTION (10)

Polymerase chain reaction: Inverse PCR, Nested PCR, Taqman assay, RT - PCR, RACE PCR, RAPD, site directed mutagenesis, methods of nucleic acid sequencing- Sangers method, (Kunkel's Method).

UNIT-V APPLICATIONS OF RECOMBINANT DNA TECHNOLOGY (10)

Applications of recombinant DNA Technology: Cloning in plants, Ti plasmid, transgenic and knockout animals, gene therapy.

Total Hours: 45

TEXT BOOKS

S.No.	Author(s) Name	Title of the book	Publisher	Year of Publications
1	Old RW, Primrose SB	Principles of Gene Manipulation, An Introduction To Genetic Engineering	Blackwell Science Publications	1993

2	Ansabel FM, Brent R, Kingston RE, Moore DD.	Current Protocols In Molecular Biology	Greene Publishing Associates	1988
----------	---	---	------------------------------------	------

REFERENCE BOOKS

S.No.	Author(s) Name	Title of the book	Publisher	Year of Publications
1	Berger Sl, Kimmer AR	Methods In Enzymology	Academic Press	1987

INTENDED OUTCOMES:

- To know the fundamentals of cost analysis and economics.
- To learn about the basics of economics and cost analysis related to engineering so as to take economically sound decisions.
- To make the students to understand capital market, break even point analysis and depreciation

UNIT- I FUNDAMENTALS OF ENGINEERING ECONOMICS

Introduction to Engineering Economics – Definition and Scope – Significance of Engineering Economics- Demand and supply analysis-Definition – Law of Demand – Elasticity of Demand – Demand Forecasting. Supply – Law of supply – Elasticity of Supply.

UNIT- II FINANCIAL MANAGEMENT

Objectives and functions of financial management – financial statements, working capital management – factors influencing working capital requirements – estimation of working capital. Capital budgeting - Need for Capital Budgeting – Project Appraisal Methods - Payback Period – ARR – Time Value of Money.

UNIT- III CAPITAL MARKET

Stock Exchanges – Functions – Listing of Companies – Role of SEBI – Capital Market Reforms. Money and banking - Money – Functions – Inflation and deflation – Commercial Bank and its functions – Central bank and its functions.

UNIT- IV NEW ECONOMIC ENVIRONMENT

National Income – concepts – methods of calculating national income - Economic systems, Economic Liberalization – Privatization – Globalization. An overview of International Trade – World Trade Organization – Intellectual Property Rights.

UNIT- V COST ANALYSIS AND BREAK EVEN ANALYSIS

Cost analysis - Basic cost concepts – FC, VC, TC, MC – Cost output in the short and long run. Depreciation - meaning – Causes – Methods of computing Depreciation (simple problems in Straight Line Method, Written Down Value Method). Meaning – Break Even Analysis - Managerial uses of BEA.

WEBSITES:

1. <http://economictimes.indiatimes.com>
2. <http://www.economist.com/>
3. <http://www.managementstudyguide.com/financial-management.htm>

Course Objectives

- To understand the wet granulation method for granules preparation.
- To explain the dry and wet granulation protocol for tablet preparation.
- To predict the steps for the analysis of tablets for its quality control.
- To perform the preparation of liquid orals-syrup.
- To understand the procedure for the preparation of topical formulations.
- To illustrate the assay techniques for tablets and injection..

Course Outcomes

1. Perform the granules preparation using wet granulation method.
2. Experiment the tablet preparation using wet and dry granulation techniques.
3. Identify the quality of tablets using different analysis.
4. Demonstrate the protocol for liquid-orals syrup preparation.
5. Perform the assay for riboflavin tablets.
6. Interpret dextrose injection using basic assays.

1. Preparation of granules by wet granulation
2. Preparation of Tablets by wet and dry granulation
3. Quality control test for tablets
4. Preparation of liquid orals-syrup
5. Preparation of topical preparation-lotion, ointment, cream
6. Assay of Riboflavin tablets
7. Assay of Dextrose Injection

Course Objectives

- To outline and evaluate the methods for preparation of plasmid DNA from plant and animal samples.
- To explain the protocol to run the agarose gel electrophoresis for DNA sample elution.
- To demonstrate the DNA ligation and digestion techniques.
- To understand the methods involved in optimization protocol for recombinant protein expression.
- To explain the importance of high throughput screening, SDS PAGE and PCR.
- To understand the basic techniques for DNA analysis.

Course Outcomes

1. Carry out agarose gel electrophoresis and isolation of DNA samples individually.
2. Develop the knowledge of techniques involved in DNA isolation and purification.
3. Perform the restriction enzyme digestion and ligation of DNA samples.
4. Produce recombinant DNA and implement blue white screening techniques to screen them.
5. Develop methods to produce recombinant proteins and understand their applications and perform SDS PAGE and PCR reactions.
6. Summarize the DNA properties from various sources.

1. Preparation of plasmid DNA.
2. Elution of DNA from agarose gels.
3. Restriction enzyme digestion
4. Ligation of DNA into expression vectors.
5. Transformation.
6. Optimization of inducer concentration for recombinant protein expression.
7. Optimization of time of inducer for recombinant protein expression.
8. SDS-PAGE
9. PCR.

15BTBT651 COMPUTATIONAL RESOURCES FOR DRUG DISCOVERY 1101 100

Course Objectives

- To explain the selection of lead and target molecule in drug discovery
- To explain the protocol to optimize the target and lead molecule in drug discovery.
- To infer the knowledge on basic properties of drug in the human system.
- To understand the ADME concept of drug molecules.
- To perform the receptor – ligand interactions in biological samples.
- To experiment the enzyme – inhibitor reactions for biological samples.

Course Outcomes

1. Carry out target and lead molecule selection.
2. Determine the perfect procedure for optimizing lead and target molecules.
3. Summarize the basic properties of drug in the human system.
4. Explain the ADME role of drug molecules inside the body.
5. Develop methods to study receptor-ligand interactions.
6. Perform the enzyme – inhibitor interactions in developing drugs.

UNIT-I DRUG DISCOVERY

Choosing a therapeutic area, choosing a drug target, bioassay, lead molecule, lead optimization

UNIT-II DRUG-LIKE MOLECULES

Lipinski's rule of five, Lipophilicity, Log P vs Log D, ADME

UNIT-III LABORATORY EXERCISES

Receptor-Ligand interactions, Enzyme-inhibitor interactions

15BTBT681

MINI PROJECT

0 0 2 1 100

OBJECTIVES

- | |
|---|
| <ul style="list-style-type: none">• To provide exposure in practical aspects• To equip the students to meet the industry standards |
|---|

The students will be directed to do a project work during VI semester and their projects will be evaluated for, forty percentages for Continuous Internal Assessment and sixty percentage for End Semester Examination.

End Semester Examination evaluation will be based on the report submitted by the student after the completion of the project work.

Course Objectives:

- To create an awareness on Engineering Ethics
- To incorporate Moral and Social Values and Loyalty
- To appreciate the rights of other
- To motivate the leadership skills
- To train to become an entrepreneur
- To learn the management skills

Course Outcomes:

1. Explain the engineering ethics
2. Outline the Moral and Social Values and Loyalty
3. Justify the rights of other
4. Illustrate the values of leadership skills
5. Assess the skills of entrepreneur
6. Discuss the management skills

UNIT I MANAGEMENT, PLANNING, AND ORGANISING

Definition of Management – Management and Administration – Contribution of Taylor and Fayol – Functions of Management – Steps involved in Planning – Objectives – Setting Objectives – Process of Managing By Objectives – Forecasting – Decision-making – Formal and informal organization – Organization Chart.

UNIT II DIRECTING AND CONTROLLING

Human Factors – Creativity and Innovation – Harmonizing Objectives – Leadership – Types of Leadership, Motivation – Hierarchy of needs – Motivation theories – Motivational Techniques – Job Enrichment – Process of Communication – System and process of Controlling – Requirements for effective control – Control of Overall Performance – Direct and Preventive Control .

UNIT III ENGINEERING ETHICS

Senses of Engineering Ethics – variety of moral issues – types of inquiry – moral dilemmas – moral autonomy – Kohlberg's theory – Gilligan's theory – consensus and controversy – Models of Professional Roles – theories about right action – Self-interest – customs and religion – uses of ethical theories.

UNIT IV FACTORS OF CHANGES

Forces that shape culture, social control – Meaning, Agencies, Institution, Customs, Values, Folkways, Norms and Laws. Social changes – Meaning and nature – Theories.

UNIT V ENTREPRENEURSHIP AND MOTIVATION

Entrepreneur – Types of Entrepreneurs – Difference between Entrepreneur and Intrapreneur

– Entrepreneurship in Economic Growth – Major Motives Influencing an Entrepreneur –

Achievement Motivation Training, self rating, Business Game, Thematic Apperception Test

– Stress management, Entrepreneurship Development Programs – Need, Objectives.

1. ethics.tamu.edu/ – United States
2. management.about.com/cs/generalmanagement/a/PlanOrg010603.htm

Course Objectives:

- To understand the importance of downstream processing and various cell disruption techniques.
- To discuss the various cell disruption techniques for product release.
- To explain the physical methods of separation.
- To understand the methods for the isolation of products.
- To understand the methods for the purification of the bioproducts.
- To explain the various methods for final product formulation and finishing operations.

Course Outcomes:

1. Outline the principles involved in downstream processing and characteristics of biomolecules.
2. Discuss the various cell disruption techniques for product release.
3. Illustrate the different physical methods of separation of bioproducts.
4. Relate and apply the methods available for the isolation of products.
5. Discuss the techniques used for the product purification.
6. Outline the principles for the final product formulation and finishing operations.

UNIT-I DOWNSTREAM PROCESSING (9)

Introduction to downstream processing principles characteristics of biomolecules and bioprocesses. Cell disruption for product release – mechanical, enzymatic and chemical methods. Pretreatment and stabilization of bio-products.

UNIT-II PHYSICAL METHODS OF SEPARATION (9)

Unit operations for solid-liquid separation - filtration and centrifugation, flocculation and sedimentation

UNIT-III ISOLATION OF PRODUCTS (9)

Adsorption, liquid-liquid extraction, aqueous two-phase extraction, membrane separation, ultrafiltration and reverse osmosis, dialysis, precipitation of proteins by different methods.

UNIT-IV PRODUCT PURIFICATION (9)

Chromatography – principles, instruments and practice, adsorption, reverse phase, ion-exchange, size exclusion, hydrophobic interaction, bio-affinity and pseudo affinity chromatographic techniques.

UNIT-V FINAL PRODUCT FORMULATION AND FINISHING OPERATIONS (9)

Crystallization: principles, batch crystallizers, process crystallization of proteins; Drying: Principles, heat and mass transfers, dryers description, batch and continuous dryers, freeze and spray dryers in final product formulation.

Total Hours: 45 +15 = 60

3	Roger.G . Harrison , Paul Todd , Scott R.Rudge and Demetr P.Petrides	Bioseparation Science and Engineering	Oxford University Press	2003

Course objectives:

- To understand the basic knowledge of cells and organs of Immune system.
- To explain the different cellular responses and its functions.
- To understand the basic views on monoclonal antibodies and antigen- antibody interactions.
- To outline the Immune responses to various disease and different immunologic reactions in Human body.
- To explain the organ transplantation and tumor immunology.
- To outline the basics of autoimmunity.

Course outcomes:

1. Discuss the cells and components of immune system.
2. Explain the basics of B, T cells, genes and generation of antibody and its functions.
3. Infer the basic views on monoclonal antibodies and antigen- antibody interactions.
4. Discuss the concept of immunity and various immunological responses to infections.
5. Discuss the basics of Transplantation and tumor therapies.
6. To illustrate the current trends in treatment of autoimmune disease.

UNIT-I INTRODUCTION**(7)**

Cells of immune system, innate and acquired immunity, primary and secondary lymphoid organs, antigens, haptens, adjuvants, types of immune responses, theory of clonal selection.

UNIT-II CELLULAR RESPONSES**(10)**

Development, maturation, activation and differentiation of T-cells and B-cells: TCR, antibodies, structure and functions; antibodies: genes and generation of diversity; antigen-antibody reactions; monoclonal antibodies: principles and applications; antigen presenting cells; major histocompatibility complex; antigen processing and presentation; regulation of T-cell and B-cell responses.

UNIT-III INFECTION AND IMMUNITY**(11)**

Injury and inflammation; immune responses to infections: immunity to viruses, bacteria, fungi and parasites, cytokines, complement, immunosuppression, tolerance, allergy and hypersensitivity, resistance and immunization: Vaccines.

UNIT-IV TRANSPLANTATION IMMUNOLOGY**(10)**

Transplantation: genetics of transplantation, laws of transplantation, problems in transplantation: Basis of Graft rejection, specificity and memory of graft rejection; Role of cell mediated response in graft rejection, Transplantation antigens, Mechanisms involved in Graft rejections.

UNIT-V AUTOIMMUNITY**(7)**

Autoimmunity, Auto immune diseases and diagnosis, proposed mechanisms for induction of Autoimmunity, Treatment of Autoimmune diseases; current therapies, monoclonal antibody and diagnosis, treatment.

REFERENCE BOOKS

S.No.	Author(s) Name	Title of the book	Publisher	Year of Publications
1	Ashim K. Chakravarthy	Immunology	Tata McGraw- Hil	1998

Course Objectives

- To illustrate the rate equation with different parameters.
- To explain the basic ideas on first order reaction in reactor design.
- To list the various functions of Non Ideal flow of fluidized bed.
- To label the basic theory of rate equation systems in heterogenous reactions.
- To develop a picture about rate controlling mechanism in solid catalyzed reaction.
- To understand the various biochemical reactions.

Course Outcomes

1. Summarize about the rate equation.
2. Determine the first order reaction in reactor design.
3. Express the functions of non ideal flow of fluidized bed.
4. Be aware of the conceptualization behind various rate equations in heterogenous systems.
5. Describe the various rate controlling mechanism in solid catalyzed reaction.
6. Summarize and predict the various reactions.

UNIT-I KINETICS OF HOMOGENOUS REACTIONS**(9)**

Concentration and temperature dependent term of rate equation – searching for mechanism–predictability of reaction rate from theory; Interpretation of batch reactor data – constant volume and variable volume batch reactors – temperature and reaction rate - development of rate equations for different homogeneous reactions (up to second order reactions both reversible and irreversible reactions).

UNIT-II REACTOR DESIGN**(9)**

Ideal batch reactors–steady state MFR & PFR – holding time for flow systems; Design for single reactions–performance equations for single reactors ; multiple reactor systems – PFR in series/ parallel – equal size and different size Mixed reactors in series; reactors of different types in series. Design for Multiple reactions (first order reactions only)

UNIT-III NON IDEAL FLOW**(9)**

RTD of fluid in vessel – relationship between F, C & E curve – conversion from tracer information; non-ideal flow models–Dispersion model and Tanks in series Model; Multi parameter models–models for fluidized beds.

UNIT-IV DESIGN FOR HETEROGENOUS SYSTEMS**(9)**

Rate equations – contacting patterns for two phase systems; fluid particle reactions – un reacted core model for spherical particles of unchanging size – rate of reaction for shrinking spherical particles – determination of rate controlling step – application to design; reactions steps; resistances and rate equations; Fluid–Fluid reactions – rate equations.

UNIT-V SOLID CATALYSED REACTIONS

(9)

Rate equation – rate controlling mechanisms – experimental methods for finding rates – product distribution in multiple reactions–application of design; Deactivating catalysts–mechanism–rate equation.

Total Hours: 45+15 = 60

1	Missen R.W.,Mims C.A.,Saville B.A	Introduction to Chemical Reaction Engineering and Kinetics	John Wiley	1999

Course Objectives

- To illustrate the rate equation with different parameters.
- To explain the basic ideas on first order reaction in reactor design.
- To list the various functions of Non Ideal flow of fluidized bed.
- To label the basic theory of rate equation systems in heterogenous reactions.
- To develop a picture about rate controlling mechanism in solid catalyzed reaction.
- To understand the various biochemical reactions.

Course Outcomes

1. Summarize about the rate equation.
2. Determine the first order reaction in reactor design.
3. Express the functions of non ideal flow of fluidized bed.
4. Be aware of the conceptualization behind various rate equations in heterogenous systems.
5. Describe the various rate controlling mechanism in solid catalyzed reaction.
6. Summarize and predict the various reactions.

1. Protein Purification by isoelectric point precipitation.

2. Ammonium Sulphate precipitation.

3. Liquid – Liquid extraction.

4. Solid – Liquid extraction.

5. Crystallization.

6. Cell fractionation using centrifuge.

7. Drying of solid by heat source.

8. Dialysis

9. Purification of α – Amylase from *Bacillus*.

Course Objectives

- To discuss the handling techniques of animals and immunization.
- To understand the isolation and identification of cells and blood group.
- To explain the methods for the detection of antigen-antibody.
- To outline the techniques for antigen identification.
- To understand the techniques of T-cell rosetting.
- To understand the techniques of Western blotting.

Course Outcomes:

1. Infer the basic handling techniques for animal studies.
2. Outline the basics of isolation and identification of cells and blood group.
3. Illustrate the Immuno electrophoresis and Immuno diffusion for determination of antibody.
4. Understand the knowledge about ELISA and western blotting for identification of various diseases.
5. Explain the identification of typhoid antigens by Widal test.
6. Discuss principles of T-cell rosetting.

1. Handling of animals, immunization and raising antisera

2. Identification of cells in a blood smear

3. Identification of blood group

4. Immuno diffusion

5. Immuno electrophoresis

6. Testing for typhoid antigens by Widal test

7. Enzyme Linked Immuno Sorbent Assay (ELISA)

8. Isolation of peripheral blood mononuclear cells

9. Identification of T cells by T-cell rosetting using sheep RBC.

REFERENCE BOOKS

S.No.	Author(s) Name	Title of the book	Publisher	Year of Publications

5	. Weir, D.M	Immunological Techniques	Blackwell Scientific Publications	1992

Course Objective

- To explain the basic concepts of natural product isolations.
- To explain the principles of chromatography.
- To discuss the applications of modern NMR.
- To understand the extraction process.
- To demonstrate the extraction and isolation of caffeine from tea leaves.
- To understand the concept of separation of bioactive compounds.

Course Outcome

- Outline the general concepts of bioproduct isolation from various natural sources.
- Elaborate the principles of chromatography.
- Summarize the applications of modern NMR.
- Outline the extraction process.
- Carry out the experiments related to extraction and isolation of caffeine from Tea Leaves.
- Discuss the concept of separation of bioactive compounds.

UNIT-I GENERAL CONCEPT OF NATURAL PRODUCT ISOLATION

Natural Product Isolation, Extraction of Plant Secondary Metabolites, Selecting General Separation Conditions, Principles of Chromatography, An Introduction to Planar Chromatography, Applications of Liquid Chromatography, Isolation of Natural Products by Low-Pressure Column Chromatography, Crystallization in Final Stages of Purification, Determination of the Nature of the Compound, Applications of Modern NMR Techniques in the Structural Elucidation, Identification and Characterization

UNIT-II LABORATORY- EXTRACTION AND ISOLATION OF CAFFEINE FROM TEA LEAVES

General background and overview of the experiment, Caffeine extraction: Solid-liquid Extraction, Overview of the extraction process, Purification, Isolation of caffeine from tea leaves

DEPARTMENT ELECTIVES

Course Objectives

- To illustrate the genetic material and its biological significance in organization.
- To explain the basic ideas on structure and function on genetic material.
- To list the various functions of Nitrogen fixation.
- To label the basic theory of genes involved in the pathogenesis.
- To develop a picture about applications of plant biotechnology.
- To discuss the different stages of developments in gene analysis and its recombination.

Course Outcomes

1. Summarize about the importance of genetic material and its uses.
2. Determine the structure and function of the genetic material.
3. Express the functions of fixing nitrogen to soil through microbes.
4. Be aware of the conceptualization behind various genes involved in pathogenesis.
5. Describe the various functions and application of plant biotechnology through tissue culture.
6. Summarize and predict the different stages of developments in gene analysis and its recombination.

UNIT- I ORGANIZATION OF GENETIC MATERIAL (9)

Genetic material of plant cells – nucleosome structure and its biological significance; junk and repeat sequences; outline of transcription and translation.

UNIT II CHLOROPLAST & MITOCHONDRIA (9)

Structure, function and genetic material; rubisco synthesis and assembly, coordination, regulation and transport of proteins. Mitochondria: Genome, cytoplasmic male sterility and import of proteins.

UNIT- III NITROGEN FIXATION (9)

Nitrogenase activity, nod genes, nif genes, bacteroids.

UNIT- IV AGROBACTERIUM & VIRAL VECTORS (9)

Pathogenesis, crown gall disease, genes involved in the pathogenesis, Ti plasmid – t- DNA, importance in genetic engineering. Viral Vectors: Gemini virus, cauliflower mosaic virus, viral vectors and its benefits.

UNIT- V APPLICATION OF PLANT BIOTECHNOLOGY (9)

Outline of plant tissue culture, transgenic plants, herbicide and pest resistant plants, molecular pharming, therapeutic products.

TEXT BOOKS

S.No.	Author(s) Name	Title of the book	Publisher	Year of Publications
1	Gamburg OL, Philips GC,	Plant Tissue & Organ Culture fundamental Methods	Narosa Publications	1995
2	Singh BD.	Text Book of Biotechnology	Kalyani Publishers	1998

REFERENCE BOOKS

S.No.	Author(s) Name	Title of the book	Publisher	Year of Publications
1	Heldt HW	Plant Biochemistry & Molecular Biology	Oxford University Press	1997
2	Ignacimuthu .S	Applied Plant Biotechnology	Tata McGraw-Hill	1996

Course Objectives

- To explain basic knowledge on biotech industries in various field.
- To demonstrate the various lab construction through new ventures.
- To construct various parameters of research and development in production of bio based products.
- To explain the case studies of different industries and their strategic planning.
- To outline the basic concepts of IPR and ethics in biotechnology.
- To discuss the different techniques for entrepreneurship in biotechnology.

Course Outcomes

1. Summarize the characteristics of different biotech industries.
2. Evaluate the different lab construction through new ventures.
3. List the various parameters of research and developmental techniques.
4. Explain the opportunities to know different industrial strategic plans.
5. Recognize basic concepts of IPR and ethics in biobased product production.
6. Identify and list different techniques for entrepreneurship in biotechnology.

UNIT I OVERVIEW OF BIOTECHNOLOGY INDUSTRIES (9)

Scope - Biotechnology Industries in India and Abroad - Fundamentals of Biotechnology for biobusiness - Trends and key issues in Biotechnology and devices industries - Technology basis in industry segment, emerging technologies and technical convergences issues.

UNIT II NEW VENTURE CREATION – ENTREPRENEURSHIP (9)

Plant tissue culture lab construction – Equipment, glassware and chemical requirements - techniques in culturing of plants. Export of tissue cultured plants to abroad – Vermiculture technology – Mushroom cultivation - single cell protein - Biofertilizer technology - production - Commercialization of R&D- Fermentation technology: Bakery, Dairy products.

UNIT III PRODUCT DEVELOPMENT (9)

Beer, wine and ethanol production using different sources– Enzyme: production, purification and characterization - Organic acids (Citric, lactic) production - Antibiotic production - Biogas technology - Azolla cultivation - Product development and project management, transition from R&D to business units. Institute– industry interaction and partnership/ alliances.

UNIT IV INTELLECTUAL PROPERTY, BIOETHICS AND LEGAL ISSUES (9)

Intellectual property rights in Biotech, Patent laws - Bioethics and current legal issues - Marketing and public perceptions in product development – Genetically modified products and organisms (Transgenic products) - Technology licensing and branding concerns.

UNIT V BIOBUSINESS PLANS

(9)

Healthcare, the Biomedical Sciences, agriculture and Agrobiotechnology. Transfer and business planning - Bank loan and finance strategy – Budget plan – licensing and Branding Concerns and Opportunities, Policy and regulatory Concerns and Opportunities Financial assistance for R&D projects and entrepreneurship. Corporate partners marketing – Model project: Case studies of different industries and their strategic planning.

Total Hours: 45

TEXTBOOKS

S.No.	Author(s) Name	Title of the book	Publisher	Year of Publications
1	Richard Oliver	The coming Biotech age: The business of Biomaterials	McGraw Hill Publications, New York	1999
2	Karthikeyan, S. and Arthur Ruf	Biobusiness	MJP Publications. Chennai, Indi	2009

REFERENCE BOOKS

S.No.	Author(s) Name	Title of the book	Publisher	Year of Publications
1	GurinderShahi	BioBusiness in Asia: How countries Can Capitalize on the Life Science Revolution	Pearson Prentice Hall	2004
2	Ruth Ellen Bulger	The ethical dimensions of the Biological sciences	Cambridge University Press	1993

Course Objectives

- To explain the fundamentals of cancer biology
- To understand the principles of carcinogenesis
- To explain the principles of molecular cell biology
- To explain the principles of cancer metastasis
- To outline the different types of cancer therapy.
- To understand the molecular tools for cancer diagnosis.

Course Outcomes

At the end of the course students will be able to

1. Understand the fundamentals of cancer biology
2. Interpret the mechanism of carcinogenesis
3. Outline the principles of molecular cell biology
4. Understand the significance of cancer metastasis
5. Summarize the different types of cancer therapy
6. Recall the molecular tools of cancer diagnosis

UNIT I FUNDAMENTALS OF CANCER BIOLOGY (8)

Epidemiology of cancer: environmental factors: tobacco, alcohol, diet, occupational exposure, hormones. Regulation of cell cycle, modulation of cell cycle in cancer. Different forms of cancers. Specific type of cancer hepato cellular, melanoma, breast, lung cancer. Genetic basis of cancer- DNA repair. mutations that cause changes in signal molecules, signal switches.

UNIT II PRINCIPLES OF CARCINOGENESIS (9)

Theory of carcinogenesis, Chemical carcinogenesis, metabolism of carcinogenesis, principles of physical carcinogenesis, x- ray radiation-mechanisms of radiation carcinogenesis.

UNIT III PRINCIPLES OF MOLECULAR CELL BIOLOGY OF CANCER (10)

Signal targets and cancer, activation of kinases; tumor suppressor genes, Oncogenes, identification of oncogenes, Virus and cancers: DNA virus-retroviruses detection of oncogenes. Oncogenes/proto oncogene activity. Growth factors related to transformation. Telomerases.

UNIT IV PRINCIPLES OF CANCER METASTASIS (10)

Clinical significances of invasion, heterogeneity of metastatic phenotype, metastatic cascade, basement

membrane disruption, three step theory of invasion, proteinases and tumour cell invasion.

UNIT V CANCER THERAPY

(8)

Cancer screening and early detection, Detection using biochemical assays, tumor markers, molecular tools for early diagnosis of cancer. Advances in cancer detection. Different forms of therapy, chemotherapy, radiation therapy, immunotherapy, molecular therapy, use of signal targets towards therapy of cancer; Gene therapy.

Total Hours: 45

TEXT BOOKS

S.No.	Author(s) Name	Title of the book	Publisher	Year of Publications
1	Ian F.Tannock	The Basic Science of Oncology”	McGraw Hill Professional,	2005
2	Dunmock. N. J and Primrose S. B	Introduction to modern Virology,	Blackwell Scientific Publications, Oxford	1988
3	L.M. Franks, N.M. Teich	Introduction to the Cellular and Molecular Biology of Cancer	Oxford Medicine Publications	1991
4	Maly B. W. J	Virology a practical approach	IRL press, Oxford	1987
5	Ruddon, R. W.	Cancer Biology	Oxford University Press	1995

Course Objectives

- To illustrate the origin of developmental biology.
- To explain the basic ideas on specifications of germ layers.
- To list the various functions of vertebrates development by its differentiation.
- To discuss the basic theory of morphogenesis and organogenesis.
- To understand embryogenesis and its functions.
- To discuss the different stages of developmental biology.

Course Outcomes

1. Summarize about the cell commitment and differentiation in developmental biology.
2. Determine the postulation of germ cells and patterning of vertebrate body plan.
3. Express the functions of cell differentiation in vertebrate development.
4. Explain the conceptualization behind morphogenesis and organogenesis.
5. Describe the various functions and stages in embryogenesis.
6. Summarize and predict the different stages of developmental biology.

UNIT I INTRODUCTION**(8)**

Origins of developmental biology; Concepts in development – Developmental signals in cell division & differentiation; Role of gene expression in development; Identifying developmental genes, Cell commitment & differentiation; Determination & induction of cell fate, Concept of morphogen & positional information; Model vertebrate organisms: Mouse, Zebrafish, Model invertebrate organisms: *D. melanogaster*, *C. elegans*, Model plant: *A. thaliana*

UNIT II GERM CELLS AND PATTERNING THE VERTEBRATE BODY PLAN (9)

Genotypic & phenotypic sex-determination in mammals, *D. melanogaster* and *C. elegans*, Structure & Formation of germ cells, Fertilization; axes & germ layers; Setting up the body axes; the origin & specification of the germ layers.

UNIT III DEVELOPMENT OF VERTEBRATES**(10)**

Development of the Drosophila, Nematodes & Cellular Slime Molds: Body Plan; Specification of body axes & role of maternal genes; Polarization of body axes during oogenesis; Patterning, Segmentation- & role of pair-rule genes; cell differentiation and aggregation.

UNIT IV MORPHOGENESIS AND ORGANOGENESIS**(10)**

Morphogenesis; Kinds of cleavage & blastulation; Types of tissue movement in gastrulation; Gastrulation in amphibians & mammals; Neural tube formation & neural crest migration; Cell Differentiation & Organogenesis; Models of cell differentiation; Insect imaginal disc & wing development; metamorphosis.

UNIT V EMBRYOGENESIS

(8)

Plant development; Pattern development in early embryogenesis of angiosperms; floral development.

Total Hours: 45

TEXT BOOKS

S.No.	Author(s) Name	Title of the book	Publisher	Year of Publications
1	Scott F. Gilbert	Developmental Biology	Sinauer Associates,	2013
2	Arumugam. A	Developmental Biology	Saras Publications	1995

Course Objectives

- To explain descriptive views of fire and explosion.
- To illustrate Differentiating relief systems in various explosions.
- To descriminate various hazards and toxicity.
- To evaluate various spills and leakage of liquids.
- To interpret different situations of explosions and toxicity through case studies.
- To discuss the different global and local explosive issues.

Course Outcomes

1. Elaborate the concept of fire and explosion.
2. Learn and evaluate relief systems in various explosions.
3. Explain the hazards and toxicity in various situations.
4. Discuss the various spills and leakage preventive measures.
5. Identify basic views in different situations of explosions and toxicity.
6. Make up perspective techniques and create data on different global and local explosive issues.

UNIT I FIRE AND EXPLOSION

(9)

Introduction-Industrial processes and hazards potential, mechanical electrical, thermal and process hazards. Safety and hazards regulations, Industrial hygiene. Factories Act, 1948 and Environment (Protection) Act, 1986 and rules thereof.Shock wave propagation, vapour cloud and boiling liquid expanding vapours explosion (VCE and BLEVE), mechanical and chemical explosion, multiphase reactions, transport effects and global rates.

UNIT II RELIEF SYSTEMS

(9)

Preventive and protective management from fires and explosion-inerting, static electricity passivation, ventilation, and sprinkling, proofing, relief systems – relief valves, flares, scrubbers.

UNIT III TOXICOLOGY

(9)

Hazards identification-toxicity, fire, static electricity, noise and dust concentration; Material safety data sheet, hazards indices- Dow and Mond indices, hazard operability (HAZOP) and hazard analysis (HAZAN).

UNIT IV LEAKS AND LEAKAGES

(9)

Spill and leakage of liquids, vapors, gases and their mixture from storage tanks and equipment; Estimation of leakage/spill rate through hole, pipes and vessel burst; Isothermal and adiabatic flows of gases, spillage and leakage of flashing liquids, pool evaporation and boiling; Release of toxics and dispersion. Naturally buoyant and dense gas dispersion models; Effects of momentum and buoyancy; Mitigation measures for leaks and releases.

UNIT V CASE STUDIES

(9)

Flixborough, Bhopal, Texas, ONGC offshore, HPCL Vizag and Jaipur IOC oil-storage depot incident; Oil, natural gas, chlorine and ammonia storage and transportation hazards.

Total Hours: 45

TEXT BOOKS

S.No.	Author(s) Name	Title of the book	Publisher	Year of Publications
1	Crowl D.A. and Louvar J.F	Chemical Process Safety Fundamentals with Applications	Prentice Hall.	2001
2	Mannan S.	Lee's Loss Prevention in the Process Industries	Butterworth- Heinemann	2005

Course Objectives

- To explain the variations of renewable and nonrenewable energy and its usage.
- To classify the different sources for the production of biomass and bioenergy.
- To record the basic notion on assorted properties of fuels.
- To design the bioenergy production through agricultural wastes.
- To differentiate and organize the distinct agricultural wastes used for bioenergy production.
- To understand the basic theory of bioprocess principles.

Course Outcomes

1. Compare and contrast energy use as renewable and non-renewable energy.
2. Synthesize the biomass for renewable energy production.
3. Prioritize diverse properties of fuels.
4. Construct and design the bioenergy production through agricultural wastes.
5. Apply the knowledge on downstream processing for bioenergy production.
6. Examine and solve the problems related to bioenergy production.

UNIT I OVERVIEW OF ENERGY USE (9)

Fossil fuels - past, present & future, Remedies & alternatives for fossil fuels, Today's energy use, Fossil fuels and environmental impact, Renewable energy source and devices, Solar Energy, wind energy and hydro energy.

UNIT II BIOMASS AND BIO-ENERGY (9)

Biomass potential - terrestrial, aquatic and marine - collection- storage and utilization, Dedicated bioenergy crops, Woody biomass, Liquid biofuels, Synthetic fuels from the biomass, biomass to biofuel conversion, Alcohol production - cellulose degradation.

UNIT III PROPERTIES OF FUELS (9)

Fuel properties - alcohol, biogas, producer gas, vegetable oil. Combustion - air requirement – Octane and Cetane numbers. Analysis of products of combustion. Fuel blending - fuel efficiency in dual fuel operation, Biogas and producer gas engines.

UNIT IV AGRICULTURE AS BIOMASS (9)

Bioenergy from wastes, agricultural wastes and byproducts - sources and availability, utilisation pattern - as fuel, Biochemical conversion of organic wastes, anaerobic digesters, methane production - sludge treatment - suitability of wastes as fuel.

UNIT V DOWNSTREAM PROCESSING (9)

Introduction to downstream processing principles, characteristics of biomolecules and bioprocesses. Cell disruption for product release– mechanical, enzymatic and chemical methods, filtration, centrifugation, chromatography, esterification, pyrolysis.

Total Hours: 45

TEXT BOOKS

S.No.	Author(s) Name	Title of the book	Publisher	Year of Publications
1	Stout. B.A.	Biomass energy	Texas University Press, College Station	1985
2	Chahal.D.S	Food, Feed and Fuel from Biomass	Oxford & IBH Publishing Co. Pvt LTD.	1991

REFERENCE BOOKS

S.No.	Author(s) Name	Title of the book	Publisher	Year of Publications
1	Chakraverty, A	Biotechnology and other alternate technologies for utilisation of biomass	Oxford and IBH publising Co., New Delhi	1993.
2	Donald. L.Klass and Emert H. George	Fuels from Biomass and wastes	AnnArbo Science Publishers, Inc. Michigan	1981.
3	Chavla, O.P	Advances in Biogas Technology	ICAR Pub	1986

Course Objectives

- To define the basic view of tissue culture techniques.
- To illustrate the breeding of farm animals.
- To propose an opinion on transgenic animal technology.
- To explain the characterization techniques for bacterial and viral diseases in animals.
- To justify the basic concept on recombinant cytokines.
- To discuss the diverse techniques on animal cell culturing and its mechanism.

Course Outcomes

1. Identify the different views on tissue culturing.
2. Differentiate various breeding farm animals.
3. Illustrate the concept behind transgenic animal technology.
4. Evaluate the bacterial and viral diseases that attack animals.
5. Analyze and categorize the best approach on recombinant cytokines.
6. Discuss the diverse techniques on animal cell culturing and its mechanism.

UNIT I ANIMAL CELL CULTURE (10)

Introduction to basic tissue culture techniques, equipments and instruments in ATC - chemically defined and serum free media - animal cell cultures - maintenance and preservation – various types of cultures; suspension cultures - continuous flow cultures - immobilized cultures – somatic cell fusion - organ cultures.

UNIT II ANIMAL DISEASES AND THEIR DIAGNOSIS (9)

Bacterial and viral diseases in animals - monoclonal antibodies – diagnosis - molecular diagnostic techniques; PCR - in-situ hybridization - northern -southern blotting - RFLP.

UNIT III THERAPY OF ANIMAL DISEASES (9)

Recombinant cytokines – therapeutic applications of monoclonal antibody, vaccines - DNA, sub unit, cocktail vaccines - gene therapy for animal diseases

UNIT IV MICROMANIPULATION OF EMBRYOS (9)

Micromanipulation technology - equipments - enrichment of x and y bearing sperms from semen samples - artificial insemination - germ cell manipulations – In vitro fertilization - embryo transfer - micromanipulation technology and breeding of farm animals.

UNIT V TRANSGENIC ANIMALS (8)

Concepts of transgenic animal technology; strategies for the production of transgenic and knock out animals– significance in biotechnology - stem cell cultures and induced pluripotent stem cells in the production of transgenic animals.

TEXT BOOKS

S.No.	Author(s) Name	Title of the book	Publisher	Year of Publications
1	Masters J.R.W	Animal Cell Culture: Practical Approach	Oxford University Press	2000

REFERENCE BOOKS

S.No.	Author(s) Name	Title of the book	Publisher	Year of Publications
1	Ranga M.M.	Animal Biotechnology	Agrobios India Limited	2002
2	Ramadass P, Meera Rani S	Text Book Of Animal Biotechnology	Akshara Printers	1997

Course Objectives

- To explain the electromagnetic wave properties.
- To discuss the functional properties of infrared spectroscopy.
- To propose an idea on the instrumentation and physical properties of mass spectrometry.
- To illustrate the electron spin detection through NMR.
- To define the scattering mechanism of X-Ray diffraction.
- To interpret the biological samples functional and physical properties using different advanced analytical instruments.

Course Outcomes

1. Define the wave properties of EMR in spectroscopy.
2. Discuss the basic functional and physical properties of molecules through infrared spectroscopy.
3. Outline the instrumentation and molecule properties using mass spectrometry.
4. Evaluate the molecules structure and properties through NMR.
5. Analyze the molecules for its structural properties using X-Ray diffraction.
6. Summarize the mechanism of various advanced analytical instruments.

UNIT I SPECTROSCOPY (8)

Interaction of radiation with matter, Definition frequency, Wave number, types of electromagnetic radiation, interparticle forces and energies, energy levels. Population of energy levels, Scattering, Absorption and Emission.

UNIT II INFRARED SPECTROSCOPY (9)

Measurement of Infrared spectrum-Physical basis of infrared spectra, Infrared of Polyatomic molecules, biological examples, infrared of oriented samples.

UNIT III MASS SPECTROMETRY (9)

Ion sources sample introduction – mass analyzers and ion detectors – biomolecule mass spectrometry – peptide and protein analysis – carbohydrates and small molecule – specific applications.

UNIT IV NUCLEAR MAGNETIC RESONANCE (10)

Chemical shifts – spin – spin coupling – relaxation mechanisms – nuclear overhauser effect – multidimensional NMR spectroscopy – determination of macromolecular structure by NMR – magnetic resonance imaging.

UNIT V X-RAY DIFFRACTION

(9)

Scattering by x-rays-diffraction by a crystal – measuring diffraction pattern – Bragg reflection – unit cell – phase problem – anomalous diffraction – determination of crystal structure – electron and neutron diffraction.

Total Hours: 45

TEXTBOOK

S.No.	Author(s) Name	Title of the book	Publisher	Year of Publications
1	Campbell I.D and Dwek R.A.	Biological Spectroscopy	Benjamin Cummins and Company	1986.

REFERENCE BOOK

S.No.	Author(s) Name	Title of the book	Publisher	Year of Publications
1	Atkins P.W	Physical Chemistry	Oxford IV Edition	1990

Course Objectives

- To identify the basic structural principles of protein.
- To classify the different techniques of mutagenesis in bioimprinting.
- To record the basic notion on enzyme engineering and protein purification.
- To differentiate and organize the distinct metagenomics and ecosystem biology.
- To explain the basic theory of protein engineering in industries.
- To examine the problems related to engineering enzymes.

Course Outcomes

1. Compare and contrast structural and functional properties of proteins.
2. Summarize the diverse techniques of mutagenesis.
3. Prioritize diverse methods for protein purification.
4. Construct and design the techniques of metagenomics and ecosystem biology.
5. Apply the knowledge on applications of protein engineering in industries.
6. Examine and solve the problems related to engineering enzymes.

UNIT- I BASIC STRUCTURAL PRINCIPLES OF PROTEINS (9)

Amino Acids properties (size, solubility, charge, pKa), Kyle-Doolittle (Hydropathy) Index; Peptides as building blocks of proteins; Torsional (dihedral) angles, Ramachandran Plot; Secondary Structures of proteins; Loops – Types and Functions; Biosynthesis and chemical synthesis of Peptides. Lesk, Richardson and Topology Schematics

UNIT- II TECHNIQUES OF MUTAGENESIS (9)

Rational Design, Non rational design , Mutagenesis library construction- Chemical, Staggered Extension, Random Elongation, Random priming, Error prone PCR , Impact of structure analysis and prediction- structure and modeling, role of biocomputing, denova design, Effect of protein conformation and bioimprinting.

UNIT- III ENGINEERING ENZYMES (9)

Engineering stability (*Bacillus subtilis* natural protease, *Pseudomonas* isoamylase, carbamylase from *Agrobacterium radiobacter*), specificity and features to ease protein purification, Engineering antibodies- Engineering signal molecules (hormones/ receptors), Engineering protein to facilitate recovery. Affinity purification (Strep-Tag)

UNIT- IV METAGENOMICS (9)

Metagenomics and ecosystems Biology- conceptual framework, tools and methods- Analyses of metagenomics, Single gene approach, Targeted partial metagenome sequencing, Analyses of metatranscriptome- Limitation in analysing the metatranscriptome- 16s rRNA sequencing and metatranscriptome pyrosequencing, metaproteome-molecular methods to study complex microbial communities, metabolomics- metabolome of an ecosystem and metagenomics.

Metabolomics for natural product perception

UNIT-V PROTEIN ENGINEERING IN INDUSTRIES

(9)

Protein engineering for industrial enzymology, Biosensor- chemically engineered electronic protein, genetically fused protein, Gene engineering for molecular networking and protein assembly; molecular bioscreening in oncology- mechanism based drug discovery. Protein engineering in vaccine development.

Total Hours: 45

REFERENCES BOOKS

S.No.	Author(s) Name	Title of the book	Publisher	Year of Publications
1	T. E. Creighton	Proteins, Structure and Molecular properties	Freeman W. H & Company	1993
2	C. Branden and J. Tooze	Introduction to Protein Structure	Garland Publications	1999

Course Objectives

- To define the basic view of infectious diseases in host microbe interactions.
- To illustrate the diverse host defense mechanism and pathogenic strategies.
- To propose an opinion on molecular pathogenesis.
- To explain the characterization techniques for host pathogen interactions.
- To understand the basic concept on modern approaches to control pathogens.
- To explain the diverse pathogens and its controlling measures.

Course Outcomes

1. Identify different views on host microbe interactions.
2. Differentiate various host defense mechanisms.
3. Illustrate the concept behind molecular pathogenesis.
4. Evaluating and characterizing host pathogen interactions.
5. Analyze and categorize the best approach to control pathogens.
6. Explain the diverse pathogens and its controlling measures.

UNIT- I HOST-MICROBE INTERACTIONS**(7)**

Normal Flora-Protective role-dynamic nature, principles of Infectious diseases-pathogenicity-course of infectious diseases-distribution of the pathogen, establishing the cause of infectious disease-Koch's postulates molecular postulates-mechanisms of pathogenesis. Epidemiology-principles.

UNIT- II HOST-DEFENSE AGAINST PATHOGENS AND PATHOGENIC STRATEGIES (10)

Host defense: skin, mucosa, cilia, secretions, physical movements, limitation of free iron, antimicrobial compounds, mechanism of killing by humoral and cellular defense mechanisms, complements, inflammation process, general disease symptoms, Pathogenic adaptations to overcome the above defenses.

UNIT- III MOLECULAR PATHOGENESIS**(10)**

Virulence factors - gene regulation in virulence of pathogens - labile & stable toxins; *Vibrio Cholerae* - Cholera toxin -*E.coli* pathogens: - ETEC – EPEC - EHEC - EIEC Hemolytic Uremic Syndrome - Shigella toxin - Plasmodium Life cycle- Antimalarials based on transport processes - Influenza virus - action of amantidine.

UNIT- IV EXPERIMENTAL STUDIES ON HOST-PATHOGEN INTERACTIONS**(9)**

Virulence assays: adherence, invasion, cytopathic, cytotoxic effects. Criteria & tests in identifying virulence factors, attenuated mutants, molecular characterization of virulence factors, signal transduction & host responses.

UNIT-V**MODERN APPROACHES TO CONTROL PATHOGENS****(9)**

Classical approaches based on serotyping. Modern diagnosis based on highly conserved virulence factors, immuno & DNA-based techniques. New therapeutic strategies based on recent findings on molecular pathogenesis of a variety of pathogens, Vaccines - DNA, subunit and cocktail vaccines

Total Hours: 45

REFERENCE BOOKS

S.No.	Author(s) Name	Title of the book	Publisher	Year of Publications
1	Nester, E. W. Anderson, D. G Roberts, C.E. Jr. and Nester, M. T.	Microbiology: A Human Perspective, Fifth Edition	McGraw-Hill,	2007

Course Objectives

- To illustrate about the biosafety in biotechnology.
- To explain basic knowledge on Intellectual property rights.
- To rephrase different views on policies of IPR.
- To solve the IPR issues and Bioethics.
- To list and examine about the case studies of copyright and patents.
- To understand the basics of IPR and ethical issues in biotechnology.

Course Outcomes

1. Classify the different techniques involved in biosafety in biotechnology based industries.
2. Manage and organize the knowledge about the intellectual property rights.
3. Label an idea about the policies of IPR.
4. Relate about the IPR issues and bioethics.
5. Diagnose about the case studies on patents.
6. Summarize the basics of IPR and ethical issues in biotechnology.

UNIT I BIOSAFETY**(8)**

Biosafety – Biotechnology development in India, Safety issues concerning biotechnological products, governing biosafety, Cartagena protocol on biosafety, Conservation of Biodiversity.

UNIT II INTELLECTUAL PROPERTY RIGHTS**(10)**

Introduction - Invention and Creativity - Intellectual Property (IP) - Importance - Protection of IPR - Basic types of property (i. Movable Property ii. Immovable Property and iii. Intellectual Property). IP - Patents - Copyrights and related rights - Trade Marks and rights arising from Trademark registration - Definitions - Industrial Designs and Integrated circuits - Protection of Geographical Indications at national and International levels - Application Procedures.

UNIT III IPR – POLICIES**(9)**

International convention relating to Intellectual Property - Establishment of WIPO - Mission and Activities -History - General Agreement on Trade and Tariff (GATT). Indian Position Vs WTO and Strategies - Indian IPR legislations - commitments to WTO-Patent Ordinance and the Bill - Draft of a national Intellectual Property Policy - Present against unfair competition.

UNIT IV CASE STUDIES**(9)**

Case Studies on - Patents (Basmati rice, turmeric, Neem, etc.) - Copyright and related rights - Trade Marks - Industrial design and Integrated circuits - Geographic indications - Protection against unfair competition.

UNIT V BIOETHICS

(9)

Bioethics – Disease prevention Vs right to privacy, patentability of DNA, pre implantation embryo diagnosis, Engineered organisms into environment, Genetic tests in diagnostics and therapy.

Total Hours: 45

1	Subbaram N.R	Handbook of Indian Patent Law and Practice	S. Viswanathan Printers and Publishers Pvt. Ltd.,	1998.
2	Sasson A	Biotechnologies and Development	UNESCO Publications,	1988.
3	Singh K	Intellectual property rights on Biotechnology	BCIL	2015

Course Objectives

- To understand the constituents of food and energy.
- To classify the different sources of microbes in food that assist food spoilage.
- To record the basic notion on fermented food products.
- To differentiate and organize the distinct food additives used.
- To explain the basic theory of food processing and preservation.
- To discuss the problems related to food deterioration and its preventive measures.

Course Outcomes

1. Compare and contrast different food constituents and their effectiveness.
2. Summarize the controlling measures for food spoilage.
3. Prioritize diverse properties of fermented foods.
4. Construct and design the food additives for food preservation.
5. Apply the knowledge on basics of food processing and preservation methods.
6. Examine and solve the problems related to food deterioration and its preventive measures.

UNIT I FOOD AND ENERGY (9)

Constituents of Food- Water : importance, water in food, activity and shelf life of food; Carbohydrates: functional properties of sugars and polysaccharides in food; Lipids: uses, physical and chemical properties; Proteins and amino acids: physical and chemical properties, distribution, functions and functional properties; Vitamins and Minerals: Dietary sources; Nutritive value of foods, food as a source of energy, food health and disease.

UNIT II FOOD MICROBIOLOGY (9)

Types of micro-organism normally associated with food -mold, yeast, and bacteria. Micro-organisms in natural food products. Biochemical changes caused by micro-organisms. Food poisoning and microbial toxin. Spoilage of vegetables, fruit, meat, poultry , beverages and other food products. Food safety.

UNIT III FERMENTATION PRODUCTS (9)

Enzymes in foods and food industry, Nature and type of starters, Role of starters in Fermented foods, Fermentation of Milk products-Fermented soy and peanut milk , Idli, Fermented fish products, Pickles, Fermented Olives ; Production of distilled beverage alcohol ,wine, brandy, and beer. Mycoprotein production.

UNIT IV FOOD ADDITIVES (9)

Chemical and physical methods of food analysis for determination of food composition; Pigments in food, food flavours, food additives and toxicants. Natural sweeteners and artificial sweeteners - role in controlling diseases.

UNIT V FOOD PROCESSING & PRESERVATION

(9)

Basic principles, unit operations Involved in the food processing methods; Objectives, importance and functions of quality control. Principles involved in the use of sterilization, pasteurization and blanching, thermal death curves of micro organisms, canning, frozen storage characteristics of foods, microbial activity at low temperatures, factors affecting quality of foods in frozen storage; irradiation preservation of foods.

Total Hours: 45

15BTBT6E08 PROCESS INSTRUMENTATION DYNAMICS AND CONTROL 3 0 0 3 100

Course Objectives

- To understand the basic concept of transformation and dynamics reactions in chemical system.
- To classify the control systems based on their functions and properties.
- To understand the concept and classification of closed loop system in process instrumentation.
- To discuss the mechanism of control systems in the dynamic reactions.
- To explain the control mechanism in the process instrumentation.
- To tell about the different types and its functional parameters of process instruments.

Course Outcomes

1. Explain the concept behind transformation and dynamic reactions in chemical systems.
2. Summarize the functions of control systems.
3. Prioritize the importance of closed loop systems.
4. Outline the working mechanism of control systems.
5. Tell about the properties of control mechanism.
6. Differentiate the process control instruments.

UNIT I INTRODUCTION (9)

Laplace transformation, transform of standard functions, derivatives and integrals, inversion, theorems in Laplace transformation, application. Open-loop systems, first order systems and their transient response for standard input functions, first order systems in series, linearization and its application in process control, second order systems and their dynamics, transfer function for chemical reactors and dynamics.

UNIT II CONTROL SYSTEMS (9)

Closed loop control systems, development of block diagram for feed-back control systems, servo and regulator problems, Transfer function for controllers and final control element, principles of pneumatic and electronic controllers, transportation lag, transient response of closed-loop control systems and their stability.

UNIT III CLOSED LOOP SYSTEMS (9)

Introduction to frequency response of closed-loop systems, control system design by frequency, Bode diagram, stability criterion, Nyquist diagram; Tuning of controller settings.

UNIT IV CONTROL MECHANISM (9)

Controller mechanism, introduction to advanced control systems, cascade control, feed forward control, control of heat exchangers, introduction to microprocessors and computer control of chemical processes.

UNIT V CONTROL INSTRUMENTS

(9)

Principles of measurements and classification of process control instruments, measurements of temperature, pressure, fluid flow, liquid weight and weight flow rate, viscosity and consistency, pH, concentration, electrical and thermal conductivity.

Total Hours: 45

TEXTBOOKS

S.No.	Author(s) Name	Title of the book	Publisher	Year of Publications
1	Coughnowr and Koppel	Process Systems Analysis and Control	McGraw-Hill	2009
2	George Stephanopolous	Chemical Process Control	Prentice-Hall of India Pvt- Ltd	1990

REFERENCE BOOKS

S.No.	Author(s) Name	Title of the book	Publisher	Year of Publications
1	Emenule, S.Savas	Computer Control of Industrial Processes	McGraw-Hill	1965
2	Eckman	Industrial Instrumentation’’	Wiley	1978.

Course Objectives

- To explain the human nervous system,
- To demonstrate about neuro physiology
- To manage and diagnose about neuro pharmacology.
- To categorize the mechanism of neurological behaviour.
- To interpret basic impression about the disorders associated with nervous system.
- To discuss the applications of neurobiology

Course Outcomes

1. Outline the basis of central and peripheral nervous system and describe the structure of neurons and supporting cells.
2. Demonstrate the mechanism of action potential conduction and working of voltage dependent channels.
3. Illustrate the concept of synaptic transmission and mechanism of action of neurotransmitters.
4. List the basic mechanisms of sensations and skeletal muscle contraction.
5. Enumerate the mechanisms associated with motivation behaviours.
6. Describe the various disorders of nervous system

UNIT I NEUROANATOMY (9)

Central and peripheral nervous systems; Structure and function of neurons; types of neurons; Synapses; Glial cells; myelination; Blood Brain barrier; Neuronal differentiation; Characterization of neuronal cells; Meninges and Cerebrospinal fluid; Spinal Cord.

UNIT II NEURO PHYSIOLOGY (9)

Resting and action potentials; Mechanism of action potential conduction; Voltage dependent channels; nodes of Ranvier; Chemical and electrical synaptic transmission; information representation and coding by neurons.

UNIT III NEURO PHARMACOLOGY (9)

Synaptic transmission, neurotransmitters and their release; fast and slow neurotransmission; characteristics of neurites; hormones and their effect on neuronal function.

UNIT IV APPLIED NEUROBIOLOGY (9)

Basic mechanisms of sensations like touch, pain, smell and taste; neurological mechanisms of vision and audition; skeletal muscle contraction.

UNIT V BEHAVIOUR SCIENCE (9)

Basic mechanisms associated with motivation; control of feeding, sleep, hearing and memory; Disorders associated with the nervous system.

TEXT BOOKS

S.No.	Author(s) Name	Title of the book	Publisher	Year of Publications
1	Gordon M. Shepherd	Neurobiology	Oxford University Press, USA	1994

REFERENCE BOOKS

S.No.	Author(s) Name	Title of the book	Publisher	Year of Publications
1	Mathews G.G.	Neurobiology	Blackwell Science, UK	2000
2	William Bechtel, George Graham	A Companion to Cognitive Science	Blackwell Science, UK	1999

Course Objectives

- To explain the genetic disorders.
- To determine protocol for biological sample diagnosis.
- To discuss the hybridoma technology.
- To distinguish the therapies for various diseases.
- To tell about the generation, differentiation and uses of stem cells.
- To develop biological pharma products using recombinant technology

Course Outcomes

1. Outline the basic idea on genetic disorders.
2. Demonstrate the biological sample diagnostic methods.
3. Illustrate the concept behind hybridoma technology.
4. List the detection and therapies of harmful diseases.
5. Explain the generation, differentiation and uses of stem cells.
6. Describe the development of pharmaceutical products using recombinant technology.

UNIT I GENETIC DISEASES**(9)**

Chromosomal disorders – Numerical disorders e.g. trisomies & monosomies, Structural disorders e.g. deletions, duplications, translocations & inversions, Gene controlled diseases – Autosomal and X-linked disorders, Molecular basis of human diseases - Pathogenic mutations. Gain of function mutations: Oncogenes, Huntingtons Disease, Loss of function - Tumour Suppressor Genes,

UNIT II DIAGNOSTICS**(9)**

Prenatal diagnosis - Invasive techniques - Amniocentesis, Fetoscopy, Non-invasive techniques - Ultrasonography, X-ray, maternal serum and fetal cells in maternal blood. Diagnosis using protein and enzyme markers, DNA/RNA based diagnosis Hepatitis, Microarray technology- genomic and cDNA arrays, application to diseases

UNIT III HYBRIDOMATECHNOLOGY**(9)**

Monoclonal Antibodies – Production, Target drug delivery using monoclonal antibodies; Human Gene Therapy, Detection and Therapy of Tuberculosis, Yellow Fever, Japanese encephalitis, Dengue fever, Acquired Immune Deficiency Syndrome (AIDS), Cholera, Malaria; Cancer.

UNIT IV STEM CELL**(9)**

Embryonic and adult stem cells, Totipotent, pluripotent and multipotent cells testing and generation of embryonic stem cells, testing of adult stem cells and differentiation, potential uses of stem cells –cell based therapies, Gene products in medicine – Humulin, erythropoietin, Growth hormone-somatostatin, TPA, Interferon; functional cloning-anti haemophilic factor positional cloning-Dystrophin.

UNIT V PHARMACEUTICAL BIOTECHNOLOGY

(9)

Vaccines- Preparation and testing, standardization and storage study, generation of vaccines- hepatitis, AIDS, Malaria. Production of recombinant pharmaceutical products – Biotechnologically derived products (therapeutic proteins); Study of Haematopoietic growth factors Recombinant coagulation factors and thrombolytic agents.

Total Hours: 45

TEXT BOOKS

S.No.	Author(s) Name	Title of the book	Publisher	Year of Publications
1	Berger S.L.,ET.Al	Methods in Enzymology	Academic press Inc	1992
2	De Kalyan kumar	Plant tissue culture	New Central Book Agency (P) Ltd.	1997
3	Freifelder David	Molecular Biology	Narosa Publishing.	1987

Course Objectives

- To explain the gene expression and its regulation.
- To determine the methods for the synthesis of primary metabolites.
- To discuss the procedure for biosynthesis of secondary metabolites.
- To distinguish the features of bioconversion.
- To tell about the regulation of enzyme production.
- To summarize the repressions in enzyme production.

Course Outcomes

1. Illustrate the gene expression and its regulation.
2. Demonstrate the primary metabolite synthesis.
3. Discuss the methods for secondary metabolites production.
4. Outline the features of bioconversion.
5. Explain the regulation of enzyme production.
6. Describe the repressions in enzyme production.

UNIT I INTRODUCTION**(9)**

Jacob Monod model for gene expression regulation – Lac operon, catabolite regulation - glucose effect - cAMP deficiency. Regulation of RNA synthesis by amino acid. Feed back regulation, regulation in branched pathways-differential regulation in isozymes, concerted feedback regulation, cumulative feedback regulation, permeability control: passive diffusion, active transport, group transportation.

UNIT II SYNTHESIS OF PRIMARY METABOLITES**(9)**

Alteration of feedback regulation, limiting accumulation of end products, feedback resistant mutants, alteration of permeability for metabolites.

UNIT III BIOSYNTHESIS OF SECONDARY METABOLITES**(9)**

Producers of secondary metabolites, Precursor effects, trophophase- idiophase relationship, enzyme induction, feedback regulation, catabolite regulation by passing control of secondary metabolism.

UNIT IV BIOCONVERSIONS**(9)**

Advantages of Bioconversions, specificity, yields, factors important for bioconversion, regulation of enzyme synthesis, mutation, permeability, co-metabolism, avoidance of product inhibition, mixed or sequential bioconversions, conversion of insoluble substances.

UNIT V REGULATION OF ENZYME PRODUCTION

(9)

Strain selection, improving fermentation, recognizing growth cycle peak, induction, feedback repression, catabolite repression, mutants resistant to repression, gene dosage.

Total Hours: 45

TEXT BOOKS

S.No.	Author(s) Name	Title of the book	Publisher	Year of Publications
1	Peter F. Stanbury, Stephen J. Hall & A. Whitaker	Principles of Fermentation Technology	Butterworth- Heinemann	2005
2	G.Stephanopoulos , AristosA. Aristidou, Jens Hoiris Nielson	Metabolic Engineering: Principles and Methodologies	Academicpress	1998

REFERENCE BOOKS

S.No.	Author(s) Name	Title of the book	Publisher	Year of Publications
1	Wang D.I.C., Cooney C.L., Demai A.L., Dunnill P., Humphrey A.E., Lill M.D	Fermentation and Enzyme Technology	JohnWiley and Sons	1980
2	Cruger, W and Crueger, A	Biotechnology: A Textbook of Industrial Microbiology	Panama Publishing Corporation	2003
3	Zubay, G.L	Principles of Biochemistry	WCB Publishers, London	1995

Course Objectives

- To explain basic knowledge on soil microbes and its characteristics.
- To demonstrate the effects of xenobiotic compounds.
- To discuss various methods for industrial waste water management.
- To explain the effects of various industrial wastes and to infer basic concepts for its management.
- To outline the natural and engineered bio-treatment methods to remediate the pollutants.
- To discuss the different environmental issues using biotechnology.

Course Outcomes

1. Summarize the characteristics of soil microbes and its interactions.
2. Evaluate the different xenobiotics present and methods to degrade them.
3. Describe the industrial waste management systems.
4. List the opportunities in waste treatment industries and its management.
5. Recognize natural and engineered biotreatment methods to remediate pollutants.
6. Identify and list different environmental issues and its remedy.

UNIT I INTRODUCTION (8)

Microbial flora of soil, growth and ecological adaptations of soil microorganisms, interactions among soil microorganisms, biogeochemical role of soil microorganisms.

UNIT II DEGRADATION OF XENOBIOTIC COMPOUNDS (9)

Aromatics - benzene, pentachlorophenol, Polyaromatic hydrocarbons (PAHs) – naphthalene, , Polychlorinated biphenyls (PCBs) hexachloro biphenyl, Pesticides-DDT and Surfactants–LAS

UNIT III INDUSTRIAL WASTE WATER MANAGEMENT (10)

Wastewater characteristics – physical, chemical and biological, Biological processes - unit operations, aerobic treatment processes, activated sludge process–characteristics of activated sludge and process configuration, anaerobic treatment by methanogenesis

UNIT IV TREATMENT OF INDUSTRIAL WASTES (9)

Dairy, Paper & Pulp, Textile, leather, hospital and pharmaceutical industrial waste management, e-waste-radioactive and nuclear power waste management.

UNITV DEVELOPMENTS PERTAINING TO ENVIRONMENTAL BIOTECHNOLOGY (9)

Solid waste management, Role of biosensors in Environmental monitoring, Heavy metal pollution and their control strategies, Prevention of environmental damage with respect to nitrogen fixation, Bioremediation, Production of bioelectricity from microbial fuel cell (MFC), Improvement of water quality by denitrification, Role of biotechnology on agricultural chemical use.

Total Hours: 45

TEXT BOOKS

S.No.	Author(s) Name	Title of the book	Publisher	Year of Publications
1	BruceE. Rittmann and perr L. Mccarty	Environmental Biotechnology: Principle and Applications	McGraw Hill	2001
2	Mecalf and Eddy	Waste water Engineering: Treatment Disposal Reuse	Mc Graw Hill	1991
3	DesW. Connell,	Basic concepts of Environmental chemistry	Lewis publishers	2005

REFERENCE BOOKS

S.No.	Author(s) Name	Title of the book	Publisher	Year of Publications
1	Alan Scragg	Environmental Biotechnology	Oxford University press	2005
2	Prescott, Harley, Klein	Microbiology	WCB publishers	1996

Course Objectives

- To explain basic knowledge on genome organization of prokaryotes and eukaryotes.
- To discuss the effects of cytogenetic mapping.
- To construct various methods for gene finding and annotations in functional genomics.
- To explain the effects of various protein level estimation in proteomics
- To understand the different protein analysis techniques.
- To outline the post translational modification and other protein interactions.

Course Outcomes

1. Summarize the characteristics of genomic organization of prokaryotes and eukaryotes.
2. Evaluate the different physical mapping techniques.
3. Discuss the gene findings in functional genomics.
4. Explain the protein estimation through different techniques.
5. Recognize different protein analysis techniques.
6. Identify and list different protein interactions.

UNIT I OVERVIEW OF GENOMES OF BACTERIA, ARCHAE AND EUKARYOTA (9)

Genome organization of prokaryotes and eukaryotes, gene structure of bacteria, archaebacterial and eukaryotes, Human genome project, Introduction of functional and comparative genomics.

UNIT II PHYSICAL MAPPING TECHNIQUES (9)

Cytogenetic mapping, radiation hybrid mapping, Fish, STS mapping, SNP mapping optical mapping, Top down and bottom up approach, linking and jumping of clones, gap closure, pooling strategies, genome sequencing.

UNIT III FUNCTIONAL GENOMICS (9)

Gene finding; annotation; ORF and functional prediction; Subtractive DNA library screening; differential display and representational difference analysis; SAGE.

UNIT IV PROTEOMICS TECHNIQUES (9)

Protein level estimation; Edman protein microsequencing; protein cleavage; 2 D gel electrophoresis; metabolic labeling; detection of proteins on SDS gels. Mass spectrometry- principles of MALDI- TOF; Tandem MS-MS; Peptide mass fingerprinting.

UNIT V PROTEIN PROFILING (9)

Post translational modification; protein-protein interactions; glycoprotein analysis; phosphor protein analysis.

TEXT BOOKS

S.No.	Author(s) Name	Title of the book	Publisher	Year of Publications
1	Cantor and Smith	Genomics	John Wiley & Sons	1999
2	Pennington and Dunn	Proteomics	BIOS Scientific Publishers	2001
3	T.ABrown	Genomes	Bios Scientific Publishers Ltd	2002

REFERENCE BOOKS

S.No.	Author(s) Name	Title of the book	Publisher	Year of Publications
1	Liebler	Introduction to Proteomics	Humana Press	2002
2	Hunt and Livesey	Functional Genomics	Oxford University press	2000
3	Primrose and Twyman	Principles of genome analysis and genomics	Blackwell Publishing Co	2003

Course Objectives

- To discuss the mass and energy balance.
- To explain the scale up of equipments.
- To describe the scale down of equipments.
- To explain design of equipments.
- To understand the facility design with safety.
- To outline the process economics in biological products production.

Course Outcomes

1. Calculate the mass and energy balance.
2. Evaluate the scaling up process for equipments.
3. Discuss the scale down process for equipments.
4. Describe the design of equipments.
5. Tell about the facility design in euipmentation.
6. Summarize the process economic calculations in plant design.

UNIT I MASS AND ENERGY BALANCE (9)

Introduction: General design information - Material and energy balance calculations - Process Flow sheeting.

UNIT II SCALE UP AND SCALE DOWN OF EQUIPMENTS (9)

Heat and Mass Transfer studies: Effect of scale on oxygenation, mixing, sterilization, pH, temperature, inoculum development, nutrient availability and supply. Bioreactor scale-up - constant power consumption per volume, mixing time, impeller tip speed (shear) - mass transfer coefficients. Scale up of downstream processes - Adsorption (LUB method), Chromatography (constant resolution etc.), Filtration (constant resistance etc.) - Centrifugation (equivalent times etc.) - Extractors (geometry based rules) - Scale-down related aspects.

UNIT III DESIGN OF EQUIPMENTS (9)

Selection of bioprocess equipment (upstream and downstream) - Specifications of bioprocess equipment - Mechanical design of reactors, heat transfer and mass transfer equipment. Design considerations for maintaining sterility of process streams and process equipment - Piping and instrumentation - Materials of construction for bioprocess plants.

UNIT IV FACILITY DESIGN (9)

Facility design aspects - Utility supply aspects - Equipment cleaning aspects - Culture cell banks - cGMP guidelines – Validation - Safety.

UNIT V ECONOMICS AND CASE STUDY

(9)

Process economics - Case studies. Commodity chemicals and production of pharmaceutical products.

Total Hours: 45

TEXT BOOKS

2	Joshi M. V. and V.V.Mahajani	Process Equipment Design	Macmillan India Ltd	2000
3	Michael R. Ladisch	Bioseparations Engineering: Principles, Practice and Economics	Wiley	2001

Course Objectives

- To explain the general properties of viruses.
- To discuss the cultivation of viruses.
- To describe the viral genetics.
- To tell about the structure and properties of DNA and RNA viruses.
- To infer the knowledge on mechanism and action of viral vaccines and antivirals.
- To outline the modern approaches of virus control.

Course Outcomes

1. Summarize the general properties of viruses.
2. List the cultivation methods of viruses.
3. Discuss the genetic importance of viruses.
4. Describe the action mechanism of DNA and RNA virus.
5. Explain the production and importance of viral vaccines and antivirals.
6. Summarize the modern approaches of viral control.

UNIT I GENERAL PROPERTIES OF VIRUSES (8)

Early development of virology – properties of viruses: morphology, structure and shape–chemical properties – Resistance – viral agglutination – viral multiplication.

UNIT II CULTIVATION OF VIRUSES & VIRAL GENETICS (9)

Cultivation of viruses: Animal inoculation – cell culture – tissue culture types, detection of virus growth in cell cultures – Virus purification – viral assay – viral genetics –non genetic interactions - Bacteriophages.

UNIT III DNA AND RNA VIRUSES (10)

DNA viruses: Morphology, properties and pathogenesis – pox viruses – herpes viruses –adeno viruses. RNA viruses – entero viruses – polio virus – influenza – rabies virus –hepatitis viruses.

UNIT IV VIRAL VACCINES AND ANTIVIRALS (9)

Conventional vaccines -killed and attenuated, modern vaccines—recombinant proteins, subunits, DNA vaccines, peptides, immuno modulators (cytokines), vaccine delivery and adjuvants, Interferons, designing and screening for antivirals, mechanisms of action, antiviral libraries, antiretrovirals—mechanism of action and drug resistance.

UNIT V MODERN APPROACHES OF VIRUS CONTROL (9)

Anti-sense RNA, siRNA, ribozymes, in silico approaches for drug designing

TEXT BOOKS

S.No.	Author(s) Name	Title of the book	Publisher	Year of Publications
1	Ranga MM	Animal biotechnology	Agrobios India Limited	2002
2	Ramadass P, Meera Rani S	Text Book of Animal Biotechnology	Akshara Printers	1997

REFERENCE BOOKS

S.No.	Author(s) Name	Title of the book	Publisher	Year of Publications
1	Masters JRW	Animal Cell Culture: Practical Approach	Oxford University Press	2000

Course Objectives

- To explain the general concepts of pharmacology.
- To discuss the systemic pharmacology with drug action.
- To describe the experimental pharmacology in drug discovery.
- To tell about the general aspects on the pharmacognosy.
- To infer the knowledge on methods and quality control for following pharmacognosy.
- To discuss the protocol for isolation of phytochemicals.

Course Outcomes

1. Tell about the basics of pharmacology in drug action.
2. Explain the systemic pharmacology.
3. Discuss the methods for experimental pharmacology.
4. Describe the action of drugs in pharmacognosy.
5. Outline the methods for isolation of phytochemicals.
6. Understand the characterization of phytochemicals.

UNIT I BASICS OF PHARMACOLOGY (9)

General concepts of Pharmacology, ADME process, drug action- mechanism, factors affecting drug action. Dose-effect relationship

UNIT II SYSTEMIC PHARMACOLOGY (9)

Drugs Affecting the Central Nervous System, Cardiovascular and Renal Systems, Immune system, Respiratory System, Gastrointestinal System and Nutrition, Endocrine System, Integumentary system and Eyes/Ears. Drugs affecting uterine motility, Chemotherapy of parasite infections, Chemotherapy of microbial diseases. Antineoplastic agents, Immunomodulators. Drugs acting on blood and blood forming organs

UNIT III EXPERIMENTAL PHARMACOLOGY (9)

Experimental methodologies involved in the discovery of drugs (*in vivo*, *in vitro*, *ex vivo*). Animal handling and animal care. Methods of anaesthetising animals and methods of euthanasia. Restraining and blood collecting methods.

UNIT IV PHARMACOGNOSY (9)

General aspects of sources of natural medicinal products. Marine Pharmacognosy and its applications. General cultivation of medicinal plants, their merits and Demerit -a. General aspects, b. Factors involved, c. Methods used to improve the Quality and d. Pest control. Role of natural pesticides – Preparation and uses.

UNIT V ISOLATION AND CHARACTERIZATION OF PHYTOCHEMICALS (9)

General methods and Principles of extraction methods, types of extraction and their merits and demerits. Selection and purification of solvents for extraction, methods of isolation, purification and identification of phytoconstituents.

Total Hours: 45

TEXT BOOKS

S.No.	Author(s) Name	Title of the book	Publisher	Year of Publications
1	Bertram G. Katzung	Basic & clinical pharmacology	Mc Graw Hill	2004
2	Richard A. Harvey PhD, Pamela C. Champ	Lippincott's Illustrated Reviews: Pharmacology	Wolters Kluwer	2008

REFERENCE BOOKS

S.No.	Author(s) Name	Title of the book	Publisher	Year of Publications
1	G.E. Trease, W.C. Evans	Pharmacognosy	ELBS	2002
2	Varro E.Tyler, Lynn. R.Brady, James E.Robbers	Pharmacognosy	Lee & Febiger	1988
3	T.E. Wallis	Text Book of Pharmacognosy	CBS Pub	1985

Course Objectives

- To explain basic knowledge on definition and scope of stem cells.
- To demonstrate the structural and functional principles of in vitro fertilization.
- To discuss the various identification and cell differentiation of somatic stem cells.
- To explain the effects of stem cell in drug discovery and tissue engineering.
- To outline the basic concepts of cellular therapy and gene therapy of stem cells.
- To compile the application of stem cells.

Course Outcomes

1. Summarize the characteristics stem cells.
2. Evaluate the different structural and functional parameters of invitro fertilization.
3. List the properties of adult stem cells in differentiation.
4. Explain the uses of stem cells in drug discovery and tissue engineering.
5. Recognize various stem cell therapies.
6. Summarize the application of stem cells.

UNIT I STEM CELLS AND CELLULAR PEDIGREES (9)

Scope of stem cells – definition of stem cells – concepts of stem cells – differentiation, maturation , proliferation , pluripotency, self – maintenance and self – renewal – problems in measuring stem cells – preservation protocols.

UNIT II EMBRYONIC STEMCELLS (9)

In vitro fertilization –culturing of embryos-isolation of human embryonic stem cells – blastocyst – inner cell mass – growing ES cells in lab – laboratory tests to identify ES cells – stimulation ES cells for differentiation – properties of ES cells.

UNIT III ADULT STEM CELLS (9)

Somatic stem cells – test for identification of adult stem cells – adult stem cell differentiation – trans differentiation – plasticity – different types of adult stem cells.

UNIT IV STEM CELL IN DRUG DISCOVERY AND TISSUE ENGINEERING (9)

Target identification – Manipulating differentiation pathways – stem cell therapy Vs cell protection - stem cell in cellular assays for screening – stem cell based drug discovery, drug screening and toxicology.

UNIT V POTENTIAL USES OF STEM CELLS (9)

Cellular therapies – vaccines – gene therapy – immunotherapy – tissue engineering – blood and bone marrow – Fc cells.

TEXT BOOKS

S. No.	Author (s) Name	Title of the book	Publisher	Year of Publication
1	CS Potten	Stem cells	Elsevier	1997
2	Kursad and Turksen	Embryonic Stem cells	Humana Press.	2002
3	Robert Paul Lanza	Essentials of stem cell biology,	O'Reilly	2006
4	Clive Svendsen , Allison D.Ebert.	Encyclopedia of stem cell research vol 1 & 2	Sage pub	2008

Course Objectives

- To present basic knowledge about the various cloning vectors and its features.
- To demonstrate the various techniques and enzymes involved in cloning.
- To explain and practice diverse concepts on expression vectors for cloning.
- To practice the basic views on preparation of genomic and cDNA library.
- To identify and organize differing views on applications of gene cloning in rDNA research.
- To compile the basic concepts of rDNA technology.

Course outcomes

1. Compose about basic concepts about the features of cloning vectors.
2. Assemble different techniques and enzymes involved in cloning.
3. Classify about expression vectors for cloning.
4. List the techniques in preparation of genomic and cDNA library.
5. Propose knowledge on applications for rDNA research.
6. Summarize concepts of rDNA technology.

UNIT I CLONING VECTORS (9)

Ideal features of cloning vectors – plasmids and bacteriophages – cloning vectors for E.coli ; pBR322, pUC vectors, M13 and other plasmid vectors – Cosmids, Phagemids – vectors for Bacillus, Streptomyces Restriction mapping and analysis

UNIT II ENZYMES AND TECHNIQUES FOR CLONING (9)

DNA modifying enzymes – ligases – Nucleic acid probe preparation; Radioactive and nonradioactive labels – Hybridization techniques – PCR; different types and applications – DNA sequencing – DNA fingerprinting – RFLP, RAPD – chromosome walking.

UNIT III EXPRESSION VECTORS (9)

Expression vectors in prokaryotes – Expression vectors in Eukaryotes-Yeast cloning vectors – selectable markers for eukaryotes – SV40, Papilloma, Retrovirus, Baculoviral vectors – mammalian cell expression system – Gene transfer techniques – Agrobacterial plasmids – Ti plasmid and viral vectors – cloning in plants.

UNIT IV GENOMIC AND cDNA LIBRARY (9)

Different strategies for in vitro and in vivo cloning – Preparation of rDNA, Preparation of cDNA and genomic DNA libraries – screening procedures – linkers, adapters, homopolymer tailing and TA cloning – gene transfer technologies – Mutagenesis – site directed mutagenesis – application.

UNIT V APPLICATION OF GENE CLONING

(9)

Fusion protein- down-stream processing of recombinant proteins Applications in medicine – Gene therapy- Diagnostics, pathogenesis, recombinant vaccines –humanized antibodies and their applications genetically modified food – bioremediation with recombinant micro organisms– forensic science – genetic diversity – Agriculture, crop improvement – production of biosensors, enzymes – safety guidelines in rDNA research – containment and disposal.

Total Hours: 45

TEXT BOOKS

S.No.	Author(s) Name	Title of the book	Publisher	Year of Publications
1	Jeremy W. Dale, Malcolm von Schantz, Nicholas Plant	From Genes to Genomes: Concepts and Applications of DNA Technology	Wiley- Blackwell	2011
2	Sandy B. Primrose and Richard Twyman	Principles of Gene Manipulation and Genomics	Wiley	2009
3	Michael R. Green and Joseph Sambrook	Molecular Cloning: A Laboratory Manual	Cold Spring Harbor Press	2012

REFERENCE BOOKS

S.No.	Author(s) Name	Title of the book	Publisher	Year of Publications
1	T. A. Brown	Gene Cloning and DNA Analysis: An Introduction	Blackwell	2010
2	Jocelyn E. Krebs, Elliott S. Goldstein and Stephen T. Kilpatrick	Lewin's GENES XI	Jones & Bartlett Learning	2012

Course Objectives

- To illustrate the scope and importance of crude drugs.
- To understand the basic ideas on cultivation and utilization of medicinal and aromatic plants.
- To list the various functions of plant tissue culture as a source.
- To label the basic theory of methods of drug evaluation.
- To develop a picture about applications of phytochemicals in industry and healthcare.
- To discuss the different stages of developments in using phytochemicals and medicinal plants.

Course Outcomes

1. Summarize about the importance of crude drugs in different medicinal system.
2. Determine the modern cultivation techniques through plants.
3. Express the functions of plant tissue culturing.
4. Be aware of the conceptualization behind various methods for drug evaluation.
5. Describe the various functions and application of phytochemicals in different industries.
6. Summarize and predict the different stages of developments in using phytochemicals and medicinal plants.

UNIT I CRUDE DRUGS (9)

Crude Drugs – Scope & Importance, Classification (Taxonomical, Morphological Chemical, Pharmacological); Cultivation, Collection & processing of Crude Drugs. Indian System of medicine: Ayurveda, Siddha and Unani and its significance

UNIT II MEDICINAL & AROMATIC PLANTS (9)

Cultivation and Utilization of Medicinal & Aromatic Plants in India. Genetics as applied to Medicinal herbs. Modern Biotechnological tools and its influence in Medical and Aromatic plant cultivation.

UNIT III TISSUE CULTURE OF MEDICINAL PLANTS (9)

Plant Tissue Culture as source of medicines, Secondary metabolite production in plants; Plant Tissue Culture for enhancing secondary metabolite production (Withania somnifera, Rauwolfia serpentina, Catharanthus roseus, Andrographis paniculata, Dioscorea sp.); Anticancer, Antiinflammatory, Antidiabetic, Analgesic drugs, Biogenesis of Phytopharmaceuticals.

UNIT IV ANALYSIS OF PHYTOCHEMICALS (9)

Methods of Drug evaluation (Morphological, Microscopic, Physical & Chemical). Preliminary screening, Assay of Drugs – Biological evaluation / assays, Microbiological methods. Types of Phytochemicals: Glycosides - extraction methods (Aloe); Volatile Oils - extraction methods (Clove); Alkaloids - extraction methods (Cinchona); Flavonoids extraction methods, Resins- extraction methods; Lectins.

UNIT V APPLICATIONS OF PHYTOCHEMICALS

(9)

Application of phytochemicals in industry and healthcare; Biocides, Biofungicides, Biopesticides. Nutraceuticals and their significance.

Total Hours: 45

TEXT BOOKS

S.No.	Author(s) Name	Title of the book	Publisher	Year of Publications
1	C. K. Kokate, A. P. Purohit & S. B. Gokhale	Pharmacognosy	NiraliPrakashan	1996
2	Paul M. Dewick	Natural Products in medicine: A Biosynthetic approach	Wiley	2009

REFERENCE BOOKS

S.No.	Author(s) Name	Title of the book	Publisher	Year of Publications
1	Hornok, L.	Cultivation & Processing of Medicinal Plants	Wiley & Sons	1992
2	Trease & Evans	Pharmacognosy	Harcourt Brace & Company	1989

Course Objectives

- To illustrate the modification of biomolecules.
- To describe the chemical reactions of active biomolecules.
- To list the importance and uses of bioconjugate reagents.
- To infer the chemical modifications of enzymes and nucleic acids.
- To tell about the enzyme and nucleic acid conjugation
- To discuss the various applications of bioconjugation of molecules.

