The following are the Elective papers

List of Elective Papers		
S.No	Course Code	Subjects
1.	15ASP105(A)	எண்கணிதம் (Numerology)
2.	15ASP105(B)	ஆடிப்படை வாஸ்து – I (Fundamentals of Vasthu – I)
3.	15ASP105(C)	அங்கலட்சணம் மற்றும் மச்சங்கள் (Samuthrika Lakshanam)
4.	15ASP205(A)	நவரத்தினங்கள் (Gemology)
5.	15ASP205(B)	நவீன வாஸ்து – II (Modern Vasthu – II)
6.	15ASP205(C)	கைரேகை சாஸ்திரம் (Palmistry)
7.	15ASP306(A)	தாஜிகம் (Thajigam)
8.	15ASP306(B)	அஷ்டவர்க்கம் (Astavargam)
9.	15ASP306(C)	16 வர்க்க சக்கரங்களும் பலன்களும் (Predictions through 16 Varga Chakras)

Programme outcomes

- 1) சோதிட முதுகலை மாணவர்கள் வானவியல் பற்றிய, சோதிடவியல் பற்றிய வரலாற்றை அறிவதால் இத்துறையின் பழமையையும் பெருமையையும் புரிந்து கொள்வார்கள்
- 2) சோதிடவியலின் அடிப்படைத்தன்மைகள் இராசி காரகத்துவங்கள், கோள்களின் காரகத்துவங்கள், பாவக காரகத்துவங்கள் ஆகியவற்றை பற்றிய ஆழ்ந்த அறிவு சாதக பலன்கள் நிர்ணயிப்பத்தில் முக்கிய பங்கு வகிக்கும்.
- 3) சோதிடவியலுக்கு பெரும் புகழ் சேர்த்த சோதிட அறிஞர்களின் பலன் கூறும் முறைகளை தெரிந்து கொள்வதினால் இத்துறையில் பல சாதனைகள் பல செய்ய ஆர்வம் ஏற்படும்
- 4) எண்கணிதம், வாஸ்து, கைரேகை, நவரத்தினங்கள், அங்கலட்சணங்கள் ஆகிய துணைப்பாடங்களுக்கு சோதிடவியலே ஆதாரம் என்பது புலப்படும்.
- 5) சாதகம் இல்லாதவர்களுக்கு பலன்கள் சொல்லும் வகையில் பிரசன்ன முறைகள் மூலம் பலன்கள் அறிந்து கொள்ளலாம்.
- 6) நாடி முறை, ஜெயமினி முறை, கிருஷ்ணமூர்த்தி பத்ததி முறை, மேலைநாட்டு முறை ஆகிய முறைகளில் பலன்கள் சொல்லப்படுவது சோதிட துறையின் வளர்ச்சிக்கு ஆதாரங்கள் ஆகும்.

- 7) நல்ல முகூர்த்தங்களில் ஆரம்பிக்கும் செயல்கள் நல்ல பலன்களைத் தரும், தீய முகூர்த்தங்களில் ஆரம்பிக்கப்படும் செயல்கள் துன்பத்தை விளைவிக்கும் என்பதை உணரமுடியும்.
- 8) மருத்துவ சோதிடத்தின் மூலம் நோய் ஏற்படும் உடல் பாவகம், நோயின் தன்மை, நோய் ஏற்படும் காலம், நோய் தீர்க்கும் முறைகள் ஆகியவற்றை தெளிவாக அறிய முடியும்.
- 9) சோதிட கணித முறைகளை அறிந்து கொள்வதின் மூலம் இக்கால விஞ்ஞானம், கணினி முதலியன அழிந்தாலும் சோதிட கணித முறைகள் அழியாமல் பாதுகாக்க முடியும்.
- 10) அஷ்டவர்க்கங்கள், தாஜிகம், பதினாறு வர்க்க சக்கரங்கள் பற்றிய அறிவு, சாதக பலன்களை சொல்லுவதில் துல்லியத்தை நிர்ணயிக்க உதவும்.
- 11) கல்வி, திருமணம், தொழில், புத்திரபேறு முதலியவை பற்றிய கேள்விகளுக்கு தெளிவான பலன்களை சொல்ல முடியும்.

Programme Specific outcomes

- 12) தனிமனிதனின் பிரச்சனைகளுக்கு சோதிட ரீதியில் சரியான தீர்வை கொடுக்க முடியும்.
- 13) எதிர்காலத்தில் நடக்கக்கூடிய நன்மை, தீமைகளை முன் கூட்டியே அறிந்து, அதற்காக முன் எச்சரிக்கை நடவடிக்கைகளை எடுத்துக் கொள்ள முடியும்.
- 14) சோதிட சாஸ்திரம் தனிமனிதனின் வளர்ச்சிக்கும், நாட்டின் வளர்ச்சிக்கும் ஒரு வழிகாட்டியாக அமையும்.

Programme Educational Objectives (PEOs)

PEO 1 : சோதிடவியல் முதுகலைப்பட்ட தாரிகளுக்கு வானவியல் அறிவு, சோதிடவியலின் வரலாறு, சோதிடவியலின் அடிப்படைத் தன்மைகள், கோள்கள், இராசிகள், பாவகங்கள் பற்றிய அறிவு உள்ளதால் கால தேச வர்த்தமானங்களுக்கு ஏற்ற வகையில் பலன்கள் கூறுவதற்கான திறமைகள் வளரும்.

PEO 2 : சாதக பலன்கள் சொல்லுவதற்கு சோதிட சாஸ்திரத்தில் பல முறைகள் உண்டு. அனைத்து முறைகளிலும் நன்கு பயிற்சி அளித்து, இத்துறையில் வலிமை உள்ளவர்களாக மாற்ற முடியும். இவர்கள் இத்துறையில் புதிய கண்டுபிடிப்புகளை கண்டுபிடிக்க முடியும். சோதிடத்தின் துணை சாஸ்த்திரங்களான கைரேகை, வாஸ்து, எண்கணிதம் முதலியவற்றிலும் அறிவு வளரும்.

PEO 3 : இது ஒரு தெய்வீக கலை என்பதால் சோதிட முதுகலை பட்டதாரிகள் ஒழுக்கத்தில் சிறந்தவர்களாகவும், சோதிட அறிவில் தன்னிகரற்றவர்களாகவும் மாற்றம் ஏற்படும். தற்காலத்தில் சமுதாயத்தில் ஏற்படும் அனைத்து தனி மனித பிரச்சனைகளுக்கும் தீர்வு காணமுடியும்.

KARPAGAM ACADEMY OF HIGHER EDUCATION

DEPARTMENT OF ASTROLOGY

Marks Allocation

Continuous Internal Assessment (CIA):

The performance of students in each will be continuously assessed by the respective faculty as per the guidelines given below:

Theory Courses

S.No	Category	Maximum Marks
1.	Attendance	5
2.	Test-I#	10
3.	Test-II#	10
4.	Journal Paper Analysis & Presentation	15
Continuous Internal Assessment : Total		40

- The Mark obtained in the seminar should be entered in automation software on or before 60th working day of the semester.
- # Test answer scripts in should be evaluated and marks awarded should be entered in automation software on or before 4th working day after the last date

Practical Courses (Astrology):

S.No	Category	Maximum Marks
1.	Attendance	5
2.	Observation Work	5
3.	Record Work	5
4.	Model Examination (Related with astrology)	15
5.	Viva –Voce [Comprehensive]	10
Continuous Internal Assessment : Total		40

- Includes Viva-voce Conducted during every regular practical class and the model exam practical.
Every practical exercise/experiment and records should be maintained.

UNIVERSITY EXAMINATIONS

End Semester Examination(ESE): ESE will be held at the end of each semester for each course. The question paper is for a maximum of 60 marks.

Pattern of ESE Question Paper:

Instruction	Remarks
Maximum Marks	60 marks for all Semester Examination
Duration	3 Hours
Part –A	10 out of 15 two mark Questions (10x2=20 Marks) (Not exceeding 3 questions from each unit)
Part-B	5 Eight mark Questions(5x8=40 Marks) <ul style="list-style-type: none"> • One Question from any one of the units is compulsory. It shall be oriented to analysis/design/application/case studies. • 4 Questions are in ‘either –or’ choice. • (One Question each from the remaining 4 units)

Admission eligibility: Any degree passed in a recognized university

15ASP101

Fundamentals of Astrology – 1

Semester – I
4H – 4C

Instruction Hours / Week: L : 4 T : 0 P : 0

Marks Internal : 40, External : 60 Total : 100
End Semester Exam : 3 hrs**நோக்கங்கள் :**

- 1) ஜோதிடத்தின் தோற்றம் எந்த நாட்டில் ஏற்பட்டது என்பதில் தெளிவு உண்டாகும்.
- 2) வானசாஸ்திர வளர்ச்சியை வரலாற்று ரீதியாகக் கற்றுக் கொள்வதால் ஆய்வு மனபான்மை உண்டாகும்.
- 3) இந்திய ஜோதிடத்தை அறிந்து கொள்வதால் இந்தியர்களின் ஜோதிடத்திறமை எவ்வாறு இருந்துள்ளது என்று உணரலாம்.
- 4) வேதாங்க ஜோதிடம், அதர்வன ஜோதிடம் ஆகியவற்றில் சொல்லப்பட்டுள்ள கருத்துக்களை தெரிந்துக் கொள்ளலாம்.
- 5) அயல் நாட்டு ஜோதிடவியலின் வரலாற்றை தெரிந்துக் கொள்வது.
- 6) நாஸ்ட்ரடாமஸ் போன்ற தீர்க்க தரிசிகளை பற்றி தெரிந்துக் கொள்வது.

பயன்கள்

- 1) இந்திய ஜோதிடத்தின் வரலாற்றை அறிந்து கொள்வதால் நமது கலாச்சாரத்தின் தொன்மையை அறியலாம்.
- 2) இந்தியர்களின் வானசாஸ்திர புலமை, ஜோதிடவியல் புலமை ஆகியவற்றை அறிந்துக் கொள்வதால் ஆய்வு மேற்படிப்புகளில் பயனுள்ள முடிவுகளை எடுக்க முடியும்.
- 3) ஜாதகத்தை கணிப்பதற்கு பஞ்சாங்க நூல் வேண்டும், பஞ்சாங்க நூல்கள் வானசாஸ்திரத்தின் அடிப்படையில் உருவாக்கப்பட்டவைகளாகும்: எனவே பஞ்சாங்க நூல்கள் யாரால் எப்படி உருவாக்கப்பட்டவை என்ற அறிவு அவசியமாகிறது.
- 4) பராசரர் போன்ற ரிஷிகளின் பெருமைகள் நமக்கு புரியும்.
- 5) வேதங்கள், புராணங்கள், இதிகாசங்களின் பெருமை புரியும்.
- 6) இந்திய ஜோதிட வரலாற்றை அயல் நாட்டு ஜோதிட வரலாற்றோடு ஒப்பு நோக்க முடியும்.

UNITS:

1. **வானியலும் ஜோதிடமும்**
வானசாஸ்திரம் - கோள்களின் அமைப்புகள்
சூரிய குடும்பம் - பூ கோளமும் வான் கோளமும்
2. **ஜோதிடத்துடன் தொடர்புகள்**
பூமியின் இயக்கமும் ஜோதிடமும். இராசி சக்கரம் என்னும் மகா அற்புதம். இராசி மண்டலமும், நட்சத்திரப் பிரிவுகளும்.
3. **ஜோதிட வரலாறு - பாபிலோனியா - எகிப்து – கிரேக்கம்**

ஈரல் ஜோதிடம் - ஜோதிடவியலின் தோற்றம் - வானவியல் ஜோதிடம் - பூவுலகில் கோள்களின் தாக்கம் தனிமனித ஜாதகம் - சகுனங்கள்.

4. **மேலை நாடுகளின் சோதிட வரலாறு**

சுமேரியர் - மெசபடோமியர் - பாபிலோனியா - சால்தியா. எகிப்து - கிரேக்கம் - வானசாஸ்திர மறுமலர்ச்சி - நிக்கோலஸ் கோபர் நிகஸ் - கலிலியே கலில் - ஜோகன்னஸ் கெப்ளர் - ஐசக் நியூட்டன்.

5. **ஜோதிட வரலாறு - இந்தியா**

வேதாங்க ஜோதிடம் - வேதகால மாதங்கள் - வேதகால திதிகள் - முகூர்த்தங்கள் - பதினெட்டு சித்தாந்தங்கள் - இந்திய வானசாஸ்திர அறிஞர்கள். வராகமிகிரார்.

குறிப்புதவி நூல்கள்

- | | |
|---|-----------------------|
| 1. Hindu Astrology and the West | B.V.Raman. |
| 2. கிருக்ஷணமூர்த்தி பத்ததி முறை | K.S. கிருக்ஷணமூர்த்தி |
| 3. வானசாஸ்திரம் | M.L. ராஜா |
| 4. வானியலும் ஜோதிடமும் | M.K. தாமோதரன் |
| 5. Ancient Hindu Astrology for the Modern Western Astrologer (1986) | James T.Braha |

நோக்கங்கள்

- 1) கோள்களின் வடிவங்கள், நிறங்கள், குணங்கள், தன்மைகள் இவைகளை தெரிந்துக் கொள்வது அவசியமாகும்.
- 2) கோள்கள் குறிப்பிடும் உடல் உறுப்புக்கள் மற்றும் நோய்கள் பலன்கள் கூறுவதில் முக்கிய பங்குவகிக்கின்றன.
- 3) கோள்கள் குறிப்பிடும் தொழிகள் எவை என்பதை தெரிந்துக் கொண்டு, ஜாதகர்களை சரியான வழியில் வழிகாட்ட முடியும்.
- 4) நாம் கூறும் பலன்கள் எக்காலகட்டத்தில் நடைபெறும் என்பதை அறிய தசா, புத்தி, கோசாரம் பற்றிய அறிவு நமக்கு தேவைப்படுகிறது.
- 5) கோள்களின் இணைவு மூலம் ஜாதகரின் வாழ்க்கையில் ஏற்படும் பலன்களை அறிவது.
- 6) கோள்களின் காரகத்துவங்கள் பார்வைகள் மூலம் ஜாதக பலன்களை மிக துல்லியமாக கணிக்க முடியும்.

பயன்கள்

- 1) ஜாதக பலன்கள் நிர்ணயிப்பதில் கோள்களின் காரகத்துவங்களுக்கு முக்கிய பங்குண்டு.
- 2) கோள்களின் தன்மைகள், குணங்களின் அடிப்படையில் ஜாதகங்களின் தன்மையும், குணங்களும் இருக்கும் என்பதில் சந்தேகம் இல்லாமல் பலன்கள் கூறமுடியும்.
- 3) கோள்கள் குறிப்பிடும் உடல் உறுப்புகளில் மிக துல்லியமாக நோய்களை கணித்து கூறமுடியும்.
- 4) கோள்களின் சேர்க்கையை கொண்டு விதவிதமான தொழில்களை ஜாதகர்களுக்கு சுட்டி காட்ட முடியும். தசா, புத்தி, கோசத்தை கொண்டு நிகழ்ச்சிகள் நடக்கும் காலத்தை நிர்ணயிக்கலாம்.
- 5) கோள்களின் பலத்தைக் கொண்டு ஜாதக பலன்களை முடிவு செய்ய முடியும்.
- 6) 2,10க்கு அதிபதியான கோள்களை கொண்டு ஜாதகர் எந்த தொழில் மூலம் பணம் சம்பாதிப்பார் என்பதை அறிய முடியும்.

UNITS**1. கோள்களின் குணங்கள்**

கோள்கள் - வடிவங்கள் - நிறங்கள் - இருப்பிடம் - கோள்களின் உருவம் - பாலினம் - சமித்து - திக்கு, மலர் - ரத்தினம் - தானியம் - உலோகம் - சுவை நீச்ச ராசி - மூலத்திரிகோண ராசிகளட - உச்ச ராசிகள் - கோள்களின் நட்சத்திரங்கள்.

2. கோள்களின் காரகங்கள்

குணங்கள் - தன்மைகள் - கோள்கள் குறிக்கும் இடங்கள் - வீட்டு உபயோக பொருட்கள் - உறவுகள் - விலங்கினங்கள் - மரங்கள் - மனிதர்களின் குணாதிசயங்கள் - பஞ்சபூத தன்மை - நவரத்தினங்கள்.

3. **கோள்கள் குறிப்பிடும் உடல் உறுப்புக்கள் மற்றும் நோய்கள்.**
காலபுருஷ ராசியும் -உடல் உறுப்புக்களும் - கோள்கள் சுட்டும் உடல் பாகங்கள்-
நோய்கள் - முக அவயங்கள் - உடலின் உட்புற உறுப்புகள்.
4. **கோள்கள் குறிப்பிடும் தொழில்கள்**
பத்தாம் பாவமும் தொழில்களும் - பத்தாம் பாவத்தில் நின்ற கோள்கள் -
சுட்டும் தொழில்கள் - பத்தாம் பாவக - நவாம்ச அதிபதி -குறிப்பிடும் தொழில்கள்-
உதாரண ஜாதகங்களுடன் விளக்கம் - வேலைகள்
5. கோள்கள் குறிப்பிடும் திசாக்கள் - திசாக்களின் வகைகள் - திசா, புத்தி, அந்தரம்
- சூட்சுமாகணிதம் - தசாபுத்தி பலன்கள் . குறிப்பாக சனிதசா – சனி புத்தி தரும் பலன்கள்
- ஏழரைநாட்டுசனி

குறிப்பதவி நூல்கள்

- | | |
|--------------------------------|---|
| 1. உத்திரகாலாமிருதம் | S.A.குமாரஸ்வாமி ஆச்சாரியார். |
| 2. Prasana Marga | B.V.Raman |
| 3. Pointer to Profession | T.P.Trivedi & R.Asthana |
| 4. Brihat Parasara Hora Sastra | G.C.Sharma |
| 5. ப்ருஹத் ஜாதகம் | C.G.ராஜன் |
| 6. குடும்பஜோதிடம் | ஸ்ரீராமய்யங்கார்-ஸ்ரீஸ்ரீனிவாஸாச்சாரியார் |
| 7. Mundane Astrology | B.V.Raman |
| 8. ஜோதிடமும் நவகிரகங்களும் | முருகு இராசேந்திரன் |

நோக்கங்கள்

- 1) ஜாதகம் இல்லாதவர்களுக்கு ஜாதக பலன்கள் சொல்வதற்காகவும், பிறப்பு ஜாதகத்தில் பிறந்த நேரம் சரியாக இல்லாத போது பலன்கள் மாறுவதை, பிரஸன்னம் தடுக்கும்.
- 2) பிரசன்ன ஜோதிடமுறையில் கேள்வியாளரின் நிலை, ஆடை தொடும் உறுப்பு முதலியவை கொண்டு பலன் அறியலாம்.
- 3) பலவகையான ஆருட லக்னங்கள் கண்டுபிடித்தல், சகுனம், நிமித்தங்கள், அஷ்டமங்கல பிரஸன்னம் ஆகியவற்றின் மூலம் ஜோதிடத்தின் ஆழத்தை புரிந்துக் கொள்ள முடியும்.
- 4) சகுனம், நிமித்தங்களின் மூலம் ஜாதகரின் கேள்விகளும் பதில் கூற முடியும்.
- 5) வெற்றிலை ஜோதிடம் மூலம் ஜாதகரின் கடந்த காலம், நிகழ்கால பலன்களை தெளிவாக கூற முடியும்.
- 6) அஷ்ட மங்கல பிரசன்னம் மூலம் ஜாதகரின் குறிப்பிட்ட கேள்விகளுக்கு பதில்கள் கூற முடியும்.

பயன்கள்

- 1) பலன்கள் கூறுவதில் மிக துல்லியத்தை கொடுப்பது பிரசன்ன ஜோதிடமாகும்.
- 2) பிறப்பு ஜாதகம் இல்லாமலும், கேட்கப்பட்ட கேள்விகளுக்கு பதில் சொல்ல முடியும்.
- 3) பிரஸன்னத்தின் மூலம் நம் முன்னோர்களின் நிலையையும், நம்முடைய பூர்வ கர்மங்களின் நன்மை, தீமைகளை பற்றிய தன்மையையும் தெளிவாக புரிந்துக் கொள்ளலாம்.
- 4) இப்பிறப்பில் செய்யப்பட்ட நல்வினை, தீவினை ஆகியவை பற்றியும் பிரஸன்னத்தின் மூலம் அறியலாம்.
- 5) அஷ்ட மங்கல பிரசன்னம் மூலம் கேள்வியாளர் பிரச்சினைகளை எளிதாக கண்டு பிடிக்க முடியும்.
- 6) விவாஹ பிரசன்னம், நஷ்ட பிரசன்னம், ஆயுள் பிரசன்னம், ரோக பிரசன்னம் மூலம் கேள்வியாளரின் கேள்விகளுக்கு பதில்கள் கூற முடியும்.

UNITS**1. பிரசன்னத்தில் ஜோதிடர் கேள்வியாளர் பங்கு.**

ஜோதிடருக்கான கோட்பாடுகள் - கேள்வியாளர் கொண்டுவரும் பொருட்கள் - கேள்வி கேட்பவர் நிற்கும் திசைகள் - தொடும் அங்கங்கள் - அதற்கான பலன்கள் - ஜோதிடரின் சுவாசம்.

2. கேள்வியாளரின் நிலை- ஆடை மற்றும் லட்சணங்கள்.

கால்களை எடுத்து வைத்தல் - கால்களை ஆட்டுதல் - தயக்கம் - மூன்றாம் நபர் கடந்து செல்லுதல் - கைகளை பிசைதல் - தன்னை அடித்துக் கொள்ளுதல் - மரண தொடர்பு கர்மங்கள்- நிற்கும் போது, உட்காரும் போது உள்ள நிலைகள்.

3. பிரசன்னத்தில் லக்னம் நிர்ணயித்தல்

ஆறு வித ஆருட லக்னங்கள் ஸ்வர்ணாருடம் - உதயாருடம் - உதய வர்ன அம்ஸ ஆருடம் - சாத்திர ஆருடம் - அங்கஸ் பரஷ்ட ஆருடம் - சந்திர ராசி.

4. பிரசன்ன வகைகள் - அக்ஷ்டமங்கலம்

தெய்வானுக்கிரகம் - குலதெய்வானுக்கிரகம் - பிதூர் சாபம் - மாதர் சாபம் - சர்ப்ப தோஷம் - வாக்க்தோஷம் - திருஷ்ட தோஷம் - சத்ரு தோஷம்- பிராமண தோஷம் - குரு, குருபத்னி சாபம் - விஷபோஜனம் - வாஸ்து தோஷம்.

5. சோழிப்பிரசன்னம்- தேங்காய்- ஆருடம்- பலகரைசோதிடம் - பஞ்ச பட்சி முறை நட்சத்திரங்களுக்குரிய பட்சிகள் - பஞ்ச பட்சிகளின் தொழில் முறை, படுபட்சிபலன் கூறும் முறைகள் ஆறு விதிகள்

குறிப்புதவி நூல்கள்

- | | |
|------------------------------------|-------------------------|
| 1. Prasana marga(1999) | B.V.Raman |
| 2. பிரசன்ன ஜோதிடம் (2006) | K.S. கிருஷ்ணமூர்த்தி |
| 3. அக்ஷ்டமங்கல தேவபிரசன்னம் (2011) | அ.அமிர்தலிங்கம் |
| 4. சோழிப்பிரசன்ன ஆருடம் | எம். நடராஜன் |
| 5. Prasanna Tantra (2001) | B.V.Raman |
| 6. பிரசன்ன ஆருடம் | சுப. சுப்ரமணியன் |
| 7. ஷட் பஞ்சாசிகா (2002) | எஸ்.ஏ.குமாரசாமி ஆச்சாரி |

நோக்கங்கள்

- 1) பன்னிரு ராசிகளின் காரகத்துவங்களை தெரிந்துக் கொள்வதால் பலன்களை தெளிவாக முடிவு செய்ய முடியும்.
- 2) ராசிகளின் தன்மை, வடிவம், இருப்பிடம், மரங்கள், மிருகங்கள் என்பவை பலன் சொல்வதில் முக்கிய பங்கு வகிக்கின்றன.
- 3) பன்னிரு பாவகங்களின் காரகத்துவங்களும் தெளிவாக புரிந்துக் கொண்டால் மட்டுமே ஜாதகப் பலன்களை வரையறுத்து கூற முடியும்.
- 4) 27 நட்சத்திரங்களின் தன்மை, குணம், வடிவம் இவைகளும் பலன் கூறுவதில் முக்கிய பங்கு வகிக்கின்றன.
- 5) ராசியில் நிற்கும் கிரகம் பாவகத்தில் மாறி நின்றால் பலன்கள் மாறுவதை அறிய முடியும்.
- 6) பாவாதிபதிகள் மாறி நிற்பதால் ஏற்படும் ஜாதக பலன் மாற்றங்களை அறிவது.

பயன்கள்

- 1) சூர்யாதி, சந்திராதி, பஞ்ச மஹா புருஷ யோகங்கள் பற்றி தெரிந்துக் கொள்வதால் ஜாதகருக்கு எப்படிப்பட்ட யோகத்தின் அடிப்படையில் பலன்கள் நடைபெறும் என்பதை கூறமுடியும்.
- 2) கேள்வியாளர்களின் கேள்விக்கு ஏற்ற பதிலை சொல்வதற்கு மேலும் முதல் மீனம் வரையுள்ள இராசிகளின் தன்மை மற்றும் காரகத்துவங்களும், 12 பாவகங்கள் எதை குறிப்பிடுகின்றன என்பனவற்றை பற்றிய அறிவு வேண்டும்.
- 3) கோள்கள் நிற்கின்ற நட்சத்திரங்களின் அடிப்படையில் பலன்கள் மாறுவதை காணமுடியும்.
- 4) ஒரு கோள் எந்த ராசியில், எந்த பாவகத்தில் எந்த நட்சத்திரத்தில் அமர்கின்றது என்பதை பொருத்து பலன்கள் சொல்ல முடியும்.
- 5) லக்னம், லக்னாதிபதி எந்த நட்சத்திரத்தில் நிற்கின்றதோ அதை பொருத்து ஜாதகரின் பலன்கள் நிர்ணயிக்க முடியும்.
- 6) கோள்களின் நிலை தெரியாமலேயே லக்னத்தை கொண்டு பலன்களை வரையறுக்க முடியும்.

UNITS**1. பன்னிரு ராசிகள் காரகத்துவம்**

மேகூஷம் முதல் மீனம் வரை பன்னிரு ராசிகளின் இருப்பிடம் -வடிவம் - சிறப்பு அம்சங்கள். பன்னிரு ராசிகளுக்கும் ஆதிபத்ய முறையில் பலன்கள். ஒவ்வொரு ராசியில் உள்ள நட்சத்திர அடிப்படையில் பயன்கள். ஒவ்வொரு ராசியிலும் ஆட்சி, உச்சம், நீச்சம் அடையும் கிரகங்களை கொண்டு பலன்கள்.

2. பாவகங்களின் காரகத்துவம்

பன்னிரு பாவகங்கள் குறிப்பிடும் நிலைகள். பன்னிரு பாவகங்கள் குறிக்கும் - உயிர்காரத்துவங்கள். உடல் உறுப்புகள் - நன்மை, தீமைகள். ஒவ்வொரு பாவகமும்

குறிப்பாக உணர்த்தும் காரத்துவங்கள். மறைவு ஸ்தனங்கள்- தனஸ்தானம் - லாபஸ்தானம் - களத்திர ஸ்தானம்.

3. **பல வகையான யோகங்கள் சூர்யாதி, சந்திராதி, பஞ்ச மஹா புருச யோகங்கள்**
பத்ரயோகம் - மாளவியா யோகம் - சச யோகம் - ஹம்சயோகம் - ருஷ்யோகம்.
4. **இருபத்தியேழு நட்சத்திரங்களின் அமைப்பு**
அசுவனி முதல் ரேவதி வரை இருபத்தியேழு நட்சத்திரங்களின் வடிவம்- நட்சத்திரங்கள் ராசியின் தன்மை, ராசி அதிபதியின் தன்மைக்கு ஏற்ற வகையில் பலன்கள் தரும் முறைகள்.
5. **இருபத்தியேழு நட்சத்திரங்களின் குணம் மற்றும் தன்மைகள்**
பாவாதிபதிகள் நட்சத்திரங்களில் நிற்பதால் ஏற்படும் பலன்கள். கோள்கள் நட்சத்திரங்களில் உச்ச நீச்சம் அடைவதால் ஏற்படும் பலன்கள்.

நோக்கங்கள்:

- 1) எண் கணிதம் பற்றிய அடிப்படையான கருத்துக்களை தெரிந்துக் கொள்ள வேண்டும்.
- 2) 1 முதல் 9 வரையுள்ள எண்கள் எந்தெந்த கிரகங்களை குறிக்கின்றது என்ற அறிவை பெற வேண்டும்.
- 3) 1 முதல் 30 தேதிகளில் பிறந்தவர்கள் எப்படிப்பட்ட குணாதிசயங்களுடன் வாழ்கிறார்கள் என்பதை இந்த எண்கணித சாஸ்திரம் நமக்கு தெளிவாக விளக்கும்.
- 4) பிறவி எண், விதி எண், பெயர் எண்களின் கூட்டு தொகை இவைகளை கொண்டு பலன் கூறும் முறையை தெரிந்துக் கொள்ளலாம்.
- 5) எண் கணிதம், ஜோதிட சாஸ்திரம் ஆகிய இரண்டிற்கும் உள்ள தொடர்பை அறிதல்.
- 6) ஒருவரின் பெயரை கொண்டு வாழ்நாள் முழுவதும் பலன்களை அறிதல்.

பயன்கள்:

- 1) எண் கணித சாஸ்திரத்திற்கு ஜோதிட சாஸ்திரமே அடிப்படை என்ற கருத்தை தெளிவாக புரிந்துக் கொள்ளுதல்.
- 2) பெயர்களின் சப்தங்களுக்கு எவ்வளவு வலிமை உண்டு என்பதை உதாரணங்களின் மூலம் தெரிந்துக் கொள்ளலாம்.
- 3) விதி எண் நாம் அனுபவித்துக் கொண்டிருக்கின்ற இன்ப துன்பங்களை படம் பிடித்து காட்ட கூடியது.
- 4) எண் கணிதம் மூலம் பெயர் மாற்றம் செய்து ஜாதகர்களின் வாழ்க்கை துன்பங்களை நீங்குவது.
- 5) பெயரில் திருத்தங்கள் செய்வதன் மூலம் பல அறிய பலன்களை அடைய முடியும்.
- 6) ஜாதகர் பிறந்த தேதியையும், கூட்டு எண்ணையும் கொண்டு வாழ்நாள் பலன்கள் சொல்ல முடியும்.

UNITS

1. **எண்கணிதம் பற்றிய முக்கிய குறிப்பு, எண்களின் பொருள்**
எண்கள் குறிக்கும் கோள்கள் - ஆங்கில எழுத்துக்கள் எண்களின் குணாதிசயங்கள். பெயர் வைக்கும் முறை பெயர்களின் எண்கள் கூட்டு எண்.
2. **எண்களில் விளக்கங்கள் (எண்களின் ஆற்றல்)**
பெயர்களின் கூட்டு எண்களின் பலன்கள் - வாழ்வில் ஏற்றம் தரும் எண்கள், கஷ்டத்தை தரும் எண்கள் - உயர்வை தரும் எண்கள்.
3. **எண்களின் செயல்பாடு – எண் நிறம், தன்மை, அதிபதி**
1,2,3 ஆகிய எண்களை பிறவி எண்களாக கொண்டவர்களின் பலன்கள். பிறப்பு ஜாதகத்தை கொண்டு பெயர் அறியும் முறை.
4. **பிறவி எண், விதி எண் பெயர் என அறியும் முறை**

பிறவி எண், விதி எண் இரண்டையும் சேர்த்து பலன்கள் நிர்ணயம் முறைகள். ஒரு எண்ணுக்கு நன்மையும், தீமையும் ஏற்படுத்தும் எண்கள்.

5. 9 கோள்களின் வக்கர எண்கள் பலவீன எண்கள்

எண்களிடத்தில் பரிகாரங்கள். நோய்கள் மற்றும் பல பிரச்சினைகளை தீர்க்கும் முறை. வாழ்வின் ஏற்ற தாழ்வுகளை மாற்றும் பெயர் மாற்றம்.

நோக்கங்கள் :

- 1) வீடு கட்டுவதற்கும், கட்டிடம் கட்டுவதற்கும் நிலம் தேர்வு செய்தல் அவசியமாகும். இப்பாடப் பகுதியில் தெளிவாக தெரிந்துக் கொள்ளலாம்.
- 2) நிலத்தின் வடிவம், கோணங்கள், சல்லியம் கண்டு பிடித்தல் முதலியவை இடத்தை தேர்வு செய்வதில் முக்கிய பங்கு வகிக்கின்றது.
- 3) வீடு அல்லது கட்டிடம் கட்டுவதற்கு ஒவ்வொரு அளவுகளும் எவ்வளவு அளவு இருக்க வேண்டும் என்பதை பற்றிய அறிவும் இதன் மூலம் கிடைக்கும்.
- 4) ஜோதிட சாஸ்திரமே வாஸ்து சாஸ்திர அடிப்படையாகும்.
- 5) வீட்டில் ஒவ்வொரு அறையும் அமையக் கூடிய இடங்களை முடிவு செய்ய முடியும்.
- 6) அறைகள் அமைப்பு, ஜன்னல் அமைப்பு மூலம் பலன்கள் அறிய முடியும்.

பயன்கள் :

- 1) வீடுகள், கட்டிடங்கள் எந்த திசையை பார்த்த வண்ணம் இருக்க வேண்டும், தலைவாசல், பின்வாசல் ஆகியவற்றின் திசைகள் வீட்டில் தங்கியுள்ளவர்களுக்கு எவ்வித பலனை தரும் என்பதை இப்பாட பகுதியில் தெரிந்துக் கொள்ளலாம்.
- 2) வீட்டிற்குள் நடப்பதையும், நடக்க போவதையும் அக்கட்டிடத்தின் வாஸ்துவின் மூலம் தெரிந்துக் கொள்ள முடியும்.
- 3) வாஸ்து சாஸ்திரம் நமது தலை எழுத்தை மாற்றும் சக்தி படைத்தது.
- 4) ஆரோக்கியமான வாழ்விற்கு துணைபுரியும்
- 5) செல்வம் நிறைந்த வாழ்விற்கு துணைபுரியும்
- 6) கல்வி, ஒழுக்கம் நிறைந்த வாழ்விற்கு துணை புரியும்.

UNITS**1. நிலம் தேர்வு செய்தல்**

வாஸ்து என்பதன் பொருள் - நிலத்தின் தன்மை – நிறம் - மணம் - சுவை – அமைப்பு - வசிக்கத்தக்க விலக்கத்தக்க நிலம் சல்லியம். வாஸ்து புருஷனின் புராணகால வரலாறு. வீடுகட்ட சிறந்த மனைகள் - வீடுகட்ட விலக்கத்தக்க மனைகள்.

2. நிலத்தின் வடிவம்

நிலத்தின் வடிவம் - சதுரம் - செவ்வகம் - வட்டம் - முக்கோணம் - நீள் சதுரம் - சக்கரம் - கிண்ணம் பாணை – பலவித கோணங்கள் - தன்மைகள் - மனைகளின் அமைப்பு – மனைகளின் வடிவங்களால் ஏற்படும் பலன்கள் - மனைகளின் வடிவத்தை சீர்திருத்தம் செய்தல்.

3. நிலத்தடி சோதனை

சல்லியம் கண்டுபிடித்தல் - பிரச்சனம் - சகுனம் - நிமித்தம் - நட்சத்திரம் - வாயிலாகச் சல்லியம் கண்டுபிடித்தல் - நீக்குதல் - கஜ பிருஷ்டம் - கூர்ம பிருஷ்டம் - தைத்ய பிருஷ்டம் - நாக பிருஷ்டம்.

4. நிலத்தை அளத்தல் ஆயம் கணித்தல்

அங்குல அளவு - கை அளவு - பொதுவான அளவு முறைகள் - ஆயம் கணித்தல் - பலன் - பார்வை – கதவு நிலம் அதிபதி – கால்நடைகள் - ஒன்பது வாக்கம் கணக்கிடுதல் - திசைகளை நிர்ணயித்தல் - வீடு கட்டத் தகுதியான பாகங்கள்

5. கட்டுமானம்

வீடு – உயரம் - தலைவாசல் - ஒற்றை அறை - இரட்டை அறை – பதினாறு
வகையான கட்டுமானம் - நிலத்தின் தோஷம் - திசை – மரம் - அஸ்திவாரம் - கதவு -
சன்னல் - மனையடி சாஸ்திரம்.

6. பல வகையான சோதிட இணைய தளங்கள்

நோக்கங்கள்

- 1) பொதுவான முகத்தின் லட்சணத்தை கொண்டு ஜாதகரின் குணாதிசயங்களை சொல்ல முடியும்.
- 2) ஜோதிடத்திற்கும் அங்கலட்சணத்திற்கும் நெருங்கிய தொடர்பு உள்ளது. ஒரு மனிதனை பார்த்து அவனுடைய ஜாதக கட்டங்களை எழுதுகின்ற அளவிற்கு அறிவை வளர்க்க முடியும்.
- 3) உடலின் வலிமை, நிறம், உயரம், மச்சங்களின் பலன்கள் அந்த ஜாதகரின் வாழ்கையில் நடக்கும் நிகழ்ச்சிகளை தெரிவிக்கும்.
- 4) ஒருவரை பார்த்த மாத்திரத்தில் அவருடைய குணங்களை சொல்வது நோக்கமாகும்.
- 5) சமுதாயத்தில் எச்சரிக்கை உணர்வோடு வாழ்வது.
- 6) நம்மை பற்றிய, மற்றவர்கள் பற்றிய எதிர்கால பலன்களை தெரிந்துக் கொள்வது.

பயன்கள்:

- 1) ஒரு மனிதனை பார்த்த மாத்திரத்தில் அவனுடைய குணம், இறந்த கால வாழ்க்கை, நிகழ்கால வாழ்க்கை எதிர்கால வாழ்க்கை பற்றி தெரிந்துக் கொள்ளலாம்.
- 2) மனித உடலின் அங்கங்களின் வடிவம், அமைப்பு, நிறம், அளவு, தன்மை முதலியவற்றை தெளிவாக புரிந்துக் கொண்டால் அம்மனிதனை பற்றிய அனைத்து மறைக்கப்பட்ட உண்மைகளையும் நம்மால் சொல்ல முடியும்.
- 3) மனிதர்கள் மட்டும் இன்றி வளர்ப்பு பிராணிகளுக்கு அங்கலட்சணம் பார்க்கப்பட்டன. அவைகள் எஜமானனுக்கு எவ்வகையில் உதவும் என்பதும் சொல்ல முடியும்.
- 4) ஒரு மனிதனின் ஆயுள் ஆரோக்யத்தை சொல்ல முடியும்.
- 5) திருமண வாழ்க்கையை புரிந்துக் கொள்ளலாம்.
- 6) வேலை, தொழில் அமைப்பு, புத்ர பாக்யங்களை தெரிந்துக் கொள்ளலாம்.

UNITS**1. பொதுவான முக லட்சணம்**

மூக்கின் லட்சணங்கள் - வாயின் லட்சணங்கள் - உதடுகளின் லட்சணம் - பற்களின் லட்சணங்கள் - காதுகளின் அமைப்பு.

2. அங்கத்துடிப்புகள்

நாக்கின் லட்சணங்கள் - காதுகளின் அமைப்பு. கன்னங்கள் - சிரிப்பும் அழுகையும் - முகவாய்க்கட்டு - கழுத்தின் லட்சணங்கள்.

3. தலை முடியின் லட்சணம்

தாடி மீசைகளின் லட்சணங்கள் - முதுகின் லட்சணங்கள் - தோள்களின் லட்சணங்கள் கைகளின் லட்சணங்கள் - மணிக் கட்டுகள் உள்ளங்கைகள் - புறங்கைகள்.

4. நெற்றியின் லட்சணம், கண்களின் லட்சணங்கள்

கைரேகை லட்சணங்கள் - விரல்கள் லட்சணங்கள் - நகங்களின் லட்சணங்கள் - இடும்பும் வயிறும் - தொடைகளின் லட்சணங்கள் - ஆண்குறியும் விதைகளும் - கால்களின் லட்சணங்கள் - கணுக்கால்கள்.

5. **உடல் மச்சங்களும் பலன்களும் , மச்சங்களின் வடிவ லட்சணங்களும் பலன்களும்**
 சாமுதிரிகா லட்சணமும் ஜோதிடவியல் சம்பந்தமும் - மச்சங்களின் வகைகள் - ராசி சக்கரத்தை கொண்டு மச்சங்களின் இருப்பிடத்தை நிர்ணயித்தல்.

Predictive methods in Astrology - 1

Semester – I
4H – 4C

Instruction Hours / Week: L : 0 T : 0 P : 4

Marks Internal : 40, External : 60 Total : 100

End Semester Exam : 3 hrs

நோக்கங்கள் :

- 1) பல்வேறு சிறப்பு லக்னங்களை கொண்டு பலன் சொல்லும் முறைகள் இங்கே செய்முறை பயிற்சியின் மூலம் தெளிவாகிறது.
- 2) நாம் சொல்லும் பலன்கள் எக்கால கட்டங்களில் நடக்கும் என்பதை தசாபுத்தி கோட்சார அடிப்படையில் கால நிர்ணயம் செய்வதை இப்பாடப்பகுதி தூண்டும்.
- 3) பல்வேறு முறைகளில் பலன் சொல்வது நோக்கமாகும்.
- 4) ஜாதகம் இல்லாதவர்களுக்கு பலன்கள் சொல்வது.
- 5) இன்றைய ஜோதிட வளர்ச்சியை, புதிய கண்டுபிடிப்புகளை ஏற்றுக் கொள்வது.
- 6) ஜெய்மினி முறையில் பலன்கள் கண்டுபிடிப்பது.

பலன்கள்

- 1) பலன்கள் கூறுவதற்கு பல முறைகள் உண்டு என்பதை தெரிந்துக் கொண்டு அவைகளை பயன்படுத்தி பார்ப்பது இங்கே அனுபவத்தை அதிகரிக்கும்.
- 2) அஷ்ட வர்க்க முறையிலும், ஷட்பல முறையிலும், எண்கணித முறையிலும் பலன்களை சொல்லுவதற்கு நம்மால் முடியும்.
- 3) ஏதேனும் ஒரு முறையில் நாம் சொல்லும் பலன்களை வேறுமுறையில் சோதித்து அறியலாம்.
- 4) நமக்கு தெரிந்த முறையில் பலன் கூறி பழகலாம்.
- 5) எந்த முறையில் பலன் கூறினாலும் பலன் ஒன்றாக தான் இருக்கும் என்பதை நிரூபிக்கலாம்.
- 6) எளிமையான முறையில் பலன்கள் நிர்ணயம் செய்யலாம்.

UNITS

1. லக்ன பலன் கூறுதல்
பல்வேறு சிறப்பு லக்னங்களைக் கொண்டு பலன் சொல்லுதல் - கேந்திர திரிகோண அதிபதிகளின் தொடர்புகளைக் கொண்டு பலன் சொல்லுதல்.
2. தசாபுத்தி - கோட்சார முறைகளைப் பயன்படுத்தி பலன் கூறல்.
தசாக்கோள் - புத்திகோள் நிலைகள் - நின்ற நட்சத்திரம் - கோட்சார சனி - குரு நிலைகளைக் கொண்டு பலன் கூறுதல்
3. எண்கணித முறையில் பலன் கூறுதல் - பிறப்பு எண் - விதி எண் அடிப்படையில் பலன்கள் கூறுதல்.
4. அஷ்டவர்க்க முறையில் பலன் கூறுதல் - நவகிரக அஷ்டவர்க பலன்கள் - நவகிரக கச்சயா பலன்கள்.
5. ஷட்பலம் முறையில் பலன் கூறுதல் - நவகிரகங்களின் பலம் பலஹீனத்தை கொண்டு பலன் கூறுதல்.