Course Outcomes

1. Tell about the modifications of common biomolecules.
2. Determine the basic chemical reactions for active groups.
3. Express the functions of bioconjugate reagents.
4. Summarize the steps for enzyme and nucleic acid modification.
5. Describe the protocol for enzyme and nucleic acid conjugation.
6. Summarize applications of bioconjugation.

UNIT I FUNCTIONAL TARGETS**(9)**

Modification of Amino Acids, Peptides and Proteins Modification of sugars, polysaccharides and glycoconjugates – modification of nucleic acids and oligonucleotides.

UNIT II CHEMISTRY OF ACTIVE GROUPS**(9)**

Amine reactive chemical reactions–Thiol reactive chemical reactions–carboxylate reactive chemical reactions – hydroxyl reactive chemical reactions–aldehyde and ketone reactive chemical reactions – Photoreactive chemical reactions.

UNIT III BIOCONJUGATE REAGENTS**(9)**

Zero length crosslinkers – Homo bifunctional crosslinkers–Hetero bifunctional crosslinkers–Trifunctional crosslinkers – Cleavable reagent systems–tags and probes.

UNIT IV ENZYME AND NUCLEIC ACID MODIFICATION AND CONJUGATION**(9)**

Properties of common enzymes – Activated enzymes for conjugation – biotinylated enzymes– chemical modification of nucleic acids – biotin labeling of DNA – enzyme conjugation to DNA – Fluorescence of DNA.

UNIT V BIOCONJUGATE APPLICATIONS**(9)**

Preparation of Hapten - carrier Immunogen conjugates – antibody modification and conjugation – Immunotoxin conjugation techniques–liposome conjugation and derivatives-Colloidal–gold-labeled proteins–modification with synthetic polymers.

1	G.T.Hermanson	Bioconjugate Techniques	AcademicPress	2013

REFERENCE BOOKS

S.No.	Author(s) Name	Title of the book	Publisher	Year of Publications
1	RavinNarain	Chemistry of Bioconjugates: Synthesis, Characterization, and Biomedical Applications	Wiley	2013

Course Objectives

- To explain basic knowledge on antigen structure and preparation.
- To discuss the structural and functional principles of antibodies and immunodiagnosis.
- To construct various parameters of B cells and T cells.
- To explain the effects of preparation and storage of tissues in immunopathology.
- To outline the basic concepts of preparations of vaccine in molecular immunology.
- To discuss the different techniques for antigen and antibody synthesis.

Course Outcomes

1. Summarize the characteristics of different methods of antigen production.
2. Evaluate the different structural and functional principles of antibodies and immunodiagnosis.
3. List the various parameters of B cells and T cells.
4. Explain the preparation and storage of antibodies and immunodiagnosis.
5. Recognize basic concepts of vaccine preparation in molecular immunology.
6. Identify and list different techniques for antigen and antibody synthesis.

UNIT I ANTIGENS**(7)**

Types of antigens, their structure, preparation of antigens for raising antibodies, handling of animals, adjuvants and their mode of action.

UNIT II ANTIBODIES & IMMUNODIAGNOSIS**(10)**

Monoclonal and polyclonal antibodies – their production and characterization, Western blot analysis, Immunoelectrophoresis, SDS-PAGE - purification and synthesis of antigens, ELISA – principle and applications, radioimmunoassay (RIA) - principles and applications, nonisotopic methods of detection of antigens-enhanced chemiluminescence assay.

UNIT III ASSESSMENT OF CELL MEDIATED IMMUNITY**(10)**

Identification of lymphocytes and their subsets in blood. T cell activation parameters, estimation of cytokines, macrophage activation, macrophage microbicidal assays, in-vitro experimentation – application of the above technology to understand the pathogenesis of infectious diseases.

UNIT IV IMMUNOPATHOLOGY**(9)**

Preparation and storage of tissues, identification of various cell types and antigens in tissues, isolation and characterization of cell types from inflammatory sites and infected tissues, functional studies on isolated cells, immune cytochemistry – immunofluorescence, immune enzymatic and immunoferritin techniques, immunoelectron microscopy.

UNIT V MOLECULAR IMMUNOLOGY

(9)

Preparation of vaccines, application of recombinant DNA technology for the study of the immune system, production of anti idiotypic antibodies, catalytic antibodies, application of PCR technology to produce antibodies and other immunological reagents, immuno therapy with genetically engineered antibodies – Tetramer, recombinant vaccines.

Total Hours: 45

TEXT BOOKS

S.No.	Author(s) Name	Title of the book	Publisher	Year of Publications
1	Talwar G.P., and Gupta S.K	A hand book of practical and clinical immunology (Vol 1&2)	CBS Publications	1992
2	WeirD.M	Practical Immunology	Blackwell Scientific Publications, Oxford	1990

REFERENCE BOOKS

S.No.	Author(s) Name	Title of the book	Publisher	Year of Publications
1	Austin J.M. and Wood K.J.	Principle of cellular and molecular immunology	Oxford university press	1993

Course Objectives

- To explain the various cell types and their advances in tissue engineering.
- To demonstrate the various biomaterials for tissue engineering.
- To explain and practice diverse concepts on tissue engineering and tissue creation.
- To discuss the techniques in tissue typing.
- To practice the basic views on gene therapy.
- To identify and organize differing views on advances on tissue engineering.

Course outcomes

1. Compose about basic concepts in tissue engineering
2. Assemble different biomaterials for tissue engineering
3. Classify about methods for Tissue Engineering.
4. List the techniques in tissue typing
5. Explain the principles of gene therapy
6. Summarize the concepts of tissue engineering in different fields.

UNIT I INTRODUCTION TO TISSUE ENGINEERING (9)

Cell therapies. Tissue Constructs, Organ Modules, Cosmetic Measures. Concepts of Tissue Creation: Sources, Stem Cells, Cells from Tissues, Culture Methods for Tissue Engineering. Maturation of Tissue Constructs. Musculo– skeletal tissue engineering; Modifications of tissue ring; Receptors ligand interaction; Receptor.

UNIT II BIOMATERIALS FOR TISSUE ENGINEERING (9)

Biomaterials: Degradable polymeric scaffolds, Acellular Bio- Matrices, Biological derived polymers in tissue engineering: Natural BD Polymers & Synthetic BD polymers, Cell seeding of scaffolds, Cell source: Allogenic cells, Autologous cells & stem cells. Bioreactors used in tissue engineering: Nail Naughton's Bioreactor, Pulsatile Bioreactor.

UNIT III BIOLOGICAL STUDY OF DIFFERENT CELL TYPES (9)

Cell line, Establishment of cell lines, Different cell types: Endothelial cell, Fibroblast cells, Epithelial cell, Myoblast cells, chromaffin cell, Smooth muscle cells & plasma cell.

UNIT IV PRINCIPLES AND PRACTICE GENE THERAPY (9)

Introduction to gene therapy, Requirements of gene therapy, Genetic defects, Target cells for gene therapy, process of gene therapy, Factors responsible for gene therapy for making effective treatment of genetic disease, Recent developments in gene therapy research, ethical considerations of gene therapy.

UNIT V ADVANCES IN TISSUE ENGINEERING

(9)

Development of artificial tissues; Transplantation biology: Tissue typing, Techniques of tissue typing, Minor histocompatibility antigens, Immuno-suppression, Side effects of immuno- suppression.

Total Hours: 45

TEXT BOOKS

S. No.	Author (s) Name	Title of the book	Publisher	Year of Publication
1	Bhojwani, S. S. Razdan, M. K.	Plant Tissue Culture (Theory and Practice)	Elseveir	1996
2	Ranga , M. M	Animal Biotechnology	Agrobios	2010
3	Watson, J. D. and Gilman, M.	Recombinant DNA	Scientific American Books	1992

Course Objectives

- To understand the variations of stoichiometry and kinetics of biochemical operations.
- To classify the different activities of microbes in waste water treatment.
- To record the basic notion on design and evaluation of growth process.
- To differentiate and organize the distinct methods for modeling reactors..
- To explain the basic applications of bioreactors.
- To discuss the problems related to biochemical operations in different industries.

Course Outcomes

1. Compare and contrast fundamentals and properties of biochemical operations.
2. Demonstrate various waste water treatment activities through biological methods.
3. Prioritize design and evaluation of growth process in bioreactors.
4. Construct and design the methods for modeling bioreactors.
5. Apply the knowledge on applications of modeling bioreactors.
6. Examine and solve the problems related to biochemical operations in different industries.

UNIT I BIOCHEMICAL OPERATIONS (8)

Classification of Biochemical operations, fundamentals of biochemical operations, Stoichiometry and Kinetics of Biochemical Operations.

UNIT II REACTORS IN WASTE WATER TREATMENT (10)

Theory, modeling of ideal suspended Growth Reactors, Modeling Suspended Growth Systems. Aerobic Growth of Heterotrophs in a single Continuous Stirred Tank, Reactor Receiving Soluble Substrate, Multiple Microbial Activities in a Single Continuous Stirred Tank Reactor, Multiple Microbial Activities in Complex Systems, Techniques for Evaluating Kinetics and Stoichiometric parameters.

UNIT III PROCESSES IN WASTE WATER TREATMENT (9)

Applications: Suspended Growth Reactors, Design and Evaluation of Suspended Growth Processes, Activated Sludge, Biological Nutrient Removal, Aerobic – digestion, Anaerobic Processes, Lagoons.

UNIT IV MODELING OF REACTORS (9)

Theory: Modeling of Ideal Attached Growth Reactors, Bio- film Modeling. Aerobic Growth of Biomass in Packed Towers, Aerobic Growth of Heterotrophs in Rotating Disc Reactors, Fluidized Bed Biological Reactors.

UNIT V APPLICATIONS OF BIOREACTORS (9)

Attached Growth Reactors, Trickling Filter, Rotating Biological Contactor, Submerged Attached Growth Bioreactors, Future Challenges, Fate and Effects of Xenobiotic Organic Chemicals.

TEXT BOOKS

S.No.	Author(s) Name	Title of the book	Publisher	Year of Publications
1	M. Henze	Biological Wastewater Treatment: Principles, Modelling and Design	IWA Publishing	2008
2	Graty. C.P.L.Daigger, G and Lim, H.C	Biological Wastewater Treatment	Marcel Dekker	1998

REFERENCE BOOKS

S.No.	Author(s) Name	Title of the book	Publisher	Year of Publications
1	Mizahi A	Biological Waste Treatment	John Wiley Sons Inc	1989

Course Objectives

- To understand the basic properties of biomaterials.
- To explain the biocompatibility of biomaterials.
- To discuss the properties of various implant materials.
- To infer the basic knowledge on various polymeric implant materials.
- To explain about the tissue replacement implants.
- To describe the functions and importance of artificial organs.

Course Outcomes

1. Summarize the basic properties of biomaterials.
2. Discuss the biocompatibility of biomaterials.
3. List the properties and importance of various implant materials.
4. Explain the properties and functions of polymeric implant materials.
5. Tell about the tissue replacement implants.
6. Describe the importance and functions of artificial organs.

UNIT I STRUCTURE OF BIO-MATERIALS AND BIO-COMPATIBILITY (9)

Definition and classification of bio-materials, mechanical properties, visco elasticity, wound healing process, body response to implants, blood compatibility.

UNIT II IMPLANT MATERIALS (9)

Metallic implant materials, stainless steels, co-based alloys, Ti-based alloys, ceramic implant materials, aluminum oxides, hydroxyapatite glass ceramics carbons, medical applications.

UNIT III POLYMERIC IMPLANT MATERIALS (9)

Polymerisation, polyolefin, polyamides, Acrylic, polymers, rubbers, high strength thermoplastics, medical applications.

UNIT IV TISSUE REPLACEMENT IMPLANTS (9)

Soft-tissue replacements, sutures, surgical tapes, adhesive, percutaneous and skin implants, maxillofacial augmentation, blood interfacing implants, hard tissue replacement implants, internal fracture fixation devices, joint replacements.

UNIT V ARTIFICIAL ORGANS (9)

Artificial Heart, Prosthetic Cardiac Valves, Limb prosthesis, Externally Powered limb Prosthesis, Dental Implants.

TEXT BOOKS

S.No.	Author(s) Name	Title of the book	Publisher	Year of Publications
1	Park J.B	Biomaterials Science and Engineering	Plenum Press	1984
2	Rater B.D	Biomaterials Sciences – An Introduction to Materials in Medicine	Academic Press	2004
3	Joon Bu Park, Joseph D. Bronzino	Biomaterials: principles and applications'	CRC press, USA	2003

REFERENCE BOOKS

S.No.	Author(s) Name	Title of the book	Publisher	Year of Publications
1	TeohSweeHin, SweeHinTeoh	Engineering materials for biomedical applications	World Scientific Publishing Co, USA	2004
2	Sujata V. Bhat	Biomaterials	Narosa Publishing House, New Delhi	2002

Course Objectives

- To understand the basic concept on animal cell as bioreactors.
- To explain the gene expression and cell based expression.
- To describe the media preparation for animal cells to grow.
- To infer the basic knowledge on cellular metabolism for obtaining optimum yield.
- To explain the various downstream processing for cell culture production.
- To discuss the characterization techniques for the produced recombinant products.

Course Outcomes

1. Summarize the basic concepts on animal cell as bioreactor.
2. Discuss the gene expression and cell based expression.
3. Describe the generation of biomass as media source for cells to grow.
4. Explain the cellular metabolism for optimum yield.
5. Tell about the basic downstream process for purification.
6. Describe the characterization of produced recombinant products.

UNIT I INTRODUCTION (9)

Introducing animal cells as bioreactors-genetically engineered microbial system –limitations-Animal cell technology for Industrial products-

UNIT II ENGINEERING OF CELLS (9)

Engineering cells for maximum expression- transient expression system- stable expression system- dominant control regions- Factors governing heterologous gene expression- production of heterologous protein using lymphoid cell based expression system- improving translational efficiency

UNIT III GENERATION OF BIOMASS (9)

Generation of Biomass-media for animal cell culture- serum free media- medium design- Engineering a new medium-Fermentor design for animal cell culture-suspension cell culture- Immobilised cells

UNIT IV CELLULAR METABOLISM AND OPTIMUM YIELD (9)

Cellular metabolism for optimum yields-Effect of culture condition on protein glycosylation-culture parameters that affect yield

UNIT V DOWNSTREAM PROCESSING (9)

Downstream processing- production of effective and safe biopharmaceuticals-challenges in purification-Characterisation of recombinant protein production-regulatory aspects of using cells as bioreactors-viral contamination of animal cell derived pharmaceuticals and prevention

TEXT BOOKS

S.No.	Author(s) Name	Title of the book	Publisher	Year of Publications
1	. R.IanFreshney	Culture of Animal Cells: A Manual of Basic Technique and Specialized Applications	Wiley- Blackwell	2010
2	Glyn Stacey, John Davis	Medicines from Animal Cell Culture	John Wiley & Sons, Ltd.	2007
3	Terence Cartwright	Animal cells as bioreactors	Cambridge University Press.	2009

REFERENCE BOOKS

S.No.	Author(s) Name	Title of the book	Publisher	Year of Publications
1	Basant Kumar Sinha and RineshKumar	Principles of Animal cell culture	International book distributing Co.ltd.	2008.
2	Jeffrey W.Pollard and John M.Walker	Animal cell culture.	Springer- Verlag.	1990

Course Objectives

- To explain basic knowledge on nanotechnology.
- To demonstrate the structural and functional principles of bionanotechnology.
- To discuss various methods for microfluidic components.
- To explain the effects of various protein and DNA based nanostructures.
- To outline the basic concepts of nanoparticles in cancer therapy.
- To identify the different nanoparticles using different controlling measures.

Course Outcomes

1. Summarize the characteristics different nanoparticles.
2. Evaluate the different structural and functional principles of biotechnology.
3. Explain the microfluidic devices.
4. Discuss the protein and DNA based nanostructures.
5. Recognize cancer curingnanoparticles.
6. Identify and list different nanoparticles for different controlling measures.

UNIT-I INTRODUCTION TO NANOTECHNOLOGY (9)

Background and definition of nanotechnology, chemical bonds in nanotechnology – Scales at the bio-nano interface – Basic capabilities of nanobiotechnology and nanomedicine – Biological tradition and mechanical tradition biotechnology – Applications in biotechnology.

UNIT-II STRUCTURAL AND FUNCTIONAL PRINCIPLES OF BIONANOTECHNOLOGY (9)

Biomolecular structure and stability – Protein folding – Self-assembly – Self-organization –Molecular recognition – Flexibility – Information – Driven nanoassembly – Energetics –Chemical transformation – Regulation – Biomaterials – Biomolecular motors – Traffic across membranes – Biomolecular sensing – Self-replication – Machine-phase bionanotechnology.

UNIT-III MICROFLUIDICS MEETS NANO (9)

Concepts and advantages of microfluidic devices – Materials and methods for the manufacture of microfluidic component – Fluidic structures – Surface modifications – Lab-on-a-chip for biochemical analysis.

UNIT-IV PROTEIN-BASED NANOSTRUCTURES (9)

S-Layers – Engineered nanopores – Microbial nanoparticle production – Magnetosomes –Nanoscale magnetic iron minerals in bacteria – Nanoparticle – Biomaterial hybrid systems.

UNIT-V DNA-BASED NANOSTRUCTURES

(9)

DNA-Protein nanostructures – Biomimetic fabrication of DNA based metallic nanowires and networks –
DNA-Gold nanoparticle conjugates – Nanoparticles as non-viral transfection agents.

Total Hours: 45

TEXT BOOKS

S.No.	Author(s) Name	Title of the book	Publisher	Year of Publications
1	Niemeyer, C.M. and Mirkin, C.A	Nanobiotechnology: Concepts, Applications and Perspectives	Wiley- VCH	2004
2	Goodsell, D.S.	Bionanotechnology	John Wiley and Sons, Inc	2004

REFERENCE BOOKS

S.No.	Author(s) Name	Title of the book	Publisher	Year of Publications
1	Shoseyov, O. and Levy, I	Nanobiotechnology: Bioinspired Devices and Materials of the Future	Humana Press	2007
2	Bhushan, B.	Springer Handbook of Nanotechnology	Springer- Verlag Berlin Heidelberg	2004
3	Freitas Jr R.A	Nanomedicine	Landes Biosciences	2004
4	Kohler, M. and Fritzsche, W.	Nanotechnology – An Introduction to Nanostructuring Techniques	Wiley- VCH	2004

Course Objectives

- To explain descriptive views of clinical practices and its scope.
- To illustrate Differentiating ethical theories and foundations of clinical trials.
- To discuss various evolution and regulation of clinical research.
- To evaluate various designing protocols and amendments of clinical research.
- To interpret different biostatistics and data management.
- To create data on different clinical research.

Course Outcomes

1. Elaborate the concept of scope and types of clinical research.
2. Evaluate the ethical theories of clinical research.
3. Discuss the history and regulation of clinical research.
4. Explain the various protocol developments in clinical research.
5. Identify basic views in different situations of biostatistics in clinical trials.
6. Make up perspective techniques and create data on different clinical research.

UNIT I INTRODUCTION TO CLINICAL RESEARCH (9)

Definition, Types and Scope of Clinical Research, Good Clinical Practices - Introduction to study designs and clinical trials - Careers in Clinical Research.

UNIT II ETHICS IN CLINICAL RESEARCH (9)

Ethical Theories and Foundations, Ethics Review Committee, Ethics and Historically derived principles - Nuremberg Code, Declaration of Helsinki, Belmont Report, Equipoise, Informed consent, Integrity & Misconduct.

UNIT III REGULATIONS IN CLINICAL RESEARCH (9)

Evolution and History of Regulations in Clinical Research, Patents US Regulatory Structure, IND, NDA, ANDA, Post Drug Approval Activities, PMS, FDA Audits and Inspections EU Regulatory Affairs, EMEA Organization and Function, INDIAN Regulatory system, Schedule Y- Rules and Regulations, Description of trial phases (Phase 0, Phase I, II, III, and IV), Trial contexts (types of trials: pharma, devices, etc.), Trial examples

UNIT IV CLINICAL RESEARCH METHODOLOGY AND MANAGEMENT (9)

Designing of Protocol, CRF, e-CRF, IB, ICF, SOP ; Study Protocol -Introduction, background, Objectives - Eligibility, Design, Randomization - Intervention details, assessments and data collection, case report forms –Violations -. Amendments. Study/ Trial Design- Phase I designs - Dose-finding designs. Phase II designs - Pilot studies, Single arm, Historical control designs. Phase III designs - Factorial designs, Crossover designs, Multicenter studies, Pilot studies. Phase IV designs- Preparation of a successful clinical study, Study management, Project management Documentation, Monitoring, Audits and Inspections, Pharmacovigilance training in clinical research budgeting in clinical research, Supplies and vendor management.

UNIT V BIostatISTICS AND DATA MANAGEMENT (9)

Introduction to Power and Sample Size- Hypothesis testing, P-values, confidence intervals, General power/sample size, estimating effect size, Matching sample size calculations to endpoints. Importance of statistics in clinical research Statistical considerations at the design, analysis and reporting stage Data management - Data collection, Paper or electronic, Parsimony, Data validation, SAE reconciliation, query management Software considerations. Data Monitoring, Trial Conduct - Data quality assurance, Data delinquency, Data Monitoring, d. Trial Conduct, Occurrence and control of variation and bias.

Total Hours: 45

TEXT BOOKS

S. No.	Author (s) Name	Title of the book	Publisher	Year of Publication
1	Friedman,L. M., Furberg, C. and DeMets, D.	Fundamentals of Clinical Trials (4th Edition)”	Springer	2010
2	Machin, D. and Fayers, P	Randomized Clinical Trials: Design, Practice and Reporting	Wiley-Blackwell	2010
3	Piantadosi, S.	Clinical Trials: A Methodologic Perspective	John Wiley & Sons	2005

Course Objectives

- To explain descriptive properties of seawater.
- To illustrate differentiating marine organisms and their industrial applications.
- To discriminate various pollution controlling marine organisms.
- To evaluate various marine toxins used in pharmaceutical industries.
- To interpret recombinations in marine aquaculture.
- To understand the usage of marine organism for different situations.

Course Outcomes

1. Discuss the basic knowledge on biogeochemical cycles.
2. Organize and manage marine organism in different industries.
3. Organize and manage pollution controlling measures through marine organisms.
4. Perceive the basics on combining marine toxins in pharma industries.
5. Compile different proteins of marine organism to develop a new variety.
6. Explain how to use marine organism for different situations.

UNIT I INTRODUCTION TO MARINE ENVIRONMENT (9)

World oceans and seas – ocean currents – physical and chemical properties of sea water – abiotic and biotic factors of the sea – ecological divisions of the sea – history of marine biology – biogeochemical cycles – food chain and food web.

UNIT II MARINE ORGANISMS AND THEIR INDUSTRIAL APPLICATIONS (9)

Phytoplanktons – zooplanktons – nektons – benthos – marine mammals – marine algae – mangroves – coral reefs – algal products, fuels from algae, algal cell culture

UNIT III MARINE ENVIRONMENTAL BIOTECHNOLOGY (9)

Marine pollution – biological indicators (marine micro , algae) – biodegradation & bioremediation – marine fouling and corrosion.

UNIT IV MARINE PHARMACOLOGY (9)

Medicinal compounds from marine flora and fauna – marine toxins , anti cancer agents, antiviral and antimicrobial agents. Marine Toxins

UNIT V AQUACULTURE TECHNOLOGY (9)

Importance of coastal aquaculture – marine fishery resources – common fishing crafts and gears – Aqua farm design and construction, transgenic fish.

Total Hours: 45

TEXT BOOKS

S. No.	Author (s) Name	Title of the book	Publisher	Year of Publication
1	M.Fingerman , R . Nagabhushanam	Recent advances in marine biotechnology volume 3	Mary Frances Thomson	1999
2	M.Fingerman , R . Nagabhushanam	Recent advances in marine biotechnology volume 2	Science publishers	1999
3	E. W. Becker	Microalgae: Biotechnology and Microbiology	Cambridge University Press	1994
	Jasper S. Lee, Michael E. Newman	Aquaculture: An Introduction	Interstate Publishers, Incorporated	1992

UNIT IV FORENSIC DIGITAL IMAGING

(9)

Introduction, Digital cameras and forensic imaging, image acquisition technique. Methods and applications, Authenticity, image processing. Technical investigation on image storage media. Digital image processing- sharpening, contrast, blur soomthing, digital videos and scanners, presenting pictures in courtroom, internet crime. Forgery and stegnography, Voice analysis. Detecting compression and forgeries and Maintaining Records, Hand Writing analysis. Computerized facial reconstruction.

UNIT V FORENSIC ETHICS

(9)

Introduction and importance of Professional ethics in Forensic Science, organizational forensic Science ethics, Code of ethics in Forensic Science Practice. Standard for Good Forensic practice. Ethical problems in ethical forensic sciences. Ethical Dilemmas

Total Hours: 45

REFERENCE BOOKS

S.No.	Author(s) Name	Title of the book	Publisher	Year of Publications
1	Richard Saperstein	Criminalistics: An Introduction to Forensic Science	Prentice Hall	2001
2	David Ellen	The Scientific Examination of Documents Methods and Techniques	Taylor and Francis	2003

Course Objectives

- To explain cell disruption techniques.
- To illustrate different chromatographic methods for separation of active components.
- To discriminate separation techniques for analyzing the biological samples.
- To discuss the importance of separation of biomolecules from a mixture..
- To describe the isolation, purification and behavior of biomolecules.
- To understand the basic downstream process for treating the samples.

Course Outcomes

1. Discuss the basic knowledge on forensic activities.
2. Analyze the forensic criminalities.
3. Describe the analysis for the evidences of forensic samples.
4. Perceive the procedure for forensic sample analyzing using different assays.
5. Compile different properties and functions of digital imaging in forensic.
6. Explain the forensic ethics.

UNIT I CELL DISRUPTION (9)

Mechanical and enzymatic methods of cell disruption, importance of cell disruption in product release, homogenization, ultrasonication, extraction, absorption, adsorption.

UNIT II CHROMATOGRAPHIC METHODS (9)

Chromatographic methods, paper chromatography, thin layer chromatography, gas chromatography, GLC, HPLC, affinity chromatography, ion exchange chromatography, reverse phase chromatography

UNIT III SEPARATION TECHNIQUES (9)

Basic separation techniques: sedimentation, centrifugation, ultra centrifugation, gradient centrifugation, filtration, micro/ ultra filtration, use of membranes (semi permeable) in purification, reverse osmosis. Separation of bioconversion products/ secondary metabolites e.g. Steroids and antibiotics.

UNIT IV PHYSICO-CHEMICAL SEPARATION (9)

Importance of separation techniques in biotechnology, its scope from research to industry, chemical, physical and biochemical aspects of separation and isolation, purification of biomolecules. Behavior of biomolecules in body fluids

UNIT V DOWNSTREAM PROCESSES (9)

Leaching, crystallization, lyophilization, drying. Chemistry of extraction, selection of solvent, use of solvent extraction in antibiotic separation, affinity extraction/ chromatography. Industrial applications with examples.

OPEN ELECTIVES

OPEN ELECTIVES OFFERED BY BIOTECHNOLOGY

Course Objectives:

- To impart basic knowledge in bioprocess Engineering
- To design the bioreactors for various operations.
- To understand the principle and working of heat transfer equipments.
- To extend the knowledge in principle of heat transfer inside a bioreactor
- To construct the equipments used in mass transfer operations.
- To learn the equipments used in separation process.

Course Outcomes:

- Summarize the basic concepts in bioprocess Engineering.
- Design the bioreactors for various operations.
- Develop the heat transfer equipments for Bioprocess Engineering.
- Elaborate the principle of heat transfer in bioreactor.
- Construct the equipments used in mass transfer operations.
- Categorize the equipments used in separation process.

UNIT I ENGINEERING PROPERTIES AND STORAGE TANK (9)

Introduction to various mechanical properties of material to be used material of construction, design of cylindrical storage tank.

UNIT II REACTOR DESIGN (9)

Design of Airlift fermentor, Bubble column reactor and Continuous stirred tank reactor.

UNIT III HEAT TRANSFER EQUIPMENTS

(9) Design of Shell and tube Heat exchanger, Double pipe heat exchanger, long tube vertical evaporator and forced circulation evaporator.

UNIT IV MASS TRANSFER EQUIPMENTS (9)

Design of Bollmann extractor, fractionating column, packed tower and spray tray absorber

UNIT V SEPERATION EQUIPMENTS

(9) Design of plate and frame filter press, leaf filter, rotary drum filter, disc bowl centrifuge, rotart drum drier and Swenson –walker crystallizer.

TEXT BOOKS:

S.No	Author(s) Name	Title of the book	Publisher	Year of Publications
1	James Edwin Bailey, David F. Ollis	Biochemical Engineering Fundamentals	McGraw-Hill	2007
2	Don W. Green, Robert H. Perry	Chemical Engineer Hand book	The McGraw- Hill	2008
			Companies, Inc.	

REFERENCE BOOKS

S.No	Author(s) Name	Title of the book	Publisher	Year of Publications
1	Pauline. M. Doran	Bioprocess Engineering Principles	Academic Press	2013

Course Objectives

- To learn the scope and importance of food processing.
- To impart basic knowledge in different food processing methods carried out in the food tech companies.
- To extend the brief knowledge in food conservation operations.
- To study the methods of food preservation by cooling.
- To familiarize the students on the concepts of preservation methods for fruits.
- To create deeper understanding on preservation methods for vegetables.

Course Outcomes

- Describe the scope and importance of food processing.
- Outline the various processing methods for foods.
- Extend the knowledge in food conservation operations.
- Describe the methods of food preservation by cooling.
- Summarize the preservation methods for fruits.
- Demonstrate the preservation methods for vegetables.

UNIT I SCOPE AND IMPORTANCE OF FOOD PROCESSING (9)

Properties of food- Physical, thermal, mechanical, sensory. Raw material Preparation - Cleaning, sorting, grading, peeling.

UNIT II PROCESSING METHODS (9)

Heating- Blanching and Pasteurization. Freezing- Dehydration- canning- additives- fermentation- extrusion cooking- hydrostatic pressure cooking- dielectric heating- micro wave processing and aseptic processing – Infra red radiation processing- Concepts and equipment used.

UNIT III FOOD CONVERSION OPERATIONS (9)

Size reduction- Fibrous foods, dry foods and liquid foods- Theory and equipments- membrane separation- filtration- equipment and application.

UNIT IV FOOD PRESERVATION BY COOLING (9)

Refrigeration, Freezing-Theory, freezing time calculation, methods of freezing, freezing equipments, freeze drying, freeze concentration, thawing, effect of low temperature on food. Water activity, methods to control water activity.

UNIT V PRESERVATION METHODS FOR FRUITS AND VEGETABLES (9)

Pre processing operations - preservation by reduction of water content: drying / dehydration and concentration – chemical preservation – preservation of vegetables by acidification, preservation with sugar - Heat preservation– Food irradiation- Combined preservation techniques.

REFERENCE BOOKS

S.No	Author(s) Name	Title of the book	Publisher	Year of Publications
1	M.A. Rao, Syed S.H. Rizvi, Ashim K. Datta	Engineering properties of foods	CRC Press	2005
2	B. Sivasankar	Food processing and preservation	PHI Learning Pvt. Ltd	2002

Course Objectives

- To learn the scope and importance of Molecular modeling.
- To impart basic knowledge in quantum mechanics.
- To familiarize the students on the concepts of molecular mechanics.
- To extend the brief knowledge in molecular dynamics simulation.
- To study the drug design by using modeling tools.
- To understand molecular docking and ligand based drug design methods

Course Outcomes

- Summarize the importance of Molecular modeling.
- Extend the knowledge in quantum mechanics
- Analyze the general features of molecular mechanics.
- Illustrate the molecular dynamics by using simple models.
- Outline the drug design by using modeling tools.
- Describe the molecular docking and ligand based drug design methods

UNIT-I MOLECULAR MODELLING**(9)**

Introduction to concept of molecular modeling, molecular structure and internal energy, applications of molecular graphics, coordinate systems, potential energy surfaces, discussion of local and global energy minima

UNIT-II QUANTUM MECHANICS**(9)**

Introduction to the computational quantum mechanics; one electron atom, many electronic atoms and molecules, Hartree Fock equations; calculating molecular properties using ab initio and semi empirical methods.

UNIT-III MOLECULAR MECHANICS**(9)**

Molecular mechanics; general features of molecular mechanics force field, bond stretching, angle bending, torsional terms, non – bonded interactions; force field parameterization and transferability; energy minimization; derivative and non – derivative methods, applications of energy minimization.

UNIT-IV MOLECULAR DYNAMICS**(9)**

Molecular dynamics simulation methods; molecular dynamics using simple models, molecular dynamics with continuous potential, setting up and running a molecular dynamic simulation, constraint dynamics; Monte Carlo simulation; Monte Carlo simulation of molecules.

UNIT-V MODELLING AND DRUG DESIGN

(9)

Macromolecular modeling, design of ligands for known macro molecular target sites, Drug- receptor interaction, classical SAR /QSAR studies and their implications to the 3 D modeler, 2-D and 3-D database searching, pharmacophore identification and novel drug design, molecular docking, Structure-based drug design for all classes of targets.

2	Matthew F. Schlecht	Molecular Modeling on the PC	Wiley- Blackwell; H	1998

Course Objectives

- To impart basic knowledge in Bioremediation.
- To study the different bio filters and bio film processes.
- To understand the concept of bioremediation for soil environment.
- To extend the knowledge in filtration processes of bioremediation.
- To learn about the bioremediation of metals.
- To apply the concept of bioremediation to reduce pollution.

Course Outcomes:

- Summarize the basic concepts in Bioremediation.
- Design the bio filters and bio film processes.
- Elaborate the concept of bioremediation for soil environment.
- Construct the filtration processes of bioremediation.
- Describe the bioremediation of metals.
- Outline the concept of bioremediation to reduce pollution.

UNIT-I OVERVIEW OF BIOREMEDIATION (9)

Pollution: Types and its consequences, History of bioremediation, Sources of contamination, Bioremediation processes, Environments where bioremediation is used, Microbiology of bioremediation.

UNIT-II BIOFILM PROCESSES (9)

Trickling Filters and Biological Towers, Rotating Biological Contactors, Granular Media Filters, Fluidized-bed Reactors, Hybrid Biofilm Processes

UNIT-III BIOREMEDIATION FOR SOIL ENVIRONMENT (9)

Environment of Soil Microorganisms, Soil Organic Matter and Characteristics, Soil Microorganisms Association with Plants, Pesticides and Microorganisms, Petroleum Hydrocarbons and Microorganisms, Industrial solvents and Microorganism, Biotechnologies for Ex-Situ Remediation & in-Situ Remediation of Soil Phytoremediation Technology for Soil Decontamination

UNIT-IV BIOREMEDIATION FOR AIR AND WATER ENVIRONMEN (9)

Atmospheric Environment for Microorganisms, Microbial Degradation of Contaminants in Gas Phase, Biological Filtration Processes for Decontamination of Air Stream- Biofiltration, Biotrickling Filtration, Bioscrubbers, Contaminants in Groundwater, Landfill Leachate Biotreatment Technologies, Industrial Wastewater Biotreatment Technologies, Biotreatment of Surface Waters

UNIT-V BIOREMEDIATION OF METALS

(9)

Microbial Transformation of Metals, Biological Treatment Technologies for Metals Remediation, Bioleaching and Biobenificiation, Bioaccumulation, Oxidation/Reduction Processes, Biological Methylation

TEXT BOOKS

S.No.	Author(s) Name	Title of the book	Publisher	Year of Publications
1	Rittmann, B.E., and McCarty, P.L.,	Environmental Biotechnology : Principles and Applications.	McGraw Hill,	2001
2	John Cookson	Bioremediation Engineering: Design and Applications	McGraw- Hill Education	1995

REFERENCE BOOKS

S.No.	Author(s) Name	Title of the book	Publisher	Year of Publications
1	Prescott, L. M., Harley, and Klein, D. A	Microbiology	McGraw- Hill Higher Education	2008

Course Objectives

- To learn the molecular structure of biological systems.
- To impart basic knowledge in conformation of nucleic acids.
- To familiarize the students on the concepts of conformation of proteins.
- To extend the brief knowledge in kinetics of ligand interactions.
- To understand the techniques for the study of biological structure & function.
- To study the transport and dynamics properties of biological systems.

Course Outcomes

- Summarize the importance of molecular structure of biological systems.
- Extend the knowledge in conformation of nucleic acids.
- Analyze the concepts of conformation of proteins.
- Illustrate the kinetics of ligand interactions.
- Outline the techniques for the study of biological structure & function.
- Describe the transport and dynamics properties of biological systems.

UNIT I MOLECULAR STRUCTURE OF BIOLOGICAL SYSTEMS (9)

Intramolecular bonds – covalent – ionic and hydrogen bonds – biological structures -general features – water structure – hydration – interfacial phenomena and membranes – self assembly and molecular structure of membranes.

UNIT II CONFORMATION OF NUCLEIC ACIDS (9)

Primary structure – the bases – sugars and the phosphodiester bonds- double helical structure – A, B and Z forms – properties of circular DNA – topology – polymorphism and flexibility of DNA – structure of ribonucleic acids – hydration of nucleic acids.

UNIT III CONFORMATION OF PROTEINS (9)

Conformation of the peptide bond – secondary structures – ramachandran plots – use of potential functions – tertiary structure – folding – hydration of proteins – hydropathy index.

UNIT IV ENERGETICS & DYNAMICS OF BIOLOGICAL SYSTEMS (9)

Kinetics of ligand interactions; Biochemical kinetics studies, uni-molecular reactions, simple bi molecular multiple intermediates, steady state kinetics, catalytic efficiency, relaxation spectrometry, ribonuclease as an example.

UNIT V APPLIED TECHNIQUES (9)

Techniques for the study of biological structure & function: Size and shape of macromolecules – methods of direct visualization macromolecules as hydrodynamic particles – macromolecules diffusion – ultra centrifugation – viscometry x-ray crystallography determination of molecular structures, X-ray fibre diffraction electron microscopy neutron scattering – light scattering.

TEXT BOOKS:

S.No	Author(s) Name	Title of the book	Publisher	Year of Publications
1	Roland Glaser	Biophysics	Springer Science & Business Media	2001
2	Michel Daune	Molecular Biophysics: Structures in Motion	Oxford University Press	1999
3	Charles R. Cantor	Biophysical Chemistry, Part 2: Techniques for the Study of Biological Structure and Function	W. H. Freeman and Company	1980

Course Objectives

- To understand the available tools and databases for performing research in bioinformatics.
- To expose students to sequence alignment tool in bioinformatics.
- To construct the phylogenetic trees for evolution.
- To get familiar with the 3D structure of protein and classification.
- To acquire basic knowledge in protein secondary structure prediction.
- To extend the brief knowledge in Micro array data analysis.

Course Outcomes

- Summarize the basic concepts and importance of Bioinformatics in various sectors.
- Demonstrate the sequence alignment tool in bioinformatics.
- Construct the phylogenetic trees for evolution.
- Analyze the three dimensional protein structure and classification using various tools.
- Illustrate the protein secondary structure prediction by comparative modeling.
- Extend the knowledge in micro array technology and applications of bioinformatics in various sectors.

UNIT I OVERVIEW OF BIOINFORMATICS**(9)**

The scope of bioinformatics; bioinformatics & the internet; useful bioinformatics sites. Data acquisition: sequencing DNA, RNA & proteins; determination of protein structure; gene & protein expression data; protein interaction data. Databases – contents, structure & annotation: file formats; annotated sequence databases; miscellaneous databases.

UNIT II RETRIEVAL OF BIOLOGICAL DATA**(9)**

Data retrieval with Entrez & DBGET/ LinkDB; data retrieval with SRS (sequence retrieval system). Searching sequence databases by sequence similarity criteria: sequence similarity searches; amino acid substitution matrices; database searches, FASTA & BLAST; sequence filters; iterative database searches & PSI-BLAST. Multiple-sequence alignment, gene & protein families: multiple-sequence alignment & family relationships; protein families & pattern databases; protein domain families.

UNIT III PHYLOGENETICS**(9)** Phylogenetics,

cladistics & ontology; building phylogenetic trees; evolution of macromolecular sequences. Sequence annotation: principles of genome annotation; annotation tools & resources.

UNIT IV STRUCTURAL BIOINFORMATICS**(9)** Conceptual

models of protein structure; the relationship of protein three-dimensional structure to protein function; the evolution of protein structure & function; obtaining, viewing & analyzing structural data; structural alignment; classification of proteins of known three-dimensional structure: CATH & SCOP; introduction to protein structure prediction; structure prediction by comparative modeling; secondary structure prediction; advanced protein structure prediction & prediction strategies.

UNIT V MICROARRAY DATA ANALYSIS**(9)**

Microarray data, analysis methods; microarray data, tools & resources; sequence sampling & SAGE. Bioinformatics in pharmaceutical industry: informatics & drug discovery; pharmainformatics resources. Basic principles of computing in bioinformatics: running computer software; computer operating systems; software downloading & installation; database management.

REFERENCE BOOKS

S. No.	Author (s) Name	Title of the book	Publisher	Year of Publication
1	Michael J. Korenberg	Microarray Data Analysis: Methods and Applications	Springer Science & Business Media	2007

Course Objectives

- To impart the skills in the field of nano biotechnology and its applications.
- To acquire knowledge in the nano particles and its significance in various fields.
- To extend the knowledge in types and application of nano particles in sensors.
- To equip students with clinical applications of nano devices.
- To understand the ethical issues in nanotechnology.
- To describe deeper understanding of the socio-economic issues in nanobiotechnology.

Course Outcomes

- Develop skills in the field of nano biotechnology and its applications.
- Summarize the nanoparticles and its significance in various fields.
- Extend the knowledge in types and application of nano particles in sensors.
- Summarize the ethical issues in nanotechnology.
- Outline the clinical applications of nano devices.
- Describe the socio-economic issues in nanobiotechnology.

UNIT I INTRODUCTION**(9)**

Introduction, Scope and Overview, Length scales , Importance of Nanoscale and Technology, History of Nanotechnology, Future of Nanotechnology: Nano Technology Revolution, Silicon based Technology, Benefits and challenges in Molecular manufacturing: The Molecular assembler concept, Controversies and confusions, Understanding advanced capabilities, Nanotechnology in Different, Fields: Nanobiotechnology, Materials, Medicine, Dental care.

UNIT II NANO PARTICLES**(9)**

Introduction, Types of Nanoparticles, Techniques to Synthesize Nanoparticles, Characterization of Nanoparticles, Applications, Toxic effects of Nanomaterials, Significance of Nanoparticles Nanofabrications- MEMS/NEMS, Atomic Force Microscopy, Self assembled monolayers/ Dip- pen Nanolithography, Soft Lithography, PDMS Molding, Nano Particles, Nano wires and Nanotubes.

UNIT III APPLICATIONS**(9)**

Nanomedicine, Nanobiocensor and Nanofluidics. Nanocrystals in biological detection, Electrochemical DNA sensors and Integrated Nanoliter systems. Nano-Biodevices and Systems. Fabrication of Novel Biomaterials through molecular self assembly- Small scale systems for in vivo drug delivery- Future nanomachine.

UNIT IV NANOBIOTECHNOLOGY**(9)**

Clinical applications of nanodevices. Artificial neurons. Real-time nanosensors- Applications in cancer biology. Nanomedicine. Synthetic retinyl chips based on bacteriorhodopsins. High throughput DNA sequencing with nanocarbon tubules. Nanosurgical devices.

UNIT V ETHICAL ISSUES IN NANOTECHNOLOGY**(9)**

Introduction, Socioeconomic Challenges, Ethical Issues in Nanotechnology: With Especial Reference to Nanomedicine, Nanomedicine Applied in Nonmedical Contexts, Social Issues Relating to Nanomedicine. Social and Ethical Issues, Economic Impacts, Other Issues, Nanotechnology and Future Socio-economic challenges.

**OPEN ELECTIVES OFFERED BY SCIENCE &
HUMANITIES**

OBJECTIVES:

- To develop analytical skills for solving engineering problems
- To teach the students the basic concepts of LPP,
- To learn the techniques to solve transportation and Assignment problems
- To make the students to study about the Integer Programming and Network Analysis
- To Analyse the results and propose recommendations to the decision-making processes in Management Engineering
- To acquaint the student to solve problems in different environments and develop critical thinking

INTENDED OUTCOMES:

- To define and formulate linear programming problems and appreciate their limitations.
- To solve linear programming problems using appropriate techniques and optimization solvers, interpret the results obtained and translate solutions into directives for action.
- To be able to build and solve Transportation Models, Assignment Models,
- To construct linear integer programming models and discuss the solution techniques.
- To formulate and solve problems as networks and graphs.
- To be able to solve problems in different environments and develop critical thinking

UNIT I LINEAR PROGRAMMING PROBLEM

Formulation of LPP - Graphical Method - Simplex Method - Artificial variable technique and two phase simplex method. Duality - Dual and simplex method - Dual Simplex Method .

UNIT II TRANSPORTATION PROBLEM

Transportation Model, finding initial basic feasible solutions, moving towards optimality, Degeneracy.

UNIT III ASSIGNMENT PROBLEM

Solution of an Assignment problem, Multiple Solution, Hungarian Algorithm, Maximization in Assignment Model, Impossible Assignment.

UNIT IV INTEGER PROGRAMMING

Integer Programming Problem – Gomory's fractional cut Method – Branch Bound Method

UNIT V NETWORK ANALYSIS

PERT & CPM- network diagram-probability of achieving completion date- crash time- cost analysis.

2. www.mathworld . Wolfram.com
3. www.mit.edu

OBJECTIVES:

- To kindle analytical skills for solving engineering problems
- To impact the knowledge about inventory models
- To learn replacement models and simulation models
- To provide techniques for effective methods to solve nonlinear programming and decision making.
- To analyse the results and propose recommendations to the decision-making processes in Management Engineering
- To enhance the students to solve problems using non integer programming.

INTENDED OUTCOMES:

The students will

- To be able to solve simple models in Inventory problems and Replacement problems.
- To understand different queuing situations and find the optimal solutions using models for different situations.
- Simulate different real life probabilistic situations using Monte Carlo simulation technique.
- To be able to understand the characteristics of different types of decision-making environments and the appropriate decision making approaches and tools to be used in each type.
- **Convert** and **solve** the practical situations into replacement models.
- To understand how to model and solve problems using non integer programming.

UNIT – I INVENTORY MODELS

Economic order quantity models-techniques in inventory management-ABC analysis.

UNIT – II NON LINEAR PROGRAMMING

Khun-tucker conditions with non-negative constraints- Quadratic programming- Wolf's modified simplex method.

UNIT – III SIMULATION MODELS

Elements of simulation model -Monte Carlo technique – applications. Queuing model: problems involving $(M/M/1): (\infty/FIFO)$, $(M/M/c): (\infty/FIFO)$ Models.

UNIT -IV DECISION MODELS

Decision Analysis – Decision Making environment – Decisions under uncertainty – Decision under risk – Decision – Tree Analysis.

UNIT -V REPLACEMENT MODELS

Models based on models that gradually deteriorate with time-whose maintenance cost increase with time-Replacement of items that fail suddenly and completely.

TEXT BOOKS:

S. No.	Author(s) Name	Title of the book	Publisher	Year of Publication
1	Hamdy Taha. A.	Operations Research	Prentice – Hall of India Private Limited, New Delhi .	2010

WEBSITES:

1. www.mathcentre.ac.uk
2. www.mathworld . Wolfram.com
3. www.mit.edu

OBJECTIVES:

- To gain knowledge in measures of central tendency.
- To provide necessary basic concepts in probability and random processes for applications such as random signals, linear systems in communication engineering.
- To understand the basic concepts of probability, one and two dimensional random variables and to introduce some standard distributions applicable to engineering which can describe real life phenomenon.
- To understand the basic concepts of random processes which are widely used in IT fields.
- To understand the concept of correlation and spectral densities.
- To acquire the knowledge on random process in engineering disciplines.

OUTCOMES:

- Learners acquire skills in handling situations involving more than one random variable and functions of random variables.
- The students will have an exposure of various distribution functions, correlation and spectral densities.
- To understand the fundamental knowledge of the concepts of probability and have knowledge of standard distributions which can describe real life phenomenon.
- To understand the basic concepts of one and two dimensional random variables and apply in engineering applications.
- To apply the concept random processes in engineering disciplines.
- To understand and apply the concept of correlation and spectral densities.

UNIT-I MEASURES OF CENTRAL TENDENCY AND PROBABILITY

Measures of central tendency – Mean, Median, Mode - Standard Deviation

Probability - Random variable - Axioms of probability - Conditional probability - Total probability – Baye's theorem.

UNIT- II STANDARD DISTRIBUTIONS

Functions of a random variable - Binomial, Poisson, Uniform, Exponential,

Gamma(one Parameter only) and Normal distributions - Moment generating functions,

Characteristic function and their properties – Chebyshev's inequality.

UNIT -III TWO DIMENSIONAL RANDOM VARIABLES

Joint distributions - Marginal and conditional distributions - Probability mass function - Probability density functions – Covariance - Correlation and regression

UNIT- IV CLASSIFICATION OF RANDOM PROCESS

Definition and examples - first order, second order, strictly stationary, wide – sense stationary and Ergodic processes - Markov process - Binomial, Poisson and Normal processes - Sine wave process.

UNIT -V CORRELATION AND SPECTRAL DENSITIES

Auto correlation - Cross correlation - Properties – Power spectral density – Cross spectral density - Properties – Wiener-Khintchine relation – Relationship between cross power spectrum and cross correlation function - Linear time invariant system - System transfer function –Linear systems with random inputs – Auto correlation and cross correlation functions of input and output.

OBJECTIVES:

- To gain knowledge in measures of central tendency and probability.
- To introduce the concept of random variable and functions of random variables.
- To introduce the basic concepts of two dimensional random variables.
- To acquaint the knowledge of testing of hypothesis for small and large samples which plays an important role in real life problems
- To introduce the basic concepts of classifications of design of experiments
- To sampling distributions and statistical techniques used in engineering and management problems.

OUTCOMES:

- The student gain the knowledge in measures of central tendency and probability
- Understand the fundamental knowledge of the concepts of probability and have knowledge of standard distributions which can describe real life phenomenon.
- Understand the basic concepts of two dimensional random variables and apply in engineering applications.
- Apply the concept of testing of hypothesis for small and large samples in real life problems.
- Apply the basic concepts of classifications of design of experiments and statistical quality control.
- Have the notion of sampling distributions and statistical techniques used in engineering and management problems.

UNIT-I MEASURES OF CENTRAL TENDENCY AND PROBABILITY

Measures of central tendency – Mean, Median, Mode and Standard Deviation – SPSS Software Demonstration.

Probability - Random variable - Axioms of probability - Conditional probability - Total probability – Baye's theorem - Probability mass function - Probability density functions.

UNIT- II STANDARD DISTRIBUTIONS

Functions of a random variable - Binomial, Poisson, Uniform, Exponential, Gamma, and Normal distributions - Moment generating functions, Characteristic function and their properties.

UNIT- III TWO DIMENSIONAL RANDOM VARIABLES

Joint distributions - Marginal and conditional distributions – Covariance - Correlation and Regression - Transformation of random variables - Central limit theorem.

UNIT- IV TESTING OF HYPOTHESIS

Sampling distributions – Testing of hypothesis for mean, variance, proportions and differences using Normal, t, Chi-square and F distributions - Tests for independence of attributes and Goodness of fit.

UNIT- V DESIGN OF EXPERIMENTS

Analysis of variance – One way classification – CRD – Two way classification – RBD - Latin square.

Note: Use of approved statistical tables permitted in the examination.

2.	www.mathcentre.ac.uk
3.	www.mathworld . Wolfram.com

OBJECTIVES:

- To understand the fundamental knowledge of probability theory.
- To introduce the concept of random variable and functions of random variables.
- To introduce the basic concepts of two dimensional random variables.
- To introduce the concepts of random processes and Markov chain
- To understand the different Queuing models and solve problems
- **To** understand and characterize phenomena which evolve with respect to time in a probabilistic manner.

OUTCOMES:

- The student gain the knowledge in measures of central tendency and probability
- Understand the fundamental knowledge of the concepts of probability and have knowledge of standard distributions which can describe real life phenomenon.
- Understand the basic concepts of two dimensional random variables and apply in engineering applications.
- Understand the concepts of random process and markov chains
- They will be able to solve the Queuing models
- The students understand and characterize phenomena which evolve with respect to time in a probabilistic manner.

UNIT- I PROBABILITY AND RANDOM VARIABLE

Axioms of probability - Conditional probability - Total probability – Baye’s theorem- Random variable - Probability mass function - Probability density function - Properties - Moments - Moment generating functions and their properties.

UNIT- II STANDARD DISTRIBUTIONS

Functions of a random variable - Binomial, Poisson, Geometric, Negative Binomial, Uniform, Exponential, Gamma, Weibull and Normal distributions and their properties.

UNIT- III TWO DIMENSIONAL RANDOM VARIABLES

Joint distributions - Marginal and conditional distributions – Covariance - Correlation and regression - Transformation of random variables - Central limit theorem.

UNIT -IV RANDOM PROCESS AND MARKOV CHAINS

Classification - Stationary process - Markov process - Poisson process - Birth and death process - Markov chains - Transition probabilities - Limiting distributions.

UNIT-V QUEUEING THEORY

Markovian models - M/M/1, M/M/C, finite and infinite capacity - M/M/ ∞ queues - Finite source model - M/G/1 queue (steady state solutions only) - Pollaczek - Khintchine formula - Special cases.

WEBSITES:

1. www.mathcentre.ac.uk
2. www.mathworld . Wolfram.com
3. www.mit.edu

COURSE OBJECTIVES:

- Be able to understand basic knowledge of fuzzy sets and fuzzy logic
- Be able to apply basic knowledge of fuzzy operations.
- To know the basic definitions of fuzzy relations
- Be able to apply basic fuzzy inference and approximate reasoning
- To know the applications of fuzzy Technology.
- To acquire the knowledge on various topics such as fuzzy algebra, fuzzy theory and fuzzy technology

COURSE OUTCOME:

- To gain the main subject of fuzzy sets.
- To understand the concept of fuzziness involved in various systems and fuzzy set theory.
- To gain the methods of fuzzy logic.
- To comprehend the concepts of fuzzy relations.
- To analyze the application of fuzzy logic control to real time systems.
- The Engineers will have an exposure on various topics such as fuzzy algebra, fuzzy theory and fuzzy technology.

UNIT I

Fuzzy Sets : Basics Classical sets vs Fuzzy Sets – Need for fuzzy sets – Definition and Mathematical representations – Level Sets – F u z z y functions - Zadeh's Extension Principle

UNIT II

Operations on Fuzzy Sets Operations on $[0,1]$ – Fuzzy negation, triangular norms, tconorms, fuzzy implications, Aggregation Operations, Fuzzy Functional Equations

UNIT III

Fuzzy Relations Fuzzy Binary and n-ary relations – composition of fuzzy relations – Fuzzy Equivalence Relations – Fuzzy Compatibility Relations – Fuzzy Relational Equations

UNIT IV

Possibility Theory Fuzzy Measures – Evidence Theory – Necessity and Belief Measures – Probability Measures vs Possibility Measures

UNIT V

Approximate Reasoning Fuzzy Decision Making - Fuzzy Relational Inference – Compositional rule of Inference - Efficiency of Inference - Hierarchical

2. www.mathworld . Wolfram.com
3. www.doc.ic.ac.uk
4. www.calvin.edu/~pribeiro/othrlnks/Fuzzy/fuzzysets.htm

COURSE OBJECTIVES:

- To understand the proficiency in mathematics and the mathematical concepts needed for a proper understanding of physics.
- To Learn about special type of matrices that are relevant in physics and then learn about tensors.
- To introduce the Special functions like Bessel, Legendre , Hermite and Laguerre functions and their recurrence relations
- To introduce the concepts of fuzzy relations.
- To make the students to analyse the application of fuzzy logic control to real time systems.
- To acquaint the students to have an exposure on various topics such as fuzzy algebra, fuzzy theory and fuzzy technology.

COURSE OUTCOME:

- Students will demonstrate proficiency in mathematics and the mathematical concepts needed for a proper understanding of physics.
- Learn about special type of matrices that are relevant in physics and then learn about tensors.
- Get introduced to Special functions like Bessel, Legendre , Hermite and Laguerre functions and their recurrence relations
- Learn different ways of solving second order differential equations and familiarized with singular points and Frobenius method.
- Students will master in calculus of variations and linear integral equations.
- The students will have the knowledge on Mathematical Physics and that knowledge will be used by them in different engineering and technology applications.

UNIT I TENSORS

Definition of tensor - rank, symmetric tensors, contraction, quotient rule - tensors with zero components, tensor equations, metric tensors and their determinants - pseudo tensors

UNIT II DIFFERENTIAL EQUATIONS-SERIES SOLUTIONS

Series Solution : Classification of singularities of an ordinary differential equation
- Series solution-Method of Frobenius - indicial equation - examples

UNIT III SPECIAL FUNCTIONS

Basic properties (Recurrence and Orthogonality relations, series expansion) of Bessel, Legendre , Hermite and Laguerre functions – Generating Function

UNIT IV CALCULUS OF VARIATIONS

Concept of variation and its properties – Euler’s equation – Functional dependant on first and higher order derivatives – Functional dependant on functions of several independent variables – Variational problems with moving boundaries – Isoperimetric Problems – Direct methods – Ritz and Kantorovich methods.

UNIT V LINEAR INTEGRAL EQUATIONS

Introduction – conversion of a linear differential equation to an integral equations and vice versa – conversion of boundary value problem to integral equations using Green’s function – solution of a integral equation – integral equations of the convolution type – Abel’s integral equations – integro–differential equations – integral equations with separable kernels – solution of Fredholm equations with separable kernels.

3. <http://www.math.umn.edu/~olver/pdn.html>
4. <http://tutorial.math.lamar.edu/classes/DE.aspx>

OBJECTIVES:

- To introduce the concepts of special functions.
- To find the solutions to partial differential equations and their applications
- To study about mathematical physics and perturbation techniques
- To learn replacement models and simulation models
- To provide techniques for effective methods to solve nonlinear programming and decision making
- To understand how to model and solve problems using non integer programming.

OUTCOMES:

- Students know the concepts of improper integrals, Beta and Gamma functions.
- The students acquire sound knowledge of techniques in solving PDE that model engineering problems.
- Identify the situations where singular perturbations are needed. They will be able to use various modifications of matched asymptotic expansions techniques to derive asymptotic solutions.
- Able to understand the characteristics of different types of decision-making environments and the appropriate decision making approaches and tools to be used in each type.
- **Convert** and **solve** the practical situations into replacement models.
- Understand how to model and solve problems using non integer programming.

UNIT I INTRODUCTION TO SOME SPECIAL FUNCTIONS

Gamma function, Beta function, Bessel function, Error function and complementary Error function, Heaviside's function, pulse unit height and duration function, Sinusoidal Pulse function, Rectangle function, Gate function, Dirac's Delta function, Signum function, Saw tooth wave function, Triangular wave function, Half wave rectified sinusoidal function, Full rectified sine wave, Square wave function.

UNIT II PARTIAL DIFFERENTIAL EQUATIONS AND APPLICATIONS

Formation PDEs, Solution of Partial Differential equations $f(x,y,z,p,q) = 0$, Nonlinear PDEs first order, Some standard forms of nonlinear PDE, Linear PDEs with constant coefficients, Equations reducible to Homogeneous linear form, Classification of second order linear PDEs. Separation of variables use of Fourier series, D'Alembert's solution of the wave equation, Heat equation: Solution by Fourier series and Fourier integral

UNIT – III PERTURBATION TECHNIQUES

Singular perturbations (algebraic example). Notion of the boundary layer. Inner and outer solutions. Overlap region. Matching of the asymptotic expansions. Ordinary differential equations with singular perturbations. Methods to determine location of the boundary layer.

UNIT -IV SIMULATION MODELS

Elements of simulation model -Monte Carlo technique – applications. Queuing model: problems involving $(M|M|1):(\infty\backslash\text{FIFO})$, $(M|M|c):(\infty\backslash\text{FIFO})$ Models.

UNIT V DECISION MODELS

Decision Analysis – Decision Making environment – Decisions under uncertainty – Decision under risk – Decision – Tree Analysis.

Course Objectives

- To introduce the basic concepts of vector space
- To know the fundamentals of linear Algebra
- To solve system of linear equations
- To study about the linear transformations
- To introduce the concepts of inner product spaces
- To give the knowledge on the importance of Linear Algebra.

COURSE OUTCOMES:

The student will be able to

- Explain the fundamental concepts of advanced algebra and their role in modern mathematics and applied contexts.
- Apply the fundamental concepts in their respective engineering fields
- Solve the system of linear equations
- Visualize linear transformations as matrix form
- Recognize the underlying theory of vector spaces over a field and inner product spaces over real or complex numbers
- Articulate the importance of Linear Algebra and its applications in branches of Mathematics

UNIT I VECTOR SPACES

General vector spaces, real vector spaces, Euclidean n-space, subspaces, linear independence, basis and dimension, row space, column space and null space,

UNIT II EIGEN VALUES AND EIGEN VECTORS

Eigen values and Eigen vectors - diagonalization - Power method - QR decomposition

UNIT III SYSTEM OF LINEAR EQUATIONS

Direct methods, Gauss elimination method, Gauss Jordan method, Crout's method, iterative methods, Gauss-Jacobi method, Gauss-Seidel method, convergence criteria.

UNIT IV LINEAR TRANSFORMATIONS

Linear Transformations - The Null Space and Range - Isomorphisms - Matrix Representation of Linear Transformations – Similarity - Eigenvalues and Eigenvectors Eigen values and Eigen vectors - Diagonalization

UNIT V INNER PRODUCT SPACES

The Dot Product on \mathbb{R}^n and Inner Product Spaces - Orthonormal Bases - Orthogonal Complements - Application : Least Squares Approximation - Diagonalization of Symmetric M - Application: Quadratic Forms

**TRANSFORMS AND PARTIAL DIFFERENTIAL EQUATIONS
(ONLY FOR BE CSE STUDENTS)****OBJECTIVES:**

- To introduce Fourier series analysis which is central to many applications in engineering apart from its use in solving boundary value problems
- To acquaint the student with Fourier series techniques in solving heat flow problems used in various situations.
- To acquaint the student with Fourier transform techniques used in wide variety of situations.
- To introduce the basic concepts of PDE for solving standard partial differential equations
- To introduce the effective mathematical tools for the solutions of partial differential equations that model several physical processes and to develop Z transform techniques for discrete time systems.
- To develop the use of effective mathematical tools for the solutions of partial differential equations by using Z transform techniques for discrete time systems.

OUTCOMES:

- Solve differential equations using Fourier series analysis which plays a vital role in engineering applications.
- The learners can equip themselves in the transform techniques and solve partial differential equations
- Understand how to solve the given standard partial differential equations.
- Understand the mathematical principles on transforms and partial differential equations would provide them the ability to formulate and solve some of the physical problems of engineering.
- Appreciate the physical significance of Fourier series techniques in solving one and two dimensional heat flow problems and one dimensional wave equations.
- Use the effective mathematical tools for the solutions of partial differential equations by using Z transform techniques for discrete time systems.

UNIT- I FOURIER SERIES

Dirichlet's conditions – General Fourier series – Odd and even functions – Half range sine series – Half range cosine series – Complex form of Fourier Series – Parseval's identity – Harmonic Analysis.

UNIT -II FOURIER TRANSFORM

Fourier integral theorem (without proof) – Fourier transform pair – Sine and Cosine transforms – Properties – Transforms of simple functions – Convolution theorem – Parseval's identity.

UNIT- III PARTIAL DIFFERENTIAL EQUATIONS

Formation of partial differential equations by elimination of arbitrary constants and arbitrary functions – Solution of standard types of first order partial differential equations – Lagrange's linear equation – Linear partial differential equations of second and higher order with constant coefficients.

UNIT- IV APPLICATIONS OF PARTIAL DIFFERENTIAL EQUATIONS

Classification of second order quasi linear partial differential equations – Solutions of one dimensional wave equation – One dimensional heat equation – Steady state solution of two-dimensional heat equation (Insulated edges excluded) – Fourier series solutions in Cartesian coordinates.

UNIT- V Z -TRANSFORM AND DIFFERENCE EQUATIONS

Z-transform - Elementary properties – Inverse Z – transform – Convolution theorem -Formation of difference equations – Solution of difference equations using Z - transform.

OBJECTIVES:

- To Develop abilities to write technically and expressively,
- To Recognize writing as a constructive, meaningful process,
- To Practise using reading strategies for effective writing.
- To equip them to write for academic as well as work place context.
- To enable students to be familiar with structure and style of formal written communication
- To Improve their writing skills and be ready with documents related ideas and notions.

OUTCOMES:

- Construct simple sentences, correct common grammatical errors in written English.
- Build confidence in English language by imbibing lexical and syntax rules.
- Enrich their reading ability for effective writing.
- Know the value of LSRW skills in document writing.
- Understand the structure, content and format of technical documents.
- Improve their writing skills and be ready with documents related ideas and notions.

UNIT – I BASICS OF WRITING

Introduction to Technical Writing – Importance of Writing – Characteristics of Writing– Audience Recognition/ Analysis – Appropriateness of language — Conciseness and Flow– Bias free and plain writing – Impersonal and Formal Language -Techniques of Technical Writing– Overcoming writer's block – Prioritizing for effective writing– Avoiding plagiarism.

UNIT – 2 PARAGRAPHS AND ESSAYS

Expressing Ideas – Paragraph construction – Cohesion and Coherence – Adequate development – Kinds of paragraphs – Writing drafts – Paragraph length and pattern – Types of Essays – Characteristics of Essays – Salient point of sentence constructions.

UNIT – 3 LETTERS, MEMOS AND EMAIL

Formal written correspondence – Types of messages – Business letters – Structure of letters – Language in letters – Tense in letters – Cover letters – Resumes – Curriculum vitae – Memos – Emails – Email Etiquette – Effectiveness and purpose.

UNIT – 4 THE ART OF CONDENSATION AND TECHNICAL PROPOSALS

Steps to Effective précis writing – Guidelines – Technical Proposals – Types of Proposals – Characteristics – Body of the Proposals – Style and appearance – Evaluation of proposals – Proof Reading – Book /Film Review – Travelogue – Dialogue Writing.

UNIT – 5 REPORTS AND RESEARCH ARTICLES

Discussion of newspaper articles -Objectives of Reports – Characteristics of Reports – Structure of Reports – Types of Reports – Writing an article – Writing research articles – Essential features of Dissertation – Organizing the structure of thesis and articles – Writing technical description.

2	Graham King	Collins Improve Your Writing	Collins; First edition	2009
3	David Morley	The Cambridge Intro. To Creative Writing	Cambridge	2008

OBJECTIVES:

- To inculcate the basics of brief history of Earth sciences
- To divulge knowledge on the basics of structure of earth and earth's gravitational field.
- To disseminate the fundamentals of magnetic field and thermal distribution of earth.
- To introduce the concepts of seismology and seismic waves .
- To impart the basic knowledge of oceans
- To Apply the knowledge gained from this course to solve the relevant problems in engineering stream.

OUTCOME:

- Gain knowledge on the basics of history of Earth sciences.
- Acquire knowledge on concepts of structure of earth and earth's gravitational field.
- Have adequate knowledge on the concepts of magnetic field and thermal distribution of earth
- Obtain knowledge on the basics of seismic waves.
- Understand the basics of oceans and properties of sea water.
- Apply the knowledge gained from this course to solve the relevant problems in engineering stream.

UNIT I ORIGIN OF EARTH

A brief history of the development of Earth Sciences and of Geophysics in particular, An overview of Geophysical methods and their essential features, Problems of inversion and non-uniqueness in Geophysics, Origin & evolution of Solar system, Earth and Moon structure,. Kepler's law of planetary motion, A review of the Earth's structure and composition

UNIT II STRUCTURE OF EARTH

Chemical composition of Earth, Rheological behavior of crust and upper mantle, viscoelasticity and rock failure criteria, Geochronology: Radiometric dating and their advantages, meaning of radiometric ages, Major features of the Earth's gravitational field and relationship with tectonic processes in the crust and upper mantle, concept of isostasy, mathematical concept of Airy and Pratt hypotheses of isostasy

UNIT III MAGNETIC FIELD AND THERMAL DISTRIBUTION OF EARTH

Origin of geomagnetic field, polar wandering, secular variations and westward drift, reversals of geomagnetic field, sun spot, solar flares, geomagnetic storms, sea-floor spreading, Paleomagnetism and its uses, Thermal history of the Earth, sources of heat generation and temperature distribution inside the earth, convection in the mantle

UNIT IV SEISMOLOGY

Earthquake seismology, Earthquakes and its classifications, Global seismicity and tectonics, Earth's internal structure derived from seismology, Earthquake mechanism and Anderson's theory of faulting, Continental drift and plate tectonics: its historical perspective and essential features, present day plate motions, Triple junctions, oceanic ridges, Benioff zones, trenches and island arcs, hot spots, Mantle Plume, Mountain building, origin of Himalaya, Geodynamics of Indian subcontinent.

UNIT V OCEANS

Physical properties of seawater and methods of determination, distribution of salinity in the oceans, factors affecting salinity, water masses and water type, TS Diagram, Circulation of currents in major ocean waves. Tides: Dynamical and equilibrium theory of tides. Marine pollution, steps to control marine pollution, Laws of seas, Coastal zone management

COURSE OBJECTIVES:

- To disseminate the fundamentals of acoustic waves. (K)
- To inculcate the characteristics of radiation and reception of acoustic waves. (K)
- To divulge knowledge on the basics of pipe resonators and filters.(S)
- To introduce the features of architectural acoustics.(S)
- To impart the basic knowledge of transducers and receivers.(K)
- To Apply the knowledge inputs of the course for engineering applications.

COURSE OUTCOME:

- Develop the idea of the fundamentals of acoustic waves.
- Apply the concepts of radiation and reception of acoustic waves.
- Explain the basic ideas of pipe resonators and filters.
- Illustrate the basics of architectural acoustics..
- Illustrate the transducers and receivers and its applications in various electronic devices.
- Apply the knowledge inputs of the course for engineering applications.

UNIT I INTRODUCTION

Acoustics waves – Linear wave equation – sound in fluids – Harmonic plane waves – Energy density – Acoustics intensity – Specific acoustic impedance – spherical waves – Describer scales. Reflection and Transmission: Transmission from one fluid to another normal and oblique incidence –method of images.

UNIT II RADIATION AND RECEPTION OF ACOUSTIC WAVES

Radiation from a pulsating sphere – Acoustic reciprocity – continuous line source radiation impedance - Fundamental properties of transducers. Absorption and attenuation of sound. Absorption from viscosity – complex sound speed and absorption – classical absorption coefficient

UNIT III PIPES RESONATORS AND FILTERS

Resonance in pipes - standing wave pattern absorption of sound in pipes – long wavelength limit – Helmholtz resonator - acoustic impedance - reflection and transmission of waves in pipe - acoustic filters – low pass, high pass and band pass. Noise, Signal detection, Hearing and speech. Noise, spectrum level and band level – combining band levels and tones – detecting signals in noise – detection threshold – the ear – fundamental properties of hearing – loudness level and loudness – pitch and frequency – voice.

UNIT IV ARCHITECTURAL ACOUSTICS

Sound in enclosure – A simple model for the growth of sound in a room – reverberation time - Sabine, sound absorption materials – measurement of the acoustic output of sound

sources in live rooms – acoustics factor in architectural design. Environmental Acoustics: Weighted sound levels speech interference – highway noise – noise induced hearing loss – noise and architectural design specification and measurement of some isolation design of portions.

UNIT V TRANSDUCTION

Transducer as an electrical network – canonical equation for the two simple transducers transmitters – moving coil loud speaker – loudspeaker cabinets – horn loud speaker, receivers – condenser – microphone – moving coil electrodynamic microphone piezoelectric microphone – calibration of receivers

OBJECTIVES:

- To understand about the fuel
- To study about the alcohols and its importance in engine
- To gain knowledge on the fuel gas and oils
- To get the information on fuel cell
- To understand electric, hybrid and solar cars
- To Develop their knowledge in studies of vegetable oils

OUTCOMES:

- Students will know about the basic concepts of alternate fuels
- Students will know about the basic concepts of alcohols.
- Students will understand about fuel gas and oils
- Students can enrich their knowledge about the alternate fuels and energy systems
- Develop their knowledge in studies of vegetable oils
- Students knows about the importance of electric, hybrid and solar cars

UNIT I INTRODUCTION

Need for alternate fuel, availability and properties of alternate fuels, general use of alcohols, LPG, hydrogen, ammonia, CNG and LNG, vegetable oils and biogas, merits and demerits of various alternate fuels, introduction to alternate energy sources and significance.

UNIT II ALCOHOLS

Properties as engine fuel, alcohols and gasoline blends, performance in SI engines, methanol and gasoline blends, combustion characteristics in CI engines, emission characteristics, DME, DEE properties performance analysis, performance in SI & CI Engines.

UNIT III NATURAL GAS, LPG, HYDROGEN AND BIOGAS

Availability of CNG, properties, modification required to use in engines, performance and emission characteristics of CNG & LPG in SI & CI engines, performance and emission of LPG. Hydrogen storage and handling, performance and safety aspects. Production of Biogas and its applications

UNIT IV VEGETABLE OILS

Various vegetable oils for engines, esterification, performance in engines, performance and emission characteristics, biodiesel and its characteristics.

UNIT V ELECTRIC, HYBRID, FUEL CELL AND SOLAR CARS

Layout of an electric vehicle, advantage and limitations, specifications, system components, electronic control system, high energy and power density batteries, hybrid vehicle, fuel cell vehicles, solar powered vehicles.

3. <http://www.alternative-energy-news.info/technology/transportation/hybrid-cars/>

OBJECTIVES:

- To make the students conversant with basics of Solid wastes and its classification.
- To make the student acquire sound knowledge of different treatments of solid wastes.
- To acquaint the student with concepts of waste disposals.
- To develop an understanding of the basic concepts of Hazardous waste managements.
- To acquaint the students with the basics of energy generation from waste materials.
- To get the information on energy conservation.

OUTCOMES:

- Outline the basic principles of Solid waste and separation of wastes (K)
- Identify the concepts of treatment of solid wastes (S)
- Identify the methods of wastes disposals. (S)
- Examine the level of Hazardousness and its management. (S)
- Examine the possible of the energy production using waste materials. (S)
- Integrate the chemical principles in the projects undertaken in field of engineering and technology (A)

UNIT I SOLID WASTE

Definitions – Sources, Types, Compositions, Properties of Solid Waste – Municipal Solid Waste – Physical, Chemical and Biological Property – Collection – Transfer Stations – Waste Minimization and Recycling of Municipal Waste

UNIT II WASTE TREATMENT

Size Reduction – Aerobic Composting – Incineration – batch type and continuous flow type, Medical/ Pharmaceutical Waste Incineration – Environmental Impacts – Measures of Mitigate Environmental Effects due to Incineration

UNIT III WASTE DISPOSAL

Sanitary Land Fill Method of Solid Waste Disposal – Land Fill Classification, Types, Methods & Siting Consideration – Layout & Preliminary Design of Land Fills – Composition, Characteristics generation, Movement and Control of Landfill Leachate & Gases – Environmental Monitoring System for Land Fill Gases, Waste landfill Remediation

UNIT IV HAZARDOUS WASTE MANAGEMENT

Definition & Identification of Hazardous Waste – Sources and Nature of Hazardous Waste – Impact on Environment – Hazardous Waste Control – Minimization and Recycling - Assessment of Hazardous Waste Sites – Disposal of Hazardous Waste, Underground Storage Tanks Construction, Installation & Closure, Remediation, risk assessment.

UNIT V ENERGY GENERATION FROM WASTE

Thermal conversion Technologies – Pyrolysis systems, Combustion systems, Gasification systems, Environment control systems, energy recovery systems. Biological & chemical conversion technologies – Aerobic composting, low solids. Anaerobic digestion, high solids anaerobic digestion, Energy production from biological conversion products, other biological transformation processes. Chemical transformation processes.

- 4.nzic.org.nz/ChemProcesses/environment/

OBJECTIVES:

- To make the students conversant about the green chemistry
- To make the student acquire sound knowledge of the atom efficient process and synthesis elaborately.
- To acquaint the student with concepts of green technology.
- To develop an understanding of the basic concepts of renewable energy resources.
- To acquaint the students with the basic information on catalysis.
- To inculcate the chemical principles in the field of engineering and technology

OUTCOMES:

- Outline the basic principles of green chemistry (K)
- Examine the different atom efficient process and synthesis elaborately (S)
- Apply the concepts combustion of green technology (S)
- Identify and apply the concepts of renewable energy (S)
- Apply the concepts of green catalysts in the synthesis (S)
- Integrate the chemical principles in the projects undertaken in field of engineering and technology (A)

UNIT I INTRODUCTION TO GREEN CHEMICAL PRINCIPLES Definition, tools, and twelve principles of green chemistry, solvent-less reactions and reactions in water, microwaves and fluorous solvents, green resolution of racemic mixtures, materials for a sustainable economy, chemistry of longer wear, agrochemicals: problems and green alternate solutions.

UNIT II ATOM EFFICIENT PROCESSES

Atom efficient processes, evaluating chemical reagents according to their yield and atom efficiency, examples of efficient stoichiometric and catalytic processes, atom economy and homogeneous catalysis, halide-free synthesis and alternatives to Strecker synthesis

UNIT III BIOTECHNOLOGY AND GREEN CHEMISTRY

Bio technology and its applications in environmental protection-Bio informatics-Bio remediation, biological purification of contaminated air. Green chemistry for clean technology-Significance of green chemistry-Basic components of green chemistry, Industrial applications of green chemistry, green fuels-e-green propellants and bio catalysts.

UNIT IV RENEWABLE RESOURCES

Use of renewable materials, evaluating feedstock and starting materials and their origins, toxicity, sustainability and the downstream implications of the choice of feedstock, commodity chemicals from glucose and biomass conversion

UNIT V CATALYSIS IN GREEN CHEMISTRY

Catalysis, energy requirements and usage, optimization of the reaction by minimizing the energy requirements, examples of efficient catalytic reactions including the use of heterogeneous catalysis, zeolites, oxidation using molecular oxygen.

OBJECTIVES:

- To make the students conversant with **the information on electrochemical material.**
- To make the student acquire sound knowledge of **conducting polymers.**
- To acquaint the student with concepts of Energy storage devices.
- To develop energy storage devices.
- To impart knowledge on basic principals of solar cells and its applications
- To inculcate the chemical principles in the field of engineering and technology

OUTCOMES:

- Outline the basic principles of chemistry in electrochemical material (K)
- Examine the properties of conducting polymers (S)
- Apply the concepts of electrochemistry in storage devices. (S)
- Identify the concepts of storage devices and its applications. (S)
- Apply the suitable materials for the manufacturing of storage devices. (S)
- Integrate the chemical principles in the projects undertaken in field of engineering and technology (A)

UNIT I METAL FINISHING

Fundamental principles, surface preparation-Electroplating of copper, nickel, chromium, zinc and precious metals (gold & silver)- Electroplating for electronic industry- Alloy plating, brass plating- Electro less plating of nickel- anodizing – Electroforming – Electro winning

UNIT II CONDUCTING POLYMERS AND ELECTROCHEMICALS

Electropolymerisation- anodic and cathodic polymerization-effect of reaction parameters on the course of the reaction- Electrochemical preparation of conducting polymers- poly acetylene- Electrolytic production of perchlorates and manganese dioxide- Electro organic chemicals- constant current electrolysis.

UNIT III BATTERIES AND POWER SOURCES-I

Principles of energy conservation- electrochemical energy conservation- thermodynamic reversibility, Gibbs equation. EMF- battery terminology, energy and power density- Properties of anodes, cathodes, electrolytes and separators- Types of electrolytes.

UNIT IV BATTERIES AND POWER SOURCES-II

Primary batteries- Dry Leclanche cells, alkaline primary batteries, Lithium batteries- construction, characteristics, problems associated with system- Secondary batteries- Lead acid, nickel cadmium- Fuel cells- Introduction, types of fuel cells, advantages.

UNIT V ELECTROCHEMICAL MATERIAL SCIENCE

Solar cells- Preparation of CdS/Cu₂S solar cells by screen printing techniques and their characteristics - Amorphous silicon solar cells - Photo electrochemical cells(PEC) for conversion of light energy to electrical energy - PEC cells based on Cd/Se and Ga/As characteristics.

OBJECTIVES:

- To make the students conversant with **cement and lime** and its uses.
- To make the student acquire sound knowledge of abrasives and refractories.
- To acquaint the student with concepts of inorganic chemicals.
- To develop an understanding of the basic concepts explosives.
- To acquaint the students with the basics of agriculture chemicals.
- To inculcate the chemical principles in the field of engineering and technology

OUTCOMES:

- Outline the basic chemistry of **cement and lime** (K)
- Examine the uses of abrasives and refractories (S)
- Identify the usage of the inorganic chemicals. (S)
- Identify the concepts of explosives and smoke screens (S)
- Identify the usage of the **agriculture** chemicals (S)
- Integrate the chemical principles in the projects undertaken in field of engineering and technology (A)

UNIT I CEMENT AND LIME

Manufacture of Portland cement – setting and hardening of Portland cement – regauging cement – effect of fineness on setting and hardening – freezing – high early strength cement – high alumina cement Lime – raw materials- manufacture – slaking – lime mortar – types of lime – high – calcium or fat lime – calcium lime or lean lime – magnesian lime – dolomitic lime – hydraulic lime.

UNIT II ABRASIVES AND REFRACTORIES

Abrasives – hard abrasives – siliceous abrasives – soft abrasives – artificial abrasives – uses. Refractories – definition – classification – acid refractories – basic refractories – neutral refractories – properties – uses.

UNIT III INORGANIC CHEMICALS

Common salt and soda ash – Manufacture – Different grades – products – alkalis – Na_2CO_3 , Caustic soda and chlor-alkali industry – manufacture principles of electrolytic process – chlorine – storage. Hydrochloric acid – manufacture – absorption – uses, Sulphur and sulphuric acid – extraction of sulphur – manufacture of H_2SO_4 – chamber – contact processes – industrial uses.

UNIT IV EXPLOSIVES

Explosives – uses – properties and tests – explosives for war – nitrocellulose – picric acid and T.N.T. – industrial explosives – nitroglycerin and dynamites – black powder – smoke screens – incendiaries – gas mask.

UNIT V AGRICULTURE CHEMICALS

Fertilizers – organic and inorganic – ammoniated superphosphates, sodium nitrate, solid pellets – potassium salts – pesticides – fungicides – herbicides – their preparations and characteristics – environmental impacts.

**OPEN ELECTIVES OFFERED BY COMPUTER
SCIENCE ENGINEERING**

COURSE OBJECTIVES:

- To learn how to use and manipulate several core data structures: Lists, Dictionaries, Tuples, and Strings
- To study decision structures and loops
- To understand the process and skills necessary to effectively deal with problem solving in relation to writing programs
- To understand the process and skills necessary to effectively deal with problem solving
- To discuss in relation to writing programs
- To study various program object and graphics based on python

COURSE OUTCOMES:

Upon completion of the course, students will be able to:

- Develop algorithmic solutions to simple computational problems Read, write, execute by hand simple Python programs
- Structure simple Python programs for solving problems
- Decompose a Python program into functions.
- Represent compound data using Python lists, tuples, dictionaries
- Read and write data from/to files in Python Programs
- Understand various program object and graphics based on python

UNIT I Fundamentals**9**

The Universal Machine-Program power- What is Computer Science?-Hardware Basics- Programming Languages-Python-Inside Python program-Software Development Process- Example program- Elements of programs- Output statements- Assignment Statements- Data types-Type conversions

UNIT II Decision Structures and Loops**9**

Simple Decisions-Two-way decisions-Multi-way decisions-Exception handling-for loops-indefinite loops-common loop patterns-Booleans

UNIT III Functions**9**

Function of functions-Functions and Parameters-Function that returns values-Function that modifies parameters-Functions and program structures

UNIT IV Sequences**9**

String data type- String Processing-List as sequences-String Representation-String Methods-I/O as String manipulation-File Processing

UNIT V Objects and Graphics**9**

Overview-Object of Objects-Simple Graphics Programming-Using Graphical Objects-Choosing Coordinates- Interactive Graphics-Graphics module reference

Total Hours: 45

15BEC SOE02

Internet Programming

L	T	P	C
3	0	0	3

COURSE OBJECTIVES:

- To study concepts of Internet, IP addresses and protocols
- To explain the concept of web page development through HTML
- To introduce the PERL and explore its current strengths and Weaknesses
- To write working Java code to demonstrate the use of applets for client-side programming
- To study Internet telephony and various multimedia applications
- To Elaborate on the principles of web page development

COURSE OUTCOMES:

Upon completion of this course, the student will be able to:

- Learn the advanced concepts & techniques of Internet and Java.
- Analyze the requirements for and create and implement the principles of web page development
- Understand the concepts of PERL
- Implement client-side programming using java applets
- Generate internet telephony based upon advanced concepts
- Develop applications on internet programming based on java applets and scripts

UNIT I Introduction

9

Introduction - Network of Networks, Intranet, Extranet and Internet. World Wide Web- Domain and Sub domain, Address Resolution, DNS, Telnet, FTP, HTTP. TCP/IP- Features, Segment, Three-Way Handshaking, Flow Control, Error Control, Congestion control, IP Datagram, IPv4 and IPv6. IP Subnetting and addressing- Classful and Classless Addressing, Subnetting

UNIT II HTML

9

Introduction, Editors, Elements, Attributes, Heading, Paragraph. Formatting, Link, Head, Table, List, Block, Layout, CSS. Form, Iframe, Colors, Colorname, Colorvalue. Image Maps- map, area, attributes of image area- Extensible Markup Language (XML)- Introduction, Tree, Syntax, Elements, Attributes, Validation, Viewing. XHTML in brief. CGI Scripts- Introduction- Environment Variable, GET and POST Methods.

UNIT III PERL

9

Introduction, Variable, Condition, Loop, Array, Implementing data structure, Hash, String, Regular Expression, File handling, I/O handling- JavaScript- Basics, Statements, comments, variable, comparison, condition, switch, loop, break. Object – string, array, Boolean, reg-ex. Function, Errors, Validation. Cookies- Definition of cookies, Create and Store a cookie with example. Java Applets- Container Class, Components, Applet Life Cycle, Update method, Applications.

UNIT IV Client-Server programming

9

Client-Server programming In Java - Java Socket, Java RMI. Threats - Malicious code-viruses, Trojan horses, worms; eavesdropping, spoofing, modification, denial of service attacks- Network security techniques- Password and Authentication- VPN, IP Security, security in electronic transaction, Secure Socket Layer (SSL), Secure Shell (SSH). Firewall- Introduction, Packet filtering, Stateful, Application layer, Proxy.

UNIT V Internet Telephony

9

Introduction, VoIP- Multimedia Applications- Multimedia over IP: RSVP, RTP, RTCP and RTSP- Streaming media, Codec and Plugins, IPTV- Search Engine and Web Crawler- Definition, Meta data, Web Crawler, Indexing, Page rank, overview of SEO.

Total Hours: 45

References:

1. Web Technology: A Developer's Perspective, N.P. Gopalan and J. Akilandeswari, PHI Learning, Delhi, 2013.
2. Internetworking Technologies, An Engineering Perspective, Rahul Banerjee, PHI Learning, Delhi, 2011.

COURSE OBJECTIVES:

- To impart the fundamental concepts of Computer Animation and Multimedia
- To study the graphic techniques and algorithms using flash
- Explain various concepts available in 3D animation
- Explain various devices available for animation
- To study the multimedia concepts and various I/O technologies for concept development
- To understand the three-dimensional graphics and their transformations

COURSE OUTCOMES

Upon completion of this course, the student will be able to:

- Develop their creativity using animation and multimedia
- Understand the concepts of Flash and able to develop animation using it
- Understand about various latest interactive 3D animation concepts
- Know the various devices and software available in motion capture
- Understand the concept development process
- Develop an interactive multimedia presentation by using multimedia devices and identify theoretical and practical aspects in designing multimedia applications surrounding the emergence of multimedia technology.

UNIT I Introduction 9

What is mean by Animation – Why we need Animation – History of Animation– Uses of Animation – Types of Animation – Principles of Animation – Some Techniques of Animation – Animation on the WEB – 3D Animation – Special Effects -Creating Animation.

UNIT II **Creating Animation in Flash** **9**

Introduction to Flash Animation – Introduction to Flash – Working with the Timeline and Frame-based Animation - Working with the Timeline and Tween-based Animation – Understanding Layers - Action script.

UNIT III	3D Animation & its Concepts	9
-----------------	--	----------

Types of 3D Animation – Skeleton & Kinetic 3D Animation – Texturing & Lighting of 3D Animation
– 3D Camera Tracking – Applications & Software of 3D Animation.

UNIT IV Motion Caption 9

Formats – Methods – Usages – Expression – Motion Capture Software's – Script Animation Usage – Different Language of Script Animation Among the Software.

UNIT V **Concept Development** **9**

Story Developing –Audio & Video – Color Model – Device Independent Color Model – Gamma and Gamma Correction - Production Budgets- 3D Animated Movies.

Total Hours: 45

3. Computer Graphics, Multimedia and Animation-Malay K. Pakhira, PHI Learning Pvt Ltd, 2010
4. Encyclopedia of Multimedia and Animations-Pankaj Dhaka, Anmol Publications-2011

COURSE OBJECTIVES:

- To study the basic parts of computer in detail
- Introduce various peripheral devices available for computer and its detailed working concepts
- Overview of various interfaces and other hardware overview
- Assemble/setup and upgrade personal computer systems and discuss about power supplies and the skills to trouble-shoot various power-related problems.
- To study basic concepts and methods in troubleshooting
- To study the installation/connection and maintenance of computer and its associated peripherals.

COURSE OUTCOME:

Upon completion of this course, the student will be able to:

- Identify the main components for the PC, familiarize themselves with PC memories such as RAM and ROM devices and so on.
- Identify various peripheral devices available and its working
- Understand various concepts of hardware and its interface and control
- Perform basic installation of PC. Importance of maintenance is understood
- Understand Various faults and failures are identified and troubleshooting in detail
- Understand overall PC hardware, interfacing, maintenance and troubleshooting

UNIT I Introduction**9**

Introduction - Computer Organization – Number Systems and Codes – Memory – ALU – CU – Instruction prefetch – Interrupts – I/O Techniques – Device Controllers – Error Detection Techniques – Microprocessor – Personal Computer Concepts – Advanced System Concepts – Microcomputer Concepts – OS – Multitasking and Multiprogramming – Virtual Memory – Cache Memory – Modern PC and User.

UNIT II Peripheral Devices**9**

Introduction – Keyboard – CRT Display Monitor – Printer – Magnetic Storage Devices – FDD – HDD – Special Types of Disk Drives – Mouse and Trackball – Modem – Fax-Modem – CD ROM Drive – Scanner – Digital Camera – DVD – Special Peripherals.

UNIT III PC Hardware Overview**9**

Introduction – Hardware BIOS DOS Interaction – The PC family – PC hardware – Inside the System Box – Motherboard Logic – Memory Space – Peripheral Interfaces and Controllers – Keyboard Interface – CRT Display interface – FDC – HDC.

UNIT IV Installation and Preventive Maintenance**9**

Introduction – system configuration – pre installation planning – Installation practice – routine checks – PC Assembling and integration – BIOS setup – Engineering versions and compatibility – preventive maintenance – DOS – Virus – Data Recovery.

UNIT V Troubleshooting

9

Introduction – computer faults – Nature of faults – Types of faults – Diagnostic programs and tools – Microprocessor and Firmware – Programmable LSI's – Bus Faults – Faults Elimination process – Systematic Troubleshooting – Symptoms observation and analysis – fault diagnosis – fault rectification – Troubleshooting levels – FDD, HDD, CD ROM Problems.

COURSE OBJECTIVES:

- To understand the basic requirements, installation and structure of gaming using Java
- Discuss various aspects of safe cracker projects
- Discuss various aspects of match game projects
- Discuss various aspects of pizza delivery projects
- Discuss various aspects of moon landing projects
- Discuss the process of development of gaming using Java

COURSE OUTCOMES:

Upon completion of the course, students will be able to:

- Interpret various concepts of gaming based on Java
- Design the frame and code to develop safe cracker project
- Design the frame and code to develop match game project
- Design the frame and code to develop pizza delivery project
- Design the frame and code to develop moon landing project
- Design and develop various games using Java

UNIT I Introduction**9**

Introducing Games with Java- Requirements-Installing Netbeans IDE-Structure of Java Program-Structure of Java GUI-Swing controls-Stopwatch Project-Creating Frames-Adding Controls-Adding Event methods-Writing Code

UNIT II Safecracker Project**9**

Frame design-Grid Bag Layout Manager-Code Design-Adding Sounds-Tic Tac Toe Project-Frame Design-Code Design-Adding Events-Adding Sounds

UNIT III Match Game Project**9**

Preview-Frame Design-Photo Selection-Code Design-Timer Objects- Adding Delays-one player Solitaire game-Computer Moves

UNIT IV Pizza Delivery Project**9**

Preview- Frame Design-Adding Clock-Game Design-Multiple Frames GUI- Leap Frog Project-Preview-Frame Design-Code Design- Introduction to OOP-Sprite Class-Collision detection between objects- Updating Scores

UNIT V Moon Landing Project**9**

Preview-Frame Design- Code Design- Graphics Methods- Graphics 2D Objects-Stroke and Paint Objects-Shapes and Drawing Methods-Line, Rectangle and Ellipse-Scrolling Background-Sprite Animation

**OPEN ELECTIVES OFFERED BY ELECTRICAL AND
ELECTRONICS ENGINEERING**

Course Objectives

- To understand the basic concepts of electric hybrid vehicle.
- To gain the knowledge about electric propulsion unit.
- To gain the concept of Hybrid Electric Drive-Trains.
- To gain the different Energy Management Strategies.
- To study about the efficiency manipulation in drives
- To understand and gain the knowledge about various energy storage devices

Course Outcomes:

- Summarize the basic concepts in bioprocess Engineering.
- Explain the concept of Hybrid Electric Vehicles.
- Understand the concept of Hybrid Electric Drive-Trains.
- Identify the different Energy Management Strategies.
- Understand the concept of different Energy Storage devices.
- Analyze the different motor drives used in Hybrid Electric Vehicles.

UNIT I INTRODUCTION

History of hybrid and electric vehicles, social and environmental importance of hybrid and electric vehicles, impact of modern drive-trains on energy supplies.

UNIT II HYBRID ELECTRIC DRIVE-TRAINS

Basic concept of hybrid traction, introduction to various hybrid drive-train topologies, power flow control in hybrid drive-train topologies, fuel efficiency analysis.

UNIT III ELECTRIC PROPULSION UNIT

Introduction to electric components used in hybrid and electric vehicles, Configuration and control of DC Motor drives, Configuration and control of Induction Motor drives, configuration and control of Permanent Magnet Motor drives, Configuration and control of Switch Reluctance Motor drives, drive system efficiency.

UNIT IV ENERGY STORAGE

Introduction to Energy Storage Requirements in Hybrid and Electric Vehicles, Battery based energy storage and its analysis, Fuel Cell based energy storage and its analysis, Super Capacitor based energy storage and its analysis, Flywheel based energy storage and its analysis, Hybridization of different energy storage devices.

UNIT V ENERGY MANAGEMENT STRATEGIES

Introduction to energy management strategies used in hybrid and electric vehicles, classification of different energy management strategies, comparison of different energy management strategies, implementation issues of energy management strategies.

TEXT BOOK

S. No.	Author(s) Name	Title of the book	Publisher	Year of Publication
1	Iqbal Hussein	Electric and Hybrid Vehicles: Design Fundamentals	CRC Press	2003

REFERENCES

S. No.	Author(s) Name	Title of the book	Publisher	Year of Publication

2	James Larminie, John Lowry	Electric Vehicle Technology Explained	Wiley	2003

Course Objectives:

- To gain the knowledge about energy management.
- To understand the basic concepts in economic analysis in energy management.
- To understand the basic principles of energy audit.
- To gain the knowledge about the basic concept of types of Energy Audit
- To gain and Evaluate the different energy efficient motors
- Understand the concept of Energy conservation.
- To study about the behavior changes of PF requirement in motor currents

Course Outcomes:

At the end of this course, students will demonstrate the ability to

- Understand the concept of Energy Management.
- Analyze the different methods for economic analysis
- Knowledge about the basic concept of Energy Audit and types.
- Evaluate the different energy efficient motors
- Understand the concept of Energy conservation.
- Investigate the different methods to improve power factor.

UNIT I ENERGY MANAGEMENT

Principles of energy management, organizing energy management program, initiating, planning, controlling, promoting, monitoring, reporting –Energy Auditor and Energy Manager – Eligibility, Qualification and functions - Questionnaire and check list for top management.

UNIT II ECONOMIC ASPECTS AND ANALYSIS

Economics analysis – Depreciation Methods, time value of money, rate of return, present worth method, replacement analysis, life cycle costing analysis - Calculation of simple payback method, net present worth method.

UNIT III BASIC PRINCIPLES OF ENERGY AUDIT

Energy audit – definition, concept, type of audit, energy index, cost index, pie charts, Sankey diagrams, load profiles, Energy conservation schemes – Energy audit of industries – energy saving potential, energy audit of process industry, thermal power station, building energy audit.

UNIT IV ENERGY EFFICIENT MOTORS

Electric Motors: Factors affecting efficiency - Energy efficient motors - constructional details, characteristics - voltage variation –over motoring – motor energy audit-

Energy conservation: Importance-energy saving measures in DG set-fans and blowers pumps- air conditioning system- energy efficient transformers.

UNIT V POWER FACTOR IMPROVEMENT, LIGHTING AND ENERGY INSTRUMENTS

Power factor - methods of improvement, location of capacitors, p.f with non linear loads, effect of

harmonics on p.f,- p.f motor controllers –Energy efficient lighting system design and practice-lighting control– Measuring Instruments – wattmeter, data loggers, thermocouples, pyrometers, lux meters, tong testers, application of PLCs.

Text Book

S. No.	Author(s) Name	Title of the book	Publisher	Year of Publication
1	Murphy W.R. and G.Mckay Butter worth	<i>Energy Management</i>	<i>Heinemann Publications</i>	2007

Reference Books

S. No.	Author(s) Name	Title of the book	Publisher	Year of Publication
1	John.C.Andreas	Energy Efficient Electric Motors	Marcel Dekker Inc Ltd – 3rd edition	2005
2	W.C.Turner Steve Doty	Energy Management Handbook	John Wiley and Sons, 7th Edition	2009
3	Paul o' Callaghan	Energy Management	Mc-Graw Hill Book Company – 1st edition	1998

Course Objectives

- It deals with various types of Sensors & Transducers and their working principle
- It deals with resistive transducers
- It deals with capacitive transducers
- It deals with inductive transducers
- It deals with some of the miscellaneous transducers
- It deals with characteristics of transducers

Course Outcomes (COs)

At the end of the course the student will be able to

1. understand all types of sensors and transducers.
2. Justify the concept and working principle of different transducers and sensors
3. Justify the transducers that will be utilised in the electrical industries
4. Identify recent developments in transducer domain
5. Discover the knowledge for small technology up gradations in it
6. Analysis the real time application.

UNIT I INTRODUCTION OF TRANSDUCERS

Transducer – Classification of transducers – Basic requirement of transducers.

UNIT II CHARACTERISTICS OF TRANSDUCERS

Static characteristics – Dynamic characteristics – Mathematical model of transducer – Zero, first order and second order transducers – Response to impulse, step, ramp and sinusoidal inputs.

UNIT III RESISTIVE TRANSDUCERS

Potentiometer –Loading effect – Strain gauge – Theory, types, temperature compensation – Applications – Torque measurement – Proving Ring – Load Cell – Resistance thermometer – Thermistors materials – Constructions, Characteristics – Hot wire anemometer.

UNIT IV INDUCTIVE AND CAPACITIVE TRANSDUCER

Self inductive transducer – Mutual inductive transducers– LVDT Accelerometer – RVDT – Synchros – Microsyn – Capacitive transducer – Variable Area Type – Variable Air Gap type – Variable Permittivity type – Capacitor microphone.

UNIT V MISCELLENEOUS TRANSDUCERS

Piezoelectric transducer – Hall Effect transducers – Smart sensors – Fiber optic sensors – Film sensors – MEMS – Nano sensors, Digital transducers.

Course Objectives

- To understand the basic principles of PLC systems.
- To gain the knowledge about data handling functions.
- To gain the knowledge of storage techniques in PLC
- To acquire the knowledge about how to handle the data and functions
- To study about flow charts of ladder and spray process system
- To understand the principles of PID.

Course Outcome

- At the end of the course the student will be able to understand the registers and functions in PLC and they are able to do the program.
- To acquire the knowledge of storage techniques in PLC
- Students know how to handle the data and functions
- Students know about advanced controller in PLC applications
- Students gather real time industrial application of PLC
- Students gathered and evaluate the flow charts of ladder and spray process system

UNIT I INTRODUCTION

PLC Basics PLC system, I/O modules and interfacing CPU processor programming equipment
Programming formats, construction of PLC ladder diagrams, devices connected to I/O modules.

UNIT II PLC PROGRAMMING

PLC Programming input instructions, outputs, operational procedures, programming examples using contacts and coils. Drill-press operation. Digital logic gates programming in the Boolean algebra system, conversion examples Ladder diagrams for process control Ladder diagrams and sequence listings, ladder diagram construction and flow chart for spray process system.

UNIT III REGISTERS AND PLC FUNCTIONS

PLC Registers: Characteristics of Registers module addressing holding registers input registers, output registers. PLC Functions Timer functions and industrial applications counters counter function industrial applications, Architecture functions, Number comparison functions, number conversion functions.

UNIT IV DATA HANDLING FUNCTIONS

Data handling functions: SKIP, Master control Relay Jump Move FIFO, FAL, ONS, CLR and Sweep functions and their applications. Bit Pattern and changing a bit shift register, sequence functions and applications, controlling of two axes and three axis Robots with PLC, Matrix functions.

UNIT V PID PRINCIPLES

Analog PLC operation: Analog modules and systems Analog signal processing multi bit data processing , analog output application examples, PID principles position indicator with PID control, PID modules, PID tuning, PID functions

WEBSITE

<http://www.mikroe.com/old/books/plcbook/chapter1/chapter1.htm>, - Introduction to programmable Logic controller

Course Objectives

- To gain the knowledge about environmental aspects of energy utilization.
- To understand the basic principles of wind energy conversion, solar cells, photovoltaic conversion.
- To study about solar energy collectors and its storages
- To study about the inter connected system in wind power
- To understand the basic principles fuel cell, Geo thermal power plants.
- To gain the knowledge about hydro energy.

Course Outcomes

At the end of this course, students will demonstrate the ability to

- Analyze the Energy Scenario in india
- Understand the concept of Solar Energy
- Understand the concept of Wind Energy
- Understand the concept of Hydro Energy
- Analyze the different energy sources
- Students gathered the real time inter connected system modelling in wind power

UNIT I INTRODUCTION

Energy scenario - Different types of Renewable Energy Sources - Environmental aspects of energy utilization - Energy Conservation and Energy Efficiency - Needs and Advantages, Energy Conservation Act 2003.

UNIT II SOLAR ENERGY

Introduction to solar energy: solar radiation, availability, measurement and estimation– Solar thermal conversion devices and storage – solar cells and photovoltaic conversion – PV systems – MPPT. Applications of PV Systems – solar energy collectors and storage.

UNIT III WIND ENERGY

Introduction – Basic principles of wind energy conversion- components of wind energy conversion system - site selection consideration – basic–Types of wind machines. Schemes for electric generation – generator control, load control, energy storage – applications of wind energy – Inter connected systems.

UNIT IV HYDRO ENERGY

Hydropower, classification of hydro power, Turbine selection, Ocean energy resources, ocean energy routes. Principles of ocean thermal energy conversion systems, ocean thermal power plants. Principles of ocean wave energy conversion and tidal energy conversion.

UNIT V OTHER SOURCES

Bio energy and types –Fuel cell, Geo-thermal power plants; Magneto-hydro-dynamic (MHD) energy conversion.

WEBSITES

1. www.energycentral.com
2. www.catelectricpowerinfo.com

Course Objectives

- To study the state variable analysis
- To provide adequate knowledge in the phase plane analysis and also describing function analysis.
- To study the analysis discrete time systems using conventional techniques.
- To analyze the stability of the systems using different techniques.
- To study the design of optimal controller.
- To study the types of compensators

Course Outcomes

At the end of the course the student will be able to

- understand the state variable analysis, Z- transform, state equation
- Construct the frequency response of the system using various plots
- Correlate the time and frequency domain specifications and effect of compensation
- Design the different types of compensators using frequency response plots to stabilize the control system
- Explain the state variable representation of physical systems with the effects of state feedback its assessment for linear-time invariant systems.

UNIT 1 STATE VARIABLE ANALYSIS

Concept of state – State Variable and State Model – State models for linear and continuous time

systems – Solution of state and output equation – controllability and observability - Pole Placement

– State observer Design of Control Systems with observers

UNIT II PHASE PLANE AND DESCRIBING FUNCTION ANALYSIS

Features of linear and non-linear systems - Common physical non-linearities – Methods of linearising

non-linear systems - Construction of phase portraits – Singular points – Limit cycles Basic concepts, derivation of describing functions for common non-linearities – Describing function analysis of non-linear systems – Conditions for stability – Stability of oscillations.

UNIT III Z-TRANSFORM AND DIGITAL CONTROL SYSTEM

Z transfer function – Block diagram – Signal flow graph – Discrete root locus – Bode plot.

UNIT 1V STATE-SPACE DESIGN OF DIGITAL CONTROL SYSTEM

State equation – Solutions – Realization – Controllability – Observability – Stability
– Jury's test.

UNIT V OPTIMAL CONTROL

Introduction -Decoupling - Time varying optimal control – LQR steady state optimal control
–
Optimal estimation – Multivariable control design.

**OPEN ELECTIVES OFFERED BY ELECTRONICS AND
COMMUNICATION ENGINEERING**

Course Objectives

- To introduce students to the embedded systems, its hardware and software.
- To introduce devices and buses used for embedded networking.
- To study about task management
- To learn about semaphore management and message passing
- To study about memory management
- To imparts knowledge on

Course Outcomes

At the end of the course the students will be able to

- Understand overview of embedded systems architecture
- Acquire knowledge on embedded system, its hardware and software.
- Gain knowledge on overview of Operating system
- Discuss about task Management
- Gain knowledge about semaphore management and message passing.
- Gain knowledge about memory management.

UNIT - I INTRODUCTION TO EMBEDDED SYSTEM

Introduction - Embedded systems description, definition, design considerations & requirements - Overview of Embedded system Architecture (CISC and RISC) - Categories of Embedded Systems - embedded processor selection & tradeoffs - Embedded design life cycle - Product specifications - hardware/software partitioning - iterations and implementation - hardware software integration - product testing techniques – ARM 7

UNIT - II OPERATING SYSTEM OVERVIEW

Introduction – Advantage and Disadvantage of Using RTOS – Multitasking – Tasks - Real Time Kernels – Scheduler - Non-preemptive Kernels - Preemptive Kernels – Reentrancy- Reentrant Functions – Round Robin Scheduling - Task Priorities - Static Priorities – Mutual Exclusion – Deadlock – Intertask Communication – Message Mailboxes – Message Queues - Interrupts - Task Management – Memory Management - Time Management – Clock Ticks.

UNIT - III TASK MANAGEMENT

Introduction - μ C/OS-II Features - Goals of μ C/OS-II - Hardware and Software Architecture – Kernel Structures: Tasks – Task States – Task Scheduling – Idle Task – Statistics Task – Interrupts Under μ C/OS-II – Clock Tick - μ C/OS-II Initialization. Task Management: Creating Tasks – Task Stacks – Stack Checking – Task's Priority – Suspending Task – Resuming Task. Time Management: Delaying a Task – Resuming a Delayed Task – System Time. Event Control Blocks- Placing a Task in the ECB Wait List – Removing a Task from an ECB wait List .

UNIT - IV SEMAPHORE MANAGEMENT AND MESSAGE PASSING

Semaphore Management: Semaphore Management Overview – Signaling a Semaphore. Message Mailbox Management: Creating a Mailbox – Deleting Mailbox – Waiting for a Message box – Sending Message to a Mailbox- Status of Mailbox. Message Queue Management: Creating Message Queue – Deleting a Message Queue – Waiting for a Message at a Queue – Sending Message to a Queue – Flushing a Queue.

UNIT - V MEMORY MANAGEMENT

Memory Management: Memory Control Blocks – Creating Partition- Obtaining a Memory Block – Returning a Memory Block .Getting Started with μ C/OS-II – Installing μ C/OS-II – Porting μ C/OS-II: Development Tools – Directories and Files – Testing a Port - IAR Workbench with μ C/OS-II - μ C/OS-II Porting on a 8051 CPU – Implementation of Multitasking - Implementation of Scheduling and Rescheduling – Analyze the Multichannel ADC with help of μ C/OS-II.

2	David Seal	ARM Architecture Reference Manual.	Addison-Wesley	2008
3	Steve Furbe,	ARM System-on-Chip Architecture,	Addison-Wesley Professional, California	2000

Course Objectives

- To study about various speakers and microphone
- To learn the fundamental of television systems and standards
- To learn the process of audio recording and reproduction
- To study various telephone networks
- To discuss about the working of home appliances
- To familiarize with TV services like ISDN.

Course Outcomes

At the end of the course the students will be able to

- Understand working of various type of loud speakers
- Acquire knowledge on various types of picture tubes
- Demonstrate the working of various optical recording systems
- Distinguish various standards for color TV system
- Acquire knowledge on various telecommunication networks
- Demonstrate the working of various home appliances

UNIT I LOUDSPEAKERS AND MICROPHONES

Dynamic Loudspeaker, Electrostatic loudspeaker, Permanent Magnet Loudspeaker, Woofers and Tweeters - Microphone Characteristics, Carbon Microphones, Dynamic Microphones and Wireless Microphones.

UNIT – II TELEVISION STANDARDS AND SYSTEMS

Components of a TV system – interlacing – composite video signal. Colour TV – Luminance and Chrominance signal; Monochrome and Colour Picture Tubes - Colour TV systems – NTSC, PAL, SECAM - Components of a Remote Control.

UNIT – III OPTICAL RECORDING AND REPRODUCTION

Audio Disc – Processing of the Audio signal – read out from the Disc – Reconstruction of the audio signal – Video Disc – Video disc formats- recording systems – Playback Systems.

UNIT – IV TELECOMMUNICATION SYSTEMS

Telephone services - telephone networks – switching system principles – PAPX switching – Circuit, packet and message switching, LAN, MAN and WAN, Integrated Services Digital Network. Wireless Local Loop. VHF/UHF radio systems, Limited range Cordless Phones; cellular modems

UNIT – V HOME APPLIANCES

Basic principle and block diagram of microwave oven; washing machine hardware and software; components of air conditioning and refrigeration systems.

Text Book:

1. S.P.Bali, “Consumer Electronics”, Pearson Education, 2005.

Course Objectives

- To familiar with the important concepts applicable to small electronic devices, their fabrication, characterization and application
- To have a solid understanding of Nanotechnology concepts.
- To introduce the basic concepts of Nanotechnology and its applications in various domain
- To understand the molecular structure of carbon nano tube
- To educate how to use Nanotechnology to solve real-world problems
- To familiar with the structure and application of carbon nano tube

Course Outcomes

At the end of the course the students will be able to

- Understand the basic concepts of Nanotechnology and its applications in various domain
- Ability to develop how to use Nanotechnology to solve real- world problems
- Understand solid understanding of Nanotechnology concepts
- Understand the important concepts applicable to small electronic devices, their fabrication, characterization and application
- Understand the molecular structure of carbon nano tube
- Familiar with the structure and application of carbon nano tube

UNIT I-LIMITATIONS OF CMOS

Fundamentals of MOSFET devices - Scaling of CMOS – Limitations – Alternative concepts in materials – **Structures of MOS devices:** SOI MOSFET, FINFETS, Dual Gate MOSFET, Ferro electric FETs.

UNIT II-MICRO AND NANO FABRICATION

Optical Lithography – Electron beam Lithography – Atomic Lithography – Molecular beam epitaxy - Nano lithography.

UNIT III-CHARACTERIZATION EQUIPMENTS

Principles of Electron Microscopes – Scanning Electron Microscope – Transmission Electron Microscope - Atomic Force Microscope – Scanning Tunneling Microscope.

UNIT IV-NANO DEVICES – I

Resonant tunneling diodes – Single electron devices – Josephson junction – Single Flux Quantum logic – Molecular electronics.

UNIT V-NANO DEVICES – II

Quantum computing: principles – Qbits – Carbon nanotubes (CNT): Characteristics, CNTFET, Application of CNT - Spintronics: Principle, Spin valves, Magnetic Tunnel Junctions, SpinFETs, MRAM

TEXT BOOK:

Course Objectives

- To study the image fundamentals and mathematical transforms necessary for image processing.
- To study the image enhancement techniques
- To study the image compression procedures.
- To study the image segmentation and representation techniques.
- To study the video processing fundamentals
- To know the concepts of motion estimation

INTENDED OUTCOMES:

- Understand the image fundamentals and mathematical transforms necessary for image processing.
- Understand the image enhancement techniques
- Understand the image compression procedures.
- Understand the image segmentation and representation techniques.
- Understand the video processing fundamentals
- Understand motion estimation concepts

UNIT I FUNDAMENTALS OF IMAGE PROCESSING AND IMAGE TRANSFORMS Basic steps of Image processing system sampling and quantization of an Image – Basic relationship between pixels Image Transforms: 2 – D Discrete Fourier Transform, Discrete Cosine Transform, Discrete Wavelet transforms.

UNIT II IMAGE PROCESSING TECHNIQUES

Image Enhancement: Spatial Domain methods: Histogram Processing, Fundamentals of Spatial Filtering, Smoothing Spatial filters, Sharpening Spatial filters, Frequency Domain methods: Basics of filtering in frequency domain, image smoothing, image sharpening, selective filtering.

UNIT III IMAGE SEGMENTATION AND COMPRESSION

Segmentation concepts, point, line and Edge detection, Thresholding, region based segmentation Image Compression Image compression fundamentals – coding Redundancy, spatial and temporal redundancy. Compression models : Lossy and Lossless, Huffman coding, Arithmetic coding, LZW coding, run length coding, Bit Plane coding, transform coding, predictive coding , wavelet coding, JPEG standards.

UNIT IV BASICS OF VIDEO PROCESSING

Analog video, Digital Video, Time varying Image Formation models : 3D motion models, Geometric Image formation , Photometric Image formation, sampling of video signals, filtering operations.

UNIT V 2-D MOTION ESTIMATION

Optical flow, general methodologies, pixel based motion estimation, Block matching algorithm, Mesh based motion Estimation, global Motion Estimation, Region based motion estimation, multi resolution motion estimation. Waveform based coding, Block based transform coding, predictive coding, Application of motion estimation in video coding.

TEXTBOOKS

1. Gonzalez and Woods ,”Digital Image Processing “, 3rd edition Pearson
2. Yao wang, Joem Ostarmann and Ya – quin Zhang, ”Video processing and communication “,1st edition PHI

REFERENCE BOOKS

1. M. Tekalp ,”Digital video Processing”, Prentice ll International
2. Aner ozdemi R, "Inverse Synthetic Aperture Radar Imaging with MATLAB Algorithms", JohnWiley & Sons
3. Chris Solomon, Toby Breckon , "Fundamentals of Digital Image Processing A Practical Approach with Examples in Matlab", John Wiley & Sons,

Course Objectives

- To learn the processing steps in fabrication of VLSI devices.
- To learn the concepts of assembling and packaging for VLSI devices.
- To impart a good knowledge in reactive plasma etching techniques and equipment.
- To familiarize the students with the NMOS and CMOS IC technology.
- To make the student acquire reactive Plasma Etching techniques and Equipment.
- To acquaint the student with the VLSI assembly technology and package fabrication technology

Course outcomes

After completing this course, the students will be able to

- List out various fabrication techniques
- Understand the etching principle in IC fabrication
- Gain knowledge on deposition and diffusion methods
- Understand the process simulation and integration.
- Assembling and packing techniques
- various technologies used for fabricating VLSI devices

UNIT 1

Introduction to MOS Technologies: MOS, CMOS, BiCMOS Technology, Trends and Projections. Basic Electrical Properties of MOS, CMOS & BiCMOS Circuits: I_{ds} - V_{ds} relationships, Threshold Voltage V_t , G_m , G_{ds} and ω_o , Pass Transistor, MOS, CMOS & Bi CMOS Inverters, Z_{pu}/Z_{pd} , MOS Transistor circuit model, Latch-up in CMOS circuits.

UNIT II:

Layout Design And Tools: Transistor structures, Wires and Vias, Scalable Design rules, Layout Design tools.

Logic Gates & Layouts: Static Complementary Gates, Switch Logic, Alternative Gate circuits, Low power gates, Resistive and Inductive interconnect delays.

UNIT III:

Combinational Logic Networks: Layouts, Simulation, Network delay, Interconnect design, Power optimization, Switch logic networks, Gate and Network testing.

UNIT IV:

Sequential Systems: Memory cells and Arrays, Clocking disciplines, Design, Power optimization, Design validation and testing.

UNIT V:

Floor Planning & Architecture Design: Floor planning methods, off-chip connections, High-level synthesis, Architecture for low power, SOCs and Embedded CPUs, Architecture testing.

TEXT BOOKS:

1. Essentials of VLSI Circuits and Systems, K. Eshraghian Eshraghian. D, A.Pucknell, 2005, PHI.
2. Modern VLSI Design - Wayne Wolf, 3rd ed., 1997, Pearson Education.

REFERENCES:

1. Principals of CMOS VLSI Design – N.H.E Weste, K.Eshraghian, 2nd ed., Adisson Wesley.

Course Objectives

- To study materials used for MEMS and its working
- To study the fabrication process used for MEMS
- To study the packaging process used for MEMS
- To familiarize the students with various micro actuators and micro sensors.
- To learn the survey of materials central to micro engineering.
- To impart good knowledge in micro system packaging materials

Course Outcomes

At the end of the course the students will be able to

- Appreciate the underlying working principles of MEMS devices.
- Understand the working of Micro sensors and actuators
- Explain the IC fabrication processes
- Gain knowledge on bulk manufacturing
- Understand the Design of Micro systems.
- Design and model MEMS devices.

UNIT I-INTRODUCTION TO MEMS AND MICRO FABRICATION

History of MEMS Development, Characteristics of MEMS-Miniaturization - Micro electronics integration - Mass fabrication with precision. Sensors and Actuators- Energy domain. Sensors, actuators Micro fabrication - microelectronics fabrication process- Silicon based MEMS processes- New material and fabrication processing- Points of consideration for processing. Anisotropic wet etching, Isotropic wet etching, Dry etching of silicon, Deep reactive ion etching (DRIE), and Surface micromachining process- structural and sacrificial material.

UNIT II-ELECTRICAL AND MECHANICAL CONCEPTS OF MEMS

Conductivity of semiconductors, crystal plane and orientation, stress and strain - definition - Relationship between tensile stress and strain- mechanical properties of Silicon and thin films, Flexural beam bending analysis under single loading condition- Types of beam- longitudinal strain under pure bending -deflection of beam- Spring constant, torsional deflection, intrinsic stress, resonance and quality factor.

UNIT III-ELECTROSTATIC AND THERMAL PRINCIPLE SENSING AND ACTUATION

Electrostatic sensing and actuation-Parallel plate capacitor - Application- Inertial, pressure and tactile sensor parallel plate actuator- comb drive Thermal sensing and Actuators-Thermal sensors-Actuators- Applications Inertial, flow and infrared sensors.

UNIT IV-PIEZORESISTIVE, PIEZOELECTRIC AND MAGNETIC PRINCIPLE SENSORS AND ACTUATOR

Piezoresistive sensors- piezoresistive sensor material- stress in flexural cantilever and membrane- Application-Inertial, pressure, flow and tactile sensor. Piezoelectric sensing and actuation- piezoelectric material properties-quartz- PZT-PVDF -ZnO- Application-Inertial, Acoustic, tactile, flow-surface elastic waves Magnetic actuation- Micro magnetic actuation principle- Deposition of magnetic materials-Design and fabrication of magnetic coil.

UNIT V-POLYMER AND OPTICAL MEMS

Polymers in MEMS- polyimide-SU-8 Liquid crystal polymer(LCP)- PDMS – PMMA – Parylene - Fluorocarbon, Application-Acceleration, pressure, flow and tactile sensors. Optical MEMS-passive MEMS optical components-lenses-mirrors-Actuation for active optical MEMS.

TEXT BOOK:

S.NO.	Author(s) Name	Title of the book	Publisher	Year of publication
1	Chang Liu	Foundations of MEMS	Pearson Indian Print, 1 st Edition	2012

REFERENCES:

S.NO.	Author(s) Name	Title of the book	Publisher	Year of publication
1	Gaberiel M. Rebiz	RF MEMS Theory, Design and Technology	John Wiley & Sons	2003
2	Charles P. Poole and Frank J. Owens	Introduction to Nanotechnology	John Wiley & Sons	2003
3	Julian W. Gardner and Vijay K. Varadhan	Microsensors, MEMS and Smart Devices	John Wiley & sons	2001

Course Objectives

- To introduce the basic concepts of neural networks and its applications in various domain
- To educate how to use Soft Computing to solve real-world problems
- To have a solid understanding of Basic Neural Network.
- To provide students with a sound and comprehensive understanding of artificial neural networks and machine learning.
- To gain exposure in the field of neural networks and relate the human neural system into the digital world
- To provide knowledge of computation and dynamical systems using neural networks

Course Outcomes

At the end of the course the students will be able to

- Understand the basic concepts of neural networks and its applications in various domains
- Gain knowledge about learning process in Neural Networks
- Apply perception concept in design
- Design using ART phenomena
- Gain knowledge on SOM concepts
- Ability to develop the use of Soft Computing to solve real-world problems

UNIT I: INTRODUCTION TO NEURAL NETWORKS

Introduction - biological neurons and their artificial models - learning, adaptation and neural network's learning rules - types of neural networks- single layer, multiple layer- feed forward, feedback networks

UNIT II LEARNING PROCESS

Error – correction learning – memory based learning - hebbian learning-competitive learning-Boltzmann learning- supervised and unsupervised learning-adaptation-statistical learning theory.

UNIT III PERCEPTION

Single layer perception-Adaptive filtering-unconstrained optimization-Least-mean square algorithm-Leaning curve-Annealing Technique-perception convergence theorem-Relationship between perception and Baye's classifier-Back propagation algorithm

UNIT IV ATTRACTOR NEURAL NETWORK AND ART

Hopfield model-BAM model-BAM stability-Adaptive BAM -Lyapunov function-effect of gain-Hopfield design-Application to TSP problem-ART- layer 1-layer 2-orienting subsystem- ART algorithm-ARTMAP

UNIT V SELF ORGANIZATION

Self organizing map-SOM Algorithm-properties of the feature map-LVQ-Hierarchical vector Quantization. Applications of self-organizing maps: The Neural Phonetic Typewriter Learning Ballistic Arm Movements

REFERENCES:

4. Laurene Fausett, "Fundamentals of Neural Networks: Architectures, Algorithms, and Applications" - Pearson/ Prentice Hall
5. Robert J Schalkoff-"Artificial Neural Networks,McGraw Hill"-1997

Course Objectives

- To introduce the basic concepts of Fuzzy logic and its applications in various domain
- To educate how to use Fuzzy computation to solve real-world problems
- To have a solid understanding of Basic fuzzy models.
- Provide an understanding of the basic mathematical elements of the theory of fuzzy sets.
- To learn about applications on Fuzzy based systems
- To familiarize with fuzzy inference and defuzzy inference procedures

Course Outcomes

At the end of the course the students will be able to

- Understand the basic concepts of Fuzzy logic and its applications in various domain
- Gain knowledge on theory of Reasoning
- Develop fuzzy controllers
- Understand concepts of adaptive fuzzy control
- Ability to develop how to use Fuzzy computation to solve real- world problems
- Design fuzzy based model for any application

UNIT - I

Basics Of Fuzzy Logic: Fuzzy sets, Properties of fuzzy sets, operation in fuzzy sets, fuzzy relations, the extension principle

UNIT – II

Theory Of Approximate Reasoning: Linguistic variables, Fuzzy proportions, Fuzzy if- then statements, inference rules, compositional rule of inference-fuzzy models

UNIT - III

Fuzzy Knowledge Based Controllers (Fkbc): Basic concept structure of FKBC, choice of membership functions, scaling factors, rules, fuzzyfication and defuzzyfication procedures – Design of Fuzzy Logic Controller

UNIT - IV

Adaptive Fuzzy Control: Process performance monitoring, adaption mechanisms, membership functions, tuning using gradient descent and performance criteria. Self organizing controller model based controller.

UNIT V**FUZZY BASED SYSTEMS**

Simple applications of FKBC -washing machines- traffic regulations -lift control-fuzzy in medical applications-Introduction to ANFIS.

TEXT BOOKS:

1. An Introduction to Fuzzy Control- D. Diankar, H. Hellendoom and M. Reinfrank- Narosa Publishers India, 1996.
2. Fuzzy Sets Uncertainty and Information- G. J. Klir and T. A. Folger- PHI IEEE, 1995.

OPEN ELECTIVES OFFERED BY MECHANICAL ENGINEERING

Course Objective

1. To explain to the students about MEMS Technology, Present, Future and Challenges.
2. To gain a knowledge of basic approaches for microsystem design.
3. To gain a knowledge of state-of-the-art lithography techniques for microsystems.
4. To learn new materials, science and technology for microsystem applications.
5. To understand materials science for microsystem applications.
6. To understand state-of-the-art micromachining and packaging technologies.

Course Outcome

1. Students will explain MEMS Technology, Present, Future and Challenges.
2. Gain a knowledge of basic approaches for microsystem design
3. Gain a knowledge of state-of-the-art lithography techniques for microsystems
4. Learn new materials, science and technology for microsystem applications
5. Understand materials science for microsystem applications
6. Understand state-of-the-art micromachining and packaging technologies

UNIT I INTRODUCTION

Intrinsic Characteristics of MEMS – Energy Domains and Transducers- Sensors and Actuators – Introduction to Micro fabrication - Silicon based MEMS processes – New Materials – Review of Electrical and Mechanical concepts in MEMS – Semiconductor devices – Stress and strain analysis – Flexural beam bending- Torsional deflection.

UNIT II SENSORS AND ACTUATORS-I

Electrostatic sensors – Parallel plate capacitors – Applications – Interdigitated Finger capacitor – Comb drive devices – Micro Grippers – Micro Motors - Thermal Sensing and Actuation – Thermal expansion – Thermal couples – Thermal resistors – Thermal Bimorph - Applications – Magnetic Actuators – Micromagnetic components – Case studies of MEMS in magnetic actuators- Actuation using Shape Memory Alloys

UNIT III SENSORS AND ACTUATORS-II

Piezoresistive sensors – Piezoresistive sensor materials - Stress analysis of mechanical elements – Applications to Inertia, Pressure, Tactile and Flow sensors – Piezoelectric sensors and actuators – piezoelectric effects – piezoelectric materials – Applications to Inertia , Acoustic, Tactile and Flow sensors.

UNIT IV MICROMACHINING

Silicon Anisotropic Etching – Anisotropic Wet Etching – Dry Etching of Silicon – Plasma Etching – Deep Reaction Ion Etching (DRIE) – Isotropic Wet Etching – Gas Phase Etchants – Case studies - Basic surface micro machining processes – Structural and Sacrificial Materials – Acceleration of sacrificial Etch – Striction and Antistriction methods – LIGA Process - Assembly of 3D MEMS – Foundry process.

UNIT V POLYMER AND OPTICAL MEMS

Polymers in MEMS– Polimide - SU-8 - Liquid Crystal Polymer (LCP) – PDMS – PMMA – Parylene – Fluorocarbon - Application to Acceleration, Pressure, Flow and Tactile sensors- Optical MEMS – Lenses and Mirrors – Actuators for Active Optical MEMS.

4. James J. Allen, "Micro Electro Mechanical System Design", CRC Press Publisher, 2010
5. Thomas M. Adams and Richard A. Layton, "Introduction MEMS, Fabrication and Application," Springer 2012.

Course Objective

1. To develop the student's knowledge in various robot structures and their workspace.
2. To develop student's skills in performing spatial transformations associated with rigid body motions.
3. To develop student's skills in perform kinematics analysis of robot systems.
4. To provide the student with knowledge of the singularity issues associated with the operation of robotic systems.
5. To provide the student with some knowledge and analysis skills associated with trajectory planning.
6. To provide the student with some knowledge and skills associated with robot control.

Course Outcome

1. Develop the student's knowledge in various robot structures and their workspace.
2. Develop student's skills in performing spatial transformations associated with rigid body motions.
3. Develop student's skills in perform kinematics analysis of robot systems.
4. Provide the student with knowledge of the singularity issues associated with the operation of robotic systems.
5. Provide the student with some knowledge and analysis skills associated with trajectory planning.
6. Provide the student with some knowledge and skills associated with robot control.

UNIT I FUNDAMENTALS OF ROBOT

Robot – Definition, Need for Robots, Robot Anatomy, Co-ordinate systems, Work Envelope, types and classification – specifications – Pitch, yaw, Roll, Joint Notations, Speed of Motion, Pay Load – Robot Parts and their functions, grippers types. Forward kinematics, inverse kinematics- Manipulators with two, three degrees of freedom in 2D - Derivations and problems.

UNIT II DRIVES AND SENSORS

Drives- hydraulic, pneumatic and electrical. Force sensing, touch and tactile sensors, proximity sensors, non contact sensors and Machine vision sensors. Safety considerations in robotic cell, proximity sensors, fail safe hazard sensor systems, and compliance mechanism.

UNIT III PROGRAMMING AND APPLICATIONS

Robot programming languages – VAL programming – Motion Commands, Sensorscommands. Role of robots in inspection, assembly, material handling, underwater, space, nuclear, defence and medical fields.

UNIT IV MACHINE VISION

Machine Vision - Sensing - Low and higher level vision - Image acquisition and digitization - Cameras, CCD,CID, CPD, etc., - Illumination and types - Image processing and analysis - Feature extraction - Applications.

UNIT V IMPLEMENTATION AND ROBOT ECONOMICS

RGV, AGV; Implementation of Robots in Industries-Various Steps; Safety Considerations for Robot Operations - Economic Analysis of Robots.

TEXT BOOKS

7. Surender Kumar, “Industrial Robots and Computer Integrated Manufacturing”, Oxford and IBH Publishing Co. Pvt. Ltd., 1991.

Course Objective

1. To recognize and evaluate occupational safety and health hazards in the workplace.
2. To determine appropriate hazard controls following the hierarchy of controls.
3. To analyse the effects of workplace exposures, injuries and illnesses, fatalities.
4. To prevent incidents using the hierarchy of controls, effective safety and health management systems and task-oriented training.
5. To teach student the concept of Industrial Safety & provide useful practical knowledge for workplace safety.
6. To prevent or mitigate harm or damage to people, property, or the environment.

Course Outcome

1. Recognize and evaluate occupational safety and health hazards in the workplace.
2. Determine appropriate hazard controls following the hierarchy of controls.
3. Analyse the effects of workplace exposures, injuries and illnesses, fatalities.
4. Prevent incidents using the hierarchy of controls, effective safety and health management systems and task-oriented training.
5. Understand the concept of Industrial Safety & provide useful practical knowledge for workplace safety.
6. Prevent or mitigate harm or damage to people, property, or the environment.

UNIT I INTRODUCTION TO LOGISTICS

Logistics - concepts, definitions and approaches, factors influencing logistics - Supply chain: basic tasks, definitions and approaches, influencing supply chain - a new corporate model.

UNIT II PHASES OF SUPPLY CHAIN

The new paradigm shift - The modular company - The network relations - Supply processes - Procurement processes - Distribution management.

UNIT III EVOLUTION OF SUPPLY CHAIN MODELS

Strategy and structure - Factors of supply chain - Manufacturing strategy stages - Supply chain progress - Model for competing through supply chain management - PLC grid, supply chain redesign - Linking supply chain with customer.

UNIT IV SUPPLY CHAIN ACTIVITIES

Structuring the SC, SC and new products, functional roles in SC - SC design framework - Collaborative product commerce (CPC).

UNIT V SCM ORGANISATION AND INFORMATION SYSTEM

The management task - Logistics organization - The logistics information systems - Topology of SC application - Product Data Management - Warehouse management system MRP- I, MRP - II, ERP,. - Case study, ERP Software's

TEXT BOOKS

1. Shari.P.B and Lassen.T.S, "Managing the global supply chain", Viva books, New Delhi, 2000.
2. Ayers.J.B, "Hand book of supply chain management", The St. Lencie press, 2000.

REFERENCES

2. Steudel.H.J and Desruelle.P, "Manufacturing in the nineteen - How to become a mean, lean and world class competitor", Van No strand Reinhold, New York, 1992.

Course Objective

1. To generalized equations for mass, momentum and heat.
2. To understand the concepts of Reynolds and Gauss theorems.
3. To learn combined diffusive and convective transport.
4. To apply Film- and penetration models for mass and heat transfer.
5. To apply Stefan-Maxwells equations for multi-component diffusion.
6. To Solve the given set of equations either analytically or numerically.

Course Outcome

1. Generalized equations for mass, momentum and heat.
2. Understand the concepts of Reynolds and Gauss theorems.
3. Learn combined diffusive and convective transport.
4. Apply Film- and penetration models for mass and heat transfer.
5. Apply Stefan-Maxwells equations for multi-component diffusion.
6. Solve the given set of equations either analytically or numerically.

UNIT I INTRODUCTION AND BASIC CONCEPTS

General overview of transport phenomena including various applications, Transport of momentum, heat and mass , Transport mechanism, Level of transport, Driving forces, Molecular transport (diffusion), convective transport (microscopic)

UNIT II PROPERTIES, UNITS AND OTHER PHYSICAL PARAMETERS

Unit systems, temperature, mole, concentration, pressure, Gas laws, laws of conservation, energy and heat units

UNIT III MOMENTUM TRANSPORT

Basic concepts in fluid mechanics, Force, unit and dimensions, pressure in fluid, head of fluid, Molecular transport for momentum, heat and mass transfer, Viscosity of fluids, Newton's law, Momentum transfer, Newtonian and non- Newtonian fluids, Fluid flow and Reynolds number, Overall mass balance, Control volume and Continuity equation, Overall energy balance, Bernoulli's equation, Overall momentum balance, Drag coefficient, Stokes law, Flow in packed beds, Flow in fluidized bed

UNIT IV ENERGY TRANSPORT

Basic concepts in heat transfer, Heat transfer mechanisms, Fourier's law of heat conduction, thermal conductivity, convective heat transfer coefficient, Conduction heat transfer - through flat slab/wall and through hollow cylinder, Conduction through solids in series, Forced convection heat transfer inside pipes, Heat transfer outside various geometrics in forced convection, General discussion on natural convection heat transfer, Heat exchangers, General discussion on radiation heat transfer

UNIT V MASS TRANSPORT

Basic concepts in mass transport, Some application examples, Modes of mass transfer, Molecular diffusion-Fick's law, Analogy between mass, heat and momentum transfer, Dispersion, Hydraulic or Darcy's flow in porous media, Chemical kinetics and activation energy, Film theory, Convective mass transfer, Liquid-solid mass transfer, Liquid-liquid mass transport, Gas-liquid mass transfer, Aeration and oxygen transport, Air stripping

REFERENCES

1. Geankoplis, C. J. 2003. Transport Processes and Separation Processes Principles. 4th Edition. Prentice Hall.
2. <https://laulima.hawaii.edu/portal>

Course Objective

1. To describe the principles of the study of human movement.
2. To describe the range of factors that influence the initiation, production and control of human movement.
3. To identify the body's lever systems and their relationship to basic joint movement and classification.
4. To distinguish between biomechanical principles of kinetics and kinematics when applied to the analysis of human movement.
5. To explain joint and muscle function and the forces acting upon the human body during various sporting activities.
6. To relate the different body systems necessary for human movement to occur.

Course Outcome

1. Describe the principles of the study of human movement.
2. Describe the range of factors that influence the initiation, production and control of human movement.
3. Identify the body's lever systems and their relationship to basic joint movement and classification.
4. Distinguish between biomechanical principles of kinetics and kinematics when applied to the analysis of human movement.
5. Explain joint and muscle function and the forces acting upon the human body during various sporting activities.
6. Relate the different body systems necessary for human movement to occur.

UNIT I INTRODUCTION

Biomechanics - Improving Performance – Applications - Preventing And Treating Injury - Qualitative And Quantitative Analysis - Scholarly Societies - Computer Searches – Biomechanical Knowledge versus Information - Kinds of Sources - Evaluating Sources

UNIT II KEY MECHANICAL CONCEPTS

Mechanics - Basic Units - Nine Fundamentals of Biomechanics - Principles and Laws - Nine Principles for Application of Biomechanics

UNIT III HUMAN ANATOMY AND SOME BASIC TERMINOLOGY

Gross (Whole-Body) Modeling - Position and Direction Terminology - Terminology for Common Movements - Skeletal Anatomy - Major Joints - Major Muscle Groups - Anthropometric Data

UNIT IV ANATOMICAL DESCRIPTION

Key Anatomical Concepts - Directional Terms - Joint Motions - Muscle Actions - Active and Passive Tension of Muscle - Limitations of Functional Anatomical Analysis - Mechanical Method of Muscle Action Analysis - The Need for Biomechanics to Understand Muscle Actions - Sports Medicine and Rehabilitation Applications

UNIT V MECHANICS OF THE MUSCULOSKELETAL SYSTEM

Tissue Loads - Response of Tissues To Forces - Biomechanics of The Passive Muscle–Tendon Unit - Biomechanics of Bone - Biomechanics of Ligaments - Three Mechanical Characteristics of Muscle - Stretch-Shortening Cycle (SSC) - Force–Time Principle - Neuromuscular Control

**OPEN ELECTIVES OFFERED BY AUTOMOBILE
ENGINEERING**

Course Objectives:

- To impart knowledge on the constructional details and principle of operation of various automobile components.
- To learn the function and working of various components in transmission and drive lines.
- To study the concept and working of steering and suspension systems in an automobile.
- To give knowledge on the wheels, tyres and brakes of automobiles.
- To provide information on the current and future trends in automobiles.
- Identify and explain the types of steering system.

Course Outcomes:**Upon successful completion of the course, the students should be able to:**

- Demonstrate the operating principles and constructional details of various automobile components.
- Explain the function and working of components in transmission and drive lines.
- Identify and explain the types of steering system.
- Identify and explain the types of suspension system.
- Classify and describe the types of wheels, tyres and brakes of automobiles.
- Discuss the current and future trends in the automobiles.

UNIT-I ENGINE AND FUEL FEED SYSTEMS

Classification of Engine , construction and working of four stroke petrol and diesel engine, firing order and its significance. Carburettor working principle, requirements of an automotive carburettor, Petrol injection Systems (MPFI, TBI), Diesel fuel injection systems (CRDI)

UNIT –II TRANSMISSION SYSTEMS

Requirements of transmission system. Flywheel. Different types of clutches, principle, Construction, torque capacity and design aspects. Objective of the gearbox - Determination of gear ratios for vehicles. Performance characteristics at different speeds. Different types of gearboxes - operation. Function of Propeller Shaft Construction details of multi drive axle vehicles. Different types of final drive. Differential principles. Constructional details of differential unit. Non-slip differential. Differential lock

UNIT -III SUSPENSION SYSTEM

Need of suspension system - Types of suspension - Suspension springs - Constructional details and characteristics of leaf, coil and torsion bar springs - Independent suspension - Rubber suspension – Pneumatic suspension – Hydro Elastic suspension - Shock absorbers. Vibration and driving comfort.

UNIT-IV BRAKES

Necessity of brake, stopping distance and time, brake efficiency, weight transfer, shoe brake and disc brake theory Brake actuating systems - Mechanical, Hydraulic and Pneumatic. Parking and engine exhaust brakes. Power and power assisted brakes. Antilock Braking System (ABS).

UNIT -V ELECTRICAL SYSTEM

Principle and construction of lead acid battery. Lighting system: details of head light and side light, LED lighting system, head light dazzling and preventive methods – Horn, wiper system and trafficator. Starting System and charging system.

Course Objectives

- The objective of this course is to make the students to know and understand the constructional details, operating characteristics and design aspects of Two and Three wheelers.
- Construct the frames of two and three wheelers of different layouts.
- Demonstrate the constructional details and principle of operation of various engine components.
- Identify and explain the types of transmission systems.
- Identify and explain the types of steering and suspension systems.
- Classify and describe the types of wheels, tyres and brakes for two and three wheelers.

Course Outcomes

Upon successful completion of the course, the students should be able to:

- Construct the frames of two and three wheelers of different layouts.
- Demonstrate the constructional details and principle of operation of various engine components.
- Identify and explain the types of transmission systems.
- Identify and explain the types of steering and suspension systems.
- Classify and describe the types of wheels, tyres and brakes for two and three wheelers.
- Explain the servicing of two and three wheelers.

UNIT I INTRODUCTION

Classifications- design considerations –weight and dimension limitations – requirements stability problems, gyroscopic effect- pendulum effect of two and three wheelers.

UNIT II POWER UNITS, IGNITION SYSTEMS AND OTHER ELECTRICAL SYSTEMS

2 stoke and 4 stoke SI engines and CI engines design criteria– design of cylinders, cylinder head, cooling fins, crank case, connecting rod and crank shaft. Carburettor types and design. Battery coil ignition, magneto ignition and electronic ignition. Lighting and other electrical system.

UNIT III CLUTCHES AND TRANSMISSION

Types of clutches for 2 and 3 wheelers. Design of clutch system. Gears for two and three wheelers. Design of gear box and gear change mechanism. Belt, chain and shaft drive. Freewheeling devices, starting systems.

UNIT IV FRAMES, SUSPENSION, WHEELS AND TYRES

Types of frames used for two wheelers and three wheelers. Wheel frames- construction design of frames for fatigue strength torsional stiffness and lateral stability. Front and rear forks. Springs for suspension, Dampers, constructional details of wheel and tyres.

UNIT V THREE WHEELERS

Auto rickshaws, different types, Pick-Ups and delivery type vehicle, frames and transmission for 3 wheelers wheel types, wheel attachment tyre types. Brakes and their operating mechanism.

TEXT BOOKS:

SL.NO.	AUTHOR(S)	TITLE OF THE BOOK	PUBLISHER	YEAR OF PUBLICATION
1.	Irving P.E.	Motor Cycle Engineering.	Temple Press Book, London.	1992.
2.	Srinivasan.S.	Motor cycle, Scooter, Mobeds.	New century book house.	1988.

2.	Bruce A. Johns, David D.Edmundson and Robert Scharff	Motorcycles: Fundamentals, Service, Repair	Goodheart-Willcox	1999

Course Objectives

- The objective of this course is to make the students to know and understand the maintenance and fault diagnosis of basic systems inAutomobile.
- Describe and differentiate the types of maintenance.
- List the procedure for dismantling, servicing and assembling of engine components.
- Demonstrate the servicing of transmission and driveline components.
- Discuss the procedure for steering and suspension
- Discuss the procedure for wheel and brake maintenance.

Course Outcomes

Upon successful completion of the course, the students should be able to:

- Describe and differentiate the types of maintenance.
- List the procedure for dismantling, servicing and assembling of engine components.
- Demonstrate the servicing of transmission and driveline components.
- Discuss the procedure for steering and suspension
- Discuss the procedure for wheel and brake maintenance.
- Explain the fault diagnosis in the electrical and air conditioner systems.

UNIT I MAINTENANCE OF RECORDS AND SCHEDULES

Importance of maintenance, preventive (scheduled) and breakdown (unscheduled) maintenance, requirements of maintenance, preparation of check lists, Inspection schedule, maintenance of records, log sheets and other forms, safety precautions in maintenance.

UNIT II ENGINE MAINTENANCE

Dismantling of engine components and cleaning, cleaning methods, visual anddimensional inspections, minor and major reconditioning of various components, reconditioning methods, engine assembly, special tools used for maintenance overhauling, engine tune up.

UNIT III CHASSIS MAINTENANCE

Mechanical and automobile clutch and gear box, servicing and maintenance, maintenance servicing of propeller shaft and differential system, Maintenance servicing of suspension systems. Brake systems, types and servicing techniques, Steering systems, overhauling and maintenance. Wheel alignment, computerized alignment and wheel balancing.

UNIT IV ELECTRICAL SYSTEM MAINTENANCE

Testing methods for checking electrical components, checking battery, starter motor, charging systems, DC generator and alternator, ignitions system, lighting systems, Fault diagnosis and maintenance of modern electronic controls, checking and servicing of dash board instruments.

UNIT V MAINTENANCE OF FUEL SYSTEM, COOLING SYSTEMS, LUBRICATION SYSTEM AND VEHICLE BODY

Servicing and maintenance of fuel system of different types of vehicles, calibration and tuning of engine for optimum fuel supply, Cooling systems, water pump, radiator, thermostat, anticorrosion and antifreeze additives, Lubrication maintenance, lubricating oil changing, greasing of parts, Vehicle body maintenance, minor and major repairs. Door locks and window glass actuating system maintenance.

TEXT BOOKS

SL.NO.	AUTHOR(S)	TITLE OF THE BOOK	PUBLISHER	YEAR OF PUBLICATION
1.	John Doke	Fleet Manag ement	McGraw Hill Co	1984
2.	James D Halderman	Advanced Engine Performance Diagnosis	Prentice Hall Publications	2011
3.	Service Manuals from Different Vehicle Manufacturers			

Course Objectives:

- To impart knowledge on trends in the vehicle power plants.
- To learn the various advanced driver assistance systems.
- To study the working of advanced suspension and braking systems in an automobile.
- To give information about motor vehicle emission and noise pollution control.
- To provide knowledge of the vehicle telematics.
- To give information about the noise control techniques

Course Outcomes:

Upon successful completion of the course, the students should be able to:

- Distinguish and describe the various modern vehicle power plant systems.
- List and explain the various driver assistant mechanisms.
- Identify and describe the working of advanced suspension and braking systems.
- Apply the knowledge of motor vehicle emission and noise pollution control.
- Describe the noise control techniques
- Describe the vehicle telematics and its applications.

UNIT I TRENDS IN POWER PLANTS

Hybrid vehicles - Stratified charged / lean burn engines - Hydrogen engines - battery vehicles – Electric propulsion with cables - Magnetic track vehicles.

UNIT II DRIVER ASSISTANCE SYSTEMS

Collision Avoidance Systems, Adaptive cruise control, adaptive noise control, anti spin regulation, traction control systems, cylinder cut- off technology, ABS, Driver Drowsiness Detection system

UNIT III SUSPENSION BRAKES AND SAFETY

Air suspension - Closed loop suspension - antiskid braking system, Retarders, Regenerative braking safety cage - air bags - crash resistance - passenger comfort.

UNIT IV NOISE & POLLUTION

Reduction of noise - Internal & external pollution control through alternate fuels/power plants – Catalytic converters and filters for particulate emission.

UNIT V TELEMATICS

Global positioning systems, geographical information systems, navigation systems, automotive vision system, road recognition

OPEN ELECTIVES OFFERED BY CIVIL ENGINEERING

COURSE OBJECTIVES

1. To examine the role and tasks of basic housing policies and building bye laws
2. Understand the process of integrated service delivery in the context of economic, social, environmental and institutional factors
3. Analyze the Innovative construction methods and Materials
4. Analyze city management strategies and strengthen the urban governance through a problem solving approach
5. To know the Importance of basic housing policies and building bye laws
6. To use Housing Programmes and Schemes

COURSE OUTCOME

The students will be able to

1. Know the Importance of basic housing policies and building bye laws
2. Use Housing Programmes and Schemes
3. Plan and Design of Housing projects
4. Examine Innovative construction methods and Materials
5. Know Housing finance and loan approval procedures
6. Understand Construction as well as managing techniques

UNIT I INTRODUCTION TO HOUSING 9

Definition of Basic Terms – House, Home, Household, Apartments, Multi storeyed Buildings, Special Buildings, Objectives and Strategies of National Housing Policies, Principle of Sustainable Housing, Housing Laws at State level, Bye-laws at Urban and Rural Local Bodies – levels - Development Control Regulations, Institutions for Housing at National, State and Local levels

UNIT II HOUSING PROGRAMMES 9

Basic Concepts, Contents and Standards for Housing Programmes - Sites and Services, Neighbourhoods, Open Development Plots, Apartments, Rental Housing, Co-operative Housing, Slum Housing Programmes, Role of Public, Private and Non-Government Organisations.

UNIT III PLANNING AND DESIGN OF HOUSING PROJECTS 9

Formulation of Housing Projects – Site Analysis, Layout Design, Design of Housing Units (Design Problems)

UNIT IV CONSTRUCTION TECHNIQUES AND COST-EFFECTIVE MATERIALS 9

New Constructions Techniques – Cost Effective Modern Construction Materials, Building Centers – Concept, Functions and Performance Evaluation

UNIT V HOUSING FINANCE AND PROJECT APPRAISAL 9

Appraisal of Housing Projects – Housing Finance, Cost Recovery – Cash Flow Analysis, Subsidy and Cross Subsidy, Pricing of Housing Units, Rents, Recovery Pattern (Problems).

TOTAL HRS : 45

TEXT BOOKS

1. Meera Mehta and Dinesh Mehta, Metropolitan Housing Markets, Sage Publications Pvt. Ltd., New Delhi, 2002.
2. Francis Cherunilam and Odeyar D Heggade, Housing in India, Himalaya Publishing House, Bombay, 2001.

REFERENCES

1. Development Control Rules for Chennai Metropolitan Area, CMA, Chennai, 2002.
2. UNCHS, National Experiences with Shelter Delivery for the Poorest Groups, UNCHS (Habitat), Nairobi, 2000.

COURSE OBJECTIVES

1. Defining and identifying of eng. services systems in buildings.
2. The role of eng. services systems in providing comfort and facilitating life of users of the building.
3. The basic principles of asset management in a building & facilities maintenance environment
4. Importance of Fire safety and its installation techniques
5. To Know the principle of Refrigeration and application
6. To Understand Electrical system and its selection criteria

COURSE OUTCOME

The students will be able to

1. Machineries involved in building construction
2. Understand Electrical system and its selection criteria
3. Use the Principles of illumination & design
4. Know the principle of Refrigeration and application
5. Importance of Fire safety and its installation techniques
6. Know the principle behind the installation of building services and to ensure safety in buildings

UNIT I MACHINERIES**9**

Hot Water Boilers – Lifts and Escalators – Special features required for physically handicapped and elderly – Conveyors – Vibrators – Concrete mixers – DC/AC motors – Generators – Laboratory services – Gas, water, air and electricity

UNIT II ELECTRICAL SYSTEMS IN BUILDINGS**9**

Basics of electricity – Single / Three phase supply – Protective devices in electrical installations – Earthing for safety – Types of earthing – ISI specifications – Types of wires, wiring systems and their choice – Planning electrical wiring for building – Main and distribution boards – Transformers and switch gears – Layout of substations

UNIT III PRINCIPLES OF ILLUMINATION & DESIGN**9**

Visual tasks – Factors affecting visual tasks – Modern theory of light and colour – Synthesis of light – Additive and subtractive synthesis of colour – Luminous flux – Candela – Solid angle illumination – Utilisation factor – Depreciation factor – MSCP – MHCP – Laws of illumination – Classification of lighting – Artificial light sources – Spectral energy distribution – Luminous efficiency – Colour temperature – Colour rendering. Design of modern lighting – Lighting for stores, offices, schools, hospitals and house lighting. Elementary idea of special features required and minimum level of illumination required for physically handicapped and elderly in building types.

UNIT IV REFRIGERATION PRINCIPLES & APPLICATIONS

9

Thermodynamics – Heat – Temperature, measurement transfer – Change of state – Sensible heat – Latent heat of fusion, evaporation, sublimation – saturation temperature – Super heated vapour – Subcooled liquid – Pressure temperature relationship for liquids – Refrigerants – Vapour compression cycle – Compressors – Evaporators – Refrigerant control devices – Electric motors – Starters – Air handling units – Cooling towers – Window type and packaged air-conditioners – Chilled water plant – Fan coil systems – Water piping – Cooling load – Air conditioning systems for different types of buildings – Protection against fire to be caused by A.C. Systems

UNIT V FIRE SAFETY INSTALLATION

9

Causes of fire in buildings – Safety regulations – NBC – Planning considerations in buildings like non-combustible materials, construction, staircases and lift lobbies, fire escapes and A.C. systems. Special features required for physically handicapped and elderly in building types – Heat and smoke detectors – Fire alarm system, snorkel ladder – Fire lighting pump and water storage – Dry and wet risers – Automatic sprinklers

TOTAL HRS : 45

TEXT BOOKS

1. E.R.Ambrose, “Heat Pumps and Electric Heating”, John and Wiley and Sons, Inc., New York, 2002.
2. Handbook for Building Engineers in Metric systems, NBC, New Delhi, 2005.

REFERENCES

1. Philips Lighting in Architectural Design, McGraw-Hill, New York, 2000.
2. A.F.C. Sherratt, “Air-conditioning and Energy Conservation”, The Architectural Press, London, 2005.
3. National Building Code.

OBJECTIVES:

1. To understand the coastal processes, coastal dynamics, impacts of structures like docks, harbours and quays leading to simple management perspectives along the coastal zone.
2. To describe the Coastal zone regulations, coastal processes and wave dynamics.
3. To forecast waves and tides and plan coastal structures including harbours.
4. To explain which scientific background values that are necessary for a successful planning,
5. To apply knowledge about ecosystem values and management in the planning process,
6. To plan and carry out a simplified consultation process for activities in the coastal zone

OUTCOMES:

1. Understand the coastal processes, coastal dynamics, impacts of structures like docks, harbours and quays leading to simple management perspectives along the coastal zone.
2. The Coastal zone regulations, coastal processes and wave dynamics.
3. Forecast waves and tides and plan coastal structures including harbours.
4. To explain which scientific background values that are necessary for a successful planning,
5. To apply knowledge about ecosystem values and management in the planning process,
6. To plan and carry out a simplified consultation process for activities in the coastal zone

UNIT I. COASTAL ZONE 9

Coastal zone – Coastal zone regulations – Beach profile – Surf zone – Off shore – Coastal waters – Estuaries – Wet lands and Lagoons – Living resources – Non living resources.

UNIT II . WAVE DYNAMICS 9

Wave classification – Airy's Linear Wave theory – Deep water waves – Shallow water waves – Wave pressure – Wave energy – Wave Decay – Reflection, Refraction and Diffraction of waves – Breaking of waves – Wave force on structures – Vertical – Sloping and stepped barriers – Force on piles.

UNIT III. WAVE FORECASTING AND TIDES 9

Need for forecasting - SMB and PNJ methods of wave forecasting – Classification of tides – Darwin's equilibrium theory of tides – Effects on structures – seiches, Surges and Tsunamis.

UNIT IV. COASTAL PROCESSES 9

Erosion and depositional shore features – Methods of protection – Littoral currents – Coastal aquifers – Sea water intrusion – Impact of sewage disposal in seas.

UNIT V. HARBOURS 9

Types of classification of harbours – Requirements of a modern port – Selection of site – Types and selection of break waters – Need and mode of dredging – Selection of dredgers.

15BECEOE04 EXPERIMENTAL METHODS AND MODEL ANALYSIS 3 0 0 3 100

OBJECTIVE:

1. To Describe some of the factors affecting reproducibility and external validity.
2. To List the different types of formal experimental designs (e.g. completely randomised, randomised block, repeated measures, Latin square and factorial experimental designs).
3. To explain the concept of variability, its causes and methods of reducing it
4. To describe possible causes of bias and ways of alleviating it
5. To identify the experimental unit and recognise issues of non-independence (pseudo-replication).
6. To describe the six factors affecting significance, including the meaning of statistical power and “p-values”.

OUTCOMES:

1. Describe some of the factors affecting reproducibility and external validity.
2. List the different types of formal experimental designs (e.g. completely randomised, randomised block, repeated measures, Latin square and factorial experimental designs).
3. Explain the concept of variability, its causes and methods of reducing it
4. Describe possible causes of bias and ways of alleviating it
5. Identify the experimental unit and recognise issues of non-independence (pseudo-replication).
6. Describe the six factors affecting significance, including the meaning of statistical power and “p-values”.

UNIT I MEASUREMENTS 9

Basic Concept in Measurements, Measurement of displacement, strain pressure, force, torque etc, Type of strain gauges (Mechanical, Electrical resistance, Acoustical etc..).

UNIT II GAUGING 9

Strain gauge circuits – The potentiometer and Wheatstone bridge – use of lead wires switches etc. Use of electrical resistance strain gauges in transducer applications.

UNIT III RECORDING DEVICES 9

Indicating and recording devices - Static and dynamic data recording –Data (Digital and Analogue) acquisition and processing systems. Strain analysis methods – Rosette analysis. Static and dynamic testing techniques. Equipment for loading-Moire’s techniques.

UNIT IV NON DESTRUCTIVE TESTING TECHNIQUES 9

Non destructive testing techniques. Photoelasticity – optics of photoelasticity – Polariscope – Isoclinics and Isochromatics - methods of stress separation.

UNIT V LAWS OF SIMILITUDE

9

Laws of similitude - model materials – model testing – testing large scale structures – holographic techniques

TOTAL HRS : 45

TEXT BOOKS

1. Dally J W and Riley W.F, Experimental stress Analysis, McGraw-Hill, Inc. New York, 2005.
2. Srinath L S et al, Experimental Stress Analysis, Tata McGraw-Hill Publishing co., Ltd., New Delhi, 2006.

REFERENCE BOOKS

1. Rangan C S et al., Instrumentation – Devices and Systems, Tata McGraw-Hill Publishing Co., Ltd., New Delhi, 2002.
2. Sadhu Singh, Experimental Stress Analysis, Khanna Publishers, New Delhi, 2006.

OBJECTIVES

1. To enable the students for a successful career as water management professionals.
2. To create a potential among students in the area of irrigation management with specific enrichment to synthesis of data and their analysis.
3. To expose the students the need for an interdisciplinary approach in irrigation water management
4. To providing a platform to work in an interdisciplinary team.
5. To provide students an ability to understand the applications of mathematical and scientific concepts to analyse intricate technical, social and environmental problems in irrigation water management and finding solutions for them.
6. To promote student awareness for a life-long learning process and inculcate professional ethics and codes of professional practice in water management.

OUTCOME

At the end of this the students will be in a capacity to

1. Understand the concepts of soil-water-plant relationship as well as to expose them to the principles and practices of crop production.
2. Exposure to ground water, hydraulics of ground water related to drainage, drainage concepts, planning, design and management of drainage related irrigation system management
3. Understand the various principles of irrigation management and to analyse the different types of irrigation systems and their performances based on service oriented approach.
4. Gain insight on local and global perceptions and approaches to participatory water resource management
5. Learn from successes and failures in the context of both rural and urban communities of water management.
6. Exposure on the use of economic concepts in irrigation development and to impart knowledge on economic planning so as to enable viable allocation of resources in the irrigation sector.

UNIT I. IRRIGATION SYSTEM REQUIREMENTS**9**

Irrigation systems – Supply and demand of water – Cropping pattern – Crop rotation – Crop diversification – Estimation of total and peak crop water requirements – Effective and dependable rainfall – Irrigation efficiencies.

UNIT II. IRRIGATION SCHEDULING**9**

Time of irrigation – Critical stages of water need of crops – Criteria for scheduling irrigation – Frequency and interval of irrigation

UNIT III. MANAGEMENT 9

Structural and non-structural strategies in water use and management – Conjunctive use of surface and ground waters – Quality of irrigation water.

UNIT IV. OPERATION 9

Operational plans – Main canals, laterals and field channels – Water control and regulating structures – Performance indicators – Case study

UNIT V. INVOLVEMENT OF STAKE HOLDERS 9

Farmer's participation in System operation – Water user's associations – Farmer councils – Changing paradigms on irrigation management – Participatory irrigation management

TOTAL HRS : 45

TEXT BOOKS

1. Dilip Kumar Majumdar, "Irrigation Water Management – Principles and Practice", Prentice Hall of India Pvt. Ltd., New Delhi, 2000
2. Hand book on Irrigation Water Requirement, R.T. Gandhi, et. al., Water Management Division, Department of Agriculture, Ministry of Agriculture, New Delhi

REFERENCES

1. Hand Book on Irrigation System Operation Practices, Water Resources Management and Training Project, Technical report No. 33, CWC, New Delhi, 2000
2. Maloney, C. and Raju, K.V., "Managing Irrigation Together", Practice and Policy in India, Stage Publication, New Delhi, India, 2000

COURSE OBJECTIVES

1. Develop Parametric design and the conventions of formal engineering drawing
2. Produce and interpret 2D & 3D drawings
3. Communicate a design idea/concept graphically/visually
4. Examine a design critically and with understanding of CAD - The student learn to interpret drawings
5. to produce designs using a combination of 2D and 3D software.
6. Get a Detailed study of an engineering artifact

COURSE OUTCOME

The students will be able to

1. Develop Parametric design and the conventions of formal engineering drawing
2. Produce and interpret 2D & 3D drawings
3. Communicate a design idea/concept graphically/visually
4. Examine a design critically and with understanding of CAD - The student learn to interpret drawings, and to produce designs using a combination of 2D and 3D software.
5. Get a Detailed study of an engineering artifact
6. Planning and designing of structures

UNIT I INTRODUCTION 9

Fundamentals of CAD - Hardware and software requirements -Design process - Applications and benefits.

UNIT II COMPUTER GRAPHICS 9

Graphic primitives - Transformations -Wire frame modeling and solid modeling -Graphic standards –Drafting packages

UNIT III STRUCTURAL ANALYSIS 9

Fundamentals of finite element analysis - Principles of structural analysis -Analysis packages and applications.

UNIT IV DESIGN AND OPTIMISATION 9

Principles of design of steel and RC Structures -Applications to simple design problems – Optimisation techniques - Algorithms - Linear Programming – Simplex method

UNIT V EXPERT SYSTEMS 9

Introduction to artificial intelligence - Knowledge based expert systems -Rules and decision tables –Inference mechanisms - Simple applications.

TOTAL HRS : 45

TEXT BOOKS

1. Groover M.P. and Zimmers E.W. Jr., “CAD/CAM, Computer Aided Design and Manufacturing”, Prentice Hall of India Ltd, New Delhi, 2005.
2. Krishnamoorthy C.S.Rajeev S., “Computer Aided Design”, Narosa Publishing House, New Delhi, 2000

REFERENCES

1. Harrison H.B., “Structural Analysis and Design”, Part I and II Pergamon Press, Oxford, 2002.
2. Rao S.S., “Optimisation Theory and Applications”, Wiley Eastern Limited, New Delhi, 2002.
3. Richard Forsyth (Ed), “Expert System Principles and Case Studies”, Chapman and Hall, London, 2000.

OBJECTIVES:

1. To understand the importance of transportation and characteristics of road transport
2. To know about the history of highway development, surveys and classification of roads
3. To study about the geometric design of highways
4. To study about traffic characteristics and design of intersections
5. To know about the pavement materials and design
6. To design flexible and rigid pavements as per IRC.

COURSE OUTCOMES

On completion of the course, the students will be able to:

1. Carry out surveys involved in planning and highway alignment.
2. Design cross section elements, sight distance, horizontal and vertical alignment.
3. Implement traffic studies, traffic regulations and control, and intersection design.
4. Determine the characteristics of pavement materials.
5. Design flexible and rigid pavements as per IRC.
6. Will gain the knowledge of horizontal and vertical curves.

UNIT I. TYPE OF PAVEMENT AND STRESS DISTRIBUTION ON LAYERED SYSTEM**9**

Introduction - Pavement as layered structure - Pavement types - rigid and flexible -Stress and deflections in pavements under repeated loading

UNIT II. DESIGN OF FLEXIBLE PAVEMENTS**9**

Flexible pavement design - Empirical - Semi empirical and theoretical Methods - Design procedure as per latest IRC guidelines – Design and specification of rural roads

UNIT III. DESIGN OF RIGID PAVEMENTS**9**

Cement concrete pavements - Modified Westergard approach - Design procedure as per latest IRC guidelines - Concrete roads and their scope in India.