நோக்கங்கள்:

- 1) தாரா பலனை நிர்ணயிப்பதின் மூலம் ஜாதகத்தின் பலனை மிகவும் துல்லியமாக கூற முடியும்.
- 2) சிறுவயது ஜாதகர்களின் எதிர்கால படிப்பை பற்றிய தெளிவு நன்கு புலனாகும்.
- 3) திருமண வாழ்க்கையின் தாரதரத்தை நிர்ணயிக்க முடியும்.
- 4) ஒரு லக்னம்(அ) சந்திரன் நின்ற ராசிக்கு கேந்திர திருகோண அதிபதிகளின் நிலை கொண்டு பலன்கள் கூறலாம்.
- 5) கோள்களின் பலத்தை அறிந்துக் கொள்ள திக்பலம் பயன்படும்.
- 6) பல்வேறு முறைகளில் பலன் சொல்வது நோக்கமாகும்.

பயன்கள்

- 1) நிலம், நீர், நெருப்பு இராசிகளை இராசி கட்டங்களில் பிரித்து அறிவதன் மூலம் பலன் சொல்லும் முறையில் பல அரிய விஷயங்களை வெளி கொண்டுவர முடியும்.
- 2) ஷட் பலங்களில் திக் பலத்தின் முக்கியத்துவம் புரியும்.
- 3) கோள்கள் நிற்கும் நட்சத்திரத்தை கொண்டு தாரா பலன்கள் நிர்ணயித்து கோள்களின் வலிமையை அறியலாம்.
- 4) மனிதர்களுக்கு மிக இன்றியமையாதது கல்வியும், திருமண வாழ்க்கையும், தொழிலும் ஆகும். இவைகளை இந்த செய்முறை பாட பகுதியின் மூலம் நன்கு அறிந்தும் கொள்ளலாம்.
- 5) எந்த முறையில் பலன் கூறினாலும் பலன் ஒன்றாக தான் இருக்கும் என்பதை நிரூபிக்கலாம்.
- 6) எளிமையான முறையில் பலன்கள் நிர்ணயம் செய்யலாம்.

UNITS

1. தாரா பலனை வரையறுத்தல் - ஜென்மதாரை - சம்பத் தாரை - விபத் தாரை -சௌம்ய தாரை- பிரத்வர தாரை - சாதக தாரை - நைதன தாரை - மைத்ர தாரை.
2. கல்வி பலனை வரையறுத்தல் - பள்ளி கல்வி - கல்லூரி படிப்பு - மேற்படிப்பு- ஆராய்ச்சி படிப்பு- மருத்துவபடிப்பு - பொறியியல் படிப்பு.
3. வாழ்க்கை முறையும் குடும்ப நலனும் - குடும்ப வாழ்க்கை அமையும்முறை - பணம் வரும் முறை.
4. நிலம், நீர், நெருப்பு, காற்று, இராசிகளை இராசிக்கட்டத்தில் பிரித்து காட்டுதல் - தன்மைகள்.
5. கேந்திர கோண ராசிகளின் பலன்களை வரையறுத்தல் - 1,4,7,10 ராசிகள். 5.9 ராசிகள் இவைகள் இணைந்த பலன்கள்.

நோக்கங்கள் :

- 1) பன்னிரு ராசிகளில் கோள்கள் அடையும் ஆட்சி, உச்சம், நீச்சம், பகை, மூலத்திரிகோணம் ஆகிய பலன்கள் கோள்களின் பலத்தை அறிவதில் முக்கிய பங்கு வகிக்கின்றன.
- 2) பாவகத்தில் கோள்கள் நின்ற பலன்களும் ஜாதகத்திற்கு பலன் சொல்வதற்கு துணையாக இருக்கும்.
- 3) கோள்களின் இணைவு பலன்கள் ஜாதகபலன் நிர்ணயத்திற்கு பெரும் பங்காற்றுகின்றது.
- 4) திசா புத்தி கோட்சார பலன்கள் நிகழ்ச்சிகள் நடக்கும் காலகட்டத்தை துல்லியமாக எடுத்துரைப்பதாகும்.
- 5) கோள்களின் இணைவு மூலம் ஜாதகரின் வாழ்க்கையில் ஏற்படும் பலன்களை அறிவது.
- 6) கோள்களின் காரகத்துவங்கள் பார்வைகள் மூலம் ஜாதக பலன்களை மிக துல்லியமாக கணிக்க முடியும்.

பயன்கள் :

- 1) கோள்களின் பார்வைகள், சிறப்பு பார்வைகள் ஜாதகரின் வாழ்க்கையில் எப்படிப் பட்ட தாக்கத்தை ஏற்படுத்துகின்றன என்பதை தெரிந்துக் கொள்ள முடியும்.
- 2) கோள்களின் வலிமையை கொண்டு அக்கோள் ஜாதகருக்கு எவ்வளவு பலனை தரும் என்பதை கணிக்கலாம்.
- 3) பாவகங்களில் நிற்கும் கோள்களின் தன்மைகளுக்கு ஏற்ற வகையில் ஜாதகரின் வாழ்க்கை அமைகிறது.
- 4) தர்ம, அர்த்த, காம, மோட்ச திரிகோணங்களில் நிற்கும் கிரகங்களை கொண்டு ஜாதகரின் பிறவியின் நோக்கம் தெரிந்துக் கொள்ளலாம்.
- 5) கோள்களின் பலத்தைக் கொண்டு ஜாதக பலன்களை முடிவு செய்ய முடியும்.
- 6) 2,10க்கு அதிபதியான கோள்களை கொண்டு ஜாதகர் எந்த தொழில் மூலம் பணம் சம்பாதிப்பார் என்பதை அறிய முடியும்.

UNITS**1. கோள்களின் பலன்கள்**

ஆட்சி, உச்சம், நீச்சம், திரிகோணம், கேந்திரம் வர்க்கப்பலன்கள் - பன்னிரு ராசிகளில் கோள்கள் அடையும் ஆட்சி – உச்ச- நீச்ச- பகை- மூலத்திரிகோண பலன்கள்

2. பாவகத்தில் கோள்களின் பலன்கள்

தர்ம - அர்த்த - காம - மோட்ச - கேந்திர - கோண பலன்கள் - நட்சத்திரங்களின் கோள்கள் நின்ற பலன்கள்.

3. கோள்களின் பார்வை பலன்கள் மற்றும் கோட்சார பலன்கள்

கோள்களின் பொதுப் பார்வைகள் - சிறப்பு பார்வைகள் குரு – சனி – செவ்வாய் - ராகு - கேதுக்களின் பார்வைகள் - கோள்களின் கோட்சாரப் பலன்கள்.

4. கோள்கள் இணைவு பலன்கள்

இரண்டு அல்லது அதற்கு மேற்பட்ட கோள்கள் இணைதல் மற்றும் பலன்கள்-யோகி கோள் - அவயோகி கோள்.

5. கோள்களின் திசா புத்தி பலன்கள்

போதகர் - காரகன் - பாசகன் - வேதகன்.

நோக்கங்கள்

- 1) கேள்வியாளர்களின் தூரப் பயணங்களை பற்றியும், தனது தொழிலில் ஏற்படும் ஏற்ற தாழ்வுகள் பற்றியும் பிரஸன்ன முறையில் பலன்கள் கூறப்படும்.
- 2) புத்திர பேறு அறிதல் பற்றிய கேள்விகளுக்கு பிரஸன்ன முறையில் பதில்கள் சொல்வதற்கு பயிற்சியளித்தல்.
- 3) விவாஹ பிரஸன்ன முறையில் திருமணத்தை பற்றிய அனைத்து கேள்விகளுக்கும் பதில் கூற முடியும்.
- 4) ரோக பிரஸன்ன முறையில் ஜாதகருக்கு ஏற்பட்ட நோயை அறிந்து அதற்கு பரிகாரமும் சொல்ல முடியும்.
- 5) சகுனம், நிமித்தங்களின் மூலம் ஜாதகரின் கேள்விகளும் பதில் கூற முடியும்.
- 6) வெற்றிலை ஜோதிடம் மூலம் ஜாதகரின் கடந்த காலம், நிகழ்கால பலன்களை தெளிவாக கூற முடியும்.

பயன்கள் :

- 1) ஜாதகம் இல்லாதவர்களும் ஜோதிடத்தின் மூலம் பலன்களும் பரிகாரங்களும் தெரிந்துக் கொள்ளலாம்.
- 2) நிகழ் காலத்தில் ஏற்படுகின்ற தொழில் தடை, திருமண தடை முதலியவைகளை முன்கூட்டியே அறிந்து அவைகளுக்கு தீர்வும் அளிக்கலாம்.
- 3) குழந்தை ஆணா? பெண்ணா? எக்கால கட்டத்தில் பிறக்கும், அக்குழந்தையால் பெற்றோர்களில் வாழ்க்கையில் ஏற்படும் மாற்றங்கள் ஆகியவை தெரிவுப்படுத்தப்படும்.
- 4) நோய் வருவதற்கு காரணம், அதை தீர்க்கும் முறையும் சொல்லப்படும்.
- 5) அஷ்ட மங்கல பிரசன்னம் மூலம் கேள்வியாளர் பிரச்சினைகளை எளிதாக கண்டு பிடிக்க முடியும்.
- 6) விவாஹ பிரசன்னம், நஷ்ட பிரசன்னம், ஆயுள் பிரசன்னம், ரோக பிரசன்னம் மூலம் கேள்வியாளரின் கேள்விகளுக்கு பதில்கள் கூற முடியும்.

UNITS

1. **பிரசன்ன முறையில் நீண்ட தூரப் பயணங்களை அறிதல்**
பிராணத்திற்கு ஏற்ற காலம் - பிரயாணத்தில் ஏற்படும் தடைகள் - கஷ்டங்கள் - கண்டங்கள்- நோய்கள்.
2. **பிரசன்ன முறையில் தொழில் அறிதல்**
வேலை கிடைக்குமா? கிடைக்காதா? வேலை கிடைக்கும் காலம் - எத்துறை சார்ந்த வேலை அமையும்.
3. **பிரசன்ன முறையில் திருமண விவரம் அறிதல்**
ஏழாம் பாவகத்தைக் கொண்டு மனைவியை அறிதல் - சுக்கிரனின் பங்கு

திருமண காலம் -மனைவியின் குணங்களை அறிதல்- பல்வேறு பொருத்த நிலைகள்-

4. **பிரசன்ன முறையில் புத்திர பேறு அறிதல்**
குழந்தைப்பேறு அறிதல் - சந்தானவிருத்தி அறிதல்.
நிசேகம் லக்னம் குறித்தல் - குழந்தைப் பேறு அறிதல் - சந்தான விருத்தி
5. **பிரசன்ன முறையில் நோய் மற்றும் வழக்கு அறிதல்**
பிரசன்னத்தில் நோய்கள் அறிதல் - பல்வேறு வகையான நோய்களுக்கு-
கோள்களின் நிலைகள் - கர்ம விபாக முறையில் பரிகாரங்கள் - நோய்
வருங்காலம் - தீர்தல்

- 2. Important Combinations B.V. Raman
- 3. Hindu predictive Astrology B.V. Raman

நோக்கங்கள் :

- 1) நம் நாட்டு ஜோதிட பலன் கூறும் முறைகள் அல்லாமல் மேல்நாட்டு பலன் கூறும் முறைகளையும் மாணவர்கள் தெரிந்துக் கொள்ளுதல்.
- 2) மழை அறிதல், இயற்கை பேரிடர் ஆகிய இகலோக ஜோதிடத்தின் அடிப்படை தன்மைகளையும் மாணவர்கள் அறிந்துக் கொள்ள வேண்டும்.
- 3) பலன் அறியும் முறைகளில் கிருஷ்ணமூர்த்தி பத்ததியின் புதிய கண்டுபிடிப்புகளை படிக்கும் நோக்கிலும், ஆய்வுமனப்பான்மையை வளர்க்கும் நோக்கிலும் இப்பாட திட்டம் அமைக்கப்பட்டுள்ளது.
- 4) பாவக ஆரம்ப முனைகள் நிற்கும், குறிகாட்டும் பாவகங்களின் மூலம் பலன்கள் முடிவு செய்வது.
- 5) புதிய கண்டுபிடிப்புகளை ஊக்குவிக்க முடியும்.
- 6) புதிய கண்டுபிடிப்புகளின் மூலம் ஜாதக பலன்கள் துல்லியமாக கூறுவது.

பயன்கள்:

- 1) மாணவர்கள் புதிய ஜோதிட பலன் கூறும் முறைகளை படிப்பதினால், புதிய ஜோதிட சார்ந்த கண்டு பிடிப்புகளுக்கு வழிவகுக்கும்.
- 2) மாணவர்கள் காலதேச வர்த்தமானங்களுக்கு ஏற்ற வகையில் பலன் கூறமுடியும்.
- 3) மற்ற துறைகளில் புதிய கண்டு பிடிப்புகளுக்கு ஏற்ற கோள்களின் காரகத்துவ பலன்களை நிர்ணயிக்க உதவும்.
- 4) நாட்டுக்கு பலன்கள் கூற முடியும்.
- 5) நாட்டில் ஆட்சி மாற்றங்கள், இயற்கை பேரிடர்கள் இவைகளை முன் கூட்டியே சொல்ல முடியும்.
- 6) மேல்நாட்டு ஜோதிட முறைகளை நம் நாட்டு ஜோதிடமுறைகளோடு ஒப்பிட முடியும்.

UNITS

1. **மேல்நாட்டு ஜோதிட முறைகள்**
அடிப்படை - பார்வை பலன்கள் - உலகியல் ஜோதிடமுறைகள் - ராசிகளுக்குரிய நாடுகள் - மற்றும் ஊர்கள் - பன்னிரு ராசிகளின் செயல்கள்- மழை அறிதல் - இயற்கை பேரிடர்.
2. **கிருஷ்ணமூர்த்திபத்ததி முறை விளக்கம்**
249 உப நட்சத்திர விளக்கம் -அயனாம்சம்- பாவக கணித முறைகள் - கோள்கள்-
3. **கிருஷ்ணமூர்த்திபத்ததி கணித முறைகள்**
கணித முறைகள் - தசாபுத்தி கணித முறைகள் -கே.பி முறையில் பாவக சக்கரம் வரைதல் - குறிகாட்டிகள்.
4. **பாவக ஆரம்ப முனை விளக்கம்**

பன்னிரு பாவகங்களில் பாவக ஆரம்பமுனை நிற்பது குறித்து விளக்கம்-
ஆளும் கோள்கள் குறித்து விளக்கம் - பார்வை முறைகள் - பன்னிரு
பாவகங்கள் குறிப்பிடுவது - கோள்கள் குறித்து விளக்கம்.

5. ஒன்று முதல் பன்னிரெண்டு பாவகங்கள் வரை பலன்கள் விளக்கம்.
ஒன்று முதல் பன்னிரெண்டு பாவகங்கள் வரை- உதாரண ஜாதகங்கள் மூலம்
விளக்கம்.

- 2) கோள்களின் உண்மையான வலிமை வர்க்க சக்கரங்களில் மட்டுமே வெளிப்படும்.
- 3) இராசி சக்கரத்தை கொண்டு மேலோட்டமான பொது பலன்களை மட்டுமே சொல்ல முடியும் ஆனால் வர்க்கங்கள் கொண்டு துல்லியமான, ஆழமான, விளக்கமான பலன்களை சொல்ல முடியும்.
- 4) நவாம்சத்தை கொண்டு ஜாதகரின் திருமண வாழ்க்கையின் சாராம்சத்தை புரிந்துக் கொள்ள முடியும்.
- 5) சதுர்விம்சாம்சத்தை கொண்டு ஜாதகரின் கல்வியின் தரத்தை நிர்ணயம் செய்ய முடியும்.
- 6) சப்தாம்சத்தை கொண்டு, புத்ர பாக்யத்தை அறிய முடியும்.

பயன்கள்:

- 1) வர்க்க சக்கர முறையில் பலன் சொல்வது என்பது ஒரு உயர்தர முறையில் பலன்கள் சொல்வதாகும்.
- 2) ஜாதகரின் வாழ்க்கையில் மறைந்து கிடக்கின்ற பலபல உண்மைகளை வெளி உலகத்திற்கு காட்டும் ஒரு பல பலன் சொல்லும் முறை என்றால் அது மிகையல்ல.
- 3) நமது வாழ்வில் நடக்கும் அனைத்து நிகழ்ச்சிகளுக்கும் காரண காரியங்களோடு, கோள்கள் சம்பந்தம் உள்ளது என்பதை புரிந்துக் கொள்ள முடியும்.
- 4) சதுர்த்தாம்சத்தை கொண்டு அசையா சொத்துகளின் நிலையை அறிய முடியும்.
- 5) தசாம்சத்தை கொண்டு ஜாதகரின் வேலையின் நிலையை முடிவு செய்யலாம்.
- 6) ஏகாதாம்சத்தை கொண்டு ஒருவரின் சொந்த தொழில் நலனை அறியலாம்.

UNITS**16 வர்க்கச் சக்கரங்களும் பலன்களும்****1. ஸ்தான பலம் மற்றும் திக்பலம்**

ஸ்தான பலம் - உச்ச - சப்த வர்கிய - ஓஜ உக்ம் - கேந்திர திரிகோண பலம் - திக்பலம் - திசைகள் - கோள்களின் பலம் - பலவீனம் - பலன் D2, D3 கட்டமைப்புகள், பலன்கள்

2. காலபலம் மற்றும் சேஷ்டாபலம்

கோள்களின் தற்காலிக பலம் - பகல் - இரவு - திரிபாகம் - வருடம் - மாதம் - நாள் - நேர அதிபதி - கோள்களின் கோசார பலம் - உள்வட்டம் - வெளிவட்டம் - விரைவாக - மெதுவாகச்

செல்லும் -

கோள்களின் பலம் - பலவீனம் - பலன் D4, D16, D24 கட்டமைப்புகள், பலன்கள்

3. நைசர்க்கிய பலம் மற்றும் திருக் பலம்

கோள்களின் இயற்கை பலம் - கோள்களின் பார்வை பலம் - பலவீனம் - பலன் D5, D6, D7 கட்டமைப்புகள், பலன்கள்

4. பாவக பலம்

பாவக பலம் - பால காரகம் - பகல் - இரவு - பிறப்பு பலம் - இஷ்ட பலம் - கஷ்ட பலம் நிகர பலம் D8, D9, D10, D11, D12, D20, D30 கட்டமைப்புகள், பலன்கள்

5. சாதக பலன் நிர்ணயித்தல்

பல அடிப்படையில் கோள்கள் - பாவகம் - தசா புத்தி கோசார - பலன் நிர்ணயித்தல்

குறிப்புதவி நூல்கள்

1. பராசரர், உரையாசிரியர் - கிரிஸ் சந்த் சர்மா, பிருகத் பராசரா ஜோரா சாஸ்திரம், சாகர் பப்ளிகேசன்ஸ், புது தில்லி
2. மந்திரேஸ்வரர், உரையாசிரியர், சு.எ. குமார சுவாமி ஆச்சாரியார், பல தீபிகை, ஆனந்த நிலையம் சென்னை
3. கல்யாணவர்மர், உரையாசிரியர் சு.ஏ. குமாரசுவாமி ஆச்சாரியார். சாராவளி. ஆனந்த நிலையம் சென்னை
4. கிருஷ்ண குமார், சட்பல ரகசியம், ஆல்.பா பப்ளிகேசன்ஸ், புது தில்லி
5. எஸ்.எம். சதாசிவம், சட்பலம், இந்து பப்ளிகேசன்ஸ், சென்னை
6. பல வகையான சோதிட இணைய தளங்கள்
7. Sanjay Rath, varga chakra, Saagar publication.
8. P.V.R. Narasimha Rao, Vedic Astrology an intergrated Approach. Sagar publication.
9. Crux of vedic Astrology- timing of events by Sanjay Rath, Sagar publication.
10. V.P.Goel, Comprehensive prediction by Division charts, Sagar publication.

நோக்கங்கள்

- 1) பராசரர் முறையில் பன்னிரு இலக்ன சாதகங்களுக்கு ஆதிபத்திய முறையில் பலன் கூறுதல் மாணவர்களின் சோதிட அறிவை பரைசாற்றுவதாக அமையும்
- 2) மேலும் பன்னிரு இலக்ன சாதகங்களுக்கு நட்சத்திர சார ஆதிபத்திய முறையில் பலன்கள் கூறுதல் மாணவர்களின் நுட்பமான சோதிட அறிவு இந்த செய்முறைத் தேர்வின் மூலம் வெளிப்படும்
- 3) பலன்களாக சொல்லப்படும் நிகழ்வுகள் எக்காலகட்டத்தில் ஏற்படும் என்பதை விம்சோத்திரி தசா புத்தியின் மூலம் கூறுவது இந்த செய்முறைத் தேர்வின் நோக்கமாகும்.
- 4) அஷ்டவர்க்க பலன்கள் மூலம் கோட்சார பலன்களை சொல்வதும்,
- 5) மேலை நாட்டுமுறையில் பலன்கள் கூறுவதும் மாணவர்களை பல முறைகளில் பலன் கூறவைப்பதற்கான முயற்சியாகும்.
- 6) கோள்களின் நிலைகள் இல்லாமலேயே ஜாதகப் பலன்களை லக்னம், ராசியை கொண்டு அறிதல்.

பயன்கள்

- 1) இந்த செய்முறை பயிற்சியின் மூலம் மாணவர்கள் உயர்தரமான சோதிட அறிவை பெறுவார்கள்
- 2) தங்களிடம் வருகின்ற சாதகங்களின் வாழ்வில் வழிகாட்டியாகவும் நன்மை செய்பவர்களாகவும் இருப்பார்கள்
- 3) மற்றவர்களுக்கு சோதிட சாஸ்திரதின் மூலம் வழிபாட்டுவதால் தெய்வீக நிலையை அடைய வழி ஏற்படும்.
- 4) மேலை நாட்டு முறையில் பலன்களை கண்டறிதல் மாணவர்களுக்கு புதிய உத்வேகத்தை தரும்.
- 5) விம்சோத்திரி தசா மூலம் ஜாதக பலன்கள் நடக்க போகும் காலக்கட்டத்தை அறிய உதவும்.
- 6) அஷ்டக வர்க்கத்தின் மூலம் மிகவும் துல்லியமான பலன்களை சொல்ல முடியும்.

செய்முறைத்தேர்வு (Practical) :III**UNITS**

1. பன்னிரு லக்ன சாதகங்களுக்கு ஆதிபத்திய முறையில் பலன் கூறுதல்.
2. பன்னிரு லக்ன சாதகங்களுக்கு நட்சத்திர சார ஆதிபத்திய முறையில் பலன் கூறுதல்.
3. விம்சோத்திரி தசா புத்தி கணித்துப் பலன் கூறுதல்.
4. அஷ்டவர்க்க ஜனன பரல்கள் மூலம் கோட்சார பலன்களைக் கூறுதல்.
5. மேலை நாட்டு முறையில் பலன் கூறுதல்.

DEPARTMENT OF BIOCHEMISTRY
FACULTY OF ARTS, SCIENCE AND HUMANITIES
KARPAGAM ACADEMY OF HIGHER EDUCATION

(Deemed to be University)
(Established Under Section 3 of UGC Act 1956)
Eachanari PO, Coimbatore – 641 021, India.

B.Sc., BIOCHEMISTRY

PREAMBLE

- Biochemistry is the study of chemistry and relating to, biological organisms.
- Biochemistry is sometimes viewed as a hybrid branch of organic chemistry which specializes in the chemical processes and chemical transformations that take place inside of living organisms.
- All life forms alive today are generally believed to have descend from a single proto-biotic ancestor, which could explain why all known living things naturally have similar biochemistries.
- Biochemistry essentially remains the study of the structure and functions of cellular components (such as enzymes and cellular organelles) and the processes carry out both on and by organic macromolecules - especially proteins, but also carbohydrates, lipids, nucleic acids and other biomolecules.
- Biochemistry is most simply put, the chemistry of life.

PROGRAMME OUTCOME (POs).

The Biochemistry graduate will be able to acquire

- a. Critical Thinking and Language Training:** The ability to analyze information objectively and make a reasonable judgment and conclusion by evaluating data, facts, observable phenomenon, and research findings from a set of information and distinguish among priorities to solve a problem To train them to communicate science by improving their English vocabulary. Speak, read, write and listen clearly in person and through electronic media in English and in one Indian language, and make meaning of the world by connecting people, ideas, books, media and technology.
- b. Ethics:** Recognize different value systems including your own, understand the moral dimensions of your decisions, and accept responsibility for them.
- c. Social Interaction:** Elicit views of others, mediate disagreements and help reach conclusions in group settings. Demonstrate empathetic social concern and equity centred national development, and the ability to act with an informed awareness of issues and participate in civic life through volunteering.
- d. Understanding cellular function:** To equip them with basic and advanced knowledge in cell biology in order to get entry/placed in cell based research and development institution/laboratories.
- e. Protein based skills:** To make them understand protein, enzymes and human physiology to lay solid foundation and to get through competitive examinations. To equip them to get placed in recombinant protein production industries/laboratory.
- f. Understanding of endocrine system and metabolism:** To train them on the regulatory role of hormone on the metabolism of carbohydrates, lipids, amino acids and nucleic acid.
- g. Molecular and Genetic understanding:** To train them on the genetic regulation of immune system and to use computational tools.
- h. Environment and Sustainability:** Understand the issues of environmental contexts and sustainable development.
- i. Self-directed and Life-long Learning:** Acquire the ability to engage in independent and life-long learning in the broadest context socio-technological changes.
- j. Skill development:** To gain hands on experience on various biochemical experiments and to equip them to interpret the data.

PROGRAMME SPECIFIC OUTCOME (PSOs)

- k. Be able to demonstrate foundation knowledge in the areas of Biochemistry like cell biology, biomolecules, protein biochemistry, molecular biology, Pharmaceutical chemistry and hormonal biochemistry
- l. Be able to integrate knowledge learned in discipline specific courses like Microbiology, Plant Biochemistry, Nutritional biochemistry, Biostatistics, Drug Biochemistry and biotechnology
- m. To use standard laboratory protocols in biochemistry, modern instrumentations, proper laboratory safety protocols and classical techniques to carry out experiments and also use computers in data acquisition and processing and use available software as a tool in data analysis.
- n. To understand the applications of biological sciences in genetics, biochemical correlations of diseases, micro biology, Genetic engineering and biotechnology

PROGRAMME EDUCATIONAL OBJECTIVES (PEO)

- I. To give students a basic knowledge in biochemistry and to teach on ethics.
- II. To develop analytical and critical-thinking skills that allows independent exploration of biological phenomena through the scientific methods.
- III. To acquaint knowledge on modern methods of biochemical experimentation to implement for future studies.
- IV. To motivate students for social responsibilities and to educate them on ethical values in addition to inculcating environmental awareness.
- V. To enable them to execute a research objective through experimentation.

அலகு - I : இக்கால இலக்கியம்

தத்துவம் : மகாகவி பாரதியார் - பகைவனுக்கு அருள்வாய்.

கவிஞர் ந.பிச்சமூர்த்தி - கிளிக்கூண்டு

இயற்கை : பாவேந்தர் பாரதிதாசன் - அழகின் சிரிப்பு - ஞாயிறு.

சமுதாயம் : கவிக்கோ அப்துல் ரகுமான் - இன்றைய நிலை

அறிவியல் : கவிஞர் சிற்பி பாலசுப்பிரமணியன் - காலம்.

பெண்ணியம் : கவிஞர் சிவரமணி - வையகத்தை வெற்றிகொள்ள

சூழலியல் : அன்பாதவன் - மரணம்

காதல் : வைரமுத்து - காதல் உயில்

தன்னம்பிக்கை பா.விஜய் - தன்னம்பிக்கை

அலகு - II : அற இலக்கியம்

1. திருக்குறள் - தேர்ந்தெடுக்கப்பட்ட குறள்கள் 20

2. நான்மணிக்கடிகை - தேர்ந்தெடுக்கப்பட்ட ஐந்து பாடல்கள்

3. திரிகடுகம் - தேர்ந்தெடுக்கப்பட்ட ஐந்து பாடல்கள்

அலகு - III : சிற்றிலக்கியம்

1. நரிவிருத்தம் - அறன் வலியுறுத்தல்

2. தமிழ் விடு தூது - தமிழின் சிறப்புரைத்தல்

3. மதுரை மீனாட்சியம்மைப் பிள்ளைத்தமிழ் - தொடுக்கும் கடவுள் பழம்பாடல்

அலகு - IV : சிறுகதை

1. புதுமைப்பித்தன் - நிகும்பலை

2. தனுஷ்கோடி ராமசாமி - கந்தகக் கிடங்கிலே

3. கந்தர்வன் - துண்டு

4. வாஸந்தி - வடிகால்

5. சி.ஆர். ரவீந்திரன் - வழுக்குமரம்

அலகு - V : மொழிப்பயிற்சி

1. விண்ணப்பங்கள் எழுதுதல் மற்றும் கடிதப் பயிற்சி

2. மொழிபெயர்ப்புப் பயிற்சி

பாட நூல்: கற்பகச்சோலை - தமிழ் ஏடு. கற்பகம் பல்கலைக்கழகத் தமிழ்த் துறை வெளியீடு.

Instruction hours/week: L:4 T:0 P:0 Marks: Internal: 40 External: 60 Total: 100**End Semester Exam: 3 Hours****Course Objectives:**

- To help students enhance their Language skills
- To introduce different kinds of literary works
- To familiarize different genres of Literature
- To instruct moral values through literature
- To improvise their productive and receptive skills
- To strengthen the basic knowledge about grammar

Course Outcomes (CO's):

1. Develop the four types of skills
2. Reading and comprehending literary works
3. Genres of literature to provide moral education
4. Develop communication skills in business environment
5. Interpersonal skills will be developed
6. Betterment of language competence

UNIT I:**Prose:** Google Guys (Extract) – Richard L Brandt**Poetry:** The Blind Pedlar – Osbert Sitwell**Short Story:** A Garden So Rich – Christie Craig**Vocabulary:** Prefixes, Antonyms, Sentence Completion**Grammar:** Articles, Adverbs, Pronouns**Composition:** Proverb Expansion**UNIT II:****Prose:** Happiness 101 – Geeta Padmanabhan**Poetry:** An Old Woman – Arun Kolatkar**Vocabulary:** Suffixes, Analogies**Grammar:** Nouns, Adjectives**Composition:** Dialogue Writing**UNIT III:****Prose:** Structured Procrastination – John Perry**Short Story:** The Umbrella Man – Roald Dahl**One-Act Play:** The Boy Who Stopped Smiling – Ramu Ramanathan**Vocabulary:** Synonyms, Euphemisms, Word Definitions**Grammar:** Verbs, Conjunctions and Interjection, Indirect/Reported Speech**UNIT IV:****Poetry:** No Sentence – Anjum Hassan**One-Act Play:** While the Auto Waits- O' Henry**Vocabulary:** Words Often Confused, Anagrams

Grammar: Prepositions, Voice- Active and Passive

Composition: Letter Writing- Informal

UNIT V:

Short Story: The Bird – Amar Jalil

One-Act Play: The Cellphone Epidemic – Claudia I. Haas

Vocabulary: Portmanteau Words, One Word Substitute

Grammar: Questions, Pronunciation

Composition: Letter Writing- Formal

Syamala, V. English for Communication. 2006. Emerald Publishers: Chennai

Instruction hours/week: L: 5 T: 0 P: 0

Marks: Internal: 40 External: 60 Total: 100

End Semester Exam: 3 Hours

Course Objectives

Equip the students:

- To understand the properties and importance of water in biological system
- To know the various biomolecules present in biological system
- To introduce the importance of vitamins in human body
- To know the biological significance of carbohydrate metabolites in living systems
- To understand the functional role of nucleic acid in living systems
- To introduce the importance of vitamins in human body

Course Outcomes (CO's)

After successful completion of the course, the student will:

1. Recognize water as a universal solvent and elixir of life by knowing its importance
2. Identify the properties and classification of carbohydrates
3. Recall the role of various lipids in biomembrane including signal transduction
4. Categorize the amino acids and know their properties
5. Differentiate the structure, properties and functions of DNA and RNA
6. List the functions and deficiency disease of fat and water soluble vitamins

UNIT I**Water and Carbohydrates****Water:** An introduction to biological molecules. Structure and properties of water as biomolecule.**Carbohydrates:** Monosaccharides-Classification, structures, stereochemistry and chemical reactions. Derivatives of monosaccharides. Disaccharides- Classification, structure, chemistry and function. Trisaccharides- Structure of raffinose. Polysaccharides: Storage polysaccharides- starch, glycogen and dextrin. Properties and functions of structural polysaccharides: cellulose, chitin and glycosaminoglycans (Structures not required).**UNIT II****Lipids:** Definition. Classification of lipids; Biological significance: Role of lipids in biomembranes. Simple lipids: Physical and chemical properties of fats. Compound lipids: Structure and function of phospholipids, glycolipids and lipoproteins. Derived lipids: Fatty acids- Saturated unsaturated and essential fatty acids. Sterols- structure and functions of cholesterol.**UNIT III****Amino acids:** Definition, Amino acids as ampholytes, structure and classification of amino acids, chemical reactions of amino acids due to carboxyl groups and amino groups. Unusual amino acids: Peptides: Structure and properties – Example

UNIT IV

Nucleic acids: Structure of purines and pyrimidines: nucleosides and nucleotides. DNA: Double helix; A, B, & Z forms; circular DNA and super coiling; DNA denaturation and renaturation. RNA: Types and structure of RNA, tRNA-unusual bases.

UNIT V

Vitamins: Definition, Classification, Fat-soluble and water-soluble vitamins-sources, structure and physiological functions. Minerals: Mineral requirement, essential macro minerals and essential micro minerals- sources and functions.

TEXT BOOKS

Lubert Stryer, L. 2009, Biochemistry, W.H. Freeman and Company, New York.

Robert K. Murray, Daryl K. Granner, Peter A. Mayes, Victor W. Rodwell, 2012, Harper's Biochemistry, 29th edition, McGraw-Hill Medical, London.

Instruction hours/week: L:4 T:0 P:0**Marks: Internal: 40 External: 60 Total: 100****End Semester Exam: 3 Hours****Course Objectives**

Equip the students:

- On the molecular orbital theory, preparation and properties of inorganic compounds
- On the theory of covalent bond, polar effects and stereochemistry of organic compounds
- About important industrial chemicals like silicones, fuel gases
- About Fertilizers and their impact on environment
- On the elements of photochemistry, chemical kinetics and chromatography
- About the dyes, chemotherapy and vitamins

Course Outcome

After successful completion of the course, the student will:

1. Understand the molecular orbital theory, preparation and properties of inorganic compounds
2. Understand the theory of covalent bond, polar effects and stereochemistry of organic compounds
3. Have knowledge about important industrial chemicals like silicones, fuel gases
4. Know the classes of fertilizers and their impact on environment
5. Understand the elements of photochemistry, chemical kinetics and chromatography.
6. Understand about the dyes, chemotherapy and vitamins

UNIT-I**Chemical Bonding:** Molecular orbital theory-linear combination of atomic orbitals-bonding and antibonding molecular orbitals-energy level diagram-bond order- M.O. configuration of H_2 , N_2 and F_2 molecules.Diborane: Preparation, properties and structure. $NaBH_4$: Preparation and uses.

Borazole: Preparation and properties.

Interhalogen compounds: ICl , BrF_3 , IF_5 - preparation, properties, uses and structure.

Basic properties of iodine.

Compounds of sulphur: Sodium hydrosulphite- preparation, properties, uses and structure.

Per acids of sulphur: Preparation, properties, uses and structure.

UNIT-II**Industrial Chemistry:** Silicones: Synthesis, properties and uses.

Fuels gases: Natural gas-water gas-semi water gas-carbureted water gas-producer gas- oil gas (Manufacturing details not required).

Fertilizers: NPK fertilizer-ammonium sulphate-urea-superphosphate of lime-triple superphosphate- potassium nitrate-ammonium nitrate.

Pollution: Water, air and soil pollution-sources and remedies-acid rain-ozone hole-greenhouse effect.

UNIT- III**Covalent Bond and Stereoisomerism:**

Covalent Bond: Orbital overlap, hybridization and geometry of CH_4 , C_2H_4 and C_2H_2 . Polar effects: Inductive effect-electromeric effect- mesomeric effect- steric effect- hyperconjugation.

Stereoisomerism: Elements of symmetry-polarised light and optical activity-isomerism in tartaric acid-racemisation- resolution- geometrical isomerism of maleic and fumaric acids-keto-enol tautomerism of acetoacetic esters.

UNIT- IV

Dyes, Chemotherapy and Vitamins:

Dyes: Terms used chromophore, auxochrome, bathachromic shift and hypsochromic shift-classification of dyes – based on chemical structure and application-one example each for azo, triphenylmethane, vat and mordant dyes- preparation.

Chemotherapy: Preparation, uses and mechanism of action sulpha drugs- preparation and uses of prontosil, sulphadiazine and sulphafurazole-structure and uses of pencillins and chloromycetin.

Vitamins: Diseases caused by the deficiency of vitamins A, B_1 , B_2 , C and D-sources of these vitamins.

UNIT- V

Elements of Photochemistry, Chemical Kinetics and Chromatography:

Elements of Photochemistry: Photochemical laws-Beer Lambert's law-Grotthuss-Draper law-Stark-Einstein law (statement only).

Chemical Kinetics: Rate-order-molecularity-pseudo first order reactions-zero order reactions-determination of order of reaction-measurement of order and rates of reactions-effect of temperature on reaction rate-energy of activation.

Chromatography: Principles and applications of Column, Paper and Thin Layer Chromatography.

TEXT BOOKS

1. V.Veeraiyan & A.N.S. Vasudevan, Text Book of Allied Chemistry (II Edition), Highmount Publishing House, Chennai (2005).
2. B.R.Puri and L.R.Sharma, Principles of Inorganic Chemistry, Shoban lal & Company Ltd., Jalandar (2002).
3. B.S.Bahl & Arun Bahl, Advanced Organic Chemistry, S.Chand & Company Ltd., New Delhi (2005).
4. Puri, Sharma & Pathania, Physical Chemistry, Vishal Publishing Company Ltd., Jalandhar (2003).

REFERENCE

1. R.Gopalan & S.Sundaram, Allied Chemistry (III Edition), Sultan Chand & Sons., New Delhi (2003).

Instruction hours/week: L:5 T:0 P:0**Marks: Internal: 40 External: 60 Total: 100****End Semester Exam: 3 Hours****Course Objectives**

- To know the safety measures to be followed in laboratory
- To give hands on experience on the preparation of buffers and various solutions.
- To identify and separate the biomolecules
- To quantify the vitamin in a sample
- To acquire knowledge in the quantitative estimation of biomolecules
- To know the importance of biological macromolecules

Course outcomes (CO's)

1. Gain knowledge on lab safety
2. Trained on preparation of reagents and solution
3. Able to analyse biomolecules and vitamins qualitatively
4. Able to analyse biomolecules and vitamins quantitatively
5. Able to identify different disaccharides and polysaccharides experimentally
6. Handle the instruments associated with the practical

I. Qualitative Analysis

1. Reactions of monosaccharide- Glucose, Fructose, Galactose and Pentose
2. Reactions of disaccharides and polysaccharides- Sucrose, Lactose, Maltose and Starch
3. Reactions of amino acids- Histidine, Tyrosine, Tryptophan, Methionine and Cysteine
4. Lipid Analysis- (Group Experiments)
 - a. Determination of Acid number and peroxide value
 - b. Determination of Iodine number
 - c. Determination of Saponification Number
 - d. Determination of RM number

Sadasivam S and A. Manickam, 2009. Biochemical Methods, New Age International Publishers, New Delhi.

Singh.S.P. 2009. Practical Manual of Biochemistry, CBS Publishers, New Delhi.

Instruction Hours/week: L: 0 T:0 P:3**Marks: Internal: 40 External: 60 Total: 100****End Semester Exam: 3 Hours****Course Objective**

To impart hands-on training on:

- Preliminary tests for identification of an organic compound
- Detection of elements
- Identification of aromatic or aliphatic compound
- Different functional groups and its nature
- Confirmatory test for aldehydes, ketones, amines and amides
- Confirmatory test for carbohydrates, phenol, acids, esters and nitro compounds

Course Outcomes (CO's)

After successful completion of the course, the student will:

1. Perform preliminary tests for identification of an organic compound
2. Perform and detect the elements present in the given compound
3. Identify and differentiate between aromatic and aliphatic compound
4. Identify different functional groups and its nature
5. Perform confirmatory test for aldehydes, ketones, amines and amides
6. Perform confirmatory test for carbohydrates, phenol, acids, esters and nitro compounds

Contents

Systematic analysis of an organic compound, preliminary tests, detection of elements present, aromatic or aliphatic, saturated or unsaturated, nature of the functional group, confirmatory tests– aldehydes, ketones, amines, diamide, carbohydrates, phenols, acids, esters & nitro compounds.

Note: Each student should analyse minimum 6 compounds.

REFERENCE BOOKS:

2. A.O. Thomas, Practical Chemistry for B.Sc. Main Students, Scientific Book Centre, Cannanore-1, Kerala (2010).
3. V.Venkateswaran, R.Veerawamy and A. R. Kulandaivelu, Basic Principles of Practical Chemistry, 2nd Edition, S.Chand Publications, New Delhi (2004).

Course Objective

- To improve the integral development of human begins
- To train the students towards sustainable lifestyle
- To create awareness about the values and their significance and role
- To imbibe the concept of discipline and freedom
- To give students a deeper understanding about the purpose of life.
- To teach and inculcate the essential qualities to become a good leader.

Course Outcomes (CO's)

After successful completion of the course, the student will:

1. Understand the importance of value based living.
2. Gain deeper understanding about the purpose of their life.
3. Understand and start applying the essential steps to become good leaders.
4. Emerge as responsible citizens with clear conviction to practice values and ethics in life.
5. Become value based professionals.
6. Contribute in building a healthy nation

UNIT – I

Concept of Self, self-awareness, self-esteem and self-confidence. Concept of personality, determinants and disorganisation of it. Personality development – meaning.

UNIT – II

Goal setting – meaning and importance; steps in goal setting Manners and Etiquette – meaning need and importance; means to improve. Positive thinking.

UNIT – III

Discipline – meaning. Concept of Roles and Responsibility Time Management – Meaning and steps for effective time management.

UNIT – IV

Interpersonal relationship – meaning and importance; means to improve it. Healthy friendship.

UNIT – V

Family Relationship importance of it; Means to improve. Spiritualism – meaning. Its relationship with Altruism, sacrifice, self control, tolerance and truthfulness.

TEXT BOOK

1. Karpagam University Study Material, 2015.

.

அலகு - I : பக்தி இலக்கியம்

1. சைவம் - மூவர் தேவாரத்திலிருந்து தேர்ந்தெடுக்கப்பெற்ற 15 பாடல்கள்
2. வைணவம் - ஆண்டாள் நாச்சியாரின் திருப்பாவையிலிருந்து 11 பாடல்கள்

அலகு - II : சங்கஇலக்கியம்

அ). எட்டுத்தொகை

நற்றிணை: 1. இலை இல பிடவம், திணை - முல்லை,

ஆசிரியர் - விழிக்கட் பேதைப் பெருங்கண்ணனார்.

2. மடல் மா ஊர்ந்து, திணை - குறிஞ்சி, ஆசிரியர் - மடல் பாடிய மாதங்கீரனார்.

குறுந்தொகை : 1. உள்ளார் கொல்லோ, திணை - பாலை, ஆசிரியர் - பெருங்கடுங்கோ.

2. யாரினும் இனியன், திணை - மருதம், ஆசிரியர் - வடமவண்ணக்கன் தாமோதரனார்.

ஐங்குறுநூறு : 1. நுண்ணேர் புருவத்த, திணை - குறிஞ்சி, ஆசிரியர் - கபிலர்.

2. அவறொறுந் தேரை, திணை - முல்லை, ஆசிரியர் - பேயனார்.

பதிற்றுப்பத்து - ததைந்த காஞ்சி, ஆசிரியர் - பாலைக் கௌதமனார்.

பரிபாடல் - வையை - திரை இரும் பனிப் பெளவம், ஆசிரியர் - மையோடக் கோவனார்.

கலித்தொகை - கடும் புனல் கால் பட்டு, திணை - பாலை, ஆசிரியர் - பெருங்கடுங்கோ.

அகநானூறு - 1. ஆடு அமைக் குயின்ற, திணை - குறிஞ்சி, ஆசிரியர் - கபிலர்.

2. யான் எவன் செய்கோ தோழி, திணை - பாலை, ஆசிரியர் - நோம்பாடியார்.

புறநானூறு - 1. சிறப்பில் சிதடு முறுப்பில், திணை - பொதுவியல்,

ஆசிரியர் - உறையூர் முதுகண்ணன் சாத்தனார்.

2. இளையரு முதியரும் வேறுபுலம் படா - ஆசிரியர் - கயமனார்.

ஆ). பத்துப்பாட்டு - சிறுபாண் ஆற்றுப்படை - கடையெழு வள்ளல்களின் சிறப்பு,

நல்லியக்கோடனின் சிறப்பு, ஈகைத் திறம்.

அலகு - III : காப்பியங்கள்

1. மணிமேகலை - பாத்திரம் பெற்ற காதை - தீவதிலகை, மணிமேகலைக்குச் சொல்லியது, சிறைக்கோட்டம் அறக்கோட்டமாக்கிய காதை - மணிமேகலை வேண்டி, மாவண்கிள்ளி, சிறைக்கோட்டத்தை அறக்கோட்டமாக்கியது.

2. கம்பராமாயணம் - இலக்கியநயம் மிக்க, தேர்ந்தெடுக்கப்பெற்ற 41 பாடல்கள்.

அலகு - IV : கட்டுரைகள்

1. திருக்குறளில் மனிதவள மேலாண்மைக் கருத்துக்கள் - திருமிகு ஹரி விஜயலட்சுமி.

2. தமிழர் வளர்த்த நுண்கலைகள்: சிற்பமும் ஓவியமும் - தொ.மு. பாஸ்கரத் தொண்டைமான்.

3. சமயமும் தமிழும் - பேராசிரியர் அ.ச.ஞானசம்பந்தன்.

4. தமிழில் அறிவியல் - ஒரு பார்வை - பேராசிரியர் சிவகுமார்.

5. இன்றைய நெருக்கடிப் பிரச்சனைகள் - நீர்வளம் - முனைவர் ச. முத்துக்குமார்.

அலகு - V : இலக்கணமும் மொழிப்பயிற்சியும்

1. எழுத்து, சொல், பொருள் இலக்கண எழுத்துப்பயிற்சிகள்

2. பொதுக் கட்டுரைகள்

பாட நூல்: கற்பகச்சோலை - தமிழ் ஏடு. கற்பகம் பல்கலைக்கழகத் தமிழ்த் துறை வெளியீடு.

Part I TAMIL 2015. Karpagam University, Coimbatore - 21, India

Instruction hours/week: L:4 T:0 P:0 Marks: Internal: 40 External: 60 Total: 100
End Semester Exam: 3 Hours

Course Objectives:

- To help students enhance their Language skills
- To introduce different kinds of literary works
- To familiarize different genres of Literature
- To instruct moral values through literature
- To improvise their productive and receptive skills
- To strengthen the basic knowledge about grammar

Course Outcomes (CO's):

1. Develop the four types of skills
2. Reading and comprehending literary works
3. Genres of literature to provide moral education
4. Develop communication skills in business environment
5. Interpersonal skills will be developed
6. Betterment of language competence

UNIT I:

Prose: The Unexpected- Robert Lynd

Poetry: The Village Schoolmaster – Oliver Goldsmith

Short Story: The Lion's Share – Arnold Bennett

Vocabulary: Homonyms

Grammar: Irregular Verbs

UNIT II:

Prose: Travel by Train – J. B. Priestly

Poetry: The Gift of India – Sarojini Naidu

Grammar: Sentence patterns

Composition: Reading Comprehension

UNIT III:

Prose: Women's Education is Almost More Important than the Education of Boys and Men
– Indira Gandhi

Short Story: The Necklace – Guy De Maupassant

One-Act Play: The Referee – W.H. Andrews and Geoffrey Dearmer

Vocabulary: Similes

Grammar: Discourse Markers

Composition: Report Writing

UNIT IV:

Poetry: Ozymandias – P.B. Shelley

One-Act Play: The Pot of Broth- W.B. Yeats

Vocabulary: Collective Nouns

Grammar: Correction of Sentences

Composition: Picture Reading

UNIT V:

Short Story: The Silver Butterfly– Pearl S. Buck

One-Act Play: The Bear – Anton Chekov

Vocabulary: Acronyms

Grammar: Question Tags

Composition: Drafting Advertisement

Prescribed Text

Wings of Communication 2014. Board of Directors. Emerald Publishers: Chennai

Reference

Syamala, V. English for Communication. 2006. Emerald Publishers: Chennai.

Instruction hours/week: L:5 T:0 P:0 Marks: Internal: 40 External: 60 Total: 100
End Semester Exam: 3 Hours

Course Objectives

Equip the students:

- On maintenance of safety documents.
- On the preparation of SOPs
- On the detection of radioisotopes
- Interpretation of virtual lab experiment
- Different methods of centrifugation (differential/density gradient)
- Determination of pKa for biological buffers using Henderson-Hasselbach equation

Course Outcomes (CO's)

After successful completion of the course, the student will:

1. Maintain safety documents.
2. Prepare SOPs
3. Detect radioisotopes
4. Interpret virtual lab experiments
5. Use different methods of centrifugation (differential/density gradient)
6. Determine pKa for biological buffers using Henderson-Hasselbach equation in a given situation

UNIT I

pH, Handerson and Hasselbach equation; measurement of pH- Glass electrode, pH scale; Buffer- buffer solutions, buffer systems of blood. pH indicators. Various ways of expressing the concentrations of solutions- molality, molarity, normality, Mole fraction, ppm, serial dilution. Simple problems to be worked out.

UNIT II

Chromatography: Principle- partition co-efficient. Types- paper chromatography, TLC, adsorption, ion exchange, molecular sieve and affinity chromatography.

Electrophoresis- Principle, instrumentation and applications of paper electrophoresis, agarose gel electrophoresis, PAGE.

UNIT III

Centrifugation: Principle and technique of preparative and analytical centrifuge. Types of centrifuge, types of rotors, centrifugation types- Density gradient and differential centrifugation- Separation of cell organelles.

Radio active Isotopes: Radioactive decay, units of radio activity, detection and measurement of radioactivity- Geiger-Muller counter, Scintillation counter, Autoradiography, biochemical applications of radio isotopes.

UNIT IV

Colorimetry: Colour and absorption spectra. Beer Lambert's law- deviation from Beer's law. Working of single cell photoelectric colorimeter. Measurement of extinction. Calibration curve.

Spectrophotometry: Principle, instrumentation and applications of double beam spectroscopy, spectro fluorimetry, mass spectroscopy and atomic absorption spectroscopy, comparison and advantages of spectrophotometer over colorimeter.

UNIT V

Nanotechnology: Introduction and Approaches to nanomaterials fabrication (Bottom up and Top down assembly), MEMS and NEMS-introduction and its applications, Carbon nano structures-Carbon Nano tubes fibers & Crystals-applications, DNA to build nanotubes, DNA as smart glue and DNA as wire template. Applications of Nanotechnology in medicine and biology.

Frank.J, Owens. 2007. Introduction to Nanotechnology. Wiley publications, Washington, United States .

Wilson K, and Walker J, 2004. Practical Biochemistry- Principles and Techniques, Cambridge University Press, London.

Instruction hours/week: L:4 T:0 P:0 Marks: Internal: 40 External: 60 Total: 100
End Semester Exam: 3 Hours

Course Objectives

Equip the students:

- To be conversant with the extraction of metals
- About coordination chemistry
- On the preparation, properties, uses and structure of naphthalene and heterocyclic compounds
- To acquire knowledge on electrochemistry, biological functions of amino acids and proteins
- To acquire knowledge on thermodynamic laws, entropy, enthalpy change and the principles of electroplating
- To acquire knowledge on aromatic and heterocyclic compounds

Course Outcomes (CO's)

After successful completion of the course, the student will understand:

1. The metallurgy of metals and the theories of coordination compounds and
2. The industrial importance of EDTA, haemoglobin and chlorophyll
3. The concept of aromaticity and preparation of aromatic compounds including heterocyclic compounds
4. The preparation, classifications and properties of amino acids, proteins and carbohydrates
5. The concepts of first and second laws of thermodynamics
6. The fundamentals of electrochemistry

UNIT-I**Metals and Coordination Chemistry:**

Metals: General methods of extraction of metals-methods of ore dressing-types of furnaces-reduction methods-electrical methods-types of refining-Van Arkel process-Zone refining.

Coordination Chemistry: Nomenclature-theories of Werner, Sidgewick and Pauling-chelation and its industrial importance-EDTA-haemoglobin-chlorophyll-applications in qualitative and quantitative analysis.

UNIT-II**Aromatic Compounds and Heterocyclic Compounds:**

Aromatic Compounds: Aromaticity-Huckel's ($4n+2$) rule- aromatic electrophilic substitution in benzene- mechanism of nitration, halogenation, alkylation, acylation and sulphonation.

Naphthalene: Isolation, preparation, properties and structure.

Heterocyclic Compounds: Preparation and properties of pyrrole, furan, thiophene and pyridine.

UNIT-III**Amino acids, Proteins and Carbohydrates:**

Amino acids: Classification, preparation and properties. Peptides-preparation of peptides (Bergmann method only).

Proteins: Classification, properties, biological functions and structure.

Carbohydrates: Classification, preparation and properties of glucose and fructose- discussion of open chain and ring structures of glucose and fructose-glucose-fructose interconversion.

UNIT-IV

Energetics: Type of systems-processes and their types - isothermal, adiabatic, reversible, irreversible and spontaneous processes-statement of first law of thermodynamics-need for the second law of thermodynamics-heat engine-Carnot cycle-efficiency-Carnot theorem-thermodynamics scale of temperature-Joule-Thomson effect- Enthalpy- Entropy and its significance-Free energy change.

UNIT-V

Electrochemistry: Kohlrausch law-conductometric titrations-hydrolysis of salts-galvanic cells-E.M.F.-standard electrode potentials-reference electrodes- electrochemical series and its applications-buffer solution-buffer solution in the biological systems-pH and its determination-principles of electroplating.

REFERENCES

1. R.Gopalan & S.Sundaram, Allied Chemistry (III Edition), Sultan Chand & Sons., New Delhi (2003).

Instruction hours/week: L:0 T:0 P:3**Marks: Internal: 40 External: 60 Total: 100****End Semester Exam: 3 Hours****Course Objectives**

To impart hands-on training:

- On the strength of concentrated acids
- On serial dilution of concentrated solutions
- How to determine the molar extension coefficient?
- How to obtain UV spectrum for a given compound?
- How to quantify nucleic acids using spectrophotometer?
- How to estimate the purity of nucleic acids

Course Outcomes (CO's)

After successful completion of the course, the student will:

1. Know the strength of laboratory acids and bases
2. Prepare serial dilution of concentrated solutions
3. Determine the molar extension coefficient
4. Obtain UV spectrum for a given compound
5. Quantify nucleic acids using spectrophotometer
6. Assess the purity of nucleic acids

I. Quantitative estimation of the following in unknown solution.

1. Estimation of glucose (Anthrone method)
2. Estimation of phosphorus (Fiske-Subbarow method)
3. Estimation of urea (Dam TSC method)
4. Estimation of uric acid (Caraway method)
5. Estimation of iron (Wong's method)
6. Estimation of protein (Lowry's method)
7. Estimation of DNA (Diphenylamine method)
8. Estimation of RNA (Orcinol method)

II. Preparation of buffers and measurement of pH using indicators and pH meter**III. Separation techniques (Group experiments)**

1. Paper chromatography of sugars or amino acids (ascending)
2. Separation and identification of amino acids from mixture using TLC
3. Separation of plant pigments by column chromatography
4. Separation of amino acids by paper electrophoresis

Instruction hours/week: L:0 T:0 P:3**Marks: Internal: 40 External: 60 Total: 100****End Semester Exam: 3 Hours****Course Objectives**

To impart hands-on training on:

- Estimation of sodium carbonate and sodium hydroxide
- Estimation of sulphuric acid
- Estimation of potassium permanganate
- Estimation of ferrous sulphate using permanganometry
- Estimation of oxalic acid using permanganometry
- Estimation of calcium using permanganometry

Course Outcomes (CO's)

After successful completion of the course, the student will:

1. Estimate sodium carbonate and sodium hydroxide using standards
2. Estimate sulphuric acid using standard oxalic acid
3. Estimate potassium permanganate by alkalimetry method
4. Estimate ferrous sulphate using standard Mohr's salt
5. Estimate oxalic acid using standard ferrous sulphate
6. Estimate calcium using direct method

Contents**I. VOLUMETRIC ANALYSIS****A. Acidimetry & Alkalimetry**

1. Estimation of sodium carbonate using standard sodium hydroxide.
2. Estimation of sodium hydroxide using standard sodium carbonate.
3. Estimation of sulphuric acid using standard oxalic acid.
4. Estimation of potassium permanganate using standard sodium hydroxide.

B. Permanganometry

1. Estimation of ferrous sulphate using standard Mohr's salt.
2. Estimation of oxalic acid using standard ferrous sulphate.
3. Estimation of calcium-direct method.

3. V. Venkateswaran, R. Veeraswamy and A. R. Kulandaivelu, Basic Principles of Practical Chemistry, 2nd Edition, S. Chand Publications, New Delhi (2004).

Course Objectives

Equip the students:

- To understand the concepts and components of ecosystem
- To understand the significance of eco components and measures to maintain ecosystem
- To teach the ethical and legal perspectives on ecosystem management
- To understand the undesired effects of environmental pollution
- To devise a strategy to avoid environmental pollution
- To understand the concept of conservation

Course Outcomes (CO's)

1. Master core concepts and methods from ecological and physical sciences and their application in environmental problem solving.
2. Master core concepts and methods from economic, political, and social analysis as they pertain to the design and evaluation of environmental policies and institutions.
3. Understand the ethical, cross-cultural, and historical context of environmental issues and the links between human and natural systems.
4. Understand the transnational character of environmental problems and ways of addressing them, including interactions across local to global scales.
5. Apply systems concepts and methodologies to analyze and understand interactions between social and environmental processes.
6. Reflect critically about their roles and identities as citizens, consumers and environmental actors in a complex, interconnected world.

UNIT - I: Eco system and natural resources: Environment – Definition – components - Ecosystem -Definition, Concept, Scope, importance, structure and functions of ecosystem. Energy flow, Ecological succession. Food chains and food webs. Classification of ecosystem. Natural resources: Forest resources; water resources.

UNIT - II: Environmental pollution: Cause, effects and control measures of Air pollution, water pollution, soil pollution, marine pollution, noise pollution, thermal pollution and nuclear hazards pollution. Solid waste management.

UNIT - III: Biodiversity and its conservation: Introduction- Definition, genetic, species and ecosystem diversity, biogeographical classification of India- Value of biodiversity: Consumptive, productive uses; social, ethical, aesthetic and option values. Threats to biodiversity: habitat loss, poaching of wildlife, man-wildlife conflicts.

UNIT - IV: Social issues and the environment: Urban problems related to energy- water conservation and management -Rain water harvesting- water shed management. Resettlement and Rehabililisaion. Natural resources and associated problems and sustainable utilization. Environmental Education.

UNIT - V: Environment ethics: Environmental Ethics - Gender equity, ethical basis of environment education and awareness, conservation ethic and traditional value systems of India. Valuing nature, cultures, social justice, Human heritage, equitable use of resources, preserving resources for future generation, common property resources, Ecology and its uses and its degradation, Introduction to Environmental Protection Act (EPA).

2. Reading and comprehending literary works
3. Genres of literature to provide moral education
4. Develop communication skills in business environment
5. Interpersonal skills will be developed
6. Betterment of language competence

UNIT I

Listening: Listening comprehension – Listening for Specific Information –Note Taking – Interpreting Charts and Diagrams.

UNIT II

Speaking: Essentials of effective communication – Greeting and Introducing – Making requests – Asking for permission – Giving and Denying Permission – Offering and Accepting Help – Asking for and Declining Help – Giving Instructions and Orders - Talking about likes and dislikes.

Telephone Skills – Understanding telephone conversation – handling calls – leaving messages –making requests - giving instructions and orders

Discussion Skills – Giving your opinion – agreeing and disagreeing – Making suggestions – Interrupting – questioning – reporting – Dealing with questions.
(Completing dialogues)

UNIT III

Reading: Reading – Reading with a purpose –Skimming and Scanning – locating main points – reading critically – Sequencing of sentences – Reading comprehension.

UNIT IV

Writing: Paragraph Writing – Descriptive and Narrative. Safety Instructions/ Suggestions. Expansion of Abbreviations – Spellings- Report writing.

Translation- Translating short sentences and passages from English to Tamil and from Tamil to English.

UNIT V

Vocabulary: Improve English vocabulary: Synonyms – Antonyms – Prefixes – Suffixes – Idioms – Collocations – Different types of English – British and American (Choose the best answer type from a database of 50 words each for each topic)

Functional Grammar: Forming questions, getting answers – Articles – Parts of Speech – Punctuation – Common mistakes in English (Homophones)(Exercise based)

Instruction hours/week: L:4 T:0 P:0 Marks: Internal: 40 External: 60 Total: 100
End Semester Exam: 3 Hours

Course objectives

- The course exhibits in depth knowledge on its structural organization, separation, purification and characterization of proteins by adopting various methods and techniques.
- The course also describes about some applications of specialized proteins.
- To study the kinetics of enzyme catalysed reactions
- To learn the mechanism of action of enzymes and enzyme inhibition concepts
- To understand various modes of enzyme regulation
- To learn the application of enzymes in health and diseases

Course outcomes (CO's)

1. The student gathers information on protein structure, its separation techniques and other latest developments.
2. Information on specialized proteins and its application will be known to the students.
3. Understand the basic concepts on enzymes
4. Relate the initial velocity and substrate concentration of enzymes and be able to understand the kinetics of inhibition reactions
5. Relate the regulation pattern of enzymes for its application in health and diseases
6. Understand the application of enzymes as marker in various disease conditions

UNIT I

Protein-Introduction, classification, protein-structure: strong and weak bonds; primary structure- insulin, secondary structure- collagen and keratin, tertiary and quaternary structure - myoglobin and hemoglobin.

UNIT II

Protein- Properties and biological importance of proteins. Peptides – primary structure of biologically active peptides- Glutathione, Oxytocin and Vasopressin. Extraction, purification and characterization of protein. Denaturation and renaturation of protein. Identification of N and C terminal residues of proteins.

UNIT III

Enzymes - Introduction, classification, nomenclature and properties of enzymes. Active site, Lock and key and induced-fit theories, specificity of enzymes. Enzyme activity; units of enzyme activity-international unit, turnover number, specific activity. Factors affecting enzyme activity.

UNIT IV

Enzyme Kinetics - Derivation of Michaelis- Menton equation, Definition of k_m , LB plot and Eadie and Hofstee plot. Enzyme inhibition-types and differentiation of competitive, uncompetitive, non-competitive inhibitors (Derivation is not needed), allosteric and covalent

modification. Coenzymes- structure and properties of TPP, coenzyme A, flavin coenzyme, Nicotinamide coenzymes, biotin and lipoic acid.

UNIT V

Application of enzymes- Industrial enzymes, Immobilized enzymes-sources, preparation techniques and application. Clinical application of enzymes. Biosensors-colorimetric, potentiometric, optical and immunosensors.

Instruction hours/week: L:4 T:0 P:0**Marks: Internal: 40 External: 60 Total: 100****End Semester Exam: 3 Hours****Course objectives**

Equip the students with:

- To understand the basic structure of prokaryotic cell and model organism for its study
- To understand the basic structure of eukaryotic cell and model organism for its study
- To know the tools required for studying cell morphology
- To enlight the students with structure and functions of various organelle
- To understand the cytoskeletal network and extracellular matrix
- To introduce the cell cycle, cell division and cell death process

Course outcomes (CO's)

After successful completion, the students will:

1. Differentiate the prokaryotic and eukaryotic cell
2. Understand the principle behind studying the cell morphology using various microscope
3. Identify the structure and functions of each organelle in cell
4. Recognise the mechanism behind the protein sorting and transport to their destinations like lysosome, mitochondria and chloroplast
5. Maintenance of cytoskeleton structure and function of micro, macro and intermediary filaments
6. Identify the proteins involved in cell cycle and cell cell interaction

UNIT-I

An overview of cells: Origin and evolution of cells. Cell theory, Classification of cells: prokaryotic cells, eukaryotic cell; comparison of prokaryotic and eukaryotic cells. Molecular composition of cell.

UNIT-II

Cell membrane: Fluid mosaic model of membrane structure. Membrane lipids-properties; Membrane proteins and their properties. Membrane carbohydrates and their role. Transport across membranes -Diffusion, active and passive transport, endocytosis and ion channels

UNIT-III**Cell organelles**

Mitochondria: - Structure and functions, Electron transport complexes.

Endoplasmic reticulum: Types, structure and functions. **Golgi apparatus:** structure and functions. **Lysosomes:** structure and functions, morphology and functions of peroxisomes and glyoxysomes.

UNIT-IV

Nucleus: - Structure and functions. Nuclear envelope and Nucleopore complex-structure. Selective import of protein to nucleus

Nucleolus: Ribosomal RNA genes. Chromosomes: chromatin structure.

Cell cycle: Phases of cell cycle, cell cycle check points. Cell division- Mitosis and meiosis. Nucleus during mitosis.

UNIT-V

Cytoskeleton: Micro, macro and intermediary filaments-structure and functions. Micro tubules: chemistry and functions; cilia and flagella.

Cell signalling – Signalling molecules & Receptors (over view)

Cell–cell interaction – cell adhesion protein, tight junction, gap junction.

Instruction hours/week: L:5 T:0 P:0

Marks: Internal: 40 External: 60 Total: 100

End Semester Exam: 3 Hours

Course objectives

Equip the students with:

- Origin of microbiology field and theories
- Diverse nature of microbial organisms
- Life cycle of viruses
- Life cycle of bacteria
- Life cycle of algae
- Life cycle of fungi and protozoa

Course outcomes (CO's)

After successful completion, the students will understand:

1. Origin of microbiology field and theories
2. Diverse nature of microbial organisms
3. Life cycle of viruses
4. Life cycle of bacteria
5. Life cycle of algae, fungi and protozoa
6. Emerging microbial threats

UNIT I

Basics of Microbiology: Bacteria- size, shape and arrangement of bacterial cells. Bacterial cell wall structure and chemical composition. Flagella and motility, pili (fimbriae) capsules and spores. Bacterial reproduction and nutrition. Algae- occurrence, biological and economic importance of algae. Characteristics of algae and classification. Fungi- Importance of fungi, morphology, reproduction- asexual and sexual.

UNIT II

Microscopy: Introduction, Bright field microscopy, Dark field microscopy, Phase contrast microscopy, TEM, SEM.

Techniques of Microbiology: Sterilization techniques, pure culture methods. Methods of preservation and maintenance. Staining- simple, Gram, acid fast, endospore and flagella. Microbial growth- determination of growth curve and generation time.

UNIT III

Virology: Viruses- Morphology and structure- types of phages, phage structure, replication of bacterial viruses- adsorption, penetration, transcription, assembly and release. Lysogeny- mechanism of lysogeny. Retroviruses: HIV- AIDS virus working of immune system in the presence of HIV, replication in target cell. Mechanism of oncogenesis.

UNIT IV

Microbial diseases: Host parasite interaction, exo and endotoxins. Food and water borne diseases- pathogenesis and symptoms of typhoid, cholera, bacillary dysentery and hepatitis. Air borne diseases- Aetiology, symptoms and prevention of TB, chickenpox and influenza. Direct contact diseases- and symptoms of rabies and leprosy.

UNIT V

Applied microbiology: Water microbiology- bacteriological examination of water, sewage treatment. Industrial microbiology- design of fermenter, types of fermentation- solid- state and submerged fermentation, batch culture and continuous culture. Production of penicillin, citric acid and amino acids.

Pelzar.A .2004.Microbiology, McGraw Hill Publishers, London

Course objectives

Equip the students with

- Concepts of nutrition
- Calorific value of carbohydrates, fats and proteins
- Recommended dietary allowances
- Nutrition as a strategy to prevent diseases
- Nutrition deficiency disorders
- Food drug interactions

Course outcomes (CO's)

After successful completion, the students will understand

1. Concepts of nutrition
2. Calorific value of carbohydrates, fats and proteins
3. Recommended dietary allowances
4. Nutrition as a strategy to prevent diseases
5. Nutrition deficiency disorders
6. Food drug interactions

UNIT-I

Energy- Definition of kilocalories, joule, energy value of foods, physiological fuel values, SDA of foods, determination of energy requirement of body, basal metabolic rate-determination, factors influencing BMR. Definition for normal and balanced diet. Calorie requirement of adults, children and old age people. Recommended dietary allowances (RDA) –ICMR Different food groups.

UNIT-II

Carbohydrates- Functions, Sources, requirement, Hyperglycemia, hypoglycemia, Protein- functions, sources and requirement, Definition of Biological Value, NPU, Digestibility coefficient. PER-definition and measurement

UNIT-III

Lipids- Functions, sources, requirement, digestion, absorption and utilization importance of essential fatty acids, their requirements and deficiency. Vitamins and Minerals: normal requirements, excess, deficiency, Significance.

UNIT-IV

Therapeutic diet - Principles of therapeutic diet, modifications of normal diet, different types of diet, difference between normal and therapeutic diet. Objectives of diet therapy. Principles of diet preparation and counseling. Diet in allergy- definition, common food allergy tests of allergy

and dietetic treatment. Diet in Diabetes, Allergy, Anemia, GI tract disorders, liver disorders and obesity.

UNIT-V

General principles and methods of food preservation: Preservation with chemicals-Microbial inhibitors, inorganic preservatives, antibiotics, mold inhibitors and antioxidants.

15BCU303C ALLIED ELECTIVE I-FOOD PRESERVATION TECHNOLOGY

Instruction hours/week: L:5 T:0 P:0 Marks: Internal: 40 External: 60 Total: 100
End Semester Exam: 3 Hours

Course objectives

Equip the students with

- Concepts of nutritional preservation methods
- Principles of food processing
- Microbiology of food
- Packaging techniques
- Calorific value of carbohydrates, fats and proteins assessment in preserved samples
- Legislations related to food storage

Course outcomes (CO's)

After successful completion, the students will understand

1. Concepts of nutrition
2. Calorific value of carbohydrates, fats and proteins
3. Recommended dietary allowances
4. Nutrition as a strategy to prevent diseases
5. Nutrition deficiency disorders
6. Food drug interactions

UNIT I:

Microbiology of Food: History of microbiology of food. Types of micro-organism normally associated with food -mold, yeast, and bacteria, Microbial growth pattern, physical and chemical factors influencing destruction of micro-organisms. Micro-organisms in natural food products and their control mechanisms. Food chemistry- definition and importance

UNIT II:

Principles of Food Processing: Principles of Preservation methods. Dehydration: Novel evaporation /dehydration techniques, spray drying. Vacuum drying- osmotic dehydration - efficient drying systems, **High salt and high sugar preservations**, infrared heating Freezing of foods, freeze concentration and drying, methods of freeze concentration. High Temperature operations, sterilization and Pasteurization.

UNIT III:

Types of Preservation Technology: Microwave Processing: Microwave, properties, heating mechanism. Applications of microwave in food processing, effect of microwave on food nutrient. Food Irradiation Technology: General aspects of irradiation, ionizing radiation, irradiation process, units, mechanism, advantages and disadvantages of irradiation process. Ultrasound in food processing and preservation: Introduction and its application in food processing.

UNIT IV:

Food Packaging: Introduction to packaging. Packaging operation, package-functions and design. Principle in the development of protective packaging. Deteriorative changes in foodstuff and packaging methods for prevention, shelf life of packaged foodstuff, methods to extend Shelf-life. Evaluation of packaging, and package performance, packaging equipment, package standards and regulation, bar coding material. Biodegradable packaging.

UNIT V:

Food Quality and Food Laws: Objectives, Importance and functions of quality control. Methods of quality, assessment of food materials-fruits, vegetables, cereals, dairy products, meat, poultry, egg and processed food products. Sanitation and hygiene - Integrated Food Laws

Instruction hours/week: L:0 T:0 P:5 Marks: Internal: 40 External: 60 Total: 100
End Semester Exam: 3 Hours

Course objectives

Equip the students:

- To understand the basic concepts of enzymes
- To study the kinetics of enzyme catalysed reactions
- To learn the mechanism of action of enzymes and enzyme inhibition concepts
- To understand various modes of enzyme regulation
- To learn the application of enzymes in health
- To learn the application of enzymes in diseases

Course outcomes (CO's)

After successful completion of the course, the student will:

1. Understand the basic concepts on enzymes
2. Relate the initial velocity and substrate concentration of enzymes and be able to understand the kinetics of inhibition reactions
3. Understand the basis of enzyme inhibitor drugs
4. Be able to understand the regulation pattern of various enzymes
5. Relate the regulation pattern of enzymes for its application in health and diseases
6. Understand the application of enzymes as marker in various disease conditions

1. Enzyme kinetics

(a) Acid Phosphatase

- (i) Preparation of crude enzyme extract from potato
- (ii) Effect of pH on the activity of acid phosphatase
- (iii) Effect of temperature on the activity of acid phosphatase
- (iv) Effect of enzyme concentration on the activity of acid phosphatase
- (v) Effect of substrate concentration on the activity of acid phosphatase

(b) Catalase

- (i) Preparation of crude enzyme extract from Chow-Chow
- (ii) Effect of pH on the activity of catalase
- (iii) Effect of temperature on the activity of catalase
- (iv) Effect of enzyme concentration on the activity of catalase
- (vi) Effect of substrate concentration on the activity of catalase

2. Estimation of salivary amylase activity

3. Assay the activity of

- (i) SGOT in serum
- (ii) SGPT in serum
- (iii) Alkaline phosphatase in serum

Marks: Internal: 40 External: 60 Total: 100
End Semester Exam: 3 Hours**Course objectives**

To impart hands-on training on

- Sterilization methods
- Autoclave, filtration techniques
- Preparation of microbial culture media
- Assessment of bacterial strains
- Pure cultures using streaking methods
- Colony counting

Course outcomes (CO's)

After successful completion, the students will understand

1. Sterilization methods
2. Autoclave, filtration techniques
3. Preparation of microbial culture media
4. Assessment of bacterial strains
5. Pure cultures using streaking methods
6. Colony counting

Microbiology

1. Student's microscope- parts.
2. Sterilization techniques.
3. Preparation of liquid and solid culture media.
4. Agar slant, agar deep, agar plates: culture characteristics.
5. Pure culture techniques- Pour plate and streak plate method.
6. Motility test- Hanging drop preparation.
7. Growth curve of *E. coli*.
8. Enumeration of microbial population of soil, milk and water.
9. Staining methods- simple, Grams, endospore, negative and fungal staining.
10. Characterization of microbial cultures- carbohydrate fermentation- glucose, sucrose and lactose, IMVIC test of enteric bacteria.
11. Antibiotic sensitivity test.

To impart hands-on training on:

- Content analysis of food sample
- Estimation of carbohydrates, fats and proteins
- Estimation of aminoacids in good grains
- Estimation of vitamins in fruits
- Analysis of milk and milk products
- Estimation of iron

Course outcomes (CO's)

1. Content analysis of food sample
2. Estimation of carbohydrates, fats and proteins
3. Estimation of aminoacids in good grains
4. Estimation of vitamins in fruits
5. Analysis of milk and milk products
6. Estimation of iron

Experiments:

1. Determination of moisture content of food sample
2. Determination of ash content of food sample
3. Estimation of total carbohydrates in potato.
4. Estimation of crude fibre in food.
5. Estimation of oil content in oil seeds.
6. Estimation of free fatty acids in oil seeds.
7. Estimation of crude protein in food sample.
8. Estimation of methionine in food grains.
9. Estimation of ascorbic acid in citrus fruit.
- 10) Analysis of milk and milk products-
 - i. Lactose content of milk
 - ii. Calcium content in milk.
11. Estimation of iron in apple juice.

To impart hands-on training on:

- Food packaging technology
- Evaluating the tensile strength of packaging materials
- Analysis of colliform microbes
- Analysis of fungal contamination
- Analysis of food adulteration
- Determining the shelf life of packaged food

Course outcomes (CO's)

1. Food packaging technology
2. Evaluating the tensile strength of packaging materials
3. Analysis of colliform microbes
4. Analysis of fungal contamination
5. Analysis of food adulteration
6. Determining the shelf life of packaged food

1. Preparation of syrups, Grape squash and orange squash.
2. Water vapor transmission rate of different packaging materials
3. Determination of migration characteristics of packaging materials
4. Determination of migration characteristics of packaging materials using different simulants
5. Determination of bacterial counts of polymer – packed foods during storage
6. Determination of tensile strength of given packaging material
7. Determination of bursting strength of given packaging material
8. Determination of coliforms and fungal counts of polymer – packed foods during storage
9. Microwave and radiation preservation of meat, poultry and fish
10. Identification and chemical resistance of plastic films.
11. Estimation of shelf-life of packaged food stuff.
12. Detection of adulteration in foods.

Instruction hours/week: L:4 T:0 P:0**Marks: Internal: 100 External: - Total: 100****End Semester Exam: 3 Hours****Course objectives****Equip the students with :**

- Know the basic concept of computers.
- Input/Output systems
- Understand the concept of MS-word, MS-Excel.
- Be able to work in MS-PowerPoint.
- Knowledge about internet and the usage of E-Mail services.
- Search engines

Course outcomes (CO's)**After successful completion, the students will understand:**

1. Basic concepts of computer
2. Input/Output systems
3. Working with MS-word, MS-Excel.
4. The presentation of data using MS-PowerPoint.
5. About internet and the usage of E-Mail services.
6. Search engines

UNIT-I

Introduction- Characteristics of computers- development of computers- generations of computers- classification of computers-the computer system- types of Input/ Output and memory devices-computer software-categories of software.

UNIT-II

Starting with MS Office Word – Working with Text – working with tables-Checking spelling and grammar- adding graphics to document- Mail merge- printing a document – Advanced features of MS Office Word- Keyboard shortcuts.

UNIT III

Starting with MS Office Excel- Working with Excel workbook-working with worksheet-formulas and functions-inserting charts-sorting-importing data-printing in excel- Advanced features of MS Office Excel.

UNIT IV

Starting with MS Office PowerPoint – Working with PowerPoint- Working with different views-Designing Presentations- Slide Show.- Printing in PowerPoint.

UNIT-V

The Internet-Evolution of Internet-Owner of Internet- Anatomy of Internet – Internet Terminology- Getting Connected to Internet- Web Brower- Electronic Mail- Search engines- Uses of internet to society.

TEXT BOOK

Instruction hours/week: L:4 T:0 P:0

Marks: Internal: 100 External: - Total: 100
End Semester Exam: 3 Hours**Course objectives**

- To acquire basic knowledge on Multimedia devices.
- To understand current trends in multimedia by experiencing a variety of applications and development packages.
- To identify a range of concepts, techniques and tools for creating and editing the interactive multimedia applications.
- To identify the current and future issues related to multimedia technology.
- To identify both theoretical and practical aspects in designing multimedia systems surrounding the emergence of multimedia technologies using contemporary hardware and software technologies.

Course outcomes (CO's)

After successful completion, the students will

- Define what is multimedia.
- Discuss the effects of multimedia in your daily life.
- Identify five multimedia components.
- Explain why multimedia is so powerful to increase human-computer interaction.
- Examine multimedia applications in several areas.
- Understand analog and digital conversion process

UNIT - I

Multimedia – An overview: Introduction – Multimedia presentation and production – Characteristics of Multimedia presentation – Hardware and Software Requirements – Uses of Multimedia. Text: Types of text - Font - Text File formats. Image: Image data representation – Image file formats – Image processing software. Graphics: Advantages of graphics – Uses – Components of a graphics system.

UNIT - II

Audio: Sound waves – Types and properties of sound – Components of audio system – Digital audio - Musical Instrument Digital Interface (MIDI) – Audio file formats – Audio processing software. Video: Motion video – Television systems – Video file formats – Video processing software. Animation: Uses of animation – Computer based animation – Animation file formats – Animation software.

UNIT - III

Introducing Photoshop elements: About elements – Welcome screen – Create mode – Menu bar – Toolbox – Options bar – Panels. Organizing images: Obtaining images – Tagging images - Searching for images - Opening and saving images. Selecting Areas – Layers – Text and Drawing Tools.

UNIT - IV

Understanding Flash: Understanding Flash basic elements – Creating a simple animation. Learning Flash Toolbox: Learning the toolbox – Using tools. Learning Flash Panels: Understanding the panels. Using timeline and layers: Understanding how timeline works – Understanding layers. Drawing objects: Drawing lines and fills – Using colors – Rotating, skewing and scaling – Grouping objects.

UNIT - V

Creating animation – How animation works – Creating motion tweens – Creating shape tweens. Understanding masks – Creating masks. Creating symbols and using the library: Learning about symbols – Creating symbols – Using libraries. Learning Basic ActionScript concepts: ActionScript basics – Data type basics.

.

Instruction hours/week: L:4 T:0 P:0 Marks: Internal: 40 External: 60 Total: 100
End Semester Exam: 3 Hours

Course Objectives:

- To help students enhance their Language skills
- To introduce different kinds of literary works
- To familiarize different genres of Literature
- To instruct moral values through literature
- To improvise their productive and receptive skills
- To strengthen the basic knowledge about grammar

Course Outcomes (CO's):

1. Develop the four types of skills
2. Reading and comprehending literary works
3. Genres of literature to provide moral education
4. Develop communication skills in business environment
5. Interpersonal skills will be developed
6. Betterment of language competence

UNIT I – Concept of Communication – Barrier to Communication –Body language – Personality Development – Etiquette and Manners- Soft Skills – Emotional Intelligence

UNIT II – Listening Comprehension – Reading Comprehension – Paragraph writing – Precis Writing – Writing Resume and Covering Letter -Speaking – Welcome Address, Vote of Thanks, Compering, Debates, Role Play, Dialogues – Vocal Communication Techniques. Voice, Quality, Volume, Pitch

UNIT III – Dicto Composition – Letter Writing (Informal, Letters to the Editor etc) – Term paper – Book reviews

UNIT IV – Business Correspondence – Layout of Business Letter – Formal Styles of Business Letters – Letters of Acceptance, Appointment, Resignation, Complaint, Sending E-mails.

UNIT V – Effective Presentation – Planning – Audience Analysis –Logical Sequencing – Timing of the Presentation – Conclusion – Answering Queries – Group Discussion – Interview.

Instruction hours/week: L:6 T:0 P:0**Marks: Internal: 40 External: 60 Total: 100**
End Semester Exam: 3 Hours**Course objectives**

Equip the students:

- On the concept of homeostasis
- On the physiological functioning of cardiovascular system
- On the physiological functioning of renal system
- On the physiological functioning of gastro-intestinal and hepatic system
- On the physiological functioning of muscular skeletal system
- On the physiological functioning of reproductive system

Course outcomes (CO's)

After successful completion of the course, the student will:

1. Understand the concept of homeostasis
2. Understand the physiological functioning of cardiovascular system
3. Understand the physiological functioning of renal system
4. Understand the physiological functioning of gastro-intestinal and hepatic system
5. Understand the physiological functioning of muscular skeletal system
6. Understand the physiological functioning of reproductive system

UNIT I

Blood: composition and functions; RBC-Hemoglobin, Hemopoiesis, Leukocytes, and Platelets; Blood coagulation mechanism; blood groups and blood transfusion.

Body Fluids: ECF and ICF: Ionic composition of body fluids; body buffers

UNIT II

Digestive system: Introduction to digestive system, secretion of digestive juices; digestion and absorption of carbohydrates; proteins; and fats.

Respiratory system: Diffusion of gases in lungs, transport of oxygen from lungs to tissues through blood, factors influencing the transport of oxygen. Transport of CO₂ from tissues to lungs through blood, factors influencing the transport of CO₂.

UNIT III

Physiology of vision: Structure of eye; Receptor mechanisms of eye: Photo pigments, visual cycle and colour adaptation.

Skeletal muscle: Structure and properties Myosin, actin and regulatory proteins, sarcomere unit; mechanism of contraction of muscle fiber

Circulatory systems: Introduction, functions of circulation, heart as a pump, special junctional tissue of the heart, cardiac cycle (only the normal values), definition of Blood pressure, physiological variation and significance of blood pressure and factors controlling blood pressure.

UNIT IV

Nervous system: Structure of Neuron, resting and action potential, propagation of nerve impulses, structure of synapse, Synaptic transmission (electrical and chemical theory)

Structure of neuromuscular junction and mechanism of neuro muscular transmission, Neuro transmitters-Acetyl choline, GABA,

Kidney: Structure of nephron; composition and mechanism of urine formation; micturition; renal regulation of acid-base balance.

UNIT V

Male reproductive system: structure and functions of testis. Spermatogenesis, causes of male infertility.

Female reproductive system: structure of ovaries; ovarian cycle and menstrual cycle. Pregnancy and lactation. Causes of female infertility

TEXTBOOKS

Chatterjee.C.C .2012. Human Physiology, 11th edition, Mical Alli Agency, Calcutta.

Saradha S.2004. Textbook of Human Physiology, S. Chand and Company, New Delhi.

Robert K. Murray, Daryl K. Granner, Peter A. Mayes, Victor W. Rodwell. 2012. Harper's Illustrated Biochemistry. 29th edition, McGraw Hill and London.

Instruction hours/week: L:6 T:0 P:0 Marks: Internal: 40 External: 60 Total: 100
End Semester Exam: 3 Hours

Course objectives

Equip the students on:

- The fundamentals of hormones and receptors
- Different mechanisms of hormonal actions
- Understanding of physiological and biochemical actions of hypothalamic, thyroid and pituitary hormones
- The role and applications of gastrointestinal hormones
- Understanding the clinical significance of adrenal and gonadal hormones
- Understanding of various endocrine disorders

Course outcomes (CO's)

After successful completion of the course, the student will:

1. Gain knowledge on functions, classification and transport of hormones
2. Understand the role of secondary messengers, effector systems and protein kinases, tyrosine kinases in hormonal action
3. Have knowledge on the biochemical action and regulation of various endocrine hormones
4. Understand the role and applications of gastrointestinal hormones
5. Have knowledge on the role and functions of adrenal and gonadal hormones
6. Be able to identify an endocrine disorder if symptoms are available

UNIT I

Hormones – Introduction, classification of hormones, chemical structure (any two for each classes). Mechanism of hormone action –Receptors: Nuclear receptors and modification of gene expression; Cytosolic hormone receptors; plasma membrane receptors and second messengers-cAMP, cGMP, Ca^{2+} and IP_3 .

Hormonal regulation of physiological processes (Basic concepts with special reference to carbohydrate)

UNIT II

Endocrine hypothalamus- Hypothalamic-pituitary axis, hypophysiotropic hormones, mechanism of action. Pituitary hormones - anatomy of pituitary gland, Hormones of the pituitary-Adenohypophysis and Neurohypophysis -Roles and mechanism of action, pathophysiology. Neuro hormones-functions. Growth hormones: somatotropins and somatomedins –role and pathophysiology

UNIT III

Thyroid gland – synthesis and chemistry of hormones , physiological roles and pathophysiology.

Parathyroid gland- synthesis, chemistry , metabolism and physiological roles .

melanotropic hormones - chemistry, mechanism of action, pathophysiology

Endocrine role of pineal gland

UNIT IV

Gastro intestinal hormones; Endocrine pancreas- insulin , glucagons , somatostatin . pancreatic peptide- chemistry, mechanism of action and physiological roles.

Adrenocortical hormones - source , chemistry, physiological role and pathophysiology.

Adrenal medullary hormones - source, chemistry, physiological role and pathophysiology.

UNIT V

Hormones of male reproductive system -source, chemistry, physiological role, mechanism of action and pathophysiology.

Hormones of female reproductive system- chemistry, physiological role, mechanism of action and pathophysiology.

Endocrinology of pregnancy, parturition and lactation. Human infertility – reasons, therapy and treatments.