UNIT IV. PERFORMANCE EVALUATION AND MAINTENANCE**9**

Pavement Evaluation [Condition and evaluation surveys (Surface Appearance, Cracks, Patches And Pot Holes, Undulations, Ravelling, Roughness, Skid Resistance), Structural Evaluation By Deflection Measurements, Present Serviceability Index] Pavement maintenance. [IRC Recommendations Only]

UNIT V. STABILISATION OF PAVEMENTS**9**

Stabilisation with special reference to highway pavements - Choice of stabilisers -Testing and field control –Stabilisation for rural roads in India -use of Geosynthetics (geotextiles & geogrids) in roads.

3. Guideline for the Design of Rigid Pavements for Highways, IRC:58-2001, The Indian Roads Congress, New Delhi.

OBJECTIVES:

1. To understand the role of geology in the design and construction process of underground openings in rock.
2. To apply geologic concepts and approaches on rock engineering projects
3. To identify and classify rock using basic geologic classification systems.
4. To use the geologic literature to establish the geotechnical framework needed to properly design and construct heavy civil works rock projects.
5. To sequential design process used in geotechnical engineering practice.
6. To Require civil engineering students to read and summarize geologic literature for site specific projects.

OUTCOMES:

1. Understand the role of geology in the design and construction process of underground openings in rock.
2. Geologic concepts and approaches on rock engineering projects
3. Identify and classify rock using basic geologic classification systems.
4. Use the geologic literature to establish the geotechnical framework needed to properly design and construct heavy civil works rock projects.
5. Sequential design process used in geotechnical engineering practice.
6. Require civil engineering students to read and summarize geologic literature for site specific projects.

UNIT I. CLASSIFICATION AND INDEX PROPERTIES OF ROCKS 9

Geological classification – Index properties of rock systems – Classification of rock masses for engineering purpose.

UNIT II. ROCK STRENGTH AND FAILURE CRITERIA 9

Modes of rock failure – Strength of rock – Laboratory and field measurement of shear, tensile and compressive strength – Stress strain behaviour in compression – Mohr-coulomb failure criteria and empirical criteria for failure – Deformability of rock.

UNIT III. INITIAL STRESSES AND THEIR MEASUREMENTS 9

Estimation of initial stresses in rocks – influence of joints and their orientation in distribution of stresses – technique for measurements of insitu stresses.

UNIT IV. APPLICATION OF ROCK MECHANICS IN ENGINEERING 9

Simple engineering application – Underground openings – Rock slopes – Foundations and mining subsidence.

UNIT V. ROCK BOLTING 9

Introduction – Rock bolt systems – rock bolt installation techniques – Testing of rock bolts – Choice of rock bolt based on rock mass condition.

TOTAL HRS : 45

TEXT BOOKS

1. Goodman P.E., “Introduction to Rock Mechanics”, John Wiley and Sons, 2005.
2. Stillborg B., “Professional User Handbook for rock Bolting”, Tran Tech Publications, 2006.

REFERENCES

1. Brow E.T., “Rock Characterisation Testing and Monitoring”, Pergaman Press, 2002.

3. Hock E. and Bray J., “Rock Slope Engineering, Institute of Mining and Metallurgy”, 1991.

OBJECTIVE:

1. To learnt the design of various steel water tanks, concrete water tanks, steel bunkers and silos, concrete bunkers and silos and prestressed concrete water tanks
2. To design the storage structures.
3. To gain knowledge of steel water tanks and their design.
4. To get a brief idea about concrete water tanks.
5. To design steel bunkers and silos
6. To design prestressed concrete water tanks

OUTCOMES:

1. The design of various steel water tanks, concrete water tanks, steel bunkers and silos, concrete bunkers and silos and prestressed concrete water tanks
2. Design the storage structures.
3. Gain knowledge of steel water tanks and their design.
4. Get a brief idea about concrete water tanks.
5. Design steel bunkers and silos
6. Design prestressed concrete water tanks

UNIT I. STEEL WATER TANKS**9**

Design of rectangular riveted steel water tank – Tee covers – Plates – Stays – Longitudinal and transverse beams – Design of staging – Base plates – Foundation and anchor bolts – Design of pressed steel water tank – Design of stays – Joints – Design of hemispherical bottom water tank – side plates – Bottom plates – joints – Ring girder – Design of staging and foundation

UNIT II. CONCRETE WATER TANKS**9**

Design of Circular tanks – Hinged and fixed at the base – IS method of calculating shear forces and moments – Hoop tension – Design of intze tank – Dome – Ring girders – Conical dome – Staging – Bracings – Raft foundation – Design of rectangular tanks – Approximate methods and IS methods – Design of under ground tanks – Design of base slab and side wall – Check for uplift.

UNIT III. STEEL BUNKERS AND SILOS**9**

Design of square bunker – Jansen's and Airy's theories – IS Codal provisions – Design of side plates – Stiffeners – Hooper – Longitudinal beams – Design of cylindrical silo – Side plates – Ring girder – stiffeners.

UNIT IV. CONCRETE BUNKERS AND SILOS**9**

Design of square bunker – Side Walls – Hopper bottom – Top and bottom edge beams – Design of cylindrical silo – Wall portion – Design of conical hopper – Ring beam at junction.

UNIT V. PRESTRESSED CONCRETE WATER TANKS**9**

Principles of circular prestressing – Design of prestressed concrete circular water tanks.

TOTAL HRS : 45

TEXT BOOKS

1. Rajagopalan K., Storage Structures, Tata McGraw-Hill, New Delhi, 2002.
2. Krishna Raju N., Advanced Reinforced Concrete Design, CBS Publishers and Distributors, New Delhi, 2000

- 2.William H.Seaverns and Julian R.Fellows, "Air-conditioning and Refrigeration", John Wiley and Sons, London, 2000.

OBJECTIVES:

1. To understand the need of energy conversion and the various methods of energy storage
2. To explain the field applications of solar energy
3. To identify Winds energy as alternate form of energy and to know how it can be tapped
4. To explain bio gas generation and its impact on environment
5. To understand the Geothermal & Tidal energy, its mechanism of production and its applications
6. To illustrate the concepts of Direct Energy Conversion systems & their applications.

OUTCOMES:

1. Understand the need of energy conversion and the various methods of energy storage
2. Explain the field applications of solar energy
3. Identify Winds energy as alternate form of energy and to know how it can be tapped
4. Explain bio gas generation and its impact on environment
5. Understand the Geothermal & Tidal energy, its mechanism of production and its applications
6. Illustrate the concepts of Direct Energy Conversion systems & their applications.

UNIT I. INTRODUCTION 9

Terminology – Wind Data – Gust factor and its determination - Wind speed variation with height – Shape factor – Aspect ratio – Drag and lift.

UNIT II. EFFECT OF WIND ON STRUCTURES 9

Static effect – Dynamic effect – Interference effects (concept only) – Rigid structure – Aeroelastic structure (concept only).

UNIT III. EFFECT ON TYPICAL STRUCTURES 9

Tall buildings – Low rise buildings – Roof and cladding – Chimneys, towers and bridges.

UNIT IV. APPLICATION TO DESIGN 9

Design forces on multistorey building, towers and roof trusses.

UNIT V. INTRODUCTION TO WIND TUNNEL 9

Types of models (Principles only) – Basic considerations – Examples of tests and their use.

2. Wind Force on Structures – Course Notes, Building Technology Centre, Anna University, 2002.

OBJECTIVE:

1. To give an experience in the implementation of new technology concepts which are applied in field of Advanced construction.
2. To study different methods of construction to successfully achieve the structural design with recommended specifications.
3. To involve the application of scientific and technological principles of planning, analysis, design and management to construction technology.
4. To study of construction equipment's, and temporary works required to facilitate the construction process
5. To provide a coherent development to the students for the courses in sector of Advanced construction technology.
6. To present the new technology of civil Engineering and concepts related Advanced construction technology.

OUTCOMES:

1. Implementation of new technology concepts which are applied in field of Advanced construction.
2. Different methods of construction to successfully achieve the structural design with recommended specifications.
3. Application of scientific and technological principles of planning, analysis, design and management to construction technology.
4. Will gain the Knowledge of construction equipment's, and temporary works required to facilitate the construction process
5. Development to the students for the courses in sector of Advanced construction technology.
6. The new technology of civil Engineering and concepts related Advanced construction technology.
- 7.

UNIT - I MODERN CONSTRUCTION METHODS 9

Open Excavation, Shafts and Tunnels- Preparation of foundation, Cofferdams, Caisson, Piled Foundation, Prestressed Concrete Construction, Pre-cast Concrete Construction.

UNIT - II CONSTRUCTION METHODS FOR SPECIAL STRUCTURES 9

Construction Methods For Bridges, Construction Methods for Roads, Construction Methods For Special Structures for Railways, Construction Methods for Dams, Construction Methods for Harbour, Construction Methods for River Works Pipelines

UNIT - III MODERN CONSTRUCTION EQUIPEMENTS -I 9

Construction Equipment used for Earth Moving, Excavating, Drilling, Blasting, Tunneling and Hoisting

UNIT - IV MODERN CONSTRUCTION EQUIPEMENTS -II**9**

Construction Equipment used for Conveying, Hoisting, Dredging, Dewatering Systems, Paving and concreting Plant

UNIT - V PRINCIPLES AND PRACTICES OF TEMPORARY STRUCTURES**9**

Principles and Practices of Temporary structures, Shoring, and Strutting, Underpinning, Principles and Design of Formwork, Scaffolding, Operation and maintenance of construction equipments

FACULTY OF ARCHITECTURE

B.ARCH

BACHELOR OF ARCHITECTURE

[5 YEAR FULL TIME UNDER GRADUATE DEGREE PROGRAM]

RECOGNISED BY THE COUNCIL OF ARCHITECTURE, NEW DELHI

REGULATIONS, CURRICULUM AND SYLLABUS

2015 -2016 Batch (New Syllabus)

CHOICE BASED CREDIT SYSTEM

(CBCS)

FACULTY OF ARCHITECTURE

KARPAGAM ACADEMY OF HIGHER EDUCATION

(Deemed to be University Established Under Section 3 of UGC Act 1956)

Pollachi Main Road, Eachanari Post, Coimbatore – 641 021. INDIA

15ART101	COMMUNICATIVE ENGLISH									SEMESTER-I	
Marks	Internal	40	External				60	Total	100	Exam Hours	3
Instruction Hours /week		L	2	T	0	P/S	0	Credits			2

COURSE OBJECTIVE:

- To Gain knowledge in communicative English
- To gain knowledge of the basic English grammar
- To gain knowledge of the technical vocabulary and formation of Sentences
- To gain the skill reading & listening to English
- To gain the skill of speaking & reading
- To make the student confident in communication skills by means of discussions & interactions

COURSE OUTCOME:

1. An understanding about the communication in English Language for the purpose of Professional practice
2. Student will understand the Basics of the grammar
3. Student will understand the technical vocabulary & will be able to Fluently speak
4. Student will be able to read the technical books quickly by understanding
5. Student will gain the Skill of Reading, Listening & Speaking effectively in a group
6. Student will become confident of his capabilities and the communication of the English & Design Vocabulary

UNIT- I LANGUAGE FOCUS

Technical vocabulary – formal phrases and idioms – homophones, homonyms, often mis-spelt words – conjunctions – formation of new words – irregular verbs – plurals, gender sounds, words ending with phobia, logy etc. Grammar: Finite and infinite verbs – transformation of sentences – simple, complex and compound – phrases and clauses – question forms – question tags – expression of cause and effect, purpose and function.

UNIT—2 READING & LISTENING

Extensive and Intensive reading – active and passive reading – eye reading and visual perception – reading for a purpose – speed reading – reading with expression – story telling – critical and analytical reading – Listening to debates and discussions for making suitable responses.

UNIT- III WRITING & SPEAKING

Cohesion and coherence in sentences and paragraphs – business letters of different kinds – report writing – writing strategies – writing comments, procedures, inferences, instructions and recommendations – writing articles.

Applied English Communication – Welcome address, vote of thanks, compeering, debates, role plays, demonstration of advertisements – group discussions – mock interviews and dialogues – checklist of making oral presentations – vocal communication techniques – voice, quality, volume, pitch, rate of delivery.

UNIT- IV HARD AND SOFT SKILLS

Personal attributes – verbal and non verbal communication – interpersonal abilities/ skills – empathy, leadership, good manners and sociability – problem solving – reasoning and flexibility – intrapersonal abilities – self communication – self control and self esteem.

UNIT- V SOCIAL SKILLS

Facilitating interactions, understanding social roles – making a team – leading a team – dealing with different kinds of people and situations – emotional quotient and intelligent quotient – personality development – communication and body language, social etiquette –goal setting – determination, discipline and direction.

SUGGESTED READINGS :

1. Sasikumar.V. and P.V.Damija, “ Spoken English”, Tata Mc Graw Hill Publishing Corporation Ltd, New Delhi, 1997
2. Ashraf Rizvi M, Effective Technical Communication, Tata McGraw Hill, Delhi 2008
3. Stanton Nicky, “ Mastering Communication”, Mc Millan Master Series, London,1996
4. Robert M Sherfield “Developing softskills”, Dorling Kindersley (India)

15ART102	HISTORY OF ARCHITECTURE									SEMESTER-I
Marks	Internal	40	External			60	Total	100	Exam Hours	3
Instruction Hours /week	L	3	T	0	P/S	0	Credits			3

COURSE OBJECTIVE:

- To Gain the understanding of the Architecture from the prehistoric age
- To gain knowledge of the ancient civilization of the World
- To gain knowledge of the ancient civilization of the Mayan, Egyptian
- To gain Knowledge in Chinese & Greek civilization
- To gain knowledge of the Light of its Social fabric, Relevance design principles
- To gain knowledge of the construction materials and methods.

COURSE OUTCOME:

1. An understanding about the spatial and stylistic qualities associated with architecture.
2. An understanding of the diversity of Architecture of the Mayan & Egyptian
3. An understanding to appreciate particular culture, symbolic, spatial and material qualities
4. An understanding about architecture and cities as givers of meaning and continuity.
5. An Understanding about the Dravidian Style by case studies
6. An Understanding about the West Asian Architecture by case studies

UNIT- I INTRODUCTION AND WEST ASIAN ARCHITECTURE

Relevance of History - Old Stone Age - the Middle Stone age – The New Stone Age - Development of Shelter. – catalhuyuk, Indus Civilization (Harappa and mohenjadaro)

West Asia: Evolution of Sumerian and Persian cultures - Outline of architectural character –

Ziggurat at Urnammu - Palace of Sargon, Khorsabad- Palace at Persepolis.

UNIT- II

EGYPT

Egypt: Factors influencing Architecture - Outline of Architectural Character, Evolution of Pyramids – Great Pyramid of Cheops, Giza, ,Architecture characteristics of Egyptian temples - Great temple of Ammon, Karnak, Temple of ramses, Abu Simbel.

UNIT- III

MAYAN

Mayan: Outline of Architectural Character – City of Chichen Itza- El Castillo, Temple of Warriors, The Great Ballcourt – Tikal and Teotihuacan - Pyramid of the Sun, Pyramid of the Moon.

UNIT- IV

CHINA

China: Outline of Architectural Character - Great Wall of China, Fogong Temple, Temple of Heaven, Forbidden City (Palace Museum)

UNIT- V

GREEK

Outline of architectural character - Orders in architecture - Doric Ionic, Corinthian, Acropolis, Athens ; Parthenon, Erechthion, , Theatre Epidauros – Agora – Athens – Character theater – temples – Greek Architectural features.

SUGGESTED READINGS::

1. Sir Banister Fletcher, A History of Architecture, University of London, The Antholone Press, 1986.
2. S.Lloyd and H.W.Muller, History of World Architecture - Series, Faber and Faber Ltd., London, 1986.
3. Francis D.K. Ching, A Global History of Architecture, John Wiley & Sons Publishers, New Jersey,2007.
4. Provide Educational movies for each topic.

15ART103	MATHEMATICS IN ARCHITECTURE									SEMESTER-I	
Marks	Internal	40	External				60	Total	100	Exam Hours	3
Instruction Hours /week		L	3	T	0	P/S	0	Credits			3

COURSE OBJECTIVE:

- To develop analytical skills needed for problem solving a
- To develop creative thinking as well as an understanding of Geometry
- To develop the application of mathematical concepts in architecture.
- To develop the skill of Parametric architecture
- To develop the skill of statistical approach
- To develop the Skill of programming by Mathematical Approach

COURSE OUTCOME:

1. Student will be trained on the basis of the topics of Mathematics necessary for effective understanding of architecture subjects.
2. Students will understand the advanced level applications by using coordinate geometry
3. Students will understand the Statistical charts and variance for applications in architecture
4. Students will develop the skill and understating of Area & volume calculations for Applications in Architectural design
5. Students will understand the historical applications of mathematics and use of it in current context
6. Student would have an understanding of the basics of parametric design concept in architecture

UNIT- I

CO-ORDINATE GEOMETRY

Points, vectors and coordinate systems – Vector Algebra – Points vs Vectors – Rotation about an arbitrary axis – Parametric, Implicit and Explicit Equations – Lines – Parametric equations of lines – Implicit equation of lines – Distance from a point to a line – Conic sections – Parametric equation of conics.

UNIT- II

BASIC STATISTICS

Arithmetic Mean, Median, Mode, Standard Deviation and Variance – Graphical display of data in statistics through charts and graphs such as bar charts, histograms etc

UNIT- III

AREA AND VOLUME CALCULATIONS

Surface Area and Volume Calculations for simple 3D objects such as cube, cuboid, cylinder, cone, sphere, pyramid, prisms and their frustrums.

UNIT- IV

GEOMETRY IN ARCHITECTURE

Ratio and Systems of proportion – definition and derivation of golden ratio – Fibonacci series. Geometry of Muqarnas. – Making models for understanding the dimensions .

UNIT- V

PLATONIC SOLIDS

Geometry of Platonic Solids. (Concept and Application). Physical modeling of simple and complex geometric forms. - Making models for understanding the dimensions.

SUGGESTED READINGS::

1. T Veerarajan, Engineering Mathematics, Tata McGraw-Hill Publishing Company Ltd, NewDelhi, 2002.
2. B.S.Grewal, Engineering Mathematics, Khanna Publishers, Delhi 1998.
3. P.Kandaswamy, P.Thilakavathy and K.Gunavathy, Engineering Mathematics Vol I and II, S.Chandan Publishers, 1998.
4. Kappraff Jay, Connections: The Geometric bridge between art and science, McGraw Hill, USA,1991.
5. Geometry of Design: Studies in Proportion and Composition, Kimberly Elam.David Gibson
6. Computer aided geometric design by Thomas W.Sederberg 2014

15ARP111	ART, CRAFT AND MODEL MAKING									SEMESTER-I	
Marks	Internal	60	External				90	Total	150	Exam Hours	6
Instruction Hours /week		L	1	T	0	P/S	4	Credits			3

COURSE OBJECTIVE:

- To introduce the vocabulary of art and the principles.
- To inform students about the various art forms through the ages within the cultural contexts.
- To develop presentation skills, visual expression and representation
- To Improve the imaginative thinking and creativity
- To develop the knowledge of Visualization by simple Two- & Three-dimensional exercises
- To develop the art skill by hands on working with various mediums and materials.

COURSE OUTCOME:

1. Student will understand the vocabulary of art and form principles
2. Student will understand to appreciate the art forms and analyse and apply the concept of architecture
3. Student will gain mastery in sketching, visualizing and expression through manual drawing, sensitized to culture, craft and context.
4. Student will gain Skill Development in Handling Materials and in Making Products and models.
5. Student will gain knowledge about various mediums of presentation
6. Student will gain deep understanding about the art Appreciation and essence of the Aesthetic value

UNIT I to UNIT V

Exploration in mixed media & collage to convey specific theme and meaning. Analytical Studies will be undertaken in two and three dimensions using various media.

Use of hand tools and materials: working with wood, metals, plaster, plastic, foam boards etc; techniques, safety & practice. Suggestive exercises are:

Type 1: Making mount board models employing cubes cuboids, pyramid, cylinder and cones.

Type 2: Space frame models using match sticks straw, steel wires, bamboo splits.

Type 3: Texture applicability to murals and interior decoration.

Making craft objects and sculpture using different materials such as clay, metal, etc.

SUGGESTED READINGS::

1. Design Methods (Architecture) (Paperback), by John Chris Jones (Author).
2. Basics Design Ideas (Paperback) by Bert Bielefeld (Author), Sebastian El khoul (Author).
3. Design Drawing, Francis D. K. Ching.
4. The Nature of Design, Peg Faimon & John Weigand.
5. Foundations of Art and Design (Paperback) by Alan Pipes (Author)
6. John W. Mills- The Technique of Sculpture, B.T. Batsford Limited, New York - Reinhold Publishing Corporation, London, 1966.
7. C. Lawrence Bunchy - Acrylic for Sculpture and Design, 450, West 33rd Street, New York, N.Y. 10001, 1972.
8. The Elements of Graphic Design: Space, Unity, Page Architecture, and Type (Paperback) by Alexander W. White (Author)
9. Geometry of Design: Studies in Proportion and Composition, Kimberly Elam. David Gibson

15ARS121	ARCHITECTURAL DESIGN I - BASIC DESIGN									SEMESTER-I	
Marks	Internal	160	External				240	Total	400	Exam Hours	6
Instruction Hours /week		L	2	T	0	P/S	10	Credits			7

COURSE OBJECTIVE:

- To provide a comprehensive introduction to the discipline of Architectural Design Fundamentals
- To develop the skill in Visual Arts.
- To encourage creative thinking and design analysis by various Exercises
- To develop the dialogue & Communication visually & Verbally
- To develop the graphic thinking ability and provide a platform for graphical representation.
- To develop an understanding of the design process and develop aesthetic judgment.

COURSE OUTCOME:

1. Student will understand the qualities of different elements as well as their composite fusions.
2. Student will be able to engage and combine the elements of design in spontaneous as well as intentional ways in order to create desired qualities and effects.
3. Student will develop these required skills – observation / analysis / abstractions / interpretation / representations / expressions through models and drawings
4. Student will be able to develop the confidence to communicate effectively by explaining their own design product
5. Student will develop the art of Design Communication through his expression
6. Student will understand with whole design process from the concept to the final product.

UNIT- I

DESIGN DEFINITION:

Design Thinking: What is Design? Changing Role of the Designer; Route map of the Design Process; Components of Design Problems; Measurement, Criteria & Judgment in Design; Types and Styles of Thinking – Creative thinking, Guiding Principles.

UNIT- II

BASIC ELEMENTS & PRINCIPLES OF DESIGN:

Introduction to Elements of design. Properties, qualities, and characteristics of principles of design Focus on Composition and Character of the elements of design addressed visually and conceptually (Exploration in any 2- Dimensional media). Exploration in mixed media & collage to convey a specific theme and meaning. Analytical Studies to be undertaken in two and three dimensions using various materials and tools.

UNIT- III

BASIC ELEMENTS & PRINCIPLES OF DESIGN:

The principles of design relationships/ Composition.- The analysis of design elements - Exercises involving the same. - Focus on Composition and Character of Basic elements of design addressed visually, and conceptually (Exploration in any 2- Dimensional media). - Exploration in mixed media & collage to convey specific theme and meaning. - Analytical Studies will be undertaken in two and three dimensions using various media.

UNIT- IV

DESIGN MODELLING:

Use of hand tools and materials: working with wood, metals, plaster, plastic, foam boards etc; techniques, safety & practice. Suggestive exercises are:

Type 1: Making mount board models employing cubes cuboids, pyramid, cylinder and cones.

Type 2: Space frame models using match sticks straw, steel wires, bamboo splits.

Type 3: Texture applicability to murals and interior decoration.

UNIT- V

INTRODUCTION TO ARCHITECTURAL DESIGN:

Simple Exercise exploring multi dimensional elements by making models – Art work – composition – Graphical representation – fundamentals of design drawing.

SUGGESTED READINGS:

1. Design Methods (Architecture) (Paperback), by John Chris Jones (Author).
2. Basics Design Ideas (Paperback) by Bert Bielefeld (Author), Sebastian El khouli (Author).
3. Foundations of Art and Design (Paperback) by Alan Pipes (Author)
4. John W.Mills- The Technique of Sculpture, B.T.Batsford Limited, New York - Reinhold Publishing Corporation, London, 1966.
5. The Elements of Graphic Design: Space, Unity, Page Architecture, and Type (Paperback) by Alexander W. White
6. Geometry of Design: Studies in Proportion and Composition, Kimberly Elam.David Gibson
7. Ching, F.D.K., “Design Drawing”, Van Nostrand Reinhold, 1998
8. Neufert, P., “Architects” Data”, 3rd Ed., Blackwell Science, 2000
9. Agkathidis, A Hudert M. and Schilig, G. “ Form Defining Strategies : Experimenting Architectural Design”. Wasmuth, 2007.

15ARS122	BUILDING MATERIALS AND CONSTRUCTION-I									SEMESTER-I	
Marks	Internal	80	External				120	Total	200	Exam Hours	6
Instruction Hours /week		L	2	T	0	P/S	5	Credits			4

COURSE OBJECTIVE:

- To provide an understanding of the construction materials and methods through construction detailing.
- To develop basic knowledge of the various components of a built structure.
- Ability to understand by field study on all Topics
- Ability to understand the Traditional materials
- Ability to understand the Rural materials
- Ability to gain Knowledge about the techniques of Rural Construction

COURSE OUTCOME:

1. Student will gain Knowledge of properties and construction methods of brick, clay products and timber products.
2. Student will be able to detail structural and nonstructural components of simple buildings using the above materials.
3. Student will understand to integrate knowledge of properties and construction methods of basic building materials in the design of simple projects.
4. Student will understand about the Bamboo construction techniques.
5. Student will be able to gain advanced knowledge about Timber Roof Constructions.
6. Student will understand the building construction techniques of the traditional / rural houses.

UNIT- I

SOIL AND STONE

Soils: Formation – grain size distribution – soil classification systems.

Stone: Classification of rocks - Building stones - their uses –physical properties - brief study of tests for stone – deterioration - preservation of stone - various stone finishes - cutting and polishing of granites.

UNIT- II

TRADITIONAL & RURAL MATERIALS

Mud as a building material - Soil stabilization, soil blocks - Cast- in-situ walls - flooring - roofing - plastering. Bamboo, Casuarina, Coconut, palm, Hay, Coir, Jute – properties and uses. Types of foundations - walls - simple roof trusses floors for rural structures Lime – types - properties and uses – Manufacturing process – Mortar: functions – requirements - mixes.

UNIT- III

BRICKS AND CLAY PRODUCTS – MATERIALS

Bricks - brief study on manufacture of bricks – properties and uses - suitability - types of bricks - uses in buildings, structural tiles, ceramics, terracotta – properties and uses.

UNIT- IV

BUILDING COMPONENTS

Functional requirements of a building and its components - Drawings of foundations, plinth, superstructure, roofing. Openings: Doors, Windows and Ventilators.

UNIT- V

BUILDING MATERIALS

Introduction to basic building materials- Observation of work at site – mixture ratio – material standards – material sample collections form market – Market study – local materials – imported materials – assignments – Introduction to bill of quantities – rates – small material volume and cost.

SUGGESTED READINGS:

1. J.S.Spencke and D.J.Cook, Building Materials in Developing Countries, John Wiley and Sons, 1983.
2. Kumar, S.K., “Building Construction”, 19th Ed., Standard Publishers Distributors, 2001
3. Allen, E. and Iano, J., “Fundamentals of Building Construction: Materials and Methods”, Wiley, 2004
4. Mehta, M., Scarborough, W. and Armpriest, Diane, “Building Construction: Principles, Materials and Systems”, Pearson Prentice Hall, 2008

15ARS123	ARCHITECTURAL GRAPHICS I									SEMESTER-I	
Marks	Internal	60	External				90	Total	150	Exam Hours	6
Instruction Hours /week		L	1	T	0	P/S	5	Credits			3

COURSE OBJECTIVE:

- To make them understand the nature of geometrical forms in terms of drawing plane and solid projections.
- To make them understand the representation of 2 dimensional and 3 Dimensional forms
- To make them understand the plans, sections, isometric and axonometric drawings of forms
- To develop the skill of doing perspectives
- To develop the skill of manual presentation with various medium
- To develop the Skill of technical Architectural Representation

COURSE OUTCOME:

1. Student will be able to understand the 2 dimensional & the 3 dimensional perspective of the objects
2. Student will be able to construct the 3d views and perspective drawings of the buildings.
3. Student will be able to draw the perspective drawings with sciography
4. Student will be able to do Architectural Rendering
5. Student will be able to do architectural detailed drawing for a smaller scale project.
6. Student will be able to do read and Do a technical Architectural Drawing

UNIT - I

GEOMETRICAL DRAWING – PLANE GEOMETRY -REPRESENTATION

Introduction to fundamentals of drawing/ drafting – Construction of Lines, Planes, form – grade of pencils and usage-Understanding the scale with units and dimensions – Construction of plane, object – Hollow and solid geometry – Development of surfaces and multifaceted forms – Understanding the graphical representations of arrows, lettering techniques, composition etc – Lineweights, Line type etc

UNIT - II

GEOMETRICAL DRAWING – ORTHOGRAPHIC PROJECTION

Isometric, Axonometric, Oblique and multiview orthographic projections to scale of various forms- Simple and complex objects- straight, curvilinear etc – Sections, Elevations of solid geometry – hollow objects etc

UNIT - III

PERSPECTIVE AND SCIOGRAPHY – SIMPLE & COMPLEX OBJECTS – SCIENTIFIC METHOD

Introduction to perspective projections – One point perspective, Two point perspective, Three point perspective, Shade and shadow of the object- Light source- Cone of Vision – Sciography of plan, isometric, axonometric views.

UNIT - IV

PERSPECTIVE AND SCIOGRAPHY – SHORT CUT METHOD

Introduction to short cut perspective method-small buildings – exterior views-adding of figures, trees, elements etc and applying rendering techniques

UNIT - V

MEASURED DRAWING AND GRAPHICAL REPRESENTATION

Introduction to fundamentals of measured drawing- format for presentation- measured drawing of simple objects like furniture, ornamentation, door, window etc -Introduction to representations of materials- building materials – Stone, brick, glass, grass etc- usage of various mediums –watercolor, pastels, color pencils, pens etc-Sketching- composition of documents, title blocks, posters, logos etc

SUGGESTED READINGS:

1. Robert S. Oliver,, The Complete Sketch, Van Nostrand Reinhold, New York, 1989.
2. Tokyo Musashino Academy of Art - Introduction to Pencil Drawing, Graphic - Shaw Publishing Co. Ltd., Japan, 1991.
3. Freehand Drawing for Architects and Interior Designers (Paperback) by Magali Delgado Yanes (Author), Ernest Redondo Dominguez (Author)
4. Alwyn Cranshaw, Learn to paint with Water colours, Acrylic colours, Boats and Harbours, Sketch, Still life, landscapes, William Collins Sons and Co. Ltd., London, 1981.
5. Francis D. K. Ching, Architectural Graphics, Van Nostrand Rein Hold Company, New York, 1964.
6. Bhatt, N.D. and Panchal, V.M., “Engineering Drawing – Plane and Solid Geometry”, 48th Ed., Charotar Publishing House, 1996
7. Griffin, A.W. and Brunicardi, V.A., “Introduction to Architectural Presentation Graphics”, Prentice Hall, 1998
8. Ciriello, M., “Architectural Design Graphics”, McGraw-Hill, 2002
9. Carpo, M., “Perspective, Projections and Design: Technologies of Architectural Representation”, Routledge, 2008

SEMESTER – 2

15ART201	THEORY OF ARCHITECTURE I									SEMESTER-II	
Marks	Internal	40	External				60	Total	100	Exam Hours	3
Instruction Hours /week		L	3	T	0	P/S	0	Credits			3

COURSE OBJECTIVE

- To introduce architecture as a discipline and to sensitize the students to the various functional aspects of architecture
- To make them understand the meaning of Architecture and its visual aesthetic sense
- To introduce the students to the ordering elements, principles of architecture
- To gain Knowledge about the organization principles of Form and Space
- To gain Knowledge about the theoretical aspects of Design
- To gain knowledge and understand the vocabulary of the architectural language through the analysis of selected buildings.

COURSE OUTCOME:

1. Student will understand on the definition of architecture; elements of architectures of form.
2. Student will be exposed to the principles of architecture and applications of the same in buildings and spaces.
3. Student will understand the meaning of character and style of buildings with examples.
4. Student will understand on ideologies and philosophies of architectures of contemporary
5. Student will understand about the theoretical aspects of Architectural Design
6. Student will gain Knowledge in the Vocabulary of the Architectural Terms and language

UNIT- I

Introduction to Design and Architecture

Definitions of Design, Architecture-context for architecture as satisfying human needs-functional, aesthetic and psychological – architecture as a discipline-introducing the various functional aspects of architecture: site, structure, skin, services, use, circulation etc. Introduction to the factors that lend meaning to architecture-architectural expression and symbolism-character and style-movements, philosophies, ideologies and theories-meaning and interpretation of architecture

UNIT- 2

Ordering Elements & Principals of Architecture

Point, line, plane, form, shape, motif, pattern, light, colour, texture – understanding the elements with respect to architecture-Detailed study of the visual and emotional effects of geometric forms and their derivatives: sphere, cube, pyramid, cylinder and cone – Transformation of forms, Articulation of forms – mass-space/solid-void effects, articulation of edges, corners, surfaces -Proportion, scale, balance, rhythm, axis, symmetry, hierarchy, datum, unity, harmony, dominance with respect to architecture

UNIT- 3

Organisation of Form and Space

Spatial relationships: space within space, interlocking spaces, adjacent spaces, space linked by a common space -spatial organization: centralized, linear, radial, clustered, grid -form-space relationships-

UNIT- 4

Circulation and Organisation

Circulation as organizing element: building approach, building entrance, configuration of the path, path space relationship, form of circulation space

UNIT -5

Experiencing Architecture

Understanding architecture in totality in terms of the various aspects through first hand

Experience, analysis and interpretation using the case of a building, architectural style, work(s)

Of the contemporary architects

SUGGESTED READINGS:

1. Francis D.K.Ching, Architecture-Form, Space and Order, Van Nostrand Reinhold Company, New York, 1979.
2. Lorraine Farrelly. 2007 The Fundamental of Architecture. AVA Publishing SA 2007. Switzerland.
3. Ernest Burden - Elements of Architectural Design - A visual resource, Van Nostrand Reinhold, 1994.
4. V.S.Pramar, Design Fundamentals in Architecture, Somaiya Publications Pvt. Ltd., New Nelhi, 1973
5. Edward D. Mills – Planning:The Architects Hand Book -Bitterworth, London, 1985
6. G.Muthu Shoba Mohan 2008 Principles of Architecture Oxford & IBH publishing co. pvt. ltd. New Delhi.
7. Francis D.K. Ching 1995 A Visual Dictionary of Architecture. John Wiley & Sons, INC. New Delhi.
8. Paul Alan Johnson - The Theory of Architecture - Concepts and themes, Van Nostrand Co., New York, 1994.
9. Pierre Von Meiss, Elements of Architecture, Spon Press, New York, 2007.

15ART202	HISTORY OF ARCHITECTURE II									SEMESTER-II	
Marks	Internal	40	External				60	Total	100	Exam Hours	3
Instruction Hours /week		L	3	T	0	P/S	0	Credits			3

COURSE OBJECTIVE:

- To Gain the understanding of the Architecture in the chronology
- To understand the social Fabric, Relevance, Design Principles& Construction materials and Methods.
- To understand about the Roman Architecture
- To Gain knowledge in Romanesque Architecture
- To gain knowledge about the Baroque architecture
- To understand about evolution of European Architecture

COURSE OUTCOME:

1. Student will understand the various Architecture features and its outcome due to various social, political and economic upheavals, and its response to the cultural and context.
2. Student will understand about the spatial and stylistic qualities associated with Roman architecture.
3. Student will understand about the spatial and stylistic qualities associated with Romanesque architecture.
4. Student will understand about the spatial and stylistic qualities associated with Gothic architecture
5. Student will understand the Styles and Details of Gothic Architecture
6. Student will expertise in Spatial understanding of historical places by Sketching& reading.

UNIT- I

ROMAN

Outline of architectural character: roman orders (Doric, ionic, Corinthian, Tuscan and composite)

Building Systems - Use of arches, vaults and columns

Building Typology: Religious Buildings – Temple (Pantheon); Civic Buildings – Baths (Thermae of Caraculla), Theatres (Colloseum), Circus (Circus Maximus), Palace (Forum Romanum); Engineering works – Aqueducts, bridges

UNIT- II

ROMANESQUE

Factors influencing architecture - Building Systems - Use of arches, vaults, columns, piers, buttresses and roofs. Outline of architectural character of Italy, France and England - Examples: Pisa complex, Italy Abbay aux Hommes, Caen, Tower of London.

UNIT- III

GOTHIC

Outline of Architectural character - evolution of vaulting and development of structural systems - Examples: Notre Dame, Paris - Westminster Abbey, Hampton Court Palace, London, Doges Palace, Venice, Milan Cathedral.

UNIT- IV

ITALIAN RENAISSANCE

Renaissance – Introduction. Italian Renaissance - three phases – early Renaissance (Alberti - S. Andrea, Brunelleschi - Cathedral of Florence, Pazzi Chapel, Basilica San Lorenzo) , High Renaissance (Bramante - Santa Maria delle Grazie) , Late Renaissance (Michelangelo, Palladio -St. Peter's Basilica, Villa Capra La Rotonda)

UNIT- V

NORTHERN RENAISSANCE AND BAROQUE

Northern Renaissance – Introduction; Characteristics of English Renaissance – Works of Sir Christopher Wren, Inigo Jones.

Baroque – Features and Elements of Baroque - St Paul's Cathedral, Palace of Versailles., Winter Palace in Saint Petersburg.

SUGGESTED READINGS:

1. Sir Bannister Fletcher, A History of Architecture, University of London, The Antholone Press, 1986.
2. Robert Chitham, The Classical Orders of Architecture, Elsevier, London, 2005
3. Francis D.K. Ching, A Global History of Architecture, John Willey & Sons Publishers, New Jersey, 2007.
4. S.Lloyd/H.W.Muller, History of World Architecture - Series, Faber Ltd., London, 1986.
5. Spiro Kostof, A History of Architecture - Settings and Rituals, Oxford University Press, London, 1985.
6. Pierre Pichard, TanjavurBrhadisvara, Ecole Francaise D' Extreme Orient, New Delhi, 1995

15ART203	MECHANICS OF STRUCTURES I									SEMESTER-II	
Marks	Internal	40	External				60	Total	100	Exam Hours	3
Instruction Hours /week		L	3	T	0	P/S	0	Credits			3

UNIT- I

INTRODUCTION TO STRUCTURES AND STRUCTURAL SYSTEMS

Overview of Structures - Concept of Structure in Architecture -Types of Structural Systems - Components of a Structure - Materials and their Structural Properties

UNIT- II

FORCES AND STRUCTURAL SYSTEMS

Types of force systems - Resultant of parallel forces - principle of moments - principle of equilibrium - simple problems

UNIT- III

ANALYSIS OF PLANE TRUSSES

Introduction to Determinate and Indeterminate plane trusses - Analysis of simply supported and cantilevered trusses by method of joints and method of sections

UNIT- IV

PROPERTIES OF SECTION

Centroid- Moment of Inertia - Section modules - Radius of gyration - Theorem of perpendicular axis - Theorem of parallel axis

UNIT- V

ELASTIC PROPERTIES OF SOLIDS

Stress strain diagram for mild steel, High tensile steel and concrete - Concept of axial and volumetric stresses and strains - Elastic constants - Relation between elastic constants - Application to problems.

SUGGESTED READINGS:

1. S.S.Bhavikatti, "Strength of Materials", VIKAS Publishing House Pvt. Ltd., Chennai, 1997.
2. S.Ramamrotham, Strength of materials - Dhanpatrai& Sons, Delhi, 1990.
3. W.A.Nash, Strength of Materials - Schaums Series - Mcgraw Hill Book Company, 1989.
4. Building Structures--From Concepts to Design. Second Edition, by Malcolm Millais. Spon Press, London 2005
5. Buildings from Caves to Skyscrapers, Mario G Salvadori, Holiday House, 1985

15ARP211	COMPUTER APPLICATIONS I									SEMESTER-II	
Marks	Internal	60	External				90	Total	150	Exam Hours	6
Instruction Hours /week		L	0	T	0	P/S	4	Credits			2

COURSE OBJECTIVE:

- To introduce computer operation principles and explore image editing through a graphical composition.
- To impart training in computer aided 2D drafting and 3D modelling through projects.
- To enable the use of computer applications to develop a design from the initial stages to the final outcome
- To enable the rendering of a building so as to create a photo realistic image.
- To develop the skill of digital rendering
- To develop the skill of Digital Applications and programming in Architecture

COURSE OUTCOME:

1. Student will be able to express using digital tools in the realm of visual composition, drafting, 3D visualization and rendering
2. Student will be able to draw measured drawings using the software
3. Student will be able to detail the building components using the software
4. Student will be able to produce accurate drawings faster using the software
5. Student will be able to give a rendered image of the Architectural Design by software
6. Student will be able to conceptualize, visualize and Produce digital drawings at ease

UNIT- I

SIMPLE APPLICATIONS

Creating technical documents and reports, Cost estimates with simple calculations, Presentations with graphics. Suggested Software – MS Word, Excel, Open Office,

UNIT- II

SKETCH UP TOOL AND APPLICATIONS

Introduction to Sketch up – Simple Buildings – Material Application– Vray rendering

UNIT- III

AUTOCAD AND ITS APPLICATION

Introduction to AutoCAD 2D, 3D, Render, Layer Applications – Plot Setup – View port – Scale Setup – Metric and imperial systems.

UNIT- IV

ADOBE PHOTOSHOP AND ITS APPLICATIONS

Introduction to Adobe Photoshop – layers – editing – filter – image – color – balance

UNIT- V

INTERNET APPLICATION

World Wide Web, Electronic Mail, Blogging, Ethical use of the Internet

SUGGESTED READINGS:

1. MS Office 2010 Product Guide by Microsoft
2. First Look Microsoft Office 2010, Katherine Murray, Microsoft
3. Sketchup 7 User Self help Tutorials and Video Tutorials
4. Cherly R. Shrock Beginning AUTOCAD. New Age International Publishers. New Delhi. 2006.
5. AutoCAD architectural users guide - Autodesk Inc., 1998.
6. AutoCAD 2011 User Manual, Autodesk 2011.

15ARS221	ARCHITECTURAL DESIGN II									SEMESTER-II	
Marks	Internal	160	External				240	Total	400	Exam Hours	6
Instruction Hours /week		L	2	T	0	P/S	10	Credits			7

COURSE OBJECTIVE:

- Understanding a Simple Design Programme and the Components of the Design Problem.
- Investigate and Acquire the Knowledge to address the various aspects of the Design Problem and Process
- Develop Ability to Communicate Design Ideas throughout the Design Stages with multiple media.
- Ability to conceptualize a design idea by Sketching and other techniques
- Ability to do a frame work of Design methodology
- Ability to understand the process of Design and deliver the Architectural Design with Technical Drawings

COURSE OUTCOME:

1. Student shall understand the basic functional aspect of designing simple building type and its relevant spatial organization.
2. Student will be learning to reciprocate and sensitize the design/concept to the environment and the design skill of the project
3. Student will be able to transform the theoretical ideas to the tangible output of design.
4. Student will be able to understand the space organization, space- volume design approach
5. Student will be able to research, Analyse and Deliver a Architectural Design .
6. Student will be able to Communicate effectively through the design ideas

UNIT- I

Design Process: Basics: Drawing skills, Conventions, Abstraction and Expression; Application: Analysis, Exploration, Discovery and Verification; Communication: Process, Individual Design, Team Design, and Public Design. Evolution from Program and Conditions to Concept & Design - Graphical Representation of the Process.

UNIT- II

The study of space standards and anthropometrics related to each problem. Anthropometry as related to physically handicapped and elderly persons is required to be studied. Different Techniques shall be used for presentation.

UNIT- III

Design Strategies and Methods. Designing in Context; Design & Function; Constituents of Design; Working with materials and Structures; Arriving at Ideas. Methods: Nature & Geometry as generators; Music and Mathematics as models; Accident and the unconscious as sources; Rationalist Approaches; Precedent; Responses to Site; Generative Processes. Traditional Methods, New Methods, The Three Stage Process – Divergence, Transformation, Convergence; Choosing Design Strategies.

UNIT- IV

Horizontal movement - single bay - passive energy type spaces. Design Exercises shall be simple functional units with universal access compliance such as : Toilet for a physically handicapped person. Hostel room, bed room, kitchen, Shop, Workshop, pavilions, snack bar;

UNIT- V

The problems involve simple space organization. Design Exercises shall be multiple spaces and understanding their inter-relationships, such as : Residence, petrol bunk, fire station, police station, Cottage for an elderly couple.

The basics of building anatomy from parapet to foundation and an overview of the different building materials shall be explained at the beginning of the design studio.

SUGGESTED READINGS:

1. Paul Laseau, Graphic Thinking for Architects.
2. E and O.E. Planning, Liffé Books Ltd., London, 1973.
3. De. Chiara and Callender, Time-saver Standards for Building Types, McGraw Hill Co., New York, 1973.
4. Sid Del Mar Leach, Techniques of Interior Design Rendering and presentation, McGraw Hill Co., New York, 1973.
5. Mike K. Lin, Drawing and Designing with Confidence: A Step by Step Guide.
1. Rendow Yee, Architectural Drawing: A visual Compendium of types and Methods.
2. Francis D Ching, Design Drawing.
3. Francis D Ching, Drawing a Creative Process.
4. Mike. W. Lin, Architectural Rendering Techniques: A Colour Reference.
5. Richard M. Mc Garry, Marker Magic: The Rendering Problem Solver for Designers.
6. Michael. E. Doyle, Color Drawing: Design drawing Skills & Techniques for Architects, Landscape Architects & Interior Designers.

15ARS222	BUILDING MATERIALS AND CONSTRUCTIONS II									SEMESTER-II	
Marks	Internal	80	External				120	Total	200	Exam Hours	6
Instruction Hours /week		L	2	T	0	P/S	5	Credits			4

COURSE OBJECTIVE:

- To give an introduction to cement and concrete as materials for building construction.
- To help understand the principles, types, methods of construction and applications of concrete
- To understand about structural and non-structural building components
- To understand and enable design and detail using concrete in buildings
- To develop the skill of detailed construction drawings
- To understand about concrete staircase.

COURSE OUTCOME:

1. Student will learn about the concrete as a versatile material in different contexts.
2. Student will understand the concepts of concrete as a building construction material.
3. Student will be able to design and detail specific components in concrete in Architectural Design
4. Student will understand about concrete Footing, column by doing detailed drawings
5. Student will understand about concrete Slab, beams by doing detailed drawings
6. Student will understand about concrete Plinth, lintel, Sill by doing detailed drawings
7. Student will understand about concrete Staircase by doing detailed drawings

OBJECTIVES:

To provide an understanding of the construction materials and methods through construction detailing.

To develop basic knowledge of the various components of a built structure.

UNIT- I

BRICKS PRODUCTS - CONSTRUCTION

Structural members in brickwork – Brick piers, footings, load bearing walls.

Reinforced brick masonry - Arches - Lintels – Corbels - copings.

UNIT- II

CLAY PRODUCTS CONSTRUCTION

Hollow clay blocks - for walls - partitions - roofs.

Roofing - Flat Roofs - Terrace roofs - Sloping roofs.

UNIT- III

TIMBER CONSTRUCTION – DOOR, WINDOWS AND PANELLING

Fundamentals of timber- manufacture – uses – current developments – physical properties - Drawings of timber joinery for Windows, doors, ventilators. Timber partitions, paneling, false ceiling, fixed partitions, sliding, folding, top hung bottom rested false ceiling - wall paneling

UNIT- IV

TIMBER CONSTRUCTION – STAIRCASE

Timber staircases - Designed staircase

UNIT- V

TIMBER CONSTRUCTION – TRUSS

Timber trusses - Lean to - close couple - Kingpost - Queen post - Trusses.

Exercise involving simple bill of quantities

SUGGESTED READINGS:

1. Don A.Watson, Construction Materials and Processes, McGraw Hill Co., 1972.
2. W.B.Mckay, 'Building Construction', Vol.1, 2, 3 Longmans, U.K. 1981.
3. Alanwerth, Materials, The Mitchell Pub. Co. Ltd., London, 1986.
4. R.Chudleu, 'Building Construction Handbook', British Library Cataloguing in Publication Data, London, 1990.
5. S.C.Rangwala, Engineering Materials, CharotarPub.House, Anand, 1997.

15ARS223	ARCHITECTURAL GRAPHICS – II									SEMESTER-II	
Marks	Internal	60	External				90	Total	150	Exam Hours	6
Instruction Hours /week		L	1	T	0	P/S	5	Credits			3

COURSE OBJECTIVE:

- To involve students in a number of exercises that will help them develop the skill of representation in advanced drawing techniques
- To make them understand the measured drawing method
- To make them understand to document buildings of architectural interest
- To understand and Develop the skill of measured drawing of Sections & Elevations
- To understand and develop the set of Architectural working drawings
- To develop them in making the working drawings for the Site Execution

COURSE OUTCOME:

1. Student will be able to construct and draw detailed architectural working drawings
2. Student will understand the 3d views and perspective drawings of the buildings.
3. Student will understand the detailed specifications of a small construction drawing
4. Student will learn to Collect the building data and document accordingly
5. Student will develop the skill of making a Architectural Working Drawing
6. Student will develop the skill of reading a Interior working Drawing

UNIT- I

Architectural drawing & representation

Introduction to basic building components representation - Typical section of a building – simple specifications and - line weight, line type etc. Types of Drawings.

UNIT- II

Orthographic projection – Exterior and Interior spaces

Isometric, Axonometric, Oblique and orthographic projections to scale of Exterior and interior spaces-multi level spaces in buildings –interior furniture etc – shade and shadow

UNIT- III

Building perspective-Manual & Digital rendering

Perspective of large spaces and buildings – One point perspective, Two point perspective, Three point perspective – scientific method, short cut method -pencil ,pen rendering ,stippling-Shade and shadow- Sciography of plan ,elevation, isometric, axonometric views-rendering of the building silhouette by manual and digital techniques.

UNIT- 4

Measured Drawing – Historic building document Study

Introduction to fundamentals of measured drawing, line value, lettering, drawing representation, methods and technique of measuring objects by measuring tape –photographs – aesthetic components and details

UNIT- V

Measured Drawing – Detailed Documentation of a Public building

Documentation of a complete building of a special interest in terms of history, building Construction- architectural excellence or technology – examples like Post office, Police Station, Public School

SUGGESTED READINGS:

1. Francis Ching, Architectural Graphics, Van Nostrand and Reinhold Company, New York, 1975.
2. Edward J. Muller, James G. Fauselt, Philip A. Graw Architecture Drawing and Light Construction Prentice hall Publishers Columbus. 1999.
3. Ernest Norling, Perspective drawing, Walter Foster Art Books, California, 1986.
4. Bernard Alkins- 147, Architectural Rendering, Walter Foster Art Books, 1986.
5. Learn to paint with Water Colours, Acrylic colours, Boats and Harbours, Sketch, Still life, landscapes. Author: Alwyn Cranshaw, Publisher: William Collins Sons & Co. Ltd., London, 1981.
6. Architectural Rendering, A Technique of Contemporary Presentation, Author: Albert O. Halse, Publisher, Mc Graw Hill Book Company, New York, 1972.
7. Elisabetta Drudi, Figure Drawing for Fashion Design, The Pepin Press Singapore. 2001.
8. K. Venugopal, Engineering Drawing and Graphics + AutoCAD, New Age International Publishers, New Delhi, 2007.
9. Kendra Schank Smith, Architects' Drawings, Architectural Press- An imprint Elsevier Burlington 2006.

SEMESTER 3

15ART301	BUILDING SERVICES I								SEMESTER-III		
Marks	Internal	40	External				60	Total	100	Exam Hours	3
Instruction Hours /week		L	3	T	0	P/S	0	Credits			3

COURSE OBJECTIVE:

- To get a Brief understanding about the list of Services involved in Building
- To understand the sequence and importance of the services in a Building during the planning
- To develop basic technical knowledge in water supply & Applications in Architecture
- To develop the technical knowledge in Electric Supply & Applications in Architecture
- To develop and understand about the Illumination systems
- To develop sanitation, electrical, air conditioning, mechanical and firefighting systems.

COURSE OUTCOME:

1. Student will understand about Building services and its integration in a building
2. Student will learn about water supply, sewage, drainage and waste systems in buildings.
3. Student will learn about the various electrical systems and applications in building
4. Student will understand about Heating, ventilation and air-conditioning systems in a building.
5. Student will learn about the Fire safety & Services in a building
6. Student will understand the importance of application of services in a building.

UNIT- I

WATER CHARACTERISTICS AND QUALITY

Surface and ground water sources - quality/quantity - nature of impurities – need for treatment

UNIT- II

FUNDAMENTALS OF SEWAGE TREATMENT AND SEWERAGE SYSTEMS

Environmental sanitation -Sanitation in buildings. Arrangement of sewerage systems in Housing, large factories, towns and cities - sewage pumping station - Rainwater disposal and storm water drainage from buildings.

UNIT- III

ELECTRICAL SYSTEMS AND ILLUMINATION

- a) Basics of electricity - Single/Three phase supply - Protective devices in electrical installations - Earthing for safety - Types of earthing - ISI specifications.
- b) Principles of illumination: Modern theory of light - Synthesis of light - Additive and subtractive synthesis of colour - Luminous flux - Candela - Solid angle illumination - Utilization factor - depreciation factor - MSCP - MHCP - Laws of illumination.

UNIT- IV

MECHANICAL SYSTEMS

- a) Pumps – uses & types and their selection, installation and maintenance, Hot Water Boilers.
- b) Basic refrigeration principles: Thermodynamics - Heat - Temperature, measurement transfer - Change of state - Sensible heat - Latent heat of fusion, evaporation, sublimation - Saturation temperature -Super heated vapour- subcooled liquid - pressure temperature relationship for liquids – Refrigerants

UNIT- V

FUNDAMENTALS OF ACOUSTICS

Sound waves, frequency, intensity, wave length, measure of sound, decibel scale, speech and music frequencies.

Types of noises, transmission of noise, transmission loss, noise control and sound insulation and remedial measures, determination of density of a given building material, absorption co-efficients and measurements, choice of absorption material, resonance, reverberation, echo, exercises involving reverberation time and absorption co-efficient.

SUGGESTED READINGS::

1. William H. Severns and Julian R. Fellows, Airconditioning and Refrigeration, John Wiley and Sons, London, 1988.
2. Robert D. Finch, Introduction to Acoustics, Prentice Hall of India Private Limited, New Dehli, 2008.
3. MARK J. HAMMER MARK J. HAMMER, JR, Water and Wastewater Technology, PHI Learning Private Limited, New Delhi. 2009.
4. M.N.Rao, A.K.Datta, Waste Water Treatment, Oxford & IBH PUBLISHING CO. PVT. LTD, New Delhi, 2007.
5. Section 11. Sanitary Appliances and Water Fittings. IS Code- SP: 21-1983.
6. Hand book on Water Supply and Drainage with Special emphasis on plumbing IS Code – SP : 35 – 1987.
7. Part of Section 1: Water Supply. IS CODE – SP : 7 – 1992.
8. IS Code of Basis Requirements for Water supply drainage and sanitation. IS Code – IS 1172: 1983.
9. Code of Practice for Water Supply in Buildings. IS Code – IS 2065: 1983.

15ART302	HISTORY OF ARCHITECTURE II									SEMESTER-III	
Marks	Internal	40	External				60	Total	100	Exam Hours	3
Instruction Hours /week		L	3	T	0	P/S	0	Credits			3

COURSE OBJECTIVE:

- To Gain the understanding of the Architecture in the chronology
- To understand the social Fabric, Relevance, Design Principles& Construction materials and Methods.
- To understand about the Buddhist Architecture
- To Gain knowledge in Dravidian Architecture
- To gain Knowledge about the Mughal Style
- To understand about evolution of Islamic architecture

COURSE OUTCOME:

1. Student will understand the various Architecture features and its outcome due to various social, political and economic upheavals, and its response to the cultural and context.
2. Student will understand about the spatial and stylistic qualities associated with Buddhist architecture.
3. Student will understand about the spatial and stylistic qualities associated with Dravidian architecture.
4. Student will understand about the spatial and stylistic qualities associated with Islamic & provincial architecture
5. Student will understand the Styles and Details of Mughal Architecture
6. Student will expertise in Spatial understanding of historical places by Sketching& reading

UNIT- I

HINDU & INDO-ARYAN STYLES

Evolution of Hindu temple - Early shrines of the gupta and chalukyan periods -Tigawa temple, Ladh Khan and Durga temple, Aihol, Papanatha and Virupaksha temples, Pattadakal.

Indo-Aryan: Salient features of an Indo Aryan temple -Lingaraja Temple, Bhuvaneswar- Sun temple, Konarak. Kunds and Vavs – - Adalaj - Surya kund, Modhera.

UNIT- II

DRAVIDIAN STYLE

Dravidian culture - Rock cut productions of Pallavas –Shore temple, Mahabalipuram- Dravidian Order – Brihadeeswara Temple, Tanjore - Evolution and form of gopuram - Complexity in temple plan due to complexity in Ritual -Minakshi temple, Madurai.

UNIT- III

BUDDHIST STYLE

Hinayana and Mahayana Buddhism - Interaction of Hellenic & Indian Ideas in Northern India - Architectural Production during Ashoka's rule - Ashokan Pillar, Saranath, Rock cut caves at Barabar, Sanchi Stupa.

Salient features of a Chaitya hall and Vihara, Rock cut architecture in the Western and Eastern ghats- Karli, Viharas at Nasik, Rani gumpha, Udaigiri. Takti Bahai, Gandhara.

UNIT- IV

INTRODUCTION TO ISLAMIC ARCHITECTURE

History of Islam- Influences on Islamic Architecture - character of Islamic architecture with examples. sources of Islamic Architecture in India and influences on them - Brief history development of architectural style during the rule of the slave, Khilji, Tuqlaq Sayyid and Lodhi Dynasties - important examples for each period.

UNIT- V

PROVINCIAL & MUGHAL STYLES

Development of the provincial styles in different regions - Punjab, Jaunpur, Bengal, Gujarat, Malwa, the Deccan (Bijapur, Golconda, Bidar and Gulbarga) - important examples for each style.

Development of the Mughal style under the different rulers - Babur, Shershah, Humayun, Akbar, Jahangir, Shahjahan, Aurangzeb- important examples - development of the Mughal garden - important examples.

SUGGESTED READINGS:

1. Percy Brown, Indian Architecture (Buddhist and Hindu Period), Taraporevala and Sons, Bombay, 1983.
2. Satish Grover, The Architecture of India (Buddhist and Hindu Period), Vikas Publishing Housing Pvt. Ltd., New Delhi, 1981.
3. ChristoperTadgelli, The History of Architecture in India from the Dawn of civilization to the end of the Raj, Longmon Group U.K.Ltd., London, 1990.
4. Islamic Architecture, Form, Function and Meaning, Robert Hillenbrand, Edinburgh University Press, 1994.
5. Brown Percy, Indian Architecture (Islamic Period) Taraporevala and Sons, Bombay, 1983.
6. Satish Grover, The Architecture of India (Islamic) Vikas Publishing House Pvt. Ltd., New Delhi, 1981.
7. Christopher Tadgell- The History of Architecture in India - Penguin Books (India) Ltd., New Delhi 1990.
8. Francis D.K. Ching, A Global History of Architecture, John Willey & Sons Publishers, New Jersey,2007.

15ART303	MECHANICS OF STRUCTURES II									SEMESTER-III	
Marks	Internal	40	External				60	Total	100	Exam Hours	3
Instruction Hours /week		L	3	T	0	P/S	0	Credits			3

COURSE OBJECTIVE:

- To gain understanding of structural concepts in architecture
- To gain understanding of structural details of various Forces and techniques
- To gain understanding about the theoretical aspects and the component aspects involved in a building
- To gain understanding about the R.C.C structural elements
- To gain understanding about the Indeterminate Structures
- To gain understanding about the forces acting on structural elements

COURSE OUTCOME:

1. Student will understand the concepts of action of forces like bending moment and shear force
2. Student will understand the basic geometric properties and the behavior of beams under effect of stress
3. Student will understand the various structural components of the building like columns
4. Student will understand about the Reinforced structures structural system and ability
5. Student will understand about Indeterminate Structures in Architectural Design
6. Student will be able to relate various building structural components and their behavior

UNIT- I

SHEAR FORCE AND BENDING MOMENT

Concept of shearing forces and Bending Moments - shear force and bending Moment diagrams for cantilever and simply supported beams subjected to point load, uniformly distributed loads and their combinations

UNIT- II

STRESSES IN BEAMS

Theory of simple bending - bending stresses in beams, shear stresses in beams - examples on simple sections. Stress distribution diagrams.

UNIT- III

DEFLECTION OF BEAMS

Slope and deflection at a section - Double Integration and Macaulay's method for simply supported and cantilever beams

UNIT- IV

THEORY OF COLUMNS

Short and long columns - Euler's method and its limitations - Derivations of Euler's formula (for different end conditions) - Rankine's formula for columns, examples, effect of eccentric loading

UNIT- V

INTRODUCTION TO INDETERMINATE STRUCTURES

Introduction – Determination of degree of statical indeterminacy for beams and frames – Concept of Analysis (No Problems)

Total 45 Hrs/Semester

SUGGESTED READINGS::

1. S.S.Bhavikatti, "Strength of Materials", VIKAS Publishing House Pvt. Ltd., Chennai, 1997.
 2. S.Ramamrotham, Strength of materials - Dhanpatrai & Sons, Delhi, 1990.
 3. W.A.Nash, Strength of Materials - Schaums Series - McGraw Hill Book Company, 1989.
 4. R.K.Bansal - Engineering Mechanics and Strength of Materials - Lakshmi Publications, Delhi, 1990.
- R.K. Rajput - Strength of Materials, S. Chand & Company Ltd., New Delhi 1996.

15ARP311	COMPUTER APPLICATIONS II									SEMESTER-III	
Marks	Internal	60	External				90	Total	150	Exam Hours	6
Instruction Hours /week		L	0	T	0	P/S	5	Credits			2

COURSE OBJECTIVE:

- To develop the advanced Digital knowledge and skills
- To develop the skills of two-dimensional rendering
- To develop the skill and knowledge of the Building information Modelling
- To develop the Skill related to building visualization,
- To develop the skill of multimedia presentations, brochures,
- To develop the skill of video presentations as required in architectural practice.

COURSE OUTCOME:

1. Student will be able to understand the use of digital tools in the realm of visual composition,
2. Student will understand the drafting & Details through Software
3. Student will develop the skill of 3D visualization and rendering
4. Student will understand the concept of BIM- building information modelling through the specific software
5. Student will gain the Skill of Multimedia & video making presentations required for Architectural practice
6. Student will gain knowledge about the latest developments of digital applications in Architecture

UNIT - I to 5:

INTRODUCTION TO BUILDING INTEGRATED MODELLING

New Features , Editing and Working with Families in a Project, Concepts, creating a sharedFamily, Project and System settings.
Suggested Software: REVIT, ARCHICAD.

BASIC MODELLING AND DOCUMENTATION

Creating the Basic Model, Adding Doors and Windows, Floors and Floor Openings, Roof and Ceiling, Staircases. Suggested Software: REVIT, ARCHICAD. Creating drawings, Creating detail from Building Model, Scheduling, Annotating and Dimensioning, Viewing the Mode

RENDERING

Applying Materials and textures, creating a perspective view, rendering an Exterior view, rendering an Interior view, Creating and Recording Walkthroughs, creating 3D cutaways with Section Boxes

Suggested Software: ArchiCAD, Revit

SUGGESTED READINGS:

1. AutoCAD 2011 User Manual, Autodesk 2011.
2. Revit reference manual - Autodesk UNC, 2010.
3. ArchiCAD architectural users guide -Graphisoft Inc., 2010.

15ARS321	ARCHITECTURAL DESIGN III									SEMESTER-III	
Marks	Internal	160	External				240	Total	400	Exam Hours	6
Instruction Hours /week		L	2	T	0	P/S	10	Credits			7

COURSE OBJECTIVE:

- To create understanding of human built environment as a holistic, living entity from macro to micro scales, and shaped by geographic and socio-cultural forces as well as by historic, political and economic factors, through study of and design within the context of rural settlements.
- Understanding the Design Programme and the Components of the Design Problem & Investigate and Acquire the Knowledge to address the various aspects of the Design Problem and Process
- Develop Ability to Communicate Design Ideas throughout the Design Stages with multiple media & Ability to conceptualize a design idea by Sketching and other techniques
- Ability to do a frame work of Design methodology
- Ability to understand the process of Design and deliver the Architectural Design with Technical Drawings
- To enable a comprehensive study of rural settlement and architecture in order to understand them as exemplar of collective design that evolved through various parameters.

COURSE OUTCOME:

1. Student will be able collect data, assimilate and integrate knowledge in a holistic manner.
2. Student will learn about the Sensitivity towards the nature and values of unselfconscious and collective design the interconnectedness of human society and environment
3. Student will learn about traditional techniques and concepts of Architecture.
4. Student will learn about the evolution and transformation of the rural settlements according to the time and cultural context.
5. Student will understand the essence of rural planning
6. Student will develop the skill of design process for the Rural settlements

TOPICS

Introduction to site – inventory and Analysis – Graphical representation - time space activity analysis.

Single level planning in small scale, small span, horizontal movement and simple vertical movement, data collection, case studies, analysis and presentation of studies – Data collection with respect to design and detailing for physically handicapped persons - Concepts and presentation of design with scaled models - Examples: Residential buildings, Institutional buildings: banks, nursery or primary schools, primary health center, school for children with learning disabilities, neighborhood market, etc.

Design Process to be approached stage wise through Architectural Programming

SUGGESTED READINGS::

1. De Chiara and Callender, Time Saver Standards Building Types, McGraw Hill Co., 2nd Edition, 1980.
2. Edward D. Mills, Planning - The Architects Handbook - 10th Edition, British Library Cataloguing in Publication Data, 1985.
3. Wakita Linde, The Professional practice of Architectural working, drawing John Wiley & Sons, 1984.
4. Andrew Alpern, Handbook of Speciality Elements in Architecture, McGraw Hill Book Co., 1982.
5. Julius Panero & Martin Zelnik, Human Dimension and Interior Space, Whitney Library of Design Publication, 1979.
6. Neufert Architect's Data, Rudolph Herg, Crosby Lockwood and Sons Ltd., 1970.

15ARS322	BUILDINGMATERIALS AND CONSTRUCTION III									SEMESTER-III	
Marks	Internal	80	External				120	Total	200	Exam Hours	6
Instruction Hours /week		L	2	T	0	P/S	4	Credits			4

COURSE OBJECTIVE:

- To give an introduction to metals as material for building construction.
- To give knowledge about the principles, methods of construction and applications of metals for structural components
- To understand about non-structural building components.
- To gain Knowledge about Steel floor & Steel Staircase
- To understand about Door, windows & partitions
- To provide familiarity with market forms of metals and finishes for them.

COURSE OUTCOME:

- Student will gain Knowledge of properties of ferrous and non-ferrous metals as materials for buildings.
- Student will understand about the possibilities of steel as an important building construction material.
- Student will be able to design and detail structural and non-structural components of simple buildings using metals.
- Student will gain Knowledge about Steel Floors & Staircase
- Student will understand about the details of Door, windows & Partitions by detailed Drawings.
- Student will be able to use metal innovatively in building projects.

UNIT - I

CONCRETE, ITS INGREDIENTS MANUFACTURE & PROPERTIES

Ingredients - suitability requirements for aggregates, grading of aggregates - role of water in concrete - reinforcement - admixtures - properties of concrete.

Manufacture of concrete and concreting - mix proportioning - batching, mixing, transporting, placing, compaction, curing formwork - quality control - outline of tests for concrete - joints in concrete - concrete finishes.

UNIT - II

SPECIAL CONCRETE AND CONCRETING METHODS

Lightweight, high density, fibre reinforced, polymer concrete - outline of manufacture properties and uses of the above - ready mixed concrete - gunning - cold weather and underwater concreting - current developments in concrete products and methods of concreting.

FOUNDATIONS

Pile foundation, different types of piles, precast and cast insitu with reinforcement details for different types of grids, details of pile capping, jointing of precast piles and columns.

UNIT - III

CONCRETE CONSTRUCTION

Introduction to framed structures. Concrete in foundations - types of footings - isolated, combined, continuous, strap.

Concrete floors, walls and partitions. Concrete lintels, arches, sunshades - Concrete slabs - types - concrete beams and columns.

UNIT - IV

CONCRETE STAIRCASES

Factors involving staircase design - types of staircases like straightflight, doglegged, quarterturn, bifurcated, spiral helical, etc. - different support conditions like inclined slab, cranked slab, continuous, cantilever - foundations finishes for staircases - detailing out of handrails and balusters. Designing and detailing for physically handicapped.

UNIT - V

D.P.C- WEATHERING COURSE – WATER PROOFING

Introduction to DPC – Damp Proof Course – Water Proofing – Details and techniques – types

Exercises involving simple bill of Quantities

SUGGESTED READINGS :

1. M.S.Shetty, Concrete Technology, S.Chand& Co. Ltd., New Delhi, 1986.
2. Dr.B.C.Punmia, Building Construction, Laxmi Publications Pvt. Ltd., New Delhi, 1993.
3. Arthur Lyons, Materials for Architects and Builders - An introduction, Arnold, London, 1997.
4. W.B.Mckay, Building Construction, Longmans, UK, 1981.
5. Francis D.K.Ching, Building Construction Illustrated VNR, 1975.

15ARS323	CLIMATE RESPONSIVE ARCHITECTURE I									SEMESTER-III	
Marks	Internal	60	External				90	Total	150	Exam Hours	6
Instruction Hours /week		L	1	T	0	P/S	5	Credits			3

COURSE OBJECTIVE:

- To study about climatic factors and its influence
- To understand about the of external and internal factors of Climate for a certain location
- To understand deeply about the Microclimatic influences in a building
- To understand about the Solar geometry and it impacts in a building
- To understand the Air movement & its principles and Applications for human thermal comfort
- To understand about the Classification of climate and Design strategies recommendations for each climatic Zone

COURSE OUTCOME:

1. Student will understand the whole climatic scenario of the world
2. Student will learn about the Solar geometry, sun path its irradiation effects and control
3. Student will learn about heat transfer in buildings due to materials and design implications.
4. Student will understand about the Various ventilation principles and techniques for good ventilation
5. Student will understand hybrid design strategies and its design applications for different climatic zones
6. Student will develop the skill of doing a climatic design for any building with optimum recommendations.

UNIT - I

CLIMATE AND HUMAN COMFORT

Factors that determine climate of a place – Components of Climate – Climate classifications for building designers in tropics – Climate characteristics. Human body heat balance – Human body heat loss – Effects of climatic factors on human body heat loss – Effective temperature – Human thermal comfort – Use of C.Mahony's tables.

UNIT - II

DESIGN OF SOLAR SHADING DEVICES

Movement of sun – Locating the position of sun – Sun path diagram – Overhead period–Solar shading–Shadow angles – Design of appropriate shading devices

UNIT - III

HEAT FLOW THROUGH BUILDING ENVELOPE CONCEPTS

The transfer of heat through solids – Definitions – Conductivity, Resistivity, Specific heat, Conductance, Resistance and Thermal capacity – Surface resistance and air cavities– Air to air transmittance (U value) – Time lag and decrement

UNIT - IV

IMPACT OF AIR MOVEMENT DUE TO NATURAL AND BUILT FORMS

The wind – The effects of topography on wind patterns – Air currents around the building – Air movement through the buildings – The use of fans – Thermally induced air currents – Stack effect, Venturi effect – Use of court yard.

UNIT - V

CLIMATE AND DESIGN OF BUILDINGS

Design strategies in warm humid climates, hot humid climates, hot and dry climates and cold climates – Climate responsive design exercises

SUGGESTED READINGS::

1. O.H. Koenigsberger and others (1993), Manual of Tropical Housing and Building – Part I - Climate design, Orient Longman, Madras, India.
2. Bureau of Indian Standards IS 3792 (1987), Hand book on Functional requirements of buildings other than industrial buildings, (Part I – IV), Manakbhavan, 9, Bahadur Shah Zafar Marg, New Delhi – 110002 SUGGESTED READINGS :
3. Martin Evans (1980), Housing Climate and Comfort – Architectural Press, London
4. B. Givoni (1981), Man, Climate and Architecture, Architectural Sciences Series - Applied Science Publishers Ltd., London
5. B. Givoni (1994) Passive and Low Energy Cooling of building, VanNostrand Reinhold New York, USA..
6. Galloe, Salam and Sayigh A.M.M. (1998) “Architecture, Comfort and Energy”, Elsevier Science Ltd. , Oxford, U.K.
7. Arvind Krishan “ Climate responsive Architecture” .

SEMESTER 4

15ART40	BUILDING SERVICES II										SEMESTER-IV
Marks	Internal	40	External				60	Total	100	Exam Hours	3
Instruction Hours /week		L	3	T	0	P/S	0	Credits			3

COURSE OBJECTIVE:

- To inform about the principles and laws of Water supply and sewage systems in buildings.
- To inform about the principles and laws of Electrical lighting systems in buildings.
- To inform about the principles and laws of HVAC systems
- To inform about the principles of Mechanical and Integrated system
- To Inform About Integrated services
- To Inform about the integration of service with the Architectural Design

COURSE OUTCOME:

1. Student will gain Knowledge of design of water supply and sewage services
2. Student will learn and understand about the design of electrical and lighting systems in buildings.
3. Student will be able to design buildings satisfying the HVAC systems
4. Student will understand the applications of mechanical systems and its design applications as per standards.
5. Student will gain basic knowledge about the Integrated Building management Systems.
6. Student will understand the Applications of building Services in advanced level by detailed Drawings

UNIT- I

Water Distribution

Water supply systems – Domestic – Commercial – usages - Distribution systems in buildings - Types of pipes used - Laying, jointing, testing - prevention of water wastage and reuse of water - Internal water supply in buildings - Relevant byelaws and regulations.

UNIT- 2

Sewage Disposal

Arrangement of sewerage systems in buildings - sewage treatment plant b) Refuse Disposal: Collection, conveyance and disposal of town refuse systems

UNIT- 3

Plumbing Systems

Materials and construction details of sewers and connections – plumbing fixtures - testing for water tightness - plumbing system for building types. – Toilets kitchen etc., Relevant Plumbing Codes

UNIT- 4

Electrical Systems And Lighting Design

Study of electrical layout for residential Building - Types of wires, wiring systems and their choice - Main and distribution boards - Electrical load calculation – Details - Classification of lighting - Artificial light sources - spectral energy distribution - luminous efficiency - colour temperature - colour rendering – lighting fixtures.

UNIT- 5

Air-Conditioning System And Applications

Vapour compression cycle - compressors - evaporators - Refrigerant control devices - electric motors - Starters - Air handling units - Cooling towers.

Window type and packaged air-conditioners - chilled water plant - fan coil systems - water piping - cooling load - Airconditioning systems for different types of buildings - Protection against fire to be caused by A.C.systems.

SUGGESTED READINGS:

1. Robert D.Finch, Introduction to Acoustics, Prentice Hall of India Private Limited, New Dehli, 2008.
2. MARK J. HAMMER MARK J. HAMMER, JR, Water and Wastewater Technology, PHI Learning Private Limited, New Delhi. 2009.
3. M.N.Rao, A.K.Datta, Waste Water Treatment, Oxford & IBH PUBLISHING CO. PVT. LTD,New Delhi,2007.
4. S.P.Arora,S.P.Bindra, Building Construction, dhanpat rai publication, New Delhi. 2009.
5. Section 11. Sanitary Appliances and Water Fittings. IS Code- SP: 21-1983.
6. Hand book on Water Supply and Drainage with Special emphasis on plumbing IS Code – SP : 35 – 1987.
7. Part of Section 1: Water Supply. IS CODE – SP : 7 – 1992.
8. IS Code of Basis Requirements for Water supply drainage and sanitation. IS Code – IS 1172: 1983.
9. Code of Practice for Water Supply in Buildings. IS Code – IS 2065: 1983.
10. William H.Severns and Julian R.Fellows, Airconditioning and Refrigeration, John Wiley and Sons, London, 1988.
11. D.J.Groomet- Noise, Building and People -Pergumon Press - 1977.

15ART402	CONTEMPORARY ARCHITECTURE I									SEMESTER-IV	
Marks	Internal	40	External				60	Total	100	Exam Hours	3
Instruction Hours /week		L	3	T	0	P/S	0	Credits			3

COURSE OBJECTIVE:

- To give exposure to the critiques of modern architecture.
- To study in detail the different postmodern directions in architecture
- To study about the influence of industrial revolution and Architecture
- To understand about the Modern era of Architecture
- To understand about the design evolutions of various contemporary Architects
- To understand the evolution of Western Architecture

COURSE OUTCOME:

1. Student will understand the spread and varied later directions of modern architecture across the world.
2. Student will understand the architectural production from the 1960s as driven by large scale changes across the world.
3. Student will become familiar with contemporary forces and directions in architecture across the world.
4. Student will understand the basis of Architecture revolutions and its changes in every decade
5. Student will understand the Ideologies of various Architects & their Works
6. Student will impart this Knowledge in his Architectural Design

UNIT- I

EVOLUTION OF MODERN ARCHITECTURE & INFLUENCE OF NEW MATERIALS

Reasons for the evolution of Modern Architecture, origins-Neo Classicism Industrial revolution and its impact – Emergence of new building typologies, New Materials and Technologies- steel, glass and concrete

UNIT- 2

REVIEWING INDUSTRIALISATION

Arts & Crafts movement in Europe and America; Art nouveau, and the works of Horta, Guimard, Gaudi and Macintosh; Organic Architecture -Early works of F.L.Wright. Chicago school; Art deco Architecture in Europe and America.

UNIT- 3

EVOLUTION OF MODERNISM, POST MODERNISM AND CRITIQUE

Viennese secession, Adolph Loos and debates on ornamentation ; Futurism, Expressionism works of Mendelssohn & Taut, Cubism, Constructivism, De stijl and their influence on Architecture. Bauhaus school & Walter Gropius, Modernism and the International style, Brutalism, Writings of Venturi - Jane Jacobus - Aldo Rossi - Christopher Alexander.

UNIT- 4

WESTERN ARCHITECTURE

Ideas and works of Richard Meier (Smith House, Connecticut and Getty Centre, Brent Wood, Los Angeles), Charles Moore (Architect's Own House at Orinda and Piazza d'Italia, New Orleans), Bernard Tschumi (Kyoto Railway Station Project and Parc de la Villette, Paris), Frank Gehry (AeroSpace Museum, Santa Monica and Guggenheim Museum, Bilbao), Norman Foster (Hong Kong Shanghai Bank and Renault Distribution Centre, Swindon, England),

UNIT- V

MODERN ARCHITECTURE

Zaha Hadid (The Peak Club, Hong Kong and IBA Housing Block 2, West Berlin), Daniel Libeskind (Jewish Museum, Berlin and World Trade Centre, New York), Rem Koolhaas (Dance Theatre, The Hague and Netherlands Sports Museum), Santiago Calatrava (Lyon- Satolas Railway Station and Olympic Stadium at Athens), Renzo Piano (Pompidou Centre, Paris and Menil Museum, Houston) - Deconstructivist Theory – Parametric.

SUGGESTED READINGS::

1. Charles Jencks, The Language of Post-Modern Architecture, 1984.
2. D.Ghirardo, Architecture After Modernism, Thames and Hudson, London, 1990.
3. Kenneth Frampton, Modern Architecture: A Critical History, Thames and Hudson, London, 1994.
4. Miki Desai et.al, Architecture and Independence, Oxford University Press, New Delhi, 1998.
5. Peter Szalapaj, Contemporary Architecture ,Architectural Press- An imprint Elsevier, Burlington, 2008.
6. Catherine Slessor Contemporary Architecture Images Publishers Australia. 2002.

15ART403	DESIGN OF STRUCTURES I									SEMESTER-IV	
Marks	Internal	40	External				60	Total	100	Exam Hours	3
Instruction Hours /week		L	3	T	0	P/S	0	Credits			3

COURSE OBJECTIVE:

- To understand the concepts and design of structures in architecture
- To understand the different structural materials used for various buildings with calculations
- To understand about the Footing Calculations & Applications
- To understand about the Column Calculations & Applications
- To understand about the Beam Calculations & Applications
- To Understand about the fundamentals of Staircase structure

COURSE OUTCOME:

1. Student will be able to apply the concepts/techniques of finding stresses.
2. Student will understand to calculate simple bending theory to find deflection in beams.
3. Student will be able to analyse and solve different types of columns.
4. Student will be able to analyse the different types of indeterminate beams.
5. Student will be able to understand about the Structural systems & Calculations of Slab
6. Student will be able to understand the Fundamental of Staircase.

UNIT - I

TIMBER – BEAMS

Grading of Timber – Permissible Stresses – Design of timber beams – Madras terrace roof.

UNIT - II

STEEL SECTIONS AND WELDED JOINTS

Properties of rolled steel sections, Types of welded joints – Advantages and disadvantages – Design of Fillet welds (Excluding eccentric connections).

UNIT - III

TENSION MEMBERS

Introduction – Net sectional area – permissible stresses. Design of Axially loaded Tension member

UNIT - IV

COMPRESSION MEMBERS

Introduction – various sections – built up section – Design of columns (excluding Lacing, Battening and other connections.)

UNIT - V

STEEL BEAMS

Allowable stresses, General specifications, Design of laterally supported beams.

Total : 45 Hrs/Semester

SUGGESTED READINGS:

1. Ramachandra S., Design of Steel Structures, Standard Book House, Delhi, 1984.
 2. A.S.Arya, Structural Design in Steel, Masonry and Timber, Nemchand and Bros, Roorkee, 1971.
 3. National Building Code of India, 1983, Part VI, Structural Design.
 4. Gurucharan Singh, Design of Steel Structures, Standard Publishers, New Delhi, 1982.
 5. Negi "Design of steel Structures" - Tata Mcgraw Hill Book Company, New Delhi 1997.
 6. Elias G.Abu-Saba Design of Steel Structures CBC Publishers New Delhi. 1997.
 7. IS Code of practice for BIS 800:2007
- IS Code of practice for Timber design.