Endocrine role of heart and kidney

TEXT BOOK

Madhavan Kutty K, Singh H.D, Sarada Subramanyam, 2012. Text Book of Human Physiology, 6th Edition, S Chand & Co., Pvt., Ltd, New Delhi

REFERENCES

Guyton C. and John E. Hall, 2015. Textbook of Medical Physiology. 13th edition. Saunders Publishing. Philadelphia, USA.

White A., Handler P., and Smith E. L. 2010. Principles of biochemistry: Vol II 5th Edition, McGraw-Hill Kogakusha Ltd., New Delhi

Instruction hours/week: L:0 T:0 P:5**Marks: Internal: 40 External: 60 Total: 100**
End Semester Exam: 3 Hours**Course objectives**

Equip the students with:

- Mitotic stages in onion root
- Cell viability analysis using trypan blue
- Separation of sub cellular organelles
- Basics of histopathology
- Analysis of blood
- Urine analysis

Course outcomes (CO's)

After successful completion, the students will understand:

1. Mitotic stages in onion root
2. Cell viability analysis using trypan blue
3. Separation of sub cellular organelles
4. Basics of histopathology
5. Analysis of blood
6. Urine analysis

Experiments:

1. Preparation of onion root squash and observation of cell
2. Cell size determination using ocular and stage micrometer
3. Determination of cell viability using trypan blue exclusion (Demo)
4. Observation of mitotic stages in Onion root
5. Osmotic, chemical and enzymatic lysis of cells-Observing extent of cell lysis by release of cellular components (Demo)
6. Separation of cell organelles and determination of markers
7. Histopathology (Demo)
Fixation, dehydration, embedding, sectioning and staining of tissues

HUMAN PHYSIOLOGY**Blood:**

1. Collection of blood-finger tip, vein puncture
2. Separation of plasma and serum
3. Preservation of whole blood
4. Enumeration of red blood cells
5. Enumeration of white blood cells
6. Differential leucocytes count
7. Determination of blood groups
8. Determination of bleeding time
9. Determination of clotting time

10. Widal test (Kit method)
11. VDRL test (Kit method)
12. RA factor (Kit method)
13. C-reactive protein (Kit method)
14. ASO titre (Kit method)
15. Pregnancy test- Gravintex test (Kit method)

Urine collection:

Random, 12, 24 hrs, First morning urine, Preservatives

8.Urine routine analysis - Colour, appearance, specific gravity, pH, sugar, albumin, bilirubin, bile salts and bile pigments, ketone bodies, urinary deposits – Pus cell, RBC, epithelial cells and casts.

Instruction hours/week: L:0 T:0 P:0

Marks: Internal: - External: 100 Total: 100
End Semester Exam: 3 Hours**Course objectives****Equip the students with:**

- Handling emergency situations
- First aid for respiratory system
- First aid for circulatory system
- First aid for nervous system
- First aid for bone, joint and muscle system
- First aid for chemical poisoning

Course outcomes (CO's)

After successful completion, the students will understand:

1. Handling emergency situations
2. First aid for respiratory system
3. First aid for circulatory system
4. First aid for nervous system
5. First aid for bone, joint and muscle system
6. First aid for chemical poisoning

UNIT I

Introduction to first aid: Basic anatomy and physiology of body systems, Emergency action principles. Survey the scene-Do a primary survey, Call for emergency services. Do a secondary survey and appropriate emergency first aid. First Aid Kit.

UNIT II

First aid for Respiratory system : Disorders of breathing - the important ones- Choking, Drowning, Asthmatic attack. Hypoxia from inhalation of fumes, carbon monoxide poisoning, lung disease. Hyperventilation . Rescue breathing for non-breathing casualty.

UNIT III**First aid for circulatory system**

Disorder of circulation - the important ones, Shock from blood and fluid loss, Anaphylactic shock, Heart attack, CPR Wound – types& first aid. Bleeding - types and control of bleeding (direct pressure and indirect pressure), pressure points first aid preservation of amputated body part. Bandage as pressure pad, ring pad and slings for wounds and bleeding

UNIT IV**First aid for the nervous system**

Disorders of conscious - the important ones- Faint, Fit (convulsion, epilepsy, fits)
Hypoglycemic coma in diabetic patient (low blood sugar). Stroke and head injury. Drunkenness.
First aid for head injury, face injury, chest injury and abdomen injury.

UNIT V

First aid for bones, joints and muscles

Disorders of musculo-skeletal system- fractures, dislocations, sprains and strains, and cramps and their first aid. Burns, heat exhaustion and heat stroke - prevention and first aid, fever - first aid. Cold related injury bites and poisoning (swallow poison, drug overdose, inhaled poisoning, plant and chemical contact).

Instruction hours/week: L:4 T:0 P:0**Marks: Internal: 40 External: 60 Total: 100****End Semester Exam: 3 Hours****Course Objectives****Equip the students with:**

- History of bioinformatics
- Biological database creation
- Utilization of available database
- Gene prediction using bioinformatics tools
- Prediction of protein structure using computational tools
- Statistical analysis

Course outcomes (CO's)

After successful completion, the students will understand:

1. History of bioinformatics
2. Biological database creation
3. Utilization of available database
4. Gene prediction using bioinformatics tools
5. Prediction of protein structure using computational tools
6. Statistical analysis

UNIT-I

Introduction to Bioinformatics: Objectives, History of Bioinformatics, Human Genome Project, application of bioinformatics – Molecular medicine, biotechnology, agricultural, forensic analysis.

UNIT-II

Introduction to Biological databases-Types of databases, sequence databases-nucleic acid sequence databases-Gene bank, EMBL, DDBJ, protein sequence database- Swiss-Prot, PIR, PDB structural databases, Search and retrieval of Entrez, bibliographic databases-Pubmed.

UNIT-III

Sequence alignment-local, global, pairwise and multiple alignment, Similarity searching programs- BLAST, FASTA; Gene prediction strategies and programs- Genscan, Genemark.

UNIT-IV

Protein secondary structure prediction, three dimensional structure prediction, Comparative modeling and visualization of molecules. Visualization-Rasmol, Deep view.

UNIT-V

Source of data – Primary and secondary data. Classification and tabulation of data. Diagrammatic and graphic presentation of data.

Measures of central tendency: arithmetic mean, median, mode.

Measures of variation: range, quartile deviation, mean deviation, standard deviation (simple problems only).

Instruction hours/week: L:4 T:0 P:0**Marks: Internal: 40 External: 60 Total: 100****End Semester Exam: 3 Hours****Course objectives**

Equip the students with:

- Data collection
- Various ways of representation of data
- Measures of central values and standard deviation.
- Determination of the relationship between two variables.
- Correlation and regression analysis
- Determining the level of significance of a particular data by various parameters.

Course outcomes (CO's)

After successful completion, the students will understand:

1. Data collection
2. Various ways of representation of data
3. Measures of central values and standard deviation.
4. Determination of the relationship between two variables.
5. Correlation and regression analysis
6. Determining the level of significance of a particular data by various parameters.

UNIT-I

Definitions-Scope of Biostatistics- Variables in biology, collection, classification and tabulation of data- Graphical and diagrammatic representation.

UNIT – II

Measures of central tendency – Arithmetic mean, median and mode. Measures of dispersion- Range, standard deviation, Coefficient of variation.

UNIT – III

Correlation – Meaning and definition - Scatter diagram –Karl Pearson's correlation coefficient. Rank correlation.

UNIT – IV

Regression: Regression in two variables – Regression coefficient problems – uses of regression.

UNIT – V

Test of significance: Tests based on Means only-Both Large sample and Small sample tests - Chi square test - goodness of fit.

Instruction hours/week: L:4 T:0 P:0**Marks: Internal: 40 External: 60 Total: 100****End Semester Exam: 3 Hours****Course objectives**

Equip the students with:

- Separation techniques
- Centrifugation and filtration techniques
- Concepts of thermodynamics
- Crystallographic methods
- Structure prediction using NMR
- Spectroscopic techniques

Course outcomes (CO's)

After successful completion, the students will understand:

1. Separation techniques
2. Centrifugation and filtration techniques
3. Concepts of thermodynamics
4. Crystallographic methods
5. Structure prediction using NMR
6. Spectroscopic techniques

UNIT I: Separation Techniques

Bioseparations – batch filtration – continuous filtration – centrifugation – sedimentation velocity and equilibrium methods – reverse osmosis – ultra filtration – micro filtration,

UNIT II: Chemical Equilibrium

Chemical equilibrium – law of mass action – equilibrium constant – electrochemistry – electrolysis – Galvanic cell – fuel cells – Nernst equation – Chemical thermodynamics – heat of reaction – entropy – enthalpy.

UNIT III: Crystallography

Study of size, shape and molecular weight of macromolecules – X-ray studies – Goniometer – Bragg's spectrometer – reciprocal lattice – isomorphous replacement – refinement of structure.

UNIT IV: Structural Studies

NMR spectra – experimental arrangement – chemical shift – two dimensional NMR – electron spin resonance technique – hyperfine structure – mass spectrometry

UNIT V: Spectroscopy

Spectroscopy – visible, fluorescence, IR, UV and Raman spectroscopic studies – electron microscope – scanning, tunneling electron microscopes – atomic force microscope working and applications

Instruction hours/week: L:0 T:0 P:3 Marks: Internal: 40 External: 60 Total: 100
End Semester Exam: 3 Hours

Course objectives

To impart hands-on training on:

- MS-office
- Analysis of databases such as SWISS PROT, NCBI
- Retrieval of protein structures from PDB
- Secondary structure prediction
- Molecular visualization tools
- Multiple sequence alignment

Course outcomes (CO's)

After successful completion, the students shall be able to

1. MS-office
2. Analysis of databases such as SWISS PROT, NCBI
3. Retrieval of protein structures from PDB
4. Secondary structure prediction
5. Molecular visualization tools
6. Multiple sequence alignment

Experiments:

1. Introduction to MS Office
2. Analysis of databases
 - NCBI
 - EMBL
 - DDBJ
 - PIR
 - SWISS PROT
3. Retrieval of protein structures –PDB
4. Bibliographic Databases
 - Pubmed
 - Medline
- 5 Secondary structure prediction
 - SOPMA
6. Molecular Visualization and analysis
 - RASMOL
7. Sequence similarity search for a pair of sequences using
 - BLAST
 - FASTA
8. Multiple sequence alignment
 - CLUSTAL

Instruction hours/week: L:0 T:0 P:3

Marks: Internal: 40 External: 60 Total: 100

End Semester Exam: 3 Hours

Course objectives

Equip the students with:

- Definition and representation styles of data
- Analysis of data using correlation to understand the interdependence
- Analysis of data using regression to understand the interdependence
- To learn various measures of central values and standard deviation.
- To understand the relationship between two variables.
- To test the significance of a particular data by various parameters.

Course outcomes (CO's)

After successful completion, the students will:

1. Use appropriate representation styles to present the data
2. Perform correlation analysis
3. Perform regression analysis
4. Calculate mean, median, mode and standard deviation.
5. Calculate the relationship between two variables.
6. Test the significance of a particular data by various parameters.

Experiments:

1. Through understanding of the usage of SPSS package.
 2. Application of various statistical tools to interpret research data in a clear and easily understandable manner
-
1. Mean for individual, discrete series using SPSS Package.
 2. Mean for continuous series using SPSS Package.
 3. Median for individual and discrete series using SPSS Package..
 4. Median for continuous series using SPSS Package..
 5. Mode for individual and discrete series using SPSS Package..
 6. Standard deviation for individual and discrete series using SPSS Package.
 7. Coefficient of variation for individual and discrete series using SPSS Package.
 8. Karl Pearson's Correlation using SPSS Package.
 9. Rank Correlation Coefficient for Untied Rank using SPSS Package.
 10. Rank Correlation Coefficient for Tied Rank using SPSS Package.

Instruction hours/week: L:0 T:0 P:3 Marks: Internal: 40 External: 60 Total: 100
End Semester Exam: 3 Hours

Course objectives

- To know about fluid friction
- Understand the interfacial surface tension between two liquids
- Understand the surface tension
- To understand the basic terms and concepts of Biophysics
- Are able to describe biophysical phenomena with simple physical models
- Know the ratio between the speed of light in medium to speed in a vacuum

Course outcomes (CO's)

After successful completion, the students will understand:

1. About the fluid friction
 2. Interfacial surface tension between two liquids
 3. Surface tension calculation
 4. Basic terms and concepts of Biophysics
 5. Biophysical phenomena with simple physical models
 6. Resolving power of a telescope
-
1. Internal friction of low liquids by Poiseuille's flow method
 2. Internal friction of high viscous liquids by Stokes method
 3. Interfacial surface tension between two liquids
 4. Surface tension of liquids by capillary rise /drop weight method
 5. Specific rotatory power of sugar solution using polarimeter
 6. Specific rotatory power of biological solution using polarimeter
 7. Refractive index of liquids using spectrometer
 8. Wave length of prominent lines of mercury spectrum using a plane transmission grating
 9. Resolving power of a telescope
 10. Emissivity of a surface - spherical calorimeter

Instruction hours/week: L:5 T:0 P:0 Marks: Internal: 40 External: 60 Total: 100
End Semester Exam: 3 Hours

Course objective**Equip the students with**

- Insight on various metabolic pathways in human and also in plants
- The pathways related with energy production through catabolism of carbohydrates and lipids
- The metabolic pathways that involve with the synthesis of macromolecule
- Understanding the molecules within cells and interactions between cells that allows construction of multi cellular organisms.
- Molecular machinery of living cells.
- Metabolic pathways of amino acids and nucleic acid metabolism.

Course outcomes (CO's)**After successful completion, the students will understand:**

1. Insight on various metabolic pathways in human and also in plants
2. The pathways related with energy production through catabolism of carbohydrates and lipids
3. The metabolic pathways that involve with the synthesis of macromolecule
4. Understanding the molecules within cells and interactions between cells that allows construction of multi cellular organisms.
5. Molecular machinery of living cells.
6. Metabolic pathways of amino acids and nucleic acid metabolism.

UNIT I**Introduction to intermediary metabolism**

Introduction, overview of intermediary metabolism- the basic metabolic pathways, anabolic, catabolic and amphibolic pathways. Biological oxidation-oxidation, reduction equilibria; redox potential, enzymes and coenzymes involved in oxidation and reduction. ETC: Role of respiratory chain in energy capture. Oxidative phosphorylation- Mechanism of oxidative phosphorylation - Chemiosmotic theory, uncouplers of oxidative phosphorylation.

UNIT II**Carbohydrate metabolism**

Introduction, fate of absorbed of carbohydrate, utilization of glucose, general processes of carbohydrate metabolism-glycolysis and citric acid cycle, glycogenesis, glycogenolysis and gluconeogenesis. Alternate pathways of carbohydrate metabolism-pentose phosphate pathway (HMP shunt), Glucuronic acid cycle and Glyoxylate cycle.

UNIT III

Metabolism of lipids

Introduction- Blood lipids and plasma lipoproteins- biomedical importance, fate of dietary lipids. Oxidation of Fatty acids: β - oxidation, α -oxidation and ω oxidation. Oxidation of fatty acids with odd numbers of carbon atoms. Biosynthesis of saturated fatty acids: Extra mitochondrial and microsomal system for elongation of fatty acids. Biosynthesis of Phospholipids: Phosphatidyl choline, Phosphatidyl ethanolamine, Phosphatidyl inositol and Phosphatidyl serine. Degradation of phospholipids, Biosynthesis of glycolipids, Biosynthesis of Cholesterol. Ketone bodies – formation, importance.

UNIT IV

Metabolism of protein and amino acids

Introduction, fate of dietary proteins, catabolism of amino acid nitrogen-oxidative deamination; non-oxidative deamination, transamination-formation of ammonia, transport of ammonia, disposal of ammonia -urea cycle. Amino acid decarboxylation, Catabolism of carbon skeleton of amino acids- glycine, tyrosine, phenyl alanine, glutamic acid and lysine.

UNIT V

Metabolism of purine and pyrimidine nucleotides

Introduction, biomedical importance, biosynthesis of purine and pyrimidine nucleotides, de novo synthesis of purines and pyrimidines, salvage pathways, catabolism of purines and pyrimidines.

Inter relationship of carbohydrate, protein and fat metabolism. TCA cycle as a central core in the inter relationships in metabolism and inter conversion of major food stuffs - Carbohydrate, fats and proteins.

Instruction hours/week: L:5 T:0 P:0 Marks: Internal: 40 External: 60 Total: 100
End Semester Exam: 3 Hours

Course objectives

- To enlight the students with genome organization of DNA
- To study the mechanism of replication DNA in prokaryotes
- To study the mechanism of replication DNA in eukaryotes
- To understand the mechanism of recombination and transposition of DNA
- To understand DNA damage, mutation
- DNA repair process

Course outcomes (CO's)

After successful completion, the students will be able to

1. Understand genome organization of DNA
2. Comprehend the mechanism of replication DNA in prokaryotes
3. Comprehend the mechanism of replication DNA in eukaryotes
4. Explain the mechanism of recombination and transposition of DNA
5. Explain DNA damage, mutation
6. Explain DNA repair process

UNIT-I

Nucleic acids: Evidences for DNA as Genetic material – Bacterial Transformation, Transduction and conjugation. DNA Organization- Chromatin, Histones and Nucleosomes: Chromosomal Organization of genes-solitary genes, tandemly repeat genes, simple sequence DNA, mobile DNA elements- transposons, mechanism of transposition.

UNIT II

Replication: Semi conservative mechanism and experimental proof, Bi-directional replication, Rolling circle model. Formation of DNA from nucleotides - Enzymology of replication, initiation, elongation and termination of replication in prokaryotes. Differences between eukaryotic replication and prokaryotic replication.

UNIT III

Transcription: Prokaryotic Transcription: RNA polymerases, Initiation, elongation and termination. Post transcriptional modifications: RNA Splicing, RNA editing, Processing of Eukaryotic mRNA, rRNA, tRNA. Prokaryotic gene regulation: Operon model – Lac operon, Trp Operon. Eukaryotic gene regulation- RNA interference, siRNA.

UNIT IV

Translation: Composition of Prokaryotic and Eukaryotic Ribosomes. Genetic code – Experimental evidences and features. Translation: Initiation, elongation and termination of protein synthesis in prokaryotes, Translation in Eukaryotes, Post translational modifications of proteins, Inhibitors of protein synthesis.

UNIT V

Recombination: Definition, types of recombination, Holliday model for Homologous recombination. Gene mutations: Types – Missense mutation and other point mutations, spontaneous mutations and induced mutations, silent mutations.

DNA Repair Mechanism: Photo repair, Excision repair, Mis-match repair, SOS repair.

Instruction hours/week: L:5 T:0 P:0**Marks: Internal: 40 External: 60 Total: 100**
End Semester Exam: 3 Hours**Course objectives****Equip the students with:**

- Basics of immunology
- History of immunology
- Components of immunity
- Immunodeficiency and hyperfunctioning of immune system
- Transplantation
- Immunotechniques

Course outcomes (CO's)**After successful completion, the students will understand:**

1. Basics of immunology
2. History of immunology
3. Components of immunity
4. Immunodeficiency and hyperfunctioning of immune system
5. Transplantation
6. Immunotechniques

UNIT I

Basics of immunology : Introduction, Innate and acquired immunity, Cells of immune system. structure and function of T, B, NK cells, neutrophils, eosinophils and basophils. monocytes and macrophages ; Primary and secondary lymphoid organs. Humoral and cell mediated immunity.

UNIT II**Components of Immunity**

Antigen: Definition, requirement for antigenecity, properties of antigen-specificity, cross reactivity, immunogenicity; epitopes, adjuvents, haptan.

Antibody-Definition, properties, classes, subclasses structure, specificity and distribution; self-antigens (MHC) - Class I, II, III molecules, role of MHC in antigen processing and presentation.

UNIT III**Hypersensitivity**

Hypersensitivity- Type I, II, III & IV; Factors causing hypersensitivity; Mechanism, Pathogenesis, prevention and treatment.

Complement- definition, classical and alternate pathways, biological importance of complement system, complement deficiency diseases.

UNIT IV**Transplantation Immunology**

Transplant-Mechanism of Allograft rejection; Auto immune diseases- Rheumatoid arthritis, myasthenia gravis, Graves's disease, Systemic lupus erythematosus.

Vaccination- passive and active. Preparation of live and attenuated vaccines, novel vaccines.

UNIT V

Immunotechniques

Antigen- antibody interaction-Precipitation reaction-immuno diffusion, immuno electrophoresis; Agglutination- blood grouping; Immuno techniques – Principle and application of RIA, ELISA, Fluorescent antibody techniques, immuno blotting, hybridoma technology - elementary concepts only.

Instruction hours/week: L:5 T:0 P:0Marks: Internal: 40 External: 60 Total: 100
End Semester Exam: 3 Hours**Course objectives**

Equip the students with

- Plant cell structure
- Transport mechanism in plants
- Photosynthesis in plants
- Microenvironment for plant growth and nitrogen fixation
- Plant growth regulators
- Photomorphogenesis in plants

Course outcomes (CO's)

After successful completion, the students will understand

1. Plant cell structure
2. Transport mechanisms in plant cell
3. Photosynthesis and carbohydrate metabolism
4. Various microenvironment and hormones required for plant growth
5. The process of nitrogen fixation
6. Photoperiodism and senescence in plants

UNIT-I

Plant Cell and Transport mechanisms: cell wall-structure and functions. Plastids: types and functions Transport mechanisms: diffusion, vacuole and turgor pressure, osmosis and imbibition, conditions necessary for imbibition. Absorption and translocation of water: Mechanism-Active and passive absorption, Factors affecting absorption of water. Ascent of sap: Mechanism and theories.

UNIT-II

Photosynthesis: Photosynthetic pigments: Chlorophyll, carotenoids and phycobillin: Photosynthetic apparatus-structure and functions of chloroplasts: light absorption. Light reactions-Two kinds of chemical system-Photosystem I&II, evidences in support of light reaction. Hill's reaction; Emerson effect, cyclic and non-cyclic phosphorylation. Dark reaction : Calvin's cycle (C3 plants). Hatch-slack cycle (C4 plants) and CAM plants. Factors affecting photosynthesis. Photorespiration.

UNIT-III

Cycles of elements and Plant Nutrition: Nitrogen cycle-Ammonification, nitrification, nitrate reduction and denitrification. Nitrogen fixation: Symbiotic and non-symbiotic nitrogen fixation. Sulfur cycle: Release of sulfur from organic compounds; Oxidation of sulfur compounds; Reduction of sulfate. Phosphorus cycle and carbon cycle. Plant nutrition: Specific roles of essential elements and their deficiency symptoms in plants. Macronutrients: Carbon, Hydrogen, Oxygen, Nitrogen, Sulfur, Phosphorus, Calcium and Potassium. Micronutrients: Manganese, Boron, Copper, Zinc, Molybdenum and Chlorine.

UNIT-IV

Plant growth regulators: Auxins: Chemistry, biosynthesis, mode of action, bioassay, practical applications of synthetic auxins. Gibberellins: Chemistry, biosynthesis and mechanism of action, role of endogenous gibberellins, bioassay and practical applications. Chemistry, mode of action and physiological role of cytokinins, abscisic acid and ethylene.

UNIT-V

Photomorphogenesis

Photoperiodism. Photochrome-function in growth and development of plant. Biochemistry of seed germination. Senescence: Biochemical changes during senescence. Senescence process in life cycle of plants.

Instruction hours/week: L:0 T:0 P:5 Marks: Internal: 40 External: 60 Total: 100
End Semester Exam: 3 Hours

Course objectives

To make the students:

- To provide hands on experience on extraction of enzymes from the plant source.
- To make them learn about isolation of bioactive compounds from fruits and vegetables.
- To learn to isolate the pigments from plants.
- To learn them about various tissue culture techniques
- To learn the PTC media preparation, culturing techniques
- To know about the Plant tissue culture

Course outcomes (CO's):

The students shall be able to

1. Gain knowledge on the isolation and enzymes and bioactive compounds from the plants.
2. Use experimental techniques related to isolation.
3. Get aware about the plant tissue culture techniques
4. Prepare the plant tissue lysates
5. Know about the estimation of vitamin
6. Isolate the DNA and RNA of enzymes from plant and animal source

MOLECULAR BIOLOGY

1. Isolation and estimation of genomic DNA, RNA and protein from plant and animal sources
2. Plasmid DNA isolation
3. Agarose gel electrophoresis of DNA
4. Separation of serum proteins by poly acrylamide gel electrophoresis (PAGE)
5. Restriction digestion of DNA (Demo)
6. Competent *E.coli* preparation(Demo)
7. Transformation and selection of transformed cell (Demo)
8. Western blotting (Demo)

(II) Plant Biochemistry

10. Estimation of starch
11. Estimation of chlorophyll
12. Estimation of vitamin C
14. Estimation of glutathione
15. Estimation of vitamin E

(III) Plant tissue culture (Demo)

16. Preparation of Tissue culture media
17. Surface sterilization
18. Callus induction

Instruction hours/week: L:5 T:0 P:0 Marks: Internal: 40 External: 60 Total: 100
End Semester Exam: 3 Hours

Course objectives

- To provide the student with the basic principles of human genetics
- Specific objectives of this course are to provide an understanding and discuss ramifications of inheritance, gene structure and function, gene mutation, and research related to genetics and its applications.
- The students are expected to have basic knowledge of chromosome structure, genome organization and cell division.
- To know about the genetic diversity
- To know about some common inherited human genetic disorders
- To understand the chromosomal changes

Course outcomes (CO's)

1. Comprehensive, detailed understanding of the chemical basis of heredity
2. Comprehensive and detailed understanding of genetic methodology and how quantification of heritable traits in families and populations provides insight into cellular and molecular mechanisms.
3. Understanding of how genetic concepts affect broad societal issues including health and disease, food and natural resources, environmental sustainability, etc.
4. Understanding the role of genetic mechanisms in evolution.
5. The knowledge required to design, execute, and analyze the results of genetic experimentation in animal and plant model systems.
6. Understand that the evolution is an active biological process which impacts the human gene pool

UNIT I

History and Development of Human Genetics: Genes, Hereditary traits, Genetic Disease, Mutations and polymorphisms, Organization of Human Genome: Repetitive DNA in Human Genome, Simple sequence repeat loci; Intron, exon, UTR, regulatory sequence, non-coding RNAs, mitochondrial genome.

UNIT II

Diseases and disorders: Chromosomal disorders: Structural and numerical; Autosomal/sex chromosomal/sex reversal; Mechanisms – mitotic/meiotic non-disjunction/ chromosomal rearrangements; Inborn errors of metabolism, Haemoglobinopathies.

UNIT III

Identification of disease gene/locus: Methods of genetic study in human: Mendelian pedigree pattern and analysis expressivity chromosomal basis of genetic disorders: Chromosomal Analysis, Karyotypes and identification of chromosome variation; Nucleic acid hybridization assays, cytogenetic mapping Single gene disorders: Genetic mapping (Microsatellite and other DNA polymorphisms in mapping), LOD score; Physical mapping, sequencing strategies (PCR

based Sanger sequencing to exome sequencing) Concept of non mendelian inheritance and complex diseases

UNIT IV

Human genome analysis: Conception, mapping, cloning and sequencing, Outcome- Generation of 'OMICS' era, significant leads. Genetic variation in health and disease: Human genetic diversity- Methods of study – Biochemical/molecular genetic markers; some examples. Tracing human migrations with autosomal, Y-chromosomal and mitochondrial markers.

UNIT V

Ethical, legal and social issues in Human genetics: Prenatal/adult (individual/family/population) screening of mutation/risk factor for genetic diseases; Confidentiality/privacy, Discrimination, Ethical dilemma, Human rights, Surrogate mothers; Organ banking and transplantation; Research ethics; Medical ethics in India.

Instruction hours/week: L:5 T:0 P:0 Marks: Internal: 40 External: 60 Total: 100
End Semester Exam: 3 Hours

Course objectives

- To understand the fundamental concepts of nanotechnology.
- To provide an introduction to and an overview over nanotechnology
- To know a basic understanding of the physical laws and effects that are active in the nano-world
- To understand the concepts and strategies used today and in the near future to build molecular machines
- To understand the applications of nanotechnology will influence science of tomorrow and will change many sides of our life.
- To know the impact of nanotechnology on our society.

Course outcomes (CO's)

After successful completion, the students will understand

1. The basic knowledge in nanotechnology.
2. About bionanomaterials and its applications
3. What forces act between atoms and/or molecules when nanoparticles are generated
4. The basic principles of molecular machines
5. the functioning of molecular switches
6. The properties of carbon-nanotubes and their role for engineering nano-electronic devices.

UNIT I

Nanostructure and Properties: Structure- size Dependence of properties, Localized particles- Donors, Acceptors and Deep Traps, Mobility, Excitons Properties of nanoparticles-Metal nanoclusters –theoretical modeling of nanoparticles, geometric structure, electronic structure, Semiconducting nanoparticles-optical properties, photofragmentation, Coulombic explosion.

UNIT II

Types of nanoparticles: Metal nanoparticles-Gold, silver and Titanium nanoparticles. Metal bivalent-Zinc, copper. Magnetic nanoparticle – iron. **Characterization of nanoparticles-** Absorption spectrum, Electron microscopy (SEM, TEM), EDX, XRD, Zeta potential.

UNIT III

Biological Materials: Biological building blocks-sizes of building blocks and nanostructures, polypeptide Nanowire and protein nanoparticles. Nucleic acids-DNA Double nanowire, biological nanostructures-examples of proteins, miscelles and vesicles, multilayer films.

UNIT IV

Synthesis of Nanomaterials: Top down – ball milerling; Bottom up – co-precipitaion – sol-gel – electrodeposition – using natural nanoparticles – chemical vapor deposition. The Carbon

Nanotube – New Forms of Carbon – Types of Nanotubes – Formation of Nanotubes – Uses for nanotubes – Biological Applications

UNIT V

Applications of nanotechnology: Nanomachines and nanodevices- nanobots, Microelectromechanical systems (MEMSs), Nanoelectrochemical systems (NEMSs)- fabrication, nanodevices and nanomachines, **Nanobots**, molecular and supramolecular switches- photochemical switching, current-voltage characteristics

Instruction hours/week: L:5 T:0 P:0 Marks: Internal: 40 External: 60 Total: 100
End Semester Exam: 3 Hours

Course objectives

- To initiate and promote the analysis of cancer as a complex biological system.
- This will encourage the emergence of integrative cancer biology as a distinct field.
- To understand various genetic and molecular changes normal cells undergo during transformation into malignant cancer cells.
- To understand the mechanisms underlying carcinogenesis.
- To understand the cell cycle, angiogenesis and apoptosis.
- To know about the fundamental principles behind cancer diagnosis, prevention, and therapeutic management

Course outcomes (CO's)

After successful completion, the students will

1. Be familiar with basic facets of carcinogenesis and methods to study the process
2. Get knowledge about the emerging themes and provides in depth analysis of cancer and its therapeutic approaches.
3. Know the role of growth factors, oncogenes, tumor suppressor genes, angiogenesis, and signal transduction mechanisms in tumor formation
4. Understand factors that contribute to cancer development and discuss cancer prevention and currently available therapeutic treatments.
5. Understand how genetics contributes to predisposition and progression of cancer.
6. Understand the differences and overlap of cancers by tissue type.

UNIT I

Introduction: Cancer- definition, hallmarks of cancer, Distinction between normal cell and cancer cell, cytological changes in cancer cells, Molecular changes in cancer cells, Genetic changes in cancer cells, Types of cancer, development of cancer, causes of cancer, properties of cancer cells.

UNIT II

Mutagens and mutations, Mechanisms of oncogene activation, Role of growth factors and receptors in carcinogenesis, Retroviral oncogenes, protooncogenes, tumor suppressor genes - P53 and Rb and their functions.

UNIT III

Cell cycle: cell cycle-G1 to S, progression of S phase, G2 to M phase, Anaphase check points and components involved as regulators of check points, role of cyclins and CDKs.

UNIT-IV

Cell death: Types of cell death-apoptosis, necrosis and others. Apoptosis during developmental process and irregular apoptosis and disease. Death causing genes – Ceds, proteins – Caspases, mechanism of programmed cell death (PCD), Pathways of apoptosis-intrinsic and extrinsic.

UNIT V

Treatment of cancer: Early detection of cancer, molecular diagnosis, treatment -radio therapy, chemotherapy, immunotherapy and use of RNAi techniques and stem cells.

Instruction hours/week: L:0 T:0 P:0**Marks: Internal: - External: 100 Total: 100**
End Semester Exam: 3 Hours**Course Objectives:****Equip the students**

- To understand the basic quality control procedures in the laboratory
- To ensure safety in laboratory
- To understand the good laboratory procedures
- To acquaint with standard operating procedures
- To understand the importance of quality audit procedures
- To learn the laboratory safety and regulations

Course Outcomes (COs):**After completion of this course the student will be able to**

1. understand the basic quality control procedures in the laboratory
2. Follow safety procedures in laboratory
3. Follow good laboratory procedures
4. Acquaint with standard operating procedures
5. Do quality audits
6. Maintain laboratory safety and regulations

UNIT I

Basic Concepts: Quality concepts, Quality Assurance, Good Manufacturing Practices, Responsibilities, Ensuring safety in laboratories: Introduction, principles-engineering controls, work practices and administrative control, personal protective equipment. General safety-biological safety, chemical safety and fire safety.

UNIT II

Quality Control: Quality control laboratory: Responsibilities, good laboratory practices, routine controls, instruments, protocols, non-clinical testing, controls on animal house, data generation and storage, quality control documents, retention samples, records, audits of quality control facilities.

UNIT III

Good Laboratory Practice (GLP): GLP – an overview and basic information, Scope. Principles of GLP: Test Facility Organization and Personnel, Quality Assurance Programme, Facilities, Apparatus, Material, and Reagents, Test Systems, Test and Reference Items, Standard Operating Procedures, Performance of the Study, Reporting of Study Result, Storage and Retention of Records and Materials. Responsibilities in GLP Implementing of GLP in non GLP analytical laboratory

UNIT IV

Inspections, Quality Audit and Quality System Reviews: Inspections of pharmaceutical manufacturers, role of quality audit, role of inspectors, methods of inspection- routine, concise, follow-up and special inspections, frequency and duration of inspections, preparations for inspections, conduct, report and regulatory actions. Loan License Auditing – Concepts, Auditing, role of quality circle in quality assurance.

UNIT V

Laboratory Regulations and Safety: List of Regulations to be followed. Laboratory safety procedure- glass ware, equipment safety, hands protection, precaution to be undertaken to prevent accident and contamination.

TEXT BOOKS

Weinberg S. 1995. Good Laboratory Practice Regulations, 3rd edition, CRC Press, U.S.A.

Course objectives

- To understand the basic concepts of chemical reactions that occur in living systems
- To know the basics about the genetic materials
- To understand the Interactions between DNA and protein
- To understand the sources of toxic emissions
- To evaluate the environmental impact of toxic compounds in emissions and immissions
- To evaluate personal and authoritative rights and duties with toxic pollutants.

Course Outcomes (COs):

After completion of this course the student will be able to

1. Comprehensive, detailed understanding of the chemical basis of heredity
2. Understand the cell cycle, angiogenesis and apoptosis.
3. To understand the properties and importance of water in biological system
4. Compare the level of toxic pollutants evacuated in the environment, with the related concentration limits, according to specific regulations
5. Assess the influence of the toxic compounds released on the public health
6. Assess safety conditions and apply related safety regulations when dealing with toxic substances.

UNIT I

Genetic elements :Structure of double strand DNA (B,A, C, D & Z DNA). The biological significance of double strandness, sequence dependent variation in DNA. Physical properties of DNA, chemicals that react with DNA; Types of RNAs and their biological significance.

UNIT II

DNA Bending: Introduction-The Wedge model and Junction model for DNA bending. Protein induced DNA bending. DNA Supercoiling: Introduction- Heterogenicity in forms of DNA molecule. Supercoil form of DNA. DNA knots and catenanes.

DNA-Protein interaction: Introduction- General consideration on protein binding. Specific DNA-Protein interaction.

UNIT III

Cell Cycle and its regulation: Check points, Involvement of CDK's and cyclins, proteins in cell cycle. Cell cycle control of DNA replication: cell cycle and cancer. Apoptosis: Characteristics and features of cell death and mechanism; Anti -apoptotic genes. Telomeres and telomerases in genomic instability.

UNIT IV

Microbial quality of water: Treatment of municipal waste and industrial effluents. Disposal of waste. Bioremediation: Degradation of pesticides by microbes Biological control: Bacteria-*Bacillus thuringensis*, Virus-*Polyhrosis virus*, Fungi-*Berveria bassiana*, Protozoa-*N.algereae*, Parasite-*Tricoderma*, Biofertilizer-Nitrogen fixing bacteria- *Cyanobacterium* and *Azospirillum*. Role of VAM in plant nutrition.

UNIT V

Toxins: Exo and endo toxins; fungal toxins and bacteriocins. Secondary metabolites from microbes. Food preservation and Spoilage: Methods of food preservation, food preservatives, flavour enhancers, emulsifiers, stabilizers, colours, sweetners, antioxidants and food additives. Chemical and microbial spoilage of foods. Food safety.

INTERNSHIP PROGRAMME

**Semester V
2C**

Instruction hours/week: L:0 T:0 P:0

Marks: Internal: 50 External: - Total: 50

End Semester Exam: 3 Hours

Instruction hours/week: L:5 T:0 P:0**Marks: Internal: 40 External: 60 Total: 100**
End Semester Exam: 3 Hours**Course objectives**

- To understand the functions of hepatic, renal and cardiovascular system
- To evaluate the functions of hepatic, renal and cardiovascular system
- To learn fatty acid synthesis and degradation and their regulation
- To study the regulation of amino acid metabolism and its regulations with Metabolic disorders.
- To understand the inter relationship of carbohydrate, lipid, protein and nucleic acid metabolism and understand the importance of TCA cycle.
- To aware about the homeostasis of glucose metabolites by intrinsic and extrinsic control mechanism.

Course outcomes (CO's)**After completion of this course the student will**

1. Acquire the basis behind the assessment of vital organ functioning through liver function, kidney function and cardiomarker assessment.
2. Able to differentiate normal and abnormal functioning of human body.
3. Gain knowledge on glucose anabolic and catabolic pathways that ultimately control the glucose homeostasis.
4. Know the metabolic pathway of amino acid and their regulation with associated disorders.
5. Learn fatty acid synthesis and degradation and their regulation
6. Able to explain the role of lipids, their metabolism and their stringent control by hormones and other factors.

UNIT I

Disorders of carbohydrate metabolism: Normal sugar level in blood, renal threshold, regulation of blood glucose concentration; Diabetes Mellitus: Types, pathophysiology; Diagnosis -OGTT, glycosylated hemoglobin, complications- diabetic ketoacidosis and diabetic coma. Hypoglycemia: Definition and causes. Renal glycosuria- fructosuria, pentosuria and galactosuria.

Disorders of Amino acid metabolism: Cystinuria. Hartnup disease. Fanconi syndrome, Homocystinuria, Alkaptonuria, Phenylketonuria, albinism and maple syrup urine disease.

UNIT II

Disorders of Lipid metabolism: Introduction, clinical manifestation, biochemical abnormalities of lipoprotein-Abetalipoproteinemia, Hyperlipoproteinemias, Hypobetalipoproteinemias; hyperlipidemia, hypercholesterolemia, Cholesterol Acyl Transferase Deficiency. Atherosclerosis, Fatty liver, liver cirrhosis.

UNIT III

Disorders of Purine and Pyrimidine metabolism: Clinical manifestation, biochemical abnormalities, Hyper uricemia- Gout, Lesch-Nyhan syndrome, Von-Gierke's disease. Hypo uricemia – xanthinuria; Orotic aciduria.

Disorders of Bilirubin metabolism: Definition, clinical manifestation, Jaundice- types, biochemical abnormalities of Crigglar-Najjar syndrome. Gilbert's disease and Dubin Johnson disease.

UNIT IV

Gastric, pancreatic and intestinal function

Gastric function – Introduction- test of gastric function – insulin stimulation test, determination of gastrin in serum, tubeless gastric analysis.

Pancreatic function- Introduction, pancreatic function test- serum amylase and lipase, direct stimulation test-secretion of CCK, indirect stimulation test-lundh test.

Intestinal function- Introduction, tests used in the diagnosis of malabsorption, determination of total fecal fat, xylose excretion test and determination of total protein

UNIT V

Liver disease and liver function tests- Bilirubin metabolism and jaundice, liver function tests- Estimation of conjugated and total bilirubin in serum, Detection of bilirubin and bile salts in urine, Thymol turbidity test, serum enzymes in liver disease- Serum transaminases (SGOT and SGPT), and phosphatases.

Kidney function tests – Introduction, physical examination of urine, elimination tests- clearance test, insulin clearance, creatinine clearance and urea clearance: Renal blood flow and filtration fraction, clinical significance of GGT, LDH and creatine phosphokinase in kidney function.

Coagulation tests- prothrombin time, Activated Partial Thromboplastin Time (APTT) and lupus anticoagulant.

Instruction hours/week: L:5 T:0 P:0 Marks: Internal: 40 External: 60 Total: 100
End Semester Exam: 3 Hours

Course objectives

- This paper gives insight knowledge about the emerging themes of drug biochemistry.
- Provides an in depth analysis of specific drug classes, its metabolism and therapeutic approaches.
- Equip the students with Pharmacokinetics and Pharmacodynamics
- To get knowledge on drug tolerance and dependence
- Gain knowledge on genetically engineered drugs
- To understand the mechanism of action of drugs and its undesired effects of drugs

Course outcomes (CO's)**After successful completion, the students will understand**

1. What the body does to a drug and what a drug does to a body
2. Drug metabolism
3. The principles and procedure for genetically engineered drugs
4. How the drugs elicit the desired effect and undesired effects
5. The goal of the paper will ensure the widespread visibility and high impact of Drugs.
6. Thereby promoting on emerging research, pointing the way for the establishment of new medicines – from the identification of targets, through to the synthesis and evaluation of putative therapeutic entities.

UNIT I

Introduction to drug Biochemistry: Classification, routes of administration – factors influencing dosage and drug action, Absorption and distribution of drugs, binding of drugs to plasma proteins, Drug Dose relationship (LD_{50} , ED_{50} , therapeutic index), Drug – Receptor interaction, Drug binding forces, Receptor theories, Drug – Receptor interaction.

UNIT II

Drug metabolism: Drug Biotransformation pathways - phase I – oxidation, reduction and hydroxylation. Phase II- Conjugation, Elimination of drugs from body system. Storage of drugs in adipose tissue.

UNIT III

Drug abuse; drug dependence; drug resistance- Biological mechanism, ways to overcome.

Chemotherapy: Antibacterials – Mode of action of sulfonamides, penicillin, streptomycin, tetracycline, chloramphenicol, antiviral drugs, antifungal drugs; Antimetabolites of folate, purines & pyrimidines, Anti tubercular drugs.

UNIT IV

Mechanism of action drugs used in the treatment of diabetes mellitus (Acarbose, Biguanides), AIDS (Azidophymidine, Didanosine), cancer (Methotrexate, Busulfan), heart (Amrinone, Digoxin) and kidney disorder (Benzophiadiazines, furosemide); antiepileptic drug (Lamictal, Tapclob), drugs for cough (Dextromethorphan Hydrobromide, Noscaphine) and bronchial

asthma (Salbutamol,Aminophylline), diuretics (Manitol, Xanthine), anti ulcer drugs (Cimetidine, Ranitidine) and drugs for fever (Paracetamol, Ibuprofen).

UNIT V

Toxicology- Introduction, definition and disciplines of toxicology, classification of toxicity and toxicants, Mechanisms of toxic effect, treatment of intoxication, methods in toxicology testing, heavy metal toxicity and chelation therapy. Environmental pollution, mycotoxins, mushroom poisons

Instruction hours/week: L:5 T:0 P:0 Marks: Internal: 40 External: 60 Total: 100
End Semester Exam: 3 Hours

Course objectives

- To give students both a theoretical background and a working knowledge of the instrumentation and techniques employed in a biotechnology laboratory
- Able to understand about the gene structure, replication, transcription, translation recombination mechanism of DNA.
- Know the regulation of the synthesis of DNA, RNA and protein.
- Know the DNA sequencing and Gene transfer techniques
- Understand the plant tissue culture technique
- Perform techniques involving the manipulation of DNA; and explore career opportunities in biotechnology

Course outcomes (CO's)**After successful completion, the students**

1. Understand the background of gene structure and flow of genetic information from DNA to RNA.
2. Understand the animal cell culture and stem cells
3. Understand the genetic engineering of plants
4. Understand the transgenic animals and gene therapy
5. Understand the DNA, genes, and gene Expression
6. Understand the recombinant DNA technology

UNIT -I

Introduction – Basic steps in gene cloning. Vehicles in gene cloning-Plasmids- basic features, size and copy number, classification. Bacteriophage- basic features, life cycle. Cosmids and phagemids. Viral vectors and plant vectors.

UNIT- II

Introduction of DNA into living cells-methods, microinjection, electroporation, shotgun methods. Transformation and transfection in *E.coli* – recombinant selection and screening. Maximizing the expression of cloned genes in *E.coli*- Promoters, Cassettes and production of fusion protein.

UNIT- III

DNA sequencing-Sanger and Maxim Gilbert method. PCR- techniques and applications. DNA foot and finger printing- applications. Hybridization probes- radiolabelled and non-radiolabelled. Hybridization techniques- Southern, Northern, Western blotting techniques. Site directed mutagenesis. DNA microarray.

UNIT- IV

Gene transfer techniques- Microinjection, biolistic methods, vector based transfer. Plant tissue culture-Media composition, nutrients and growth regulators, callus culture. Genetic engineering

of plants-methodology- plant transformation with Ti plasmid of *Agrobacterium tumefaciens*. Production of herbicide resistance plant (with reference to glyphosate only). Applications of transgenic plants.

UNIT –V

Genetic engineering of animals – methodology-production of transgenic mice (with reference to insulin only). Knock out mice, Applications of Transgenic animals. Animal biotechnology- Artificial insemination and embryo transfer. *In vitro* fertilization (IVF).

Animal cell culture-Facilities and culture media for animal cell culture. Primary cell culture techniques-cell separation and monolayer culture. Cell lines. Recombinant proteins from cell cultures: interferons, viral vaccines. Gene therapy.

Instruction hours/week: L:5 T:0 P:0 Marks: Internal: 40 External: 60 Total: 100
End Semester Exam: 3 Hours

Course objectives**Equip the students with:**

- To enable students to understand the ethical issues in life sciences and animal handling and to give a more insight in to IPR.
- To understand the food safety
- To understand the Biosafety guidelines and regulations
- Know the conservation and sustainable use of biodiversity
- Components of clinical research (Phases)
- Fundamentals of IPR and patents laws

Course outcomes (CO's)**After successful completion, the student will understand:**

1. Food safety
2. Application and level of bioafety
3. CPCSEA Guidelines for using small experimental animals
4. Human ethics committee and their guidelines
5. The patent procedure
6. Intellectual property rights and Patents laws

UNIT I

Bioethics – Positive effects, Negative effects. Consumer traits – food safety- Environmental concerns- Economic and Social Concerns.

Biosafety – Introduction, definition, need, application and level of bioafety. Bioethics - Introduction to Bioethics in life sciences;

UNIT II

Biosafety guidelines and regulations- National and International Guidelines. Introduction – Regulatory framework in various countries – USA- European Union-Canada-Australia- South Africa- Asian Region- International Guidelines. Biosafety guidelines in India. Guidelines for research in transgenic organisms. **Human ethics committee and their guidelines**

UNIT III

CPCSEA Guidelines for Laboratory Animal Facility Goal- Veterinary care- Animal procurement- **acclimatization**, Quarantine, Sterilization and separation – Surveillance, diagnosis, treatment and control of disease- Animal care and technical personnel, Personal hygiene- Animal experimentation involving hazardous agent- Multiple surgical procedures on single animal- Duration of experiments- Physical restraint- Physical relationships of animal facilities to laboratories – **rehabilitation and sacrifice procedure**. Functional areas - Environment- Animal husbandry- Activity – Food- Bedding- Water- Sanitation and cleanliness. Assessing the effectiveness of sanitation – Waste disposal- Pest control- Emergency , weekend and holiday care.

UNIT IV

Participation of public and NGO's in biosafety and protection of biodiversity – introduction. Participation – consultative processes – public participation and education – role of NGO's in biosafety and biotechnology – environmental and food safety. Food supply and population. Role of public and NGO's in protection, conservation and sustainable use of biodiversity.

UNIT V

Intellectual Property Rights - An introduction- **Types**; Origin of the Patent Regime- Early patterns Act & Indian Pharmaceutical Industry – History of Indian Patent System- The Present Scenario – Basis of Patentability –Patent Application Procedure in India- Patent Granted Under Convention Agreement- Patent Procedure – Opposition to Grant of Patent. Grant and Sealing- Exclusive Rights – Grant of Exclusive Rights- Special Provision for selling or distribution – Suits relating to infringements.

Instruction hours/week: L:5 T:0 P:0

Marks: Internal: 40 External: 60 Total: 100
End Semester Exam: 3 Hours**Course objectives**

- The course is to offer the student state of the art education of stem cell and how the pluripotent cells and multipotent cells can be used to treat the neurodegenerative disorders, cardiovascular disorders and diabetes.
- Explain the specific characteristics of stem cells.
- Relate the importance of stem cells to the development and maintenance of multicellular organisms.
- Understand how cell-cell signaling maintains stem cells and influences differentiation of specialized cell.
- Understand how defects in stem cell behavior can lead to medical problems.
- Describe current limitations of stem cell biology applications and areas of active research

Course outcomes (CO's)**After successful completion, the student will:**

1. Get the knowledge of wide ranging, topics related to stem cells, regenerative biology and embryonic cells.
2. Differentiate between embryonic and adult stem cells, and describe their characteristics
3. Define the molecular mechanisms of stem cell differentiation
4. Discuss potential applications of stem cells in regenerative medicine.
5. Gain a knowledge of the intrinsic and extrinsic factors important for stem cell renewal and differentiation.
6. Understand the clinical significance of stem cell research and the possible problems that need to be overcome.

UNIT I

Introduction to Stem Cells – Definition, Classification, characteristics, Differentiation and dedifferentiation, Basic culture procedures – Isolation, culture methods, identification, stem cell markers, feeder layer; Instrumentations in stem cell biology.

UNIT II

Different kinds of stem cells – Adult Stem cells-stem cell niche, Embryonic stem cells, Embryonic Germ cells, Hematopoietic stem cell, Neural stem cells, muscle and cardiac stem cells, Umbilical cord blood stem cells, cancer stem cells, Mesenchymal stem cells, Induced pluripotent Stem cells.

UNIT III

Therapeutic applications – stem cells and neurodegenerative disorders, stem cells and diabetes, stem cells and cardiac disorders, regeneration of epidermis, Success stories of stem cell therapy. Stem cell banking.

UNIT IV

Cell Cycle Control, Checkpoints, and Stem Cell Biology: regulation of the eukaryotic cell cycle
- The spindle checkpoint - Cell cycle checkpoints in a changing cell cycle and their **relationship to stem cells**.

UNIT V

Regenerative medicine: Current stem cell therapies, Correlation between stem cells and cancer, Stem cells and aging. Hematopoietic stem cells and their clinical application. Treatment of neural diseases (Parkinson's disease, Huntington's disease and Alzheimer's disease). Repair of damaged organs (liver and pancreas).

TEXT BOOK

Essentials of Stem cell Biology – Robert Lanza, John Gearhart, Brigid Hogan, Academic Press, 2005.

REFERENCES

Lodish, H., Ber, A., Zipursky, L.S., Matsudaira, P., Baltimore, D and Darnell J. (2001) Molecular Biology W.H Freeman & Co. 47

Instruction hours/week: L:0 T:0 P:5 Marks: Internal: 40 External: 60 Total: 100
End Semester Exam: 3 Hours

Course objectives

- Understand the *in vitro* study of the biological properties that contribute to the prevention, diagnosis, prognosis and monitoring of diseases and disease states in humans.
- To teach students on phlebotomy, serum and/or plasma collection.
- The estimation of biomolecules such as glucose and cholesterol
- Assessment of renal function through the analysis of urea and uric acid in serum
- Assessment of liver function through the estimation of bilirubin
- To impart skills to assess various biomolecules to diagnose the functioning of vital organs.

Course outcomes (CO's)

1. Know the analytical methods commonly used in the clinical laboratory.
2. Know how can contribute the clinical laboratory to assess the health status of individuals
3. Students acquire the skills to perform phlebotomy and to estimate biomarkers to assess the vital organ functions.
4. Explain the physiopathological bases and the biochemical markers of the most prevalent diseases in our population
5. Interpret and integrate the analytical data from the principal biochemical tests for the screening, diagnosis, prognosis and monitoring of pathologies
6. Use clinical laboratory techniques to determine biochemical markers of different pathologies and critically assess the results, speculating on the nature of any possible underlying pathologies.

BLOOD ANALYSIS

1. Determination of blood sugar by O-Toluidine method.
2. Determination of urea DAM-TSC method.
3. Determination of phosphorus by Fiske-Subbarow method.
4. Determination of alkaline phosphatase in serum.
5. Determination of acid phosphatase in serum.
6. Determination of cholesterol in serum by Zak's method.
7. Determination of total proteins by Lowry's method and Biuret method.

URINE ANALYSIS

8. Determination of creatinine by picric acid method.
9. Determination of urea DAM-TSC method.
10. Determination of uric acid by Caraway's method.
11. Determination of calcium by permanganate method.
12. Determination of phosphorus by Fiske-Subbarow method.

KIT METHOD (Group experiments)

13. Estimation of triglycerides in serum
14. Estimation of creatinine in serum
15. Estimation of haemoglobin in serum
16. Extraction of lipids from liver and estimation of cholesterol

Instruction hours/week: L:4 T:0 P:6**Marks: Internal: 60 External: 90 Total: 150
End Semester Exam: -**

Instruction hours/week: L:0 T:0 P:0**Marks: Internal: - External: 100 Total: 100**
End Semester Exam: 3 Hours**Course objectives****Equip the students with:**

- Managerial skills
- Hospital organization
- Specialized service areas
- Human Resources
- Finances
- Quality Assurance

Course outcomes (CO's)

After Successful completion, the students will understand:

1. The Managerial skills required for hospital management
2. Hospital organization
3. Overview of specialized service areas
4. Human Resources required for the running of the hospital
5. Maintenance of income and expenditure documents
6. Ensuring Quality Assurance

UNIT –I**Managerial skills:** Planning, Information system, communication, Delegation, Decision making, Monitoring and evaluation, Managing time, Meetings, Negotiations and Innovation.**UNIT-II****Hospital organization:** Hospital Organization – Structure and functions – Objectives, Types of hospitals, Hospital organizational principles. Hospital organizational functions – Organization and function of the governing body, senior management executives, The department heads. Hospital committees. The Clinical Services – The medical staff organization, The nursing services – objectives, administrations, Rules, policies and procedures, Meetings and audit.**UNIT III****Specialized service areas:** Casualty services- Characteristics, management problems, instructions. Disaster: Be prepared- Plan of action, Outpatient services- location, physical infrastructure facilities, problem in functioning of OPD. Day care, The operating department, diagnostic services, medical records- nature and contents, Pharmacy –functions, problems in drugs supply, physical facilities and legal implications.**Unit IV****Human resources:** Personnel – introduction, problem people, restraining, performance appraisal system- objectives, technology of appraisal, conflicts in appraisal. Material and management - objectives, process of material and management.

Unit V

Finances: Methods of financing, internal control, preparation of income and expenditure account. Activity based costing in hospitals- objectives, clinical budgeting and advantages.

Quality assurance: Quality management in hospitals, quality management programs.

**ADVANCED ANALYTICAL TECHNIQUES AND
RESEARCH METHODOLOGY**

Instruction hours/week: L:0 T:0 P:0**Marks: Internal: - External: 100 Total: 100
End Semester Exam: 3 Hours****Objective:****Equip the students with:**

- Principles of NMR and X-Ray Crystallography
- Principles of Ultrasound imaging
- Working principles of EEG, ECMO
- Fundamentals of nanotechnology
- Experimental design
- Clinical Research

Outcome:

After successful completion, the students will understand:

- Principles of NMR and X-Ray Crystallography
- Principles of Ultrasound imaging
- Working principles of EEG, ECMO
- Fundamentals of nanotechnology
- Experimental design
- Clinical Research

UNIT I

NMR-Principles, features of NMR spectra, NMR imaging. X-Ray crystallography-Determination of molecular structure. X-Ray Comput Tomography (CAT Scan)-basic principles and system components.

UNIT II

Ultrasonic imaging systems-physical principles- mical ultra sound. ECG-Electrical and mechanical activity of heart, leads, heart sound, artificialheart valve, Pacemaker- heart lung machine. Electroencephalography (EEG) - Electrical activity of the brain, Applications. Fibre optics- Sources, detectors, application, Endoscope.

UNIT III

Nanotechnology-Introduction, development of nanotechnology, fundamental concepts, nano materials, tools - nano tubes, nanopores, cantilevers, dentrimers and quantum dots. Nano voyage into medical application and drug designing. Nano integrate eco system.

UNIT IV

Analysis and Identification of research requirements: Prioritization of research area. Review of work done in identification area - time scheduling - laboratory facilities, Research duration – choice of research topic – Methodology – Procure, experiment design.

Experiment design: Regarding observation. Types of observation. Laboratory setting sample; Data collection – Presentation of and analysis of collect data. Preparation of result reports and Publication of research findings in peer review journals, impact factor.

UNIT V

Quality Control: Introduction, GLP, equipments and computer system, quality assurance unit, standard operating procures, reagents and solutions and conduct of study, study protocol and study report and record retention and retrieval. Clinical trial: Types, Design, Clinical trial protocol, Design features, Statistical power, Phases- Phase 0, Phase I, Phase II, Trial design, Phase III, Phase IV. Intellectual Property rights in India

M.Sc., - BIOCHEMISTRY

PREAMBLE

- Biochemistry is the study of chemistry and relating to biological organisms.
- Biochemistry is sometimes viewed as a hybrid branch of organic chemistry which specializes in the chemical processes and chemical transformations that take place inside of living organisms.
- Biochemistry incorporates everything in size between a molecule and a cell and all the interactions between them.
- Biochemistry essentially remains the study of the structure and function of cellular components (such as enzymes and cellular organelles) and the processes carried out both on and by organic macromolecules - especially proteins, but also carbohydrates, lipids, nucleic acids and other biomolecules.
- All life forms alive today are generally believed to have descended from a single proto-biotic ancestor, which could explain why all known living things naturally have similar biochemistries.
- Biochemistry is most simply put the chemistry of life.

KARPAGAM ACADEMY OF HIGHER EDUCATION
Coimbatore – 641 021
DEPARTMENT OF BIOCHEMISTRY
M.Sc., CURRICULUM (2015 – 2016 Batch)
(Scheme of Examination for 2015- 2016 onwards)

Blue – Employability

Green – Entrepreneurship

Red – Skill Development

Code: 15BCP101

15 -Academic Year

BC -Biochemistry

P - Masters Degree

First Digit - Semester number (1, 2, 3 and)

Second digit - Theory (0); Practical (1); Project (9)

Last digit - Paper number in the concerned semester (1, 2...)

PROGRAMME OUTCOME (POs)

PG biochemistry graduate will be able to achieve

- a. **Critical Thinking and Effective Communication:** The teaching is intended to kindle the critical thinking of the student to address problems (Problem based learning) and equip them to list out their understanding (Activity based learning). The syllabus also includes journal paper presentation and analysis on specific topics of all subjects which will be evaluated by faculty handling the subject.
- b. **Future Career:** To prepare students for future careers in the various fields of biochemistry such as academic and research institution.
- c. **Societal Contribution and Social Interaction:** The Biochemistry Programme will benefit the society on the whole by adding to the highly skilled scientific workforce, particularly for the biomedical research sectors, in the academic, industry as well as for research laboratories across the country and the globe. Inside the classrooms group discussion is encouraged on topics during the last five minutes of class to improve the understanding and to share the knowledge and view point. Outside the classroom, various outreach programme are conducted on various health initiatives.
- d. **Identification and Differential Diagnosis:** To acquire biochemist position in leading hospitals and scientist position in industries.
- e. **Ethics:** Students learn about the significance of having right moral features to develop good interpersonal skills.
- f. **Environment and Sustainability:** Understand the role of citizen to maintain sustainable environment and encourage Eco-friendly initiatives.
- g. **Self-directed and Life-long Learning:** Acquire the ability to engage in independent and life-long learning in the broadest context of health and disease.

PROGRAMME SPECIFIC OUTCOME (PSOs)

- h. To prepare students for future careers in various fields of biochemistry by enhancing analytical and critical-thinking skills in which a core understanding of the chemistry of biological processes is important for the understanding of human health and disease.
- i. To equip highly skilled scientific workforce, particularly for the biomedical research sectors, in the academic, industry as well as for research laboratories across the country and the globe.
- j. The skills acquired in the programme will help the students in acquiring scientific, academic and industrial positions such as Analyst, Research Scientist at Pharma (R&D) Industries, Academician, Project Associates (JRF, SRF), Doctoral Research positions abroad at India and abroad. Clinical biochemist at renowned hospitals, medical coding, Scientific writers.

PROGRAMME EDUCATIONAL OBJECTIVE (PEOs)

- I. The course aims to impart advanced and in depth understanding on all the human physiological and pathological state. To understand the molecular process and their perturbation during disease.
- II. The programme covers various aspects of Biomolecule estimation and regulation to ascertain health and disease state. metabolic pathways alterations along with their regulation at the replication, transcriptional, translational, and post-translational levels including by studying DNA, RNA and protein molecules, immunology, endocrinology, advancements in rDNA technologies to circumvent genetic disorders.
- III. Further to enrich research understanding various genomic, proteomic and bioinformatics tools are added. Animal cell culture, IPR, Biostatistics, research methodology, clinical research and Plant tissue culture are offered as elective papers to get specialized in a specific area. The final semester is devoted exclusively to enrich the students to address specific research objective.

Mapping of PEOs and POs

POs	a	b	c	d	e	f	g	i	j	k
PEO I	X		X			X				
PEO II	X		X	X	X	X		X	X	X
PEO III	X	X	X	X	X		X		X	X

Course objectives**Equip the students:**

- To understand the biological significance of polysaccharides in living systems
- To understand the structure of amino acids and proteins and their biological significance in living systems
- To know the structure, properties and biological significance of lipids in biological systems
- To understand lipid peroxidation and the importance of antioxidants in degenerative diseases
- To understand the structure and functional role of nucleic acid in living systems
- To understand the nucleic acid interaction with proteins and their molecular aspects.

Course outcomes (CO's)**After successful completion of the course, the student will:**

1. Understand the structure and organization of storage and structural polysaccharides in living system
2. Recognize the structure and importance of proteins and amino acids in biological system.
3. Recall the role of lipids in bio membrane including signal transduction
4. Equip with the knowledge on antioxidants and their importance
5. Differentiate the structure, types, properties and functions of DNA and RNA
6. Recognize the nucleic acid interaction with proteins and gain knowledge in molecular techniques.

UNIT I

Polysaccharides: Occurrence, structure and biological functions of cellulose, chitin, starch and glycogen. Fructans, arabinans and galactans(brief account). Occurrence, structure, and biological functions of bacterial cell wall polysaccharides and blood group antigens. Structure and significance of glycoconjugates -Glycosaminoglycans – structure and biological role of hyaluronic acid, chondroitin sulfate and heparin, sialic acid; glycoproteins and glycolipids.

UNIT II

Proteins: Orders of protein structure. Primary structure – determination of amino acid sequence of proteins. The peptide bond – The Ramachandran plot. Secondary structures – α -helix, β -sheet and β -turns. Fibrous proteins- Collagen triple helix-Structure and assembly. Globular proteins-forces involved, folding process and folding patterns. Tertiary structure –Myoglobin organisation. Quarternary structure of proteins- Structure of haemoglobin. Models for haemoglobin allostery. Quintinary structure-basics only.

UNIT III

Lipids: Introduction- simple lipid, compound lipids-phospholipids, glycolipids and storage lipids. Properties of lipids-Micelles, bilayers and liposomes. Significance of lipid anchored protein-prenylated, fatty acylated and GPI anchored proteins. Lipoproteins – classification and composition. Lipids as signals, cofactors and pigments (Brief account). Lipid peroxidation and antioxidants.

UNIT IV

Nucleic acids: DNA double helical structure – Watson and Crick model. A, B and Z forms of DNA. Tertiary and quadruplex structures of DNA. DNA supercoiling and linking number. Properties of DNA – DNA bending, buoyant density, viscosity, denaturation and renaturation – The cot curve – Chemical synthesis of DNA. Major classes of RNA – mRNA, rRNA, tRNA, sn RNA, siRNA, hn RNA – structure and biological functions. Secondary and tertiary structure of tRNA and rRNA.

UNIT V

Nucleic acid interaction with proteins: DNA binding motifs in proteins – the basic helix loop helix (bHLH) motif, zinc finger, the leucine zipper, helix-loop helix and homeo domain. RNA binding motifs in proteins. Molecular aspects of protein-nucleic acid binding – direct interactions. Techniques characterizing nucleic acid-protein complex – gel retardation assay, DNase I footprinting.

6. Nucleic acids in Chemistry and Biology. Blackburn and Gait, IRL Press, 1996
7. David Rawn.J.(2004). Biochemistry, First Indian reprint, Panima Publishing Corporation, New Delhi.

Course objectives**Equip the students:**

- To understand the structure of enzymes and their classifications.
- To analyse the active site of enzymes by various experimental approaches.
- To learn the kinetics of enzyme catalysed reactions.
- To learn the importance of enzyme immobilization and its wide applications in medicine and industries.
- To study various fermentor designs, culture systems and the application of fermentation process in industry.
- To learn the fermented products preparation, downstream processing and its industrial applications.

Course outcomes (CO's)**After successful completion of the course, the student will:**

1. Understand the mechanism of action of enzymes and their classifications.
2. Recall the kinetics of enzyme catalyzed reactions
3. Understand the enzyme immobilization concept and apply the knowledge to produce more products out of it.
4. Gain knowledge in designing fermentor based on Industrial needs
5. Have clear understanding of microbe's implication to derive a product and the role of enzymes in downstream process.
6. Clear in concept of various culture techniques and apply the suitable one for a particular application.

UNIT I

Proteins: Enzymes - Nomenclature and classification of Enzymes with examples; coenzymes and cofactors. Active site rule: catalytic triad; Mechanism of enzyme action - Lock and key model, Induced fit model. Factors affecting enzyme activity. Isolation, purification and characterization of enzymes.

UNIT II

Enzyme Kinetics : Derivation of MM equation, LB plot, Eadie Hofstee plot and Hanes plot. Enzyme inhibition-Types and differentiation of competitive, uncompetitive, Non-competitive inhibition, Allosteric inhibition, feed-back inhibition and regulation. Allosteric enzymes- cooperativity, Hills equation, Physiological significance of sigmoidal behaviour. R and T states and K and V series. Mechanism of action of enzymes - chymotrypsin and lysozyme.

UNIT III

Immobilization of enzymes: Methods of immobilization - adsorption, covalent binding, entrapment, membrane confinement. Effect of immobilization on enzyme. Use of enzymes in detergents, Leather Industry, Wool Industry, Food, Dairy, Juice and Beverage Industry, Sugar Industry. Uses in medicine. Enzyme engineering. Artificial enzymes and synzymes, Abzymes, ribozymes, enzymes in organic solvents.

UNIT IV

Microbial Growth: Balanced and Unbalanced microbial growth; Measurement of growth; Principles of microbial growth and culture systems-batch culture, fed batch culture, semi-continuous culture and continuous culture. Isolation and screening of industrially important microbes. Important strains for better yield. Design of a fermenter. Types of bioreactor-Continuous stirred tank, Bubble column, Airlift, Fluidized bed, Packed bed and Photobioreactor.

Solid substrate fermentation and Media fermentation. Examples of bioprocess for the production of biomass. Microbial metabolic products-primary and secondary metabolites.

UNIT V

Production of fermented products and downstream processing: Production of alcohol and alcoholic beverages. Microbial production of Organic acids: Source, recovery and uses of Citric acid, Lactic acid, Acetic acid and L-ascorbic acid. Production of antibiotics: Penicillin and Tetracyclin. Bioinsecticides: Production of Bacterial and fungal polysaccharides, commercial production of Xanthan gum and pullulan. Production of edible mushroom and SCP.

Biofertilizers (*Phosphobacterium* and *Rhizobium sp.*, - Basics only).

Instruction hours/week: L: 4 T: 0 P:0 Marks: Internal: 40 External: 60 Total: 100
End Semester Exam: 3 Hours

Course objective**Equip the students:**

- To learn centrifugation techniques and their applications in biological system.
- To understand the principle of colorimetry
- To understand the applications of advanced spectrophotometric techniques
- To learn the basics, advanced techniques and applications of chromatography
- To learn the principle and applications of electrophoresis techniques
- To understand the principle and applications of radio isotopic techniques in biological sample analysis

Course outcomes (CO's)**After successful completion of the course, the student will:**

1. Apply the centrifugation techniques in biological system
2. Use colorimetry and spectrophotometry for sample analysis
3. Use spectrophotometry for sample analysis
4. Use chromatographic techniques for sample analysis
5. Detect radioisotopes and analyze samples
6. Use electrophoretic techniques for sample analysis

UNIT I

Colorimetry: Colour and absorption spectra, Beer's law and Lambert's law. Principle of photoelectric colorimeter, Spectroscopy – Properties of electromagnetic radiations, Instrumentation and applications of UV Visible and mass spectroscopy, Spectrofluorimetry, atomic spectroscopy, NMR spectroscopy and ICPMS, Applications.

UNIT II

Centrifugation: Principle, types of centrifuges, Principles and applications of analytical and preparative centrifuges, density gradient and ultra centrifugation. Relative molecular mass determination and sedimentation coefficient. Sub cellular fractionation of cellular components. Applications.

UNIT III

Chromatography: Principles, Types – paper chromatography, thin layer chromatography and HPTLC, Column chromatography - Ion exchange chromatography, affinity chromatography, gel filtration chromatography, Low pressure liquid chromatography (LPLC) and High Performance Liquid Chromatography (HPLC)- Normal and Reverse Phase Gas -liquid chromatography Mass spectroscopy (GC – MS), MALDI-TOF. Application of Chromatography.

UNIT IV

Electrophoresis: Principle, instrumentation and applications of agarose gel electrophoresis, sodium dodecyl sulphate – polyacrylamide gel electrophoresis (SDS-PAGE), native PAGE, isoelectric focusing, immunoelectrophoresis, 2D gel electrophoresis. Pulse field gel electrophoresis, capillary electrophoresis, gel documentation – Applications.

UNIT V

Radioisotopic techniques: Introduction, nature of radio activity, types and rate of radioactive decay, units of radio activity, detection and measurement of radioactivity-Geiger-Muller counter, solid and liquid scintillation counter. Autoradiography, X-ray diffraction and circular dichorism. Non radioactive, fluorescent methods.

Flowcytometry: Principles and applications.

CELLULAR BIOCHEMISTRY

4H-4C

Instruction hours per week: L: 4 T: 0 P:0 Marks: Internal: 40 External: 60 Total: 100

End Semester Exam: 3 Hours

Course objectives**Equip the students**

- To recall the knowledge in organization and dynamics of mitochondria.
- To understand the molecules within the cell and interaction between cells that allows construction of multicellular organisms.
- To understand cytoskeleton network and extracellular matrix.
- To learn cell signaling mechanisms and pathways
- To understand cell cycle, cell division and cell death process.
- To recognize cancer and mutational changes at gene level.

Course outcomes (CO's)**Upon successful completion of this course, participants will be able to:**

1. Recognize the organization and dynamics of mitochondria.
2. Recognize cell cell interaction and their mechanism.
3. Maintain cytoskeleton structure and functions of micro, macro and intermediary filaments.
4. Recognize the cell signaling mechanisms and pathways.
5. Enumerate the phases of cell cycle, events in cell division and mechanism of cell death
6. Relate properties of cancerous cells to mutational changes in gene function.

UNIT I

Membrane: Membrane bilayer- models, Membrane lipids- fluidity, asymmetry, phase transition, Liposomes.

Membrane proteins – Types, Orientation, Mobility – Experiments, flippases, proteins of RBC membrane, RBC ghosts, Bacteriorhodopsin, Porins – aquaporin. solubilisation of proteins, lipid anchored proteins, Carbohydrates – cell surface carbohydrates – Lectins and selectins.

UNIT II

Membrane transport: Passive diffusion, facilitated diffusion in erythrocytes, Carriers and ion channels, Ion concentration gradients.

Uniporter Catalyzed transport, active transport systems. Transport process driven by ATP- Ion pumps: Calcium ATP ase; $\text{Na}^+ \text{K}^+$ ATPase; Mechanism, Gastric $\text{H}^+ \text{K}^+$ ATPase, ABC superfamily – ATPases that transport peptides and drugs (MDR proteins).

Co-transport by Symporters and antiporters, Group translocation.

Osmosis and receptor mediated endocytosis.

UNIT III

Mitochondria – Reduction potential, electron transport chain – Complexes, Q-cycle, Cyt C oxidase complex, Translocation of protons and the establishment of a proton motive force, machinery for ATP formation and chemi-osmotic mechanism, ATP synthase – Experiments, inhibitors and uncouplers of oxidative phosphorylation.

Microfilaments – Actin – Structures, Assembly, Myosin. Microtubules – Organisation and dynamics, kinesin and dynein. Cilia and flagella – Structure and functions, intermediary filaments.

UNIT IV

Cell – Matrix interaction: Cell – Cell interaction: Extra cellular matrix; Collagen, hyaluronan and proteoglycans, laminin, integrins and fibronectins.

Cell – Cell adhesion: Specialised junctions – Desmosomes, Gap junctions, Tight junctions. Adhesion molecules – Cadherins, Connexins.

Cell – Cell signaling – Signalling molecules and their receptors; functions of cell surface receptors, pathways of intracellular signal transduction, second messengers, G-protein coupled receptors, receptor tyrosine kinases, Ras, MAP kinases.

UNIT V

Cell cycle and cancer: Cell cycle and its control, Cell cycle control in mammalian cells, checkpoints in cell cycle regulation.

Cancer: Properties of tumour cells and genetic basis and onset of cancer.

Tumour viruses – DNA & RNA Viruses as transforming agents – mechanism.

Tumour suppressor genes and functions of their products. Carcinogenic effect of chemicals and radiation. Apoptosis (Programmed cell death) – pathways, regulators and effectors on apoptosis.

PLANT BIOCHEMISTRY**Instruction hours/week: L: 4 T: 0 P: 0 Marks: Internal: 40 External: 60 Total: 100****End Semester Exam: 3 Hours****Course objectives****Equip the students**

- To recollect the knowledge in plant cell organelles and their functions
- To understand the functions and regulations of major biosynthetic pathways of plants
- To learn and understand the role of plant growth substances in various stages of plant growth
- Obtaining knowledge on tissue culture techniques
- To learn metabolic engineering to increase the production of plant secondary metabolites
- To become familiar with the applications of plant tissue culture techniques

Course outcomes (CO's)**Upon successful completion of this course, participants will be able to:**

1. Recall the understanding of plant cell organelles and their functions
2. Recognize the source of food for other organisms and their synthesis in plants
3. Recall the role of plant growth substances in various stages of plant growth
4. Equip with tissue culture techniques
5. Understand the role of secondary metabolites and their production and importance
6. Understand the application of tissue culture in mass production

UNIT I

Plant cell: Structure of plant cell – cell wall, vacuoles, plastids, mitochondria, peroxisomes and Golgi complex. Overview of photosynthesis: photosynthetic apparatus, reaction center, photosystems I and II, mechanism of photosynthesis-cyclic and non cyclic photophosphorylation; evidences in support of light and dark reactions.

UNIT II

Assimilatory mechanisms in plants: Photorespiration and water consumption, CO₂ assimilation by C3 and C4 plants, CAM plants. Nitrogen assimilation; reduction of nitrate, nitrogen fixation in symbiotic and non-symbiotic plants, nitrogen cycle. Sulphate metabolism in leaf; sulfite reduction and sulphur cycle, glutathione synthesis. Carbon and phosphorus cycles.

UNIT III

Lipid metabolism in plants: Biosynthesis of fatty acids in plastids, synthesis of waxes, triacyl glycerols and glycolipids. Synthesis of chlorophyll. Carotenoid formation. Synthesis of nitrogenous compounds: caffeine synthesis, ureide synthesis in nodulated legumes.

Secondary oxidative mechanisms: β - oxidation, ω - oxidation, glyoxylate pathway.

UNIT IV

Plant growth substances: chemistry, biosynthesis, mode of action and physiological role of auxins, gibberellins, cytokinins, abscisic acid and ethylene. Factors influencing endogenous growth- Biotic and Abiotic factors. Phytochromes: molecule, biological display, functions as light sensor. Senescence: biochemical changes, regulation.

UNIT V

Plant secondary metabolites: Alkaloids, flavonoids, terpenoids, phenols-Occurrence, distribution & functions, Production of secondary metabolites in plants, stages of secondary metabolite production, PTC- Totipotency, meristematic and nodal cultures-Callus induction. Somatic embryogenesis. Metabolic engineering for increased production of secondary metabolites.

Instruction hours / week: L:0 T:0 P:4 Marks: Internal: 40 External: 60 Total: 100
End Semester Exam: 3 Hours

Course objectives

- To provide hands on experience on preparation of buffers and determination of pH of solutions
- To estimate the macromolecules quantitatively thro colorimetric procedures
- To perform fluorometric experiments and titrimetry
- To separate the macromolecules using TLC and column chromatography.
- To perform the secondary metabolite quantification using HPLC.
- Gain hands on training in protein extraction and purification techniques.

Course outcomes (CO's)**After completion of this course the student will**

1. Prepare buffers and reagents based on the needs of experiments
2. Estimate macromolecules quantitatively thro colorimetric procedures
3. Estimate vitamins and calcium using fluorimetry and titrimetry
4. Quantify secondary metabolites using HPLC
5. Separate the macro molecules using TLC and column chromatography
6. Extract and purify protein from various sources

Colorimetry

1. Isolation and estimation of starch from potato (Anthrone method)
2. Isolation and estimation of glycogen from liver (Anthrone method)
3. Estimation of Total carotenoids (Spectroscopic method)
4. Estimation of fructose in fruits (Resorcinol method)
5. Estimation of ascorbic acid (DNPH method)
6. Estimation of Vitamin E (Dipyrridyl method)

Fluorimetry

7. Estimation of thiamine from cereals or fruits
8. Estimation of riboflavin

Titrimetry

9. Estimation of lactose in milk
10. Estimation of calcium in milk

Separation techniques

11. Separation of amino acids by paper chromatography- circular, ascending &

Descending.

12. Separation of plant pigments by TLC.
13. Separation of plant pigments by column chromatography.
14. Estimation of quercetin using HPLC (Demo).

Cell biology:

15. Preparation of standard buffer and determination of pH of buffers.
16. Subcellular fractionation by differential centrifugation and purity assessment with marker enzymes (Group Experiment).
17. Salting out of proteins using ammonium sulphate precipitation

PRACTICAL – II

4H-

PLANT BIOCHEMISTRY AND MICROBIOLOGY

Instruction hours/week: L:0 T:0 P: 4 Marks: Internal: 40 External: 60 Total: 100
End Semester Exam: 3 Hours

Course objectives**Equip the students**

- To screen phytochemicals and estimate the amount of secondary metabolites
- To handle microbiological techniques
- To identify microbes in soil and water samples
- To isolate, characterize and purify microbial enzymes
- To perform antibacterial activity of active compounds
- To gain hands on experience in plant tissue culture

Course outcomes (CO's)**After completion of this course the student will perform**

1. Phytochemical screening and secondary metabolite estimation
2. Microbiological techniques
3. Microbial identification in soil and water samples
4. Isolation, characterization and purification of microbial enzymes.
5. Antibacterial activity of active compounds
6. Callus induction and regeneration of plantlets

Experiments**Plant Biochemistry**

1. Phytochemical screening of any one selected medicinal plant
2. Estimation of Tannins
3. Estimation of Flavonoids
4. Estimation of Chlorophyll
5. Estimation of Phenols

Microbiology

6. Isolation of pure culture – serial dilution, pour plate, spread plate, streak plate methods.
7. Colony morphology – colony counting.
8. Staining techniques- simple, differential, spore, and fungal staining.
9. Antibiotic resistance / sensitivity test (Disc method)
10. Estimation of bacteria- growth curve of bacteria and generation time.
11. Identification of microorganisms – biochemical tests (IMVIC test)(Group Experiment)
12. Microbiology of potable water
13. Isolation, characterization and purification of ANY one of the following microbial enzymes

- a) Amylase
- b) Protease
- 14. Assay of Antibacterial of ANY ONE selected medicinal plant by Disc or Well diffusion and broth dilution method.
- 15. Assay of antifungal activity of ANY ONE selected medicinal plant by Disc or Well diffusion.

Plant tissue culture (Group experiment)

- 16. Preparation of tissue culture media
- 17. Surface sterilization
- 18. Induction of meristem culture
- 19. Callus induction.
- 20. Regeneration of shoot and root from callus culture.

REFERENCES

- 1. Jayaraman J , 2011. Laboratory Manual in Biochemistry, New Age International Publishers, New Delhi.
- 2. Kannan.N , 2003. Laboratory Manual in Microbiology, Panima Publishing Corporation, Bangalore.
- 3. Sadasivam S and A. Manickam , 2009. Biochemical Methods, New Age International Publishers, New Delhi.

- 6. Varley H, 2003. Practical Clinical Biochemistry, CBS Publishers, New Delhi.

Course objectives

- To shed knowledge on generation and transformation of energy in metabolic pathways.
- To know the metabolic pathway of carbohydrate and their regulation with associated disorders.
- To learn fatty acid synthesis and degradation and their regulation
- To study the regulation of amino acid metabolism and its regulations with Metabolic disorders.
- To understand the inter relationship of carbohydrate, lipid, protein and nucleic acid metabolism and understand the importance of TCA cycle.
- To aware about the homeostasis of glucose metabolites by intrinsic and extrinsic control mechanism.

Course outcomes (CO's)**After completion of this course the student will perform**

1. Gain knowledge on glucose anabolic and catabolic pathways that ultimately control the glucose homeostasis.
2. know the metabolic pathway of amino acid and their regulation with associated disorders.
3. learn fatty acid synthesis and degradation and their regulation
4. Able to explain the role of lipids, their metabolism and their stringent control by hormones and other factors.
5. Understand the anabolic and catabolic processes associated with amino acids and nucleic acids and their regulation.
6. Able to understand the energy homeostasis during starvation and energy excess

UNIT I

Introduction to control of enzyme activity: Allosteric interaction; Reversible covalent modification; proteolytic action; control of amount of enzyme; control of rates of enzyme degradation; feedback inhibition; feed forward stimulation. Role of compartmentation. Elucidation of Metabolic pathways- Single-and Multi-step pathways. Experimental approaches to study the metabolism- using metabolic inhibitors and isotopes.

UNIT II

Carbohydrate Metabolism: An overview of Glycolysis and Gluconeogenesis. Regulation of Glycolysis and Gluconeogenesis-Reciprocal control of Glycolysis and Gluconeogenesis, TCA cycle- steps, regulation at branch points; Glycogen Metabolism: Overview of

glycogenesis and glycogenolysis. Reciprocal control of glycogenesis and glycogenolysis. Hormonal regulation of fuel metabolism; Metabolic disorders-Diabetes mellitus.

UNIT III

Lipid metabolism: An overview of fatty acid synthesis and degradation, Regulation of fatty acid synthesis- control of acetyl CoA carboxylase and fatty acid synthetase complex; Reciprocal control of fatty acid synthesis and degradation. Biosynthesis of triacyl glycerol, phosphatidyl choline, phosphatidyl ethanolamine and sphingomyelin and their regulation. Synthesis and degradation of cholesterol and its regulation. Obesity and regulation of body mass. Metabolic disorders- Atherosclerosis, Hyper and hypo lipoproteinemia.

UNIT IV

Amino acid metabolism: Regulation of synthesis of aspartate and aromatic family of aminoacids. Key role of glutamate dehydrogenase and glutamine synthetase in nitrogen metabolism and their allosteric regulations. Amino acid degradation- deamination, decarboxylation and transamination. Regulation of urea cycle. Biosynthesis of heme (porphyrin) and its regulations. Molecules derived from aminoacids. Metabolic disorders- Alkaptonuria, phenyl ketonuria.

UNIT V

Nucleic acid metabolism: De novo synthesis of purine and its regulation – Role of PRPP amino transferase. De novo synthesis of pyrimidine and its regulation – Role of aspartate carbomyl transferase. Regulation of deoxy ribonucleotides by activators and inhibitors. Tissue specific metabolism- Metabolic profile of major organs- Brain, Muscle, Liver and Adipose tissue. Intergration of metabolism. Metabolic disorders- Gout, SCID.

7. Geoffrey Zubay,2009. Biochemistry, Wm.C Brown Publishers, Saunders and Company, Philadelphia.

Course objectives**Equip the students**

- To acquire the knowledge on Organization of DNA in a genome and transposons
- To know the mechanism behind replication and repair.
- To enable the knowledge on transcription and translation.
- To understand the mechanism of Regulation of gene expression in prokaryotes
- To study the structure and remodeling of chromatin
- To learn the mechanism of Eukaryotic gene regulation

Course outcomes (CO's)**After completion of this course the student will**

1. Acquire the knowledge on molecular structure of genes.
2. Understand the structure of nucleic acids and the DNA replication process
3. Learn about the process of transcription
4. Understand the mechanism of translation
5. Learn about gene regulation in prokaryotes
6. Learn about gene regulation in eukaryotes

UNIT I

Molecular structure of genes: Molecular definition of gene, chromosomal organization of genes and non-coding DNA, protein coding genes, tandemly repeated genes, single sequence DNA. Structural organization of eukaryotic chromosomes- histone proteins, chromatin, functional elements. Mobile DNA elements- bacterial IS elements, transposons, viral transposons and non- viral transposons. Mutation- types.

UNIT II

DNA replication and repair: General features of chromosomal replication. Enzymology of DNA replication, DNA replication machinery. Replication in prokaryotes and eukaryotes- Initiation, elongation and termination. DNA damage-types. Repair mechanism of DNA damage-all types.

UNIT III

Transcription: prokaryotic gene transcription- Initiation, elongation and termination. Eukaryotic gene transcription- transcription unit, RNA polymerases- types, Transcription and processing of mRNA, tRNA and rRNA. Regulatory sequences in protein coding genes- TATA box, initiators, CpG island, promoter-proximal element, activators and repressors of transcription, Multiple transcription control elements. Regulation of transcription factor activity by lipid-soluble hormones.

UNIT IV

Translation: Deciphering genetic code, features. Wobble hypothesis. Initiation, elongation and termination of prokaryotic and eukaryotic translation. Fidelity of translation. Post translational modifications-all types; Protein targeting-Targeting protein to nucleus, ER, Golgi complex. Protein degradation- ubiquitin mediated degradation.

UNIT V

Prokaryotic gene regulation: Operon model, Lac, trp and ara operons. Regulatory proteins-DNA binding domain, protein- protein interaction domain. Recombination- holiday model, Rec BCD enzymes, Rec A protein, Messelson Radding model, site- specific recombination. Antisense RNA technology.

Eukaryotic gene regulation: Transcriptionally active chromatin, chromatin remodeling, DNA binding transactivators and coactivators. Regulation of gene expression by intracellular and intercellular signal, RNAi.

Instruction hours / week: L: 4 T:0 P:0 Marks: Internal: 40 External: 60 Total: 100
End Semester Exam: 3 Hours

Course objectives**Equip the students**

- To make students understand the essential features of the interdisciplinary field of science for better understanding the biological data.
- To retrieve the sequence analysis of Nucleic acid and protein
- To create opportunity to interact with algorithms, tools and data in current scenario.
- To make the students look at a biological problem from a computational point of view.
- To find out the methods for analyzing the expression, structure and function of proteins,
- To understand the relationships between species.