15ARP411	SURVEYING AND SITE PLANNING									SEMESTER-IV	
Marks	Internal	60	External				90	Total	150	Exam Hours	6
Instruction Hours /week		L	0	T	0	P/S	4	Credits			2

COURSE OBJECTIVE:

- To understand the principles of surveying, classification, types of surveys and their applications.
- Know about techniques of surveying.
- Understand the concepts of levelling and its applications.
- To understand about contour applications
- Get exposed to total station surveying, GIS and GPS.
- To understand the site, its premises and various factors involved

COURSE OUTCOME:

1. Student will understand the various systems of Surveying
2. Student understand the concept of levelling and its applications on site for various types of buildings.
3. Student will understand about the larger survey context using the total station and GIS mapping
4. Student will understand about the Site Inventory and Site analysis
5. Student will learn about Hill survey and method of Contouring
6. Student will learn about the item planning principles, methods and its applications in architectural design.

UNIT - I

SURVEYING

Definition, classification, principles of surveying, chain surveying and compass surveying.

UNIT - II

PLANE TABLE SURVEY

Plane table and accessories, methods of plane table survey, Radiation, Intersection, traversing and resection.

UNIT3

LEVELING.

Definition, classification, booking and reduction of levels.

Theodolite – study of instruments, definition of different terms, temporary adjustments, uses, measuring horizontal and vertical angles, method of repletion, extension lines.

UNIT - IV

CONTOURING

Characteristics of contours, direct and indirect methods of contouring, interpolation, uses of contours, setting out works such as centre lines of a building, grade for sewer. Earth work calculation , area and volume.

UNIT - V

TOTAL STATION & GIS

Introduction and Characteristics – Handling and setting up a Total Station – Angle and Distance Measurement – Traversing – Introduction to GIS – Concept of GIS Mapping

SUGGESTED READINGS:

Rangwala, Surveying & Levelling, Charotar Publishing House, Gujarat, 2005.

Duggal, S. K. “Surveying (Vol – I)”, Tata McGraw-Hill publishing Company Ltd., New Delhi, 1996.

Surveying and leveling (Part I) by Kanetkar TP and Kulkarni SV

Wolf, Paul R. and Ghilani, Charles D., Elementary Surveying an Introduction to Geomatics: Fifth Edition, Upper Saddle River, New Jersey: Pearson Prentice Hall, 2006

Banister.A&Raymond.S – 1992, Surveying , ELBS 6th Edition

Punmia.B.C, 2000, Surveying, Volumes I, II, III, Laxmi publications.

15ARS421	ARCHITECTURAL DESIGN IV									SEMESTER-IV	
Marks	Internal	160	External				240	Total	400	Exam Hours	6
Instruction Hours /week		L	2	T	0	P/S	10	Credits			7

COURSE OBJECTIVE:

- Understanding Complex Design Programme and the Components of the Design Problem.
- Investigate and Acquire the Knowledge to address the various aspects of the Design Problem and Process
- Develop Ability to Communicate Design Ideas throughout the Design Stages with multiple media.
- Ability to conceptualize a design idea by Sketching and other techniques
- Ability to do a frame work of Design methodology
- Ability to understand the process of Design and deliver the Architectural Design with Technical Drawings

COURSE OUTCOME:

1. Student shall understand the basic functional aspect of designing simple building type and its relevant spatial organization.
2. Student will be learning to reciprocate and sensitize the design/concept to the environment and the design skill of the project
3. Student will be able to transform the theoretical ideas to the tangible output of design.
4. Student will be able to understand the space organization, space- volume design approach
5. Student will be able to research, Analyse and Deliver a Architectural Design.
6. Student will be able to Communicate effectively through the design ideas

UNIT - I to 5:

RURAL PROJECT

Problems related to Rural Housing - Visits to selected village – based on Rural surveys on socio-economic, physical, housing and visual surveys, etc. to study existing conditions - analysis of survey data - preparation of report and presentation in a seminar - preparation of design brief solutions for housing and community facilities.

SUGGESTED READINGS::

1. De Chiara and Callender, Time Saver Standard for Building Types, McGraw Hill Co., 2nd Edition, 1980.
2. Edward D.Mills, Planning - The Architects Handbook - 10th Edition, British Library Cataloguing in Publication Data, 1985.
3. Wakita Linde, The Professional Practice of Architectural Working, Drawing John Wiley & Sons, 1984.
4. Andrew Alpern, Handbook of Speciality Elements in Architecture, McGraw Hill Book Co., 1982.
5. Julius Panero& Martin Zelnik, Human Dimension and Interior Space, Whitney Library of Design Publication, 1979.
6. Neufert Architect's Data, Rudolf Herg, Crosby Lockwood and Sons Ltd., 1970.

15ARS422	BUILDING MATERIALS AND CONSTRUCTION IV									SEMESTER-IV	
Marks	Internal	80	External				120	Total	200	Exam Hours	6
Instruction Hours /week		L	2	T	0	P/S	5	Credits			4

COURSE OBJECTIVE:

- To give an introduction to liquid storage structure and retaining wall
- To give an introduction about retaining wall
- To understand about the design of R.C.C slabs & footing
- To give an introduction to glass, plastic and related materials in building construction.
- To provide familiarity with advanced building construction techniques (shell structure
- To learn about the materials as well as design with them.

COURSE OUTCOME:

1. Student will learn about the Liquid storage structure design calculations and applications
2. Student will learn about Retaining wall
3. Student will learn about the Structural design of R.C.C slab & Footing
4. Student will gain Knowledge of glass, plastics, paints and finishes in building construction.
5. Student will become familiar with advanced materials and construction techniques of shell structures
6. Student will gain knowledge in design the R.C.C slab and footing

UNIT - I

FERROUS METALS

Brief study on manufacture, properties and uses of cast iron, wrought iron, pig iron and steel - anticorrosive measures for steel - mechanical and heat treatment of steel - market forms of steel - structural steel, stainless steel, steel alloys - properties and uses - current developments.

UNIT - II

STEEL CONSTRUCTION

Structural steel sections - types of connections in steel - steel in foundations, columns and beams - different types of steel roof trusses including northlight truss - space frames - materials for roofcovering. Steel staircases and handrails, salusters..

UNIT - III

STEEL STAIRS, DOORS, WINDOWS

Steel doors and windows – safety doors, dock doors, cold storage doors, revolving doors - collapsible gates - rolling shutters. Steel in furniture and other interior uses

UNIT - IV

NON FERROUS METALS

Aluminium and Aluminium Alloys - brief study on manufacture, properties and uses -Aluminium products - extrusions, foils, castings, sheets, etc. - brief study of other non-ferrous metals like copper, bronzebrass, tin and lead, properties and uses - current developments.

UNIT - V

CONSTRUCTION USING NON-FERROUS METALS

Aluminium doors - revolving, sliding, pivoted. Aluminium windows and ventilators - sliding, fixed, pivoted, tophung, bottom hung, louvred, fixed. Aluminium partitions, false ceiling, Aluminium roofing -northlight glazing bar. Use of other nonferrous metals like copper, bronze, brass, etc. in architectural construction.

SUGGESTED READINGS::

1. S.C.Rangwala, Engineering Materials, Charotar Publishing House, India, 1997.
2. B.C.Punmia, Building Construction, Laxmi Publications Pvt. Ltd., New Delhi, 1993.
3. Arthur Lyons - Materials for Architects and Builders - An Introduction - Arnold, London, 1997.
4. Harold B.Olin, Construction Principles Materials and Methods, The Institute of Financial Education, Chicago, 1980.
5. W.B.Mckay Building Construction, Longmans, U.K. 1981.

15ARS423	CLIMATERESPONSIVE ARCHITECTURE II										SEMESTER-IV
Marks	Internal	60	External				90	Total	150	Exam Hours	6
Instruction Hours /week		L	1	T	0	P/S	4	Credits			3

COURSE OBJECTIVE:

- To study about climatic factors and Passive design concepts
- To understand about the of external and internal factors of Climate for a certain location
- To understand deeply about the Microclimatic influences in a building
- To understand about the Solar geometry and it impacts in a building
- To understand the Air movement & its principles and Applications for human thermal comfort
- To understand about the Classification of climate and Design strategies recommendations for each climatic Zone

COURSE OUTCOME:

1. Student will understand the whole climatic scenario of the world
2. Student will learn about the Solar geometry, sun path its irradiation effects and control
3. Student will learn about heat transfer in buildings due to materials and design implications.
4. Student will understand about the Various ventilation principles and techniques for good ventilation
5. Student will understand hybrid design strategies and its design applications for different climatic zones
6. Student will develop the skill of doing a climatic design for any building with optimum recommendations.

UNIT- I

CLIMATE & SHELTER

Over view of the different Passive Solar Techniques & Climate responsive design features adopted in the traditional / vernacular architecture of various places in different climate zones – Control of Micro-climate around the building by settlement pattern, built form – open space relationship & façade articulation & appropriate use of building materials in historic buildings

UNIT- II

SOLAR ENERGY & BUILDING

Solar geometry and built form – Various techniques of shading to reduce heat gain in tropical climate –

Various methods of Maximising exposure to solar radiation in cold & temperate climate. Heating & cooling loads – Energy estimates - Energy conservation – Efficient day lighting – Solar Water heating system. Exercises on heating and cooling load calculations in buildings.

UNIT- III

PASSIVE HEATING & COOLING

Heating: General principles – Direct gain systems - Glazed walls, Bay windows, Attached sun spaces etc. Indirect gain systems – Trombe wall, Water wall, Solar Chimney, Transwall, Roof pond, Roof radiation trap, Solarium etc - Isolated gain systems – Natural convective loop etc. Cooling: General principles – Evaporative cooling, Nocturnal radiation cooling, Passive Desiccant cooling, induced ventilation, earth sheltering, Berming, Wind Towers, earth – Air tunnels, Curved Roofs & Air Vents, Insulation, Vary Thermal wall etc.

UNIT- IV

BUILDING DESIGN CONCEPTS

Land form & orientation – Vegetation & Pattern – Water Bodies – Open Space & Built form - Plan form & Elements – Roof form – Fenestration pattern & Configuration – Building envelope & finishes. Choosing between Active-Passive-Hybrid Design Systems .

UNIT- V

SUSTAINABLE ARCHITECTURE

Sustainability – Design Methods – Resource Optimization – Biomimetics – Green Architecture - Green Building Rating Systems – Case studies of selected sustainable buildings.

SUGGESTED READINGS:

1. MiliMajunder, Teri – Energy – Efficient Bldg in India – Thomson Press , New Delhi – 2001
2. Arvind Krishnan & Others – Climate Responsive Architecture, Tata McGraw –Hill New Delhi 2001.
3. Ralph M .Lebens – Passive Solar Architecture in Europe – 2, Architecture Press, London 1983.
4. Charles. J. Kibert, ‘Sustainable Construction’ John Wiley and sons Inc, USA.
5. N.D. Kaushika, Energy, Ecology and Environment, Capital Publishing Company, New Delhi.

SEMESTER 5

15ART501	CONTEMPORARY ARCHITECTURE II									SEMESTER-V	
Marks	Internal	40	External				60	Total	100	Exam Hours	3
Instruction Hours /week		L	3	T	0	P/S	0	Credits			3

COURSE OBJECTIVE:

- To provide the student an in-depth knowledge of modern design philosophies in the evolution of innovative architectural forms and designs in the Indian context.
- To give an outline of architectural approaches across the world from late 20th century.
- To study in detail the different post-modern directions in architecture. +
- To provide information about the Alternate Practice
- To understand about the evolution of Architectural design of pre – independence
- To understand the Recent trends in Architecture

COURSE OUTCOME:

1. Student will learn about the spread and varied later directions of modern architecture across the world.
2. Student will become familiar with contemporary forces and directions in architecture across the world and in India
3. Student will understand about the post-independence architecture in India contemporaneous with the rest of the world, along with its own particular influences.
4. Student will understand about the Post- independence revolution of design in India
5. Student will know about the Alternate practices
6. Student will gain knowledge in recent trends of Architecture & Design

UNIT- I

ALTERNATIVE PRACTICE

Ideas and Works of Fathy - Baker - Ando -Soleri – Bawa – Buckminster fuller
Architects of Auroville .

UNIT- II

PRE – INDEPENDENT ARCHITECTURE IN INDIA

Monumental buildings of Early colonial period – Examples – St.Pauls Cathedral, Calcutta& Bombay Townhall –Architectural character of Indo-Saracenic and Classical revival –University of Madras Senate House & Victoria Memorial hall, Calcutta – Later Colonial period – Contribution of Edwin Lutyens & Herbert Baker to the lay-out and Architecture of New Delhi – Rashtrapathi Bhavan & Parliament House.

UNIT- III

POST-INDEPENDENT ARCHITECTURE IN INDIA

Post-Independence Architecture in India – Works of Corbusier in Chandigarh and Ahmedabad (Legislative Assembly Complex including High Court, Legislative assembly and Secretariat, Chandigarh and Mill Owners’ Building, Ahmadabad) Louis Kahn’s contributions – the IIM, Ahmedabad, Koenigsberger and the Bhubaneswar experiment.

UNIT- IV

POST – INDEPENDENT ARCHITECTURE IN INDIA

Ideas and works of BV Doshi (Institute of Indology Ahmedabad, IIM-Bangalore and Gufa, Ahmedabad), Charles Correa (RamaKrishna House, Ahmedabad, KanchenJunga Apartments, Mumbai and MRF Headquarters, Chennai), Raj Rewal (Pragati Maidan, New Delhi and Asian Games Village, New Delhi), Achyut Kanvinde(IIT, Kanpur and Nehru Science Centre, Mumbai), Uttam Jain(Lecture Theatres, Jodhpur and Engineering College, Kota), Laurie Baker(Centre for Development Studies, Thiruvananthapuram and St. John Cathedral at Tiruvalla) and Anant Raje(IIFM, Bhopal and Management Development Centre, IIM-Ahmedabad)

UNIT- V

RECENT TRENDS IN INDIAN ARCHITECTURE

Recent developments in architecture of India – works of Selected architects – Current architecture practice.

SUGGESTED READINGS:

1. Morgan, Ann Lee & Taylor Colin, 1987, Contemporary Architecture, 2nd Edition, St.James Press
2. Sarabjit Bahga. S, Modern Architecture in India,
3. Ar.Pramod Beri, 2009, Form follows feeling, Anjali Prakashan, New Delhi

15ART502	DESIGN OF STRUCTURES II									SEMESTER-V	
Marks	Internal	40	External				60	Total	100	Exam Hours	3
Instruction Hours /week		L	3	T	0	P/S	0	Credits			3

COURSE OBJECTIVE:

- To get introduced to basic structural members in timber and steel.
- To give knowledge to design different timber components in a building.
- To enable an understanding of the types, efficiency and strength, advantages and d
- To know the disadvantages of rivet and welded joints in steel.
- To enable the design of tension (beams) and compression (columns) steel members in a building under different conditions.
- To Understand the concept of Structural system of Steel & Timber

COURSE OUTCOME:

1. Student will understand about Various Timber sections
2. Student will understand about the design timber beams and columns by applying the code provisions.
3. Student will understand about the Steel Sections and its usage.
4. Student will be able to design steel joints for maximum efficiency and strength.
5. Student will be able to design tension and compression members for different conditions by applying the code provisions.
6. Student will be able to design different types of laterally unsupported & supported beams for different conditions.

UNIT- I

PROPERTIES OF STEEL AND CONCRETE

Structural properties of concrete - Grades and Strength of Concrete - durability - code provisions and design requirements of steel and concrete.

UNIT- II

LIMIT STATE DESIGN - INTRODUCTION

Various limit stages - characteristic load and characteristic strength of materials - partial safety factor - stress-strain relationship of steel and concrete - safety and serviceability requirements.

UNIT- III

LIMIT STATE DESIGN OF BEAMS & SLABS

Analysis and Design of rectangular sections for bending - singly and doubly reinforced. Design of one way and two way slabs using IS Code co-efficients for various edge conditions.

UNIT- IV

LIMIT STATE DESIGN OF COLUMNS

Types of columns – Analysis and Design of Short Columns for Axial, Uniaxial and biaxial bending – Use of Design aids.

UNIT- V

LIMIT STATE DESIGN OF STAIRCASE

Types of staircases - Design of doglegged staircase.

SUGGESTED READINGS:

1. P.Dayaratham, Design of Reinforced Concrete Structures, Oxford and IBH Publishing Co., 1983.
 2. N.C.Sinha and S.K.Roy, Fundamentals of Reinforced Concrete, S.Chand & Co., New Delhi, 1983.
 3. S.N. Sinha, 'Reinforced Concrete Design' Tata McGraw Hill, New Delhi 1998.
 4. Dr.B.C.Punmiya, Reinforced Concrete Structures, Standard Laxmi publication, Delhi, 1994.
 5. Chu-Kia Wang, Charles G.Salmon, Reinforced Concrete Design, Addison Wesley Educational Publishers, New Delhi, 1998.
 6. SS Mahadevan, Reinforced Concrete Design, The Science & Technology Book Publishers, Chennai. 2007.
- S.Unnikrishna Pillai, Devdas Menon, Reinforced Concrete Design, Tata McGraw-Hill Publishing Company Ltd, New Delhi. 2008.

15ARS521	ARCHITECTURAL DESIGN V									SEMESTER-V	
Marks	Internal	160	External				240	Total	400	Exam Hours	6
Instruction Hours /week		L	2	T	0	P/S	10	Credits			7

COURSE OBJECTIVE:

- Understanding Complex Design Programme and the Components of the Design Problem.
- Investigate and Acquire the Knowledge to address the various aspects of the Design Problem and Process
- Develop Ability to Communicate Design Ideas throughout the Design Stages with multiple media.
- Ability to conceptualize a design idea by Sketching and other techniques
- Ability to do a frame work of Design methodology
- Ability to understand the process of Design and deliver the Architectural Design with Technical Drawings

COURSE OUTCOME:

1. Student shall understand the basic functional aspect of designing simple building type and its relevant spatial organization.
2. Student will be learning to reciprocate and sensitize the design/concept to the environment and the design skill of the project
3. Student will be able to transform the theoretical ideas to the tangible output of design.
4. Student will be able to understand the space organization, space- volume design approach in large scale projects
5. Student will be able to research, Analyse and Deliver a Mixed use Architectural Design.
6. Student will be able to Communicate effectively through the design ideas

TOPICS

Small complexes - multi planning circulation analysis - massing problems involving building technology - Design and detailing for movement of physically handicapped and elderly persons within and around buildings. examples, shopping centre (Commercial) , apartments (residential) Nursing home (institutional) home for aged. Construction and manipulation of three dimensional building data bases, Rendering 3D images. Presentation techniques, preparing scaled models using different materials.

Design Process to be approached stage wise through Architectural Programming. Site Planning fundamentals as relevant to small projects to be introduced in the design.

SUGGESTED READINGS:

1. Edward D.Mills, Planning, 4 volumes, Newnes, Butterworths, London, 1976.
2. E and O.E. Planning. Liffie Books Ltd., London, 1973.
3. National Building Code IST
4. De Chiara Callender, Time Saver Standard for Building Types, McGraw Hills Co., 1973.

15ARS522	BUILDING MATERIALS AND CONSTRUCTIONS V									SEMESTER V	
Marks	Internal	80	External				120	Total	200	Exam Hours	6
Instruction Hours /week		L	2	T	0	P/S	5	Credits			4

COURSE OBJECTIVE:

- To give an introduction to glass as a material in architectural construction
- To give an introduction about plastic
- To give an introduction about composite materials
- To understand about the design of timber furnitures, paneling, partition etc.
- To give an introduction to cladding, flooring and painting in building construction.
- To provide familiarity with advanced building construction techniques (shell structures) and materials as well as design with them.

COURSE OUTCOME:

1. Student will learn about the Composition, manufacturing method, treatment, properties and uses of glass
2. Student will learn about Plastic building products
3. Student will learn about Timber floors , build in furnitures , interior details
4. Student will gain Knowledge of glass, plastics, paints and finishes in building construction.
5. Student will become familiar with Secondary Building products – windows, doors, sky light domes
6. Student will gain knowledge about Smart Materials: Characteristics, classification, properties, energy behaviour, intelligent environments.

UNIT I

GLASS

Composition of glass - brief study on manufacture, treatment, properties and uses of glass - special types of glass, sheet glass, plate glass, safety glass, tint coated glass -Glass blocks - properties and applications in the building industry - current developments

UNIT II

PLASTICS, COMPOSITE MATERIALS

Primary Plastic building products – walls, partitions and roofs – design and construction details

Secondary Building products – windows, doors, sky light domes – handrail - design and construction details

UNIT III

TIMBER, ALLIED PRODUCTS

Timber floors , build in furnitures , interior details

UNIT IV

CLADDING,FALSE CEILING, FLOORING AND PAINTING

Stone, ACP, wood, Glass, curtain wall, Structural glazing,(reflected ceiling plan), Flooring and painting

UNIT V

INTRODUCTION TO CURRENT DEVELOPMENTS IN BUILDING INDUSTRY

Smart Materials: Characteristics, classification, properties, energy behaviour, intelligent environments.

Recycled and ecological materials and energy saving materials: Straw-bale, card board, earthsheltered structures, recycled plastics, recycled tyres, paper-crete, sandbags, photovoltaic, solar collectors, light-pipes, wind catchers. Exercises of the above through case studies and drawings.

SUGGESTED READINGS:

1. S.C.Rangwala, Engineering Materials, Charotar Publishing House, India, 1997.
2. B.C.Punmia, Building Construction, Laxmi Publications Pvt. Ltd., New Delhi, 1993.
3. Arthur Lyons - Materials for Architects and Builders - An Introduction - Arnold, London, 1997.
4. Harold B.Olin, Construction Principles Materials and Methods, The Institute of Financial Education, Chicago, 1980.
5. W.B.Mckay Building Construction, Longmans, U.K. 1981.

15ARS523	BUILDING SERVICES III									SEMESTER-V	
Marks	Internal	80	External				120	Total	200	Exam Hours	6
Instruction Hours /week		L	2	T	0	P/S	5	Credits			4

COURSE OBJECTIVE:

- To inform about the principles and laws of Water distribution systems in buildings.
- To inform about the principles and laws of sewerage systems in buildings.
- To inform about the principles and laws of plumbing systems
- To inform about the electrical layout for residential Building
- To understand about compressors, evaporators and refrigerant control devices
- To Inform about the integration of service with the Architectural Design

COURSE OUTCOME:

1. Student will gain Knowledge of design of Water distribution systems in buildings
2. Student will learn and understand about the sewerage systems in buildings.
3. Student will learn and understand about the plumbing systems
4. Student will understand the electrical layout for residential Building
5. Student will gain basic knowledge about compressors
6. student will gain Knowledge in evaporators and refrigerant control devices

UNIT- I

WATER CHARACTERISTICS AND QUALITY

Surface and ground water sources - quality/quantity - nature of impurities – need for treatment

UNIT- II

FUNDAMENTALS OF SEWAGE TREATMENT AND SEWERAGE SYSTEMS

Environmental sanitation -Sanitation in buildings. Arrangement of sewerage systems in Housing - Rainwater disposal and storm water drainage from buildings.

UNIT- III

ELECTRICAL SYSTEMS AND ILLUMINATION

a)Basics of electricity - Single/Three phase supply - Protective devices in electrical installations - Earthing for safety - Types of earthing - ISI specifications.

b)Principles of illumination: Modern theory of light - Synthesis of light - Additive and subtractive synthesis of colour - Luminous flux - Candela - Solid angle illumination - Utilization factor - depreciation factor - MSCP - MHCP - Laws of illumination.

UNIT- IV

MECHANICAL SYSTEMS

a)Pumps – uses & types and their selection, installation and maintenance, Hot Water Boilers.

b)Basic refrigeration principles: Thermodynamics - Heat - Temperature, measurement transfer - Change of state - Sensible heat - Latent heat of fusion, evaporation, sublimation - Saturation temperature -Super heatedvapour- subcooled liquid - pressure temperature relationship for liquids – Refrigerants.

UNIT- V

FUNDAMENTALS OF ACOUSTICS

Sound waves, frequency, intensity, wave length, measure of sound, decibel scale, speech and music frequencies.Types of noises, transmission of noise, transmission loss, noise control and sound insulation and remedial measures, determination of density of a given building material, absorption co-efficients and measurements, choice of absorption material, resonance, reverberation, echo, exercises involving reverberation time and absorption co-efficient.

SUGGESTED READINGS::

1. William H. Severns and Julian R. Fellows, Airconditioning and Refrigeration, John Wiley and Sons, London, 1988.
2. Robert D. Finch, Introduction to Acoustics, Prentice Hall of India Private Limited, New Dehli, 2008.
3. MARK J. HAMMER MARK J. HAMMER, JR, Water and Wastewater Technology, PHI Learning Private Limited, New Delhi. 2009.
4. M.N.Rao, A.K.Datta, Waste Water Treatment, Oxford & IBH PUBLISHING CO. PVT. LTD, New Delhi, 2007.
5. Section 11. Sanitary Appliances and Water Fittings. IS Code- SP: 21-1983.
6. Hand book on Water Supply and Drainage with Special emphasis on plumbing IS Code – SP : 35 – 1987.
7. Part of Section 1: Water Supply. IS CODE – SP : 7 – 1992.
8. IS Code of Basis Requirements for Water supply drainage and sanitation. IS Code – IS 1172: 1983.
9. Code of Practice for Water Supply in Buildings. IS Code – IS 2065: 1983.

15ARES531A	PHYSICAL PLANNING									SEMESTER- V	
Marks	Internal	40	External				60	Total	100	Exam Hours	6
Instruction Hours /week		L	0	T	0	P/S	4	Credits			2

COURSE OBJECTIVE:

- To introduce the vocabulary, elements and classification of human settlements.
- To learn about the planning theories
- To give exposure to planning concepts at different scales of settlements.
- To understand about the planning settlement theories
- To gain understanding about the land use planning
- To give an understanding of planning addressing current issues.

COURSE OUTCOME:

1. Student will understand morphology of settlements and their generating forces and characteristics.
2. Student will understand the role of planning processes in making positive changes to settlements.
3. Student will gain knowledge and awareness of planning interventions with respect to the current world.
4. Student will gain understanding about the city evolution process due to planning
5. Student will gain Knowledge about existing settlements by Survey studies
6. Student will gain vast knowledge about Landsue patterns and planning theories

UNIT- I

HUMAN SETTLEMENTS AND PLANNING THEORIES

Origins, evolution and growth of settlements. Relation between urban and rural settlements

Urbanisation, Industrialisation and urban growth, definitions and inter relationship. Trends in urbanization in India since Independence. Growth of metropolitan cities and their management.

UNIT- II

PLANNING THEORIES

Enunciated by Ebenezer Howard, Patrick Geddes, Soria Y Mata, Doxiadis, Le-Corbusier, Clarence Stein, Clarence Arthur perry, Hilberseimer.

UNIT- III

EVOLUTION OF CITY

Evolution of city and Components of a city - Central business district of a city, Special economic zone, coastal regulatory zone, fringe area.

UNIT- IV

LANDUSE PLANNING

Land use classification for cities, analysis of land uses in Indian cities. Demography pattern, social & physical infrastructure, environmental and pollution, traffic and road network.

UNIT- V

PLANNING TECHNIQUES

Study and analysis of existing settlements, methodology of conducting diagnostic surveys and studies, land use survey, socio economic survey, traffic surveys and presentation of data

SUGGESTED READINGS:

1. Gallion and Eisner, The Urban Pattern: City Planning and Design, Van Nostrand, 5th Edition, 1986
2. Chapin, UrbanLanduse Planning, University of Illinois Press, Chicago, 1995.

15ARES531B	STRUCTURES AND ARCHITECTURE								SEMESTER-V	
Marks	Internal	40	External			60	Total	100	Exam Hours	6
Instruction Hours /week		L	0	T	0	P/S	4	Credits		2

COURSE OBJECTIVE:

- To learn about the structural design of the pre industrial era
- To learn about the historic evolution of structural design
- To learn about the structural design of the postindustrial era
- To learn about the large span structures of the contemporary period
- To learn about the prototype structures
- To learn the advanced level structures in airport, railway station

COURSE OUTCOME:

1. An understanding of the Structural design of the Pre industrial period
2. An understanding of evolution of various structures and design changes
3. An understanding of the post-industrial structural design
4. An understanding of the structural design through case studies
5. An understanding of the large-scale structural design
6. An understanding of the advanced level structures in Airport, railway station

UNIT - I

HISTORY OF STRUCTURAL DESIGN IN THE PRE INDUSTRIAL ERA

Development of monolithic and rock cut structures- trabeated construction-arcuate construction vaults and flying buttresses- tents and masted structures and bridges through ancient and medieval history.

UNIT - II

HISTORY OF STRUCTURAL DESIGN IN THE POST INDUSTRIAL PERIOD

Post Industrial modular construction of large span and suspension structures in steel and concrete-projects of Pier Luigi Nervi, Maillart, Candella, Buckminster Fuller and Eero Saarinen.

UNIT - III

CONTEMPORARY STRUCTURAL EXPRESSION THROUGH CASE STUDY

The select case studies could include KCR Terminal at Hung Hom, Hong Kong, B3 Offices in Stockley Park, Sainsbury Centre for Visual Art, Renault Centre and Swindon UK by Norman Foster and Stansted Airport Terminal, London, UK by Foster/Arup British Pavilion EXPO 1992, Seville, Spain and Waterloo International Terminal by Nicholas Grimshaw

UNIT - IV

CONTEMPORARY STRUCTURAL EXPRESSION THROUGH CASE STUDY – II

The select case studies could include Inmos Microchip Factory, Centre Commercial St. Herbtain, PA Technology, Princeton and Fleetguard, Quimper UK by Richard Rogers Athens Olympic Stadium and Village, Bridges and Public Bus Stop in St. Gallen, Railway Station, Lyon, France and Stadelhofen Railway station, Zurich Schweiz by Santiago Calatrava Kansai International Airport, UNESCO Workshop, the Jean-Marie Tjibaou Cultural Center, Menil Museum, Thomson Optronics Factory, IBM Traveling Exhibition Pavilion, Columbus International Exposition, Genoa Italy and Lowara Officers, Montecchio Maggiore Italia by Renzo Piano Building Workshop

UNIT 5

SEMINAR

Seminar to present a study of architectural form and structural expression through select cases which will aid understanding of structural philosophy and analysis, building envelope and services and construction sequence.

SUGGESTED READINGS:

1. “Paper Arch” and Japan Pavilion at Expo 2000 in Hannover by Shigeru Ban
2. Greene King Draught Beer Dept and Schlumberger Cambridge Research Centre, UK by Michael Hopkins
3. Design Center, Linz, Austria and Two Family House in Pullach Thomas Herzog
4. King Abdul Aziz International Airport, Haj Terminal by SOM
5. Pavilion of the Future, Expo 92, Seville by Martorell, Bohigas& Mackay (MBM)
6. Daring Harbour Expo Center, Sydney Australia by P. COX
7. Olympic Archery Building by Enric Miralles& Carme Pinos
8. Eagle Rock House by Ian Ritchie
9. Le Grande Arche de La Defense by J O Spreckelsen

15ARES531C	SUSTAINABLE ARCHITECTURE								SEMESTER-V	
Marks	Internal	40	External			60	Total	100	Exam Hours	6
Instruction Hours /week		L	0	T	0	P/S	4	Credits		2

COURSE OBJECTIVE:

- To understand the concept of sustainability
- To understand the impacts of environment today and to follow the steps to sustainability
- To work towards sustainable development and to understand low impact construction practices,
- To understand the life cycle costs and alternative energy resources.
- To familiarize the students with the various rating systems for building practices with case studies.
- Through case studies to understand the concept of sustainable communities and the economic and social dimensions.

COURSE OUTCOME:

1. Student will understand about climate change and the need for the sustainable buildings
2. Student will understand the energy-based concepts and resource optimisation
3. Student will understand about the environmental impacts of today and Follow the Sustainable approach
4. Student will gain ability to design energy efficient buildings
5. Student will understand the green concepts and apply them in every aspect and approach towards sustainable architecture
6. Student will understand about the building simulation for energy analysis and for various design solutions

UNIT - I

Concept of Sustainability – Carrying capacity, sustainable development – Bruntland report – Ethics and Visions of sustainability.

UNIT - II

Eco system and food chain, natural cycles – Ecological foot print – Climate change and Sustainability.

UNIT - III

Selection of materials Eco building materials and construction – Biomimicry, Low impact construction, and recyclable products and embodied energy. Life cycle analysis. Energy sources – Renewable and non-renewable energy.

UNIT - IV

Green building design – Rating system –LEED, GRIHA, BREEAM etc., case Studies.

UNIT - V

Urban ecology, social and economic dimensions of sustainability, urban heat Island effects, sustainable communities – Case studies.

SUGGESTED READINGS :

1. Sustainable Architecture and Urbanism: Concepts, Technologies and examples by Gauzin-Muller(D) – Birkhauser 2002.
2. Eco-Tech : Sustainable Architecture and High Technology by Slessor© - Thames and Hudson 1997.
3. Ecodesign : A manual for Ecological Design by Yeang(K) – Wiley Academy 2006.
4. Sustainable Architecture : Low tech houses by Mostaedi (A) – CarlesBroto 2002.
5. HOK guide book to sustainable design by Mendler (S) & Odell (W) – John willey and sons 2000.
6. Environmental brief : Path ways for green design by Hyder(R) – Taylor and Francis 2007.
7. Green Architecture: Design for a sustainable future by Brenda and Vale (R) – Thames and Hudson 1996.

15ARES531D	ACOUSTICS								SEMESTER-V	
Marks	Internal	40	External			60	Total	100	Exam Hours	6
Instruction Hours /week		L	0	T	0	P/S	4	Credits		2

COURSE OBJECTIVE:

- To understand the science behind acoustical design and Lighting design
- To expose students to understand noise control, sound transmission, Daylighting and artificial lighting.
- To familiarize the students with various building and interior elements for Acoustics and lighting
- To familiarize the students with the basic principles of acoustic design
- To familiarize the students with the basic principles of Lighting design
- To familiarize the student with the applications of Acoustical materials

COURSE OUTCOME:

1. Student will understand the theoretical concepts of acoustics
2. Student will understand the theoretical ideas and concepts of lighting
3. Student will be able to understand the basis of noise reduction and design applications of noise control
4. Student will be able to understand the basis of Lighting and method at provide daylighting and Artificial lighting as per the functionality of the space.
5. Student will understand about Daylighting concepts & its Applications
6. Student will understand about efficient lighting techniques & its Applications

UNIT - I

FUNDAMENTALS

Sound waves, frequency, intensity, wave length, measure of sound, decibel scale, speech and music frequencies, human ear characteristics - Tone structure.

UNIT - II

SOUND TRANSMISSION AND ABSORPTION

Outdoor noise levels, acceptable indoor noise levels, sonometer, determinate of density of a given building material, absorption co-efficient and measurements, choice of absorption material, resonance, reverberation, echo, exercises involving reverberation time and absorption co-efficient.

UNIT - III

NOISE CONTROL AND SOUND ABSORPTION

Types of noises, transmission of noise, transmission loss, noise control and sound insulation, remedial measures and legislation.

UNIT - IV

CONSTRUCTIONAL MEASURES

Walls/partitions, floors/ceilings, widow/doors, insulating fittings and gadjets, machine mounting and insulation of machinery.

UNIT - V

ACOUSTICS AND BUILDING DESIGN

Site selection, shape, volume, treatment for interior surfaces, basic principles in designing open air theatres, cinemas, broadcasting studios, concert halls, class rooms, lecture halls, schools, residences. Call Centers, Office building and sound reinforcement systems for building types.

SUGGESTED READINGS :

1. Dr.V.Narasimhan - An Introduction to Building Physics - Kabeer Printing Works, Chennai-5 - 1974.
2. D.J.Groomet - Noise, Building and People - Pergumon Press - 1977.
3. Thomas D.Northwood - Architectural Acoustics - Dowden, Hutchinson and Ross Inc. – 1977.
4. B.J.Smith, R.J.Peters, Stephanie Owen - Acoustics and Noise Control - Longman Group Ltd., - New York, USA 1982.
5. David Eagan concepts in Architectural Acoustics.
6. Harold Burris – Meyer and Lewis Good friend, Acoustics for Architects – Reinhold

15ARES531E	ENVIRONMENTAL PLANNING									SEMESTER-V	
Marks	Internal	40	External				60	Total	100	Exam Hours	6
Instruction Hours /week		L	0	T	0	P/S	4	Credits			2

COURSE OBJECTIVE:

- To understand the impact of man's activities on the environment
- To gain knowledge about the ecology of the whole world
- To gain knowledge about the Environmental impacts
- To understand about the Renewable & Non – renewable sources
- To gain knowledge about the Environmental laws
- To gain Knowledge about environmental acts & Policies for industries

COURSE OUTCOME:

1. Student will understand about the ecosystem and approach towards sustainability
2. Student will gain knowledge about the environmental impacts
3. Student will gain knowledge in
4. Student will be able to understand the current environmental conditions and to work towards a sustainable approach
5. Student will know to integrate the global environmental situation with the policy level decisions
6. Student will become capable of envisioning for the future environmental benefits.

UNIT - I to 5

Man – biosphere – ecosystems – resource identification and its implications for development – soil water , land , plants , animals , renewable energy and non renewable energy . preparation and analysis or resource inventories

Environmental Impact Assessment – methodologies and techniques

Environment legislation – significance of law – relationship to development – evolution of planning legislation – National environmental policy

SUGGESTED READINGS::

- 1.Richard p. Dober – Environmental design – VNR company – Newyork 1969
- 2.Albert J. Rutledge – Anatomy of a Park – Mc Graw hill book co., USA 1971
- 3.Harvey m. Rubenstein – A Guide to site and environmental planning , vol 3 – John wiley and sons , Newyork, 1987

15ARES531F	VERNACULAR ARCHITECTURE									SEMESTER-V	
Marks	Internal	40	External				60	Total	100	Exam Hours	6
Instruction Hours /week		L	0	T	0	P/S	4	Credits			2

COURSE OBJECTIVE:

- To introduce the study of vernacular architecture as a process and not a product.
- To provide an overview of the various approaches and concepts to the study of vernacular architecture.
- To study the various vernacular architecture forms in the different regions of the country.
- To gain Knowledge about the methods & techniques of Vernacular Architecture
- To gain understanding about the climatic considerations & Design aspects of vernacular Architecture
- To gain understanding about socio- economic aspects of the vernacular & Traditional Architecture

COURSE OUTCOME:

1. Student will understand the Indian vernacular architecture as a process and to also provide an overview of various approaches and concepts towards its study.
2. Student will gain Knowledge of vernacular architectural forms in different regions.
3. Student will gain understanding of the impact of colonial rule on vernacular architecture in India
4. Student will understand about the climatic consideration & Design aspects
5. Student will understand the socio economic aspects existed in the various regions through the study of vernacular Architecture
6. Student will gain knowledge in the vernacular methods of construction and ways to incorporate in this modern architecture.

UNIT - I

INTRODUCTION

Definition and classification of Vernacular architecture – Vernacular architecture as a process – Survey and study of vernacular architecture: methodology- Cultural and contextual responsiveness of vernacular architecture: an overview

UNIT - II

APPROACHES AND CONCEPTS

Different approaches and concepts to the study of vernacular architecture: an overview – Aesthetic, Architectural and anthropological studies in detail

UNIT - III

VERNACULAR ARCHITECTURE OF THE WESTERN NORTHERN REGION OF INDIA

Forms spatial planning, cultural aspects, symbolism, colour, art, materials of construction and construction technique of the vernacular architecture of the following: - Deserts of Kutch and Rajasthan; Havelis of Rajasthan

- Rural and urban Gujarat; wooden mansions (havelis); Havelis of the Bohra Muslims - Geographical regions of Kashmir; house boats

UNIT - IV

VERNACULAR ARCHITECTURE OF SOUTH INDIA

Forms, spatial planning, cultural aspects, symbolism, art, colour, materials of construction and construction technique, proportioning systems, religious beliefs and practices in the vernacular architecture of the following-Kerala: Houses of the Nair & Namboothri community; Koothambalam, Padmanabhapuram palace.

- Tamil Nadu: Houses and palaces of the Chettinad region; Aghrahams.

UNIT - V

WESTERN INFLUENCES ON VERNACULAR ARCHITECTURE OF INDIA

Colonial influences on the Tradition Goan house

Evolution of the Bungalow from the traditional bangla, Victoria Villas – Planning principles and materials and methods of construction. Settlement pattern and house typologies in Pondicherry and Cochin.

SUGGESTED READINGS :

1. Paul Oliver, Encyclopedia of Vernacular Architecture of the World, Cambridge University Press, 1997.
2. Amos Rapoport, House, Form & Culture, Prentice Hall Inc. 1969.
3. R W Brunskill: Handbook on Vernacular Architecture
4. V.S. Pramar, Haveli – Wooden Houses and Mansions of Gujarat, Mapin Publishing Pvt. Ltd., Ahmedabad, 1989.
- 5.. Kulbushanshan Jain and Minakshi Jain – Mud Architecture of the Indian Desert, Aadi Centre, Ahmedabad 1992.
6. G.H.R. Tillotsum – The tradition of Indian Architecture Continuity, Controversy – Change since 1850, Oxford University Press, Delhi, 1989.
7. Carmen Kagal, VISTARA – The Architecture of India, Pub: The Festival of India, 1986.
8. S. Muthiah and others: The Chettiar Heritage; Chettiar Heritage 2000

SEMESTER 6

15ART601	PROFESSIONAL PRACTICE									SEMESTER- VI	
Marks	Internal	40	External				60	Total	100	Exam Hours	3
Instruction Hours /week		L	3	T	0	P/S	0	Credits			3

COURSE OBJECTIVE:

- To give an introduction to the architectural profession
- To know about the role of professional bodies and statutory bodies as well as ethics of the profession.
- To give familiarity with basic aspects of running an architectural practice.
- To learn about the ethics of the profession
- To give exposure to the processes involved in taking up and completing an architectural project.
- To inform about legal aspects and legislations associated with the profession.

COURSE OUTCOME:

1. Student will gain knowledge of the role of professional and statutory bodies.
2. Student will become familiar with the process involved in an Architecture Project
3. Student will gain knowledge about the Scale of Services and Fees for an Architect
4. Student will understand the code of conduct and ethical values of the Profession
5. Student will understand about the Tender & Contract
6. Student will understand about the participation, award in an Architectural competition

UNIT- I

ARCHITECT AND PROFESSION

Role of architect in society - relationship with client and contractor - code of conduct – management of an architect's office - elementary accountancy

UNIT- II

ARCHITECT'S SERVICES AND SCALE OF FEES

Conditions of engagement of an architect - normal additional, special and partial services – scale of fees for various services - claiming of fees

UNIT- III

ARCHITECTURAL COMPETITIONS

Open and closed competitions - appointment of assessors - duties of assessors - instructions to participants - rejection of entries - award of premium - guidelines prescribed by COA AND IIA for promotion and conduct of competitions

UNIT- IV

TENDER & CONTRACT

Calling for tenders - tender documents - open and closed tenders - item rate, lumpsum, labor and demolition tender - conditions of tender - submission of tender - scrutiny and recommendations

Conditions of contract - Form of contract articles of agreement - Contractor's bill certification

UNIT- V

ARBITRATION & EASEMENTS

Arbitration in disputes - arbitration agreement - sole arbitration - umpire - excepted matters - award .

Definition - types of easement – acquisition extinction and protection of easements

SUGGESTED READINGS:

1. J.J. Scott, Architect's Practice, Butterworth, London 1985
2. Publications of COA IIA Hand book on Professional Practice, The Architects publishing Corporation of India, Bombay 1987
3. Derek Sharp, The Business of Architectural Practice William Collins Sons & Co. Ltd, 8 Erafton St., London W1 1986
4. Roshan Namavathi, Professional Practice, Lakhsmi Book Depot, Mumbai 1984
5. Publication of IIA
6. Environmental Laws of India - by Kishore Vanguri, C.P.R. Environmental Education Centre, Chennai
7. The Tamil Nadu Hill Areas Special Building Rules - 19
8. Heritage Act
9. Consumer Protection Act
10. Indian Easements Act

15ART602	HOUSING									SEMESTER-VI	
Marks	Internal	40	External				60	Total	100	Exam Hours	3
Instruction Hours /week		L	3	T	0	P/S	0	Credits			3

COURSE OBJECTIVE:

- Understanding of the various issues involved in urban housing
- Understand the various issues of Rural housing
- Understand about the planning and design solutions for low income groups.
- Understanding about the housing Policies & Agencies involved
- Understanding about the mass housing technologies
- Understanding about the Socio-economic Aspects

COURSE OUTCOME:

1. Student will learn the various schemes and policies in Housing in India
2. Student will understand the importance of socio-economic aspects of the People and need for Housing
3. Student will learn about housing standards
4. Student will learn about the Housing design Process
5. Student will learn about government housing, private & cooperative housing
6. Student will be able to arrive at design ideas for large scale Housing Projects

UNIT- I

INTRODUCTION

Review of housing typology, Housing demand and supply – Calculation of future need.

Housing resources and options available in housing

UNIT- II

HOUSING AGENCIES AND POLICIES

Housing Agencies and their contributions to housing development – HUDCO, State Housing Boards, Housing Co-operatives and Banks. Housing Policies in India and other countries.

UNIT- III

SOCIO ECONOMIC ASPECTS

Social factors influencing Housing Design, affordability, economic factors and housing concepts – Slum upgrading and sites and services schemes.

UNIT- IV

HOUSING STANDARDS

Different types of Housing standards – Methodology of formulating standards – Relevance of standards in Housing Development.

UNIT- V

HOUSING DESIGN PROCESS

Different stages in project development – Layout design including utilities and common facilities – Housing design as a result of environmental aspects, development of technology and community interests. Case studies of Public Sector housing, Government housing, Private and Co-operative housing – their Advantages and disadvantages.

SUGGESTED READINGS:

1. Babur Mumtaz and Patweikly, Urban Housing Strategies, Pitman Publishing, London, 1976.
2. Geoffrey K. Payne, Low Income Housing in the Development World, John Wiley and Sons, Chichester, 1984.
3. John F.C. Turner, Housing by people, Marison Boyars, London, 1976.
4. Martin Evans, Housing, Climate and Comfort, Architectural Press, London, 1980.
5. Forbes Davidson and Geoff Payne, Urban Projects Manual, Liverpool University Press, Liverpool, 1983.

15ARP611	COMPUTER APPLICATION - III									SEMESTER-VI	
Marks	Internal	80	External				120	Total	200	Exam Hours	6
Instruction Hours /week		L	1	T	0	P/S	4	Credits			3

COURSE OBJECTIVE:

- To develop the advanced Digital knowledge and skills
- To develop the skills of two-dimensional rendering
- To develop the skill and knowledge of the Building information Modelling
- To develop the Skill related to building visualization,
- To develop the skill of multimedia presentations, brochures,
- To develop the skill of video presentations as required in architectural practice.

COURSE OUTCOME:

1. Student will be able to understand the use of digital tools in the realm of visual composition,
2. Student will understand the drafting & Details through Software
3. Student will develop the skill of 3D visualization and rendering
4. Student will understand the concept of BIM- building information modelling through the specific software
5. Student will gain the Skill of Multimedia & video making presentations required for Architectural practice
6. Student will gain knowledge about the latest developments of digital applications in Architecture

TOPICS

1. Advanced techniques in rendering with differential lighting for realistic rendering
2. Animations and Walkthroughs
3. Simulating gravity, wind and other effects in the scene, distributed rendering
4. Application of videography in architecture
5. Basics of developing and hosting websites

Recommended Software: 3ds Max, rhino, lumion, vector works, BIM, Ecotect, v-ray rendering techniques

SUGGESTED READINGS:

1. Rendering Techniques for mixed reality, Thomas Girlinger, Daniel Dauch, Andre Stork, Springer, Berlin, October 2009
2. 3D Computer Animated Walk Throughs, Clark Cory, Scott Meador, William Rosi, McGraw Hill 2009.
3. The Animation Book: A complete guide to animation and film making, Kit Laybourne, Three Rivers Press, December 1998
4. Creating a website, Matthew McDonald, Pogue Press, January 2009

15ARS621	ARCHITECTURAL DESIGN VI									SEMESTER-VI	
Marks	Internal	160	External				240	Total	400	Exam Hours	6
Instruction Hours /week		L	2	T	0	P/S	10	Credits			7

COURSE OBJECTIVE:

- Understanding Complex Design Programme and the Components of the Design Problem.
- Investigate and Acquire the Knowledge to address the various aspects of the Design Problem and Process
- Develop Ability to Communicate Design Ideas throughout the Design Stages with multiple media.
- Ability to conceptualize a design idea by Sketching and other techniques
- Ability to do a frame work of Design methodology
- Ability to understand the process of Design and deliver the Architectural Design with Technical Drawings

COURSE OUTCOME:

1. Student shall understand the basic functional aspect of designing complex building type and its relevant spatial organization.
2. Student will be learning to reciprocate and sensitize the design/concept to the environment and the design skill of the project
3. Student will be able to transform the theoretical ideas to the tangible output of design.
4. Student will be able to understand the space organization, space- volume design approach in large scale projects
5. Student will be able to research, Analyse and Deliver a Campus Design.
6. Student will be able to Communicate effectively through the design ideas

TOPICS

Design of large structures - Multiuse multi span - non masonry building types involving buildings – Design and detailing for movement and use by physically handicapped people within and around building technology and services. Examples: college (Institutional) office buildings Resorts - etc. Preparation of working drawings using CAD for the design exercises.

Design Process to be approached stage wise through Architectural Programming. Advanced concepts of Site Planning as relevant to small and medium sized campuses to be introduced in the design.

SUGGESTED READINGS:

1. Edward D mills, planning, 4 volumes, Newnes Butterworths, London 1976
2. E and OE planning 11ffe Books Ltd., London, 1973
3. National Building Code 151
4. De Chara and Callendar, Tune, saver standards for building types. McGraw Hall Col. 1983.

15ARS623	ARCHITECTURAL DETAILING AND BUILDING SERVICES DETAILING									SEMESTER- VI	
Marks	Internal	80	External				120	Total	200	Exam Hours	6
Instruction Hours /week		L	2	T	0	P/S	4	Credits			4

COURSE OBJECTIVE:

- To enable students to appreciate the challenges in detailing for both the newly designed buildings as well as while carrying out additions and alterations to existing buildings.
- To enable students to understand the various Fittings, Furniture & Equipment (FFE) that are needed in buildings and their installation methods.
- To create architectural drawings for construction and as a base for structures and services drawings.
- To develop the skill of architectural working drawings
- To develop the skill of reading various drawings for the Site execution
- To design, incorporate and detail architectural and interior components of the architectural design project

COURSE OUTCOME:

1. Student will gain understanding of all the aspects that go into the making of a building through study of drawings related to construction.
2. Student will gain the ability to resolve spatial concerns with technical aspects and services of a building.
3. Student will understand to design and detail components within a building.
4. Student will gain knowledge in interior detailing and planning
5. Student will gain knowledge in Interior furniture, fixtures as per the functionality
6. Student will gain understanding in the installation methods of cladding, integrated services by means of detailed drawings etc

UNIT - I

DETAILING OF WALLS, ROOFS AND FLOORING FOR INSTITUTIONAL BUILDINGS

- a) Detailing of a residence - selected spaces.
 - b) Detailing of classrooms, library (in school, college)
 - c) Detailing of lecture hall, auditorium, exhibition spaces
- Exercises of the above through case studies and drawings.

UNIT - II

DETAILING OF WALLS, ROOF, FLOORING FOR COMMERCIAL BUILDINGS

- a) Detailing of shop-fronts, office spaces for commercial buildings including detailing of crucial elements such as entrance porches, main doors, staircases, show-windows, enclosed and air-conditioned atrium spaces.
 - b) Detailing of façade and selected spaces for apartment buildings, hotels and hostels.
- Exercises of the above through case studies and drawings.

UNIT - III

DETAILING OF BUILT-IN FURNITURE AND FITTINGS

Detailing of built-in elements like kitchen counters, cupboards, cabinets, toilets, toilet fitting. Exercises of the above through case studies and drawings.

UNIT - IV

DETAILING OF EXTERIOR AND INTERIOR ARCHITECTURAL ELEMENTS

Detailing of architectural elements like indoor fountains, water walls, transparent floors, street furniture, hard and soft landscape, swimming pools, water bodies and courtyard spaces. Detailing of interior architectural elements in existing buildings (e.g. Staircase in bookshops, restaurants, playpen in restaurants, reception areas in hotel lobbies etc.) Exercises of the above through case studies and drawings.

UNIT - V

DETAILING OF EXTERIOR AND INTERIOR SERVICES

Detailing of building services – Toilet Water & Plumbing Details – Air conditioning details – Fire suppression & alarm – Electrical Layouts – Lift & Escaltors etc.

SUGGESTED READINGS:

1. De Chiara and Callendar, Time Saver Standard Building Types, McGraw Hill Co,1980.
2. Richardson Dietruck, Big Idea and Small Building, Thames and Hudson, 2002
3. Edward D Mills, Planning – The Architecture Handbook, British Library Cataloguing in Publication Data, 1985
4. Susan Dawson, Architect's Working Details(Volume 1-10), 2004
5. Swimming Pools, Lane Book Company, Menlo Park, California
6. Nelson L Burbank, House Carpentry Simplified, Simmons-Board- Man
7. Publishing Corporation, New York,
8. Landscape Construction
9. Grant W. Reid , Landscape Graphics, Whitney Library of Design, 1987

15ARE631A	LANDSCAPE ARCHITECTURE									SEMESTER-VI	
Marks	Internal	40	External				60	Total	100	Exam Hours	6
Instruction Hours /week		L	0	T	0	P/S	4	Credits			2

COURSE OBJECTIVE:

- To introduce the various aspects of outdoor design and site planning
- To teach them to enhance & improve the quality of built environment, functionally and aesthetically.
- To stress on the role of landscape design in sustainability, to provide an overview of ecological balance and impacts of human activities and the need for environmental protection and landscape conservation.
- To study the historical method of garden Design
- To understand the significance of urban landscape.
- To provide familiarity with the various elements of landscape architecture and the principle of landscape design.

COURSE OUTCOME:

1. Student will understand the role of landscape design with respect to macro scale of sustainability and ecology
2. Student will understand the micro scale of shaping of outdoor environments.
3. Student will gain Knowledge about the elements of landscape design and their scope.
4. Student will know about the Sensitivity towards evolution of different garden and landscape design across time and context.
5. Student will understand the historical method of landscape design
6. Student will understand the urban scale landscape design.
7. Student will be able to do landscape design with respect to site planning and different functional typologies of spaces

UNIT- I

INTRODUCTION

Introduction to landscape architecture; role of landscape design in architecture; Introduction to site planning, site analysis & landscape design. Site selection criteria for landscape projects.

UNIT- II

ELEMENTS IN LANDSCAPE DESIGN

Hard and soft landscape elements, Plant materials, classification, characteristics, use and application in landscape design; Water and Landform.

UNIT- III

GARDEN DESIGN IN HISTORY

Landscape and garden design in history - French, English, Japanese, Renaissance and Moghul . Study of notable examples.

UNIT- IV

URBAN LANDSCAPE

Significance of landscape in urban areas; road landscaping; waterfront development, landscaping of residential areas , Industrial landscaping .

UNIT- V

LANDSCAPE DESIGN

Basic principles of planting design; Spatial development in landscape design; Detailed landscape design of any small project including paving and street furniture design

SUGGESTED READINGS:

1. Michael Laurie , An Introduction to Landscape Architecture, Elsevier, 1986.
2. Geoffrey And Susan Jellicoe, The Landscape of Man, Thames And Hudson, 1987.

15ARE631B	PRODUCT DESIGN									SEMESTER-VI
Marks	Internal	40	External			60	Total	100	Exam Hours	6
Instruction Hours /week		L	0	T	0	P/S	4	Credits		2

COURSE OBJECTIVE:

- To gain Knowledge about the various styles of furniture
- To gain knowledge about the manufacturing of various materials/ product
- To learn about visual codes & Symbols
- To understand the importance of Artefacts, murals and Artwork
- To learn about various products for the Physically challenged
- Understanding the methods and techniques involved in furniture and product design.

COURSE OUTCOME:

1. Student will gain knowledge about the various furniture and products
2. Student will understand the needs of the industry demand and product value
3. Student will gain knowledge in Composite materials and Products
4. Student will gain knowledge about Packaging design
5. Student will gain knowledge about the House hold items / products
6. Student will be able to do a Product design for the client

UNIT- I

INTRODUCTION

An brief introduction to Product Designing – Various elements – History of Product Design – Definition of Product Design, understanding of Product Design - Purpose of Product Design – Role of Product Designers.

UNIT- II

HUMAN FACTORS

Definition of human factors, Application of human factors data. Human activities, their nature and effects. Man-machine system and physical environment. Human performance and system reliability. Information input and processing. Human control systems. Applied anthropometry – Human response to climate.

UNIT- III

ASPECTS OF PRODUCT DESIGN

Visual, Auditory, Tactual, Olfactory human mechanisms, Physical space and arrangement. Visual display, process of seeing, visual discrimination, quantitative and qualitative visual display, Alphanumeric and related displays, Visual codes and symbols.

UNIT- IV

PRODUCT DESIGN

Form, Colour, Symbols, User specific criteria, Material, Technology and recyclability, Packaging. Multiple Utility oriented approach to Product Design.

UNIT- V

DESIGN EXERCISES

Design of Household elements, tools and devices – Spoon/Cutlery. Design of furniture – Chairs/Computer table, Kitchen racks, Cabinets etc. Design of Industrial Product – Watch Dial, Gear Wheels, Automobile Headlights etc. Element design for the physically and mentally different people.

SUGGESTED READINGS::

1. Time Saver Standards for Interior Design
2. Andrew Alpern, Handbook of Speciality Elements in Architecture, McGrawhill Co., USA, 1982.
3. Francis D.K.Ching, Interior Design Illustrated, VNR Publications, New York, 1987.
4. An invitation to Design, Helen Marie Evans.

15ARE631C	INTERIOR DESIGN									SEMESTER-VI	
Marks	Internal	40	External				60	Total	100	Exam Hours	6
Instruction Hours /week		L	0	T	0	P/S	4	Credits			2

COURSE OBJECTIVE:

- To provide familiarity with the characteristics of interior spaces
- To gain knowledge in all type's furniture across history.
- To introduce the profession of interior design and bring out its role.
- To inform about the various components of interior space and give an understanding of the design aspects involved in each
- To provide knowledge in Interior services
- To provide knowledge in interior specification & costing

COURSE OUTCOME:

1. Student will gain knowledge and understanding in Interior design
2. Student will understand the various elements in Interior Design
3. Student will gain knowledge in terms of Interior design lighting and accessories
4. Student will gain an overall exposure to the ways in which interior spaces can be enriched through the design of specific interior components.
5. Student will be able to do specification for an Interior Design layout
6. Student will be able to design a Interior project with all working drawings

UNIT- I

INTRODUCTION TO INTERIOR DESIGN

Definition of interior design -design of interior spaces as related to typologies and functions, themes and concepts - Study of the history of interior design through the ages relating to historical context, design movements and ideas etc.

UNIT- II

ELEMENTS OF INTERIOR DESIGN

Introduction to various elements in interiors like floors, ceilings, walls, staircases, openings, interior service elements, incidental elements etc. and various methods of their treatment involving use of materials and methods of construction in order to obtain certain specific functional, aesthetic and psychological effects - design projects.

UNIT- III

INTERIOR DESIGN SERVICES - LIGHTING, ACCESSORIES, LANDSCAPE

Study of interior lighting - different types of lighting, their effects, types of lighting fixtures. Other elements of interiors like accessories used for enhancement of interiors - paintings, objects de art, Interior landscaping - elements like rocks, plants, water, flowers, fountains, paving, artefacts, etc. their physical properties, effects on spaces and design values.

UNIT- IV

FURNITURE DESIGN

Study of relationship of furniture to spaces and human movements furniture design as related to human comfort, function, materials and methods of construction, changing trends and lifestyles, innovations and design ideas - study on furniture for specific types of interiors like office furniture, children's furniture, residential furnitures, display systems, etc. - projects on furniture design.

UNIT- V

CASE STUDIES AND PROJECT

Study of Contemporary design in India and abroad with reference to interior design and decoration. Study of projects related to Residential Interiors, Commercial Interiors, Hospital Interiors etc. as regards to design scheme, functionalism, aesthetics, services integration, interior materials and details. Small scale interior projects such as Interior of an Office, Restaurant, Kids bedroom etc.

SUGGESTED READINGS::

1. Francis D.K.Ching, Interior Design Illustrated, V.N.R. Pub. NY 1987.
2. An Invitation to design, Helen Marie Evans.
3. Steport- De - Van Kness, Logan and Szebely, Introduction to Interior Design Macmillan Publishing Co., NY 1980.
4. Inca/Interior Design Register, Inca Publications, Chennai 1989.
5. Kathryn B.Hiesinger and George H.Marcus, Landmarks of twentieth Century Design; Abbey Ville Press, 1993.
6. SyanneSlesin and Stafford Ceiff- Indian Style, Clarkson N.Potter, Newyork, 1990.
7. The Impulse to adorn - Studies in traditional Indian Architecture. - Editor Dr.Saranya Doshi, Marg Publications, 1982.

15ARE631D	ARCHITECTURAL CONSERVATION									SEMESTER-VI	
Marks	Internal	40	External				60	Total	100	Exam Hours	6
Instruction Hours /week		L	0	T	0	P/S	4	Credits			2

COURSE OBJECTIVE:

- To introduce the various issues and practices of Conservation
- To familiarize the students with the status of conservation in India
- To teach them about the various agencies involved in the field of conservation worldwide and their policies.
- To outline the status of conservation practice in the country
- To learn about the various guidelines for the preservation, conservation and restoration of buildings.
- To inform the students about the character and issues in our heritage towns through case studies.

COURSE OUTCOME:

1. Student will understand the importance of heritage, issues and practices of conservation through case studies.
2. Student will become familiar with historic materials and their properties, different technologies for investigating masonry, foundation and also traditional and modern repair methods
3. Student will gain knowledge about the government agencies involved in Conservation
4. Student will understand the methods of urban Conservation.
5. Student will gain knowledge about various methods of Conservation techniques and Design
6. Student will gain knowledge about various policies involved in Conservation and practice in India

UNIT - I

INTRODUCTION TO CONSERVATION

e conservation- Need, Debate and purpose.

Defining Conservation, Preservation and Adaptive reuse. Distinction between Architectural and Urban Conservation. International agencies like ICCROM , UNESCO and their role in Conservation

UNIT - II

CONSERVATION IN INDIA

Museum conservation – monument conservation and the role of Archeological Survey of India – role of INTACH – Central and state government policies and legislations – inventories and

projects- select case studies of sites such as Hampi, Golconda, Mahabalipuram -craft Issues of conservation

UNIT - III

CONSERVATION PRACTICE

Listing of monuments- documentation of historic structures- assessing architectural character – historic structure report- guidelines for preservation, rehabilitation and adaptive re-use of historic structures- Case studies of Palaces in Rajasthan, Chettinad and Swamimalai dwellings, seismic retrofit and disabled access/ services additions to historic buildings-heritage site management

UNIT - IV

URBAN CONSERVATION

Over view of urban history of India and Tamil Nadu- understanding the character and issues of historic cities – select case studies of towns like Srirangaram, Kumbakonam and Kanchipuram - historic districts and heritage precincts.

UNIT - V

CONSERVATION PLANNING

Conservation as a planning tool.- financial incentives and planning tools such as Transferable Development Right(TDR)-urban conservation and heritage tourism-case studies of sites like for Cochin, Pondichery French town.- conservation project management

SUGGESTED READINGS :

1. Donald Appleyard, The Conservation of European Cities, M.I.T. Press, Massachusetts
2. James M. Fitch, Historic Preservation: Curatorial Management of the Built World by University Press of Virginia; Reprint edition (April 1, 1990)
3. A Richer Heritage: Historic Preservation in the Twenty-First Century by Robert E. Stipe
4. Conservation Manual , Bernard Fielden; INTACH Publication
5. B.K. Singh, State and Culture, Oxford, New Delhi
6. A.G. K. Memon ed. Conservation of Immovable Sites, INTACH Publication, N.Delhi.
7. Seminar Issue on Urban Conservation.

15ARE631E	ARCHITECTURAL JOURNALISM								SEMESTER-VI		
Marks	Internal	40	External				60	Total	100	Exam Hours	6
Instruction Hours /week		L	0	T	0	P/S	4	Credits			2

COURSE OBJECTIVE:

- To introduce general skills necessary for the practice of professional journalism.
- To introduce the fundamentals of writing, explain different strategies and their criticism.
- To give particular exposure to architectural journalism.
- To introduce photojournalism, bring out importance/ contributions of photograph
- To learn about the various work of architects through Interviews
- To gain knowledge in modern photography techniques.

COURSE OUTCOME:

1. Student will gain the ability to critically think and analyse about the effects of architecture on society as well as the tools to enable recording of the same
2. Student will be able to express by means of effective communication, writing and video documentation
3. Student will learn about the composition of content in Architecture Journals
4. Student will learn about Photography and Photo Journalism
5. Student will be able to document, analyse and critic the work by means of interview and data collection
6. Student will develop the proficiency in Field program, interviews and Architectural Document writing

UNIT- I

PHOTOGRAPHY & TECHNIQUES

Concept of color; concepts of lighting, distance, visual angle, frames; media; Types of camera, properties and priorities; Exposure, Aperture, Speed; Photographic films. Techniques of photography relevant to architecture.

UNIT- II

JOURNALISM

Analysis of recent historical and contemporary examples of written and journalistic criticism of architecture, including selected writings by Indian and overseas critics; discursive techniques, analysis of major critical themes, thematic categories in architectural writing over the past three centuries.

UNIT- III

ANALYSIS OF WORKS

Works of Indian and international writers and critics will be presented and discussed. Seminars on Indian architectural writers, journalists and critics

UNIT- IV

FIELD PROGRAM

Exercise on integrating photography in architectural journalism.

UNIT- V

DOCUMENTING AND REPORTING

Preparation of documentaries and reports in any media such as Video, Still images, Reports, presentations etc., and present as a Seminar.

SUGGESTED READINGS:

1. Dave Saunders, Professional Advertising Photography, Merchurst, London 1988
2. Roger Hicks, Practical photography, Cassell, London 1996
3. Julian Calder and John Garrett, The 35mm Photographer's Handbook, Pan Books, London 1999
4. Julie Adair King, Digital Photography for Dummies, COMDEX, New Delhi 1998

15ARE631F	ADVANCED STRUCTURES									SEMESTER-VI	
Marks	Internal	40	External				60	Total	100	Exam Hours	6
Instruction Hours /week		L	0	T	0	P/S	4	Credits			2

COURSE OBJECTIVE:

- To get introduced to basic structural members in masonry & steel
- To give knowledge to design different slab & column components in a building.
- To enable an understanding of the types, efficiency and strength, advantages and disadvantages of rivet and welded joints in steel.
- To enable the design of tension (beams) and compression (columns) steel members in a building under different conditions.
- To gain understanding in pre stressed concrete
- To Understand the concept of Structural system of Steel sections

COURSE OUTCOME:

1. Student will understand about various masonry sections
2. Student will understand about the design of circular columns by applying the code provisions.
3. Student will understand about the Flat slabs and its usage.
4. Student will be able to design steel joints for maximum efficiency and strength.
5. Student will be able to design tension and compression members for different conditions by applying the
6. code provisions.
7. Student will be able to design different types of laterally unsupported & supported beams for different conditions.

UNIT- I

MASONRY

Analysis and Design of masonry walls – use of Nomograms - code requirements

UNIT- II

CIRCULAR SLABS

Design of RCC Circular slabs - simply supported and fixed slabs with uniformly distributed loads .

UNIT- III

FLAT SLABS

Design principles for flat slabs- coffer slabs - code provisions.

UNIT- IV

DESIGN OF FOOTINGS

Types of footings – Design of wall footings – Design of Axially loaded rectangular footing (Pad and sloped footing). Design of Combined Rectangular footings.

UNIT- V

PRESTRESSED CONCRETE

Principle of pre-stressing, methods of pre-stressing, advantages and disadvantages - applications to simple problems.

SUGGESTED READINGS:

1. P. Dayarathnam, 'Design of Reinforced Concrete Structures' second edition, Oxford and IBH publishing Co., New Delhi 1984.
2. Ashok K. Jain, Reinforced Concrete Limit State Design Nemchand and Bros., Roorkee, 1983.
3. N.L. Shinha and S.K. Roy, Fundamental of Reinforced Confrete, S.Chand and Company, New Delhi, 1983.

15ARE631G	DISASTER MANAGEMENT								SEMESTER-VI		
Marks	Internal	40	External				60	Total	100	Exam Hours	6
Instruction Hours /week		L	0	T	0	P/S	4	Credits			2

COURSE OBJECTIVE:

- To create awareness about natural disasters-factors
- To be aware of the disaster cause them-and to foster knowledge about strategies
- To learn about the methods of disaster prevention and management-
- To understand the fragile Eco-systems and factors that cause global climatic changes.
- Overview of major natural disasters-design & planning solutions
- To learn about disaster mitigation-organizational and management aspects.

COURSE OUTCOME:

1. Student will be able to understand the cause and effects of natural disasters
2. Student will understand about climate change & disaster influences due to natural calamities
3. Student will learn to understand the prevention and design resistant structures
4. Student will understand the strategies to be implemented for disaster Mitigation.
5. Student will learn about Disaster management & recovery
6. Student will gain knowledge in design and Planning solutions of disaster proof structures

UNIT- I

INTRODUCTION TO NATURAL HAZARDS

Understanding the effects of natural calamities such as floods, tropical cyclones, earthquakes, landslides, heat waves , droughts & Tsunami.Climate changes, global sea rise, coastal erosion, environmental degradation, large dams & earth tremors, roads buildings & landslides, urbanization & desertification, cyclone effects on coastal towns.

UNIT- II

CASE STUDIES OF NATURAL DISASTERS IN INDIA

Earthquakes at Bhuj, Latur, etc., Cyclones in coastal Andhra pradesh& Orissa, Landslides in Nilgiris, Himachal etc, Floods in Bangladesh, and Droughts in Rajasthan & Tsunami in Tamil Nadu.

UNIT- III

STRATEGIES FOR DISASTER PREVENTION & MITIGATION

Pre disaster, emergency, transition, and recovery. Disaster management plan, Natural crisis management committee [NMC], State crisis management group [SCMG].

UNIT- IV

DESIGN & PLANNING SOLUTIONS

Design guidelines for disaster proof construction at appropriate situations.-Engineering, architectural, landscape & planning solutions for different types of calamities.- Norms, standards and practice procedures for shelter & settlement. Seismic repairs & retrofitting of damaged and undamaged buildings.

SUGGESTED READINGS::

1. Earthquake Resistant Design for Built Environment. Compiled notes by Department of Architecture and Planning, IIT-Roorkee. December 2003.
2. Das P.K, A.R.Ramanathan, An Introduction to Seismic Safety in Architecture, 2007
3. Paul D.K. Singh, Yogendra, Short Term Training Course on Earthquake Resistant Design of Buildings, ADPC, IIT Roorkee & DMMC, Dehradun, 2002
4. S.Rajagopal - *Problems of housing in cyclone prone areas* - SERC, Vol.2, Chennai, 1980
5. Office of the UN Disaster Relief Coordinator - *Disaster prevention and mitigation*, Vol 12, Social and Sociological aspects - UNO, NY, 1986
5. F.C. Cony et.al - *Issue and problems in the prevention of disaster and housing* - A review of experiences from recent disasters - Appropriate reconstruction and training information centre, 1978
6. S.Ramani, *Disaster management - Advanced course on modern trends in housing* - SERC, Vol 2, Chennai, 1980

SEMESTER 7

15ARP711	PRACTICAL TRAINING - I									SEMESTER-VII	
Marks	Internal	400	External				600	Total	1000	Exam Hours	6
Instruction Hours /week	L	0	T	0	P/S	0	Credits				14

COURSE OBJECTIVE:

- To introduce the challenges of architectural practice.
- To enable overall understanding of different stages in real life architectural projects in practice.
- To create involvement in these stages as much as possible within the scope of a specific architectural practice
- To work from initiation of project, development of concepts into schematic drawings
- To know about the approval process, presentations and release of working drawings
- To get involvement in office discussions and client meetings, integrating structural and service concerns, estimation and tendering processes, site supervision and coordination in the construction process

COURSE OUTCOME:

1. Student will get and overall idea of the nuances of architectural practice.
2. Student will understand about the total process that takes place in an Architectural firm
3. Student will understand the Specifications of a project, time involved and the execution process
4. Student will gain knowledge in architectural working drawings
5. Student will gain experience of client meetings & site Execution
6. Student will gain the maturity of Architectural design, and the experience gained from internship will be helpful in the thesis project

TOPICS

The choice of the place of training shall be Architectural Firms, Organizations, Development Authorities, etc. which are headed by eminent architects. The choice of the office shall be approved by the Training Committee of the Faculty of Architecture. The practical training, primarily involves learning in the office and on the site. The progress of training shall be assessed periodically by reports from the employers of trainees and by the Training Committee of the Faculty of Architecture.

The evaluation of the practical training will be based on the following features.

- Client meeting and interaction
- Site visits, verification and measurements
- Concept and scheme development
- Construction documents / drawings
- Training portfolio I

SEMESTER 8

15ARP811	PRACTICAL TRAINING II									SEMESTER-VIII	
Marks	Internal	400	External				600	Total	1000	Exam Hours	6
Instruction Hours /week		L	0	T	0	P/S	0	Credits			14

COURSE OBJECTIVE:

- To introduce the challenges of architectural practice.
- To enable overall understanding of different stages in real life architectural projects in practice.
- To create involvement in these stages as much as possible within the scope of a specific architectural practice
- To work from initiation of project, development of concepts into schematic drawings
- To know about the approval process, presentations and release of working drawings
- To get involvement in office discussions and client meetings, integrating structural and service concerns, estimation and tendering processes, site supervision and coordination in the construction process

COURSE OUTCOME:

1. Student will get and overall idea of the nuances of architectural practice.
2. Student will understand about the total process that takes place in an Architectural firm
3. Student will understand the Specifications of a project, time involved and the execution process
4. Student will gain knowledge in architectural working drawings
5. Student will gain experience of client meetings & site Execution
6. Student will gain the maturity of Architectural design, and the experience gained from internship will be helpful in the thesis project

TOPICS

The choice of the place of training shall be Architectural Firms, Organizations, Development Authorities, etc. which are headed by eminent architects. The choice of the office shall be approved by the Training Committee of the Faculty of Architecture. The practical training, primarily involves learning in the office and on the site. The progress of training shall be assessed periodically by reports from the employers of trainees and by the Training Committee of the Faculty of Architecture.

The evaluation of the practical training will be based on the following features.

- Independent handling of small projects
- Contribution in medium and large scale projects
- Training portfolio II

15ARP821	DISSERTATION									SEMESTER-VIII	
Marks	Internal	40	External				60	Total	100	Exam Hours	6
Instruction Hours /week		L	0	T	0	P/S	0	Credits			2

COURSE OBJECTIVE:

- To inculcate the spirit of research in architecture.
- To enable the acquisition of in-depth knowledge in a specific aspect/ issue in the discipline of architecture
- To develop perspectives on the same through reading, study, analysis and thought.
- To develop the skill of experimentation by their own course of study
- To facilitate the development of a coherent line of thinking and express it through clear writing.
- To serve as prelude to Thesis.

COURSE OUTCOME:

1. Student will learn to research on a specific interested topic and collect appropriate data
2. Student will develop the skill of analytical approach towards the related topic
3. Student will be able to develop a coherent line of thought based on point of view,
4. Student will be able to do observation, analysis and study
5. Student will be able to prepare a dissertation report which is based on accepted norms of technical writing.
6. Student will become prepared for the larger thesis project.

Unit I to Unit V

Identification of Dissertation Topic and Area, Hypothesis Formulation, Objectives and Methodology. Importance, Purpose and Scope of the Dissertation in architecture in terms of design, technology, environment, economic and behavioral areas.

Related Research, Literature and Field Studies. Submission of the above in report form.

SUGGESTED READINGS:

1. Knight, A. and Ruddock, L., "Advanced Research Methods in Built Environment", John Wiley & Sons. 2008.
2. Groat, L. and Wang D., "Architectural Research Methods", John Wiley & Sons. 2002.
3. Kothari, C.R., "Research Methodology- Methods and Techniques", New Age International. 2004.
4. All relevant Local, National and International Codes related to the Dissertation topic.
5. All relevant Books and Publications related to the Dissertation topic.

SEMESTER 9

15ART901	PROJECT MANAGEMENT									SEMESTER-IX	
Marks	Internal	40	External				60	Total	100	Exam Hours	3
Instruction Hours /week		L	3	T	0	P/S	0	Credits			3

COURSE OBJECTIVE:

- To introduce different Project management techniques
- To learn about project control, updating & Monitoring
- To Know about network concepts, network elements and inter - relationships
- To know about PERT network
- To know about CPM
- To enable understanding of management systems for accomplishing the task efficiently in terms of quality, time and cost.

COURSE OUTCOME:

1. Student will understand a project from concept to commissioning.
2. Student will understand the feasibility study & facility programme, design, construction to commissioning.
3. Student will be able to apply project management techniques in achieving objectives of a project like client needs, quality, time & cost.
4. Student will understand about the Project Costing
5. Student will understand about the various software of project management.
6. Student will gain understanding of principles of management, construction scheduling, scope definition and team roles

UNIT- I

INTRODUCTION TO PROJECT MANAGEMENT

Introduction to project Management concepts - background of management, purpose, goal and objectives, characteristics of projects and different aspects of management.

Traditional management system, Gantt's approach load chart, progress chart, bar chart merits and limitation. Schedule time, estimates units

UNIT- II

PROJECT PROGRAMMING

Project programming, resources balancing, phasing of activities, programs, scheduling, project control, reviewing, updating and monitoring. Exposure to relevant software such as MS Project, Primavera, Introduction to modern management, concepts, uni-dimensional management techniques - Introduction to PERT and CPM introduction to network concepts, network elements and inter-relationships.

UNIT- III

NETWORK TECHNIQUES

Network techniques, network logic - interrelationships, activity information, data sheets, development of network. CPM for management, CPM network analysis, identification of critical path float computation result sheets.

UNIT- IV

PERT NETWORK

PERT Network, introduction to the theory of probability and statistics, probabilistic time estimation for the activities of PERT network

UNIT- V

PROJECT COST

Introduction to two dimensional network analysis, activity cost information. Cost time relationship, crashed estimates for the activities, compression potential, cost slope, utility, data sheet, project direct cost and indirect cost. Crashed programmes, network compression least cost solution least time solution, optimum time solution. Network techniques, PERT/CPM, generating alternative strategies using computers

SUGGESTED READINGS:

1. Project management for design professionals By William Ramroth
2. Jerome D. Wiest and Ferdinand K. Levy, A Management Guide to PERT/CPM, Prentice Hall of Indian Pub.Ltd. New Delhi, 1982.

15ART902	URBAN DESIGN									SEMESTER-IX	
Marks	Internal	40	External				60	Total	100	Exam Hours	3
Instruction Hours /week		L	3	T	0	P/S	0	Credits			3

COURSE OBJECTIVE:

- Understanding Complex Design Programme and the Components of the Design Problem.
- Investigate and Acquire the Knowledge to address the various aspects of the Design Problem and Process
- Develop Ability to Communicate Design Ideas throughout the Design Stages with multiple media.
- Ability to conceptualize a design idea by Sketching and other techniques
- Ability to do a frame work of Design methodology
- Ability to understand the process of Design and deliver the Architectural Design with Technical Drawings

COURSE OUTCOME:

1. Student shall understand the basic functional aspect of designing complex building type and its relevant spatial organization.
2. Student will be learning to reciprocate and sensitize the design/concept to the environment and the design skill of the project
3. Student will be able to transform the theoretical ideas to the tangible output of design.
4. Student will be able to understand the space organization, space- volume design approach in large scale projects
5. Student will be able to research, Analyse and Deliver a Urban Design proposal
6. Student will be able to Communicate effectively through the design ideas.

UNIT- I

INTRODUCTION

Relationship between Architecture, Urban Design and Town Planning - Perception of city form and pattern – Townscape elements

UNIT- II

ROLE OF PUBLIC SPACE IN URBAN AREAS

Introduction to public spaces. Evolution of public spaces. Comparative analysis of public spaces, their organization and articulation.

UNIT- III

ORGANIZATION OF SPACE

Understanding, organizing and articulation of spaces for residential, commercial, industrial and recreational areas.

UNIT- IV

URBAN RENEWAL

Causes and consequences of urban blight and obsolescence – slums and shanties – methods of conducting surveys, analysis and presentation of data, prevention of formation of slums and squatter settlements. Environmental and management issues.

UNIT- V

URBAN REDEVELOPMENT

Objectives, surveys programs of urban redevelopment and public involvement and participation.

SUGGESTED READINGS:

1. Gordon Cullen - The concise TOWNSCAPE - The Architectural Press - 1978
2. Lawrence Halprin- CITIES - Reinhold Publishing Corporation N.Y. 1964.
3. Gosling and Maitland - URBAN DESIGN -St.Martin's Press, 1984.
4. Jonathan Barnett - An Introduction to Urban Design - Harper & Row, Publishers, N.Y.,1982

15ARS921	ADVANCED DESIGN – URBAN									SEMESTER-IX	
Marks	Internal	200	External				300	Total	500	Exam Hours	6
Instruction Hours /week		L	2	T	0	P/S	12	Credits			8

COURSE OBJECTIVE:

- Understanding Complex Design Programme and the Components of the Design Problem.
- Investigate and Acquire the Knowledge to address the various aspects of the Design Problem and Process
- Develop Ability to Communicate Design Ideas throughout the Design Stages with multiple media.
- Ability to conceptualize a design idea by Sketching and other techniques
- Ability to do a frame work of Design methodology
- Ability to understand the process of Design and deliver the Architectural Design with Technical Drawings

COURSE OUTCOME:

1. Student shall understand the basic functional aspect of designing complex building type and its relevant spatial organization.
2. Student will be learning to reciprocate and sensitize the design/concept to the environment and the design skill of the project
3. Student will be able to transform the theoretical ideas to the tangible output of design.
4. Student will be able to understand the space organization, space- volume design approach in large scale projects
- 5 . Student will be able to research, Analyse and Deliver a Urban Design proposal
6. Student will be able to Communicate effectively through the design ideas.

TOPICS

Design of advanced and complex problems - comprising group multi storeyed structures and infrastructure - with regard to climatic conditions, orientation, services, circulation problems relating to large developments Design and detailing for movement and use by handicapped persons within and around building and campuses to be addressed – examples: campus design, urban centers, Housing for Senior citizens.