Course outcomes (CO's)**After completion of this course the student will perform**

1. Acquire the knowledge on biological data, submission and retrieval from databases.
2. Able to make experiment pair wise and multiple sequence alignment
3. Analyze the secondary and tertiary structures of protein sequences.
4. Understand the data structure (databases) used in bioinformatics and interpret the information (especially: find genes; determine their functions),
5. Understand and be aware of current research and problems relating to this area.
6. Knowledge on applications of bioinformatics

UNIT I

Definition, concepts of Bioinformatics: Objectives, History of Bioinformatics, Milestones, Genome sequencing projects, Human Genome Project- Science, applications and ELSI.

Introduction to Biological databases: Types of databases, sequence databases-nucleic acid sequence databases, GenBank, protein sequence database, Swiss-Prot, PIR, motif database-PROSITE, structural databases, bibliographic databases and organism specific databases-GMOD- Searching and retrieval of data-Entrez and SRS.

UNIT II

Introduction to sequence Alignment: Pairwise and multiple sequence alignment, substitution matrices, Similarity searching programs, BLAST, FASTA, Multiple sequence alignment – CLUSTAL, Phylogenetic analysis-PHYLIP theory of phylogeny, tree building methods.

UNIT III

Protein prediction strategies and programs: Protein Secondary Structure Prediction, three dimensional structure prediction-Comparative modeling, threading, protein folding and visualization of molecules – Visualization tools-RasMol, Deep View.

UNIT IV

Gene Identification and Prediction: Gene Mark, Gene Scan, Pattern Recognition, Global gene expression studies-DNA Micro array.

UNIT V

Applications of Bioinformatics-Molecular medicine, biotechnology, agricultural, Computer Aided Drug Designing- Lead molecules, properties, ADME profiles, QSAR. receptors, docking.

**CORE ELECTIVE –I
RECOMBINANT DNA TECHNOLOGY**

Semester II

4H-4C

Instruction hours/week: L:4 T:0 P:0

Marks: Internal: 40 External: 60 Total: 100

End Semester Exam: 3 Hours

Course objectives

Equip the students

- To make the student to understand the concept of gene manipulation and gene transfer technologies.
- To understand the concept of recombinant DNA technology or genetic engineering
- To interpret the characterization of recombinant protein
- To infer the knowledge on cDNA
- To expose students to application of recombinant DNA technology in biotechnological research.
- To train students in strategizing research methodologies employing genetic engineering techniques.

Course outcomes (CO's)

After completion of this course the student will

1. Understand the application of genetic engineering techniques in basic and applied experimental biology
2. Learn the concept of recombinant DNA technology or genetic engineering
3. Understand the expression of gene cloning vectors
4. Explore the knowledge on genomic library
5. Proficiency in designing and conducting experiments involving genetic manipulation.
6. Describe DNA fingerprinting, and restriction fragment length polymorphism (RFLP) analysis and their applications.

UNIT I

Introduction to gene manipulation: Basic techniques- Isolation and purification of nucleic Acids, Agarose gel Electrophoresis. Hybridization of nucleic acids-probes and types. Hybridization techniques-Southern, Northern, Western blotting. DNA and RNA markers.

UNIT II

Gene cloning vectors: Plasmids, bacteriophages, phagemids, cosmids, Artificial chromosomes- BAC, YAC, HAC. Restriction mapping of DNA fragments, Map construction, Cloning in *E. coli*- Vector engineering and codon optimization. Gene expression in *E.coli*. Expression vector- PET vector. Genomic library.

UNIT III

Isolation and characterization of gene transcripts: Introduction, Converting mRNA transcripts into cDNA, Screening representative cDNA libraries, Functional sequencing of cDNA expression libraries. Expressed cDNAs compared with computer databases. Characterization of recombinant proteins- Processing, purification and refolding and stabilization-Insulin, hGH, tpA.

UNIT IV

Mutagenesis: Site-directed mutagenesis, *In vitro* mutagenesis-Linkers, synthetic oligonucleotides and transposons, Role of Tagging in gene analysis, Identification and isolation of genes through T-DNA or transposons.

Gene therapy- Different strategies for gene therapy, therapeutics based on targeted exhibition of gene expression and mutation correction *in vivo*, Gene therapy for inherited diseases, ADA, FH, Cystic fibrosis.

UNIT V

Transgenics: Gene transfer techniques- Microinjection, biolistic methods, vector based transfer.

Transgenic plants: Agrobacterium & Ti plasmids. Methods of engineering herbicide resistance plants, Stress resistance plants and modification of plant nutritional content (amino acids, β - carotene) Plants as bioreactors: edible vaccines.

Transgenic animals: Method of Engineering transgenic mice, transgenic cattle- applications
Biosafety- regularities and concerns. Societal impact of genetically modified food.

7. Tom Strachan and Andrew, P. Read , 2003. Human Molecular Genetics, 3rd edition. John Wiley and Sons,Toronto. Canada.

Course Objectives:**Equip the students**

- To understand the basic quality control procedures in the laboratory
- To ensure safety in laboratory
- To understand the good laboratory procedures
- To acquaint with standard operating procedures
- To understand the importance of quality audit procedures
- To learn the laboratory safety and regulations

Course Outcomes (COs):**After completion of this course the student will be able to**

1. understand the basic quality control procedures in the laboratory
2. Follow safety procedures in laboratory
3. Follow good laboratory procedures
4. Acquaint with standard operating procedures
5. Do quality audits
6. Maintain laboratory safety and regulations

UNIT I

Basic Concepts: Quality concepts, Quality Assurance, Good Manufacturing Practices, Responsibilities, Ensuring safety in laboratories: Introduction, principles-engineering controls, work practices and administrative control, personal protective equipment. General safety-biological safety, chemical safety and fire safety.

UNIT II

Quality Control: Quality control laboratory: Responsibilities, routine controls, instruments, protocols, non-clinical testing, controls on animal house, data generation and storage, quality control documents, retention samples, records, audits of quality control facilities.

UNIT III

Good Laboratory Practice (GLP): GLP – an overview and basic information, Scope. Principles of GLP: Test Facility Organization and Personnel, Quality Assurance

Programme, Facilities, Apparatus, Material, and Reagents, Test Systems, Test and Reference Items, Standard Operating Procedures, Performance of the Study, Reporting of Study Result, Storage and Retention of Records and Materials. Responsibilities in GLP Implementing of GLP in non GLP analytical laboratory

UNIT IV

Inspections, Quality Audit and Quality System Reviews: Inspections of pharmaceutical manufacturers, role of quality audit, role of inspectors, methods of inspection- routine, concise, follow-up and special inspections, frequency and duration of inspections, preparations for inspections, conduct, report and regulatory actions. Loan License Auditing – Concepts, Auditing, role of quality circle in quality assurance.

UNIT V

Laboratory Regulations and Safety: List of Regulations to be followed. Laboratory safety procedure- glass ware, equipment safety, hands protection, precaution to be undertaken to prevent accident and contamination.

TEXT BOOKS

1. Weinberg S. 1995. Good Laboratory Practice Regulations, 3rd edition, CRC Press, U.S.A.
2. Harburn K, 1990. Quality Control of Packing Materials in Pharmaceutical Industry, CRC Press, U.S.A.
3. Prichard E. 1995. Quality in the Analytical Chemistry Laboratory, 1st edition, Wiley, U.S.A.

REFERENCES

2. Wenclawiak B.W., Koch M , Hadjicostas E. 2004. Quality Assurance in Analytical Chemistry: Training and Teaching. 1st edition, springer. U.S.A.

Course Objectives:**Equip the students**

- To understand the basics of fermentation technology
- To gain knowledge on preservation and maintenance of industrially important microorganisms
- To learn the effective bioreactor system for effective fermentation technology
- To gain knowledge on fermentation kinetics
- To understand downstream processing
- To learn the application of fermentation technology in food, pharmaceutical and therapeutic industry

Course Outcomes (COs):**After completion of this course the student will be able to**

1. Understand the basics of fermentation technology
2. Preserve and maintain industrially important microorganisms
3. Use effective bioreactor system for effective fermentation technology
4. Gain knowledge on fermentation kinetics
5. To carryout downstream processing
6. Apply fermentation technology in food, pharmaceutical and therapeutic industry

Unit I:

Introduction of fermentation technology: History of fermentation. Fermentation process. Microbial culture, Screening and selection for fermentation processes. Preservation and improvement of industrially important microorganisms. Inoculum production for bacterial and fungal processes. Strain improvement

Unit II:

Bioreactor Design: Fermentor functions, construction and maintenance of aseptic conditions. Control of various parameters: temperature control; Aeration and agitation system (Non-Newdonian fermentations), baffles; types of fermentors, computer applications in fermentation technology. Sterilization of fermentor, aseptic inoculation

and sampling methods, Specialized bioreactors: tubular bioreactors, membrane bioreactors, tower bioreactors, fluidized bed bioreactors, Immobilized system and packed bed reactors and Photobioreactor.

Unit III:

Fermentation kinetics: Fermentation growth kinetics. Simple unstructured kinetic model for microbial growth of bacterial, fungal, animal and plant systems. Kinetic of substrate utilization, biomass growth and product formation in continuous system, batch and fed batch cultures, total cell retention cultivation, inhibition on cell growth and product formation.

Unit IV:

Downstream process: Basic concepts of bio-separation technology, separation characteristics of proteins and enzymes –size, stability properties; purification methodologies characteristics of bio enzymes products; Flocculation and conditioning of broth, over view of reaction processes involved in separation. Centrifugation as a tool for downstream processing.

Unit V:

Bioreactor Products: Production of fermented dairy products, Fermented foods and beverages; Types of fermentation processes and their advantages and disadvantages; production of penicillin, recombinant insulin. Propagation of animal and plant cell using bioreactors for production of pharmaceuticals, therapeutic proteins and monoclonal antibodies.

5. Michael J. Waites, Neil L. Morgan, John S. Rockey, Gary Higon. 2001. “Industrial Microbiology: An Introduction”, Blackwell Science, UK

Course Objectives:**Equip the students**

- To understand the role of nutrients and hormones in plant growth and development
- To gain knowledge on media composition for plant tissue culture
- To maintain aseptic condition in laboratory
- To gain knowledge on setting up of plant tissue culture laboratory
- To understand plant transformation techniques
- To understand the applications of plant tissue culture

Course Outcomes (COs):**After completion of this course the student will be able to**

1. Understand the role of nutrients and hormones in plant growth and development
2. Design media composition for plant tissue culture
3. Maintain aseptic condition in laboratory
4. set up a plant tissue culture laboratory
5. Carryout plant transformation techniques
6. Apply plant tissue culture for mass production of significant products.

UNIT I**Growth and Development:**

Role of Plant Hormones in growth & development. Plant Nutrition - Effect of soil pH on mineral availability, uptake & assimilation of minerals and their physiological role.

Impact of macro, micro, vitamins in plant growth development.

UNIT II

Introduction to plant tissue culture: Totipotency, Tissue culture Media (Composition and preparation). Nutritional components of tissue culture media. Plant Hormones- Types, structures, biosynthesis & metabolism. Basic concepts of aseptic cultures and its uses. Different areas and applications of plant tissue culture.

UNIT III

Basic techniques in tissue culture: Design & lab setup of Tissue Culture laboratory. Types of culture, Initiation of callus and suspension cultures, Micro propagation (Organogenesis, Somatic Embryogenesis, Shoot tip culture, Rapid clonal propagation, Embryo Culture and Pollen culture). Production of haploids and their application, Storage of plant genetic resources and Cryopreservation.

UNIT IV

Plant transformation technology: Ti & Ri Plasmid and their transfer mechanisms, Use of Ti & Ri as vectors, Binary vectors, Use of 35s & other promoters genetic markers- methods of nuclear transformation, viral vectors & their applications, Use of reporter gene, Particle bombardment, electroporation, Microinjection, Chloroplast transformation- transplastomics, Transformation of monocots, Transgene stability & gene silencing in Plant transformation.

UNIT V

Plant tissue culture and its applications: Transgenic plants - for- biotic (weeds, insects, viruses, fungi and bacteria) and abiotic (drought, salt, temperature, poor soil quality and oxidative) stress tolerance. Production of secondary metabolites. Molecular farming (improvement in protein, lipids, carbohydrates). Plant antibodies, vaccines, therapeutic proteins and active principles. Biofortification of important crops (rice and banana).

CORE ELECTIVE –I

**Semester II
4H-**

DIETETIC MANAGEMENT OF DISEASE

Instruction hours/week: L:4 T:0 P:0

Marks: Internal: 40 External: 60 Total: 100

End Semester Exam: 3 Hours

Course objectives

Equip the students with

- Nutrition as a drug
- Dietary management of diabetes
- Dietary management of obesity
- Dietary management of cardiovascular diseases
- Nutrition deficiency affecting hematopoiesis and diet for individual with cancer
- Dietary management of musculoskeletal diseases

Course outcomes (CO's)

After successful completion, the students will understand:

1. Nutrition as a drug
2. Dietary management of diabetes
3. Dietary management of obesity
4. Dietary management of cardiovascular diseases
5. Nutrition deficiency affecting hematopoiesis and diet for individual with cancer
6. Dietary management of musculoskeletal diseases

UNIT-1

Nutrition- Foods for normal nutrition. Diets in gastrointestinal diseases-Acute gastrointestinal conditions, chronic and non-acute disorders of the upper gastrointestinal tract, lower gastrointestinal conditions, pancreatitis, liver diseases, gall stones, appendicitis, cholelithiasis. Diet for hepatitis

Nutrition for critically ill- Burns, Enteral nutrition, Enteral feeding vs parenteral feeding, Indications of enteral nutrition, Types of enteral feed formula, Complications of enteral feeding. Parenteral nutrition- Techniques of infusion, Complications of parenteral feeding.

UNIT II

Diet for diabetes mellitus- Nutrition recommendations for patient with diabetes, Meal planning, Exchange list of different food groups, Diabetic diets based on exchange list, Diabetic diets menu wise.

Diets in Renal disease-Acute renal failure, Proteinuria, Indoor diet charts for renal patients.

UNIT III

Diet for Cardiovascular Diseases- Risk Factors, Hypertension, Atherosclerosis, Stroke and other peripheral diseases, Cardiomyopathy and cardiac failure, Rheumatic heart disease, dietary management, general guidelines for coronary heart disease, Dietary recommendations of WHO.Diet for Acute cardiac diseases

Obesity- Body fat distribution, Health risks of obesity, Weight reduction, Factors contributing to obesity.

UNIT IV

Cancer and diet therapy- Influence of diet on carcinogenesis, Dietary risk factors and cancers at various sites in the human body, diet therapy, eating well during cancer treatment, managing eating problems during treatment

Diet for inborn errors of metabolism- phenylketonuria, Galactosaemia, Celiac disease.

UNIT V

Nutrition related bone disease- osteoporosis.

Dietary factors in dental disease- Starch & dental cavities, protective factor in food

Blood –Nutrition deficiency affecting hematopoiesis.

OPEN ELECTIVE

BIOREMEDIATION

Instruction hours/week: L:4 T:0 P:0

Marks: Internal: 40 External: 60 Total: 100

End Semester Exam: 3 Hours

Course objectives**Equip the students to understand**

- Environmental pollution and its impact on living beings
- Bioremediation process
- Bioremediation techniques
- Bioremediation of contaminants
- Recent approaches in bioremediation
- Waste water management

Course outcomes (CO's)**After successful completion, the students will be able to**

1. Understand impact of environmental pollution on living beings
2. Do bioremediation process
3. Understand bioremediation techniques
4. Carryout bioremediation of contaminants
5. Understand recent approaches in bioremediation
6. Manage waste water treatment

UNIT I

Environmental pollution: Definitions, Parts of environment, Environmental contamination versus pollution. Nature of contaminants: Recalcitrant compounds, pollutants. Physico-chemical properties of contaminants. General classification of contaminants. Effect of contaminants on environment. Environmental segments – structure and composition of atmosphere - Pollution – Air, water, soil, thermal and radiation – Effects – acid rain, ozone layer depletion and greenhouse effect. Sources of heavy metal pollution

UNIT II

Bioremediation: Introduction of Bioremediation, general perspectives, constraints and priorities of bioremediation, Advantages, limitations and applications. Factors affecting process of biodegradation. Contaminant availability for biodegradation. Microbial

interactions with inorganic pollutants, Microbial metal resistance, Microbial transformation, accumulation and concentration of heavy metals.

UNIT III

Bioremediation Techniques: *In situ* and *ex situ* bioremediation. Characterization of essential factors for bioremediation. Strategies for improvement of bioremediation techniques. Bioremediation monitoring (physical, chemical, biological). Molecular techniques in the analysis of contaminated sites.

UNIT IV

Bioremediation of contaminants: Nature of organic compound and wastes, Decomposition of organic matter, microbes involved in decomposition. Aerobic and anaerobic decomposition of organic waste, Waste water treatment (Primary, Secondary and Tertiary), Bioreactor for waste water treatment, microbes for waste water treatment. Environment impact of fertilizers.

UNIT V

Recent approaches in bioremediation: Organic and vermicomposting (Elementary concepts only). Recent biotechnological trends in bio augmentation and bio stimulation. Role of plasmids in bioremediation. Evolution barriers for new microbes. Enhancement of novel microbial degradative abilities. Genetics and gene manipulation of bioremediation. Role of environmental biotechnology in management of resources. Reclamation of wasteland, biomass production, biogas and biofuel production. Development of environmentally friendly processes such as integrated waste management.

PRACTICAL – III

5H-3C

MOLECULAR BIOLOGY AND ANIMAL BIOTECHNOLOGY

Instruction hours/week: L:0 T:0 P:4 Marks: Internal: 40 External: 60 Total: 100
End Semester Exam: 3 Hours

Course objectives

Equip the students

- To understand the Molecular structure, functions of cells, molecules such as DNA, RNA, proteins.
- To understand the principles of animal cell culture and its application.
- To learn the knowledge on quantity of DNA by Diphenylamine method
- To infer the Estimation of RNA by Orcinol method
- To know the Preparation of competent *E coli*- transformation
- To explore the knowledge on Ligation of DNA

Course outcomes (CO's)

After completion of this course the student will perform

1. To demonstrate knowledge and understanding of the molecular machinery of living cells, cell and tissue culture to manipulate.
2. To explore the genomes of animals for ways to improve the livestock for food production and biomedical purpose as well as and to analyse, interpret, and participate in reporting to their peers on the results of their laboratory experiments.
3. Identification of DNA by Agarose gel electrophoresis
4. Estimation of RNA by Orcinol method
5. Preparation of competent *E coli*- transformation
6. Ligation of DNA

MOLECULAR BIOLOGY

1. Isolation of DNA and RNA from liver
2. Estimation of DNA and RNA - UV method
3. Estimation of DNA by Diphenylamine method
4. Estimation of RNA by Orcinol method
5. Estimation of Protein by Lowry's method

6. Culturing and Isolation of Plasmid DNA
7. Agarose gel electrophoresis of DNA
8. Restriction digestion analysis of DNA (Demonstration)
9. Preparation of competent *E coli*- transformation (demonstration)
10. Determination of Molecular weight of polypeptides by SDS PAGE (group)
11. Polymerase Chain Reaction for amplification of DNA (demonstration)
12. Ligation of DNA
13. Southern Blot Analysis (Demonstration)
14. Western Blotting (Demonstration)

ANIMAL TISSUE CULTURE (Demonstration)

15. Preparation and Sterilization of media
16. Cell lines and maintenance -Trypsinisation, Passaging, Staging
17. Cell counting and cell staining
18. Cell viability determination – Tryphan blue exclusion.

Instruction hours/week: L:0 T:0 P:4 Marks: Internal: 40 External: 60 Total: 100
End Semester Exam: 3 Hours

Course objectives

To make the students

- To provide hands on experience on various biological databases
- To learn the retrieval of data from the biological databases
- To make them learn about pair wise and multiple sequence analysis.
- To learn and apply the statistical approaches
- To study the models for phylogenetic analysis and tree reconstruction.
- To teach them protein prediction methods and its validation.

Course outcomes (CO's)

The students shall be able to

1. The course will enable students to use various biological databases
2. The importance functions in the biological system.
3. The use computational approaches for pair wise, multiple and phylogenetic analysis.
4. Aware to predict the physio-chemical properties, protein structure and validation using computer-based labs.
5. Solve the biological problems using various computational tools and techniques.
6. Visualization of Protein structure by RASMOL.

Experiments:

1. Biological Databanks Sequence databases, Structure Databases, Specialized databases
2. Data base file formats.
3. Data retrieval tools and methods (PUBMED, ENTREZ, SRS)
4. Sequence Similarity searching (NCBI- BLAST, FASTA)
5. Protein sequence analysis (ExPASy proteomics tools)
6. Multiple sequence alignment (Clustal-W)

7. Gene structure and function prediction (Using ORF Finder, Genscan, GeneMark)
8. Molecular Phylogeny (PHYLIP)
9. Sequence Analysis using EMBOSS
10. Protein structure visualization – RASMOL (Menu function and Command line entries), Deep View.

Instruction hours/week: L:4 T:0 P:0

Marks: Internal: 40 External: 60 Total: 100

End Semester Exam: 3 Hours

Course objectives**Equip the students with**

- Specialized immune cells and their function
- Mechanisms of humoral immunity
- Mechanisms of cell mediated immunity
- Hyperactivation of immune cell and associated pathogenesis
- Basis behind immunodeficiency diseases
- Utility of immune based principles in diagnostic field

Course outcomes (CO's)**After successful completion, the students will understand:**

1. The structure and functions of specialized immune cells
2. Basis of humoral immunity
3. Basis of cell mediated immunity
4. Hypersensitivity reactions (I-V)
5. Hereditary and acquired immunodeficiency diseases
6. Utility of immune based principles in diagnostic field

UNIT I

Cells of the immune system: Haematopoiesis. Overview of Immune stem cells-Lymphoid cells, mononuclear, granulocytes, mast cells and dendritic cells. Lymphoid classes B, T and NK – B & T Cell maturation, activation and differentiation; Lymphocyte surface markers, CD nomenclature. Cell-mediated and humoral response.

UNIT II

Antigen: Epitope, B cell and T cell epitope, haptens, viral and bacterial antigens; factors influencing adjuvant technology. Immunoglobulins-domains, B cell receptors, antigenic determinants on immunoglobulins, Immunoglobulin super family. Immunoglobulin genes: multigene family; Immunoglobulin rearrangement- antibody diversity.

UNIT III

Hyper sensitivity: Type I, II, III, IV, V and VI. Complement-definition, classical and alternate pathway, MHC: organization, MHC molecules and genes, MHC and immune responsiveness, Transplantation and rejection.

UNIT IV

Immunity to infection: Definition and types of immunity, Primary and secondary immunodeficiency diseases. Auto-immune diseases, Tumor immunology
Vaccines: Active and passive immunization, Types of vaccines with example. Monoclonal Antibodies- Production and Applications.

UNIT V

Immuno Techniques: Antigen-Antibody interactions- precipitation reaction, agglutination tests- haemagglutination; Complement fixation test. Direct and indirect immunofluorescence, RIA, ELISA, CLIA, ECLIA, Immunoblotting, effector cell assay, Hemolytic plaque assay and Elispot assay.

2015-2016

Semester III

15BCP302 CLINICAL BIOCHEMISTRY AND ENDOCRINOLOGY 4H-4C

Instruction hours/week: L:4 T:0 P:0 Marks: Internal: 40 External: 60 Total: 100
End Semester Exam: 3 Hours

Course objectives

Equip the students with:

- Biological fluid collection and analysis
- Blood cell counting
- Assessment of inflammatory markers
- Estimation of clinically relevant enzymes
- Diagnosis of cancer
- Assessment of endocrine pathophysiology

Course outcomes (CO's)

After successful completion, the students will:

1. Collect and analyze biological fluid
2. Count the total RBC and different WBC using hemocytometer
3. Learn the assessment of CRP, RA and ESR
4. Perform estimation of clinically relevant enzymes
5. Understand the cancer marker assessment
6. Understand the endocrine pathophysiology

UNIT I

Clinical Samples: Blood collection, processing and transfusion process. Normal blood profile. Cerebrospinal fluid: Composition, clinical investigation of CSF in meningitis. Amniotic fluid: Origin, composition and analysis of amniotic fluid. Collection of urine. Urine preservatives. Test for urine compounds. Clinical significance of urinary components.

UNIT II

Serology and Hematology: C- reactive protein test, immunological test for pregnancy. Rheumatoid arthritis (RA) test, ESR. Coagulation test, prothrombin test. Haemoglobin. Normal and abnormal Hb, separation of haemoglobin, Thalassemia, Hemoglobinopathies. Disorder of erythrocyte metabolic pathways, erythrocyte enzyme disorders. Porphyrins and

disorder: porphyrias.

UNIT III

Clinical Parameters: Myocardial infarctions, hepatobiliary disease. General principles of hormone assay and clinical significance of steroid, protein and thyroid hormone (experimental details are not required). Oncology- oncogenes and cell cycle, Cancer Markers; Free radical induced lipid peroxidation. Free radical scavengers. Antioxidants in disease prevention.

UNIT IV

Overview of important endocrine glands and their hormones: Chemistry, synthesis, control, physiological role and pathophysiology of hypothalamus, pituitary, thyroid and parathyroid hormones.

UNIT V

Chemistry, synthesis, control, physiological role and pathophysiology of pancreas, adrenal medulla, adrenal cortex, male and female reproductive hormones. Endocrinology of pregnancy, parturition and lactation.

Course objectives**Equip the students**

- To learn and understand the methods of plant analysis
- To gain knowledge on natural products from plant sources
- To extract the natural products from plant sources
- To gain knowledge on natural products from plant sources
- To learn extraction of secondary metabolites from marine organisms
- To extract drugs from natural sources

Course outcomes (CO's)**After successful completion, the students will**

1. Learn and understand the methods of plant analysis
2. Gain knowledge on natural products from plant sources
3. Extract the natural products from plant sources
4. Gain knowledge on natural products from plant sources
5. Learn extraction of secondary metabolites from marine organisms
6. Extract drugs from natural sources

UNIT I

Methods of plant analysis-Extraction- sequential and percolation techniques. Separation techniques-Column chromatography, TLC, GLC and HPLC. Methods of identification-UV, IR, NMR and MS; Analysis of results- Qualitative and quantitative methods.

UNIT II

Natural products from plant sources: Chemistry, distribution and techniques for anthocyanins, phenolics, flavonol and flavones, tannin and quinines (General discussion only).

UNIT III

Natural products from plant sources: Chemistry, distribution and techniques for triterpenoids, essential oils, steroids, carotenoids and alkaloids (General discussion only).

UNIT IV

Natural products from microbes: Sample collection; Screening tests- antiviral, antibacterial, anticancer, antihypercholesterolemic. Commercial production of microbial enzymes - Invertase and beta galactosidase.

UNIT V

Marine organism and animals: Secondary metabolite from marine algae, bacteria, fungi and vertebrates. Separation and isolation techniques- Desalting, ion exchange and reverse

phase column chromatography; Bio assay directed fractionation. Isolation of simple peptides. Drugs from animal sources – hormones, carbohydrate and proteins.

Course objectives

Equip the students with

- Pharmacokinetics
- Pharmacodynamics
- Drug tolerance and dependence
- Genetically engineered drugs
- Mechanism of action of drugs
- Undesired effects of drugs

Course outcomes (CO's)

After successful completion, the students will understand

1. What the body does to a drug
2. What a drug does to a body
3. Drug dependence
4. The principles and procedure for genetically engineered drugs
5. How the drugs elicit the desired effect
6. Undesired effects of drugs

UNIT I

Drugs – Introduction, sources and routes of administration, Structural features and pharmacological activity, prodrug concept, Adsorption – factors modifying drug absorption. Distribution, metabolism - phase I, II reactions, action of cytochrome P450 and excretion of drugs.

Drug receptors – Localization, types and subtypes, models and theories. G-protein coupled receptor and ion-channel linked receptors. Examples of drug-receptor interactions. Agonists and antagonists.

UNIT II

Drug tolerance and drug dependence. Principles of basic pharmacokinetics. Adverse response to drugs, drug intolerance, pharmacogenetics, drug allergy, tachyphylaxis, drug abuse, vaccination against infection, factors modifying drug action and effect. Assay of drug potency: chemical, bioassay and immunoassay.

UNIT III

Genetically engineered protein and peptide agents as drugs, Novel drug delivery systems, anti-AIDS drug development, oncogenes as targets for drugs, multidrug resistance phenotypes, production of secondary metabolites by plant tissue culture. Genome based medicine.

UNIT IV

Mechanism of action of drugs used in therapy of Respiratory system – cough, bronchial asthma, pulmonary tuberculosis. Antimicrobial drugs – sulphonamides, trimethoprim,

penicillins, aminoglycosides and bacterial resistance, Cancer chemotherapy. Thyroid and antithyroid drugs, insulin and oral antidiabetic drugs, antifertility and ovulation inducing drugs. Pharmacotherapy of gout and rheumatoid arthritis, Immuno therapy – Immunosuppressants and immunostimulants, Enzymes in therapy.

UNIT V

Brain – Neurotransmitters, encephalins and endorphins; general function of autonomic and somatic nervous system; cholinergic transmission and receptors; adrenergic transmission and receptors; muscarinic receptors. Non steroidal and anti inflammatory drugs; adrenergic blocking drugs; cholinergic blocking drugs; muscarinic blocking drugs; parkinson's disease; Alzheimer's disease. Neurodegenerative disorders – Amyotrophic, lateral sclerosis, senile dementia, schizophrenia, Huntington's disease.

TEXTBOOKS

4. Wolf E ,1995. Burgers Medicinal Chemistry and Drug Discovery. Principles and Practice, John Wiley and Sons, Manfred.

Course objectives**Equip the students with:**

- Definition and representation styles of data
- Analysis of data using correlation to understand the interdependence
- Analysis of data using regression to understand the interdependence
- To learn various measures of central values and standard deviation.
- To understand the relationship between two variables.
- To test the significance of a particular data by various parameters.

Course outcomes (CO's)**After successful completion, the students will:**

1. Use appropriate representation styles to present the data
2. Perform correlation analysis
3. Perform regression analysis
4. Calculate mean, median, mode and standard deviation.
5. Calculate the relationship between two variables.
6. Test the significance of a particular data by various parameters.

UNIT I

Definitions-Scope of Biostatistics- Variables in biology, collection, classification and tabulation of data- Graphical and diagrammatic representation.

Measures of central tendency – Arithmetic mean, median and mode. Measures of dispersion- Range, standard deviation, Coefficient of variation.

UNIT II

Correlation: Meaning and definition - Scatter diagram –Karl Pearson's correlation coefficient. Rank correlation.

Regression: Regression in two variables – Regression coefficient problems – uses of regression.

UNIT III

Test of significance: Tests based on Means only-Both Large sample and Small sample tests – Student's t test, Chi square test - goodness of fit. Analysis of variance – one way and two way classification. CRD, RBD Designs.

UNIT IV

Research: Scope and significance – Types of Research – Research Process – Characteristics of good research – Problems in Research – Identifying research problems. Research Designs – Features of good designs.

UNIT V

Sampling Design : Meaning – Concepts – Steps in sampling – Criteria for good sample design. Scaling measurements – Techniques – Types of scale.

Instruction hours/week: L:4 T:0 P:0

Marks: Internal: 40 External: 60 Total: 100

End Semester Exam: 3 Hours

Course objectives**Equip the students with:**

- The process of drug discovery
- Pre-clinical studies
- Components of clinical research (Phases)
- Questionnaire preparation
- Fundamentals of IPR
- Patents laws

Course outcomes (CO's)**After successful completion, the student will understand:**

1. Steps involved in drug discovery
2. Using small experimental animals
3. Phase 2 and Phase 3 trials
4. Questionnaire preparation
5. Intellectual property rights
6. Patents laws

UNIT I

Drug discovery and Development: Introduction to Pharmaceutical Industry, New drug discovery-Target Identification- Target Prioritization/ validation, Lead identification, Lead optimization ; Preclinical studies - Preclinical technology, Chemistry manufacturing and controls / Pharmaceuticals Pharmacology/Toxicology

UNIT II

Basics of Clinical Research: Definition of clinical research and development, History of randomized trial Literature - Finding and Evaluation databases of Scientific Literature; Critiquing of Research Projects, Time management and resource implications

UNIT III

Epidemiology: Experimental Procedures - Controlled Experiments, Sampling Techniques, Questioner Design, Validity and reliability of observations, Primary variables, Acquisition and using secondary data, Randomization and Blinding: Theory and practice

UNIT IV

IPR: Introduction to Copyright - Conceptual Basis, International Protection of Copyright and Related rights- An Overview (International Convention/Treaties on Copyright). Indian Copyright Law -The Copyright Act, 1957 with its amendments, Ownership, transfer and duration of Copyright, Renewal and Termination of Copyright.

UNIT V

Patent: Introduction to Patent Law - Paris Convention, Patent Cooperation Treaty, WTO-TRIPS, Harmonisation of CBD and TRIPs. Indian Patent Law- The Patents Act, 1970, Amendments to the Patents Act, Patentable Subject Matter, Patentability Criteria, Procedure for Filing Patent Applications, Patent Granting Procedure.

**CORE ELECTIVE –I I
BIOPHARMACY****Semester III****4H-4C****Instruction hours/week: L:4 T:0 P:0 Marks: Internal: 40 External: 60 Total: 100****End Semester Exam: 3 Hours****Course objectives****Equip the student**

- To explain the relationship among physicochemical and biological factors, dosage forms,
- To understand the routes of administration and therapeutic outcomes;
- To illustrate the principles of pharmaceuticals and biopharmaceuticals in dosage form design and development;
- To describe production procedures
- To learn quality control measurements and stability improvements for tablets and sterile products and different routes of drug administration in principles and applications
- To identify the needs and differences in drug use for various patient groups, and devise appropriate strategies from perspectives of dosage forms.

Course outcomes (CO's)**After completion of this course the student will**

1. Explain biopharmaceutical, physiological, biochemical and cell biology-related aspects
2. Understand the transport and metabolism of drugs in the gastrointestinal tract and in the liver.
3. Explain mechanisms behind the transport of drug and metabolism and how drugs can interact with other drugs and food and methods to study these
4. Have developed its ability to plan, compile, analyse and report experiment that has importance for biopharmaceutical issues -
5. Recognize the regulatory requirements within the biopharmaceutical area
6. Describe the role of biopharmaceuticals in drug development within the pharmaceutical industry

UNIT I

Phytochemistry: Authentication of medicinal plants, Biosynthesis of primary and secondary metabolites - alkaloids, terpenoids. Phenolic compounds and coumarins.

Classification and sources of alkaloids. Major classes in phenolic compounds – carotenoids, flavonoids, tannins and phenolic acids. Classification of terpenoids.

UNIT II

General extraction and isolation techniques for compounds from plants. Techniques involved in extraction of phytochemicals – Perculation, Soxhlet extraction, Supercritical Fluid extraction, Pilot scale extraction, reflux and other methods. Factors affecting extraction.

UNIT III

Isolation and purification techniques – Thin layer and Column chromatography. Chemical fingerprinting – HPLC, HPTLC, FTIR, NMR and GC-MS.

UNIT IV

Biotechnology of medicinal plants: Production of secondary metabolites from plant culture. Indian Standard Specifications (ISI) laid down for sampling and testing of various drugs in finished form by the Bureau of Indian Standards. Toxicity testing in drugs and Safety.

UNIT V

Bioactive studies: Anticancer, antidiabetic, anti-inflammatory, hepatoprotectives, antimicrobials from medicinal plants. Antioxidants of plant origin – Reactive Oxygen Species (ROS), antioxidant polyphenols.

Instruction hours/week: L:4 T:0 P:0 Marks: Internal: 40 External: 60 Total: 100
End Semester Exam: 3 Hours

Course objectives**Equip the students**

- To impart the knowledge on basic tissue culture techniques and limitations in products
- To study about tissue culture laboratory and safety – biohazards
- To extrapolate the different types of culture media
- To understand the various types of cultures
- To learn synchronization of cell cultures and cell division
- To know the importance of stem cell research and its applications.

Course outcomes (CO's)**After completion of this course the student will be able to**

1. Demonstrate foundational knowledge of Cell culture techniques and competence in laboratory techniques.
2. Set up a tissue culture lab to carry out research based on cell lines.
3. Extrapolate the different types of culture media
4. Understand the various types of cultures
5. Learn synchronization of cell cultures and cell division
6. Know the importance of stem cell research and its applications.

UNIT I

Introduction, importance, history of cell culture development, different tissue culture techniques including primary and secondary culture, continuous cell lines, suspension culture, organ culture, advantages and limitations medical/pharmaceutical products of animal cell culture-genetic engineering of animal cells and their applications. Risks in a tissue culture laboratory and safety - biohazards.

UNIT II

Different types of cell culture media, growth supplements, serum free media, balanced salt solution, other cell culture reagents, culture of different tissues and its application. Facilities for animal cell culture-infrastructure, equipment, culture vessels. Biology and characterization of cultured cells-cell adhesion, proliferation, differentiation, morphology of cells and identification.

UNIT III

Primary cell culture techniques - mechanical disaggregation, enzymatic disaggregation, separation of viable and non-viable cells. Mass culture of cells - manipulation of cell line selection - types of cell lines - maintenance of cell lines - immobilization of cells and its application - synchronization of cell cultures and cell division - production of secondary metabolites - biotransformation - Induction of cell line mutants and mutations - cryopreservation – germplasm conservation and establishment of gene banks.

UNIT IV

Animal cell culture scale up: Scale up in suspension - stirrer culture, continuous flow culture, air-lift fermentor culture; Scale up in monolayer - Roller bottle culture, multi surface culture, multi array disks, spirals and tubes - monitoring of cell growth. Organ culture - whole embryo culture - specialized culture techniques - measurement of cell death.

UNIT V

Tissue engineering: Design and engineering of tissues - tissue modeling. Embryonic stem cell engineering - ES cell culture to produce differential cells - Human embryonic stem cell research. Transgenic animals-transgenic animals in xenotransplantation

2. Methods in Cell Biology, Volume 57, Jennie P.Mathur and David Barnes, 1998. Animal Cell Culture Methods Academic Press.

Instruction hours/week: L: 4 T:0 P:0 Marks: Internal: 40 External: 60 Total: 100
End Semester Exam: 3 Hours

Course objectives**Equip the students**

- To provide a comprehensive theoretical knowledge on genomics and proteomics
- To learn the fundamentals, current techniques and applications.
- To update and strengthen basic concepts in proteomics and genomics
- To address the modern biological issues.
- To use the different methodologies, techniques and tools commonly used in genome sequencing, assembly and annotation.
- To understand the Characterization of protein complexes

Course outcomes (CO's)**After completion of this course the student will be able to**

1. Identify and describe the different components in prokaryotic and eukaryotic genomes and proteomes.
2. Identify molecular mechanisms responsible for diseases.
3. Use the different methodologies, techniques and tools commonly used in genome sequencing, assembly and annotation.
4. Use the different methodologies, techniques and tools commonly used in proteomics.
5. Address the modern biological issues.
6. Characterize the protein complexes

UNIT I

Genome Sequencing: Introduction to Genes, Genome organization –prokaryotes and eukaryotes, Genetic markers- RFLP, Mini and Micro satellite, STS, EST, SSCP, RAPD, RFLP, SNP and SSR. Human Genome and Genomic analysis: Size, features, composition and characteristics of human genome – Sequence repeats, transposable elements, gene structure and pseudogenes.

UNIT II

Sequencing Genomes- methodology, chain termination method, chemical degradation method, shotgun sequencing and assembly of contiguous DNA sequence. cDNA and genomic library construction. Genomic Mapping: Different types of Genome maps and their uses, Genetic and Physical mapping techniques. Map resources. Practical uses of genome maps, NGS

UNIT III

Gene Expressions and Microarrays: Gene structure and pseudo genes. Concepts of microarrays, spotter analysis, Normalization –total intensity, using regression techniques, ratio statistics. Clustering Gene expression profiles-hierarchical, single-linkage, complete linkage, and average linkage. Tools for microarray analysis- MADAM, spot finder, SAGE Applications of Microarrays- Bioinformatics challenges in micro array design and analysis.

UNIT IV

Analytical Proteomics:RP-HPLC, Mass Spectrometry – ESI MS and MALDI techniques and applications. Characterization of protein complexes – protein-protein interactions, yeast two-hybrid system and protein micro arrays.

UNIT V

Experimental Proteomics: Proteome analysis- 2D gel electrophoresis: general strategy, immobilized pH gradients, sample preparation, isoelectric focusing, second dimension PAGE, staining, transfer of proteins from 2D gels, image acquisition and analysis of 2D gels. 2DE databases.

9. Reiner Westermeier and Tom Naven., 2002. Proteomics in Practice. Wiley – VCH, Weinheim, Germany.

Course objectives

To impart hands-on training in:

- Assays of clinically relevant enzymes
- Diagnostic utility of enzyme assays
- Radial immunodiffusion
- Double immunodiffusion
- Immunoelectrophoresis
- Glucose tolerance test

Course outcomes (CO's)

After successful completion, the students will understand:

1. Various methods of assaying clinically relevant enzymes
2. The diagnostic significance of enzyme assays
3. Working knowledge principle of Radial immunodiffusion
4. Working knowledge principle of Double immunodiffusion
5. Working knowledge principle of Immunoelectrophoresis
6. Working knowledge principle of Glucose tolerance test

ENZYMOLOGY

1. Determination of the activity of the following serum enzymes:

- a. LDH
- b. Acid phosphatase
- c. Alkaline phosphatase
- d. Aspartate amino transferase
- e. Alanine amino transferase
- f. 5' nucleotidase
- g. Sodium potassium ATPase
- h. Ceruloplasmin

IMMUNOLOGY (DEMONSTRATION)

2. Raising of antibodies- single soluble and particulate antigen

3. Immunodiffusion- single radial and double diffusion.
4. Immunoelectrophoresis.
5. Rocket immunoelectrophoresis
6. ELISA

Case study-Report

7. Serum enzyme in liver disease
8. Serum enzyme in cardiac disease
9. Serum enzyme in cancer disease
10. Glucose Tolerance Test

REFERENCES

1. Jayaraman J, 2007. Laboratory Manual in Biochemistry, New Age International Publishers New Delhi.
2. Sadasivam S and A. Manickam, 2009. Biochemical Methods, New Age International Publishers, New Delhi.
3. Singh S.P, 2009. Practical Manual of Biochemistry, CBS Publishers, New Delhi.
4. Talib V. H, 2003. A Handbook of Medical Laboratory Technology, CBS Publishers, New Delhi.

Course objectives

To impart hands-on training in:

- The estimation of biomolecules such as glucose and cholesterol
- Assessment of renal function through the analysis of urea and uric acid in serum
- Assessment of liver function through the estimation of bilirubin
- The determination and significance of A/G ratio
- Handling experimental animals
- Various routes of injections

Course outcomes (CO's)

Upon successful completion of this course, students will be able to:

1. Explain the physiopathological bases and the biochemical markers of the most prevalent diseases in our population
2. Perform the estimation of biomolecules such as glucose and cholesterol
3. Assess renal and liver function through the analysis of urea and uric acid and bilirubin in serum
4. Determine A/G ratio and interpret its relevance
5. Handle the small experimental animals and
6. Understand the differences and significance of routes of injections

Clinical analysis

1. Estimation of glucose in serum
2. Estimation of cholesterol in serum
3. Estimation of urea in the urine and serum
4. Estimation of chloride in the urine and serum
5. Estimation of calcium in the urine and serum
6. Estimation of magnesium in the urine and serum
7. Analysis of urinary calculi

8. Estimation of Bilirubin in serum(Kit method)
9. Estimation of triglyceride in serum (Kit method)
10. Estimation of HDL in serum (Kit method)

ANIMAL STUDIES (Group experiment)

11. Handling of animals
12. Methods of injection
13. Induction of liver toxicity
14. Assay of lipid peroxidation in rat liver.

M.Sc., Biochemistry		2015-2016
15BCP491	PROJECT AND VIVA VOCE	Semester IV 15C
Hours / week: L:5 T:0 P:25		Marks: Internal: 80 External:120 Total: 200

SCOPE

To understand structural features of clinical data management.

OBJECTIVE

Since the emerging trends are numerous the goals of the course is to introduce the student to the current trends in database management for clinical research.

UNIT I**Drug Development Process**

Review FDA approved process for development and approval of a drug, role of key player in drug development. Key events in history that have impacted human subject rights, review informed consent process and describe regulatory requirements.

UNIT II**GCP Regulation and Guidelines**

Key concept in regulatory application such as GCP, regulation guidance and ICH guide lines. Review mandatory regulations of FDA that apply to sponsor investigator and IRB. Review the regulatory documents which must be collected and maintained, discuss the role of these regulatory documents, and identify strategies to ensure their accurate completion, review management of study files.

UNIT III**Database Management Systems (DBMS) for Clinical Research**

The concept of a multi-table relational database and data normalization. Rows as entities, columns as attributes. Primary and foreign keys. One-to-One, One-to-Many and Many-to-Many relationships. The basic tables in a clinical research study: subjects, measurements, and examiners.

Creating a table in design or “data dictionary” view. Field names, types, and descriptions; validation rules, primary and foreign keys, lookup tables, and relationships between tables. Creating data entry forms/subforms.

UNIT IV

Queries and Reports, Importing Data

Filtering by form. Writing select queries and reports for monitoring study progress. Importing data and appending and updating records.

UNIT V

Queries and Exporting Data

More sophisticated queries, including totals (“group by”) queries. Exporting data for statistical analysis. SAS Programming

TEXT BOOKS

1. Martin D.Hynes, 1998. Preparing for FDA pre-approval inspections, Informa Health Care Publication.
2. Raghu Ramakrishnan, Johannes Wendy Bohaychuk and Graham Ball, 1999. Conducting GCP-compliant clinical research, John Wiley Son’s publication.
3. Richard K. Rondel and Sheila A.Varley, 2000. Clinical Data Management, John Wiley and Sons.

3. Gehrke, 2003. Database Management SystemsMcGraw-Hill Professional, New Delhi
4. Jack Shostak, 2005. SAS Programming in the Pharmaceutical Industry, SAS Publication.

SCOPE

This paper encodes information on drug designing, drug discovery and drug metabolism.

OBJECTIVE

To assist the students to know the actual path of drug mechanism of action and drug discovery.

UNIT I

Introduction to drugs, classification of drugs, passage of drugs across biological membrane; absorption and distribution of drugs; Drug metabolism and elimination- methods of study of drug metabolism, microsomal drug metabolism, binding of drugs to plasma proteins, Introduction and receptor concept-. Types of receptors, receptor theories, isolation of receptors. consequences of drug receptor interaction

UNIT II

Monte Carlo Simulation Methods, Conformational analysis, *Ab initio*, dft and semi empirical methods, Use of molecular modeling to discover and design new molecules. Techniques of molecular dynamics, Molecular Dynamics Simulation Methods - molecular dynamics using simple models, molecular dynamics with continuous potential-setting up and running a molecular dynamic simulation, constraint dynamics.

UNIT III

Recent advances in drug design methodologies- Biomolecular structure, Structure activity relationship, Pharmacokinetics, Pharmacophoric pattern, ADME Properties, quantitative structure activity relationship, Use of genetic algorithms and principle component analysis in the QSAR equations.

UNIT IV

Ion channels- Structure, function and Pharmacology, Enzymes and enzyme inhibitors, - Enzyme Inhibition strategies.- Enzyme inhibition as a tool for drug development – Examples. Finding new drug targets to treat disease- strategies for target identification and

lead design- Use of Genomics and Proteomics for understanding diseases at molecular level-
- new targets for anti-cancer drugs, Lipinski's rule.

UNIT V

Principles and methods of docking, docking problem, structure based drug design, induced fit docking. 3D database search approaches. Screening technology and Informatics for natural products drug discovery. The drug development process, the practice and limitations of Computer assisted drug discovery process, Commercial analysis of docking software's.

LS: Language course; EN: English course ; ECA: Extra Curricular Activities; NCC: National Cadet Corps; NSS: National Social Service; DSE : Discipline Specific Elective

Blue – Employability Green – Entrepreneurship Red- Skill Development

PROGRAMME OUTCOMES (POs)

- a) Graduates will acquire in-depth understanding of basic concept, knowledge about biochemistry and cell organelles, their functions for applied field, allied subject and life skills.
- b) The students will be able to discuss the metabolic aspects of biomolecules.
- c) The Graduates will gain the technical capability of handling, isolating and identifying various organisms from different sources.
- d) Understanding and better knowledge of the causes, types and control methods for environmental pollution by the students.
- e) The student will be able to discuss the mechanisms associated with gene expression system in prokaryotes and eukaryotes.
- f) Understand the role of different types of cells, effectors and effectors mechanisms in immune-technology by the students.
- g) Develop skills associated with screening of industrially important strains, various aspects of bioprocess technology and rDNA technology by the graduates.
- h) The student will be able to understand the production of enzymes from different sources and enzyme characterization and kinetic actions in living organisms.
- i) The student will be able to understand the production of transgenic plants and animals for human and environmental welfare.
- j) Understand the basic concepts and modern knowledge of bioinformatics by graduates.
- k) Apply the knowledge and skills gained from molecular aspects should be useful in developing new innovations in different life forms by the graduates.
- l) The student will be able design, solve the application-oriented problem in biotechnological field through project-based learning.

PROGRAMME SPECIFIC OUTCOMES (PSOs)

To enable the student to emerge as:

- m) Proficiency to work on biotechnological concepts and interdisciplinary areas of science and technology towards product and process development for industrial and academic research applications.
- n) An expert in Biotechnology and allied fields (medical, microbial, agricultural, environmental, plant and animal) for utilizing the practical skills to address biotechnological challenges.
- o) Proficiency to acquire knowledge in facing the interviews, to become an entrepreneur and develop leadership skills with life-long learning.

PROGRAMME EDUCATIONAL OBJECTIVES (PEOs)

To impart the following PEOs to the students of Under-graduates in Biotechnology:

PEO I: To obtain detailed information about the fundamentals of Biotechnology, allied subjects and life skills.

PEO II: To provide information about the molecular methods which involved in cellular processes of living systems such as microbes to higher order organisms for applied aspects. To address the emerging need for skilled scientific manpower with research ethics involving organisms.

PEO III: To impart the basics and current molecular tools in the areas of Molecular Diagnostics, Fermentation Technology, Plant, Animal & Environmental Biotechnology are included to train the students for man power development and also sensitize them to scope for research. The practical subjects will provide information about the careers in the industry and applied research where biological system is employed.

PEO IV: To make the graduates of Biotechnology to learn and to adopt in a competitive world of technology update and contribute to all forms of life.

MAPPING OF PEOs AND POs

கற்பகம் உயர்கல்வி கலைக்கழகம்
தமிழ்த்துறை
பகுதி - I தமிழ்ப் பாடத்திட்டம் (2015 - 2016)
முதல் பருவம்
(இளநிலை அறிவியல் பட்ட வகுப்புகளுக்குரியது)
(For I-UG Science Degree Classes) 15LSU101

பாடத்திட்டப் பொதுநோக்கம்

- கற்றல் வழி சிந்தனைத் திறனையும், கருத்து வெளிப்பாட்டுத் திறனையும், மேம்படுத்துதல்.
- ஆய்வுநோக்கை மேம்படுத்துதல்.
- இலக்கியங்கள் உணர்த்தும் வாழ்வின் நுட்பமான பகுதிகளை உணர்த்துதல்.
- மனித மனத்தினைப் பக்குவப்படுத்துதலில் இலக்கியம் தரும் பங்கினை உணர்த்துதல்.
- வளர்ந்து வரும் சமூகத்தில் அறஉணர்வு, பண்பாடு போன்றவை குறித்து அறிவூட்டல்.
- அரசுத் தேர்வுகளுக்கு மாணவர்களை ஆயத்தமாக்குதல்.

பாடத்திட்டப் பயன் விளைவு

- இந்திய குடியுரிமைப் பணி முதலான போட்டித் தேர்வுகளில், விருப்பப் பாடமாக இடம்பெறுகின்ற, 'தமிழ் இலக்கிய வரலாறு' குறித்த முழுமையான அறிமுகம் பெற்றிருத்தல்.
- கல்வெட்டியல், ஓலைச்சுவடியியல் மற்றும் தொல்லியல் சார்ந்த ஆவணத் தேடலுக்குரிய ஆய்வுமனப்பான்மையுடன், இலக்கியங்களை அணுகுதல்.
- தமிழின் வளர்ச்சித் துறையாகிய, 'அறிவியல் தமிழ்'; 'இணைய தமிழ்' குறித்த பன்னோக்கு அணுகுமுறையிலான ஆய்வுச் சிந்தனை மேம்பாடு.
- வேலைவாய்ப்புக்குரிய சுயதிறன் மேம்பாட்டுடன், படைப்பாக்கத்திறன் மேம்பாடும் பெற்றிருத்தல்.
- சமுதாய மற்றும் வாழ்வியல் மதிப்புகளைப் பேணுவதற்குக் கருவியாக இலக்கியங்களை நாடுகின்ற மனப்பான்மை வளர்ச்சி.
- மொழிபெயப்புத் துறைசார்ந்த வேலைவாய்ப்புத் திறன் பெற்றிருத்தல்

பகுதி-I, தமிழ்
15LAU101 :

தமிழ் முதல் தாள்

பருவம் I
5-H,5-C

அலகு-I : இக்கால இலக்கியம்

தத்துவம் : மகாகவி பாரதியார் - பகைவனுக்கு அருள்வாய்.
கவிஞர் ந.பிச்சமூர்த்தி - கிளிக்கூண்டு
இயற்கை : பாவேந்தர் பாரதிதாசன் - அழகின் சிரிப்பு - ஞாயிறு.
சமுதாயம் : கவிக்கோ அப்துல் ரகுமான் - இன்றைய நிலை
அறிவியல் : கவிஞர் சிற்பி பாலசுப்பிரமணியன் - காலம்.
பெண்ணியம் : கவிஞர் சிவரமணி - வையகத்தை வெற்றிகொள்ள
குழலியல் : அன்பாதவன் - மரணம்
காதல் : வைரமுத்து - காதல் உயில்
தன்னம்பிக்கை பா.விஜய் - தன்னம்பிக்கை

அலகு-II : அற இலக்கியம்

1. திருக்குறள் - தேர்ந்தெடுக்கப்பட்ட குறள்கள் 20
2. நான்மணிக்கடிகை - தேர்ந்தெடுக்கப்பட்ட ஐந்து பாடல்கள்
3. திரிகடுகம் - தேர்ந்தெடுக்கப்பட்ட ஐந்து பாடல்கள்

அலகு-III : சிற்றிலக்கியம்

1. நரிவிருத்தம் - அறன் வலியுறுத்தல்
2. தமிழ் விடு தூது - தமிழின் சிறப்புரைத்தல்
3. மதுரை மீனாட்சியம்மைப் பிள்ளைத்தமிழ் - தொடுக்கும் கடவுள் பழம்பாடல்

அலகு-IV : சிறுகதை

1. புதுமைப்பித்தன் - நிகும்பலை
2. தனுஷ்கோடி ராமசாமி - கந்தகக் கிடங்கிலே
3. கத்தர்வன் - துண்டு
4. வாஸந்தி - வடிகால்
5. சி.ஆர். ரவீந்திரன் - வழுக்குமரம்

அலகு-V : மொழிப்பயிற்சி

1. விண்ணப்பங்கள் எழுதுதல் மற்றும் கடிதப் பயிற்சி
2. மொழிபெயர்ப்புப் பயிற்சி

பாட நூல்: கற்பகச்சோலை - தமிழ் ஏடு. கற்பகம் பல்கலைக்கழகத் தமிழ்த் துறை வெளியீடு.

Part I TAMIL 2015. Karpagam University, Coimbatore - 21.

Course Objectives

The main objectives of the course are

- To enable the learners to acquire English language skills at a faster pace
- To introduce different kinds of literary works
- To familiarize different genres of Literature
- To instruct moral values through literature
- To improve their productive and receptive skills
- To strengthen the basic knowledge about grammar

Course Outcomes

On successful completion of the course the students will be able to

1. Learn to reflect on the literary works and communicate flexibly.
2. Reading and comprehending literary works
3. Genres of literature to provide moral education
4. Develop communication skills in business environment
5. Interpersonal skills will be developed
6. Betterment of language competence

UNIT I:

Prose: Google Guys (Extract) – Richard L Brandt

Poetry: The Blind Pedlar – Osbert Sitwell

Short Story: A Garden So Rich – Christie Craig

Vocabulary: Prefixes, Antonyms, Sentence Completion

Grammar: Articles, Adverbs, Pronouns

Composition: Proverb Expansion

UNIT II:

Prose: Happiness 101 – Geeta Padmanabhan

Poetry: An Old Woman – Arun Kolatkar

Vocabulary: Suffixes, Analogies

Grammar: Nouns, Adjectives

Composition: Dialogue Writing

UNIT III:

Prose: Structured Procrastination – John Perry

Short Story: The Umbrella Man – Roald Dahl

One-Act Play: The Boy Who Stopped Smiling – Ramu Ramanathan

Vocabulary: Synonyms, Euphemisms, Word Definitions

Grammar: Verbs, Conjunctions and Interjection, Indirect/Reported Speech

UNIT IV:

Poetry: No Sentence – Anjum Hassan

One-Act Play: While the Auto Waits- O' Henry

Vocabulary: Words Often Confused, Anagrams

Grammar: Prepositions, Voice- Active and Passive

Composition: Letter Writing- Informal

UNIT V:

Short Story: The Bird – Amar Jalil

One-Act Play: The Cellphone Epidemic – Claudia I. Haas

Vocabulary: Portmanteau Words, One Word Substitute

Grammar: Questions, Pronunciation

Composition: Letter Writing- Formal

Prescribed Texts

1. Rao, G. Chandralekha and et al. *Spring* 2013. Emerald Publishers: Chennai.

Reference

2. Syamala, V. English for Communication. 2006. Emerald Publishers: Chennai

Course Objectives

The main objectives of the course are

- To know the qualitative and quantitative determination of the biochemical substances
- To study their structure and functions of macromolecules
- To identify the molecular interactions between the atoms and molecules
- To derive the mathematical equations of enzyme kinetics
- To understand the metabolic pathways that occurs in the normal human life
- To elucidate the role of macromolecules for the growth and development of organisms

Course Outcomes

On successful completion of the course the students will be able to

1. Demonstrate and understand the fundamental biochemistry principles, including topics specific to chemistry and biochemistry
2. Acquaint knowledge in understanding the structure/function of biomolecules
3. Explain the metabolic pathways
4. Understand the regulation of biological/biochemical processes
5. Insight into protein structures and folding mechanism
6. Explain the applications of protein engineering in academia and industry

UNIT –I

Introduction: Atoms, molecules, chemical bonds: covalent and non-covalent, Van der Waals, electrostatic and hydrophobic interactions. Chemical foundation of biology: pH, pKa, acids, bases and buffers.

UNIT- II

Carbohydrates: Structure and functions, classification, physical and chemical properties. **Proteins:** Amino acids and peptides Structure and classification of amino acids. Classification and organization of proteins: – primary, secondary, tertiary and quaternary. Structure of peptide bond and its biological significance.

UNIT- III

Lipids: Lipids: Classification, structure and functions. Triglycerides; Phospholipids; Steroids and terpenes. Glycolipids and lipoproteins-structure and function. Role of lipids in biomembranes. **Nucleic acids:** Structure, properties and functions of nucleic acids, DNA, RNA and their types.

UNIT -IV

Enzyme catalysts: Basic principles and factors affecting enzyme activity. Enzyme kinetics – Michaelis – Menten equation. Mechanism of enzyme regulation. Co-enzyme, co-factors, difference between chemical and enzyme catalysis, enzyme inhibition.

UNIT -V

Metabolism: Glycolysis, gluconeogenesis, Tri Carboxylic Acid cycle, electron transport chain and oxidative phosphorylation, photophosphorylation- light reaction, dark reaction. **Hormones:** Structure and function; **Vitamins:** Types, structure and functions.

Course Objectives

The main objectives of the course are

- To acquire skill on various experimental methods and techniques
- To analyze the given protein and sugar samples
- To design biochemical experiments using classical techniques and modern instruments
- To estimate calcium in urine samples
- To analyze the oil sample
- To quantify the lipids in the given sample

Course Outcomes

On successful completion of the course the students will be able to

1. Quantify the amount of sugar in the given sample
2. Quantify the amount of protein in the given sample
3. Perform the analysis of amino acids using paper and thin layer chromatography
4. Determine the iodine number, saponification value and acid number in a given oil sample
5. Gain skills on quantitative estimation methods for various biomolecules from natural sources
6. Prepare casein from milk sample

Experiments

1. Bio instruments – Introduction and demonstration
2. Quantification of sugars (Anthrone method)
3. Quantification of proteins (Lowry *et al* Method)
4. Quantification of total free amino acids
5. Quantification of lipids
6. Analysis of oils- Iodine number, Saponification value and Acid number
7. Quantification of Ascorbic acid
8. Paper Chromatography (Ascending and descending)
9. Thin Layer Chromatography (Amino acids)
10. Estimation of DNA (DPA method)
11. Estimation of RNA (Orcinol method)
12. Spot test for biomolecules
13. Preparation of casein from milk
14. Estimation calcium in urine

Course Objectives**The main objectives of the course are**

- The molecular orbital theory, preparation and properties of inorganic compounds.
- Theory of covalent bond, polar effects and stereochemistry of organic compounds.
- About important industrial chemicals like silicones, fuel gases and fertilizers and their impact on environment.
- Elements of photochemistry, chemical kinetics and chromatography.
- About the dyes, chemotherapy and vitamins.
- To know the principles of Column, Paper and Thin Layer Chromatography.

Course Outcomes**On successful completion of the course the students will be able to**

1. The molecular orbital theory, preparation and properties of inorganic compounds.
2. Theory of covalent bond, polar effects and stereochemistry of organic compounds.
3. About important industrial chemicals like silicones, fuel gases and fertilizers and their impact on environment.
4. Elements of photochemistry, chemical kinetics and chromatography.
5. About the dyes, chemotherapy and vitamins.
6. Principles and applications of Column, Paper and Thin Layer Chromatography.

Unit-I

Chemical Bonding: Molecular orbital theory-linear combination of atomic orbitals-bonding and antibonding molecular orbitals-energy level diagram-bond order- M.O. configuration of H₂, N₂ and F₂ molecules. Diborane: Preparation, properties and structure. NaBH₄: Preparation and uses. Borazole: Preparation and properties. Interhalogen compounds: ICl, BrF₃, IF₅ - preparation, properties, uses and structure. Basic properties of iodine. Compounds of sulphur: Sodium hydrosulphite- preparation, properties, uses and structure. Per acids of sulphur: Preparation, properties, uses and structure.

Unit-II

Industrial Chemistry: Silicones: Synthesis, properties and uses. Fuels gases: Natural gas- water gas-semi water gas-carbureted water gas-producer gas- oil gas (Manufacturing details not required). Fertilizers: NPK fertilizer-ammonium sulphate-urea-superphosphate of lime- triple superphosphate-potassium nitrate-ammonium nitrate. Pollution: Water, air and soil pollution-sources and remedies-acid rain-ozone hole-greenhouse effect.

Unit- III**Covalent Bond and Stereoisomerism:**

Covalent Bond: Orbital overlap, hybridization and geometry of CH₄, C₂H₄ and C₂H₂. Polar effects: Inductive effect-electromeric effect- mesomeric effect- steric effect- hyperconjugation.

Stereoisomerism: Elements of symmetry-polarised light and optical activity-isomerism in tartaric acid-racemisation- resolution- geometrical isomerism of maleic and fumaric acids- keto-enol tautomerism of acetoacetic esters.

Unit- IV

Dyes, Chemotherapy and Vitamins: Dyes: Terms used chromophore, auxochrome, bathochromic shift and hypsochromic shift- classification of dyes – based on chemical structure and application-one example each for azo, triphenylmethane, vat and mordant dyes- preparation. **Chemotherapy:**

Preparation, uses and mechanism of action sulpha drugs- preparation and uses of prontosil, sulphadiazine and sulphafurazole-structure and uses of penicillins and chloromycetin. **Vitamins:** Diseases caused by the deficiency of vitamins A, B1, B2, C and D-sources of these vitamins.

Unit- V

Elements of Photochemistry, Chemical Kinetics and Chromatography: Elements of Photochemistry: Photochemical Laws-Beer Lambert's law-Grotthuss-Draper law-Stark- Einstein law (statement only).

Chemical Kinetics: Rate-order-molecularity-pseudo first order reactions-zero order reactions-determination of order of reaction-measurement of order and rates of reactions- effect of temperature on reaction rate-energy of activation.

Chromatography: Principles and applications of Column, Paper and Thin Layer Chromatography.

Textbooks

Reference Books

1. Gopalan, R. & Sundaram, S. (2003). *Allied Chemistry* (3rd ed.). New Delhi: Sultan Chand & Sons.

Total hours/week: L:0 T:0 P:3**Marks: Internal: 40 External: 60 Total: 100****Course Objectives**

The student should know

- The molecular orbital theory, preparation and properties of inorganic compounds.
- Theory of covalent bond, polar effects and stereochemistry of organic compounds.
- Theory about important Aromatic or aliphatic
- About the preliminary test
- Elements of chemical confirmatory test.
- Understand the concepts of safe laboratory practices.

Course Outcomes

The student understands

1. The molecular orbital theory, preparation and properties of inorganic compounds.
2. Theory of covalent bond, polar effects and stereochemistry of organic compounds.
3. About importance of the preliminary test
4. About the chemical confirmatory test
5. Elements of photochemistry, chemical kinetics.
6. About the safety measures to handle the chemicals in the lab.

Experiments:

Systematic analysis of an organic compound, Preliminary tests, detection of elements present, aromatic or aliphatic, saturated or unsaturated, nature of the functional group, confirmatory tests-aldehyde, ketones, amines, diamide, carbohydrates, phenols, acids, esters & nitro compounds

Note: Each student analyzes minimum 6 compounds

Course Objectives

The main objectives of the course are

- To develop a sense of competitive spirit, co-operation, leadership, diligence, punctuality and team spirit
- To provide a backdrop for the development of their creative talents
- To train the students towards sustainable life style
- To improve the Interpersonal relationship
- To know the importance of family relationship
- To acquire tolerance and truthfulness

Course outcome

On successful completion of the course the students will be able to

1. Acquire knowledge in facing the interviews
2. Acquire knowledge of Time management
3. To know about Goal Setting
4. To know about Spiritualization
5. Able to create awareness about the values and their significance role
6. Imbibe the concept of discipline and freedom

Unit I

Concept of self, self-awareness, self-esteem and self-confidence. Concept of personality, determinants and disorganization of it. Personality development – meaning.

Unit II

Goal Setting – meaning and importance; steps in goal setting manners and etiquette – meaning need and importance; means to improve, Positive thinking.

Unit III

Discipline-meaning, concept of roles and responsibility; Time management – Meaning and steps for effective time management

Unit IV

Interpersonal relationship – meaning and importance; means to improve it. Healthy friendship.

Unit V

Family Relationship importance of it; Means to improve, Spiritualization – meaning. Its relationship with Altruism, sacrifice, self-control, tolerance and truthfulness.

Textbooks:

1. Karpagam University Study Material, 2015

Instruction hours/week: L:1 T:1 P:0

Course Objectives

The main objectives of the course are

- To impart knowledge on both aptitude and soft skills to the students
- To critically evaluate and demonstrate various principles involved in solving mathematical problems
- To adopt new faster methods of calculations.
- To acquire knowledge on coding and decoding
- To get knowledge on the calculation of simple and compound interest
- To develop interpersonal skills

Course outcome

On successful completion of the course the students will be able to

1. Acquire knowledge in facing the interviews
2. Obtain acquaintance of time management
3. Imply new faster methods for calculation
4. Do coding and decoding
5. Calculate profit and loss
6. Improve interpersonal skills

UNIT – I

Introduction to Quantitative Aptitude, Speed Maths, Problems on Numbers, Averages, Ratios and Proportions, Problems on Ages

UNIT – II

Number Series, Blood Relation, Image Analysis, Direction Sense, Syllogism, Coding and Decoding.

UNIT – III

Percentages, Data Interpretation, Profit and Loss, Simple Interest and Compound Interest.

UNIT- IV

Parts of Speech, Tense, Subject Verb Agreement, Active and Passive Voice, Articles, Prepositions

UNIT – V

Conditional Clause, Degrees of Comparison, Goal Setting, Interpersonal Skills.

அலகு - II : சங்கஇலக்கியம்

அ). எட்டுத்தொகை

- நற்றிணை: 1. இலை இல பிடவம், திணை - முல்லை, ஆசிரியர் - விழிக்கட பேதைப் பெருங்கண்ணனார்.
2. மடல் மா ஊர்ந்து, திணை - குறிஞ்சி, ஆசிரியர் - மடல் பாடிய மாதங்கீரனார்.

- குறுந்தொகை: 1. உள்ளார் கொல்லோ, திணை - பாலை, ஆசிரியர் - பெருங்கடுங்கோ.
2. யாரினும் இனியன், திணை - மருதம், ஆசிரியர் - வடமவன்னக்கன் தாமோதரனார்.

- ஐங்குறுநூறு: 1. நுண்ணோர் புகுவத்த, திணை - குறிஞ்சி, ஆசிரியர் - கபிலர்.
2. அவறொறுந் தேரை, திணை - முல்லை, ஆசிரியர் - பேயனார்.

பதிற்றுப்பத்து - ததைந்த காஞ்சி, ஆசிரியர் - பாலைக் கௌதமனார்.

பரிபாடல் - வையை - திரை இரும் பனிப் பெளவம், ஆசிரியர் - மையோடக் கோவனார்.

கலித்தொகை - கடும் புனல் கால் பட்டு, திணை - பாலை, ஆசிரியர் - பெருங்கடுங்கோ.

- அகநானூறு - 1. ஆடு அமைக் குயின்ற, திணை - குறிஞ்சி, ஆசிரியர் - கபிலர்.
2. யான் எவன் செய்கோ தோழி, திணை - பாலை, ஆசிரியர் - நோய்பாடியார்.

புறநானூறு - 1. சிறப்பில் சிதடு முறுப்பில், திணை - பொதுவியல்,

ஆசிரியர் - உறையூர் முதுகண்ணன் சாத்தனார்.

2. இளையரு முதியரும் வேறுபுலம் படா - ஆசிரியர் - கயமனார்.

ஆ). பத்துப்பாட்டு - சிறுபாண் ஆற்றுப்படை - கடையெழு வள்ளல்களின் சிறப்பு.

நல்லியக்கோடனின் சிறப்பு, ஈகைத் திறம்.

அலகு - III : காப்பியங்கள்

1. மணிமேகலை - பாத்திரம் பெற்ற காதை - தீவதிலகை, மணிமேகலைக்குச் சொல்லியது,

சிறைக்கோட்டம் அறக்கோட்டமாகிய காதை - மணிமேகலை வேண்ட,

மாவண்கிள்ளி, சிறைக்கோட்டத்தை அறக்கோட்டமாகியது.

2. கம்பராமாயணம் - இலக்கியநயம் மிக்க, தேர்ந்தெடுக்கப்பெற்ற 41 பாடல்கள்.

அலகு - IV : கட்டுரைகள்

1. திருக்குறளில் மணிதவள மேலாண்மைக் கருத்துக்கள் - திருமிகு ஹரி விஜயலக்ஷ்மி.

2. தமிழர் வளர்த்த நூண்கலைகள்: சிற்பமும் ஓவியமும் - தொ.மு. பாஸ்கரத் தொண்டைமான்.

3. சமயமும் தமிழும் - பேராசிரியர் அ.ச.ஞானசம்பந்தன்.

4. தமிழில் அறிவியல் - ஒரு பார்வை - பேராசிரியர் சிவகுமார்.

5. இன்றைய நெருக்கடிப் பிரச்சனைகள் - நீர்வளம் - முனைவர் ச. முத்துக்குமார்.

அலகு - V : இலக்கணமும் மொழிப்பயிற்சியும்

1. எழுத்து, சொல், பொருள் இலக்கண எழுத்துப்பயிற்சிகள்

2. பொதுக் கட்டுரைகள்

பாட நூல்: கற்பகச்சோலை - தமிழ் ஏடு, கற்பகம் பல்கலைக்கழகத் தமிழ்த் துறை வெளியீடு.

Part I TAMIL 2015. Karpagam University, Coimbatore - 21, India

Course Objectives

The main objectives of the course are

- To acquire English language skills through literature
- To familiarize them with English literature
- To acquire Grammar knowledge
- To imbibe cultural values
- To get skill of making correct sentences
- To reflect originality on the application of soft skills and express in writing their views

Course Outcomes

On successful completion of the course the students will be able to

1. Learn to enjoy the ecstasy of literature
2. The select literary pieces will develop the confidence level of the learners
3. To get the social values
4. To know the importance of communication
5. Get sound knowledge in English
6. Communicate well for business purpose

UNIT I:

Prose: The Unexpected- Robert Lynd

Poetry: The Village Schoolmaster – Oliver Goldsmith

Short Story: The Lion's Share – Arnold Bennett

Vocabulary: Homonyms

Grammar: Irregular Verbs

UNIT II:

Prose: Travel by Train – J. B. Priestly

Poetry: The Gift of India – Sarojini Naidu

Grammar: Sentence patterns

Composition: Reading Comprehension

UNIT III:

Prose: Women's Education is Almost More Important than the Education of Boys and Men – Indira Gandhi

Short Story: The Necklace – Guy De Maupassant

One-Act Play: The Referee – W.H. Andrews and Geoffrey Dearmer

Vocabulary: Similes

Grammar: Discourse Markers

Composition: Report Writing

UNIT IV:

Poetry: Ozymandias – P.B. Shelley

One-Act Play: The Pot of Broth- W.B. Yeats

Vocabulary: Collective Nouns

Grammar: Correction of Sentences

Composition: Picture Reading

UNIT V:

Short Story: The Silver Butterfly– Pearl S. Buck

One-Act Play: The Bear – Anton Chekov

Vocabulary: Acronyms

Grammar: Question Tags

Composition: Drafting Advertisement

Prescribed Texts

Wings of Communication 2014. Board of Directors. Emerald Publishers: Chennai

Reference

Syamala, V. *English for Communication*. 2006. Emerald Publishers: Chennai.

Total hours/week: L:4 T:1 P:0

Marks: Internal: 40 External: 60 Total:100

Course Objectives

The main objectives of the course are

- To inculcate knowledge on fundamentals of microorganisms.
- To learn the structural organization, morphology and reproduction of microbes.
- To know the principles of Microscopy and advancements in Microscopy
- To deal with the study of genetic, metabolic strategies and ecology of microorganisms.
- To learn the basic knowledge of the main microbiological techniques to be applied in the laboratory.
- To develop understanding about microbial metabolism, growth, energy generation and disease caused.

Course Outcomes

On completion of the course, students are able to

1. Gain rigorous knowledge on historical perspective of Microbiology
2. Acquire basic knowledge on different structure of microbes.
3. Get Ideas on different type of microscope.
4. Acquire basic knowledge the different applications of microbiology in biotechnology.
5. Acquire basic knowledge of genetic, metabolic strategies and ecology of microorganisms.
6. Acquire basic knowledge about microbial metabolism, growth, energy generation and disease caused.

UNIT - I

General Microbiology: Definition, history, scope, discovery and development of microorganisms, **Microscopy:** Bright field, dark field, phase contrast, fluorescence and confocal microscopy. Electron Microscope - SEM and TEM.

UNIT –II

Microbiological Techniques: Types of media preparation, methods of sterilization, techniques of pure culture, maintenance and preservation. Staining – types of stains and dyes, staining methods. Microbial growth.

UNIT –III

Microbial Physiology: Microbial growth, growth factors, Impact of environmental factors on growth, nutritional classification of microbes- energy production, oxidation, reduction reactions, aerobic and anaerobic.

UNIT – IV

Microbial Diversity: General structure of microbes-bacteria, viruses, algae, fungi and protozoans – Outline classification of each group and identification. Viruses – Structure, Classification and Replication.

UNIT - V

Microbial Diseases: Causative agent, pathology, diagnosis, control and treatment of Bacterial - TB, Cholera and Typhoid. Protozoan – Amoebiasis and Malaria. Viral - AIDS. Control of microorganisms – drugs, chemotherapy, antimicrobial agents.

Textbooks:

1. Cossart, P, P. Boquet, and S. Normark, 2005. Cellular Microbiology. American Society for Microbiology, New York.
2. Jay, J. M, M. J. Loessner, G. A. David, 2006. Modern Food. VII Edition. Springer Publications, New York.

References:

1. Pelzar, M.J, 2003. Microbiology. Tata McGraw-Hill Publishing Company Ltd, New York.
2. Prescott. L.M, 1996. Microbiology. III Edition, Wm. C. Brown Publishers, London.

Course Objectives**The main objectives of the course are**

- To understand the basic principles of microscopy ultra-structure of microbes along with staining and sterilization methods
- To understand various accessories for microbiology Practicals
- To acquaint the students with various aspects of basic and applied microbiology
- To understand the biochemical characterization of isolated microbes
- To develop practical biological skills such as staining, sterilization etc.
- To develop skills on primary screening of microorganisms

Course Outcomes**On completion of the course, students are able to**

1. Develop basic skill in aseptic techniques
2. Have outline knowledge on isolation, sub culture and maintenance of microbes
3. Gain experience in microbiological laboratory practices and skills in the design and execution of microbiology related research
4. Develop skills to prepare useful medias for microbial growth in the laboratory
5. Use of handling of glass wares, minor equipment for conducting experiments
6. Learn safety and precautionary measures for working with microbes in a laboratory

Experiments

1. Sterilization, Disinfection, and Antisepsis
2. Culturing and Preserving Microorganisms
3. Media preparation (Liquid, solid and semi-solid)
4. Isolation of organisms from soil, water and air
5. Pure culture technique – Pour plate, streak plate and Spread plate method
6. Staining technique - Simple staining, Gram's staining, Flagella staining Endospore staining, Lacto phenol cotton blue.
7. Biochemical analysis – IMVIC, Urease, Carbohydrate fermentation, TSI
8. Measurement of growth rate of bacteria
9. Plaque Assay for Bacteriophage
10. Motility – Hanging drop, Soft agar analysis

Texts

1. Bharucha, F.D. and A.I. Mehta, 2000. Handbook of Microbiological Methods and Media. Sevak Printers, Mumbai.
2. Cappuccino, J.G. and N. Sherman, 2004. Microbiology-A Lab Manual. Pearson Education, Singapore.

References

1. Dubey, R.B. and E. Maheswari, 2004. Practical Microbiology. S. Chand and Co. Publishers, New Delhi.
2. Goldman, E. and H. G. Lorrence, 2008. Practical Handbook of Microbiology. II Edition, CRC press, London.

Course Objectives

- To make the student to be conversant with the extraction of metals, coordination chemistry, preparation, properties uses and structure of naphthalene and heterocyclic compounds.
- To make the student acquire sound knowledge of electrochemistry, biological functions of amino acids and proteins.
- To educate students on chemistry of carboxylic acids, nitro compounds and carbohydrates.
- To impart basic understanding on Thermodynamics
- To educate students on topics Electrochemistry
- To educate on thermodynamic laws, entropy, enthalpy change and the principles of electroplating.

Course Outcomes

1. The students will be able to understand the metallurgy of metals and the theories of coordination compounds and the industrial importance of EDTA, haemoglobin and chlorophyll.
2. The students will be able to understand the concept of aromaticity and preparation of aromatic compounds including heterocyclic compounds.
3. The students will be able to understand the preparation, classifications and properties of amino acids, proteins and carbohydrates.
4. The students will be able to understand the concepts of first and second laws of thermodynamics.
5. The students will be able to understand the fundamentals of electrochemistry.
6. To expose students on radical analysis in inorganic mixtures; Determination of surface tension and viscosity of liquids.

Unit-I - Metals and Coordination Chemistry:

Metals: General methods of extraction of metals-method of ore dressing-types of furnaces-reduction methods-electrical methods-types of refining- Van Arkel process – zone refining.

Coordination Chemistry: Nomenclature – theories of Werner, Sidgwick and Pauling – chelation and its industrial importance -EDTA- haemoglobin – chlorophyll- applications in qualitative and quantitative analysis.

Unit-II - Aromatic Compounds and Heterocyclic Compounds:

Aromatic Compounds: Aromaticity – Huckel's $(4n+2)$ rule- aromatic electrophilic substitution in benzene- mechanism of nitration, halogenation, alkylation, acylation and sulphonation.

Naphthalene: Isolation, preparation, properties and structure.

Heterocyclic Compounds: Preparation and properties of pyrrole, furan, thiophene and pyridine.

Unit- III - Amino acids, Proteins and Carbohydrates:

Amino acids: Classification, preparation and properties. Peptides-preparation of peptides (Bergmann method only).

Proteins: Classification, properties, biological functions and structure.

Carbohydrates: Classification, preparation and properties of glucose and fructose -discussion of open chain and ring structures of glucose and fructose-glucose-fructose interconversion.

Unit- IV

Energetics: Type of systems- processes and their types – isothermal, adiabatic, reversible, irreversible and spontaneous processes- statement of first law of thermodynamics – need for the second law of thermodynamics- heat engine- Carnot cycle- efficiency – Carnot theorem- thermodynamics scale of temperature- Joule – Thomson effect- Enthalpy – Entropy and its significance- Free energy change.

Unit- V

Electrochemistry: Kohlrausch law- conductometric titrations- hydrolysis of salts- galvanic cells- EMF- standard electrode potentials- reference electrodes- electrochemical series and its applications- buffer solution- buffer solution in the biological systems -pH and its determination – principles of electroplating.

Textbooks

1. Veeraiyan, V., & Vasudevan, A.N.S. (2005). *Text Book of Allied Chemistry* (2nd ed.). Chennai: Highmount Publishing House.
2. Puri, B.R., & Sharma L.R. (2002). *Principles of Inorganic Chemistry*. Jalandar: Shoban lal & Company Ltd.
3. Bahl, B.S., & Arun Bahl, (2005). *Advanced Organic Chemistry*. New Delhi: S.Chand & Company Ltd.
4. Puri, Sharma & Pathania, (2003). *Physical Chemistry*. Jalandhar: Vishal Publishing Company Ltd.

Reference Books

1. Gopalan, R. & Sundaram, S. (2003). *Allied Chemistry* (3rd ed.). New Delhi: Sultan Chand & Sons.

Course Objectives

- The student on successful completion of the course should learn the principles of volumetric analysis
- To estimate the compounds by acidimetry, alkalimetry and permanganometry.
- Experimental practice of quantitative volumetric analysis.
- The objective of the titration is the determination of the concentration or the mass of the minimum formula from the titrated chemical material composing a pure liquid or a solution.
- The main objective of volumetric analysis is to determine the amount of a substance in a given sample.
- When dealing with volumetric analysis the concept of concentration cannot be avoided. Molarity i.e. moles per litre or decimeter is widely used unit of concentration.

Course Outcomes

1. Student will be able to learn the principles of quantitative analysis of inorganic compounds.
2. Student will be able to learn the estimation of sample present in a solution by volumetric analysis
3. Understand the concepts of quantitative analysis
4. Recognize the indicators, acid and bases used in volumetric analysis
5. Estimate the amount of substance present in a given solution
6. Utilize the mathematical skills doing calculations

Contents**VOLUMETRIC ANALYSIS****A. Acidimetry & Alkalimetry**

1. Estimation of sodium carbonate using standard sodium hydroxide.
2. Estimation of sodium hydroxide using standard sodium carbonate.
3. Estimation of sulphuric acid using standard oxalic acid.
4. Estimation of potassium permanganate using standard sodium hydroxide.

B. Permanganometry

1. Estimation of ferrous sulphate using standard Mohr's salt.
2. Estimation of oxalic acid using standard ferrous sulphate.
3. Estimation of calcium-direct method.

Reference Books

1. Ramasamy, R. (2008). *Allied Chemistry Practical Book*. Karur: Priya Publications.
2. Thomas, A.O. (2010). *Practical Chemistry for B.Sc. Main Students*. Cannanore: Kerala, Scientific Book Centre.
3. Venkateswaran, V., Veeraswamy, R., & Kulandaivelu, A. R. (2004). *Basic Principles of Practical Chemistry* (2nd ed.). New Delhi: S. Chand Publications.

Course Objectives**The main objectives of the course are**

- To study the definition and components of ecosystem
- To get knowledge on the classification of ecosystem
- To know about biodiversity and threats to biodiversity
- To gain adequate information about rain water harvesting and its importance
- To acquire knowledge on Environmental Protection Act
- To recognize Resettlement and Rehabilitation

Course Outcomes**On completion of the course, students are able to**

1. Explain the components of ecosystem
2. Describe the biodiversity and point out the biodiversity hot spots
3. Designate the threats to biodiversity
4. List out the effects of environmental pollution
5. Elucidate the solid waste management
6. Explicate the poaching of wildlife

Unit - I:

Eco system and natural resources: Environment - Definition – components – Ecosystem - Definition, Concept, Scope, importance, structure and functions of ecosystem. Energy flow, Ecological succession. Food chains and food webs. Classification of ecosystem. Natural resources: Forest resources; water resources.

Unit - II:

Environmental pollution: Cause, effects and control measures of Air pollution, water pollution, soil pollution, marine pollution, noise pollution, thermal pollution and nuclear hazards pollution. Solid waste management.

Unit - III:

Biodiversity and its conservation: Introduction - Definition, genetic, species and ecosystem diversity, biogeographical classification of India- Value of biodiversity: Consumptive, productive uses; social, ethical, aesthetic and option values. Threats to biodiversity: habitat loss, poaching of wildlife, man-wildlife conflicts.

Unit - IV:

Social issues and the environment: Urban problems related to energy - water conservation and management - Rainwater harvesting- water shed management. Resettlement and Rehabilitation. Natural resources and associated problems and sustainable utilization. Environmental Education.

Unit - V:

Environment ethics: Environmental Ethics - Gender equity, ethical basis of environment education and awareness, conservation ethic and traditional value systems of India. Valuing nature, cultures, social justice, Human heritage, equitable use of resources, preserving resources for future generation, common property resources, Ecology and its uses and its degradation, Introduction to Environmental Protection Act (EPA).

Course Objectives**The main objectives of the course are**

- To impart knowledge on both aptitude and soft skills to the students
- To critically evaluate and demonstrate various principles involved in solving mathematical problems
- To adopt new faster methods of calculations.
- To acquire knowledge on coding and decoding
- To get knowledge on the calculation of simple and compound interest
- To develop interpersonal skills

Course outcome**On successful completion of the course the students will be able to**

7. Acquire knowledge in facing the interviews
8. Obtain acquaintance of time management
9. Imply new faster methods for calculation
10. Do coding and decoding
11. Calculate profit and loss
12. Improve interpersonal skills

UNIT – I

Introduction to Quantitative Aptitude, Speed Maths, Problems on Numbers, Averages, Ratios and Proportions, Problems on Ages

UNIT – II

Number Series, Blood Relation, Image Analysis, Direction Sense, Syllogism, Coding and Decoding.

UNIT – III

Percentages, Data Interpretation, Profit and Loss, Simple Interest and Compound Interest.

UNIT- IV

Parts of Speech, Tense, Subject Verb Agreement, Active and Passive Voice, Articles, Prepositions

UNIT – V

Conditional Clause, Degrees of Comparison, Goal Setting, Interpersonal Skills.

Course Objectives

The main objectives of the course are

- To develop confidence to respond in English during situations where the use of English is imperative
- To grow fluency in actual conversation in the English language
- To develop speech skills necessary for confident and intelligent participations in Group discussions
- To develop knowledge about business communication
- To improve the hearing skills
- To enhance the reading skills
- To sequence the sentence appropriately

Course Outcomes

On completion of the course, students are able to

1. Explain the basics and purposes of listening skill
2. Understand the importance of speaking
3. Students developed the speaking skills on telephone, business and also in travel
4. Implement an effective vocabulary learning strategy
5. Make an effective communication
6. Translating short sentences and passages

UNIT I

Listening: Listening comprehension – Listening for Specific Information –Note Taking – Interpreting Charts and Diagrams.