Time problem using computer aided design such as AUDITORIUM, THEATRE etc., and Working Drawings to be done for the design projects.

SUGGESTED READINGS:

1. Edward D Mills, planning, 4 volumes, newness Butterworths, London 1976
2. E and OE Planning London, Books Ltd 1973
3. National Building Code ISI
4. De Chira and Callendar- Time saver standards for Building Types - Mc Graw Hill Co., 1973.

15ARS922	ESTIMATION AND COSTING									SEMESTER-IX	
Marks	Internal	80	External				120	Total	200	Exam Hours	6
Instruction Hours /week		L	2	T	0	P/S	4	Credits			4

COURSE OBJECTIVE:

- To provide the student adequate knowledge to write the specifications for a given item of work
- To gain knowledge in specification
- To gain Knowledge in Estimation of Civil Work
- To gain knowledge in estimation of Carpentry work
- To gain Knowledge in the estimation of Plumbing work
- To understand to work out the unit cost of individual items based on their specifications and arrive at the overall cost of the project.

COURSE OUTCOME:

1. Student will be able to understand and write specification for the given item of work
2. Student will gain knowledge & Understanding of Estimation of civil work
3. Student will gain knowledge about estimation of Carpentry work
4. Student will gain knowledge about estimation of plumbing work
5. Student will be able to do calculate the quantities on site with Field measurement book
6. Student will learn about various calculation of bill of quantities for Interiors

UNIT- I

SPECIFICATION

Necessity of specification, importance of specification, - How to write specification, - Types of Specification, -Principles of Specification writing, - Important aspects of the design of specification – sources of information – Classification of Specification.

UNIT- II

SPECIFICATION WRITING

Brief Specification for 1st class, 2nd class, 3rd class building. Detailed specification for earthwork excavation, plain cement concrete, Reinforced concrete, first class and second class brickwork, Damp proof course, ceramic tiles/marble flooring and dadoing, woodwork for doors, windows frames and shutters, cement plastering, painting & weathering course in terrace.

UNIT- III

ESTIMATION

Types & purpose, Approximate estimate of buildings – Bill of quality, - Requirement for preparing estimation, factors to be considered, - principles of measurement and billing, contingencies, Elementary billing and measurement of basic materials like brick, wood, concrete and unit of measurement for various items of work – abstract of an estimate.

UNIT- IV

DETAILED ESTIMATE

Deriving detailed quantity estimates for various items of work of a building. Like earthwork excavation, brick work, plain cement concrete, Reinforced cement concrete works, wood work, iron works, plastering, painting, flooring, weathering course for a single storied building using centre line method and long and short wall method.

UNIT- V

COST ESTIMATING & COST BUDGETTING

Function of Cost planner – liaison with consultant, operation cost Exercise in variation, Cost adjustment and Cost analysis. Role of various financial agencies for building & land development. Economic feasibility reports – valuation, depreciation and its implications.

SUGGESTED READINGS:

1. Dutta, Estimating and Costing, S.Dutta and Co., Lucknow
2. S.C.Rangwala, Elements of Estimating and Costing, Charoter Publishing House, India.
3. W.H.King and D.M.R.Esson, Specification and Quantities for Civil Engineers, The English University Press Ltd.
4. T.N.Building Practice, Vol.1, Civil, Govt. Publication.P.W.D. Standard specifications, Govt. Publication.

15ARE931A	DEVELOPMENTAL RULES AND REGULATIONS								SEMESTER- XI		
Marks	Internal	60	External				90	Total	150	Exam Hours	6
Instruction Hours /week		L	1	T	0	P/S	4	Credits			3

COURSE OBJECTIVE:

- To develop understanding of the duties and liabilities of an architect
- To gain knowledge of bye-laws that relate to the building
- To understand about the environment in the Indian context.
- To Understand about legislation of corporation areas
- To understand about the Legislation of panchayat
- To understand about legislation of Industries

COURSE OUTCOME:

1. Student will be able to read and understand government related documents and incorporate it in practice
2. Student will be able to understand the building regulations and follow accordingly
3. Student will understand about the legislation of corporation areas
4. Student will understand about the legislation of panchayat
5. Student will understand about the legislation of Industries
6. Student will be able to design buildings as per the recent norms and standards

UNIT- I

LEGISLATION - CORPORATION AREAS

Chennai Corporation Building Rules 1972, Development control Rules for Chennai Metropolitan Area 1990

UNIT- II

LEGISLATION - PANCHAYATS

The Panchayat Building Rules 1942

UNIT- III

LEGISLATION - INDUSTRIES AND FACTORIES

The Tamil Nadu Factory Rules 1950

UNIT- IV

EMERGING AREAS OF IMPORTANCE

Role of urban Arts Commissions - need for special rules on architectural control and development

UNIT- V

SPECIAL LEGISLATION

Environmental Acts and Laws - Special Rules governing Hill Area Development - coastal area development and management - Heritage Act of India - Consumer protection act and their relevant provisions

SUGGESTED READINGS::

1. Publications of COA, IIA Hand book on Professional Practice, The Architects publishing Corporation of India, Bombay 1987
2. D.C. Rules for Chennai Metropolitan Area 1990
3. T.N.D.M. Building Rules, 1972
4. T.N.P. Building Rules 1942
5. Chennai City Corporation Building Rules 1972
6. Environmental Laws of India - by Kishore Vanguri, C.P.R. Environmental Education Centre, Chennai
7. The Tamil Nadu Hill Areas Special Building Rules - 19
8. Heritage Act
9. Consumer Protection Act
10. Indian Easements Act

15ARE931B	CONSTRUCTION TECHNOLOGY									SEMESTER-IX	
Marks	Internal	60	External				90	Total	150	Exam Hours	6
Instruction Hours /week		L	1	T	0	P/S	4	Credits			3

COURSE OBJECTIVE:

- To study the advancements in construction with concrete for large span structures.
- To familiarize the students with the various classifications in buildings
- To familiarize the students with the manufacture, storage and transportation of concrete.
- To inform the various equipment used in the construction industry
- To learn about the criteria for choice of equipment.
- To familiarize the students with an overview of construction management, planning and scheduling

COURSE OUTCOME:

1. Ability to understand the practice of construction technology
2. Ability to understand the construction systems for high rise buildings
3. Ability to understand the process of manufacture, storage and transportation of concrete
4. Ability to understand the various equipment used in the construction industry
5. Ability to understand the criteria for choice of equipment
6. Students will gain an overview of construction management, planning and scheduling

UNIT - I

GENERAL BUILDING REQUIREMENTS

Classification of buildings - Sites and Services - Requirements of parts of buildings.

UNIT - II

CONSTRUCTION SYSTEMS

Planning - Cast in situ construction (ready mixed pumped etc.) Reinforced concrete and prestressed concrete constructions precast concrete and pre- fabrication system - Modular coordination – Structural schemes.

UNIT - III

CONSTRUCTION PRACTICE

Manufacture, storage, transportation and erection of precast component forms, moulds and scaffoldings in construction - safety in erection and dismantling of constructions.

UNIT - IV

CONSTRUCTION EQUIPMENT

Uses of the following: Tractors, bulldozers, shovels draglins, cableways and belt conveyors, batching plants - Transit mixers and agitator trucks used for ready mix concrete pumps Gunite equipments - Air compressors - welding equipment - cranes and other lifting devices Choice of construction equipment for different types of works.

UNIT - V

CONSTRUCTION MANAGEMENT

Overview of construction management topics including estimating, cost control, quality control, safety, productivity, value engineering, claims, and legal issues - planning and scheduling

SUGGESTED READINGS :

1. R. Chudley, Construction Technology, Longman Group Limited, England, 1985
2. R. Barry, The Construction of Buildings, The English Language Book Society and Crosby Lockwood, Staples, London, 1976
1. National Building Code of India, 1983
2. Frank R. Dagostino, Materials of Construction – Details given Reston Publishing Company, nc. Virginia, 1976.
- 3.M. Mohsin, Project Planning and Control, Vikas Publishers, New Delhi, 1983

15ARE931C	INTEGRATED BUILDING MANAGEMENT SYSTEM									SEMESTER-IX	
Marks	Internal	60	External				90	Total	150	Exam Hours	6
Instruction Hours /week		L	1	T	0	P/S	4	Credits			3

COURSE OBJECTIVE:

- To familiarize the student with minimum safety requirements for a high-rise building
- To understand the codes of NBC.
- To gain knowledge about the safety codes & practice
- To Gain Knowledge about the security systems
- To know and familiarize about the Building management systems in various functions
- To study fire alarm systems and fire suppression systems and their installation.

COURSE OUTCOME:

1. Student will be able to understand the practice of safety standards
2. Student will gain knowledge in Fire safety standards & practice considerations
3. Student will understand about the integrated building management systems
4. Student will gain understanding in building automation systems
5. Student will become familiar with integrated services for multistoried buildings
6. Student will learn about the new concepts of Security and building Management systems

UNIT - I

SAFETY REQUIREMENTS

Minimum safety requirements for a building, particularly for a high rise building as per the National Building Code.

UNIT - II

FIRE ALARM SYSTEMS

Objectives of a Fire Alarm System, Essential components of a Fire Alarm System, Technology of detection, Type of Statutory Standards followed in direction, Explanation on the essential clauses, various types of technologies employed in the Fire Alarm System, basic knowledge on how a Fire Alarm System is designed and installed

UNIT - III

FIRE SUPPRESSION SYSTEMS:

Objectives of a Fire Suppression System, Explanation on fire triangle, Essential components of a Fire Suppression System, different types of Fire Suppression Systems, Type of Statutory Standards followed in Suppression, Explanation on the essential clauses and basic knowledge on how a Fire Suppression System is designed and installed.

UNIT - IV

SECURITY SYSTEMS

Introduction to different types of Security Systems and why they are required. Introduction to Access Control, CCTV, Intruder Alarm and Perimeter protection Systems, Essential components of each system, various types of technologies employed in these Systems, basic knowledge on how they are designed and installed.

UNIT - V

AUTOMATION SYSTEMS

The objectives of the Building Automation system (BAS), the list of utility, safety and security systems that are generally monitored and controlled through IBMS, the various components of IBMS, types of integration with the utility, safety and security systems and the basic knowledge on how they are designed and installed.

SUGGESTED READINGS :

1. Building Automation Systems – A Practical Guide to selection and implementation – Author : Maurice Eyke
2. National Building Code of India 1983 (SP 7:1983 Part IV) – Published by Bureau of Indian Standards
3. IS 2189 – Selection, Installation and Maintenance of Automatic fire Detection and Alarm System – Code of Practice (3rd Revision) – Published by Bureau of Indian Standards.

SUGGESTED READINGS :

1. The Principles and Practice of Closed Circuit Television – Author: Mike Constant and Peter Turnbull
2. Rules of Automatic Sprinkler Installation – 2nd Edition – Published by Tariff Advisory Committee.
3. Fire Suppression Detection System – Author : John L. Bryan
4. Design and Application of Security/Fire Alarm system – Author: John E. Traister.
5. CCTV Surveillance – Author: Herman Kruegle
6. Security Systems and Intruder Alarm Systems – Author: Vivian Capel

15ARE931D	EARTH QUAKE RESISTANCE ARCHITECTURE									SEMESTER-IX	
Marks	Internal	60	External				90	Total	150	Exam Hours	6
Instruction Hours /week		L	1	T	0	P/S	4	Credits			3

COURSE OBJECTIVE:

- To understand the fundamentals of Earthquake and the basic terminology
- To familiarize the students with design codes and building configuration
- To understand the site planning and performance of ground & Buildings
- To understand the seismic design codes & configurations
- To understand about the quick measures for recovery in calamities
- To understand the various types of construction details to be adopted in a seismic prone area.

COURSE OUTCOME:

1. Student will be able to understand the formation and causes of earthquakes
2. Student will gain understanding of the factors to be considered in the design of buildings
3. Student will understand the services to resist earthquakes.
4. Student will become familiar with the Seismic Design Codes & configurations
5. Student will understand about designing earth quake resistant structures
6. Student will learn about urban level planning strategies for earth quake resistance

UNIT - I

Fundamentals of earthquakes

- a) Earths structure, seismic waves, plate tectonics theory, origin of continents, seismic zones in India.
- b) Predictability, intensity and measurement of earthquake
- c) Basic terms- fault line, focus, epicentre, focal depth etc.

UNIT - II

Site planning, performance of ground and buildings

- a) Historical experience, site selection and development
- b) Earthquake effects on ground, soil rupture, liquefaction, landslides.
- c) Behaviour of various types of building structures, equipments, lifelines, collapse patterns
- d) Behaviour of non-structural elements like services, fixtures in earthquake-prone zones

UNIT - III

I. Seismic design codes and building configuration

- a) Seismic design code provisions – Introduction to Indian codes
- b) Building configuration- scale of building, size and horizontal and vertical plane, building proportions, symmetry of building- torsion, re-entrant corners, irregularities in buildingslike short stories, short columns etc.

UNIT - IV

II. Various types of construction details

- a) Seismic design and detailing of non-engineered construction- masonry structures, wood structures, earthen structures.
- b) Seismic design and detailing of RC and steel buildings
- c) Design of non-structural elements- Architectural elements, water supply, drainage, electrical and mechanical components

UNIT - V

III. Urban planning and design

- a) Vulnerability of existing buildings, facilities planning, fires after earthquake, socioeconomic impact after earthquakes.
- b) Architectural design assignment- Institutional masonry building with horizontal spread and height restriction, multi-storeyed RC framed apartment or commercial building .

SUGGESTED READINGS:

1. Guidelines for earthquake resistant non-engineered construction, National Information centre of earthquake engineering (NICEE, IIT Kanpur, India)
2. C.V.R Murthy, Andrew Charlson. "Earthquake design concepts", NICEE, IIT Kanpur India.
3. Ian Davis (1987) Safe shelter within unsafe cities" Disaster vulnerability and rapid urbanisation, Open House International, UK
4. Socio-economic developmental record- Vol.12, No.1, Jan-Feb 2005
5. Learning from Practice- A review of Architectural design and construction experience after recent earthquakes- Joint USA-Italy workshop, Oct.18-23, 1992, Orvieto, Italy.

15ARE931E	DIGITAL ARCHITECTURE									SEMESTER-IX
Marks	Internal	60	External			90	Total	150	Exam Hours	6
Instruction Hours /week		L	1	T	0	P/S	4	Credits		3

COURSE OBJECTIVE:

- To develop the advanced knowledge and skills in Digital application
- To develop knowledge in building visualization
- To develop knowledge in rendering
- To develop the digital skill sin advanced level simulations
- To get familiarized & create simple multimedia presentations brochures
- To learn about the videos & Presentations as required in architectural practice.

COURSE OUTCOME:

1. Student will learn about the Latest digital applications used in the architectural practice
2. Student will gain knowledge about parametric applications in design
3. Student will learn about the building visualization & Simulation
4. Student will learn about Advanced rendering techniques
5. Student will learn about animation and visualization techniques used in the architecture industry
6. Student will learn about the video presentations and realistic animations of buildings

TOPICS

1. Advanced techniques in rendering with differential lighting for realistic rendering
2. Advanced techniques in building information modeling
3. Animations and Walkthroughs
4. Simulating gravity, wind and other effects in the scene, distributed rendering
5. Performance Analysis on Building Model using software.

Recommended Software: Auto desk Revit, 3ds Max, rhino, lumion, vector works, BIM, Ecotect, v-ray rendering techniques

SUGGESTED READINGS:

1. Rendering Techniques for mixed reality, Thomas Girlinger, Daniel Dauch, Andre Stork, Springer, Berlin, October 2009
2. 3D Computer Animated Walk Throughs, Clark Cory, Scott Meador, William Rosi, McGraw Hill 2009.
3. The Animation Book: A complete guide to animation and film making, Kit Laybourne, Three Rivers Press, December 1998
4. Creating a website, Matthew McDonald, Pogue Press, January 2009s

15ARE931F	ADVANCED CONCRETE TECHNOLOGY									SEMESTER-IX	
Marks	Internal	60	External				90	Total	150	Exam Hours	6
Instruction Hours /week		L	1	T	0	P/S	4	Credits			3

COURSE OBJECTIVE:

- To learn about the classification and specifications in concrete
- To learn about the Chemical composition and Testing of concrete
- To learn about the properties and durability of concrete
- To learn about the Principles and Methods of concrete mix design
- To learn about the Statistical quality control- sampling and acceptance criteria
- To learn the advanced level concrete technological applications.

COURSE OUTCOME:

1. An understanding of the classification and specifications in concrete
2. An understanding of special types of concrete and concreting methods
3. An understanding of the Chemical composition and Testing of concrete
4. An understanding of properties and durability of concrete
5. An understanding of Statistical quality control- sampling and acceptance criteria
6. An understanding of the advanced level concrete technological applications

UNIT - I

CONCRETE MAKING MATERIALS

Aggregates classification, IS Specifications, Properties, Grading, Methods of combining aggregates, specified gradings, Testing of aggregates. Cement, Grade of cement, Chemical composition, Testing of concrete, Hydration of cement, Structure of hydrated cement, special cements. Water Chemical admixtures, Mineral admixture.

UNIT - II

CONCRETE

Properties of fresh concrete, Hardened concrete, Strength, Elastic properties, Creep and shrinkage, Variability of concrete strength, durability of concrete.

UNIT - III

MIX DESIGN

Principles of concrete mix design, Methods of concrete mix design, Testing of Concrete. Statistical quality control- sampling and acceptance criteria.

UNIT - IV

SPECIAL CONCRETE

Light weight concrete, Fly ash concrete, Fiber reinforced concrete, Sulphur impregnated concrete, Polymer Concrete, Super plasticized concrete, Hyper plasticized concrete, Epoxy resins and screeds for rehabilitation - properties and applications - high performance concrete. High performance fiber reinforced concrete, self-compacting-concrete.

UNIT - V

CONCRETING METHODS

Process of manufacturing of concrete, methods of transportation, placing and curing. Extreme weather concreting, special concreting methods. Vacuum dewatering - underwater concrete, special form work.

SUGGESTED READINGS:

1. Neville, A.M., Properties of Concrete, Prentice Hall, 1995, London.
2. Shetty M.S., Concrete Technology, S.Chand and Company Ltd. Delhi, 2003.
3. A.R.Santhakumar ;"Concrete Technology",Oxford University Press,2007.
4. Rudhani G. Light Weight Concrete Academic Kiado,Publishing Home of Hungarian Academy of Sciences, 1963

15ARE931G	REAL ESTATE MANAGEMENT								SEMESTER-IX		
Marks	Internal	60	External				90	Total	150	Exam Hours	6
Instruction Hours /week		L	1	T	0	P/S	4	Credits			3

COURSE OBJECTIVE:

- To give an overview of real estate development
- To understand about the market potential in the current scenario
- Stimulating an awareness of the issues involved in international real estate
- To learn about urban level policy & Decisions
- To know about the market value variations
- To gain knowledge about the leverage that the real estate could provide in the overall development

COURSE OUTCOME:

1. Student will gain knowledge in the concepts of Real estate development
2. Student will understand about Property development
3. Student will learn about urban level policies in Real estate management
4. Student will learn about the corporate Real estate management
5. Student will gain knowledge in Project financing and development
6. Student will understand the Current scenario through case studies

UNIT - I

REAL ESTATE DEVELOPMENT

Fundamentals of real estate development – concepts – techniques – recognizing institutional elements – issues encountered in various phases of development like the site evaluation and land procurement – lease hold and free hold property – development team assembly –market potential – demand estimation study – development scheme – construction and project management – Project marketing

UNIT - II

DEVELOPMENT AND PROJECT FINANCING

Project feasibility – options – development financing – asset disposal and redevelopment options – analysis of development sites and case studies – integrated case study on specific development project – reviewing and analysis – problems and strategic issues

UNIT - III

URBAN POLICY AND REAL ESTATE MARKET

Impact of government regulations and public policies on real estate markets – urban land use and location theories – Land use structures – community and neighborhood dynamics – degeneration and renewal in urban dynamics – private public participation- government policies – public and private housing and fiscal policy – Property taxation – local government finance

UNIT - IV

CORPORATE REAL ESTATE MANAGEMENT

Strategic plans to align real estate needs with corporate business plans – performance measurement techniques – identify assets acquisition or disposal – methods for enhancing values through alternative – efficient source utilization or improving user satisfaction

SEMESTER 10

15ARS1021	ARCHITECTURAL THESIS									SEMESTER-X		
Marks	Internal	400	External				600	Total	1000	Exam Hours		6
Instruction Hours /week		L	4	T	0	P/S	27	Credits				18

COURSE OBJECTIVE:

- To ensure consolidation and application of the knowledge gained in preceding years of the programme
- To develop the skill of Design in the context of a project of the student's choice.
- To enable addressing of specific projects through key, identified issues inherent in the project or
- To enable development of thought processes in specific areas/aspects into a project.
- To facilitate development of ability to complete and handle projects independently
- To develop the career of Architecture by exhibiting the skill in thesis

COURSE OUTCOME:

1. Student will gain an overall understanding of an Architectural project
2. Student will be able to research, Analyse, synthesize and present his ideas
3. Student will apply his skills developed in the previous years in this Project
4. Student will gain the ability to handle major architectural project of a larger scale
5. Student will be able to design with all Socio, economic and Environmental aspects.
6. Student will become an expertise in his domain of architectural design

UNITS: 1 to 5

The main areas of study and analysis shall be Architecture, Urban design, Urban renewal and Human settlements, Environmental Design, Conservation, Landscape Design, Housing etc.. However, the specific thrust should be architectural design of built environment.

Research Methods as applicable to architectural studies is to be taught as part of Thesis.

METHOD OF SUBMISSION

The Thesis Project shall be submitted in the form of drawings, project report, physical/ digital models, presentations and walkthroughs.

SUGGESTED READINGS:

1. E and OE Planning London Books Ltd 1973
2. National Building Code ISI
3. De Chiasa and Callendar- Time saver standards for Building Types - Mc Graw Hill Co., 1973.
4. Edward D Mills, planning, 4 volumes, newness Butterworths, London 1976

15ARS1031A	INDUSTRIAL ARCHITECTURE								SEMESTER-X		
Marks	Internal	80	External				120	Total	200	Exam Hours	6
Instruction Hours /week		L	0	T	0	P/S	4	Credits			2

COURSE OBJECTIVE:

- To introduce about Industrial design building and architecture
- To understand about the types of industrial space
- To understand about precast building types & practice
- To gain knowledge in Manufacturing process of prefab structures
- To gain knowledge in on site & off-site prefabrication systems
- To understand about the overall structural system of Industrial buildings

COURSE OUTCOME:

1. Student will understand the application of Industrial buildings
2. Student will gain understanding about the pre fabrication systems
3. Student will gain Knowledge in Industrial construction
4. Student will understand about the modular components & coordination of Industrial Buildings
5. Student will understand about the overall structural system of Industrial buildings
6. Student will be able to design large scale Industrial buildings

UNIT - I

INTRODUCTION

Five year plans and thrust in housing – Issues in Urban Housing – use of modern building materials – application of modern technology – meaning of industrial building system.

UNIT - II

APPLICATION OF INDUSTRIAL BUILDING SYSTEM

Feasibility of using industrial building system in Residential and Non-Residential buildings – manufacturing of building components – Technology requirements for industrial building system – use of Industrial building system as an option for disaster mitigation.

UNIT - III

MODULAR CO-ORDINATION AND INDUSTRIALISED SYSTEM

Concept and definition of Modular dimensional discipline – Advantages and Limitations of modular principle – Components of residential buildings – precast elements.

UNIT - IV

PRE-FABRICATION SYSTEM

Objective and necessity – Off site on site prefabrication elements and construction joints – architectural and technical limitations.

UNIT - V

PROCEDURES AND ORGANISATION

Equipments used – manufacturing processes – transportation of components – assembly and finishing – Structural, social and economic issues related to industrial building system.

SUGGESTED READINGS :

1. Industrial Building and Modular Design Henrik Missen – C & CK, UK 1972.
2. Albert G.H.Dietz, Laurence Secotter – “Industrialized Building Systems for Housing” – MIT, special summer session, 1970 USA.
3. “Industrialized Building Construction” – Proceedings of National Seminar, Nov-17-18, 2000, Indian Concrete Institute, Mumbai.
4. “Innovative Construction Materials” – Proceedings of Seminar, Jan 20-21,2001, Veermata Jeejabai Technical Institute, Mumbai.

15ARS1031B	GREEN BUILDING								SEMESTER-X	
Marks	Internal	80	External			120	Total	200	Exam Hours	6
Instruction Hours /week		L	0	T	0	P/S	4	Credits		2

COURSE OBJECTIVE:

- To develop and acquire knowledge about environment and ecosystems
- To understand about the use of energy efficient technologies
- To learn about the use of natural materials and water conservation technique.
- To learn about various green building rating Systems
- To understand about the Rating of current buildings
- To understand the Bio degradability materials & recycling

COURSE OUTCOME:

1. Student will understand the basic concept of sustainability in Architecture
2. Student will gain knowledge in passive and Hybrid design strategies for designing a green building
3. Student will understand the energy usage of various types of buildings
4. Student will learn about energy efficiency and ways to minimize the energy.
5. Student will learn about the environmental impacts and assessment
6. Student will gain knowledge about the green rating systems and codes in India

UNIT - I

SUSTAINABILITY AND GREEN BUILDING

Understanding of food and energy cycle – Principles of sustainability – Natural ecosystem – Elements of green development – Introduction to green architecture – green building design – benefits – rating systems – LEED, GRIHA, BREEM, ECBC

UNIT - II

SUSTAINABLE STRATEGIES AND DEVELOPMENT

Sustainable design concepts – strategies – Design principles – Active and passive techniques – land use patterns – site development – site selection – adaptive reuse – existing buildings up gradation

UNIT - III

ENERGY – USAGE AND REGENERATION

Water – consumption – domestic usage – efficiency in usage – low flow plumbing fixtures – water appliances – rain water harvesting – reuse of gray water – energy efficiency – optimizing building envelopes configuration – renewable power- Towards net zero energy building - use of photovoltaic- automation for efficient usage – smart buildings

UNIT - IV

BIO DEGRADABLE MATERIALS AND RECYCLING

Concept of embodied energy – performance and life cycles – building materials – selection of sustainable materials – recycling waste – collection and disposal – appropriate technologies – use in landscape.

UNIT - V

ENVIRONMENTAL IMPACT ASSESMENT.

Environmental Impact Assessment – Internal frameworks & Assessment Tools.

SUGGESTED READINGS:

1. Anna Ray – Jones – Sustainable architecture in Japan – The green buildings of Nikken seiki, Wiley – academy 2000
2. Architecture and the environment – bioclimatic building design – David Lloyd (Laurence king publishers, London 1998)
3. Sustainable Architecture low tech houses – Charles Broto & Arian Mostedi Pub : Joseph Ma Minguet 2002.
4. Energy efficient buildings in India – Milli majundar. TER publication and ministry of non conventional energy sources, 2001
5. Ecology of the sky – Ivor Richards , The Image publishing groups , 2009

15ARS1031C	RESEARCH METHODS								SEMESTER-X	
Marks	Internal	80	External			120	Total	200	Exam Hours	6
Instruction Hours /week		L	0	T	0	P/S	4	Credits		2

COURSE OBJECTIVE:

- To learn the importance of and undertake research and field studies
- To understand the research applications in architectural design.
- To understand the different methods and the techniques as relevant to the design profession
- To apply research in evaluation and appraisal of architectural design projects.
- To understand about the Analytical methods of research
- To understand about different survey methods

COURSE OUTCOME:

1. Student will understand the research methodology and research methods
2. Student will understand the various analytical methods
3. Student will understand the experimental methods of Research
4. Student will learn about the survey methods and documentation
5. Student will know to collect relevant data, compile and document
6. Student will be able to critically analyse the data and present it as a document

UNIT - I

Importance. Purpose and scope of research and field studies. Application in architecture in terms of design, technology, environment, economic and behavioral areas.

UNIT - II

Sequence and methods of research, Identification of problem, Hypothesis formulation objectives and methodology.

UNIT - III

Understanding and applying qualitative analytical interpretative correlation, quasi experimental, experimental, simulation and modeling techniques in Architectural design.

UNIT - IV

Pilot studies field surveys and collection of samples – physical, Architectural, Environmental organizational, preparation and Analysis of Data sheets and Questionnaires.

UNIT - V

Preparation and analysis of data sheets and questionnaires. Arriving at conclusions from the research at fiels studies. Report writing and publications.

SUGGESTED READINGS::

- 1.Knight. A and Ruddock L., “Advanced Research Methods in build Environment”, John Wiley & Sons 2008.
- 2.Groat L, and Wang D, “Architectural Research Methods”. John Wiley & Sons, 2002.
- 3.Gibbs J P “ Urban Research Methods”, (rev.ed) Von Nostrand 1988.
- 4.Kothari C R, Research Methodology – Methods and Techniques”, New Age Interntional 2004.
- 5.Khanzode V V, “ Research Methodology – Techniques and Trends”, APH Publishing, 1995.

15ARS1031D	MEDICAL ARCHITECTURE								SEMESTER-X		
Marks	Internal	80	External				120	Total	200	Exam Hours	6
Instruction Hours /week		L	0	T	0	P/S	4	Credits			2

COURSE OBJECTIVE:

- To learn the importance of health care industry
- To understand the various standards suggested by the United nation for the health care industry
- To understand the Health care equipment & services
- To apply the Architectural & Interior design as per the functionality of Health care industry
- To understand the delivery systems of health care industry
- To understand about the modern concepts of health care designing, commissioning and built environment enhancement

COURSE OUTCOME:

1. Student will understand the important fields of health care industry
2. Student will understand the standards to be followed in Health care industry in accordance to architecture
3. Student will understand the services involved in the health care industry
4. Student will learn about the survey methods and documentation
5. Student will know about the various delivery systems and operations involved in health care industry
6. Student will be able to design for a health care sector with green concepts and with environmental quality

UNIT - I

Introduction to health care industry, demand of the health care industry.

UNIT - II

Health care Industry - United Nations International Standard Industrial Classification (ISIC) - Hospital activities, Medical and dental practice activities and other human health activities.

UNIT - III

Health care Industry – Global Industry Classification Standard and the Industry Classification - Health care equipment & services and Pharmaceuticals, biotechnology & related life sciences.

UNIT - IV

Health care Industry – Delivery System – Primary, Secondary, Tertiary and Quaternary, Community Health

UNIT - V

Modern concepts in planning, designing, equipping and commissioning of all such built environments which are associated with the health care industry. Future aspects of planning health care facilities and service

SUGGESTED READINGS::

- 1.Kunders .G.D, Hospitals – Facilities planning and Management, Tata Mcgraw Hill Publication, 2008
- 2.Joseph DeChiara, Julius Panero. Time-Saver Standards for Interior Design and Space Planning, McGraw-Hill Education, 2001
- 3.Peter Stone, British hospital and health-care buildings: designs and appraisals, Architectural Press, 1980
- 4.Joint Commission International Accreditation Standards for Hospitals, 2002
- 5.Carles Broto, New Health Care Facilities, Links International, 2009

15ARS1031E	EXHIBITION DESIGN								SEMESTER-X		
Marks	Internal	80	External				120	Total	200	Exam Hours	6
Instruction Hours /week		L	0	T	0	P/S	4	Credits			2

COURSE OBJECTIVE:

- To learn about the introduction of the Exhibition design
- To learn about the introduction of the retail architecture
- To learn about the level of services in Exhibition & retail architecture
- To learn about the planning aspects of the Exhibition design
- To learn about the Marketing theories & retail branding
- To learn the advanced level of exhibition structures

COURSE OUTCOME:

1. An understanding of the Exhibition design
2. An understanding of the retail Architecture
3. An understanding of the major services in exhibition design
4. An understanding of planning aspects of the Exhibition Design
5. An understanding of the marketing theories & retail branding techniques
6. An understanding of the advanced level of Exhibition Structures

UNIT - I

Introduction **Discussion: The terms 'exhibition' and 'retail' and 'Space & Form- Space Layout'**

UNIT - II

Elements of environmental design: from flat graphics to 3D

UNIT - III

Ergonomics& Accessibility

UNIT - IV

Exhibition Design: Form, Feel & Function, Introduction to aesthetic, form and functional aspects of basic exhibition design , Identification of critical issues through research , Execution of the design processes
Application of visualization skills

UNIT - V

Introduction to marketing theory / retail branding Marketing theory. Display of case studies.

SUGGESTED READINGS :

1. Pam Locker, BASICS INTERIOR DESIGN 02 – EXHIBITION DESIGN, Published by AVA Publishing.
2. Lynne Mesher, BASICS INTERIOR DESIGN 01 – RETAIL DESIGN, Published by AVA Publishing.

15ARS1031F	PROGRESSIVE ARCHITECTURE								SEMESTER-X		
Marks	Internal	80	External				120	Total	200	Exam Hours	6
Instruction Hours /week		L	0	T	0	P/S	4	Credits			2

COURSE OBJECTIVE:

- To understand and acquire knowledge in advanced architectural concepts and ideologies.
- To gain Knowledge about the future concepts of eminent architects
- To understand about the material usage in the current trend of architecture
- To gain knowledge about the Concept of biomimicry
- To understand about the adaptive reuse
- To gain understanding about energy integration and zero energy developments

COURSE OUTCOME:

1. Student will be able to understand and evolve futuristic design ideas and concepts
2. Student will be able to integrate various aspects of design thinking of future
3. Student will understand about the parametric design concepts and applications
4. Student will understand about the concept of Biomimicry
5. Student will gain knowledge about the Adaptive reuse
6. Student will gain knowledge about energy integration and zero energy development.

UNIT- I

Futuristic Vision

Future concepts as envisioned by Antonio Saint Elia, Frank Lloyd Wright, Corbusier.

UNIT- II

Futuristic Trends

Future trends being evolved by Marcos Novak, Neil Denari, Greg Lynn, Toyo Ito and others.

UNIT- III

Architectural Concepts and Ideas

Evolution of contemporary architectural concepts such as biomimicry, adaptive reuse, low cost development and urban regeneration.

UNIT- IV

Materials, Technology and Systems

Futuristic building materials, building tectonics and systems of the future.

UNIT- V

Energy Integration

“Zero energy” and “Energy +” buildings with emphasis on an integrated approach.

SUGGESTED READINGS:

1. Bell, J., “21st Century House”, Laurence King Publishing, 2006
2. Jodidio, P., “Building a New Millennium”, Vol.1 Taschen, 2003
3. Jodidio, P., “Architecture Now”, Vol. 2, Taschen, 2004

15ARS1031G	HGH RISE BUILDINGS								SEMESTER-X		
Marks	Internal	80	External				120	Total	200	Exam Hours	6
Instruction Hours /week		L	0	T	0	P/S	4	Credits			2

COURSE OBJECTIVE:

- To understand the various types of multistoried buildings
- To understand the structural systems of High-rise buildings
- To understand deeply about the building service systems of high-rise buildings
- To understand about the Safety Systems in high Rise buildings
- To know about the structural systems involved in High – rise buildings
- To understand about the Bye – laws & codes of design of high-rise buildings

COURSE OUTCOME:

1. Student will learn about the Design and planning aspects of High-rise structures
2. Student will gain knowledge about the National building Codes of high-rise structures
3. Student will understand about the various development control regulations all over India
4. Student will gain knowledge about the Structural aspects of High-Rise buildings
5. Student will gain knowledge about various technical services involved in High rise buildings
6. Student will gain knowledge about functionality of the high-rise structures

UNIT - I

Introduction to High rise structures

Urban environment and physical planning considerations – architectural design considerations – space planning – planning building services – advanced service systems – automation – Bye laws and codes applicable – for every structure and service section

UNIT - II

Tall building types and floor systems

Classification of tall buildings – types – shear frames ,interacting systems – Tubular systems.

Composite steel floor systems , pre stressed and post tensioned concrete floor systems – examples

UNIT - III

Lateral load resisting systems

Braced frames – moment resisting frame systems – core and out trigger systems – benefits and drawbacks – tubular system – Hybrid systems – examples

UNIT - IV

Services for Tall buildings

Express elevators- Sky lobbies – service floor etc – Water supply system- skip stage plumbing – energy conservation methods – location and sizing of water tanks – wet risers, sumps , smoke detectors , alarms ,sprinkler systems – fire escape stairs – fire resistant doors – Fire resistant materials – fire fighting equipments.

SUGGESTED READINGS: :

1. Bennetts , Ian et al – tall building structural systems
2. Proceedings of the council for tall buildings – Vol 1 to 10
3. NBC

DETAILED SYLLABUS
M.ARCH (ADVANCED DESIGN)
2015-2016 BATCH

15MARS111	RESEARCH AND FIELD STUDIES -1								SEMESTER-I		
Marks	Internal	40	External				60	Total	100	Exam Hours	6
Instruction Hours /week		L	1	T	0	P/S	2	Credits			2

COURSE OBJECTIVE:

- To learn the importance of research & field Studies
- To understand the Research application in architectural design.
- To understand the different methods and techniques as relevant to the design profession
- To apply the research concepts in evaluation and appraisal of architectural design projects.
- To Analyse the Various methodologies of Field Survey
- To Develop the skill of preparation of report and Documentation

COURSE OUTCOME:

1. Student will understand the methods of research
2. Student will be able to develop the Skill of field study and experimentation
3. Student will understand the research application in the field of Architectural Design
4. Student will understand about the collection of data and Analyse the data
5. Student will develop the skill of documentation of various Survey and Research
6. Student will be able to prepare documents, report writing and publish in journals

UNIT-I INTRODUCTION TO RESEARCH

Importance, Purpose and Scope of Research and Field Studies. Application in architecture in terms of design, technology, environment, economic and behavioral areas.

UNIT-II RESEACRH OBJECTIVES AND METHODOLOGY

Sequence and Methods of Research. Identification of Problem, Hypothesis Formulation, Objectives and Methodology.

UNIT-III APPLICATION OF RESEARCH

Understanding and Applying Qualitative, Analytical, Interpretative, Correlational, Quasi-Experimental, Experimental, Simulation and Modelling techniques in Architectural Design.

UNIT-IV FIELD STUDIES

Pilot Studies, Field Surveys and Collection of Samples - Physical, Architectural, Environmental, Organizational. Preparation and Analysis of Data Sheets and Questionnaires.

UNIT-V ANALYSIS, PREPARATION AND DOCUMENTATION

Preparation and Analysis of Data Sheets and Questionnaires. Arriving at conclusions from the Research at Field Studies. Report Writing and Publications.

SUGGESTED READINGS:

1. Knight, A. and Ruddock., "Advanced Research Methods in Built Environment", John Wiley & Sons. 2008.
2. Groat, L. and Wang D., "Architectural Research Methods", John Wiley & Sons. 2002.
3. Gibbs, J.P., " Urban Research Methods", (rev) Von Nostrand. 1988.
4. Kothari, C. R., and Gaurav Garg. *Research Methodology: Methods and Techniques*. New Delhi: New Age International (P) Limited, Publishers, 2019.

15MARS112	DESIGN SYSTEMS								SEMESTER-I		
Marks	Internal	80	External				120	Total	200	Exam Hours	6
Instruction Hours /week		L	2	T	0	P/S	4	Credits		4	

COURSE OBJECTIVE:

- To understand various design systems
- To Understand the different civilizations in different parts of the world through study of their source,
- To Understand the origin, context, grammar, intent and application in architectural design.
- To Understand the Contemporary design process and relevant case studies
- To Understand & develop the skill of Design thinking as per the Current change in Architectural Style
- To understand the Concept of design Systems by various literature/case studies.

COURSE OUTCOME:

1. Student will be able to understand the various design systems in the Architecture
2. Student will be able to understand the vernacular architecture and its importance
3. Student will Understand the contemporary design process
4. Student will develop the skill of Design thinking as per the Current situation
5. Student will develop the skill of presentation of his ideas by Seminar and presentation
6. Student will be able to envision the futuristic architecture

UNIT-I HISTORIC DESIGN SYSTEMS

Pragmatic, Iconic, Analogic and Canonic systems. Relationship between mathematics and architecture and hierarchies of geometry in design. Design systems through the middle ages to the renaissance period.

UNIT-II VERNACULAR DESIGN SYSTEMS

Vernacular architecture of the world and relevance of the climate in which they have evolved. Enduring nature of the vernacular in contemporary times, De-coding vernacular narratives regarding the cultures they represent.

UNIT-III CONTEMPORARY DESIGN SYSTEMS

Evolution of design systems since the modern period following industrial revolution to the advent of the digital age and representation of design.

UNIT-IV FUTURISTIC DESIGN SYSTEMS

Evolution of futuristic ideas since the 1960s in the field of design. Emerging areas of programming, expert systems and 3-D printing in design. New materials, technologies and bio mimicry- oriented design evolutions of future.

UNIT – V SEMINAR

Seminar on all the design systems -vernacular architecture – futuristic ideas and discussions

SUGGESTED READINGS:

1. Paul Oliver, Encyclopedia of Vernacular Architecture of the World, Cambridge University Press, 1997
2. Bernard Rudofsky, 'Architecture without Architects', MoMA, 1964.
3. Geoffrey Broadbent - Design in Architecture - Architecture and the human sciences - John Wiley & Sons, New York, 1981
4. Francis D.K. Ching et al; A global history of Architecture; John Wiley's sons, 2nd edition 2010
5. Weber.W & Yannas.S, 'Lessons from Vernacular Architecture', Routledge, 2014.
6. Vernacular Architecture – contemporary traditions – Aishwarya Tipnis – TERI

15MARS113	EXHIBITION AND SEMINAR -1								SEMESTER-I		
Marks	Internal	100	External					Total	100	Exam Hours	6
Instruction Hours /week		L		T	0	P/S	3	Credits			2

COURSE OBJECTIVE:

- To comprehend the importance of Seminars
- To understand the Types and methods of Exhibition
- To Understand the method of presentations in International Seminars
- To Understand the method of presentations in National Seminars
- To Undertake responsibilities to conduct a conference & Seminar
- To refer reputed journals/magazines and gain the skill & Importance of good presentation methods.

COURSE OUTCOME:

1. Student will be able to know the method of Seminar events
2. Student will understand the methods of Presentation in International Seminar
3. Student will understand the methods of Presentation in National Seminar
4. Student will be able to prepare and publish journal Articles
5. Student will be able to develop the skill of writing & Presentation in Seminars
6. Student will develop the Skill of Report Writing & Presentation in Exhibitions

UNIT-I to UNIT V

CONTENT

Organizing and participating in Technical Seminars, Exhibitions, Workshops, Conferences related to architecture and allied fields. Publishing papers and articles in reputed magazines and journals. Preparing, editing and publishing reports, dossiers, documents, magazines and portfolios of master's course work.

SUGGESTED READINGS:

1. Knight, A. and Ruddock, L., "Advanced Research Methods in Built Environment", John Wiley & Sons. 2008.
2. Groat, L. and Wang D., "Architectural Research Methods" second edition, John Wiley & Sons. 2013.
3. Gibbs, J. P., "Urban Research Methods", (rev.ed.) Von Nostrand. 1988.
4. Booth, Wayne C., Gregroy G. Colomb, and Joseph M. Williams. 2008. The Craft of Research, 3rd edition. Chicago: University of Chicago Press.
5. Zeisel, J., "Inquiry by Design", Revised edition. New York: Norton, 2006.

15MARS211	RESEARCH AND FIELD STUDIES - II							SEMESTER-II			
Marks	Internal	40	External				60	Total	100	Exam Hours	6
Instruction Hours /week		L	1	T	0	P/S	2	Credits		2	

COURSE OBJECTIVE:

- To learn the importance of research & Field Studies in advanced level
- To understand the Research application in architectural design.
- To understand the different methods and techniques as relevant to the design profession
- To apply the research concepts in evaluation and appraisal of architectural design projects.
- To Analyse the Various methodologies of Field Survey in focus area such as Sustainability, housing etc
- To Develop the skill of preparation of report and Documentation in the focus area

COURSE OUTCOME:

1. Student will understand the methods of research
2. Student will be able to develop the Skill of field study and experimentation
3. Student will understand the research application in the field of Architectural Design
4. Student will understand about the collection of data and Analyse the data
5. Student will develop the skill of documentation of various Survey and Research
6. Student will be able to prepare documents, report writing and publish in journals

UNIT-I RESEARCH METHODS – PART -1

Importance, Purpose and Scope of Research methodology & field studies specific to the focus area. Understanding and Applying Qualitative, Analytical, Interpretative research in Architectural Design

UNIT-II RESEARCH METHODS – PART -2

Importance, Purpose and Scope of Research methodology & Field studies specific to the focus area. Understanding and Applying Quasi- Experimental, Experimental, Simulation and Modelling techniques in the focus area of Architectural Design.

UNIT-III FIELD STUDIES AND EXPERIMENT

Focus area and specialization specific Pilot Studies, Field Surveys and Collection of Samples - Physical, Architectural, Environmental, and Organizational

UNIT-IV FIELD STUDY ANALYSIS

Preparation and Analysis of Data Sheets and Questionnaires. Preparation and Analysis of Data Sheets and Questionnaires. Arriving at conclusions from the Research at Field Studies.

UNIT-V PROJECT REPORT

Arriving at conclusions from the Research at Field Studies. Report Writing and Publications.

SUGGESTED READINGS:

- 1.Knight, A. and Ruddock,L., "Advanced Research Methods in Built Environment", John Wiley & Sons. 2008.
 - 2.Groat, L. and Wang D., "Architectural Research Methods", John Wiley & Sons. 2002.
 - 3.Gibbs, J.P., " Urban Research Methods", (rev.ed.) Von Nostrand. 1988.
 - 4.Kothari, C.R., "Research Methodology- Methods and Techniques", New Age International. 2004.
 - 5.Khanzode, V.V., "Research Methodology -Techniques and Trends", APH Publishing. 1995.
- Books and Magazines/Journals specific to the focus area.

15MARS212	EXHIBITION AND SEMINAR - II							SEMESTER-II	
Marks	Internal	100	External			-	Total	100	Exam Hours
Instruction Hours /week		L		T	0	P/S	3	Credits	
									6
									2

COURSE OBJECTIVE:

- To comprehend the importance of Seminars
- To understand the methods of Exhibition
- To Understand the method of presentations in International Seminars
- To Understand the method of presentations in National Seminars
- To Undertake responsibilities to conduct a conference & Seminar
- To refer reputed journals/magazines and gain the skill & Importance of good presentation methods.

COURSE OUTCOME:

1. Student will be able to know the method of Seminar events
2. Student will understand the methods of Presentation in International Seminar
3. Student will understand the methods of Presentation in National Seminar
4. Student will be able to prepare and publish journal Articles
5. Student will be able to develop the skill of writing & Presentation in Seminars
6. Student will develop the Skill of Report Writing & Presentation in Exhibitions

UNIT-I to UNIT V

CONTENT

Organizing and participating in Technical Seminars, Exhibitions, Workshops, Conferences related to architecture and allied fields. Publishing papers and articles in reputed magazines and journals. Preparing, editing and publishing reports, dossiers, documents, magazines and portfolios of master's course work.

SUGGESTED READINGS:

1. Knight, A. and Ruddock, L., "Advanced Research Methods in Built Environment", John Wiley & Sons. 2008.
2. Groat, L. and Wang D., "Architectural Research Methods" second edition, John Wiley & Sons. 2013.
3. Gibbs, J. P., "Urban Research Methods", (rev.ed.) Von Nostrand. 1988.
4. Booth, Wayne C., Gregroy G. Colomb, and Joseph M. Williams. 2008. The Craft of Research, 3rd edition. Chicago: University of Chicago Press.
5. Zeisel, J., "Inquiry by Design", Revised edition. New York: Norton, 2006.

15MARS213	ADVANCED DESIGN STUDIO – II								SEMESTER-II		
Marks	Internal	160	External				240	Total	400	Exam Hours	6
Instruction Hours /week		L	3	T	0	P/S	9	Credits		7	

COURSE OBJECTIVE:

- To learn the importance of and undertake the design process at advanced level t
- To learn the design aspects and considerations in large scale projects
- To understand the Urban Reformation and Renewal systems through Design
- To Categorize the Physiological and Psychological aspects in advanced level of Design
- I** • To understand the various design systems, guidelines and considerations as undertaken in the research and field studies and apply them in architectural design.
- To understand the future need for the city & design accordingly

COURSE OUTCOME:

1. Student will be able to design complex structures with advanced level planning principles
2. Student will be able to understand & design as per the Sustainability aspects
3. Student will be able to Design large scale projects
4. Student will understand the Physiological and Psychological aspects in advanced level of Design
5. Student will be able to give a wholesome product of design in all aspects
6. Student can give futuristic proposals for the urban Architecture.

UNIT-I to UNIT - V

CONTENT:

Design of advanced and complex built environments having strong linkages with the urban scale and focusing on architectural, spatial, landscape, environmental, structure, services and technology features.

Examples: Campus Design, Urban Centers, Mixed Use Development etc.

SUGGESTED READINGS:

1. Agkathidis, A., Hudert, M. and Schillig, G., "Form Defining Strategies: Experimenting Architectural Design", Wasmuth International. 2007.
2. Ching, F.D.K., "Architecture: Form, Space and Order", 3rd ed., John Wiley & Sons. 2007.
3. Morgan, C.L., "Jean Nouvel - The Elements of Architecture", Thames and Hudson. 1998.
4. Neufert, P., "Architects' Data", 3rd ed., Blackwell Science. 2000.

Any other books, documents and standards relevant to the focus area

15MARS311	DISSERTATION -1								SEMESTER-III		
Marks	Internal	160	External				240	Total	400	Exam Hours	6
Instruction Hours /week		L	2	T	0	P/S	10	Credits		7	

COURSE OBJECTIVE:

- To Learn and show advanced understanding and application of the knowledge of Architectural design
- To Understand the Sustainability & housing in general or to any specific focus area through the culmination in a dissertation.
- I • To develop the skill of Unique research-based application through various Literature study
- To develop knowledge by own experimentation as per the chosen topic
- To do an in- depth study and analysis for a chosen topic of interest
- To present a Wholesome Technical Study report based on Experimentation and Research

COURSE OUTCOME:

1. Student will be able to identify the thrust area of research
2. Student will understand and develop his own dissertation topic with research -oriented study
3. Student will know the basis of experimentation, methods and applications
4. Student will understand the core ideas of Application design through the experimental research
5. Student will be able to analyse and synthesize a defined context with in-depth study and scientific approach
6. Student will be able to provide innovative and practical solutions for the future architecture.

UNIT-I to UNIT - V

CONTENT:

Identification of Dissertation Topic and Area, Hypothesis Formulation, Objectives and Methodology. Importance, Purpose and Scope of the Dissertation in architecture in terms of design, technology, environment, economic and behavioral areas.

Related Research, Literature and Field Studies. Submission of the above in report form.

SUGGESTED READINGS:

1. Knight, A. and Ruddock, L., "Advanced Research Methods in Built Environment", John Wiley & Sons. 2008.
2. Groat, L. and Wang D., "Architectural Research Methods", John Wiley & Sons. 2002.
3. Kothari, C.R., "Research Methodology- Methods and Techniques", New Age International. 2004.
4. Wayne C Booth, Joseph M Williams, Gregory G. Colomb, 'The Craft of Research', 2nd Edition, University of Chicago Press, 2008.
5. Ranjith Kumar, 'Research Methodology- A Step by Step Guide for Beginners', Sage Publications, 2005.
6. John W Creswell, 'Research Design: Qualitative, Quantitative and Mixed Methods Approaches', Sage Publications, 2002.

15MARS411	DISSERTATION -II							SEMESTER-IV			
Marks	Internal	320	External				480	Total	800	Exam Hours	6
Instruction Hours /week		L	16	T	0	P/S	20	Credits		16	

COURSE OBJECTIVE:

- To Learn and show advanced understanding and application of the knowledge of Architectural design
- To Understand the Sustainability & housing in general or to any specific focus area through the culmination in a dissertation.
- To develop the skill of Unique research-based application through various Literature study
- To develop knowledge by own experimentation as per the chosen topic
- To do an in- depth study and analysis for a chosen topic of interest
- To present a Design report based on previous Experimentation and Research

COURSE OUTCOME:

1. Student will be able to identify the thrust area of research
2. Student will understand and develop his own dissertation topic with research - oriented study
3. Student will know the basis of experimentation, methods and applications
4. Student will understand the core ideas of Application design through the experimental research
5. Student will be able to analyse and synthesize a defined context with in-depth study and scientific approach
6. Student will be able to provide innovative and practical solutions for the future architecture by Design

UNIT-I to UNIT - V

CONTENT:

Identification of Dissertation Topic and Area, Hypothesis Formulation, Objectives and Methodology. Importance, Purpose and Scope of the Dissertation in architecture in terms of design, technology, environment, economic and behavioral areas.

Related Research, Literature and Field Studies. Submission of the above in report form.

SUGGESTED READINGS:

1. Knight, A. and Ruddock, L., "Advanced Research Methods in Built Environment", John Wiley & Sons. 2008.
2. Groat, L. and Wang D., "Architectural Research Methods", John Wiley & Sons. 2002.

LIST OF ELECTIVES		
FOCUS AREA: SUSTAINABLE ARCHITECTURE		
Elective 1	Introduction to Sustainable Architecture	15MARESS1
Elective2	Sustainable Trends and Theories	15MARESS2
Elective 3	Sustainable Design Strategies	15MARESS3
Elective 4	Sustainable Building Systems	15MARESS4
Elective 5	Building Performance Analysis	15MARESS5
FOCUS AREA: HOUSING DESIGN		
Elective 1	Introduction to Housing Design	15MARESH1
Elective2	Housing Policies and Schemes	15MARESH2
Elective 3	Sustainable Housing	15MARESH3
Elective 4	Community Participation in Housing	15MARESH4
Elective 5	Special Types of Housing	15MARESH5
FOCUS AREA: LANDSCAPE DESIGN		
Elective 1	Introduction to Landscape Design	15MARESL1
Elective2	Plants and Application	15MARESL2
Elective 3	Site Engineering	15MARESL3
Elective 4	Planting Design	15MARESL4
Elective 5	Advanced Landscape Theories	15MARESL5
FOCUS AREA: MEDICAL ARCHITECTURE		
Elective 1	Introduction to Medical Architecture	15MARESM1
Elective2	Medical Systems and Typologies	15MARESM2
Elective 3	Hospital Standards	15MARESM3
Elective 4	Management of Healthcare Facilities	15MARESM4
Elective 5	Special Types of Healthcare	15MARESM5
FOCUS AREA: STRUCTURES IN ARCHITECTURE		
Elective 1	Advanced Concrete Technology	15MARESA1
Elective2	Advanced Structural Analysis I	15MARESA2
Elective 3	Advanced Structural Analysis II	15MARESA3
Elective 4	Design of Concrete Structures	15MARESA4
Elective 5	Steel Structures	15MARESA5
FOCUS AREA: RETAIL AND EXHIBITION DESIGN		
Elective 1	Introduction to Retail and Exhibition Design	15MARESR1
Elective2	Visual Merchandising	15MARESR2
Elective 3	Animation for Design	15MARESR3
Elective 4	Exhibition Construction and Detailing	15MARESR4
Elective 5	Interactive Experience Design	15MARESR5

15MARESS1	INTRODUCTION TO SUSTAINABLE ARCHITECTURE							SEMESTER-I			
Marks	Internal	80	External				120	Total	200	Exam Hours	6
Instruction Hours /week		L	2	T	0	P/S	4	Credits		4	

COURSE OBJECTIVE:

- To orient towards the United nations Sustainable Development goals
- To Understand the environmental impact of building as well as to safeguard the environment
- To Understand the Sustainable Design principles in Architecture
- To Understand the Climatic impacts due to urbanization and ways for mitigation.
- To Understand & work for the health & well- being of the building and its occupants.
- To Understand the broad guideline of various green Building Systems

COURSE OUTCOME:

1. Student will understand the fundamentals of sustainable concepts and applications
2. Student will understand the Site planning principles and its applications
3. Student will understand the climate and its impacts in indoor thermal comfort
4. Student will understand the energy usage ratio and the effective steps of conservation and utilization of energy.
5. Student will understand the Green building Rating Systems in a Broader context
6. Student will understand the Effective methods to propose green buildings through Case Studies

UNIT-I INTRODUCTION TO SUSTAINABILITY

Sustainable Design Concepts and Strategies - Energy and Environment in Architecture, Green building systems, Energy efficiency. Relevant Literature/Case studies.

UNIT-II SUSTAINABLE DESIGN PRINCIPLES

Sustainable Design Principles - Site planning, Resources, Built form, Climate responsiveness, Energy usage, Occupant behaviour and comfort. Relevant Literature/Case studies.

UNIT-III CLIMATE AND BUILT ENVIRONMENT

Climate and Built Form - Overview of Passive techniques for Day lighting, Ventilation, Solar Control and Thermal Comfort. Modelling methods and simulation for assessing building performance. Relevant Literature/Case studies.

UNIT-IV ENERGY AND ITS IMPACTS

Zero Energy and Zero Waste - Methods to achieve zero energy and zero waste in buildings, life cycle assessments and energy audits, renewable energy technologies, integrated energy design. Relevant Literature/Case studies and codes such as ECBC.

UNIT-V GREEN BUILDING SYSTEMS

Green buildings systems - GRIHA, LEED, BREEAM, GREEN STAR. Comparative Studies and analysis, relevance to India.

SUGGESTED READINGS:

- 1.Mili Majunder, Teri - Energy - Efficient Bldg in India - Thomson Press, New Delhi. 2001.
- 2.Arvind Krishnan & Others - Climate Responsive Architecture, Tata McGraw -Hill New Delhi. 2001.
- 3.Ralph M. Lebens - Passive Solar Architecture in Europe - 2, Architecture Press, London. 1983.
- 4.Charles. J. Kibert, 'Sustainable Construction' John Wiley and sons Inc, USA. 2004.
- 5.N.D. Kaushika, Energy, Ecology and Environment, Capital Publishing Company, New Delhi. 2006
- 6.GRIHA manuals, TERI press
- 7.Norbert Lechner, "Heating, Cooling, Lighting", John wiley and sons
8. Mark Dekay and G.Z. Brown, "Sun, Wind and Light- Architectural Design Strategies", John Wiley and Sons
9. Szokolay, Koenigsberger, " Manual of Tropical Housing and building" 2014

15MARESS2	SUSTAINABLE TRENDS AND THEORIES								SEMESTER-II		
Marks	Internal	80	External				120	Total	200	Exam Hours	6
Instruction Hours /week		L	2	T	0	P/S	4	Credits		4	

COURSE OBJECTIVE:

- To Understand the various Sustainable Policies & mechanisms
- To Gain in-depth knowledge about vernacular & traditional practices
- To Gain knowledge about biomimicry and applications in building design
- To Gain Knowledge about Adaptive reuse & Urban regeneration
- To Understand about Resource Optimisation – Water Efficiency- Operational procedure
- To familiarize with the historic, contemporary and futuristic trends of sustainable building.

COURSE OUTCOME:

1. Student will be able to understand the policy level mechanisms and design process and product accordingly.
2. Student will understand the vernacular / traditional building types and its applications to the modern context by its systems and materials.
3. Student will understand to use the site in an optimum manner and know about the operational and maintenance practices.
4. Student will gain knowledge about biomimicry and its importance in sustainable design
5. Student will gain knowledge about futuristic design systems and new material applications.
6. Student will Understand about the Adaptive Reuse & urban Generation

UNIT-I POLICY AND REGULATORY MECHANISMS

Sustainable Design: Policies and regulatory mechanisms, Design practices

UNIT-II VERNACULAR AND TRADITIONAL PRACTICES

Sustainable Trends: Vernacular ways of sustainable building, Preservation of the regional and cultural identity, documentation and continuity of vernacular/traditional ways of building and detailing

UNIT-III RESOURCE OPTIMISATION

Sustainable Trends: Contemporary ideas and trends, Optimization Of site potential, Minimization of energy consumption, Protection and conservation of water resources, Use of environmentally friendly materials and products, Provision of a healthy and convenient indoor climate, Optimization of operational and maintenance practices

UNIT-IV DIGITAL APPLICATIONS AND FUTURISTIC APPROACH

Sustainable Trends: Futuristic thoughts and approaches, New materials and technologies, Application of digital technologies

UNIT-V ADAPTIVE REUSE AND URBAN REGENERATION

Sustainable Theories: Biomimicry, Adaptive Reuse, Urban regeneration

SUGGESTED READINGS:

1. Eco-Tech: Sustainable Architecture and High Technology by Slessor© - Thames and Hudson 1997
2. Sustainable Architecture: Low tech houses by Mostaedi (A) – Carles Broto 2002
3. Eco-design: A manual for Ecological Design by Yeang(K) – Wiley Academy 2006
4. O.H. Koenigsberger and others (2014), Manual of Tropical Housing and Building –Part I - Climate design, Orient Longman, Madras, India,
5. “Sun wind and light”- Mark Dekay, G. Z. Brown, Feb 2014

15MARESS3	SUSTAINABLE DESIGN STRATEGIES							SEMESTER-II	
Marks	Internal	80	External			120	Total	200	Exam Hours
Instruction Hours /week	L	2	T	0	P/S	4	Credits		4

COURSE OBJECTIVE:

- To understand the sustainable strategies and its principles in the design.
- To focus on passive means, reduction of active methods in building Function
- To gain a broad understanding of hybrid strategies and Mixed mode building
- To Understand in depth the green building Rating Systems all over India & Abroad
- To Understand the Design Aspects of Daylighting techniques for large scale projects
- To Understand the Design Aspects of heating & Ventilation techniques for large scale projects

COURSE OUTCOME:

1. Student will be able to apply the Sustainable design strategies in architecture, Design and environment
2. Student will be able to give design solutions of Thermal comfort for various climatic locations
3. Student will understand the application of Passive, Active and Hybrid Design strategies.
4. Student will become expertise in terms of green building aspects and applications.
5. Student will understand the in – depth Analysis of Daylighting
6. Student will understand the In- depth analysis of Ventilation technique.

UNIT-I DAYLIGHTING AND VENTILATION STRATEGIES

Sustainable Strategies - Day lighting -WWR – Daylight Factor, Daylight levels – ERC, SC, IRC, Visible light Transmittance – Code compliance – Indian Standards – Lighting Standards. Ventilation – Fenestrations- Methods and calculations – Orientation strategies- Wing walls – Permeable buildings – Stack- Chimney – Cross ventilation etc

UNIT-II SOLAR CONTROL AND SHADING STRATEGIES

Sustainable Strategies - Solar Control -Sun Path – Shading concepts – radiation control – Heat balance – thermal properties of materials- Heat Dissipation – Albedo effect etc. Thermal Comfort – ASHRAE standards, Adaptive comfort model, Operative temperature, Tropical Summer Index, Comfort indices – Shading methods for Indoor thermal Comfort etc

UNIT-III STRATEGIES ASSESMENT BY SIMULATION

Sustainable Strategies - Modelling methods and simulation for assessing building performance – Simulation software – Daylight, Irradiation, Mean radiant temperature calculations etc

UNIT-IV GREEN BUILDING SYSTEM AND RATING- APPLICATIONS

Sustainable Strategies - Green buildings systems such as GRIHA, LEED, ECBC, BREEAM, and GREEN STAR. - Rating systems and applications in Residential, Commercial and Industrial buildings etc

UNIT-V CASE STUDY AND COMPARITIVE STUDIES

Sustainable Strategies - Comparative Studies of the different Case studies of buildings with rating systems and their analysis with relevance to India.

SUGGESTED READINGS:

1. GRIHA, LEED, BREEAM and GREEN STAR manuals.
2. Mark deKay and G. Z. Brown, "Sun Wind and light – Architectural Design Strategies", John Wiley and sons, New York. 2013
3. Norbert Lechner, 'Heating, cooling and Lighting', 2011
4. Edward Allen, "How Buildings Work-The Natural Order of Architecture", Oxford University Press
5. Mili Majumder, Teri - Energy - Efficient Bldg in India - Thomson Press, New Delhi. 2001.
6. Arvind Krishnan & Others - Climate Responsive Architecture, Tata McGraw -Hill New Delhi. 2001.
1. Ralph M. Lebens - Passive Solar Architecture in Europe - 2, Architecture Press, London. 1983.

15MARESS4	SUSTAINABLE BUILDING SYSTEMS								SEMESTER-III		
Marks	Internal	80	External				120	Total	200	Exam Hours	6
Instruction Hours /week		L	2	T	0	P/S	4	Credits		4	

COURSE OBJECTIVE:

- To Understand the low Energy Building Concepts with case studies
- To Understand the Indoor Environmental Quality aspects through survey & Case studies
- To Gain understanding & knowledge about the green Materials
- To learn & provide a comfortable, healthy, and productive environment and landscape with minimal energy and better environmental impact.
- To Gain Understanding about the Smart technologies for the Energy management
- To Gain Understanding & Knowledge about the Energy & Cost Audit

COURSE OUTCOME:

1. Student will be able to gain knowledge and application of low energy building design
2. Student will understand the thermal quality standards and its importance in various countries
3. Student will understand the use of green materials and products for a sustainable future.
4. Student will be able to calculate the energy consumption features and the cost audits.
5. Student will be able to understand the integrated building management systems for a controlled environment.
6. Student will be able to understand the energy and cost audits

UNIT-I LOW ENERGY BUILDING

Sustainable Building - Low energy building design and operation. -types of energy – consumption- renewable/ non-renewable-Hybrid design strategies-

UNIT-II INDOOR ENVIRONMENTAL QUALITY

Indoor Environment - Quality and Standards, Indoor Air Quality-indoor thermal comfort- levels – activity analysis- carbon emissions etc

UNIT-III GREEN MATERIALS

Building Systems - Green Materials and green Products- Manufacture- reuse- reduce-recycled materials

UNIT-IV SMART TECHNOLOGIES

Building Systems – Smart Materials and systems- Integrated buildings- Energy saving – Automations

UNIT-V ENERGY AND COST AUDITS

Building Services - Energy and Cost audits.

SUGGESTED READINGS:

7. Mili Majunder, Teri - Energy - Efficient Bldg in India - Thomson Press, New Delhi. 2001.
8. Charles. J. Kibert, 'Sustainable Construction' John Wiley and sons Inc, USA. 2004.
1. N.D. Kaushika, Energy, Ecology and Environment, Capital Publishing Company, New Delhi. 2006

15MARESS5	BUILDING PERFORMANCE ANALYSIS								SEMESTER-III		
Marks	Internal	80	External				120	Total	200	Exam Hours	6
Instruction Hours /week		L	2	T	0	P/S	4	Credits			4

COURSE OBJECTIVE:

- To Understand the principles of Sustainable building through Simulation process
- To learn the simulation techniques with digital applications, and to get quantifiable results by usage of various building simulation analysis software.
- To Understand the Effective methods of Daylighting through Simulation
- To Understand the Effective methods of Reduction of Solar Radiation through Simulation
- To Understand the effects of Indoor thermal comfort through Simulation.
- To Understand the Energy performance Index of a Building

COURSE OUTCOME:

1. Student will understand the effects of indoor comfort through software simulation and analysis
2. Student will be able to achieve a quantitative result of thermal analysis by software simulations
3. Student will be able to effectively use the modelling tools and techniques
4. Student will be able to design a building with good thermal comfort with optimum design solutions
5. Student will be able to give quantitative results of Daylighting and Ventilation of a building
6. Student will be able to give an energy performance index of a building.

UNIT-I BUILDING PERFORMANCE-DATA FILES

Building Performance Analysis - Design Optimization and Visualization using Building Information Modelling. - use of Epw file – TMY data extraction – IMD files

UNIT-II DAYLIGHTING, IRRADIATION AND WIND ANALYSIS

Building Performance Analysis - Daylighting, Shading and Ventilation.

UNIT-III ENERGY ANALYSIS

Building Performance Analysis - Whole building energy analysis.

UNIT-IV MODELLING TOOLS

Building Performance Analysis - Modelling Tools and Techniques.

UNIT-V SIMULATION TOOLS

Building Performance Analysis - Simulation Tools and Techniques.

Suggested software: CLIMATE CONSULTANT, HEED, SBEED, OPAQUE, ECOTECH, SKETCHUP – OPEN STUDIO, OPTIVENT, ENERGY PLUS, DAYSIM -RADIANCE, COOLVENT, RHINO-GRASSHOPPER-LADY BUG, DIVA, DRAGONFLY, SEFAIRA, IES-VE, VELUX and recent software.

SUGGESTED READINGS:

7. Autodesk Manuals for BIM tools such as CAD, REVIT, ECOTECH
8. Rhino tutorials
9. Sefaira tutorials
10. Climate consultant Tutorials
11. IES tutorials
12. Computational fluid Dynamics – Tutorials

15MARESH1	INTRODUCTION TO HOUSING DESIGN							SEMESTER-I		
Marks	Internal	80	External			120	Total	200	Exam Hours	6
Instruction Hours /week		L	2	T	0	P/S	4	Credits		4

COURSE OBJECTIVE:

- To Gain Knowledge about the Housing Typologies all over the world
- To Understand the principles of Community living & Neighbourhood
- To Understand the social, economic, environmental, and psychological implications of housing process and products.
- The goal is to familiarize with housing as a process and a product in the context of the individual, the family, and the community.
- To introduce various stakeholders involved in the housing scenario.
- To Understand about the Housing Finance

COURSE OUTCOME:

1. Student will be able to gain knowledge about housing typologies
2. Student will understand about the theories and concepts of community and Neighbourhood
3. Student will understand about the emerging trends in housing
4. Student will understand about the housing finance schemes and management
5. Student will understand the relation of housing and real estate management in the global and local scenario.
6. Student will Understand the Basis of Housing Demand all over the world

UNIT-I HOUSING TYPOLGY

Housing typologies - Identification of stakeholders, roles responsibilities of various stakeholders, classification of various typologies.

UNIT-II COMMUNITY AND NEIGHBOURHOOD

Community and neighborhood - Theories and concepts, Understanding the scale of housing.

UNIT-III CONTEMPORARY HOUSING

Architectural styles and preferences - Trends in contemporary housing types, greater role for the architect in housing.

UNIT-IV HOUSING FINANCE

Housing finance - Economic consideration and feasibility studies. Various housing financial institutions

UNIT-V HOUSING AND REAL ESTATE

Housing markets - Real estate scenario, Land availability & Acquisition, suburban and rural trends.

SUGGESTED READINGS:

1. Merrill, J.L. (Ed.). Introduction to Housing. Upper Saddle River, NJ:Pearson Prentice Hall. 2006
2. Joseph DeChiara, Julius Panero. Time-Saver Standards for Interior Design and Space Planning, McGraw-Hill Education, 2001
3. Robert E. Stevens, Philip K. Sherwood. How to prepare a feasibility study Prentice-Hall, 1982
4. Susan S. Fainstein, Scott Campbell, Readings in Planning Theory, Wiley, 2011
5. Doris Kohn, J. D. von Pischke, "Housing Finance in Emerging Markets: Connecting Low-Income Groups to Markets"Springer

15MARESH2	HOUSING POLICIES AND SCHEMES								SEMESTER-II		
Marks	Internal	80	External				120	Total	200	Exam Hours	6
Instruction Hours /week		L	2	T	0	P/S	4	Credits		4	

COURSE OBJECTIVE:

- To learn about the housing schemes and policies
- To learn about the Urban housing scenario
- To learn about the Rural housing scenario
- To explore about the stakeholders in the housing
- To gain knowledge about the Central government schemes
- To gain Knowledge about the State Government Schemes

COURSE OUTCOME:

1. Student will learn and gain knowledge the housing schemes and policies
2. Student will gain knowledge about the urban housing scenario
3. Student will gain knowledge about the rural housing scenario
4. Student will gain knowledge about the stakeholders in the housing
5. Student will gain knowledge about the systematic approach for the future housing demand.
6. Student will gain knowledge about the Schemes of Central & State government

UNIT-I HOUSING POLICY IN INDIA

Housing Policy in the India - Government policies on housing, Government Agencies in housing sector, Classification of housing Stock

UNIT-II CENTRAL GOVERNMENT SCHEMES

Central Government Schemes - Identification and review of schemes with housing component.

UNIT-III STATE GOVERNMENT SCHEMES

State government Schemes - Identification and review of schemes with housing component.

UNIT-IV URBAN HOUSING

Urban housing Scenario - Housing scenario, Housing typology, Housing Stock & shortage, Demand and supply, emerging trends.

UNIT-V RURAL HOUSING

Rural Housing Scenario - Housing scenario, Housing typology, Housing Stock & shortage, Demand and supply, emerging trends.

SUGGESTED READINGS:

- 1.National Urban Housing and habitat policy, 2007
- 2.<http://www.tnhb.gov.in/dept.aspx>
- 3.<http://mhupa.gov.in/policies/>
- 4.http://nhb.org.in/Urban_Housing/HousingjDolicies.php

15MARESH3	SUSTAINABLE HOUSING							SEMESTER-II	
Marks	Internal	80	External			120	Total	200	Exam Hours
Instruction Hours /week		L	2	T	0	P/S	4	Credits	4

COURSE OBJECTIVE:

- To Understand about the Site Analysis
- To gain Knowledge about Affordable housing
- To gain Knowledge about Resource Mapping
- To gain Knowledge about advanced level of Building services for housing
- To learn and understand the current interventions in housing sector and propose a sustainable approach towards the housing.
- To learn about High Performance Housing

COURSE OUTCOME:

1. Student will be able to understand the sustainable site planning with site inventory and analysis
2. Student will understand about Affordable housing techniques
3. Student will learn about cost effective techniques in housing.
4. Student will be able to understand the resource mapping
5. Student will be able to understand the advance level building services
6. Student will be able to understand & design high performance houses

UNIT-I SITE ANALYSIS

How Site and climate related issues affect the design parameters and decisions. -Site Inventory and Analysis- Location, Access- Circulation, Traffic, Climate, Sensory – Analysis

UNIT-II AFFORDABLE HOUSING

Exploring the social and economic choices, options and decision of housing, various technologies available.

UNIT-III RESOURCE MAPPING

Identifying the resources (construct techniques & technology, Manpower & Material) predominant in that area. Understanding the Availability and Cost implication of the resources.

UNIT-IV BUILDING SERVICES

An in depth understanding of building system, how houses work as a system.

UNIT- V HIGH PERFORMANCE HOUSING

Exploring the science and technology required to build high performance houses.

SUGGESTED READINGS:

1. Thomas Russ, Site Planning and Design Handbook, Second Edition, McGraw-Hill Education, 2009
2. Joseph De Chiara, Julius Panero Time-Saver Standards for Interior Design and Space Planning, McGraw-Hill Education, 2001.
3. Clayton Bennett Greening Your Home: Sustainable options for every system in your house McGraw-Hill Professional 2008
4. Global Green USA, "Blueprint for Greening Affordable Housing" Island Press. 2007
5. Jessica Kellner Housing Reclaimed: Sustainable Homes for Next to Nothing New Society

15MARESH4	COMMUNITY PARTICIPATION IN HOUSING								SEMESTER-IV		
Marks	Internal	80	External				120	Total	200	Exam Hours	6
Instruction Hours /week		L	2	T	0	P/S	4	Credits		4	

COURSE OBJECTIVE:

- To gain knowledge about the Community participation in Housing
- To gain deep understanding about the Planning Aspects in Housing
- To gain knowledge about the planning process
- To Learn and determine the involvement end users in various stage of housing process across.
- To learn about the community participation for various typologies
- To learn about various best practices in community Housing Through Case studies

COURSE OUTCOME:

1. Student will be able to develop a model for both the end user and the service provider
2. Student will be able to involve in planning in design stages
3. Student will be able to understand the intricacies of Community participation in Housing
4. Student will be able to give design solution for the future community housing
5. Student will gain Knowledge about the best practices in Community housing

UNIT-I COMMUNITY PARTICIPATION PLANNING

Awareness and importance of Community participation, Planning and design stages - Zoning studies, spatial analysis, customs & cultural practices and user -based studies

UNIT-II PLANNING ASPECTS

People-based planning - Identifying & incorporating Aspiration, Needs & Affordability, incorporating special needs of the elderly and children, concept of better living. Degrees of customizations

UNIT-III PLANNING PROCESS

Familiarization with development and planning process of various agencies (Public, Private (Multifamily), Private (single family), Co-operative, NGO), view on community participation, organizational structure, Project and product brief, Identification of beneficiaries.

UNIT-IV COMMUNITY PARTICIPATION MODELS AND CASE STUDIES

Existing models of community participation across various typologies, best practices, Case studies.

UNIT-V TYPOLOGY

Developing models for community participation for various typologies and stages.

SUGGESTED READINGS:

- 1.Sylvia J.T. Jansen, Henny C.C.H. Coolen and Roland W. Goetgeluk, "The Measurement and Analysis of Housing Preference and Choice" Springer 2011
- 2.Andrew Beer, Debbie Faulkner, Chris Paris, Terry Clower - Housing transitions through the life course: Aspirations, needs and policy 2011
- 3.Groat, L. and Wang D., "Architectural Research Methods", John Wiley & Sons. 2002.
- 4.Merrill, J.L. (Ed.). Introduction to Housing. Upper Saddle River, NJ:Pearson Prentice Hall. 2006
- 5.Juilenne Hanson, Decoding Homes and Houses Cambridge University Press 2003

15MARESH	SPECIAL TYPES OF HOUSING							SEMESTER-IV			
Marks	Internal	80	External				120	Total	200	Exam Hours	6
Instruction Hours /week		L	2	T	0	P/S	4	Credits		4	

COURSE OBJECTIVE:

- To gain Knowledge about the Vernacular housing in Chettinad Region
- To Gain knowledge about the Vernacular housing in Hill region
- To understand the Various techniques involved in the vernacular construction
- To understand about Disaster prone areas and methodologies for housing in those regions
- To learn about the influences of social, economic and environmental factors in housing
- Exploring housing typologies which tends to lean more on a aspect more than the rest.

COURSE OUTCOME:

1. Student will learn and understand the Vernacular Architecture of various regions of world
2. Student will learn and understand the Vernacular Architecture of various regions of India
3. Student will learn and understand the Vernacular Architecture of various regions of Tamilnadu
4. Student will learn about design aspects and historical methods of construction which can be adopted for a particular context
5. Student will learn and understand the types of housing in disaster prone areas
Student will be able to Propose the housing trend for the Future

UNIT-I VERNACULAR- CHETTINAD REGION

Vernacular Architecture - Typology 1 - Chettinad region - Social factor influencing Architectural features, Location characteristics, Climatic consideration.

UNIT-II VERNACULAR-HILL REGION

Vernacular Architecture - Typology 2 - Hill region - Social factor influencing Architectural features, Location characteristics, Climatic consideration.

UNIT-III VERNACULAR – DESERT REGION

Vernacular Architecture - Typology 3 - Desert region - Social factor influencing Architectural features, Location characteristics, Climatic consideration.

UNIT-IV HOUSING – DISASTER PRONE AREAS

Housing in Disaster prone areas - Classification of Disaster, Disaster Management Cycle, Housing interventions.

UNIT-V HOUSING – FUTURE CONCEPTS

Future concepts - Development trends, Product categories, material trends, People preferences

SUGGESTED READINGS:

1. Richard Hyde, Bioclimatic Housing: Innovative Designs for Warmer Climates, Earthscan
2. Willie Webber, Simos Yannas (ed.) Lessons from vernacular Architecture, Earthscan
3. Ilay Cooper, Traditional Buildings of India, Thames and Hudson, 1998
4. Monisha Bharadwaj, India Style, Bay Soma Publishing -2003

FACULTY OF PHARMACY

15PYU101

SEMESTER-I

HUMAN ANATOMY, PHYSIOLOGY AND HEALTH EDUCATION– I 3H 3C

Instruction hours/ week: L: 3 T: 0 P: 0

Marks: Internal: 40 External: 60 Total: 100

External Semester Exam: 3 Hours

Course Objectives:

- This subject is designed to impart fundamental knowledge on the structure and functions of the various systems of the human body.
- It also helps in understanding both homeostatic mechanisms.
- It also helps in understanding homeostatic imbalances of various systems of the body.
- Since a medicament, which is produced by the pharmacist, is used in various disease conditions to correct the abnormal functioning of the body systems.
- The basic knowledge of this subject is must for a student to understand how drugs act on various systems/organs in correcting the disease state of organs/systems.
- Thus it becomes a prerequisite subject for the pharmacy course.

Course Outcomes (CO's):

On successful completion of the course the student will

1. Understand the gross morphology, structure and functions of various organs of the human body.
2. Understand the various homeostatic mechanisms and their imbalances.
3. Identify the various tissues and organs of different systems of the human body.
4. Perform the haematological tests like blood cell counts, hemoglobin estimation, bleeding/clotting time, etc and also record blood pressure, ECG, heart rate, pulse and respiratory volume.
5. Appreciate coordinated working pattern of different organs of each system.
6. Appreciate the interlinked mechanisms in the maintenance of normal functioning (homeostasis) of the human body.

Course Content:**UNIT - I**

Introduction to anatomy and physiology and health education with basic terminology- Introduction to Cell physiology-Different type of cells-cell membrane physiology and development of Action potential- impulse transmission-cardiac and skeletal muscles Electrophysiology- Cell stimulation and neuronal functions-Tissues types and characteristics – epithelial –connective-muscular and nervous tissues- **Structure and function of joints and bones** - skeleton- types of joints and their disorders.

UNIT - II

Composition and functions of blood including their disorders- Blood grouping and its significance- the mechanism of coagulation-bleeding and clotting disorders- Formation of lymph and

its composition-Reticular endothelial system and its functions.

UNIT - III

Anatomy and physiology of cardiovascular system—heart- blood circulation – systemic –hepatic – Pulmonary- fetal and circle of Willis- cardiac cycle-heart rate-blood pressure and its regulation- ECG and heart sounds.

UNIT - IV

Gross anatomy of the G.I.T and its physiology with special reference to liver – pancreas and stomach – Digestion – absorption - movements of intestine and disorders of digestive system – constipation - diarrhea and vomiting.

UNIT - V

Anatomy of respiratory tract - mechanism of respiration lung volumes - transport of oxygen and carbon dioxide - Disorders like cyanosis- mountain sickness and Caisson's disease - Cough and sneezing reflex – Structure and functions of kidney and urinary tract – Physiology of urine formation and acid-base balance.

SEMESTER-I

**HUMAN ANATOMY, PHYSIOLOGY AND HEALTH EDUCATION
LABORATORY – I****3H 2C**

Instruction hours/ week: L: 0 T: 0 P: 3

Marks: Internal: 40 External: 60 Total: 100

External Semester Exam: 3 Hours

Course Objectives:

- This subject is designed to impart fundamental knowledge on the structure and functions of the various systems of the human body.
- It also helps in understanding both homeostatic mechanisms.
- It also helps in understanding homeostatic imbalances of various systems of the body.
- Since a medicament, which is produced by the pharmacist, is used in various disease conditions to correct the abnormal functioning of the body systems
- The basic knowledge of this subject is must for a student to understand how drugs act on various systems/organs in correcting the disease state of organs/systems.
- Thus it becomes a prerequisite subject for the pharmacy course.

Course Outcomes (CO's):

On successful completion of the course the student will

1. Understand the gross morphology, structure and functions of various organs of the human body.
2. Understand the various homeostatic mechanisms and their imbalances
3. Identify the various tissues and organs of different systems of the human body.
4. Perform the hematological tests like blood cell counts, hemoglobin estimation, bleeding/clotting time, etc and also record blood pressure, ECG, heart rate, pulse and respiratory volume.
5. Appreciate coordinated working pattern of different organs of each system
6. Appreciate the interlinked mechanisms in the maintenance of normal functioning (homeostasis) of the human body.

Course content:

1. Guidelines in laboratory discipline
2. Introduction to microscope
3. The study of common objects
4. Hemocytometry
5. Estimation of Bleeding time
6. Estimation of Clotting Time
7. Determination of RBC
8. Determination of WBC
9. Estimation of hemoglobin content
10. Determination of ESR

15PYU102

SEMESTER-I

PHARMACEUTICAL INORGANIC CHEMISTRY –I**3H****3C**

Instruction hours/ week: L: 3 T: 0 P: 0

Marks: Internal: 40 External: 60 Total: 100

External Semester Exam: 3 Hours

Course Objectives:

- This subject deals with the monographs of inorganic drugs and pharmaceuticals.
- Study about various role of inorganic compounds which having medicinal use.
- This course deals with the fundamentals of analytical chemistry and principles of electrochemical analysis of drugs.
- This subject deals with the monographs of inorganic drugs and pharmaceuticals.
- This subject deals with general methods of preparation and reactions of some organic compounds.
- Methods of preparation, test for purity, principle involved in the assay, important medicinal uses of some important organic compounds.

Course Outcomes (CO's):

On successful completion of the course the student will

1. Know the sources of impurities and methods to determine the impurities in inorganic drugs and pharmaceuticals.
2. Understand the medicinal and pharmaceutical importance of the inorganic compounds.
3. Write the molecular formula and balance chemical equations and understand the development of periodic table.
4. Understand the importance of quality control.
5. Discuss the nuclear reactions and radioactivity.
6. Elaborate the importance of topical agents.

Course Content:**UNIT – I**

Learning symbols and valency of elements –Writing molecular formula- balancing the equation Pharmacopoeia and monograph - Development of periodic table of the modern concept of atomic structure and its importance.

UNIT – II

Importance of quality control - sources and types of impurities in pharmaceutical substances - Test for purity – Swelling power in bentonite- acid is replacing capacity of antacid- presence of iodates and ferric ion - Limit test – Definition – importance- general procedure for limit test for chloride – sulphate – iron – arsenic - heavy metals and lead - Modified limit test for chloride and

sulphate in potassium permanganate- sodium bicarbonate and sodium salicylate - Modified limit test for chlorinated compounds in sodium benzoate.

UNIT – III

Nuclear reactions –radioactivity–nomenclature – units- detection and measurement of radioactivity- clinical applications and dosage – hazards- precautions and storage- biological effects of radiation - Radio pharmaceutical preparations and standards of radioactive material such as ^{131}I Iodine- ^{58}Co Cobalt - Radio opaque contrast medium-barium sulfates.

Method of preparation- assay- identification test-test for purity- storage conditions- official preparations and uses of inorganic compounds in the following categories:

UNIT – IV

Gastrointestinal agents and related compounds -Acidifiers - Dilute hydrochloric acid – Sodium phosphate – Ammonium chloride - Antacids –Classification- qualities of ideal antacid- side effects – advantages- combination therapy-acid neutralizing capacity-sodium bicarbonate-potassium citrate-aluminium hydroxide gel- dried aluminium hydroxide gel-aluminium phosphate-magnesium hydroxide-light and heavy magnesium trisilicate-lightandheavymagnesiumcarbonate-calciumcarbonate-magaldrate and bismuth carbonate -Adsorbents and protectives - Light kaolin-heavy kaolin and bismuth sub-carbonate –Saline cathartics - Magnesium hydroxide-magnesium sulphate-magnesium carbonate and Sodium phosphate.

UNIT – V

Topical Agents - Protective - Talc-zinc oxide-calamine-zinc stearate-titanium dioxide – kaolin-silicon polymers and Dimethicone - Astringents - Alum- zinc sulfate and zinc chloride - Antimicrobials –Hydrogen peroxide-potassium permanganate-chlorinated lime-iodine-boric acid-silver nitrate-sodium stilbo gluconate –povidone – iodine-selenium sulfide and zinc undecenoate.

SEMESTER-I

PHARMACEUTICAL INORGANIC CHEMISTRY LABORATORY-I 3H 2C

Instruction hours/ week: L: 0 T: 0 P: 3

Marks: Internal: 40 External: 60 Total: 100
External Semester Exam: 3 Hours**Course Objectives:**

- This subject deals with the monographs of inorganic drugs and pharmaceuticals.
- Study about various role of inorganic compounds which having medicinal use.
- This course deals with the fundamentals of analytical chemistry and principles of electrochemical analysis of drugs.
- This subject deals with the monographs of inorganic drugs and pharmaceuticals.
- This subject deals with general methods of preparation and reactions of some organic compounds.
- Methods of preparation, test for purity, principle involved in the assay, important medicinal uses of some important organic compounds.

Course Outcomes (CO's):

On successful completion of the course the student will

1. Know the sources of impurities and methods to determine the impurities in inorganic drugs and pharmaceuticals
2. Understand the medicinal and pharmaceutical importance of the inorganic compounds
3. Write the molecular formula and balance chemical equations and understand the development of periodic table.
4. Understand the importance of quality control.
5. Discuss the nuclear reactions and radioactivity.
6. Elaborate the importance of topical agents.

Course Content:

Limit test for Chloride

1. Limit test for Sulphate
2. Limit test for Iron
3. Preparation of Barium sulphate
4. Preparation of Magnesium sulphate
5. Preparation of Boric acid
6. Test for acid neutralizing capacity of Aluminium hydroxide gel
7. Test for adsorption power in heavy kaolin
8. Systematic qualitative analysis for unknown inorganic mixture (four experiments)

15PYU103

SEMESTER-I

PHARMACEUTICAL ORGANIC CHEMISTRY –I**3H 3C**

Instruction hours/ week: L: 3 T: 0 P: 0

Marks: Internal: 40 External: 60 Total: 100

External Semester Exam: 3 Hours

Course Objectives:

- Illuminate relevance & significance of Organic Chemistry to Pharmaceutical Sciences.
- Review and study fundamentals of Organic Chemistry in identifying and synthesizing organic compounds essentially employed as drugs and pharmaceuticals.
- Clarify basic principles concepts of organic chemistry.
- Explain basic functional groups & IUPAC Nomenclature of Organic Compounds.
- Some important physical properties of organic compounds.
- Methods of preparation, test for purity, principle involved in the assay, important medicinal uses of some important organic compounds.

Course Outcomes (CO's):

On successful completion of the course the student will Explain molecular orbital theory.

1. Understand the strain theories.
2. Describe effect of substituents on the reaction.
3. Elaborate the different mechanisms of reaction.
4. Account for the structure, stability, orientation, reaction and its mechanism of Benzene.
5. Explain different Reaction Intermediates & their application in reaction mechanism.
6. How to name the organic compounds?
7. Explain different reaction involve in the formation of aromatic compounds.

Course Content:**UNIT – I**

Molecular orbital theory- wave equations- molecular orbitals – bonding- anti-bonding orbitals- unshared pair of electrons and hybrid orbitals -Intra-molecular and inter-molecular forces- their effect on solubility-boiling point-melting point-covalent bond-polarity of bond-polarity of molecule-dipole moment- bond dissociation energy- energy of activation- solubility of ionic solutes and non ionic solutes.

UNIT – II

Inductive effect- electromeric effect- mesomeric effect-resonance effect –resonance – tautomerism–conjugation –hyper conjugation-types of bond fission- electrophiles and nucleophiles – IUPAC nomenclature of organic compounds.

UNIT – III

Mechanism of halogenations of alkanes- sp^3 Hybridization in alkanes- stabilities of alkenes- sp^2 Hybridization in alkenes-thermodynamics and kinetics of their actions of methane with a halogen-

Saytzeff's rule-free radical and electrophilic addition on C=C bond- Markownikoff's rule-Peroxide effect – Ozonolysis – mechanism of Diel's - Alder reaction and addition reaction of conjugated dienes.

UNIT – IV

Bayer's strain theory-Limitations of Bayer's strain theory- Coulson and Moffitt's modification- Sachse Mohr's theory (Theory of strainless rings).

UNIT – V

Derivation of structure of benzene-Kekule structure- heat of hydrogenation and stability- C-C bond length in benzene-Resonance structure of benzene-orbital picture-aromatic character-Huckel's rule-Mechanism of electrophilic and nucleophilic aromatic substitution –reaction –Theory of effect of substituent on reactivity and orientation- Preparation and reactions of benzene including Friedel crafts alkylation and acylation.

15PYU113

SEMESTER-I

PHARMACEUTICAL ORGANIC CHEMISTRY LABORATORY-I**3H****3C**

Instruction hours/ week: L: 0 T: 0 P: 3

Marks: Internal: 40 External: 60 Total: 100

External Semester Exam: 3 Hours

Course Objectives:

- Illuminate relevance & significance of Organic Chemistry to Pharmaceutical Sciences.
- Review and study fundamentals of Organic Chemistry in identifying and synthesizing organic compounds essentially employed as drugs and pharmaceuticals.
- Clarify basic principles concepts of organic chemistry
- Explain basic functional groups & IUPAC Nomenclature of Organic Compounds.
- Some important physical properties of organic compounds;
- Methods of preparation, test for purity, principle involved in the assay, important medicinal uses of some important organic compounds.

Course Outcomes (CO's):

On successful completion of the course the student will

1. Explain molecular orbital theory.
2. Understand the strain theories.
3. Describe effect of substituents on the reaction.
4. Elaborate the different mechanisms of reaction.
5. Account for the structure, stability, orientation, reaction and its mechanism of Benzene.
6. Explain different Reaction Intermediates & their application in reaction mechanism.
7. How to name the organic compounds.
8. Explain different reaction involve in the formation of aromatic compounds.

Course Content:

1. Preparation of Salicyclic acid
2. Preparation of Benzamide
3. Preparation of Iodoform
4. Preparation of Phenyl Benzoate
5. Preparation of Dibenzilidene acetone
6. Assay of organic compounds involving acidimetry, alkalimetry (at least 02).
7. Melting point of any synthesized compound
8. Stereo models
9. Systematic qualitative analysis of organic compounds including preparation of derivative (not less than 4 compounds with different functional groups).

15PYU104**SEMESTER-I****PHARMACOGNOSY AND PHYTO CHEMISTRY –I****3H****3C**

Instruction hours/ week: L: 3 T: 0 P: 0

Marks: Internal: 40 External: 60 Total: 100

External Semester Exam: 3 Hours

Course Objectives:

- To learn and understand the cultivation and production of crude drugs and their usefulness.
- This subject has been introduced for the pharmacy course in order to make the student aware of medicinal uses of various naturally occurring drugs its history, sources, distribution, method of cultivation, active constituents, medicinal uses, identification tests, preservation methods, substitutes and adulterants.
- The subject involves the fundamentals of Pharmacognosy like scope, classification of crude drugs, their identification and evaluation, phytochemicals present in them and their medicinal properties.
- Know the techniques in the cultivation and production of crude drugs.
- To know the crude drugs, their uses and chemical nature.

Course Outcomes (CO's):

On successful completion of the course the student will

1. Understand basic concepts of Pharmacognosy and their usefulness.
2. Know the History, Present status, Future scope, Development of Pharmacognosy.
3. Understand the classification of crude drugs.
4. Demonstrate the principles and advances in the cultivation and production of drugs.
5. Understand the Different methods of adulteration of crude drugs and evaluation methods.
6. Explain the detailed study of crude drugs like source, cultivation, collection, preparation, storage, diagnostic characters (Macroscopic & Microscopic techniques applied) constituents, chemical tests, substitutes, adulterants & uses.

Course Content:**UNIT – I**

Definition-History-Present status-Future scope-Development of Pharmacognosy.

UNIT – II

Alphabetical –Biological –Chemical –Pharmacological –Taxonomical- Chemotaxonomical and Serotaxonomical classification of crude drugs.

UNIT – III

General principles of cultivation & collection of vegetable drugs of commercial - Significance from wild & cultivated source-Advantage and disadvantages of cultivation-Soil and soil fertility-Factors influencing cultivation of medicinal plants –Processing – storage-and preservation of crude drugs-Study of natural pesticides.

UNIT – IV

Different methods of **adulteration of crude drugs** & their detection by evaluation methods – Introduction – morphological – Microscopical – physical – chemical- biological and spectral analysis of herbal drugs.

UNIT – V

Detailed study of crude drugs with emphasis on source- cultivation- collection- preparation-storage- diagnostic characters (Macroscopic & Microscopic techniques applied) – constituents-chemical tests– substitutes- adulterants & uses of: **Carbohydrates** and their derived products: Agar- Gum Acacia- Gum tragacanth – Honey – Isapgol – pectin – Starch-Tannins: Gambier- Black Catechu – Gall –Myrobalan- Pale catechu and Tannic acid –**Lipids** -Castor oil- Shark liver oil- Wool fat – Beeswax-Neem oil- Cod liver oil and Bran oil –Proteins –Gelatin -Spirullina and soya -**Volatile oils** Mentha – Coriander – Cinnamon – Cassia – Caraway – Dill – Clove – Fennel – Nutmeg – Cardamom- Lemon grass oil – Eucalyptus – Sandalwood- Palmarosa and Citronella–**Saponins** – Liquorice – Ginseng – Dioscorea -**Cardio active sterols** – Digitalis-Squill and Strophanthus – **Steroid**al -Kurchi- Solasodine -**Alkaloidal amines** -Ephedra and Colchicum –**Glycoalkaloids** – Solanum species.

PHARMACOGNOSY AND PHYTO CHEMISTRY LABORATORY –I 3H 2C

Instruction hours/ week: L: 0 T: 0 P: 3

Marks: Internal: 40 External: 60 Total: 100

External Semester Exam: 3 Hours

Course Objectives:

- To learn and understand the cultivation and production of crude drugs and their usefulness.
- This subject has been introduced for the pharmacy course in order to make the student aware of medicinal uses of various naturally occurring drugs its history, sources, distribution, method of cultivation, active constituents, medicinal uses, identification tests, preservation methods, substitutes and adulterants.
- The subject involves the fundamentals of Pharmacognosy like scope, classification of crude drugs, their identification and evaluation, phytochemicals present in them and their medicinal properties.
- Know the techniques in the cultivation and production of crude drugs.
- To know the crude drugs, their uses and chemical nature.

Course Outcomes (CO's):

On successful completion of the course the student will

1. Know the name of crude drugs.
2. Identify the crude drugs by morphological characters.
3. Perform the staining, sectioning of crude drugs.
4. Perform the staining and view the powder characters of crude drugs.
5. Demonstrate macroscopical characters for unorganized crude drugs.
6. Demonstrate chemical tests to identify unorganized crude drugs.

Course Content:

1. Identification of crude drugs listed in theory (entire condition) by Morphological characters.
2. Microscopical studies of some selected drugs:
 - a. Datura – Digitalis – Cinnamon – Clove – Ephedra – Liquorice – Fennel- Coriander.
3. Microscopical studies of some selected powdered drugs of single component or mixture of two components:
 - a. Datura –Cinnamon – Digitalis –Ipecac – Clove – Fennel- Coriander.
4. Identification of unorganized drugs by Morphological characters and chemical tests.

15PYU105

SEMESTER-I

BIOSTATISTICS & COMPUTER APPLICATIONS-I**3H****3C**

Instruction hours/ week: L: 3 T: 0 P: 0

Marks: Internal: 40 External: 60 Total: 100

External Semester Exam: 3 Hours

Course Objectives:

- To learn and understand the computer basics.
- To learn the statistical method of analysis that can apply in the development and use of therapeutic drug.
- This subject deals with the introduction Database, Database Management system.
- This subject deals with the Computer application in clinical studies and use of databases.
- To switch the introduction Database, Database Management system, Computer application in clinical studies and use of data bases.
- To organize, summarize, and display quantitative data.

Course Outcomes (CO's):

On successful completion of the course the student will

1. Able to organize, summarize, and display quantitative data.
2. Comfortable with statistical methods for calculating summary estimates, measures of variability, and confidence intervals
3. Know the various types of application of computers in pharmacy.
4. Know the various types of data bases.
5. Know the various applications of data bases in pharmacy.
6. Swith the introduction Database, Database Management system, Computer application in clinical studies and use of data bases.

Course Content:**UNIT – I**

Application of biostatics in medicine and pharmacy - collection of data - classification and tabulation of statistical data- diagrammatic and graphical representation - measure of central tendency - Mean – Median- mode – geometric Mean.

UNIT – II

Purpose of sampling- methods of sampling- test significance-Null hypothesis and alternative hypothesis- standard errors-one tailed test and two tailed test-T test.

UNIT – III

Correlation analysis- application of correlation analysis- types of correlation-Scatter diagram- karl pearson's correlation coefficient- spearman's rank correlation coefficient.

UNIT – IV

Computer application - Basic computer components of organization- classification of computers-

binary number system conversion- types of memory device - network topology - types of computer networks- internet search engine- computer input and output device – multimedia- MS office package- advantages and application.

UNIT – V

Types of computer software and application - types of operating systems - statistical software tools- DBMS and RDDMS- data abstraction- E- R diagram concept- Client server process- network layers- HTML web pages.

SEMESTER-I

BIOSTATISTICS & COMPUTER APPLICATIONS LABORATORY-I 3H 2C

Instruction hours/ week: L: 0 T: 0 P: 3

Marks: Internal: 40 External: 60 Total: 100

External Semester Exam: 3 Hours

Course Objectives:

- To learn and understand the computer basics.
- To learn the statistical method of analysis that can apply in the development and use of therapeutic drug.
- This subject deals with the introduction Database, Database Management system.
- This subject deals with the Computer application in clinical studies and use of databases.
- To switch the introduction Database, Database Management system, Computer application in clinical studies and use of data bases.
- To organize, summarize, and display quantitative data.

Course Outcomes (CO's):

On successful completion of the course the student will

1. Able to organize, summarize, and display quantitative data.
2. Comfortable with statistical methods for calculating summary estimates, measures of variability, and confidence intervals
3. Know the various types of application of computers in pharmacy.
4. Know the various types of data bases.
5. Know the various applications of data bases in pharmacy.
6. Switch the introduction Database, Database Management system, Computer application in clinical studies and use of data bases.

Course Content:

1. Computer operating systems like MS DOS etc
2. Simple program in C
3. MS office (MS-Word, MS-Excel, M S- power point).

15PYU201

SEMESTER-II

HUMAN ANATOMY, PHYSIOLOGY AND HEALTH EDUCATION-II 3H 3C

Instruction hours/ week: L: 3 T: 0 P: 0

Marks: Internal: 40 External: 60 Total: 100

External Semester Exam: 3 Hours

Course Objectives:

- This subject is designed to impart fundamental knowledge on the structure and functions of the various systems of the human body.
- It also helps in understanding both homeostatic mechanisms.
- It also helps in understanding homeostatic imbalances of various systems of the body.
- Since a medicament, which is produced by the pharmacist, is used in various disease conditions to correct the abnormal functioning of the body systems
- The basic knowledge of this subject is must for a student to understand how drugs act on various systems/organs in correcting the disease state of organs/systems.
- Thus it becomes a prerequisite subject for the pharmacy course.

Course Outcomes (CO's):

On successful completion of the course the student will

1. Understand the gross morphology, structure and functions of various organs of the human body.
2. Understand the various homeostatic mechanisms and their imbalances
3. Identify the various tissues and organs of different systems of the human body.
4. Perform the hematological tests like blood cell counts, hemoglobin estimation, bleeding/clotting time, etc and also record blood pressure, ECG, heart rate, pulse and respiratory volume.
5. Appreciate coordinated working pattern of different organs of each system
6. Appreciate the interlinked mechanisms in the maintenance of normal functioning (homeostasis) of the human body.

Course Content:**UNIT – I**

Endocrine system- Basic anatomy and physiology of pituitary – thyroid – parathyroid-adrenal and pancreatic hormones and disorders of these glands.

UNIT – II

Reproductive system- Structure and functions of male and female reproductive systems -Sex hormones- physiology of menstruation- coitus and fertilization -Spermatogenesis and oogenesis- pregnancy and parturition- oral contraceptives.

UNIT – III

Central Nervous system- Structure and functions of brain and spinal cord –Functions of cerebrum– cerebellum- vital centers of medulla oblongata- cerebral ventricles- cranial nerves and their functions - Reflex arc- cerebrospinal fluid and its functions- meningitis.

UNIT – IV

Autonomic nervous system – Anatomy - physiology and divisions of ANS - Motor and sensory pathways.

UNIT – V

Sense organs- Physiology of vision- audition-olfaction- taste and skin -**Health education and Nutrition-** Concepts of health and disease- Disease causing agents and prevention of disease - Balanced diet-deficiency disorders of various nutrients-their prevention and treatment - **Communicable disease-** The causative agents-modes of transmission and prevention of chicken pox– measles – diphtheria- tuberculosis –malaria – poliomyelitis –filariasis –rabies – tetanus- STD and AIDS - Vaccination schedule - Emergency treatment of shock–snakebite–burns– poisoning- fractures and resuscitation methods -**First Aid.**

SEMESTER-II

**HUMAN ANATOMY, PHYSIOLOGY AND HEALTH EDUCATION
LABORATORY – II****3H 2C**

Instruction hours/ week: L: 0 T: 0 P: 3

Marks: Internal: 40 External: 60 Total: 100

External Semester Exam: 3 Hours

Course Objectives:

- This subject is designed to impart fundamental knowledge on the structure and functions of the various systems of the human body.
- It also helps in understanding both homeostatic mechanisms.
- It also helps in understanding homeostatic imbalances of various systems of the body.
- Since a medicament, which is produced by the pharmacist, is used in various disease conditions to correct the abnormal functioning of the body systems
- The basic knowledge of this subject is must for a student to understand how drugs act on various systems/organs in correcting the disease state of organs/systems.
- Thus it becomes a prerequisite subject for the pharmacy course.

Course Outcomes (CO's):

On successful completion of the course the student will

1. Understand the gross morphology, structure and functions of various organs of the human body.
2. Understand the various homeostatic mechanisms and their imbalances
3. Identify the various tissues and organs of different systems of the human body.
4. Perform the hematological tests like blood cell counts, hemoglobin estimation, bleeding/clotting time, etc and also record blood pressure, ECG, heart rate, pulse and respiratory volume.
5. Appreciate coordinated working pattern of different organs of each system
6. Appreciate the interlinked mechanisms in the maintenance of normal functioning (homeostasis) of the human body.

Course content

1. Determination of blood count
2. Determination of differential leukocyte count
3. Recording of systematic arterial blood pressure
4. Determination of heart rate
5. Identification of tissues
6. Identification of bones
7. Experimental models
8. Health education

SEMESTER-II

PHARMACEUTICAL INORGANIC CHEMISTRY –II**3H****3C**

Instruction hours/ week: L: 3 T: 0 P: 0

Marks: Internal: 40 External: 60 Total: 100

External Semester Exam: 3 Hours

Course Objectives:

- This subject deals with the monographs of inorganic drugs and pharmaceuticals.
- Study about various role of inorganic compounds which having medicinal use.
- This course deals with the fundamentals of analytical chemistry and principles of electrochemical analysis of drugs.
- This subject deals with the monographs of inorganic drugs and pharmaceuticals.
- This subject deals with general methods of preparation and reactions of some organic compounds.
- Methods of preparation, test for purity, principle involved in the assay, important medicinal uses of some important organic compounds.

Course Outcomes (CO's):

On successful completion of the course the student will

1. Know the sources of impurities and methods to determine the impurities in inorganic drugs and pharmaceuticals
2. Understand the medicinal and pharmaceutical importance of the inorganic compounds
3. Write the molecular formula and balance chemical equations and understand the development of periodic table.
4. Understand the importance of quality control.
5. Discuss the nuclear reactions and radioactivity.
6. Elaborate the importance of topical agents.

Course Content**UNIT-I**

Anti-caries Agents - Role of fluorides as anti-caries agents-sodium fluoride –**Dentifrices**-Calcium carbonate - dibasic calcium phosphate-strontium chloride- zincs chloride -**Medicinal Gases** – Oxygen- carbon dioxide – helium- nitrogen and nitrous oxide.

UNIT -II

Major Intra and extra cellular electrolytes- Physiological role of chloride – phosphate – bicarbonate –sodium– potassium-calcium and magnesium-Electrolytes used for replacement therapy - Sodium chloride-potassium chloride-calcium chloride- calcium gluconate- calcium lactate-di basic calcium phosphate- tri basic calcium phosphate -Physiological acid-base balance and its importance – Electrolytes used in the acid –base therapy –Sodium acetate-potassium acetate-sodium bicarbonate-

potassium bicarbonate-sodium citrate-sodium lactate-ammonium chloride – Electrolyte combination therapy- compound sodium chloride solution- sodium chloride injection and oral rehydration salt.

UNIT – III

Essential and Trace ions – Definition - physiological role of iron - copper – zinc – chromium– manganese – molybdenum – selenium-sulphur and iodine – Ferrous fumarate- ferrous gluconate-ferrous sulphate- iron and ammonium citrate -**Official formulation** –Iron dextran injection- strong iodine solution.

UNIT – IV

Pharmaceutical Aids- Sodium bisulphate- sodium metabisulphite –sulphur dioxide –bentonite-magnesium stearate – zinc stearate- aluminium sulphate- sodium carboxymethyl cellulose-sodium formaldehyde sulfoxylate- purified water- water for injection and sterile water for injection.

UNIT – V

Miscellaneous- Sclerosing agents- Hypertonic saline- sodium tetra decyl sulphate– Expectorants – Potassium citrate and potassium iodide – Sedative – Potassium bromide –Antidotes –Sodium nitrite-sodium thiosulphate and charcoal - Respiratory stimulant - Ammonium carbonate.

SEMESTER-II

PHARMACEUTICAL INORGANIC CHEMISTRY LABORATORY-I 3H 2C

Instruction hours/ week: L: 0 T: 0 P: 3

Marks: Internal: 40 External: 60 Total: 100

External Semester Exam: 3 Hours

Course Objectives:

- This subject deals with the monographs of inorganic drugs and pharmaceuticals.
- Study about various role of inorganic compounds which having medicinal use.
- This course deals with the fundamentals of analytical chemistry and principles of electrochemical analysis of drugs.
- This subject deals with the monographs of inorganic drugs and pharmaceuticals.
- This subject deals with general methods of preparation and reactions of some organic compounds.
- Methods of preparation, test for purity, principle involved in the assay, important medicinal uses of some important organic compounds.

Course Outcomes (CO's):

On successful completion of the course the student will

1. Know the sources of impurities and methods to determine the impurities in inorganic drugs and pharmaceuticals
2. Understand the medicinal and pharmaceutical importance of the inorganic compounds
3. Write the molecular formula and balance chemical equations and understand the development of periodic table.
4. Understand the importance of quality control.
5. Discuss the nuclear reactions and radioactivity.
6. Elaborate the importance of topical agents.

Course Content:

1. Modified limit test for chloride in KMnO_4
2. Modified limit test for Sulphate in KMnO_4
3. Modified limit test for chloride in NaHCO_3
4. Modified limit test for Sulphate in NaHCO_3
5. Preparation of Calcium Carbonate
6. Preparation of Zinc Oxide
7. Preparation of Potassium citrate
8. Test for Swelling power of bentonite
9. Test for Presence of iodate in potassium iodide

10. Systematic qualitative salt analysis (4 compounds)

15PYU203

SEMESTER-II

PHARMACEUTICAL ORGANIC CHEMISTRY –II**3H 3C**

Instruction hours/ week: L: 3 T: 0 P: 0

Marks: Internal: 40 External: 60 Total: 100

External Semester Exam: 3 Hours

Course Objectives:

- Illuminate relevance & significance of Organic Chemistry to Pharmaceutical Sciences.
- Review and study fundamentals of Organic Chemistry in identifying and synthesizing organic compounds essentially employed as drugs and pharmaceuticals.
- Clarify basic principles concepts of organic chemistry
- Explain basic functional groups & IUPAC Nomenclature of Organic Compounds.
- Some important physical properties of organic compounds;
- Methods of preparation, test for purity, principle involved in the assay, important medicinal uses of some important organic compounds.

Course Outcomes:

On successful completion of the course the student will

1. Emphasize the synthesis, reactions and uses of Polyaromatic compounds and its derivatives.
2. Describe the structure, nomenclature, preparation and reaction of alkyl/aryl halides.
3. Discuss the physical and chemical properties of alcohol, ether, epoxide and amines.
4. Explain the preparation and test for purity and use of organic compounds.
5. Analyze the reactive intermediates in a reaction.
6. How to name the organic compounds.
7. Explain different reaction involve in the formation of aromatic compounds.

Course Content:**UNIT – I**

Preparation and properties of polyaromatic compounds–Naphthalene –anthracene –phenanthrene –phenylmethane- triphenylmethane and diphenylethane –Preparation- test for purity and medicinal uses of dicophane –gammexene – saccharin- methyl salicylate –phenindione – ethyl biscoumacetate –vanillin –urethane –carbromal- amphetamine and acetanilide.

UNIT – II

General structure – nomenclature- preparation and reaction mechanism of alkyl and aryl halides - (Mechanism of SN₁-SN₂, E1 and E2).

UNIT – III

Alcohols – ethers – epoxides- amines (basicity of amines- influence of substituent on basic property) –aldehydes- ketones- carboxylic acids and functional derivatives of carboxylic acids.

UNIT – IV

Preparation-test for purity and medicinal uses of Chloroform–Iodoform–Mephenesin- Citric acid- Lactic acid- Benzoic acid-Sodium lauryl sulphate and Glycol.

UNIT – V

Reactive intermediates- Carbocations– Carbanions – Carbenes- Free radicals – generation- relative stability- fate and applications - Properties of Alpha (α) and Beta (β) unsaturated carbonyl compounds – Preparation and synthetic utility of aceto-acetic ester-malonic ester- Grignard reagent and diazonium salts.

SEMESTER-II

PHARMACEUTICAL ORGANIC CHEMISTRY LABORATORY-II**3H****3C**

Instruction hours/ week: L: 0 T: 0 P: 3

Marks: Internal: 40 External: 60 Total: 100

External Semester Exam: 3 Hours

Course Objectives:

- Illuminate relevance & significance of Organic Chemistry to Pharmaceutical Sciences.
- Review and study fundamentals of Organic Chemistry in identifying and synthesizing organic compounds essentially employed as drugs and pharmaceuticals.
- Clarify basic principles concepts of organic chemistry
- Explain basic functional groups & IUPAC Nomenclature of Organic Compounds.
- Some important physical properties of organic compounds;
- Methods of preparation, test for purity, principle involved in the assay, important medicinal uses of some important organic compounds.

Course Outcomes(CO's):

On successful completion of the course the student will

1. Determine of melting point and boiling point of organic compounds including mixed melting point technology.
2. Prepare of organic compounds.
3. Systematically qualitative analysis of salt.
4. Account for the structure, stability, orientation, reaction and its mechanism of Benzene.
5. Explain different Reaction Intermediates & their application in reaction mechanism.
6. How to name the organic compounds.
7. Explain different reaction involve in the formation of aromatic compounds.

Course Content:

1. Determination of melting point and boiling point of organic compounds including mixed melting point technology (3 compounds)
2. Preparation of organic compounds (5 compounds)
3. Systematic Qualitative Salt analysis (4 compounds)

PHARMACOGNOSY AND PHYTO CHEMISTRY –II 3H 3C

Instruction hours/ week: L: 3 T:0 P:0

Marks: Internal: 40 External: 60 Total: 100

External Semester Exam: 3 Hours

Course Objectives:

- To learn and understand the cultivation and production of crude drugs and their usefulness.
- This subject has been introduced for the pharmacy course in order to make the student aware of medicinal uses of various naturally occurring drugs its history, sources, distribution, method of cultivation, active constituents, medicinal uses, identification tests, preservation methods, substitutes and adulterants.
- The subject involves the fundamentals of Pharmacognosy like scope, classification of crude drugs, their identification and evaluation, phytochemicals present in them and their medicinal properties.
- Know the techniques in the cultivation and production of crude drugs.
- To know the crude drugs, their uses and chemical nature.

Course Outcomes (CO's) :

On successful completion of the course the student will

1. Explain the detailed study of crude drugs like source, cultivation, collection, preparation, storage, diagnostic characters (Macroscopic & Microscopic techniques) constituents, chemical tests, substitutes, adulterants & uses.
2. Understand the drugs coming under alkaloids and terpenoids.
3. Know the Tumor inhibitors.
4. Explain the Anti-hepatotoxic and oral hypoglycemic agents.
5. Understand Plant fibers used as surgical dressing.
6. Explain the Pharmaceutical aids.

Course Content:**UNIT – I**

Detailed study of crude drugs with emphasis on source – cultivation – collection – preparation – storage- diagnostic characters (Macroscopic & Microscopic techniques applicable) – constituents- chemical tests – substitutes- adulterants & uses of- **Anthraquinone cathartics** –Aloes –Senna- Rhubarb and Cascara -**Pyridine and Piperidine alkaloids** – Areca and Lobelia - **Tropane alkaloids** – Belladonna –Hyoscyamus –Datura –Cocoa -**Quinoline and Isoquinoline alkaloids** –Cinchona- Ipecac and Opium **Indole alkaloids** –Ergot –Rauwolfia –Nuxvomica –Physostigmine –**Imidazole** -Pilocarpus.

UNIT – II

Purines -Tea-Coffee –**Resins** –Colophony –Cannabis –Capsicum- Balsam of Tolu – Benzoin-Balsam of Peru –Asafoetida- Turmeric and Ginger –**Quinazolidine alkaloids** –Adathoda **Terpenes** -Neem-Artemesia.**Others** –Gentian- Saffron –Ashwagandha.

UNIT – III

Tumor inhibitors –Taxol- Vinca and Podophyllum.

UNIT – IV

Anti-hepatotoxic and oral hypoglycemic agents Phyllanthus niruri- Eclipta Alba-Gymnema sylvestre.

UNIT – V

Plant fibers used as surgical dressing –Cotton – Silk – Wool – Nylon – Rayon- Alginate dressing- Gelatin Sponge- Oxidized cellulose - Sutures and ligatures - **Pharmaceutical aid** - Talc- Kaolin- Bentonite and Natural colours.

SEMESTER-II

PHARMACOGNOSY AND PHYTO CHEMISTRY LABORATORY-II 3H 2C

Instruction hours/ week: L: 0 T: 0 P: 3

Marks: Internal: 40 External: 60 Total: 100

External Semester Exam: 3 Hours

Course Objectives:

- To learn and understand the cultivation and production of crude drugs and their usefulness.
- This subject has been introduced for the pharmacy course in order to make the student aware of medicinal uses of various naturally occurring drugs its history, sources, distribution, method of cultivation, active constituents, medicinal uses, identification tests, preservation methods, substitutes and adulterants.
- The subject involves the fundamentals of Pharmacognosy like scope, classification of crude drugs, their identification and evaluation, phytochemicals present in them and their medicinal properties.
- Know the techniques in the cultivation and production of crude drugs.
- To know the crude drugs, their uses and chemical nature.

Course Outcomes (CO's):

On successful completion of the course the student will

1. Perform the staining, sectioning of crude drugs
2. Perform the staining and view the powder characters of crude drugs.
3. Demonstrate the microscopical measurements of cells and cell contents.
4. Perform the leaf constants.
5. Demonstrate Lycopodium spore method.
6. Perform chemical tests to identify pharmaceutically important Phytoconstituents.

Course Content:

1. Microscopical studies of some selected drugs:
Senna –Vinca – Cinchona –Nuxvomica –Ephedra –Rauwolfia –Ipecac –Ginger –Neem-Phyllanthus
2. Microscopical studies of some selected powdered drugs of single component or mixture of two components:
Cinchona- Senna–Rauwolfia –Ipecac –Nuxvomica –Rhubarb –Neem –Phyllanthus- Ginger
3. Quantitative microscopy:
 - ❖ Microscopical measurements of cells and cell contents: Starch grains, calcium oxalate crystals and phloem fibres.

- ❖ Determination of leaf constants i.e., stomatal index, stomatal number, vein islet number, vein termination number and palisade ratio.
- ❖ Lycopodium spore method.

4. To do simple chemical tests to identify the pharmaceutically important phytoconstituents based on the theory.

SEMESTER-II

BIostatISTICS & COMPUTER APPLICATIONS-II**3H****3C**

Instruction hours/ week: L: 3 T: 0 P: 0

Marks: Internal: 40 External: 60 Total: 100

External Semester Exam: 3 Hours

Course Objectives:

- To learn and understand the computer basics.
- To learn the statistical method of analysis that can apply in the development and use of therapeutic drug.
- This subject deals with the introduction Database, Database Management system.
- This subject deals with the Computer application in clinical studies and use of databases.
- To switch the introduction Database, Database Management system, Computer application in clinical studies and use of data bases.
- To organize, summarize, and display quantitative data.

Course Outcomes (CO's):

On successful completion of the course the student will

1. Able to organize, summarize, and display quantitative data.
2. Comfortable with statistical methods for calculating summary estimates, measures of variability, and confidence intervals
3. Know the various types of application of computers in pharmacy.
4. Know the various types of data bases.
5. Know the various applications of data bases in pharmacy.
6. Swith the introduction Database, Database Management system, Computer application in clinical studies and use of data bases.

Course Content:**UNIT – I****Biostatistics** – Dispersion - Theory of sampling -Statistical inference.**UNIT – II**

Regression and correlation -Probabilities.

UNIT – III**Computer Packages-** MS Office -MS Word-MS Excel MS Power Point - Advantages and use.**UNIT – IV****Introduction to Computer Networks** – Definition - LAN- WAN – Advantages – Internet-Worldwide Web.

UNIT – V

Computer Graphics – Definition – display devices – graphical input and output devices – multimedia–definition and application.

15PYU301

SEMESTER-III

PHYSICAL PHARMACEUTICS-I**3H****3C**

Instruction hours/ week: L: 3 T: 0 P: 0

Marks: Internal: 40 External: 60 Total: 100

External Semester Exam: 3 Hours

Course Objectives:

- Physical pharmaceutics is a fundamental course that leads to proper understanding of subsequent courses in Pharmaceutics.
- It integrates knowledge of mathematics, physics and chemistry and applies them to the pharmaceutical dosage form development.
- It focuses on the theories behind the phenomena needed for dosage form design.
- Enables the pharmacist to make rational decisions on scientific basis concerning the art and technology of solutions, suspensions, emulsions, etc.
- The course deals with the various physical and physicochemical properties, and principles involved in dosage forms/formulations.
- Theory and practical components of the subject help the student to get a better insight into various areas of formulation research and development, and stability studies of pharmaceutical dosage forms.

Course Outcomes (CO's):

On successful completion of the course the student will

1. Exploit the historical background of pharmacy industry.
2. Recognize about various Pharmacopoeias like IP, BP, USP
3. Acquire the basics of physical pharmaceutics.
4. Interpret about diffusion, dissolution and particle properties.
5. Demonstrate the applications of micromeritics in pharmaceutical industry.
6. Enable the pharmacist to make rational decisions on scientific basis concerning the art and technology of solutions, suspensions, emulsions.

Course Content:**UNIT-I**

Historical back ground and development of profession of pharmacy industry and organization - Pharmacy as a career – Pharmacopoeias - Introduction to IP – BP - USP and extra pharmacopoeia - Salient features of Indian Pharmacopoeia.

UNIT-II

Diffusion – definition – Fick's law - steady state diffusion – principles of diffusion involved in biological systems - **Dissolution** – definition – rate of dissolution – theories of dissolution - factors affecting rate of dissolution - Noyes Whitney equation.

UNIT-III

Colloids– definition – types of colloids – preparation of colloids – purification - dialysis – electrodialysis – ultrafiltration – stabilization of colloids – solubilization – optical properties – electrical properties –kinetic properties.

UNIT-IV

Coarse dispersion– definition - **Suspension** – definition – preparation – settling of suspension – physical stability – evaluation of suspension - **Emulsion** – definition – types of emulsion – theories involved –instabilities of emulsion – microemulsion – multiple emulsions.

UNIT-V

Micromeritics– definition – particle shape and size distribution – methods of determining particle size – microscopic method –sieve method – sedimentation technique – particle volume measurement – coulter counter method - shape - surface area and derived properties of powders.

SEMESTER-III

PHYSICAL PHARMACEUTICS LABORATORY- I

3H 2C

Instruction hours/ week: L: 0 T: 0 P: 3

Marks: Internal: 40 External: 60 Total: 100

External Semester Exam: 3 Hours

Course Objectives:

- Physical pharmaceutics is a fundamental course that leads to proper understanding of subsequent courses in Pharmaceutics.
- It integrates knowledge of mathematics, physics and chemistry and applies them to the pharmaceutical dosage form development.
- It focuses on the theories behind the phenomena needed for dosage form design.
- Enables the pharmacist to make rational decisions on scientific basis concerning the art and technology of solutions, suspensions, emulsions, etc.
- The course deals with the various physical and physicochemical properties, and principles involved in dosage forms/formulations.
- Theory and practical components of the subject help the student to get a better insight into various areas of formulation research and development, and stability studies of pharmaceutical dosage forms.

Course Outcomes (CO's):

On successful completion of the course the student will

1. Understand the physicochemical parameters of a drug
2. Identify methods to enhance solubility of a new drug moiety
3. Discover the importance of stability in pharmaceutical preparations
4. Demonstrate the powder properties and effect of Glidants in powder flow
5. Interpret about diffusion, dissolution and particle properties.
6. Demonstrate the applications of micromeritics in pharmaceutical industry
7. Enable the pharmacist to make rational decisions on scientific basis concerning the art and technology of solutions, suspensions, emulsions

Course content:

1. Determination of particle size and particle size distribution using microscope.
2. Determination of particle size distribution using sieve method.
3. Determination of powder properties,
 - a) Density
 - b) Porosity
4. Determination of powder properties,
 - a) Compressibility
 - b) Angle of repose
5. Determination of effect of glidants or lubricants on angle of repose.
6. Preparation of emulsion.
7. Determination of globule size of emulsions

8. Preparation of various types of suspensions
9. Determination of suspension sedimentation parameters.
10. Experiment on preparation of colloids.

15PYU302

SEMESTER-III

ADVANCED PHARMACEUTICAL ORGANIC CHEMISTRY-I**4H****4C**

Instruction hours/ week: L: 3 T: 1 P: 0

Marks: Internal: 40 External: 60 Total: 100

External Semester Exam: 3 Hours

Course Objectives:

- Illuminate relevance & significance of Organic Chemistry to Pharmaceutical Sciences.
- Review and study fundamentals of Organic Chemistry in identifying and synthesizing organic compounds essentially employed as drugs and pharmaceuticals.
- Clarify basic principles concepts of organic chemistry
- Explain basic functional groups & IUPAC Nomenclature of Organic Compounds.
- Some important physical properties of organic compounds;
- Methods of preparation, test for purity, principle involved in the assay, important medicinal uses of some important organic compounds.

Course Outcomes:

On successful completion of the course the student will

1. Write the structure, name, type of isomerism of the organic compound.
2. Write the reaction, name the reaction and understand orientation of reactions.
3. Understand the stereo chemical aspects of organic compounds and reactions
4. Account for the stability/reactivity/orientation
5. Emphasize the synthesis, reactions and uses of Heterocyclic compounds
6. Know aspects of organic compounds and reactions.

Course Content:**UNIT I**

Polynuclear hydrocarbons –Synthesis - reactions and medicinal uses of following derivatives
Naphthalene – Phenanthrene - Anthracene - Diphenylmethane and Triphenylmethane.

UNIT II

Reactions of synthetic importance: Catalytic hydrogenation - metal hydride reduction - Clemmensen reduction - MeerweinPonndorfVerley reduction - Birch reduction - Wolff kishner reduction.

UNIT III

Study of name reaction with its mechanism: Beckmanns rearrangement, Claisen-Schmidt Condensation- Oppenauer-oxidation- Dakin reaction- cannizaro reaction- crossed cannizaro reaction- Aldol condensation.

UNIT IV

Detailed Study of Heterocyclic Compounds Including Its Synthesis and Medicinal Uses - Classification and nomenclature of Heterocyclic compounds- Pyrrole- Furan- Thiophene - Relative aromaticity, reactivity, Basicity of pyrrole- Pyrazole- Imidazole- Oxazole- Thiazole.

UNIT V

Detailed Study of Heterocyclic Compounds Including Its Synthesis and Medicinal Uses - Pyridine and its basicity- Quinoline- Isoquinoline- Acridine- Indole- phenothiazine- azepines and Diazepines- Pyrimidine- Purine.

SEMESTER-III

ADVANCED PHARMACEUTICAL ORGANIC CHEMISTRY 3H 2C
LABORATORY- I

Instruction hours/ week: L: 0 T: 0 P: 3

Marks: Internal: 40 External: 60 Total: 100
External Semester Exam: 3 Hours**Course Objectives:**

- Illuminate relevance & significance of Organic Chemistry to Pharmaceutical Sciences.
- Review and study fundamentals of Organic Chemistry in identifying and synthesizing organic compounds essentially employed as drugs and pharmaceuticals.
- Clarify basic principles concepts of organic chemistry
- Explain basic functional groups & IUPAC Nomenclature of Organic Compounds.
- Some important physical properties of organic compounds;
- Methods of preparation, test for purity, principle involved in the assay, important medicinal uses of some important organic compounds.

Course Outcomes (CO's):

On successful completion of the course the student will

1. Quantitatively analyze the organic compounds
2. Determine the qualitative parameters of oil.
3. Prepare homocyclic compounds using basic reactions.
4. Write the structure, name, type of isomerism of the organic compound.
5. Write the reaction, name the reaction and understand orientation of reactions.
6. Understand the stereo chemical aspects of organic compounds and reactions

Course Content:**I. Quantitative determination of following classes of organic compound**

1. Alcohol by acetylation method.
2. Carbonyl compound by hydroxyl amine hydro chloride method.
3. Carboxylic acid by acid base method.
4. Ester by hydrolysis method.

II. Determination of following oil values

1. Acid value.
2. Saponification value.

III. Preparation of homocyclic compounds.

1. Benzanilide/Phenyl benzoate/Acetanilide from Aniline/ Phenol
/Aniline by acylation reaction. (any two)
- 5- Nitro salicylic acid/Meta di nitro benzene from Salicylic acid / Nitro benzene by nitration reaction. (any two)

IV. Preparation of heterocyclic compounds.

1. Benzimidazole from ortho phenylene diamine.
2. 2,3–diphenyl quinoxaline from benzil

SEMESTER-III

BIOCHEMISTRY & BIOMOLECULES - I**3H****3C**

Instruction hours/ week: L: 3 T: 0 P: 0

Marks: Internal: 40 External: 60 Total: 100

External Semester Exam: 3 Hours

Course Objectives:

- Biochemistry deals with complete understanding of the molecular levels of the chemical process associated with living cells.
- The scope of the subject is providing biochemical facts and the principles.
- It is also emphasizing on genetic organization of mammalian genome and hetero & autocatalytic functions of DNA.
- To understand metabolism of nutrient molecules in physiological and pathological conditions.
- To understand the mechanism of drug action and fundamental changes occur in diseases.
- Clinical chemistry deals with the study of chemical aspects of human life in health and illness and the application of chemical laboratory methods to diagnosis, control of treatment, and prevention of diseases.

Course Outcomes (CO's):

On successful completion of the course the student will

1. Understand cell and transport across membrane.
2. Explain the types and importance of biomolecules and bioenergetics
3. Understand the catalytic role of enzymes, importance of enzyme inhibitors in design of new drugs, therapeutic and diagnostic applications of enzymes.
4. Elaborate the biological oxidation emphasizing electron transport chain and oxidative phosphorylation.
5. Understand the metabolism of nutrient molecules in physiological and pathological conditions.
6. Understand the principles of organ functions tests and their clinical significances.

Course Content:**UNIT I**

Introduction to biochemistry - Cell organelles and its biochemical functions - Transport process across the cell membranes.

UNIT II

Bioenergetics - Concept of free energy - determination of free energy from equilibrium constant - Redox potential - **Energy rich compounds** – Definition - classification and Production and biological significance of ATP and cyclic AMP.

UNIT III

Enzymes - Definition – Nomenclature - IUB classification - Properties of enzymes - Factor affecting enzyme activity - Enzyme kinetics (Michaelis plot, Line Weaver Burke plot) - Enzyme inhibitors with examples - Mechanism of enzyme action and theories of enzyme action eg. Allosteric enzymes - Enzyme induction and repression- Isoenzymes and their diagnostic applications - Therapeutic and diagnostic applications of enzymes - Coenzymes –Structure and biochemical role.

UNIT IV

Biological oxidation - Enzymes and co-enzymes involved in Biological oxidation - Electron transport chain (its mechanism and role) - Oxidative phosphorylation (its mechanism) and substrate level phosphorylation - Inhibitors ETC and Uncouplers or inhibition of oxidative phosphorylation.

UNIT V

Carbohydrate metabolism–Definition – classification - chemistry and biological role of carbohydrates - Glycolysis – energetics and significance - Citric acid cycle – energetic - amphibolic nature -anaplerosis and significance - HMP shunt and its significance - Glycogen metabolism (Glycogenolysis and glycogenesis) and its regulation - Gluconeogenesis and its significance - Various shuttle systems and its significance - glycerol – phosphate & malate –aspartate -Uronic acid pathway and its significance - Hormonal regulation of carbohydrate metabolism - Disorders of Carbohydrate metabolism - Diabetes mellitus - glycogen storage diseases.

BIOCHEMISTRY & BIOMOLECULES LABORATORY– I 3H 3C

Instruction hours/ week: L: 0 T: 0 P: 3

Marks: Internal: 40 External: 60 Total: 100

External Semester Exam: 3 Hours

Course Objectives:

- Biochemistry deals with complete understanding of the molecular levels of the chemical process associated with living cells.
- The scope of the subject is providing biochemical facts and the principles.
- It is also emphasizing on genetic organization of mammalian genome and hetero & autocatalytic functions of DNA.
- To understand metabolism of nutrient molecules in physiological and pathological conditions.
- To understand the mechanism of drug action and fundamental changes occur in diseases.
- Clinical chemistry deals with the study of chemical aspects of human life in health and illness and the application of chemical laboratory methods to diagnosis, control of treatment, and prevention of diseases.

Course Outcomes (CO's):

On successful completion of the course the student will

1. Explain molecular orbital theory.
2. Understand the strain theories.
3. Describe effect of substituents on the reaction.
4. Qualitatively analyze the biomolecules.
5. Quantitatively analyze biochemical parameters and their importance in diagnosis of disease.
6. Qualitatively analyze the urine for normal and abnormal constituents.

Course Content:

1. Qualitative analysis of carbohydrates
2. Qualitative analysis of Proteins
3. Determination of Serum Glutamate Oxaloacetate Transaminase
4. Determination of Serum Glutamate Pyruvate Transaminase
5. Determination of blood and urine sugar to assess metabolic function

6. Determination of serum calcium
7. Qualitative analysis of urine for normal constituents
8. Qualitative analysis of urine for abnormal constituents
9. Determination of serum total proteins
10. Determination of blood Creatinine
11. Determination of urine Creatinine
12. Determination of blood urea

SEMESTER-III

TITRIMETRIC METHODS OF PHARMACEUTICAL ANALYSIS 3H 3C

Instruction hours/ week: L: 3 T: 0 P:0

Marks: Internal: 40 External: 60 Total: 100

External Semester Exam: 3 Hours

Course Objectives:

- Titrimetric analysis deals with complete understanding of the various titration methods.
- The scope of the present course is to know the quality, quantity and purity of pharmaceutical products and chemicals.
- Know and understand the various apparatus used in pharmaceutical analysis and their calibrations.
- This course mainly deals with fundamentals of Analytical chemistry and also the study of inorganic pharmaceuticals regarding their monographs and also the course deals with basic knowledge of analysis of various pharmaceuticals.
- Understand the principles and procedures of analysis of drugs and also regarding the application of inorganic pharmaceuticals.
- Know the analysis of the inorganic pharmaceuticals their applications.

Course Outcomes (CO's):

On successful completion of the course the student will

1. To know the quality control and their importance
2. To know the apparatus used in analysis
3. To know the calibration of volumetric apparatus
4. To know the different types of titrations like neutralization, non- aqueous, complexometric, gravimetric, precipitation and reduction oxidation titrations.
5. To know the concept of titrations
6. To know indicators used in various titration methods.

Course Content:**UNIT- I**

Introduction - Importance of quality control- computation of analytical results- significant figure- concept of error – precision – accuracy- standard deviation- normal distribution curve- calibration of volumetric apparatus- titration - concepts and different types of titration.

UNIT- II

Acid-base titrations - Acid-base concepts, Henderson–Hasselbalch equation, theory of indicators, neutralization curves- **Non aqueous titration** -Introduction- Solvents for Non- Aqueous Titrations- Indicators for Non- Aqueous Titrations-Titrations of Weak Base.

UNIT- III

Precipitation titrations -Principles of precipitation titrations- factors affecting solubility of precipitate- Argentimetric titration including, Mohr's method, Volhard's method, Fajan's method and Gay Lussac method - **Complexometric titration** -principle of complexometric titration- types of titrations-endpoint determination-masking and demasking agents.

UNIT- IV

Oxidation Reduction titrations - concept of oxidation reduction titrations-redox reactions-theory of redox titrations-Oxidation reduction curves- Iodometry and Iodimetry- Titrations involving ceric ammonium sulphate and potassium permanganate - **Diazotization titration**- principle-application.

UNIT-V

Gravimetric analysis - Basic concepts - precipitation techniques - various steps involved in gravimetric analysis - **Miscellaneous methods of analysis**- Kjeldahl methods- oxygen flask combustion method-**gasometry**- assay of oxygen, carbon dioxide, nitrous oxide.

SEMESTER-III

TITRIMETRIC METHODS OF PHARMACEUTICAL ANALYSIS**LABORATORY – I****3H****2C**

Instruction hours/ week: L: 0 T: 0 P: 3

Marks: Internal: 40 External: 60 Total: 100

External Semester Exam: 3 Hours

Course Objectives:

- Titrimetric analysis deals with complete understanding of the various titration methods.
- The scope of the present course is to know the quality, quantity and purity of pharmaceutical products and chemicals.
- Know and understand the various apparatus used in pharmaceutical analysis and their calibrations.
- This course mainly deals with fundamentals of Analytical chemistry and also the study of inorganic pharmaceuticals regarding their monographs and also the course deals with basic knowledge of analysis of various pharmaceuticals.
- Understand the principles and procedures of analysis of drugs and also regarding the application of inorganic pharmaceuticals;
- Know the analysis of the inorganic pharmaceuticals their applications.

Course Outcomes (CO's):

On successful completion of the course the student will

1. Understand the quality control and their importance
2. Understand the apparatus used in analysis
3. Perform the calibration of volumetric apparatus
4. Describe the different types of titrations like neutralization, non- aqueous, complexometric, gravimetric, precipitation and reduction oxidation titrations.
5. Discuss the concept of titrations
6. Standardize the analytical weights and calibrate volumetric apparatus

Course Content:

1. Standardization of analytical weights and calibrating of volumetric apparatus
2. Assay of citric acid by alkalimetry
3. Assay of ammonium chloride by alkalimetry
4. Assay of sodium hydroxide by acidimetry
5. Standardization of perchloric acid

6. Assay of copper sulphate by iodometry
7. Assay of calcium gluconate by complexometry
8. Assay of magnesium sulphate by complexometry
9. Assay of hydrogen peroxide by permanganometry
10. Assay of potassium iodide by potassium iodate titration
11. Assay of ferrous sulphate by ceriometry
12. Assay of silver nitrate by precipitation titration

SEMESTER-III

PHARMACEUTICAL TECHNOLOGY-I**3H****3C**

Instruction hours/ week: L: 3 T: 0 P: 0

Marks: Internal: 40 External: 60 Total: 100

External Semester Exam: 3 Hours

Course Objectives:

- This course is designed to impart a fundamental knowledge on the art and science of various machines and their handling in pharmaceutical industry.
- This course focuses on various topics like unit operations, material handling, pharma plant construction, corrosion, industrial pollution etc.
- Enables the pharmacist to make rational decisions on scientific basis concerning the art and technology of pharmaceutical equipments.
- To carry out various test to prevent environmental pollution.
- To appreciate and comprehend significance of plant lay out design for optimum use of resources.
- To appreciate the various preventive methods used for corrosion control in Pharmaceutical industries.

Course Outcomes (CO's):

On successful completion of the course the student will

1. Exploit various unit operations used in Pharmaceutical Industries.
2. Understand the material handling techniques.
3. Appreciate and comprehend significance of plant lay out design for optimum use of resources.
4. Perform various processes involved in pharmaceutical manufacturing process.
5. Appreciate the various preventive methods used for corrosion control in Pharmaceutical Industries.
6. Carry out various tests to prevent environmental pollution.

Course Content:**UNIT I**

Materials of Pharmaceutical Plant Construction - General study of composition – corrosion – resistance - properties and applications of the materials of construction with special reference to stainless steel and glass.

UNIT II

Industrial Hazards and Safety Precautions –Mechanical – Chemical – Electrical - Fire and Dust hazards - Industrial dermatitis - Accident records - **Fluid Flow** -Types of flow - Reynold's number –

Viscosity - Concepts of boundary layer - Basic equation of fluid flow – Valves – Pumps - Flow meters - Manometers and Measurement of flow and pressure.

UNIT III

Filtration and Centrifugation -Theory of filtration - filter aids - filter media - industrial filters including filter press - rotary press - rotary filter - edge filter - Factors affecting filtration - mathematical problems on filtration – optimum- cleaning cycle in batch filters - Principles of centrifugation - industrial centrifugal filters & centrifugal sedimenters.

UNIT IV

Crystallization - Characters of crystals like purity - size - shape - geometry - habit, forms, size and factors affecting them - Solubility curves and calculation of yields - Material and heat balances around Swenson Walker crystalliser - Super saturation theory - its limitations - nucleation mechanism and crystal growth - Study of various types of crystallisers - Caking of crystals and its prevention and numerical problems on yields.

UNIT V

Dehumidification and Humidity Control -Basic concepts – definition - wet bulb and adiabatic saturation temperatures - psychometric chart and measurement of humidity - application of humidity measurement in pharmacy -Equipments for dehumidification operations.

PHYSICAL PHARMACEUTICS - II**SEMESTER-IV****3H 3C**

Instruction hours/ week: L: 3 T:0 P:0

Marks: Internal: 40 External: 60 Total: 100

External Semester Exam: 3 Hours

Course Objectives:

- Physical pharmaceutics is a fundamental course that leads to proper understanding of subsequent courses in Pharmaceutics.
- It integrates knowledge of mathematics, physics and chemistry and applies them to the pharmaceutical dosage form development.
- It focuses on the theories behind the phenomena needed for dosage form design.
- Enables the pharmacist to make rational decisions on scientific basis concerning the art and technology of solutions, suspensions, emulsions, etc.
- The course deals with the various physical and physicochemical properties, and principles involved in dosage forms/formulations.
- Theory and practical components of the subject help the student to get a better insight into various areas of formulation research and development, and stability studies of pharmaceutical dosage forms.

Course Outcomes (CO's):

On successful completion of the course the student will

1. Understand the physicochemical parameters of a drug
2. Identify methods to enhance solubility of a new drug moiety
3. Discover the importance of stability in pharmaceutical preparations
4. Demonstrate the powder properties and effect of Glidants in powder flow
5. Interpret about diffusion, dissolution and particle properties.
6. Demonstrate the applications of micromeritics in pharmaceutical industry
7. Enable the pharmacist to make rational decisions on scientific basis concerning the art and technology of solutions, suspensions, emulsions

Course Content:**UNIT-I**

Kinetics – definition – rate and order of reaction – zero order reactions – first order reactions – second order reactions – determination of orders – factors influencing rate of reaction – decomposition and stabilization study of medicinal agents – accelerated stability studies.

UNIT-II

Interfacial phenomenon – definition – measurement of surface and interfacial tension - surface active agent – hydrophilic lipophilic balance – spreading coefficient – theory of micelle formation – factors influencing critical micelle concentration – electrical properties at interface.

UNIT-III

Rheology – definition – Newtonian and non Newtonian system - flow characteristics – thixotropy – determination of rheological properties – capillary viscometer – falling and rising body apparatus – rotational viscometers – application of rheology in pharmacy.

UNIT-IV

pH, buffer and isotonic solutions - definition – buffer action - pH determination – applications – buffer equation – buffer capacity – factors affecting buffer capacity – buffers in pharmaceutical - biological systems and buffered isotonic solutions.

UNIT-V

Complexation – definition – types of complexes – metal complexes – inorganic complexes – chelates – olefin complexes – aromatic complexes – organic molecular complexes - inclusion complexes – methods of analysis of complexes - Protein binding – definition – binding equilibria.

SEMESTER-IV

PHYSICAL PHARMACEUTICS LABORATORY-II**3H 2C**

Instruction hours/ week: L: 0 T: 0 P: 3

Marks: Internal: 40 External: 60 Total: 100

External Semester Exam: 3 Hours

Course Objectives:

- Physical pharmaceutics is a fundamental course that leads to proper understanding of subsequent courses in Pharmaceutics.
- It integrates knowledge of mathematics, physics and chemistry and applies them to the pharmaceutical dosage form development.
- It focuses on the theories behind the phenomena needed for dosage form design.
- Enables the pharmacist to make rational decisions on scientific basis concerning the art and technology of solutions, suspensions, emulsions, etc.
- The course deals with the various physical and physicochemical properties, and principles involved in dosage forms/formulations.
- Theory and practical components of the subject help the student to get a better insight into various areas of formulation research and development, and stability studies of pharmaceutical dosage forms.

Course Outcomes (CO's):

On successful completion of the course the student will

1. Understand the physicochemical parameters of a drug.
2. Identify methods to enhance solubility of a new drug moiety.
3. Discover the importance of stability in pharmaceutical preparations.
4. Demonstrate the powder properties and effect of Glidants in powder flow.
5. Interpret about diffusion, dissolution and particle properties.
6. Demonstrate the applications of micromeritics in pharmaceutical industry.
7. Enable the pharmacist to make rational decisions on scientific basis concerning the art and technology of solutions, suspensions, emulsions.

Course content:

1. Determination of half life of pseudo first order reaction.
2. Determination of rate constant and order of reaction.
3. Determination of surface tension.
4. Determination of CMC of surfactant.
5. Determination of HLB value
6. Study of rheological properties of various systems using viscometer.
7. Preparation of pharmaceutical buffers.

8. Determination of buffer capacity.
9. Determination of partition coefficient of benzoic acid in benzene and distilled water.
10. Accelerated stability studies.

15PYU402

SEMESTER-IV

**ADVANCED PHARMACEUTICAL ORGANIC
CHEMISTRY-II****4H 4C**

Instruction hours/ week: L: 3 T: 1 P: 0

Marks: Internal: 40 External: 60 Total: 100

External Semester Exam: 3 Hours

Course Objectives:

- Illuminate relevance & significance of Organic Chemistry to Pharmaceutical Sciences.
- Review and study fundamentals of Organic Chemistry in identifying and synthesizing organic compounds essentially employed as drugs and pharmaceuticals.
- Clarify basic principles concepts of organic chemistry
- Explain basic functional groups & IUPAC Nomenclature of Organic Compounds.
- Some important physical properties of organic compounds;
- Methods of preparation, test for purity, principle involved in the assay, important medicinal uses of some important organic compounds.

Course Outcomes (CO's):

On successful completion of the course the student will

1. Study the isomerism of the organic compound
2. Understand the stereo chemical aspects of organic compounds and reactions
3. To study the three dimensional structural formulae of certain compounds.
4. Account for the stability/reactivity/orientation
5. Emphasize the synthesis, reactions and uses of Heterocyclic compounds
6. Know aspects of organic compounds and reactions.

Course Content:**UNIT I**

Study about stereochemistry - Optical isomerism - Optical activity – enantiomerism – diastereoisomerism - meso compounds - Elements of symmetry – chiral – achiral- molecules - DL system of nomenclature of optical isomers - sequence rules - RS system of nomenclature of optical isomers.

UNIT II

Optical isomerism - Reactions of chiral molecules - Racemic modification - resolution of racemic mixture -Asymmetric synthesis – partial – absolute.

UNIT III

Geometrical isomerism - Nomenclature of geometrical isomers (Cis Trans- EZ- Syn Anti system)- Methods of determination of configuration of geometrical isomers- Conformational isomerism in alkanes Cyclopentane - Cyclohexane.

UNIT IV

Stereo isomerism in biphenyl compounds (Atropisomerism) - conditions for optical activity - Stereospecific and stereoselective reactions.

UNIT V

Fats and Oils - Fatty acids – Reactions – Hydrolysis – hydrogenation - saponification and rancidity-of oils - drying oils - **Analytical constants** – Acid value - saponification value - ester value - iodine value - acetyl value - Reichert Meissl (RM) value –significance and principle involved in the determination.

Course Outcomes (CO's):

On successful completion of the course the student will

1. Study the isomerism of the organic compound
2. Understand the stereo chemical aspects of organic compounds and reactions
3. To study the three dimensional structural formulae of certain compounds.
4. Account for the stability/reactivity/orientation
5. Emphasize the synthesis, reactions and uses of Heterocyclic compounds
6. Know aspects of organic compounds and reactions.

Course Content:

- I. Quantitative determination of following classes of organic compounds (2 compounds)
- II .Determination of following oil values (2 compounds)
- III. Preparation of homocyclic compounds.(2 compounds)
- IV. Preparation of heterocyclic compounds. (4 compounds)
- V. Partition coefficient. (2 compounds)

SEMESTER-IV

BIOCHEMISTRY & BIOMOLECULES – II 3H 3C

Instruction hours/ week: L: 3 T: 0 P: 0

Marks: Internal: 40 External: 60 Total: 100

External Semester Exam: 3 Hours

Course Objectives:

- Biochemistry deals with complete understanding of the molecular levels of the chemical process associated with living cells.
- The scope of the subject is providing biochemical facts and the principles.
- It is also emphasizing on genetic organization of mammalian genome and hetero & autocatalytic functions of DNA.
- To understand metabolism of nutrient molecules in physiological and pathological conditions.
- To understand the mechanism of drug action and fundamental changes occur in diseases.
- Clinical chemistry deals with the study of chemical aspects of human life in health and illness and the application of chemical laboratory methods to diagnosis, control of treatment, and prevention of diseases.

Course Outcomes:

On successful completion of the course the student will

1. Understand cell and transport across membrane.
2. Explain the types and importance of biomolecules and bioenergetics
3. Understand the catalytic role of enzymes- importance of enzyme inhibitors in design of new drugs- therapeutic and diagnostic applications of enzymes.
4. Understand the metabolism of nutrient molecules in physiological and pathological conditions.
5. Understand the genetic organization of mammalian genome- functions of DNA and RNA in protein synthesis.
6. Understand the principles of organ functions tests and their clinical significances

Course Content:**UNIT I**

Lipid metabolism – Definition – classification- chemistry and biological role of lipids- β -Oxidation of saturated (Palmitic acid) and unsaturated fatty acids(linolenic acid)-Ketone bodies metabolism (Ketogenesis and ketolysis) ketosis and ketoacidosis d - *De novo* -Biosynthesis of fatty acids

(Palmitic acid)-Metabolism of cholesterol (Biosynthesis and degradation)-Biosynthesis and significance of Phospholipids- Disorders of lipid metabolism – Hypercholesterolemia-atherosclerosis and fatty liver.

UNIT II

Amino acid metabolism – Definition- classification and biological role of amino acids - General reactions of amino acid metabolism - Transamination- deamination & decarboxylation-Urea cycle and its metabolic disorders-Metabolism of sulfur containing amino acids their metabolic disorders- Catabolism of tyrosine – tryptophan- phenylalanine and their metabolic disorders- Synthesis and significance of biological substances – creatine – histamine- 5-hydroxy- Tryptophan (5-HT) – dopamine – noradrenaline – adrenaline-Metabolism of Heme and its disorders Porphyria-as-hyperbilirubinemia and jaundice.

UNIT III

Nucleic acid metabolism – Definition- chemistry and biological role of nucleosides - nucleotides - Biosynthesis of purine and pyrimidine nucleotides-Catabolism of purine and pyrimidine nucleotides - Disorders of nucleotide metabolism - Gout disease.

UNIT IV

Replication and Protein synthesis -Organization of mammalian genome-Structure of DNA and significance as genetic material– RNA – structure- types and significance in protein synthesis-DNA replication- types and details on semi conservative model-Mutation and consequences of mutation-DNA Damage and repair mechanism-Transcription or RNA synthesis-Genetic code-Translation or Protein synthesis and its regulation and inhibition.

UNIT V

Clinical biochemistry-Role of the kidney - routine performed Laboratory tests - serum creatinine-creatinine clearance- serum urea and serum uric acid- Liver functions – Metabolic – synthetic-excretion & detoxification - Tests to evaluate the liver function- Composition and significance of lipoproteins - Lipid profile tests.

- To understand the mechanism of drug action and fundamental changes occur in diseases.
- Clinical chemistry deals with the study of chemical aspects of human life in health and illness and the application of chemical laboratory methods to diagnosis, control of treatment, and prevention of diseases.

Course Outcomes:

On successful completion of the course the student will

1. Explain molecular orbital theory.
2. Understand the strain theories.
3. Describe effect of substituents on the reaction.
4. Qualitatively analyze the biomolecules.
5. Quantitatively analyze biochemical parameters and their importance in diagnosis of disease.
6. Qualitatively analyze the urine for normal and abnormal constituents.

Course Content:

1. Determination of serum cholesterol
2. Determination of serum triglycerides
3. Determination of Salivary amylase activity
4. Study the effect of pH on salivary amylase activity.
5. Study the effect of Temperature on Salivary amylase activity.
6. Study the effect of substrate concentration on salivary amylase activity.

15PYU404**SEMESTER-IV****PHARMACY PRACTICE AND PATHOPHYSIOLOGY 4H 4C**

Instruction hours/ week: L: 3 T: 1 P:0

Marks: Internal: 40 External: 60 Total: 100

External Semester Exam: 3 Hours

Course Objectives:

- This course is designed to impart basic knowledge and skills that are required for the practice of pharmacy in both hospital and community settings.
- To develop practical clinical skills that will enable the student to enhance the quality of life of patients and advance pharmaceutical care in the community setting.
- To understand prescription handling, dispensing of dosage forms and calculation of dosage forms.
- Pathophysiology is the study of causes of diseases and reactions of the body to such disease producing causes.
- This course is designed to impart a thorough knowledge of the relevant aspects of pathology of various conditions with reference to its pharmacological applications, and understanding of basic pathophysiological mechanisms.
- Hence it will not only help to study the syllabus of pathology, but also to get baseline knowledge required to practice medicine safely, confidently, rationally and effectively.

Course Outcomes:

On successful completion of the course the student will

1. Understand the various drug distribution system- BMI & BP
2. Handle the prescriptions.
3. Manage community pharmacies.
4. Understand the elements of pharmaceutical care and provide comprehensive patient care services
5. Understand the concept and practice of the quality use of medicines.
6. Summarize the therapeutic approach for management of various diseases including reference to the latest available evidence.

Course Content:**UNIT I**

Prescription -Parts of prescription- handling of prescription- source of errors in prescription- care required in dispensing procedures including labeling of dispensed products..

UNIT II

Pharmaceutical calculations -Latin terms used in prescription – posology- factors determining doses of drug- calculation of doses for infants- adults and elderly patients - enlarging and reducing recipes- percentage solutions –allegation - alcohol dilution- proof spirit- isotonic solutions.

UNIT III

Dosage form -introduction - classifications of dosage forms - **Principles involved and procedures adopted in dispensing** -Typical prescription like mixtures – emulsions – powders – pastilles – lozenges – pills – lotions – liniments – inhalations – mouthwashes – gargles – douches – paints- sprays and tablet triturates.

UNIT IV

Basic principles of cell injury and adaptation -Causes of cellular injury- Pathogenesis and morphology of cell injury - Intercellular alterations in lipids- proteins and carbohydrates- cellular adaptation- atrophy and hypertrophy.

UNIT V

Basic mechanism involved in the process of inflammation and repair - alteration in vascular permeability and blood flow- migration of WBC's- acute and chronic inflammation and mediators of inflammation - Brief outline of the process of repair.

4. Understand the elements of pharmaceutical care and provide comprehensive patient care services
5. Understand the concept and practice of the quality use of medicines.
6. Summarize the therapeutic approach for management of various diseases including reference to the latest available evidence.

Course Content:

1. Dispensing of prescription falling under the following categories:
 - Syrups
 - Mixtures

- Elixirs
- Emulsions
- Powders
- Mouthwashes
- Gargles
- Lotions

2. Dispensing procedures involving pharmaceutical calculation, dosage calculation for paediatric.

SEMESTER-IV

PHARMACEUTICAL TECHNOLOGY-II**3H****3C**

Instruction hours/ week: L: 3 T: 0 P: 0

Marks: Internal: 40 External: 60 Total: 100

External Semester Exam: 3 Hours

Course Objectives:

- This course is designed to impart a fundamental knowledge on the art and science of various machines and their handling in pharmaceutical industry.
- This course focuses on various topics like unit operations, material handling, pharma plant construction, corrosion, industrial pollution etc.
- Enables the pharmacist to make rational decisions on scientific basis concerning the art and technology of pharmaceutical equipments.
- To carry out various test to prevent environmental pollution.
- To appreciate and comprehend significance of plant lay out design for optimum use of resources.
- To appreciate the various preventive methods used for corrosion control in Pharmaceutical industries.

Course Outcomes (CO's):

On successful completion of the course the student will

1. To know various unit operations used in Pharmaceutical Industries.
2. To understand the material handling techniques.
3. To perform various processes involved in pharmaceutical manufacturing process.
4. To carry out various tests to prevent environmental pollution.
5. To appreciate and comprehend significance of plant lay out design for optimum use of resources.
6. To appreciate the various preventive methods used for corrosion control in Pharmaceutical Industries

Course Content:**UNIT I**

Evaporation -basic concepts of phase equilibria – factors affecting evaporation – evaporators – film evaporators – single effect and multiple effect evaporators - **Heat transfer** - source of heat – mechanism of heat flow – steam as heating source.

UNIT II

Distillation -Raoult'slaw - phase diagrams- volatility - simple steam flash distillation - principles of rectification - method for calculation of number of theoretical plates - Azeotropic and extractive

distillation.

UNIT III

Drying - Moisture content - mechanism of drying - rate of drying - time of drying - calculations - classification - types of dryers - dryers used in pharmaceutical industries - special drying methods - mathematical problems on drying.

UNIT IV

Size reduction and Size separation -Definition - objective of size reduction - factors affecting size reduction - laws governing energy and power requirement of mills - including ball mill - hammer mill - fluid energy mill.

UNIT V

Mixing - definition - solid-solid mixing – mixing process steps – classification of equipments for solid mixing - solid-liquid mixing - mechanism of liquid mixing – mixing vessels or tanks - liquid-liquid mixing – equipments used in mixing.

ADVANCED PHARMACOGNOSY – I**SEMESTER-V****3H 3C**

Instruction hours/ week: L: 3 T:0 P:0

Marks: Internal: 40 External: 60 Total: 100

External Semester Exam: 3 Hours

Course Objectives:

- The department is to acquaint the students with the basic knowledge of the natural products.
- Students engaged in pharmacy and in other health professionals should know the role of natural products in discovery of drugs and their use and application in eradicating ailments.
- The students are given sufficient knowledge to be able to describe the modern methods of extraction and purification of crude drugs.
- To learn and understand the techniques involved in the herbal drug-cosmetic preparation and their Standardization.
- The subject involves the fundamentals of Pharmacognosy like scope, classification of crude drugs, their identification and evaluation, phytochemicals present in them and their medicinal properties.
- To know the techniques in the cultivation and production of crude drugs.

Course Outcomes (CO's):

On successful completion of the course the student will

1. Explain the basic principles of extraction and various modern extraction techniques.
2. Understand the biogenesis of secondary metabolites.
3. Elaborate the plant based industries and institutions involved in work on medicinal and aromatic plants in India.
4. Demonstrate the Industrial production and estimation of Phytoconstituents.
5. Perform the Herbal formulation and standardization.
6. Explain the Nutraceuticals.

Course Content:**UNIT I**

Modern methods of extraction- application of latest techniques like Spectroscopy, types and applications– various types and applications of chromatography, and electrophoresis in the isolation-purification and identification of crude drugs.

UNIT II

Introduction to plant biochemistry with special reference to basic metabolic pathways - Introduction to biogenesis of secondary metabolites like Atropine –Ergotamine-Morphine

and Steroidal glycosides -Study of utilization of radioactive isotopes in the investigation of Biogenetic studies.

UNIT III

A brief account of plant based industries and institutions involved in work on medicinal and aromatic plants in India - Introduction – classification of medicinal plant based industry – production and utilization of medicinal plants and their products in India –manufacturers of herbal formulations manufacturers of standardized herbal extracts, phytoconstituents and essential oils – list of government institution involved in the development of plant based industrial technology.

UNIT IV

Industrial production and estimation of the following phytoconstituents –production – estimations–uses of Forskolin –Sennoside– Artemisinin – Diosgenin-Tropane alkaloids – Curcumin –Rutin –Phyllanthin –Asiaticoside-Andrographolides and Gymnemic acid.

UNIT V

Herbal formulation development and standardization –Preparation-stability testing of Herbal extracts and formulations- **Role of Herbs in Cosmetics** – Hair care preparation–Henna–Amla-Hibiscus – **Skin Care preparation**- Aloe vera–Turmeric-Sandalwood – **Nutraceuticals**

- The subject involves the fundamentals of Pharmacognosy like scope, classification of crude drugs, their identification and evaluation, phytochemicals present in them and their medicinal properties.
- To know the techniques in the cultivation and production of crude drugs.

Course Outcomes (CO's):

On successful completion of the course the student will

1. Describe the isolation of the Phytoconstituents.
2. Prepare the hair care preparation.
3. Prepare the skin care the preparation.
4. Demonstrate the Amino acid by ascending chromatography.
5. Perform the Thin layer chromatography of Curcumin.
6. Understand the isolation and formulation procedure.

Course content:

1. Caffeine – from tea dust
2. Quinine – from Cinchona bark
3. Citric acid – from Lemon.
4. Casein – from Milk.
5. Starch – from Potato
6. Pectin – from Orange peel
7. Curcumin from turmeric
8. Hair care preparation
 - I. Amla
 - II. Hibiscus
9. Skin Care preparation
 - I. Aloe vera

10. Determination of Aminoacid by Ascending chromatography
Thin layer chromatography of curcumin

15PYU502**PHARMACEUTICAL BIOTECHNOLOGY – I****SEMESTER-V****3H 3C**

Instruction hours/ week: L: 3 T: 0 P: 0

Marks: Internal: 40 External: 60 Total: 100
External Semester Exam: 3 Hours**Course Objectives:**

- This paper has been designed to provide the advanced knowledge to the Pharmacy students in valuable areas of advanced Biotechnology.
- To play a crucial role in determining its future use and applications in medicine- drug discovery and in pharmaceutical industry.
- It also emphasize the study of microbiological and biotechnological processes.
- To know modern technology aspects to useful products and to correct the alternative ways to prevent the occurrence and the treatment of disease related to microorganisms and techniques.
- To understand methods of identification- cultivation and preservation of various microorganisms.
- To understand Genetic engineering applications in relation to production of pharmaceuticals.

Course Outcomes (CO's):

On successful completion of the course the student will

1. Know the importance of immunological reactions and preparations of immunological products.
2. Do sterilization of various equipments/products and bacterial sensitivity testing against antibiotics and disinfectants.
3. Know the anatomy, identification, growth factors and sterilization of microorganisms;
4. Know the mode of transmission of disease causing microorganism, symptoms of disease, and treatment aspect;
5. Do estimation of RNA and DNA and there by identifying the source;
6. Do cultivation and identification of the microorganisms in the laboratory;
7. Do identification of diseases by performing the diagnostic tests; and
8. Appreciate the behavior of motility and behavioral characteristics of microorganisms.

Course Content:**UNIT I**

Introduction to Microbiology- Scope of Microbiology- Microbes of Medicinal interest- study of mode of Transmission & treatment of Microbial diseases like Cholera – Typhoid – Tuberculosis – Diphtheria – Tetanus- Syphilis & AIDS –Classification- Morphology and fine structure Bacteria –

Fungi- Viruses -Methods of isolation and identification of bacteria - staining techniques and biochemical reactions - Total & viable counting techniques of bacteria - Growth and cultivation- Their Nutritional requirements -Media-differential enriched selective - Maintenance of lab culture.

UNIT II

Detail study of different methods of sterilization including their merits and Demerits-Detailed study of sterility testing of different pharmaceutical preparations – Disinfectant - study of disinfectant. Factors affecting their action and evaluation of bactericidal & Bacteriostatic -Principles and methods of different microbiological assays including sensitivity testing with references to ciprofloxacin-streptomycin & vitamin B -12.

UNIT III

Genetic organization of Eukaryotes and Prokaryotes - Microbial genetics including transformation – transduction – conjugation- plasmids and transposons - Introduction to Microbial biotransformation- Biotransformation of steroids and production of single cell protein.

UNIT IV

Molecular Biology and Engineering -Study of cloning vectors- restricted endonucleases and DNA ligase -Application of rDNA technology and genetic engineering in the products- **Interferon Vaccines**- hepatitis- B –**Hormones**- Insulin.

UNIT V

Access to Molecular Biology Data Bases-Nucleic Acid Sequences – Genomes- Protein Sequence and Structures – Entrez- Sequence Retrieval System (SRS) - Protein Identification Resource (PIR) - Sequence Alignment- Software's (BLAST- FASTA- CLUSTAL-W)-Construction of Phylogenetic Tree -Protein Structure Prediction- Applications of Bioinformatics.

- To understand methods of identification- cultivation and preservation of various microorganisms.
- To understand Genetic engineering applications in relation to production of pharmaceuticals.

Course Outcomes (CO's):

On successful completion of the course the student will

1. Know the importance of immunological reactions and preparations of immunological products.
2. Do sterilization of various equipments/products and bacterial sensitivity testing against antibiotics and disinfectants.
3. Know the anatomy, identification, growth factors and sterilization of microorganisms;
4. Know the mode of transmission of disease causing microorganism, symptoms of disease, and treatment aspect;
5. Do estimation of RNA and DNA and there by identifying the source;
6. Do cultivation and identification of the microorganisms in the laboratory;
7. Do identification of diseases by performing the diagnostic tests; and
8. Appreciate the behavior of motility and behavioral characteristics of microorganisms.

Course Content:**Microbiology**

1. Study of apparatus used in experimental microbiology.
2. Sterilization techniques – Glasswares- media- Room.
3. Preparation and sterilization of Media.
4. Isolation techniques– Streak plate- Pour plate
5. Staining techniques- Simple staining Gram's staining- Acid fast staining-
6. Spore staining- flagella staining - Capsule staining.

7. Total and viable count of Microorganisms.
8. Motility of the microorganism by Hanging drop method.
9. Sterility testing for Pharmaceutical products.
10. Microbiological assay of antibiotics.

SEMESTER-V

CHEMISTRY OF NATURAL PRODUCTS**3H****3C**

Instruction hours/ week: L: 3 T: 0 P: 0

Marks: Internal: 40 External: 60 Total: 100

External Semester Exam: 3 Hours

Course Objectives:

- This subject is designed to provide detail knowledge about chemistry of medicinal compounds from natural origin and general methods of structural elucidation of such compounds.
- It also emphasizes on isolation, purification and characterization of medicinal compounds from natural origin.
- To know the modern extraction techniques- characterization and identification of the herbal drugs.
- To know the different types of natural compounds and their chemistry and medicinal importance
- Importance of natural compounds as a lead molecules for new drug discovery.
- The main purpose of subject is to impart the students the knowledge of how the secondary metabolites are produced in the crude drugs, how to isolate and identify and produce them industrially.

Course Outcomes (CO's):

On successful completion of the course the student will

1. To know the modern extraction techniques, characterization and identification of the herbal drugs and phytoconstituents.
2. To understand the preparation and development of herbal formulation.
3. To understand the herbal drug interactions.
4. To carryout isolation and identification of phytoconstituents.
5. Know the modern extraction techniques- characterization and identification of the herbal drugs.
6. Know the different types of natural compounds and their chemistry and medicinal importance

Course Content:**UNIT I****Terpenoids** – Classification - chemistry and uses of citral – menthol – thymol – camphor - alpha-terpineol and alpha-pinene**UNIT II****Alkaloids** – Classification - chemistry and pharmacological activity of Atropine and related compounds – Papaverine – Ephedrine**UNIT III****Glycosides** - Basic ring system - nomenclature and stereochemistry of steroid nucleus - Chemistry of Digitoxin – Digoxin – Lanatosides - Diosgenin and Sennosides.

UNIT IV

Vitamins - Chemistry - medicinal and pharmaceutical uses of vitamin A- D- E- K- B₁ - B₂ - B₆ - B₁₂ and Folic acid – **Flavonoids** - Classification and chemistry of hesperidine

UNIT V

Purines - A brief account of chemistry and structural elucidation of uric acid - interrelation between caffeine - theophylline and theobromine.

SEMESTER-V

CHEMISTRY OF NATURAL PRODUCTS LABORATORY 3H 2C

Instruction hours/ week: L: 0 T: 0 P: 3

Marks: Internal: 40 External: 60 Total: 100

External Semester Exam: 3 Hours

Course Objectives:

- This subject is designed to provide detail knowledge about chemistry of medicinal compounds from natural origin and general methods of structural elucidation of such compounds.
- It also emphasizes on isolation, purification and characterization of medicinal compounds from natural origin.
- To know the modern extraction techniques- characterization and identification of the herbal drugs.
- To know the different types of natural compounds and their chemistry and medicinal importance
- Importance of natural compounds as a lead molecules for new drug discovery.
- The main purpose of subject is to impart the students the knowledge of how the secondary metabolites are produced in the crude drugs, how to isolate and identify and produce them industrially.

Course Outcomes:

On successful completion of the course the student will

1. To know the modern extraction techniques, characterization and identification of the herbal drugs and phytoconstituents.
2. To understand the preparation and development of herbal formulation.
3. To understand the herbal drug interactions.
4. To carryout isolation and identification of phytoconstituents.
5. Know the modern extraction techniques- characterization and identification of the herbal drugs.
6. Know the different types of natural compounds and their chemistry and medicinal importance

Course Content:

1. Isolation of active principles from natural sources including volatile oils, terpenoids etc (6).
2. Estimation of number of functional groups in organic compounds (3 compounds)
3. Chromatographic techniques. (3 compounds)

SEMESTER-V

PHARMACOLOGY & THERAPEUTICS –I 3H 3C

Instruction hours/ week: L: 3 T: 1 P: 0

Marks: Internal: 40 External: 60 Total: 100

External Semester Exam: 3 Hours

Course Objectives:

- The main purpose of the subject is to understand what drugs do to the living organisms and how their effects can be applied to therapeutics.
- The subject covers the complete information about the drugs like sources-physicochemical properties- mechanism of action-physiological and biochemical effects (pharmacodynamics) as well as absorption-distribution-metabolism and excretion (pharmacokinetics) along with the adverse effects-clinical uses-interactions-doses-contraindications and routes of administration of different classes of drugs.
- This subject is designed to impart the basic knowledge of preclinical studies in experimental animals including design, conduct and interpretations of results.
- To appreciate the applications of various commonly used laboratory animals.
- To appreciate and demonstrate the various screening methods used in preclinical research.
- To appreciate and demonstrate the importance of biostatistics and research methodology.

Course Outcomes(CO's):

On successful completion of the course the student will

1. Explain the pharmacological actions of different categories of drugs on various systems of the body.
2. Explain the mechanism of drug action at organ system/subcellular/macromolecular levels.
3. Apply the basic pharmacological knowledge in the prevention and treatment of various diseases.
4. Handle the animals and conduct the experiments to observe the effect of drugs from different therapeutic classes and to interpret the results using suitable statistical analysis.
5. Understand the mechanism of drug action and its relevance in the treatment of different infectious diseases.
6. Comprehend the principles of toxicology and treatment of various poisonings.

Course Content:**UNIT I**

General Pharmacology - Introduction to Pharmacology- Definition and various branches of pharmacology – **Pharmacodynamics**-Principles and mechanisms of drug action -Classification of receptors-Signal transduction mechanisms of ligand gated ion channels-G Protein–coupled receptors-Kinase linked receptors and receptors that regulate transcription factors –Drug receptors interactions-combined effects of drugs and factors modifying drug action.

UNIT II

Pharmacokinetics- Detail study of various factors influencing drug absorption- distribution- metabolism and excretion - **Pharmacogenetics**-Adverse drug reactions – Discovery and development of new drugs-Preclinical and clinical studies.

UNIT III

Pharmacology of Peripheral Nervous System – Organization and function of ANS-Neurohumoral transmission – Parasympathomimetics –Parasympatholytics-Sympathomimetics and Sympatholytics.

UNIT IV

Pharmacology of Peripheral Nervous System-Neuromuscular blocking agents and skeletal muscle relaxants (peripheral)-Local anesthetic agents-Drugs used in Myasthenia Gravis.

UNIT V

Drugs acting on Urinary System-Diuretics and anti-diuretics.

PHARMACOLOGY & THERAPEUTICS LABORATORY – I 3H 2C

Instruction hours/ week: L: 0 T: 0 P: 3

Marks: Internal: 40 External: 60 Total: 100

External Semester Exam: 3 Hours

Course Objectives:

- The main purpose of the subject is to understand what drugs do to the living organisms and how their effects can be applied to therapeutics.
- The subject covers the complete information about the drugs like sources-physicochemical properties- mechanism of action-physiological and biochemical effects (pharmacodynamics) as well as absorption-distribution-metabolism and excretion (pharmacokinetics) along with the adverse effects-clinical uses-interactions-doses-contraindications and routes of administration of different classes of drugs.
- This subject is designed to impart the basic knowledge of preclinical studies in experimental animals including design, conduct and interpretations of results.
- To appreciate the applications of various commonly used laboratory animals.
- To appreciate and demonstrate the various screening methods used in preclinical research.
- To appreciate and demonstrate the importance of biostatistics and research methodology.

Course Outcomes (CO's):

On successful completion of the course the student will

1. Explain the pharmacological actions of different categories of drugs on various systems of the body.
2. Explain the mechanism of drug action at organ system/subcellular/macromolecular levels.
3. Apply the basic pharmacological knowledge in the prevention and treatment of various diseases.
4. Handle the animals and conduct the experiments to observe the effect of drugs from different therapeutic classes and to interpret the results using suitable statistical analysis.
5. Understand the mechanism of drug action and its relevance in the treatment of different infectious diseases.
6. Comprehend the principles of toxicology and treatment of various poisonings.

Course Content:

1. Commonly used Apparatus/instruments in experimental pharmacology.
2. Commonly used laboratory animals and their handling.
3. Maintenance of laboratory animals- regulations of animal use and Ethical requirements according to CPCSEA.
4. Some common laboratory techniques: Blood withdrawal –plasma and serum separation-
5. Anesthetics used for animal studies-procedures for rendering animal unconscious and chemical euthanasia.

6. Study of different routes of drugs administration in mice/rats.
7. To study the effect of hepatic microsomal enzyme inhibitors and inducers on the Phenobarbitone sleeping time in mice.
8. Experiments on Central nervous system: Recording of spontaneous motor activity- stereotype activity -anti-catatonic activity-analgesic activity-anti convulsant
9. Local anesthetic activity of drugs by suitable animal model.
10. Effect of autonomic drugs on rabbit's eye.
11. Diuretic activity of drugs in rats.

15PYU505**BIOPHARMACEUTICS & PHARMACOKINETICS****SEMESTER-V****3H 3C**

Instruction hours/ week: L: 3 T: 0 P: 0

Marks: Internal: 40 External: 60 Total: 100

External Semester Exam: 3 Hours

Course Objectives:

- Course enables the student to understand and appreciate the absorption, distribution, metabolism and excretion of drugs and to overcome various incompatibilities.
- This subject places emphasis on the dependence of drug absorption on the physical and chemical nature of drug substances, the effect of dosage form in which it is designed.
- To understand the factors related to the physiologic and pathologic conditions of the subjects to which it is administered.
- This subject is designed to impart knowledge and skills of Biopharmaceutics and pharmacokinetics and their applications in pharmaceutical development, design of dose and dosage regimen and in solving the problems arising there in.
- To know the drug molecule gets absorbed, distributed, metabolized and excreted.
- To know pharmacokinetic parameters.

Course Outcomes (CO's):

On successful completion of the course the student will

1. Know various incompatibilities and to overcome incompatibilities.
2. Understand the basic concepts in biopharmaceutics and pharmacokinetics and their significance.
3. Use of plasma drug concentration-time data to calculate the pharmacokinetic parameters to describe the kinetics of drug absorption, distribution, metabolism, excretion, elimination.
4. To understand the concepts of bioavailability and bioequivalence of drug products and their significance.
5. Understand various pharmacokinetic parameters, their significance & applications.
6. To appreciate the various preventive methods used for corrosion control in Pharmaceutical Industries.
7. Understand various physicochemical properties of drug molecules in the designing the dosage forms.

Course Content:**UNIT-I**

Bio pharmaceutics - definition – introduction- **Absorption** – definition – rate of drug absorption after administration - drug concentration in blood - biological factors in drug absorption - physico-chemical factors - dosage form consideration for gastrointestinal absorption.

UNIT-II

Distribution of drugs - definition - distribution in blood and other fluids - **Biotransformation of drugs** - definition - Phase I and Phase II reactions - Factors affecting biotransformation.

UNIT-III

Excretion of drugs - definition - renal excretion of drugs – glomerular filtration – tubular secretion – tubular reabsorption - factors affecting renal excretion – dialysis and haemoperfusion - non- renal routes of drug excretion.

UNIT-IV

Pharmacokinetics - Compartment models- a brief study of parameters like biological half life - apparent volumes of distribution - renal clearance - total body clearance – absorption - elimination rate constants and significance of the data.

UNIT-V

Bioavailability and bio-equivalency testing - Definitions - dosage forms - dissolution rate and bio-equivalency testing – biopharmaceutical classification system - **Incompatibilities** -definition – physical – chemical - therapeutic incompatibility – reason and correction of incompatibility – role of pharmacist in overcoming incompatibilities.

SEMESTER-V

BIOPHARMACEUTICS & PHARMACOKINETICS LABORATORY 3H 2C

Instruction hours/ week: L: 0 T: 0 P: 3

Marks: Internal: 40 External: 60 Total: 100

External Semester Exam: 3 Hours

Course Objectives:

- Course enables the student to understand and appreciate the absorption, distribution, metabolism and excretion of drugs and to overcome various incompatibilities.
- This subject places emphasis on the dependence of drug absorption on the physical and chemical nature of drug substances, the effect of dosage form in which it is designed.
- To understand the factors related to the physiologic and pathologic conditions of the subjects to which it is administered.
- This subject is designed to impart knowledge and skills of Biopharmaceutics and pharmacokinetics and their applications in pharmaceutical development, design of dose and dosage regimen and in solving the problems arising there in.
- To know the drug molecule gets absorbed, distributed, metabolized and excreted.
- To know pharmacokinetic parameters.

Course Outcomes (CO's):

On successful completion of the course the student will

1. Know various incompatibilities and to overcome incompatibilities.
2. Understand the basic concepts in biopharmaceutics and pharmacokinetics and their significance.
3. Use of plasma drug concentration-time data to calculate the pharmacokinetic parameters to describe the kinetics of drug absorption, distribution, metabolism, excretion, elimination.
4. To understand the concepts of bioavailability and bioequivalence of drug products and their significance.
5. Understand various pharmacokinetic parameters, their significance & applications.
6. To appreciate the various preventive methods used for corrosion control in Pharmaceutical Industries.
7. Understand various physicochemical properties of drug molecules in the designing the dosage forms.

Course Content:

1. Determination of pseudo first order kinetics and half life.
2. Determination of second order kinetics.
3. Dissolution studies of any marketed drug.
4. Improvement of dissolution characteristics of slightly soluble drugs.

5. Protein binding studies of a highly protein bound drug and poorly protein bound drug.
6. Calculation of k_a , k_e ,
7. Calculation of $t_{1/2}$, C_{max} .
8. Calculation of bioavailability from urinary excretion data for drugs.
9. Calculation of bioavailability from systemic circulation data for drugs.
10. Calculation of AUC and bioequivalence from the given data for drugs.

SEMESTER-VI

ADVANCED PHARMACOGNOSY – II**3H****3C**

Instruction hours/ week: L: 3 T: 0 P: 0

Marks: Internal: 40 External: 60 Total: 100

External Semester Exam: 3 Hours

Course Objectives:

- The department is to acquaint the students with the basic knowledge of the natural products.
- Students engaged in pharmacy and in other health professionals should know the role of natural products in discovery of drugs and their use and application in eradicating ailments.
- The students are given sufficient knowledge to be able to describe the modern methods of extraction and purification of crude drugs.
- To learn and understand the techniques involved in the herbal drug-cosmetic preparation and their Standardization.
- The subject involves the fundamentals of Pharmacognosy like scope, classification of crude drugs, their identification and evaluation, phytochemicals present in them and their medicinal properties.
- To know the techniques in the cultivation and production of crude drugs.

Course Outcomes (CO's):

On successful completion of the course the student will

1. Understand the preparation and development of herbal drugs as per GMP guidelines.
2. Explain the plant toxins and their adverse drug reactions.
3. Understand the different types of plant tissue culture.
4. Perform the isolation and purification of enzymes.
5. Understand the preparations and standardization of ayurvedic formulations.
6. Elaborate the Herbal-Drug interaction, Edible Vaccine.

Course Content:**UNIT I**

WHO Guidelines for the assessment of Herbal Medicine and Cosmetics – introduction – standardization involving ash and extractives values – foreign matter – volatile matter – moisture content determination – evaluation – classification of evaluation methods of herbal medicine and cosmetics.

UNIT II

Basic principles involved in the alternative system of medicine viz–Ayurveda–Siddha–Unani and Homeopathy– Preparation and standardization of Ayurvedic formulations – Aristas –Asawas – Ghutika– Churna–Leha and Bhasma.

UNIT III

Plant Toxins and adverse drug reactions – Natural allergens–Hallucinogens- Teratogens - Industrial production and pharmaceutical application of phytoconstituents such as – Sennosides - Cardiac glycosides - Vinca alkaloids - Quinoline alkaloids – Menthol - Citric acid – Podophyllotoxin – Diosgenin - Solasodine, and Tropane alkaloids.

UNIT IV

Plant tissue culture -Historical development- nutritional requirements -growth and their maintenance-applications of plant tissue culture and types of cultures related to cell suspension culture-callus culture-hairy root culture and protoplast culture.

UNIT V

Enzyme Biotechnology - Introduction-general methods of isolation-purification and application of immobilized enzymes – Biological sources-methods of preparation-chemical nature and uses of - Papain-Pepsin- Trypsin- Pancreatin– Asparaginase- urokinase –Herbal-Drug interaction -Edible Vaccine.

- The subject involves the fundamentals of Pharmacognosy like scope, classification of crude drugs, their identification and evaluation, phytochemicals present in them and their medicinal properties.
- To know the techniques in the cultivation and production of crude drugs.

Course Outcomes (CO's):

On successful completion of the course the student will

1. Describe the isolation of the Phytoconstituents.
2. Prepare the hair care preparation.
3. Prepare the skin care the preparation.
4. Demonstrate the Amino acid by ascending chromatography.
5. Perform the Thin layer chromatography of Curcumin.
6. Understand the isolation and formulation procedure.

Course content:

1. Preparation and standardization of Herbal medicine
 - I. Turmeric
 - II. Garlic
2. Preparation and standardization of Herbal cosmetics
 - I. Shampoos
 - II. Creams
 - III. Lipsticks
3. Preparation and standardization of Ayurvedic formulation leghya
4. Demonstration experiment on plant tissue culture
5. Extraction of volatile oils
 - I. Menthol oil
 - II. Coriander oil
 - III. Fennel oil

6. Isolation of a plant enzyme

- I. Papain
- II. Pepsin

PHARMACEUTICAL BIOTECHNOLOGY – II**SEMESTER-VI****3H 3C**

Instruction hours/ week: L: 3 T: 0 P: 0

Marks: Internal: 40 External: 60 Total: 100

External Semester Exam: 3 Hours

Course Objectives:

- This paper has been designed to provide the advanced knowledge to the Pharmacy students in valuable areas of advanced Biotechnology.
- To play a crucial role in determining its future use and applications in medicine- drug discovery and in pharmaceutical industry.
- It also emphasize the study of microbiological and biotechnological processes.
- To know modern technology aspects to useful products and to correct the alternative ways to prevent the occurrence and the treatment of disease related to microorganisms and techniques.
- To understand methods of identification- cultivation and preservation of various microorganisms.
- To understand Genetic engineering applications in relation to production of pharmaceuticals.

Course Outcomes (CO's):

On successful completion of the course the student will

1. Know the importance of immunological reactions and preparations of immunological products.
2. Do sterilization of various equipments/products and bacterial sensitivity testing against antibiotics and disinfectants.
3. Know the anatomy, identification, growth factors and sterilization of microorganisms;
4. Know the mode of transmission of disease causing microorganism, symptoms of disease, and treatment aspect;
5. Do estimation of RNA and DNA and there by identifying the source;
6. Do cultivation and identification of the microorganisms in the laboratory;
7. Do identification of diseases by performing the diagnostic tests; and
8. Appreciate the behavior of motility and behavioral characteristics of microorganisms.

Course Content:**UNIT I**

Bio process technology- Introduction to fermentation technology- study- design and operation of Fermenter -Bioprocess of the following metabolites – Alcohol- Citric acid- Penicillin - Vitamin B12- and Glutamic acid.

UNIT II

Enzyme biotechnology – Introduction- classification and uses -Techniques of immobilization - Application- biosensors and their application.

UNIT III

Immunology and Immune Biotechnology– Introduction- types of Immunity- antigen and haptens- antibodies – antigen- antibody reactions- complementary systems- structure and function of MHC- antigen recognition and presentation – hypersensitivity- Hypersensitivity response-immuno stimulation and suppression and Auto immune disorders –**Immunization** - Definition – types – preparation- standardization and application of official vaccines – containerization- storage conditions and stability of official vaccines -Hybridoma technology.

UNIT IV

Monoclonal antibodies - Introduction- Techniques of production and purification of monoclonal antibodies- Application of monoclonal antibodies -Immuno blotting techniques such ELISA- Western Blot- Southern Blot- Northern blot.

UNIT V

Animal Biotechnology - Introduction to animal tissue culture – characters- general procedure for the maintenance of cell culture- Nutritional requirements- Primary and established cell culture and application of animal tissue culture.

PHARMACEUTICAL BIOTECHNOLOGY LABORATORY-II 3H 2C

Instruction hours/ week: L: 0 T: 0 P: 3

Marks: Internal: 40 External: 60 Total: 100

External Semester Exam: 3 Hours

Course Objectives:

- This paper has been designed to provide the advanced knowledge to the Pharmacy students in valuable areas of advanced Biotechnology.
- To play a crucial role in determining its future use and applications in medicine- drug discovery and in pharmaceutical industry.
- It also emphasize the study of microbiological and biotechnological processes.
- To know modern technology aspects to useful products and to correct the alternative ways to prevent the occurrence and the treatment of disease related to microorganisms and techniques.
- To understand methods of identification- cultivation and preservation of various microorganisms.
- To understand Genetic engineering applications in relation to production of pharmaceuticals.

Course Outcomes (CO's):

On successful completion of the course the student will

1. Know the importance of immunological reactions and preparations of immunological products.
2. Do sterilization of various equipments/products and bacterial sensitivity testing against antibiotics and disinfectants.
3. Know the anatomy, identification, growth factors and sterilization of microorganisms;
4. Know the mode of transmission of disease causing microorganism, symptoms of disease, and treatment aspect;
5. Do estimation of RNA and DNA and there by identifying the source;
6. Do cultivation and identification of the microorganisms in the laboratory;
7. Do identification of diseases by performing the diagnostic tests; and
8. Appreciate the behavior of motility and behavioral characteristics of microorganisms.

Course Content:

1. Production of alcohol and wine by fermentation process.
2. Immobilization techniques – Whole cells- Enzymes
3. Solid media inoculation – streak plate, pour plate.
4. Motility study by hanging drop method.
5. Staining preparation – negative staining.
6. Microbiological assay – well plate method.
7. Biochemical test
8. Determination of minimum inhibitory concentration.

SEMESTER-VI

MEDICINAL CHEMISTRY- I

3H

3C

Instruction hours/ week: L: 3 T: 0 P: 0

Marks: Internal: 40 External: 60 Total: 100

External Semester Exam: 3 Hours

Course Objectives:

- This subject is designed to impart fundamental knowledge on the structure- chemistry and therapeutic value of drugs.
- The subject emphasizes on structure activity relationships of drugs
- To know the importance of physicochemical properties and metabolism of drugs.
- This subject is designed to impart fundamental knowledge on the structure, chemistry and therapeutic value of drugs.
- The subject emphasizes on structure activity relationships of drugs, importance of physicochemical properties and metabolism of drugs.
- The syllabus also emphasizes on chemical synthesis of important drugs under each class.

Course Outcomes:

On successful completion of the course the student will

1. Understand the chemistry of drugs with respect to their pharmacological activity.
2. Understand the drug metabolic pathways- adverse effect and therapeutic value of drugs.
3. Know the structural activity relationship of different class of drugs.
4. Write the chemical synthesis of some drug.
5. Know the Structural Activity Relationship (SAR) of different class of drugs.
6. Write the chemical synthesis of some drugs.

Course Content:

Study of classification - mechanism of action (biochemical and molecular basis) - structure activity relationship including stereo chemical aspects - physiochemical properties and synthesis of selected drugs (only drugs marked with asterisk) on the following categories of drugs.

UNIT I

Drugs acting on Autonomic Nervous System- Neurotransmitters- Sympathomimetic agents-SAR of Sympathomimetic agents-Direct acting-Nor-epinephrine- Epinephrine- Phenylephrine*- Dopamine- Methyldopa- Clonidine*- Salbutamol*- Oxymetazoline and Xylometazoline-**Indirect acting agents:** Hydroxyamphetamine **Adrenergic Antagonists- Alpha adrenergic blockers-**Tolazoline*- Phentolamine*- **-Beta adrenergic blockers:** SAR of beta blockers- Propranolol*- **Cholinergic neurotransmitters-**Biosynthesis and catabolism of acetylcholine-Cholinergic receptors system (muscarinic & nicotinic) and their distribution-**Parasympathomimetic agents-SAR of Parasympathomimetic agents-Direct acting agents:** Acetylcholine- Carbachol*- Pilocarpine- **Indirect acting/Cholinesterase inhibitors (Reversible & Irreversible):** Physostigmine- Neostigmine- Pyridostigmine*- Isofluorophate- **Cholinesterase reactivators:** Pralidoxime chloride- **Cholinergic Blocking agents- SAR of cholinolytic agents-**Solanaceous alkaloids and analogues- -

Ipratropium bromide*. **Synthetic cholinergic blocking agents:** Dicyclomine hydrochloride*- Biperidine hydrochloride- Procyclidine hydrochloride*- Tridihexethyl chloride- **-Ganglionic blocking agents**-Trimethaphan camsylate- mecamlamine-**Neuromuscular blocking agents:** Metocurine Iodide- pancuronium bromide- **Local Anesthetics-** SAR of Local anaesthetics-**Benzoic Acid derivatives**-Cocaine- **Amino Benzoic acid derivatives** Benzocaine*- Butamben- Procaine*- Butacaine- Propoxycaine- Tetracaine- Benoxinate-**Lidocain/Anilide derivatives-** Lignocaine*- Mepivacaine- Prilocaine- Etidocaine- **Miscellaneous-** Dibucaine*

UNIT II

Drugs acting on Central Nervous System - General anesthetics - Inhalation anesthetics- Halothane*- Methoxyflurane*- **Dissociative anesthetics -** Ketamine hydrochloride*- **Sedatives and Hypnotics – Benzodiazepines -**SAR of Benzodiazepines- Chlordiazepoxide*- Diazepam **Barbiturates -**SAR of barbiturates- Barbitol*- Phenobarbital – Mephobarbital –Amobarbital – Butobarbital – Pentobarbital – Secobarbital –**Miscellaneous - Amides & imides –** Glutethimide - **Alcohol & their carbamate derivatives –** Meprobamate-**Aldehyde & their derivatives -** Triclofos sodium*- Paraldehyde.

Skeletal Muscle relaxants – Methocarbamol – **Antipsychotics – Phenothiazines -** SAR of Phenothiazines - Chlorpromazine hydrochloride*- Prochlorperazine maleate*- Trifluoperazine hydrochloride- **Chlorprothixene–** Thiothixene- Loxapine succinate – Clozapine- **Fluorobutero-phenones –** Haloperidol – Droperidol – Risperidone- **Beta amino ketones –**MolindoneHcl– **Benzamides–** Sulpieride.

UNIT III

Drugs acting on Central Nervous System - Anticonvulsants -SAR of Anticonvulsants - mechanism of anticonvulsant action **Hydantoins -**Phenytoin*- Mephenytoin – Ethotoin - **Oxazolindione diones -**Trimethadione*- Paramethadione – **Succinimides –**Phensuximide- Ethosuximide* - **Urea and monoacylureas-** Carbamazepine* - **Benzodiazepines-** Clonazepam**Miscellaneous –**Primidone- Valproic acid* - **CNS stimulants – Analeptics-** Nikethamide*- Caffeine – Theophylline – Theobromine- **Psychomotor stimulants –**Amphetamine- Dextroamphetamine sulphate*- Methamphetamine – Chorphentermine- **MAO inhibitors-** Phenelzine sulphate – Isocarboxazid – Tranlycypromine- Pargyline hydrochloride- **Tricyclic anti-depressants -** Amitriptyline hydrochloride*- Nortriptyline- Imipramine hydrochloride*

UNIT IV

Drugs acting on Cardiovascular System- Anti-anginal- Vasodilators -Amyl nitrite- Nitroglycerin*- Pentaerythritol tetranitrate- Isosorbide dinitrite*- Dipyridamole - **Calcium channel blockers –**Verapamil- Bepridil hydrochloride- Diltiazem hydrochloride – Nifedipine – Amlodipine – Felodipine – Nicardipine – Nimodipine – **Cardiotonics –**Digoxin – Digitoxin - Deslanoside - **Anti-arrhythmic Drugs-** Quinidine sulphate- Procainamide hydrochloride- Disopyramide phosphate*- Phenytoin sodium- Lidocaine hydrochloride- Tocainide hydrochloride Mexiletine hydrochloride- Lorcaïnide hydrochloride- amiodarone and Sotalol - **Anti-hypertensive Agents–** timolol – Captopril – Lisinopril – Enalapril- Benazepril hydrochloride- Quinapril hydrochloride - Methyldopate

hydrochloride* - Clonidine hydrochloride- Guanethidine monosulphate*- Guanabenz acetate- Sodium nitroprusside – Diazoxide – Minoxidil – Reserpine- Hydralazine hydrochloride.

UNIT V

Drugs acting on Cardiovascular System - Diuretics-Carbonic anhydrase inhibitors - Acetazolamide*- Methazolamide – Dichlorphenamide - Thiazides-Chlorthiazide*- Hydrochlorothiazide*- Hydroflumethiazide – Cyclothiazide-Loop diuretics -Furosemide*- Bumetanide- Ethacrynic acid - Potassium sparing Diuretics– spironolactone – Triamterene- Amiloride*- Miscellaneous –Mannitol- and Theophylline-Anti-hyperlipidemic agents – Clofibrate – lovastatin - cholestamine and cholestipol - Coagulant & Anticoagulants – menodione – acetomenadione - Warferin*- phenindione - Oral hypoglycemic agents – tolbutamide – metformin – glipizide – pioglitazone – acarbose - Thyroid & Antithyroid - L-Thyroxine - L-Thyronine – Propylthiouracil - Methimazole.

15PYU613**SEMESTER-VI****MEDICINAL CHEMISTRY LABORATORY– I 3H 2C**

Instruction hours/ week: L: 0 T: 0 P: 3

Marks: Internal: 40 External: 60 Total: 100
External Semester Exam: 3 Hours**Course Objectives:**

- This subject is designed to impart fundamental knowledge on the structure- chemistry and therapeutic value of drugs.
- The subject emphasizes on structure activity relationships of drugs
- To know the importance of physicochemical properties and metabolism of drugs.
- This subject is designed to impart fundamental knowledge on the structure, chemistry and therapeutic value of drugs.
- The subject emphasizes on structure activity relationships of drugs, importance of physicochemical properties and metabolism of drugs.
- The syllabus also emphasizes on chemical synthesis of important drugs under each class.

Course Outcomes:

On successful completion of the course the student will

1. Understand the chemistry of drugs with respect to their pharmacological activity.
2. Understand the drug metabolic pathways- adverse effect and therapeutic value of drugs.
3. Know the structural activity relationship of different class of drugs.
4. Write the chemical synthesis of some drug.
5. Know the Structural Activity Relationship (SAR) of different class of drugs.
6. Write the chemical synthesis of some drugs.

Course Content:

- I. Preparation of medicinally important compounds or intermediates required for synthesis of drugs (5 compounds)
- II. Monograph analysis of selected drugs from course content (2 compounds)
- III. Assay of Selected drugs from course content prescribed as per I-P or B-P (2 compounds)

15PYU604

SEMESTER-VI

PHARMACOLOGY & THERAPEUTICS –I 3H 3C

Instruction hours/ week: L: 3 T: 1 P:0

Marks: Internal: 40 External: 60 Total: 100

External Semester Exam: 3 Hours

Course Objectives:

- The main purpose of the subject is to understand what drugs do to the living organisms and how their effects can be applied to therapeutics.
- The subject covers the complete information about the drugs like sources-physicochemical properties- mechanism of action-physiological and biochemical effects (pharmacodynamics) as well as absorption-distribution-metabolism and excretion (pharmacokinetics) along with the adverse effects-clinical uses-interactions-doses-contraindications and routes of administration of different classes of drugs.
- This subject is designed to impart the basic knowledge of preclinical studies in experimental animals including design, conduct and interpretations of results.
- To appreciate the applications of various commonly used laboratory animals.
- To appreciate and demonstrate the various screening methods used in preclinical research.
- To appreciate and demonstrate the importance of biostatistics and research methodology.

Course Outcomes:

On successful completion of the course the student will

1. Explain the pharmacological actions of different categories of drugs on various systems of the body.
2. Explain the mechanism of drug action at organ system/sub cellular/macromolecular levels.
3. Apply the basic pharmacological knowledge in the prevention and treatment of various diseases.
4. Handle the animals and conduct the experiments to observe the effect of drugs from different therapeutic classes and to interpret the results using suitable statistical analysis.
5. Understand the mechanism of drug action and its relevance in the treatment of different infectious diseases.
6. Comprehend the principles of toxicology and treatment of various poisonings.

Course Content:**UNIT I**

Pharmacology of Central Nervous System – Neurohumoral transmission in the CNS with special emphasis on pharmacology of various neurotransmitters like histamine-serotonin –dopamine– gaba-

glutamate and glycine- **general anesthetics**- alcohol and disulfiram- sedatives-hypnotics and centrally acting muscle relaxants.

UNIT II

Pharmacology of Central Nervous System - Psychopharmacological agents–Anti psychotics– antidepressants- anti-anxiety agents-anti-manics and hallucinogens-**Anti-epileptic drugs**- Drugs used in Parkinsonism and Alzheimer's disease-**Narcotic analgesics and antagonists**-CNS stimulants and Nootropics- Drug addiction-drug abuse-tolerance and dependence.

UNIT III

Pharmacology of Cardiovascular System - Introduction to hemodynamic and Electrophysiology of heart- **Anti-hypertensive drugs**-**Anti-anginal drugs**-**Anti-arrhythmic drugs**.

UNIT IV

Drugs acting on Cardiovascular System – Drugs used in congestive heart failure- **Anti-hyperlipidemic drugs** –Haematinics- anticoagulants and haemostatic agents- Fibrinolytics and antiplatelet drugs- Blood and plasma volume expanders.

UNIT V

Drugs acting on Respiratory System -anti-asthmatic drugs- Anti-tussives and expectorants- Respiratory stimulants – Mucolytics and nasal decongestants.

- To appreciate the applications of various commonly used laboratory animals.
- To appreciate and demonstrate the various screening methods used in preclinical research.
- To appreciate and demonstrate the importance of biostatistics and research methodology.

Course Outcomes:

On successful completion of the course the student will

1. Explain the pharmacological actions of different categories of drugs on various systems of the body.
2. Explain the mechanism of drug action at organ system/sub cellular/macromolecular levels.
3. Apply the basic pharmacological knowledge in the prevention and treatment of various diseases.
4. Handle the animals and conduct the experiments to observe the effect of drugs from different therapeutic classes and to interpret the results using suitable statistical analysis.
5. Understand the mechanism of drug action and its relevance in the treatment of different infectious diseases.
6. Comprehend the principles of toxicology and treatment of various poisonings.

Course Content:

1. Recording of spontaneous motor and anti-inflammatory activity.
2. Evaluation of skeletal muscle relaxant activity of drugs in animals.
3. Recording of analgesic and anti-convulsant activity.
4. Statistical calculations in experimental pharmacology such as Students-t-test.
5. Statistical calculations in experimental pharmacology such as ANOVA.
6. Study of different routes of drugs administration in mice.

7. Study of different routes of drugs administration in rat.
8. To study the effect of hepatic microsomal enzyme inhibitors in mice.
9. To study the effect of hepatic microsomal enzyme inducers on the Phenobarbitone sleeping time in mice.
10. Local anesthetic activity of drugs by suitable animal model.
11. Effect of autonomic drugs on rabbit's eye.
12. Diuretic activity of drugs in rats.

15PYU605

SEMESTER-VI

**PHARMACEUTICAL JURISPRUDENCE
AND DRUG BUSINESS MANAGEMENT 3H 3C**

Instruction hours/ week: L: 3 T: 0 P: 0

Marks: Internal: 40 External: 60 Total: 100

External Semester Exam: 3 Hours

Course Objectives:

- The subject deals with several important legislations related to the profession of pharmacy in India.
- The Drugs and Cosmetics Act- along with its amendments is the core of this course- Other acts- which are covered- include the Pharmacy Act- dangerous drugs- medicinal and toilet preparation Act etc- Besides this the new drug policy- professional ethics- DPCO- patent and design Act will be discussed.
- This course is designed to impart the fundamental knowledge on the regulatory requirements for approval of new drugs, and drug products in regulated markets of India & other countries like US, EU, Japan, Australia, UK etc.
- It prepares the students to learn in detail on the regulatory requirements, documentation requirements, and registration procedures for marketing the drug products.
- The pharmaceutical industry not only needs highly qualified researchers, chemists and, technical people, but also requires skilled managers who can take the industry forward by managing and taking the complex decisions which are imperative for the growth of the industry.
- The Knowledge and Know-how of marketing management groom the people for taking a challenging role in Sales and Product management.

Course Outcomes (CO's):

On successful completion of the course the student will

1. Know and understand the Pharmaceutical legislations and their implications in the development and marketing .
2. Understand and follow the code of ethics during the pharmaceutical practice.
3. Know and understand various Indian pharmaceutical acts and laws.
4. Know about the process of drug discovery and developments.
5. Know the regulatory authorities and agencies governing the manufacture and sale of pharmaceuticals.
6. Know the regulatory approval process and their registration in Indian and international markets.

Course Content:**UNIT I**

Definition and scope of Forensic Pharmacy- Pharmacist's role in drug treatment- drug usage and pharmacist as a member of health care team.

UNIT II

Pharmaceutical legislation in India - Historical development of Pharmaceutical education in India and its present status- Professional ethics in Pharmacy practice- legal and ethical responsibilities of Pharmacists.

UNIT III

Concept of Management-Administrative management (Planning- Organizing- Staffing- Directing and Controlling)- Entrepreneurship Development and Operative Management- (Personnel- Materials- Production- Financial Marketing- Time/Space Margin / Morale).

UNIT IV

Pharmaceutical marketing– Functions – buying – selling – transportation – storage – finance – insurance – feedback – information- channels of distribution – wholesale- retail departmental store- multiple shops and mail order business.

UNIT-V

Salesman ship -Principles of sales promotion – advertising- ethics of sales merchandising – literature – detailing – recruitment – training- evaluation and compensation to the pharmacist.

15PYU606**HOSPITAL AND CLINICAL PHARMACY****SEMESTER-VI****3H 3C**

Instruction hours/ week: L: 3 T: 0 P: 0

Marks: Internal: 40 External: 60 Total: 100

External Semester Exam: 3 Hours

Course Objectives:

- This course is designed to impart basic knowledge and skills that are required for the practice of pharmacy in both hospital and community settings.
- Conduct sufficiently thorough and accurate patient assessments
- Explain and properly dispense commonly used medications, formulations, and drug products.
- Identify and assess drug related problems relative to specific patient cases.
- The Knowledge and Know-how of marketing management groom the people for taking a challenging role in Sales and Product management.
- The purpose of this course is to introduce to students a number of health issues and their challenges.

Course Outcomes (CO's):

On successful completion of the course the student will

1. Understand the various drug distribution system
2. Handle the prescriptions and manage community pharmacies
3. Understand the elements of pharmaceutical care and provide comprehensive patient care services
4. Understand the concept and practice of the quality use of medicines
5. Summarize the therapeutic approach for management of various diseases including Reference to the latest available evidence.
6. Evaluate alternative ways of solving problems related to health and pharmaceutical issues.

Course Content:**UNIT-I****Organisation and structure** -Organisation of a hospital- hospital pharmacy- Responsibilities of a hospital pharmacist- Pharmacy and Therapeutic committee- Budget preparation and Implementation.**UNIT-II****Hospital formulary** – Contents- drug profile- preparation and revision of hospital formulary.**UNIT-III****Purchase-Distribution and inventory control of drugs in hospitals** - Purchasing Procedures - Dispensing of drugs to outpatients and inpatients - Types of distribution of drugs and charging policies in Hospital- Dispensing of Controlled drugs.

UNIT-IV

Central sterile supply unit and their management -Types of materials for sterilization- packing of materials prior to sterilization- sterilization equipments and supply of sterile materials.

UNIT-V

Drug information services-Drug information centre- sources of information on drugs- disease treatment schedules- procurement of information- computerized services (e-g- MEDLINE)- retrieval of information.

SEMESTER-VII

FORMULATIVE & INDUSTRIAL PHARMACY –I

3H 3C

Instruction hours/ week: L: 3 T: 0 P: 0

Marks: Internal: 40 External: 60 Total: 100

External Semester Exam: 3 Hours

Course Objectives:

- Course enables the student to understand and appreciate the influence of pharmaceutical additives and various pharmaceutical dosage forms on the performance of the drug product.
- This gives a knowledge of preformulation studies and stability studies
- Different machinery used for various steps in manufacture of various dosage forms. Formulation and evaluation of dosage forms and their advantages over other dosage forms.
- This course is designed to impart fundamental knowledge on pharmaceutical product development and translation from laboratory to market.
- To know the various pharmaceutical dosage forms and their manufacturing techniques.
- To know various considerations in development of pharmaceutical dosage forms.

Course Outcomes (CO's):

On successful completion of the course the student will

1. Know the various pharmaceutical dosage forms and their manufacturing techniques.
2. Know various considerations in development of pharmaceutical dosage forms.
3. Formulate solid and novel drug delivery system .
4. Know evaluation of pharmaceutical dosage forms.
5. To understand the criteria for selection of drugs and polymers for the development of Novel drug delivery systems, their formulation and evaluation
6. Formulate solid, liquid and semisolid dosage forms and evaluate them for their quality

Course Content:**UNIT I**

Preformulation studies-Study of physical properties of drugs like physical form- particle size – shape – density – wetting- dielectric constant – solubility –dissolution - organoleptic property and their effect on formulation- stability and bioavailability.

UNIT II

Stability studies -Study of chemical properties of drugs like hydrolysis – oxidation – reduction – racemisation – polymerization - their influence on formulation and stability of products-Stabilization and stability testing protocol for various pharmaceutical products.

UNIT III

Liquid Dosage forms – Introduction - types of additives used in formulations – vehicles – stabilizers – preservatives - suspending agents - emulsifying agents – solubiliser – colours – flavours – manufacturing - packaging and evaluation of clear liquids - **Semisolid dosage form** - definition – types – general formulation - evaluation and packaging of semisolids.

UNIT IV

Cosmeticology and cosmetic preparation - Fundamentals of cosmetic science - Structure and functions of skin and hair – Formulation – Evaluation - packaging of cosmetics for skin – hair - dentifrices and manicure preparations - nail polish – lipsticks - eye lashes - baby care products - **Pharmaceutical Aerosols** – Definition – propellants - general formulation – manufacturing - packaging methods - pharmaceutical applications and evaluation.

UNIT V

Sterile pharmaceutical products -Formulation – requirements - evaluation of injectable solutions - suspensions and sterile powders - containers and closures - Total parenteral nutrition (TPN) & IV additives -**Ophthalmic preparations** – Requirements – formulation - methods of preparation - containers and evaluation.

FORMULATIVE & INDUSTRIAL PHARMACY LABORATORY –I 3H 2C

Instruction hours/ week: L: 0 T: 0 P: 3

Marks: Internal: 40 External: 60 Total: 100

External Semester Exam: 3 Hours

Course Objectives:

- Course enables the student to understand and appreciate the influence of pharmaceutical additives and various pharmaceutical dosage forms on the performance of the drug product.
- This gives a knowledge of preformulation studies and stability studies
- Different machinery used for various steps in manufacture of various dosage forms. Formulation and evaluation of dosage forms and their advantages over other dosage forms.
- This course is designed to impart fundamental knowledge on pharmaceutical product development and translation from laboratory to market.
- To know the various pharmaceutical dosage forms and their manufacturing techniques.
- To know various considerations in development of pharmaceutical dosage forms.

Course Outcomes (CO's):

On successful completion of the course the student will

1. Know the various pharmaceutical dosage forms and their manufacturing techniques.
2. Know various considerations in development of pharmaceutical dosage forms.
3. Formulate solid and novel drug delivery system.
4. Know evaluation of pharmaceutical dosage forms.
5. To understand the criteria for selection of drugs and polymers for the development of
6. Novel drug delivery systems, their formulation and evaluation
7. Formulate solid, liquid and semisolid dosage forms and evaluate them for their quality

Course content:**Preformulation studies**

1. Determination of flowability of powder by assessing compressibility index
2. Determination of flow property by assessing angle of repose.
3. Determination of effect of glidants
4. Determination of effect of different concentration of glidants.
5. Evaluation of liquid dosage forms.
6. Evaluation of semi solid dosage form.

Cosmetic preparations

7. Formulation of face powder.
8. Formulation of shampoo.

9. Formulation of lipstick.
10. Manufacture of parenterals.

SEMESTER-VII

INSTRUMENTAL METHODS OF PHARMACEUTICAL ANALYSIS – I 4H 4C

Instruction hours/ week: L: 3 T: 1 P: 0

Marks: Internal: 40 External: 60 Total: 100

External Semester Exam: 3 Hours

Course Objectives:

- This subject is designed to impart a fundamental knowledge on the testing of drugs by various instrumental methods of analysis.
- This focuses on various modern instruments that are used for testing the purity of drugs in various dosage forms.
- course also gives knowledge about modern instruments that are used for drug testing like NMR- IR- Mass- HPLC- HPTLC etc.
- This course deals with the fundamentals of analytical chemistry and principles of electro chemical analysis of drugs.
- To know the principle and applications of instrumentation
- To understand the components and working of various analytical instruments.

Course Outcomes (CO's):

On successful completion of the course the student will

1. Know the principle and applications of instrumentation
2. Understand the components and working of various analytical instruments.
3. Understand the different modern techniques of drug analysis.
4. Appreciate the advantages of instrumental methods of drug analysis.
5. Understand the principles of volumetric and electro chemical analysis.
6. Carry out various volumetric and electro chemical titrations.
7. Develop analytical skills.

Course Content:**UNIT I**

UV/Visible spectroscopy-Theory of atomic and molecular spectra- Electronic transitions- Beer and Lambert's law- Derivation and deviations- Applications of Beer law to single and multi component systems – Chromophores – Auxochromes- Spectral shifts- Solvent effect on absorption spectra - Instrumentation - Sources of radiation- wavelength selectors- sample cells – Detectors- Barrier layer cell- Photo tube- Photomultiplier tube- Silicon Photodiode -Applications - Spectrophotometric titrations- Measurement of equilibrium constant and rate constant -**Fluorimetry** – Theory- Concepts of singlet- doublet and triplet electronic states- internal and external conversions- factors affecting fluorescence – quenching - Instrumentation and applications.

UNIT II

IR spectroscopy – Introduction- Fundamental modes of vibrations in poly atomic molecules - Sample handling- Instrumentation - Sources of radiation- wavelength selectors- sample cells- Detectors – Golay cell- Bolometer – Thermocouple – Thermister- Pyrroelectric detector - Structure – frequency correlation with examples.

UNIT III

Atomic absorption spectroscopy –Introduction- Theory- instrumentation- and applications-**Flame emission spectroscopy** – Introduction – Theory – Instrumentation-Interferences and applications-**Nephelometry and Turbidimetry** – Theory- Instrumentation and applications.

UNIT IV

NMR Spectroscopy - Principles- Instrumentation and applications.

UNIT V

Mass Spectroscopy - Principles- Fragmentation- Instrumentation- applications - Introduction to MALDI and ICPMS.

INSTRUMENTAL METHODS OF PHARMACEUTICAL ANALYSIS
LABORATORY – I**3H 2C**

Instruction hours/ week: L: 0 T: 0 P: 3

Marks: Internal: 40 External: 60 Total: 100

External Semester Exam: 3 Hours

Course Objectives:

- This subject is designed to impart a fundamental knowledge on the testing of drugs by various instrumental methods of analysis.
- This focuses on various modern instruments that are used for testing the purity of drugs in various dosage forms.
- course also gives knowledge about modern instruments that are used for drug testing like NMR- IR- Mass- HPLC- HPTLC etc.
- This course deals with the fundamentals of analytical chemistry and principles of electro chemical analysis of drugs.
- To know the principle and applications of instrumentation
- To understand the components and working of various analytical instruments.

Course Outcomes (CO's):

On successful completion of the course the student will

1. Know the principle and applications of instrumentation
2. Understand the components and working of various analytical instruments.
3. Understand the different modern techniques of drug analysis.
4. Appreciate the advantages of instrumental methods of drug analysis.
5. Understand the principles of volumetric and electro chemical analysis.
6. Carry out various volumetric and electro chemical titrations.
7. Develop analytical skills.

Course Content:

1. Chromatographic analysis of some pharmaceutical products.
2. Exercises involving
 - a. Nephelo-turbidimeter
 - b. colorimeter
 - c. spectrophotometer
 - d. flamephotometer
3. Infra Red spectra peak identification for different functional groups.

SEMESTER-VII

MEDICINAL CHEMISTRY- II**4H****4C**

Instruction hours/ week: L: 3 T: 1 P: 0

Marks: Internal: 40 External: 60 Total: 100

External Semester Exam: 3 Hours

Course Objectives:

- This subject is designed to impart fundamental knowledge on the structure- chemistry and therapeutic value of drugs.
- The subject emphasizes on structure activity relationships of drugs
- To know the importance of physicochemical properties and metabolism of drugs.
- This subject is designed to impart fundamental knowledge on the structure, chemistry and therapeutic value of drugs.
- The subject emphasizes on structure activity relationships of drugs, importance of physicochemical properties and metabolism of drugs.
- The syllabus also emphasizes on chemical synthesis of important drugs under each class.

Course Outcomes:

On successful completion of the course the student will

1. Understand the chemistry of drugs with respect to their pharmacological activity.
2. Understand the drug metabolic pathways- adverse effect and therapeutic value of drugs.
3. Know the structural activity relationship of different class of drugs.
4. Write the chemical synthesis of some drug.
5. Know the Structural Activity Relationship (SAR) of different class of drugs.
6. Write the chemical synthesis of some drugs.

Course Content:

Study of classification - mechanism of action (biochemical and molecular basis) - structure activity relationship including stereo chemical aspects - physicochemical properties and synthesis of selected drugs (only drugs marked with asterisk) on the following categories of drugs.

UNIT I

Introduction to Drug Design- Principles of Drug Design-Various approaches used in drug design- Physicochemical parameters used in quantitative structure activity relationship (QSAR) such as partition coefficient- Hammett's electronic parameter- Taft's steric parameter and Hansch analysis- **Pharmacophore and docking technique**- **Prodrugs**- Basic concepts and application of prodrugs design -**Combinatorial Chemistry**- Concept and applications of combinatorial chemistry- solid phase and solution phase synthesis.

UNIT II

Anti-infective agents- Local anti-infective agents-Ethyl alcohol- Isopropyl alcohol – Formaldehyde-Sodium glutaraldehyde solution- Liquefied phenol- Hexachlorophene*- Eugenol-

Hexyl resorcinol Anthralin- Hydrous benzoylperoxide- Halazone*- Benzalkonium chloride Methylbenzethonium chloride*- Cetylpyridinium chloride- Chlorhexidinegluconate*- Gentianviolet- Methylene blue – Thiomersal- Methyl paraben and Sodium benzoate - **Antifungal agents- Antifungal antibiotics-** Amphotericin-B – Nystatin- Natamycin and Griseofulvin- **Synthetic Antifungal agents** –Clotrimazole- Econazole nitrate – Butoconazole- Oxiconazole nitrate – Tioconazole- Miconazole*- Ketoconazole – Terconazole – Itraconazole – Fluconazole- Naftifine hydrochloride- Tolnaftate*- Cyclopiroxolamine.

UNIT III

Anti-infective agents- Urinary tract anti-infective agents–Quinolones- SAR of quinolones- Nalidixic Acid*- Cinoxacin – Norfloxacin – Enoxacin – Ciprofloxacin – Ofloxacin- Lomefloxacin – Sparfloxacin – **Miscellaneous** –Furazolidine- Nitrofurantoin* and Methanamine-**Antitubercular Agents- Synthetic anti tubercular agents-** INH*- Ethionamide – ethambutol – Pyrazinamide- Para amino salicylic acid*-**Anti tubercular antibiotics** –Rifampicin – Rifabutin- Cycloserine* and sterile Capreomycin sulphate-**Anti-protozoal Agents-** Metronidazole*- Diloxanide*- Iodoquinol- Pentamidine Isethionate – Atovaquone – Eflornithine-**Anthelmintics-** Piperazine salts*- Diethylcarbamazine citrate*- Thiabendazole*- Mebendazole*- Albendazole – Niclosamide – Oxamniquine- Praziquantel and Ivermectin- **Anti-scabious and Anti-pedicular Agents-** Benzyl Benzoate*- Lindane* (Gamaxene)- Crothamiton* and Permethrin.

UNIT IV

Anti-infective agents-Antimalarials- Etiology of malaria- SAR-**Quinolines-** Quinine sulphate- Chloroquine phosphate*- Hydroxy chloroquine sulphate- Amodiaquine hydrochloride*- Primaquine phosphate- Quinacrine hydrochloride – Mefloquine- **Biguanides and dihydro triazines-**Cycloguanil pamoate – Proguanil-**Miscellaneous** –Pyrimethamine- Trimethoprim and Sulfadoxine.

UNIT V

Antibiotics-Historical background – Nomenclature – stereochemistry- Structure activity relationship- chemical degradation classification and important products of the following classes-**β-Lactam antibiotics** –Penicillin – Cephalosporins- β- Lactamase inhibitors – Monobactams-**Aminoglycosides** –Streptomycin – Neomycin- **Tetracyclines** –Tetracycline – Chlortetracycline – Minocycline – Doxycycline **Macrolide-** Erythromycin and Azithromycin –**Miscellaneous-** Chloramphenicol*- Clindamycin.

MEDICINAL CHEMISTRY LABORATORY– I

3H

2C

Instruction hours/ week: L: 0 T: 0 P: 3

Marks: Internal: 40 External: 60 Total: 100

External Semester Exam: 3 Hours

Course Objectives:

- This subject is designed to impart fundamental knowledge on the structure- chemistry and therapeutic value of drugs.
- The subject emphasizes on structure activity relationships of drugs
- To know the importance of physicochemical properties and metabolism of drugs.
- This subject is designed to impart fundamental knowledge on the structure, chemistry and therapeutic value of drugs.
- The subject emphasizes on structure activity relationships of drugs, importance of physicochemical properties and metabolism of drugs.
- The syllabus also emphasizes on chemical synthesis of important drugs under each class.

Course Outcomes:

On successful completion of the course the student will

1. Understand the chemistry of drugs with respect to their pharmacological activity.
2. Understand the drug metabolic pathways- adverse effect and therapeutic value of drugs.
3. Know the structural activity relationship of different class of drugs.
4. Write the chemical synthesis of some drug.
5. Know the Structural Activity Relationship (SAR) of different class of drugs.
6. Write the chemical synthesis of some drugs.

Course Content:

- I. Preparation of medicinally important compounds or intermediates required for synthesis of drugs (5 compounds)
- II. Monograph analysis of selected drugs from course content. (2 compounds)
- III. Assay of Selected drugs from course content prescribed as per I.P or B.P. (5 compounds)

SEMESTER-VII

PHARMACOLOGY & THERAPEUTICS –III 3H 3C

Instruction hours/ week: L: 3 T: 0 P:0

Marks: Internal: 40 External: 60 Total: 100

External Semester Exam: 3 Hours

Course Objectives:

- The main purpose of the subject is to understand what drugs do to the living organisms and how their effects can be applied to therapeutics.
- The subject covers the complete information about the drugs like sources-physicochemical properties- mechanism of action-physiological and biochemical effects (pharmacodynamics) as well as absorption-distribution-metabolism and excretion (pharmacokinetics) along with the adverse effects-clinical uses-interactions-doses-contraindications and routes of administration of different classes of drugs.
- This subject is designed to impart the basic knowledge of preclinical studies in experimental animals including design, conduct and interpretations of results.
- To appreciate the applications of various commonly used laboratory animals.
- To appreciate and demonstrate the various screening methods used in preclinical research.
- To appreciate and demonstrate the importance of biostatistics and research methodology.

Course Outcomes:

On successful completion of the course the student will

1. Locate and isolate different organs/tissues from the laboratory animals used in pharmacological experiments
2. Demonstrate the various receptor actions using isolated tissue preparation
3. Appreciate correlation of pharmacology with related medical sciences
4. Handle the animals and conduct the experiments to observe the effect of drugs from different therapeutic classes and to interpret the results using suitable statistical analysis.
5. Understand the mechanism of drug action and its relevance in the treatment of different infectious diseases.
6. Comprehend the principles of toxicology and treatment of various poisonings.

Course Content:**UNIT I**

Pharmacology of Endocrine System-Basic concepts in endocrine pharmacology- Hypothalamic and pituitary hormones-Thyroid hormones and anti thyroid drugs – Parathormone- Calcitonin and Vitamin-D.

UNIT II

Insulin- Oral Hypoglycemic agents and glucagon-ACTH and corticosteroids-Androgens and Anabolic steroids – Estrogens- progesterone and oral contraceptives-**Drugs acting on the uterus.**

UNIT III

Pharmacology of Drugs acting on the Gastrointestinal Tract –Antacids- anti-secretary and anti ulcer drugs- Laxatives and anti-diarrheal drugs- Appetite stimulants and suppressants-Digestants and carminatives-Emetics and anti-emetics.

UNIT IV

Bioassay-Principles and methods of bioassay - Bioassay of insulin- oxytocin-vasopressin- ACTH- histamine and 5-HT.

UNIT V

Immunopharmacology-Immunostimulants and immunosuppressants.

PHARMACOLOGY & THERAPEUTICS –III LABORATORY**3H****2C**

Instruction hours/ week: L: 0 T: 0 P: 3

Marks: Internal: 40 External: 60 Total: 100

External Semester Exam: 3 Hours

Course Objectives:

- The main purpose of the subject is to understand what drugs do to the living organisms and how their effects can be applied to therapeutics.
- The subject covers the complete information about the drugs like sources-physicochemical properties- mechanism of action-physiological and biochemical effects (pharmacodynamics) as well as absorption-distribution-metabolism and excretion (pharmacokinetics) along with the adverse effects-clinical uses-interactions-doses-contraindications and routes of administration of different classes of drugs.
- This subject is designed to impart the basic knowledge of preclinical studies in experimental animals including design, conduct and interpretations of results.
- To appreciate the applications of various commonly used laboratory animals.
- To appreciate and demonstrate the various screening methods used in preclinical research.
- To appreciate and demonstrate the importance of biostatistics and research methodology.

Course Outcomes:

On successful completion of the course the student will

1. Explain the pharmacological actions of different categories of drugs on various systems of the body.
2. Explain the mechanism of drug action at organ system/sub cellular/macromolecular levels.
3. Apply the basic pharmacological knowledge in the prevention and treatment of various diseases.
4. Handle the animals and conduct the experiments to observe the effect of drugs from different therapeutic classes and to interpret the results using suitable statistical analysis.
5. Understand the mechanism of drug action and its relevance in the treatment of different infectious diseases.
6. Comprehend the principles of toxicology and treatment of various poisonings.

Course Content:

1. Introduction to *in-vitro* pharmacology and physiological salt solutions.
2. To record CRC of acetylcholine by using suitable muscle preparations.
3. To record the CRC of 5HT on rat fundus preparation.
4. To record CRC of Nor adrenaline on rat anococcygeus muscle

5. Estimation of bioavailability parameters viz AUC from blood sample.
6. Estimation of bioavailability parameters viz T_{max} from blood sample.
7. Estimation of bioavailability parameters viz K_{el} from blood sample.
8. Estimation of bioavailability parameters viz AUC from urine sample.
9. Estimation of bioavailability parameters viz T_{max} from urine sample.
10. Estimation of bioavailability parameters viz K_{el} from urine sample.

SOCIAL & BEHAVIOURAL SCIENCE**3H 3C**

Instruction hours/ week: L: 3 T: 0 P: 0

Marks: Internal: 40 External: 60 Total: 100

External Semester Exam: 3 Hours

Course Objectives:

- Social Pharmacy and Behavioral Science course will prepare the young pharmacy student to fit into the social role as Pharmacist. Interaction of pharmacist with doctors- nurses- dentists- physiotherapists and other health workers is to develop team spirit in pharmacist.
- Rational drug use and essential drugs concepts can be realized with meaningful interaction of pharmacists with other health care providers.
- At the end of this course the student will get the soft skills set to work cohesively with the team as a team player and will add value to the pharmaceutical business.
- This course also introduced a number of national health programmes. The roles of the pharmacist in these contexts are also discussed.
- In the changing scenario of pharmacy practice in India, for successful practice of Hospital Pharmacy, the students are required to learn various skills like drug distribution, drug information, and therapeutic drug monitoring for improved patient care.
- In community pharmacy, students will be learning various skills such as dispensing of drugs, responding to minor ailments by providing suitable safe medication, patient counselling for improved patient care in the community set up.

Course Outcomes (CO's):

On successful completion of the course the student will

1. Understand the behavioral needs for a Pharmacist to function effectively in the areas of pharmaceutical Operation
2. Communicate effectively (Verbal and Non Verbal)
3. Effectively Manage the team as a team player
4. Manage the time effectively
5. Develop Leadership Qualities and Essentials
6. Know pharmaceutical care services

Course Content:**UNIT I****Social Pharmacy and Behavioral Science**-The Concept and context of social pharmacy**UNIT II****Pharmacy Profession**-Introduction to profession of Pharmacy-Pattern of entry and employment in pharmacy-Employment position and job responsibilities of a pharmacist-Role of pharmacist in health

care-Pharmacy ethics.

UNIT III

Professionalization of community pharmacy- Introduction – professional status of community pharmacy- Patients medication records and pharmacist's extended role-Health screening services in community pharmacy.

UNIT IV

Role of hospital pharmacist in a hospital– Introduction– Manufacturing – purchasing- inventory management- distribution and promoting the rational view of medicine-Definition and concept of clinical pharmacy.

UNIT V

Time Management-Value of Time- How to Track the action items-Goal setting-Using SMART Objective concept– Goals – Tasks- Sub Tasks-Resource Management- Mile Stone- Mapping and Gantt chart application.

15PYU801**SEMESTER-VIII****FORMULATIVE & INDUSTRIAL PHARMACY –II 3H 3C**

Instruction hours/ week: L: 3 T: 0 P: 0

Marks: Internal: 40 External: 60 Total: 100

External Semester Exam: 3 Hours

Course Objectives:

- Course enables the student to understand and appreciate the influence of pharmaceutical additives and various pharmaceutical dosage forms on the performance of the drug product.
- This gives a knowledge of preformulation studies and stability studies
- Different machinery used for various steps in manufacture of various dosage forms. Formulation and evaluation of dosage forms and their advantages over other dosage forms.
- This course is designed to impart fundamental knowledge on pharmaceutical product development and translation from laboratory to market.
- To know the various pharmaceutical dosage forms and their manufacturing techniques.
- To know various considerations in development of pharmaceutical dosage forms.

Course Outcomes (CO's):

On successful completion of the course the student will

1. Know the various pharmaceutical dosage forms and their manufacturing techniques.
2. Know various considerations in development of pharmaceutical dosage forms.
3. Formulate solid and novel drug delivery system .
4. Know evaluation of pharmaceutical dosage forms.
5. To understand the criteria for selection of drugs and polymers for the development of
6. Novel drug delivery systems, their formulation and evaluation
7. Formulate solid, liquid and semisolid dosage forms and evaluate them for their quality

Course Content:**UNIT I**

Tablets-Classification of different types of tablets- tablet excipients- granulation technology on large scale by various techniques- different types of tablet compression machinery and equipment employed-processing problems of tablets and evaluation of tablets.

UNIT II

Capsules -definition -advantages and disadvantages of capsule - material for production of hard gelatine capsules - size of capsules - method of capsule filling. Soft gelatin capsule, capsule shell – manufacturing - quality control – stability testing.

UNIT III

Micro-encapsulation - Types of microcapsules - importance of micro encapsulation in pharmacy - micro encapsulation by Co-acervation phase separation - multi-orifice centrifugation - spray drying - spray congealing – polymerisation - air suspension technique - pan coating and other techniques - Evaluation of microcapsules.

UNIT IV

Novel Drug delivery systems– definition - advantages - disadvantages -Transdermal delivery systems- Osmotic drug delivery systems – Liposomes–microsomes – Nanoparticles – applications in pharmaceutical field .

UNIT V

Prolonged action pharmaceuticals -benefits – limitations – oral products terminology –types and construction of products – evaluation – applications in pharmaceutical field.

15PYU811**SEMESTER-VIII****FORMULATIVE & INDUSTRIAL PHARMACY LABORATORY –II 3H 2C**

Instruction hours/ week: L: 0 T: 0 P: 3

Marks: Internal: 40 External: 60 Total: 100

External Semester Exam: 3 Hours

Course Objectives:

- Course enables the student to understand and appreciate the influence of pharmaceutical additives and various pharmaceutical dosage forms on the performance of the drug product.
- This gives a knowledge of preformulation studies and stability studies
- Different machinery used for various steps in manufacture of various dosage forms. Formulation and evaluation of dosage forms and their advantages over other dosage forms.
- This course is designed to impart fundamental knowledge on pharmaceutical product development and translation from laboratory to market.
- To know the various pharmaceutical dosage forms and their manufacturing techniques.
- To know various considerations in development of pharmaceutical dosage forms.

Course Outcomes (CO's):

On successful completion of the course the student will

1. Know the various pharmaceutical dosage forms and their manufacturing techniques.
2. Know various considerations in development of pharmaceutical dosage forms.
3. Formulate solid and novel drug delivery system.
4. Know evaluation of pharmaceutical dosage forms.
5. To understand the criteria for selection of drugs and polymers for the development of
6. Novel drug delivery systems, their formulation and evaluation
7. Formulate solid, liquid and semisolid dosage forms and evaluate them for their quality

Course content:**Formulation of tablets**

1. Preparation of sodium bicarbonate tablets.
2. Preparation of Phenobarbitone tablets.
3. Preparation of aspirin effervescent tablets.

4. Preparation of ferrous sulphate tablets.

Evaluation test for tablets

5. Test for Weight variation of tablets.
6. Test for Friability of tablets.
7. Test for Hardness of tablets.
8. Test for thickness of tablets.
9. Test for disintegration of tablets.
10. Test for dissolution of tablets.
11. Filling of capsules and evaluation tests.
12. Preparation of novel drug delivery system.

15PYU802**SEMESTER-VIII****INSTRUMENTAL METHODS OF PHARMACEUTICAL ANALYSIS – II 3H 3C**

Instruction hours/ week: L: 3 T: 1 P: 0

Marks: Internal: 40 External: 60 Total: 100

External Semester Exam: 3 Hours

Course Objectives:

- This subject is designed to impart a fundamental knowledge on the testing of drugs by various instrumental methods of analysis.
- This focuses on various modern instruments that are used for testing the purity of drugs in various dosage forms.
- course also gives knowledge about modern instruments that are used for drug testing like NMR- IR- Mass- HPLC- HPTLC etc.
- This course deals with the fundamentals of analytical chemistry and principles of electro chemical analysis of drugs.
- To know the principle and applications of instrumentation
- To understand the components and working of various analytical instruments.

Course Outcomes (CO's):

Upon completion of this course the student will:

1. Know the principle and applications of instrumentation
2. Understand the components and working of various analytical instruments.
3. Understand the different modern techniques of drug analysis.
4. Appreciate the advantages of instrumental methods of drug analysis.
5. Understand the principles of volumetric and electro chemical analysis.
6. Carry out various volumetric and electro chemical titrations.
7. Develop analytical skills.

Course Content:**UNIT I**

X- Ray diffraction studies – Introduction- diffraction methods and applications-**Electro chemical methods of analysis- Conductometry** – Introduction- Conductivity cell- Conductometric titrations – applications-**Potentiometry** – Electrochemical cell-construction and working of reference and indicator electrodes- methods to determine end point of titration.

UNIT II

Thermal Methods of Analysis – Theory- Instrumentation and applications of Differential Scanning Calorimetry (DSC).

UNIT III

Chromatography-Adsorption and partition column chromatography – Methodology– advantages-disadvantages and applications- **Thin layer chromatography** -Introduction – Principle – Methodology- Stahl's triangle- Rf values – advantages- disadvantages and applications- **High Performance Thin Layer Chromatography (HPTLC)** – Introduction –instrumentation – advantages – application- **Paper chromatography** – Introduction – Principle – Methodology-developmental techniques – advantages – disadvantages – applications-**Ion exchange chromatography** – Introduction – Definition – classification- ion exchange resins – properties-mechanism of ion exchange process- Factors affecting ion exchange – methodology- applications.

UNIT IV

High Performance Liquid Chromatography (HPLC) – Introduction – theory – instrumentation- advantages and applications - Introduction to UPLC and supercritical fluid chromatography-**Gas Chromatography** –Introduction – theory – instrumentation – derivatization- temperature programming – advantages- disadvantages and applications-**Electrophoresis** - Principle of separation – classification- equipment for moving boundary electrophoresis – gel- paper electrophoresis and applications-**Gel Filtration Chromatography** – Introduction – technique- factors affecting- Applications.

UNIT V

Quality assurance- Calibration and validation of following Instruments-UV-Visible spectrophotometer- pH meter- HPLC- Electronic balance- Conductivity meter- IR spectrophotometer – Fluorimeter- Flame Photometer-**Introduction to analytical method development.**

SEMESTER-VIII

**INSTRUMENTAL METHODS OF PHARMACEUTICAL ANALYSIS
LABORATORY – II****3H 2C**

Instruction hours/ week: L: 0 T: 0 P: 3

Marks: Internal: 40 External: 60 Total: 100

External Semester Exam: 3 Hours

Course Objectives:

- This subject is designed to impart a fundamental knowledge on the testing of drugs by various instrumental methods of analysis.
- This focuses on various modern instruments that are used for testing the purity of drugs in various dosage forms.
- course also gives knowledge about modern instruments that are used for drug testing like NMR- IR- Mass- HPLC- HPTLC etc.
- This course deals with the fundamentals of analytical chemistry and principles of electro chemical analysis of drugs.
- To know the principle and applications of instrumentation
- To understand the components and working of various analytical instruments.

Course Outcomes (CO's):

On successful completion of the course the student will

1. Know the principle and applications of instrumentation
2. Understand the components and working of various analytical instruments.
3. Understand the different modern techniques of drug analysis.
4. Appreciate the advantages of instrumental methods of drug analysis.
5. Understand the principles of volumetric and electro chemical analysis.
6. Carry out various volumetric and electro chemical titrations.
7. Develop analytical skills.

Course Content:

1. Chromatographic analysis of some pharmaceutical products.
2. Exercises involving
 - fluorimeter
 - conductometric
 - potentiometric
 - polarographic
 - amperometric titrations

3. Infra Red spectra peak identification for different functional groups.

SEMESTER-VII

MEDICINAL CHEMISTRY- III

3H

3C

Instruction hours/ week: L: 3 T: 0 P: 0

Marks: Internal: 40 External: 60 Total: 100

External Semester Exam: 3 Hours

Course Objectives:

- This subject is designed to impart fundamental knowledge on the structure- chemistry and therapeutic value of drugs.
- The subject emphasizes on structure activity relationships of drugs
- To know the importance of physicochemical properties and metabolism of drugs.
- This subject is designed to impart fundamental knowledge on the structure, chemistry and therapeutic value of drugs.
- The subject emphasizes on structure activity relationships of drugs, importance of physicochemical properties and metabolism of drugs.
- The syllabus also emphasizes on chemical synthesis of important drugs under each class.

Course Outcomes:

On successful completion of the course the student will

1. Understand the chemistry of drugs with respect to their pharmacological activity.
2. Understand the drug metabolic pathways- adverse effect and therapeutic value of drugs.
3. Know the structural activity relationship of different class of drugs.
4. Write the chemical synthesis of some drug.
5. Know the Structural Activity Relationship (SAR) of different class of drugs.
6. Write the chemical synthesis of some drugs.

Course Content:

Study of classification - mechanism of action (biochemical and molecular basis) - structure activity relationship including stereo chemical aspects - physicochemical properties and synthesis of selected drugs (only drugs marked with asterisk) on the following categories of drugs.

UNIT I

Non Steroidal Anti-inflammatory Drugs & antigout- Anti-inflammatory agents- Sodium salicylate – Aspirin- Salsalate*- Mefenamic acid- Meclofenamate sodium Indomethacin*- Sulindac- Tolmetin sodium- Zomepirac sodium- Diclofenac sodium – Ketorolac- Ibuprofen*- Naproxen*- Piroxicam Phenacetin – Acetaminophen – Antipyrine- Aminopyrine- Phenylbutazone* and Oxyphenbutazone-**Antiviral agents**-Types of virus- stages of viral infection- targets for prevention of viral infections - Amantadine hydrochloride- Rimantadine hydrochloride- Idoxuridine

trifluoride- Acyclovir*- Gancyclovir – Zidovudine- Didanosine – Zalcitabine – Lamivudine – Ribavirin – Saquinavir- Indinavir and Ritonavir.

UNIT II

Anti-neoplastic agents-Alkylating agents- Meclorothamine*- Cyclophosphamide – Melphalan – Chlorambucil – Busulfan- Thiotepa-**Antimetabolites-** Mercaptopurine* Thioguanine – Fluorouracil – Floxuridine – Cytarabine- Methotrexate*- Azathioprine-**Antibiotics** –Dactinomycin – Daunorubicin –hydrochloride- Doxorubicin hydrochloride – Bleomycin-**Plant products** – Etoposide- Vinblastin sulphate- Vincristin sulphate-**Miscellaneous-** Cisplatin and Mitotane.

UNIT III

Sulphonamides and Sulphones-Historical development – chemistry- classification and SAR of Sulfonamides – Sulphamethizole – Sulfisoxazole – Sulphamethizine- Sulfacetamide Sodium*- Sulphapyridine- Sulfamethoxazole*- Sulphadiazine- Mixed Sulfonamides-Mefenide Acetate- Silver Sulfadiazine – Sulfasalazine- **Folate reductase inhibitors** -Trimethoprim* Cotrimoxazole – **Sulfones** -Dapsone*-**Sex hormones** – **Androgens** – testosterone– **Estrogens** –Esterodiol – Estrone- Estriol- Diethyl Stilbestrol-**Progesterone and Oral contraceptives.**

UNIT IV

Antihistaminic agents– Histamine- receptors and their distribution in the human body-**H1 – antagonists-Amino alkyl ethers-** Diphenhydramine*- Dimenhydrinate – Doxylamine-**Ethylene diamines** –Tripeleminamine – Thonzylamine-**Piperazine derivatives** –Meclizine – Buclizine – Chlorcyclizine – Cetirizine-**Propylamine derivatives**-Chlorpheniramine*- Pheniramine-**Tricyclic derivatives-** Promethazine*- Trimeprazine – Phenidamine – Cyproheptadine – Azatidine-**Second generation non sedating** – Astemizole – Loratadine – Cetirizine – Acrivastine-**H2-antagonists-** Development of selective H2 antagonists - Cimetidine*- Famotidine – Ranitidine-**Gastric Proton pump inhibitors**-Omeprazole and Lansoprazole.

UNIT V

Prostaglandins and other eicosanoids-History and discovery- eicosanoid biosynthesis- drug action mediated by eicosanoids- design of eicosanoid drugs- eicosanoids approved for human clinical use-**Narcotic analgesic-Morphine and related drugs-**SAR of Morphine analogues- Morphine sulphate- Codeine phosphate- Hydromorphone hydrochloride- Meperidine hydrochloride*- Alphaprodine hydrochloride- Anilerdine hydrochloride- Diphenoxylate hydrochloride- Loperamide hydrochloride- Fentanyl citrate*- Methadone hydrochloride*- Propoxyphene hydrochloride – Pentazocine- Levorphanol tartarate-**Narcotic antagonists-** Nalorphine hydrochloride- Levallorphan tartarate and Naloxone hydrochloride-**Anti-tussives** – Noscapine- Dextromethorphan hydrobromide and Benzonatate- Carbetapentane.

External Semester Exam: 3 Hours

Course Objectives:

- This subject is designed to impart fundamental knowledge on the structure- chemistry and therapeutic value of drugs.
- The subject emphasizes on structure activity relationships of drugs
- To know the importance of physicochemical properties and metabolism of drugs.
- This subject is designed to impart fundamental knowledge on the structure, chemistry and therapeutic value of drugs.
- The subject emphasizes on structure activity relationships of drugs, importance of physicochemical properties and metabolism of drugs.
- The syllabus also emphasizes on chemical synthesis of important drugs under each class.

Course Outcomes:

On successful completion of the course the student will

1. Understand the chemistry of drugs with respect to their pharmacological activity.
2. Understand the drug metabolic pathways- adverse effect and therapeutic value of drugs.
3. Know the structural activity relationship of different class of drugs.
4. Write the chemical synthesis of some drug.
5. Know the Structural Activity Relationship (SAR) of different class of drugs.
6. Write the chemical synthesis of some drugs.

Course Content:

- I. Assay of medicinal compounds (5 compounds)
- II. Monograph analysis of selected drugs from course content. (2 compounds)
- III. Preparation of medicinally important compounds or intermediates required for synthesis of drugs. (5 compounds)

15PYU804**SEMESTER-VIII****PHARMACOLOGY & THERAPEUTICS –IV****3H 3C**

Instruction hours/ week: L: 3 T: 0 P:0

Marks: Internal: 40 External: 60 Total: 100

External Semester Exam: 3 Hours

Course Objectives:

- The main purpose of the subject is to understand what drugs do to the living organisms and how their effects can be applied to therapeutics.
- The subject covers the complete information about the drugs like sources-physicochemical properties- mechanism of action-physiological and biochemical effects (pharmacodynamics) as well as absorption-distribution-metabolism and excretion (pharmacokinetics) along with the adverse effects-clinical uses-interactions-doses-contraindications and routes of administration of different classes of drugs.
- This subject is designed to impart the basic knowledge of preclinical studies in experimental animals including design, conduct and interpretations of results.
- To appreciate the applications of various commonly used laboratory animals.
- To appreciate and demonstrate the various screening methods used in preclinical research.
- To appreciate and demonstrate the importance of biostatistics and research methodology.

Course Outcomes:

On successful completion of the course the student will

1. Locate and isolate different organs/tissues from the laboratory animals used in pharmacological experiments
2. Demonstrate the various receptor actions using isolated tissue preparation
3. Appreciate correlation of pharmacology with related medical sciences
4. Handle the animals and conduct the experiments to observe the effect of drugs from different therapeutic classes and to interpret the results using suitable statistical analysis.
5. Understand the mechanism of drug action and its relevance in the treatment of different infectious diseases.
6. Comprehend the principles of toxicology and treatment of various poisonings.

Course Content:**UNIT I**

Chemotherapy-General Principles of Chemotherapy-Sulfonamides and co-trimoxazole – Antibiotics – Penicillins- Cephalosporins – Chloramphenicol – Erythromycin- Quinolones and Fluoroquinolones- tetracycline and aminoglycosides.

UNIT II

Chemotherapy of tuberculosis – leprosy- fungal diseases- viral diseases-anti protozoal drugs – anthelminitics- urinary tract infections and sexually transmitted diseases.

UNIT III

Histamine- 5-HT and their antagonists – Prostaglandins- Thromboxanes and Leukotrienes – Pentagastrin – Cholecystokinin – Angiotensin- Bradykinin and Substance P-Analgesic- anti-pyretic- anti-inflammatory and anti-gout drugs.

UNIT IV

Definition of poison- general principles of treatment of poisoning-Heavy metals and heavy metal antagonists-Definition for acute- sub acute and chronic toxicity – genotoxicity – **Carcinogenicity**- teratogenicity and mutagenicity studies.

UNIT V

Chronopharmacology-Definition of rhythm and cycles- Biological clock and their significance leading to chronotherapy.

15PYU814**SEMESTER-VIII****PHARMACOLOGY & THERAPEUTICS –IV LABORATORY****3H****2C**

Instruction hours/ week: L: 0 T: 0 P: 3

Marks: Internal: 40 External: 60 Total: 100

External Semester Exam: 3 Hours

Course Objectives:

- The main purpose of the subject is to understand what drugs do to the living organisms and how their effects can be applied to therapeutics.
- The subject covers the complete information about the drugs like sources-physicochemical properties- mechanism of action-physiological and biochemical effects (pharmacodynamics) as well as absorption-distribution-metabolism and excretion (pharmacokinetics) along with the adverse effects-clinical uses-interactions-doses-contraindications and routes of administration of different classes of drugs.
- This subject is designed to impart the basic knowledge of preclinical studies in experimental animals including design, conduct and interpretations of results.
- To appreciate the applications of various commonly used laboratory animals.
- To appreciate and demonstrate the various screening methods used in preclinical research.
- To appreciate and demonstrate the importance of biostatistics and research methodology.

Course Outcomes:

On successful completion of the course the student will

1. Explain the pharmacological actions of different categories of drugs on various systems of the body.
2. Explain the mechanism of drug action at organ system/sub cellular/macromolecular levels.
3. Apply the basic pharmacological knowledge in the prevention and treatment of various diseases.
4. Handle the animals and conduct the experiments to observe the effect of drugs from different therapeutic classes and to interpret the results using suitable statistical analysis.
5. Understand the mechanism of drug action and its relevance in the treatment of different infectious diseases.
6. Comprehend the principles of toxicology and treatment of various poisonings.

Course Content:

1. To record the agonistic and antagonistic response by using suitable muscle preparations.
2. To estimate the strength of the test sample of agonist/ drug (e.g. Acetylcholine- Histamine- 5HT- Oxytocin etc) using a suitable isolated muscle preparation employing matching bioassay- interpolation.
3. bioassay- three point bioassay and four point bioassay.
4. Alternate methods for animal experimentation for both efficacy and toxicity studies.
5. Estimation of serum biochemical parameters by using semi- auto analyzer.