UNIT II

Speaking: Essentials of effective communication – Greeting and Introducing – Making requests – Asking for permission – Giving and Denying Permission – Offering and Accepting Help – Asking for and Declining Help – Giving Instructions and Orders - Talking about likes and dislikes.

Telephone Skills – Understanding telephone conversation – handling calls – leaving messages –making requests - giving instructions and orders

Discussion Skills – Giving your opinion – agreeing and disagreeing – Making suggestions – Interrupting – questioning – reporting – Dealing with questions.
(Completing dialogues)

UNIT III

Reading: Reading – Reading with a purpose –Skimming and Scanning – locating main points – reading critically – Sequencing of sentences – Reading comprehension.

UNIT IV

Writing: Paragraph Writing – Descriptive and Narrative. Safety Instructions/ Suggestions. Expansion of Abbreviations – Spellings- Report writing.

Translation- Translating short sentences and passages from English to Tamil and from Tamil to English.

UNIT V

Vocabulary: Improve English vocabulary: Synonyms – Antonyms – Prefixes – Suffixes – Idioms – Collocations – Different types of English – British and American (Choose the best answer type from a database of 50 words each for each topic).

Functional Grammar: Forming questions, getting answers – Articles – Parts of Speech – Punctuation – Common mistakes in English (Homophones) (Exercise based)

Reference Books

1. Language in Use: Kenneth Anderson, Cambridge University Press.
2. Study Speaking: A course in Spoken English for Academic Purpose: Kenneth Anderson, Joan MacLean and Tony Lynch, Cambridge University Press, 2008.
3. Spoken English Part I & II (for Tamil speakers), Orient Longman Pvt. Ltd.
4. Dr. J. John Love Joy, Dr. Francis M. Peter S.J. "Let's Communicate – Basic English for Everyone", Vaigarai Publications, 1st edition, Dindigul 2007.

Course Objectives**The main objectives of the course are**

- To study the bio-analytical tools and their applications
- To have sufficient knowledge on the separation of compounds from a mixture
- To recognize the working principle and instrumentation of spectrometer
- To understand the procedure for handling the instruments
- To study the applications of centrifugation
- To understand the gel documentation and application

Course Outcomes**On completion of the course, students are able to**

1. Know the working principle, maintenance, and calibrations of bioanalytical tools and technique
2. Estimate the number of biomolecules using the Bioanalytical tool
3. Implement the bioanalytical techniques to analyze the biomolecules
4. Explain the working principle of spectrophotometer
5. Appreciate the applications of the gel documentation
6. Acquaint knowledge on the results interpretations

UNIT – I

Analytical Devices: Triple beam – analytical and semi microbalance. pH meter: pH scale, methods of calculating pH from Henderson's equation. Types of electrode, measurement of pH, pH indicators. Conductivity meter: Principles, instrumentation and application.

UNIT – II

Colorimetry: Colour and absorption spectra, Beer's law and Lambert's law, principles, Instrumentation and applications. Spectrophotometry: component of the instrument, single beam, double beam, UV-visible spectrophotometer-Principle and instrumentation and application. Fluorimetry-Principle, Instrumentation and application.

UNIT – III

Centrifugation: Principles, types, analytical and preparative, density gradient and ultra centrifugation-instrument and applications- fractionation of cellular components.

UNIT – IV

Chromatography: Paper, TLC, HPTLC -Principles, instrumentation and applications. Column and ion exchange chromatography, GC and HPLC.

UNIT – V

Electrophoresis: Principles, instrumentation and application of agarose gel electrophoresis, native SDS-PAGE, Isoelectric focusing and immunoelectrophoresis. Gel documentation and application.

Textbooks

1. Holme, DJ. and Hazelpack, K, 1998. Analytical Biochemistry. III edition, Longman Publications, London.
2. Boyer.R, 2000. Modern Experimental Biochemistry, III Edition, Addison Wesley Longman, New Delhi.

References

1. David Friedfelder, 2001. Molecular Biology, V Edition Oxford Publishers, New York.
2. Keith Wilson and John Walker, 2006. Principles and Techniques of Biochemistry and Molecular Biology, VIth Edition, Cambridge University Press, India.
3. Switzer, R and Garritty.L, 1999. Experiment Biochemistry. III edition, W.H. Freeman and Company Publishers, New York.

Course Objectives

The main objectives of the course are

- To enable students to learn the basic structure of cells
- To know the structural organization of plasma membrane
- To understand the concept of cell signaling and signal transduction
- To emphasize the basic knowledge about genetic code and its concept
- To obtain the adequate knowledge on the structure and functions of biomolecules
- To gain the information about the DNA damage and repair mechanisms

Course Outcomes

The learners will be able to

1. Appreciate the unique features of plant and animal cells
2. Gain knowledge on the organization of the plasma membrane
3. Acquire knowledge about the concepts of genetic code
4. Achieve knowledge about the functions of nucleic acids and proteins
5. Obtain an in-depth knowledge on the structural organization of biomolecules
6. Explain about mutations and its types

UNIT – I

Cellular Organization: Cell theory, Classification cell types- Prokaryotic and Eukaryotic cells, structure and organization- plant and animal cell. Various types of cell division. Chromosome biology – histone and non-histone proteins, Recombination in models- Homologous and site-specific recombination.

UNIT – II

Membrane models, Composition, structure and functions of plasma membrane- functions: electrochemical gradients and action potentials, pumps, channels. transport of nutrients, ions –Active and passive. Cell signaling and Signal transduction.

UNIT – III

Genetic Material: DNA as genetic material, structure of Nucleic acids –DNA, supercoils, RNA- types – tRNA, mRNA, rRNA and Sn RNA, Genetic code and its concept, Anatomy of a gene, DNA replication and its models, DNA binding protein.

UNIT – IV

Protein synthesis: Control sequence- Promoter, operator, terminator, enhancers, silencers and attenuation, Transcription and translation. Operon concept- regulatory genes and structural, Lactose, tryptophan.

UNIT – V

DNA damage and repairs mechanisms: Types, Mutation and its types, Mutagens-Physical and chemical. Transposon and retrotransposon.

Textbooks

1. Lehninger and Nelson Cox. 1993. Principles of Biochemistry. CBS Publishers, New Delhi.
2. Bruce Alberts, D. Bray, J. Lewis, M. Raff, Roberts and J.D. Watson, 1994. Molecular Cell Biology, II Edition, Garland Publishing Inc., New York.

References

1. Gerald Karp, 2005. Cell and Molecular Biology- Concepts and Experiments, IV Edition, Wiley International Edition, New York.
2. Sambrook, J, E.F. Fritsch and T. Maniatis, 2000. Molecular Cloning, a Laboratory Manual, Cold Spring Harbor Laboratory Press, New York.
3. Watson, J.D, N.H. Hopkins, J.W. Roberts, J. Steitz and A.M. Weiner, 1987. Molecular Biology of Gene. IV Edition, The Benjamin Cummings Publishers Inc., California.

Course Objectives

The main objectives of the course are,

- To inculcate practical skill in handling Microscope
- To develop skills on identification of cells in plant and animal sources
- To detect the chromosomal aberration
- To analyze the membrane components
- To learn what are the solutions required for cell and molecular biology experiments and how to prepare it
- To understand the principles and applications of cell and molecular biology

Course Outcomes

The learners will be able to

1. Perform the experiments for isolation, purification and visualize the nucleic acid from various sources
2. Acquire skills on microtomy
3. Gain basic knowledge on sex chromatin
4. Know the protocol for fractionation of cellular components
5. To perform the chromosomal aberration experiment
6. Know how they control cellular activity and they respond to environment

Experiments

1. Identification of plant and animal cell types
2. Identification of microbial cell types
3. Fractionation of cellular components (Chloroplast, Mitochondria)
4. Cell membrane, separation and analysis of membrane components
5. Cell permeability
6. Chromosomal aberration (Onion root)
7. Microtomy
8. Preparation of sex chromatin
9. Mitotic preparation from onion root tip
10. Salivary gland chromosomes of *Chironomous* larvae

Textbooks

1. Nigam, A. and A. Ayyagari, 2007. Lab Manual in Biochemistry, Immunology and Biotechnology. Tata McGraw Hill Publishing Company Private Ltd., India
2. Dealtry, G.B. and Rickwood, D, 1992. Cell Biology. LAB FAX. Bio Scientific Publishers, India.

References

1. Sambrook, J, E.F. Fritsch and T. Maniatis, 2000. Molecular Cloning, a Laboratory Manual, Cold Spring Harbor Laboratory Press, New York.
2. Watson, J.D, N.H. Hopkins, J.W. Roberts, J. Steitz and A.M. Weiner, 1987. Molecular Biology of Gene. IV Edition, The Benjamin Cummings Publishers Inc., California.

Course Objectives

The main objectives of the course are

- To know the scope of biostatistics
- To learn the knowledge about graphical and diagrammatic representation of Statistical data
- To gain adequate knowledge about the applications of biostatistics
- To learn the knowledge about collection, processing and presentation of data and testing of hypothesis
- To learn the knowledge about measures of central tendency, measures of dispersion
- To learn the knowledge about correlation analysis and regression analysis

Course Outcomes

On completion of the course, students are able to

1. Apply the statistical tool knowledge for research data analysis
2. Understand the concept of various hypothesis regarding data analysis
3. To perform analysis for the data based on graphical representation (Bar, multiple bars, histogram, pie chart etc.)
4. To perform analysis to determine the mean, median, mode and standard deviation of given sample/data
5. To perform analysis, determine the probability of given sample/data
6. To perform the t-test/F-Test and Chi-square test of given data

UNIT – I

Definitions – Scope of Biostatistics – Variables in Biology, collection, classification and tabulation of data – Graphical and diagrammatic representation.

UNIT – II

Measures of Central tendency – Arithmetic mean, median and mode. Measures of dispersion – Range, standard deviation, Coefficient of variation.

UNIT – III

Correlation – Meaning and definition – Scatter diagram – Karl Pearson's correlation coefficient. Rank correlation.

UNIT – IV

Regression: Regression in two variables – Regression coefficient problems – uses of regression.

UNIT – V

Test of significance: test based on means only: Both Large sample and Small sample tests- Chi square test- goodness of fit.

Course Objectives

The main objectives of the course are

- To gain mathematical approach for analyzing the data.
- To learn the knowledge about graphical and diagrammatic representation of Statistical data.
- To learn the knowledge about Scope and applications of biostatistics
- To learn the knowledge about collection, processing and presentation of data and Testing of hypothesis
- To learn the knowledge about Measures of central tendency, Measures of dispersion
- To learn the knowledge about Correlation analysis and regression analysis

Course Outcomes

On completion of the course, students are able to

1. Apply the statistical tool knowledge for research data analysis.
2. Understand the concept of various hypothesis regarding data analysis.
3. To perform analysis for the data based on graphical representation (Bar, multiple bars, histogram, pie chart etc.)
4. To perform analysis to determine the mean, median, mode by SPSS package
5. To perform analysis, determine the probability of given sample/data
6. To perform Karl Pearson's Correlation of given data

PRACTICAL

1. Mean for individual, discrete series using SPSS Package.
2. Mean for continuous series using SPSS Package.
3. Median for individual and discrete series using SPSS Package.
4. Median for continuous series using SPSS Package.
5. Mode for individual and discrete series using SPSS Package.
6. Standard deviation for individual and discrete series using SPSS Package.
7. Coefficient of variation for individual and discrete series using SPSS Package
8. Karl Pearson's Correlation using SPSS Package.
9. Rank Correlation Coefficient for United Rank using SPSS Package
10. Rank Correlation Coefficient for Tied Rank using SPSS Package.

2. Gupta S.P., 2001, Statistical methods, Sultan Chand & Sons, New Delhi.

Course Objectives

The main objectives of the course are

- To inculcate knowledge on fundamentals of microorganisms
- To learn the structural organization, morphology and reproduction of microbes
- To know the principles of Microscopy and advancements in Microscopy
- To deal with the study of genetic, metabolic strategies and ecology of microorganisms
- To learn the basic knowledge of the main microbiological techniques to be applied in the laboratory
- To develop understanding about microbial metabolism, growth, energy generation and disease caused

Course Outcomes

On completion of the course, students are able to

1. Gain rigorous knowledge on historical perspective of Microbiology
2. Acquire basic knowledge on different structure of microbes
3. Get Ideas on different type of microscope
4. Acquire basic knowledge the different applications of microbiology in biotechnology
5. Acquire basic knowledge of genetic, metabolic strategies and ecology of microorganisms
6. Acquire basic knowledge about microbial metabolism, growth, energy generation and disease caused

UNIT – I

Scope of clinical Microbiology- Safety precautions in laboratory – Aseptic collections – transportation – handling of pathological specimens (blood, urine, sputum, pus and stool)- Antibiotic susceptibility testing (Kirby Bauer method).

UNIT – II

Definitions of pathogens, saprophytes and commensals – Infection- Sources and methods – Infectious disease cycle – Definitions of Endemics, Epidemics and Pandemics- Investigation of epidemics and its control.

UNIT – III

Gram Positive bacteria: Morphology, cultural characteristics, pathogenecity and laboratory diagnosis. *Staphylococcus aureus*, *Streptococcus pyogenes*, *Bacillus anthracis*, *Corynebacterium diphtheriae*.

UNIT – IV

Gram negative bacteria: Morphology, cultural characteristics, pathogenecity, and laboratory diagnosis, *E. Coli*, *Klebsiella pneumonia*, *Proteus vulgaris*, *Pseudomonas aeruginosa*, *Vibrio cholera*.

UNIT – V

Normal microbial flora of the human body (skin, intestinal tract, genitourinary tract and respiratory tract) – Vaccines and Antibiotics.

Course Objectives

The main objectives of the course are

- To understand the basic principles of Analysis of Blood grouping
- To understand various accessories for clinical microbiology practical
- To acquaint the students with various aspects of analysis of Rh typing
- To learn the techniques of antibiotic sensitivity assessment
- To develop practical skills to perform WIDAL test

Course Outcomes

On completion of the course, students are able to

1. Develop basic skill in aseptic techniques
2. Perform blood grouping and Rh typing
3. Carry out antibiotic sensitivity test
4. Do WIDAL test
5. Learn safety and precautionary measures for working with microbes in a laboratory
6. Accomplish the processing of urine and csf

Practical

- Analysis of Blood grouping and Rh typing
- Collection and processing of sputum and stool
- Collection and processing of urine and csf
- Performance of WIDAL – slide and tube test
- Preparation of antibiotic disc.
- Antibiotic sensitivity testing – disc diffusion method
- Antibiotic sensitivity testing – well diffusion method

Course Objectives

The main objectives of the course are

- To gain mathematical approach for analyzing the data
- To learn the knowledge about matrix Algebra
- To learn the knowledge about differential calculus
- To learn the knowledge about Integral calculus
- To learn the knowledge about probability theory
- To learn the knowledge about theoretical distribution

Course Outcomes

On completion of the course, students are able to

1. Apply the algebra for research data analysis
2. Understand the concept of Differential Calculus
3. Perform Integral Calculus
4. Perform analysis based on Probability theory
5. Perform analysis on the theoretical distribution
6. Perform analysis on First and Second order derivatives

UNIT- I

Matrix Algebra: Addition - Subtraction - Multiplication - Transpose – Inverse of a matrix- Solving Simultaneous Linear equations by matrix method.

UNIT- II

Differential Calculus: Meaning of derivatives - Simple Differentiation of Algebraic, Exponential, Logarithmic functions - Evaluation of First and Second order derivatives- Maxima and Minima of functions.

UNIT- III

Integral Calculus: Definite and Indefinite integrals - Methods of Integration - Integration by substitution - Integration by parts.

UNIT-IV

Probability theory: Axioms of Probability-Addition theorem - Multiplication theorem- conditional Probability - Baye's theorem.

UNIT- V

Theoretical Distribution: Basic Concepts - Binomial distribution, Poisson Distribution & Normal distribution (No derivations) and simple problems.

Course Objectives

The main objectives of the course are

- To understand the basic characteristics of Computers
- To understand classification and development of Computers
- To acquaint the students with various aspects of MS Office
- To understand the working principles of MS Word
- To develop practical skills of MS PowerPoint
- To develop skills on MS Excel

Course Outcomes

On completion of the course, students are able to

1. Develop basic skill in basics of operating in system
2. Have outline knowledge on development of Computers
3. Gain experience in practicing MS Office
4. Develop skills to prepare MS PowerPoint presentations
5. Use of handling of computers
6. Learn safety and precautionary measures while working with computers

Unit-I

Introduction- Characteristics of computers- development of computers- generations of computers- classification of computers - the computer system- types of Input / Output and memory devices-computer software-categories of software.

Unit-II

Starting with MS Office Word - Working with Text - working with tables-Checking spelling and grammar- adding graphics to document- Mail merge- printing a document - Advanced features of MS Office Word- Keyboard shortcuts.

Unit III

Starting with MS Office Excel- Working with Excel workbook-working with worksheet-formulas and functions-inserting charts-sorting-importing data-printing in excel- Advanced features of MS Office Excel.

Unit IV

Starting with MS Office PowerPoint - Working with PowerPoint- Working with different views-Designing Presentations- Slide Show. - Printing in PowerPoint.

Unit-V

The Internet - Evolution of Internet - Owner of Internet - Anatomy of Internet - Internet Terminology- Getting Connected to Internet- Web Brower- Electronic Mail- Search engines- Uses of internet to society.

Textbook:

1. Fundamentals of Computers: For Undergraduate Courses in Commerce and Management, ITL Education Solutions.2011. Pearson, New Delhi.

15SSD401

SOFT SKILL DEVELOPMENT - II

2H – 1C

Total hours/week: L:1 T:1 P:0

Course Objectives**The main objectives of the course are**

- To impart knowledge on both aptitude and soft skills to the students
- To critically evaluate and demonstrate Time, Speed and Distance
- To adopt new faster methods of Data Sufficiency
- To acquire knowledge on Synonyms, Antonyms, Verbal Analogy
- To get knowledge on Resume Writing, Introduction to HR rounds
- To develop interpersonal skills

Course outcome**On successful completion of the course the students will be able to**

1. Acquire knowledge in facing the interviews
2. Obtain acquaintance of time management
3. Imply new faster methods for calculating data sufficiency
4. Do Verbal Analogy
5. Perform best resume writing
6. Improve interpersonal skills

UNIT-I

Time, Speed and Distance, Time and Work, Pipes and Cisterns, Geometry, Data Arrangement

UNIT-II

Analogy, Logic based Venn diagram, Probability, Permutation and Combination, Logarithms

UNIT-III

Data Sufficiency, Clocks, Calendar, Reading Comprehension, Sentence Correction, Sentence Completion, Spotting the Errors, Jumbled Sentences

UNIT-IV

Synonyms, Antonyms, Verbal Analogy, Statements and Assumptions, Group Discussion

UNIT – V

Resume Writing, Introduction to HR rounds, Time Management, Attitude and Behavior

Course Objectives

The main objectives of the course are

- To train the students in understanding the concepts of communication
- To be familiar with the four basic skills of English
- To train students in developing their written communication
- To train students in developing their presentation skills
- To acquire the skill of making grammatically correct sentences
- To reflect originality on the application of soft skill views and express in writing their views

Course Outcome

On successful completion of the course the students will be able to

1. Students have acquired proficiency in communication
2. Students have become adept in written communication and presentation skills
3. Developed the skill of writing in English and that of public speaking
4. Establish and maintain social relationships
5. Develop communication skills in business environment
6. Enhanced communication competency through LSRW skills

UNIT I – Concept of Communication – Barrier to Communication –Body language – Personality Development – Etiquette and Manners- Soft Skills – Emotional Intelligence

UNIT II – Listening Comprehension – Reading Comprehension – Paragraph writing – Precis Writing – Writing Resume and Covering Letter -Speaking – Welcome Address, Vote of Thanks, Compering, Debates, Role Play, Dialogues – Vocal Communication Techniques. Voice, Quality, Volume, Pitch

UNIT III – Dicto Composition – Letter Writing (Informal, Letters to the Editor etc) – Term paper – Book reviews

UNIT IV – Business Correspondence – Layout of Business Letter – Formal Styles of Business Letters – Letters of Acceptance, Appointment, Resignation, Complaint, Sending E-mails.

UNIT V – Effective Presentation – Planning – Audience Analysis –Logical Sequencing – Timing of the Presentation – Conclusion – Answering Queries – Group Discussion – Interview.

3. Mohan, Krishna and Meenakshi Raman.2008, Effective English Communication, Tata McGraw Hill: New Delhi.
4. Selley, John. Oxford Guide to Effective Writing and Speaking. 2005. OUP: New Delhi.

Course Objectives

The main objectives of the course are

- To deliver the basic concepts of heredity in different living organisms
- To gain the information about the level of genome organization in various living organisms
- To obtain the knowledge about transmission of genetic information across generation at the individual and population level
- To understand how to identify and classify mutations in DNA
- To relate the structure and function of the DNA molecule to its functional role in encoding genetic material
- To describe the basic aspects of the flow of genetic information

Course Outcomes

On successful completion of the course the students will be able to

1. Acquire knowledge about the central theories and methodologies traditional, molecular and population genetics
2. Acquire information on sex- linked inheritance and associated diseases
3. Understand the role of genetics in breeding and natural selection
4. Apply the principles of inheritance as formulated by Mendel
5. Apply the Chromosome Mapping
6. Acquire knowledge about the relationship between genetic, physical, and cytogenetic maps

UNIT - I

Science of Genetics – Introduction, Scope and history of Genetics, Mendelian genetics: Mendel's principles - Laws of Segregation, independent assortment, applications of Mendel's principles.

UNIT- II

Non-Mendelian genetics- Incomplete dominance, over-dominance and co-dominance. Cytoplasmic inheritance, extranuclear inheritance (mitochondrial, chloroplast), non-chromosomal inheritance, maternal inheritance, uniparental inheritance, Chromosomal variation in Number & Structure, Chromosomal Mosaics, Polytenic chromosomes.

UNIT - III

Linkage and Crossing over: Chromosome theory of Linkage, kinds of linkage, linkage groups, types of Crossing over, mechanism of Meiotic Crossing over, kinds of Crossing over, theories about the mechanism of Crossing over, cytological detection of Crossing over, significance of Crossing over.

UNIT - IV

Chromosome Mapping: Haploid mapping (2 point & 3-point cross), Diploid mapping (Tetrad analysis), determination of linkage groups, determination of map distance, determination of gene order, cytological mapping.

UNIT - V

Human Cyto-Genetics: Human karyotype, Banding techniques, classification, use of Human Cyto-genetics in Medical science, Chromosomal abnormalities in spontaneous abortions, viable monosomies & trisomies, chromosomal deletions & duplications, genetics of chromosomal inversions & translocations, human traits, Genomic position effects on Gene expression.

Textbooks

2. Friedfielter, D, 2007. Molecular Biology. Narosa Publishing House, New Delhi.
3. Gardner, G, 2001. Principles of Genetics. John Wiley and Sons Inc, New York.

References

1. Louise, G, 2004. Genetic Engineering. Gale Group Farmington Hills, New York.
2. Leland, H, 2008. Genetics: From Genes to Genomes. McGraw-Hill, New York
3. Lewin, B, 2004. Genes VIII. Pearson Education Inc., New Jersey.

Course Objectives**The main objectives of the course are**

- To understand the basic concepts of immunology
- To expose students to use these principles of immune system to combat infections
- To gain the information about the auto immune diseases
- To identify the cellular and molecular basis of immune responsiveness
- To describe the roles of the immune system in both maintaining health and contributing to disease
- To demonstrate a capacity for problem-solving about immune responsiveness

Course Outcomes**On successful completion of the course the students will be able to**

1. Gain about the various cells and organs involved in the immune system
2. Understand the molecular mechanisms of antigen-antibody interactions
3. And also, the molecular mechanisms behind the immune response evoked after infection by various pathogens
4. Learn the theoretical basis for the various immunological techniques
5. Apply immunological laboratory techniques to understand principles of antigen-antibody reaction
6. Use different immunological test to study the immune effector function and immune development

UNIT - I

Introduction: Historical background & Biological aspects of Immunology, Self and non-self recognition, specificity, memory of immune system. Primary & Secondary lymphoid organs: Thymus, Bone marrow, Lymph nodes, Spleen & MALT.

UNIT - II

Antigens: Essential features of Ag, haptens, Carrier molecule, Immunological valence, Antigenic determinants. Adjuvants: Freund's complete and incomplete.

Antibodies: Nature, Primary structure of immunoglobulins; Classification of Ig: Types – IgG (G1, G2, G3 & G4), IgM, IgA, IgD and IgE (Origin, structural functions); Major Histocompatibility Complex (MHC): antigen processing and presentation; synthesis of antibody and secretion. **Theories of Ab formation:** Instructive, selective, clonal selection.

UNIT - III

Immunity: Active, Passive - Cell-mediated, Humoral, Immune response: primary and secondary response.

Phagocytosis - its mechanism; Null cells: Natural Killer cells; Interferons: Definition & its types; Complement system: Nature, components of complement pathway; Pathways: Classical and Alternative pathways.

UNIT - IV

Hypersensitivity Reactions (HS): Mechanism and pathogenicity - **Type I:** Allergies and anaphylaxis; **Type II:** Antibody mediated HS reactions; **Type III:** Immune complex mediated HS reactions, **Type IV:** Delayed type (or) cell-mediated HS reactions; **Type V:** Stimulatory HS reactions.

Auto immunity: Introduction, Auto recognition, classes of auto immuno diseases. (Hashimoto disease, thyrotoxicosis, Systemic lupus erythematosus, Autoimmune haemolytic anemia, Rheumatoid arthritis).

UNIT - V

Transplantation: Types and Graft Rejection; Immunosuppressant drugs (azathioprine, methotrexate, cyclophosphamide, cyclosporin-A, Steroids).

Hybridoma Technology: Production of monoclonal antibodies.

Textbook

2. Pathak, S. 2005. Immunology, (II Edn.) Capital Publishing Company, New Delhi.

Course Objectives

The main objectives of the course are,

- To train the students in mulberry cultivation, farm maintenance, seed Technology, Silkworm rearing, Silk Reeling.
- To know Technology of Mulberry cultivation and basic inputs of water, irrigation, fertilizers, and pest management
- To guide and give counseling to become entrepreneur.
- To know technology of Mulberry cultivation and basic inputs of water, irrigation, fertilizers, and pest management.
- To study the biology and varieties of mulberry silkworms and the basic techniques of silk production and construction of cocoons
- To follow proper technology of rearing silkworm larvae and using disinfection methods so that to get healthy cocoons.

Course Outcomes

The learners will be able to,

1. Acquire knowledge on the physiological aspects of mulberry
2. Know the physical agents like temperature and water, Growth and development
3. Understand the concept and establishment of separate mulberry garden for chawki and late age worms
4. Gather information about the primary, secondary and micronutrients in mulberry
5. Know the impact of nutrient deficiency on silkworm growth and development
6. Understand the genetics and inheritance of voltinism

UNIT – I

General Sericulture – Introduction to Sericulture-Origin and history of Sericulture, Components of Sericulture, Sericultural practices, Employment generation.

UNIT- II

Silkworm Biology - Characteristic features, Classification, Life cycle.

UNIT –III

Mulberry cultivation –soil, Importance, soil pH, organic carbon and NPK level, Propagation of mulberry-seedling, sapling, grafting and layering, other cultivation practices.

UNIT -IV

Silkworm rearing - Rearing house, Rearing appliances, Selection of silkworm races/breeds, Incubation-stgaes, Chawki rearing, Late age silkworm rearing, Identification, Harvesting.

UNIT – V

Silk technology and biotechnology - textile fibres, Physical and commercial characteristics of cocoons, marketing, sorting, Reeling, Raw silk properties, testing, grading. Introduction to by-products of sericulture industry, by- product utilization in mulberry; types of silk waste and pupal waste-oil extraction and cake preparation, Entrepreneurship Development

15BTU411

GENETICS AND IMMUNOLOGY– PRACTICAL IV

5H – 3C

Total hours/week: L:0 T:0 P:5

Marks: Internal: 40 External: 60 Total:100

Course Objectives

The main objectives of the course are,

- To learn about prokaryotic and eukaryotic genetic system using modern techniques.
- To inculcate knowledge on Karyotype analysis
- To develop skills on immunodiffusion.
- To understand the fundamentals of genetics and immunology that deals with the practical aspects
- To gain knowledge on Mutagenicity testing
- To study the application of Mono and Dihybrid Cross

Course Outcomes

The learners will be able to

1. Gain rich knowledge on genetic model system used in research
2. Acquire basic knowledge on Karyotype analysis
3. Get Ideas on pedigree analysis for detection of genetic disorders
4. Assess immunodiffusion
5. Have hands on training for various immunological techniques
6. Describe the DOT-ELISA

Genetics

1. Peripheral blood lymphocyte cultures and metaphase preparation
2. Karyotype analysis of Human or Plant chromosomes.
3. Micronucleus test in Plant or animal
4. Comet assay
5. Mutagenicity testing in Tester Strains of *E. Coli*
6. Test for Mono and Dihybrid Cross

Immunology

7. Preparation of serum from blood.
8. Methods of immunization and bleeding.
9. Hemolysis.
10. Single radial immunodiffusion.
11. Double immunodiffusion.
12. Immunoelectrophoresis
13. DOT-ELISA

Textbooks:

Total hours/week: L:4 T:0 P:0

Marks: Internal: 40 External: 60 Total:100

Course Objectives

The main objectives of the course are,

- To understand the basic Fundamentals of Computer
- To expose students to use hardware and softwares for interpretation of data
- To gain the information about the C language
- To identify the various program tools for analyzing the data
- To describe the roles of the programs in both maintaining data and interpreting data
- To demonstrate a decision capacity for problem-solving about C programming

Course Outcomes:

The learners will be able to,

1. Gain about the various tools and programs involved in the Computer
2. Understand the hardware and software specifications for data interpretation
3. Know C programs for Decision making for various problems
4. Learn the theoretical basis for the various Arrays
5. Apply C Programming to understand the uniqueness of data
6. Use different test to study how programs are good at decision making with the data provided

UNIT -I

Introduction to computers: What is computer- Brief history of computers- Evaluation of computers- Organization/Components of computers - Computer languages- what is hardware and software? - Types of software- Processing of a computer program- what is operating system? - Classification of computers- Data representation- Algorithms and flow-charting.

UNIT-II

Hardware components: Input devices, output devices and memory devices- Hardware and software- Programs- Machine language- Assembly language- High-level language- Translators Operating system: DOS- UNIX- WINDOWS Computer languages: Low level and High-level languages.

UNIT- III

Overview of C: Introduction- Importance of C- Basic structure of C programs- Executing a C program- Constants- Variables and data types - Operators and expressions: Arithmetic- Relational- Logical- Assignment-Increment/Decrement- Conditional- Bit wise and special operators- Precedence of arithmetic expressions- Managing input and output operators.

UNIT -IV

Arrays: One-dimensional, Two-dimensional and Multidimensional arrays- Handling of character string- Decision-making and branching- IF- IF ELSE- Nesting of IF ELSE- ELSE IF ladder- SWITCH- Conditional operator- GOTO statement.

UNIT- V

Decision making and looping: WHILE statement- DO statement- FOR statement- Jumps in loops- Structures and unions- User defined functions- Return values and their types- Calling a function- Category of functions- no arguments and no return values- Arguments but no return values- Arguments with return values- Recursion.

Course Objectives

The main objectives of the course are

- To understand the basic characteristics of C programming practical
- To understand structure of C programming
- To acquaint the students with various aspects of C programming
- To understand the ways to write C programming
- To develop practical skills of C programming
- To develop operations of C programming

Course Outcomes

On completion of the course, students are able to

1. Develop basic skill in basics of operating C programming in system
2. Have outline knowledge on development of C programming
3. Gain experience in practicing C programming
4. Develop skills to prepare C program
5. Use of Solving problems with C programming
6. Learn to use the quadratic equation using C programming

Practical

1. Find the Fibonacci series for a given limit.
2. Write a program to find the given number is prime or not.
3. Write a program to solve the given expression $(A^2+B^2)*C$
4. Write a program to find the given string is palindrome or not.
5. Write a program to find the roots for a given quadratic equation.
6. Write a program for arranging numbers in Ascending order using Bubble sort
7. Write a program for arranging names in alphabetical order.
8. Write a program to illustrate Switch statement.
9. Assume student's marks and Calculate grade for a student's mark.
10. Calculate the factorial value for a given number using function.
11. Find the given number is Armstrong or not.

15BTU403B

ALLIED ELLECTIVE – II BIOPHYSICS

4H – 3C

Total hours/week : L :4 T :0 P :0

Marks : Internal : 40 External : 60 Total :100

Course Objectives

The main objectives of the course are

- To understand the basic principles of Bioseparation
- To understand various concepts of Chemical Equilibrium
- To acquaint the students with various aspects of Crystallography.
- To understand the Structural Studies of biomolecules.
- To develop practical instrumentation skills on Spectrometry.
- To develop skills on advance microscopy

Course Outcomes

On completion of the course, students are able to

1. Develop basic skill in aseptic techniques
2. Have outline knowledge on Bioseparation
3. Gain experience in practices and skills in Crystallography
4. Develop skills on Structural Studies of biomolecules.
5. Use of handling of glass wares, minor equipment for conducting experiments.
6. Learn safety and precautionary measures for practical instrumentation skills on Spectrometry.

UNIT -I

Separation Techniques: Bioseparation – batch filtration – continuous filtration – centrifugation – sedimentation velocity and equilibrium methods – reverse osmosis – ultra filtration – micro filtration.

UNIT-II

Chemical Equilibrium: Chemical Equilibrium – law of mass action – equilibrium constant – electrochemistry – electrolysis – Galvanic cell – fuel cells – Nernst equation – Chemical Thermodynamics – heat of reaction – entropy – enthalpy.

UNIT- III

Crystallography: Study of size, shape and molecular weight of macromolecules- X ray studies- Goniometer- Bragg's spectrometer – reciprocal lattice – isomorphous replacement – refinement of structure.

UNIT -IV

Structural Studies: NMR spectra – experimental arrangement – chemical shift – two-dimensional NMR- electron spin resonance technique – hyperfine structure – mass spectrometry.

UNIT- V

Spectrometry: visible, fluorescence, IR, UV and Raman spectroscopic studies – electron microscope – scanning, tunneling electron microscopes – atomic force microscope working and applications.

Textbooks

Course Objectives

The main objectives of the course are,

- To know about Internal friction of low liquids
- To expose students to know Interfacial surface tension
- To gain the information about Surface tension of liquids
- To identify the Specific rotatory power of biological solution
- To describe Specific heat capacity of liquids
- To understand how to verify Newton's law
- To understand the concepts of Thermal conductivity

Course Outcomes

On successful completion of the course the students will be able to

1. Gain about the concepts in Biophysics
2. Perform Thermal conductivity test
3. Know the resolving power of telescope
4. Learn the theoretical basis for Emissivity of a surface
5. Apply the concepts of Interfacial surface tension
6. Use different test to study how the Specific rotatory power of liquids

Practical

1. Internal friction of low liquids by Poiseuille's flow method
2. Internal friction of high viscous liquids by Stokes method
3. Interfacial surface tension between two liquids
4. Surface tension of liquids by capillary rise / drop weight method
5. Specific rotatory power of sugar solution using polarimeter
6. Specific rotatory power of biological solution using polarimeter
7. Specific heat capacity of liquids
8. Refractive index of liquids using spectrometer
9. Verification of Newton's law of cooling
10. Wave length of prominent lines of mercury spectrum using a plane transmission grating
11. Resolving power of a telescope
12. Emissivity of a surface - spherical calorimeter
13. Thermal conductivity of bad conductor by Lee's method
14. Thermal conductivity of rubber tubing
15. Thermal conductivity of good conductors.

5. Gupta S.L. and V. Kumar, 2002, Practical Physics, 25th Edition, Pragathi Prakashan, Meerut

Course Objectives**The main objectives of the course are**

- To identify common infectious agents and the diseases that they cause.
- To evaluate methods used to identify infectious agents in medical microbiology lab.
- To recall microbial physiology including metabolism, regulation and replication of pathogenic microbes.
- To explain general and specific mechanisms by which an infectious agent causes disease.
- To recognize and diagnose common infectious diseases from the clinical presentation and associated microbiology.
- To describe the epidemiology of infectious agents including how infectious diseases are transmitted.

Course Outcomes**On completion of the course, students are able to**

1. Apply the biotechnology concept for controlling infectious agents.
2. Expertise on the concepts of metabolism, regulation and replication of pathogenic microbes.
3. Able to get knowledge on the toxins released by microbes.
4. Able to enter into a wide range of biotechnology industries with research enterprises.
5. Develop of non-toxic therapeutic agents from microbes
6. Able to get knowledge on Fungal and Protozoan infections

UNIT-I

Bacteriology Morphology, cultural characteristics, antigenic property, pathogenecity, laboratory diagnosis and Treatment. *Staphylococcus* sp., *Streptococcus* sp., *Bacillus* sp., *E. coli*, *Klebsiella* sp., *Proteus* sp., *Pseudomonas* sp.

UNIT-II

General Properties of Fungi - Medically important fungi - diagnosis of fungal disease -routine mycological techniques - antifungal agents.

UNIT-III

Superficial mycosis ~ Cutaneous mycosis - Systemic mycosis _ Opportunistic mycosis- Subcutaneous mycosis

UNIT-IV

Protozoan infections - *Entamoeba histolytica*, *Plasmodium falciparum*, *Leishmania donovani* – *Giardia intestinalis*, *Trichomonas vaginalis*.

UNIT-V

Helminthic infections - *Taenia solium*. *Trematodes* - *Schistosoma haematobium*, Nematodes- *Trichuris trichiura* - *Ascaris lumbricoides*, *Ancylostoma duodenale*, *Wuchereria Bancrofti*.

Course Objectives

The main objectives of the course are

- To obtain basic concepts of Identification of pathogenic bacteria
- To ascertain the diagnostics tools for infectious diseases
- To achieve a complete knowledge about staining and mounting
- To understand the observation of various Fungi
- To understand the observation of various parasites
- To recognize the importance of proper specimen collection and preparation.

Course Outcomes

On completion of the course, students are able to

1. Get hold of the knowledge on fundamentals of medical microbiology techniques.
2. Expertise on the concepts of infection, diagnosis and control assortment.
3. Acknowledge on the qualitative studies based on biomarker observations.
4. Apply methodologies of laboratory diagnostics to relevant states of health.
5. Be aware of characteristics signs of clinical manifestations.
6. Comprehend and analyse the mounted strains.

Practical

1. Identification of clinically important fungi - *Candida albicans*
2. Lacto phenol cotton blue mounting.
3. Identification of *Aspergillus* sp.
4. Identification of *Mucor* sp
5. Identification of *Rhizopus* sp.
6. Identification of *Fusarium* sp.
7. Identification of *Penicillium* sp.
8. Observation of parasites - *Entamoeba* sp. *Plasmodium* sps. *Ascaris* sp. *Taenia* sp.
9. Observation of parasites - Blood smear examination

SOFT SKILL DEVELOPMENT - II

2H – 1C

Total hours/week: L:1 T:1 P:0**Course Objectives****The main objectives of the course are**

- To impart knowledge on both aptitude and soft skills to the students
- To critically evaluate and demonstrate Time, Speed and Distance
- To adopt new faster methods of Data Sufficiency
- To acquire knowledge on Synonyms, Antonyms, Verbal Analogy
- To get knowledge on Resume Writing, Introduction to HR rounds
- To develop interpersonal skills

Course outcome**On successful completion of the course the students will be able to**

1. Acquire knowledge in facing the interviews
2. Obtain acquaintance of time management
3. Imply new faster methods for calculating data sufficiency
4. Do Verbal Analogy
5. Perform best resume writing
6. Improve interpersonal skills

UNIT-I

Time, Speed and Distance, Time and Work, Pipes and Cisterns, Geometry, Data Arrangement

UNIT-II

Analogy, Logic based Venn diagram, Probability, Permutation and Combination, Logarithms

UNIT-III

Data Sufficiency, Clocks, Calendar, Reading Comprehension, Sentence Correction, Sentence Completion, Spotting the Errors, Jumbled Sentences

UNIT-IV

Synonyms, Antonyms, Verbal Analogy, Statements and Assumptions, Group Discussion

UNIT – V

Resume Writing, Introduction to HR rounds, Time Management, Attitude and Behavior

Course Objectives

The main objectives of the course are,

- To learn the procedure for isolation nucleic acids and Protein.
- To learn the strategies for gene transfer in plants and animals.
- To acquire knowledge on genome mapping.
- To familiarize the student with emerging field of biotechnology
- To acquaint the students to versatile tools and techniques employed in recombinant DNA technology.
- To learn the history and recent developments in rDNA technology, Enzymes used in rDNA technology.

Course Outcomes

On completion of the course, students are able to

1. Outline the fundamental steps in a genetic engineering procedure.
2. Describe the mechanism of action and the use of restriction enzymes in biotechnology research and recombinant protein production.
3. Explain the usefulness of plasmid preparations, how they are performed, and how the concentration and purity of plasmid samples can be determined.
4. Discuss cloning strategies and techniques used to probe DNA for specific genes of interest.
5. Conceptualize PCR technique in medical and forensic science.
6. Summarize various applications of rDNA technology in human health care and safety regulations.

UNIT - I

Introduction to r-DNA technology: Basic techniques – isolation and purification of nucleic acids. Restriction Enzymes, Enzymes used in cloning - DNA polymerases, RNA Polymerases, Reverse Transcriptase, Ligases, Taq polymerase, kinases, phosphatases, transferases, DNase, RNase.

UNIT - II

Cloning vectors – Plasmids: bacteriophage based, M13 phage based, phagemids. Cosmids, yeast artificial chromosomes, bacterial artificial chromosomes, Covalent linkage of DNA fragments to vector molecules: Linkers, Adapters, homopolymer tailing. Generation of genomic and cDNA libraries, Solid phase synthesis of DNA.

UNIT - III

Selection and screening of recombinant clones: Probe preparation - radiolabelled and non radiolabelled, Guessmers and degenerate probes. Sequence dependent and independent screening, southern-western, colony and plaque hybridization, *in situ* chromosomal hybridization, chromosome walking.

UNIT – IV

Expression and characterization of cloned DNA: Expression vectors, optimization of protein expression in heterologous systems, Fusion proteins, *In vitro* translation systems. RNAi vectors. Restriction mapping. DNA sequencing, PCR, VNTRs, DNA fingerprinting, SNPs, RFLPs.

UNIT - V

Applications of recombinant DNA technology: Production of recombinant proteins in bacterial and eukaryotic cells. Identification of genes responsible for human diseases, diagnostics, gene therapy. Genetically modified plants. Ethical, legal and social issues.

Textbook:

Total hours/week: L:4 T:1 P:0**Marks: Internal: 40 External: 60 Total:100**

Course Objectives

The main objectives of the course are,

- To learn the procedure for isolation, screening of industrial important microbes
- To derive industrially important products from microbes
- To acquire knowledge on proteins
- To learn the principle and applications of bioprocess technology
- To learn the fundamental calculation in bioprocessing
- To learn the schematic diagram of upstream and downstream processing for product recovery and purification

Course Outcomes

The learners will be able to

1. Gain overall knowledge of industrial biotechnology
2. Obtain information about the application of industrially important microbes
3. Know the screening, extraction and purification of enzymes
4. Designing of bioreactors and control necessary for maximizing production
5. Select and optimize media for maximum production of microbial metabolites
6. Designing of protocols for strain improvement and separation of molecules after fermentation process

UNIT - I

Industrially important microbes: Isolation, Screening, Strain improvement – mutation and recombination. Substrates for industrial fermentation.

UNIT - II

Concepts of basic modes of fermentation - Batch, Fed batch and Continuous fermentation. Bioreactor designs, Media formulation. Air and media sterilization, Aeration & agitation in bioprocess.

UNIT - III

Bioprocess control and monitoring: Temperature, pH, agitation, pressure, online measurement, on / off control, PID control, computers in bioprocess control system.

UNIT - IV

Downstream processing – Filtration, Centrifugation, cell disruption, chromatography, Liquid – liquid extraction, membrane process, drying crystallization, broth processing. Effluent treatment – disposal, treatment process, by- products.

UNIT - V

Bioprocess production: Amino acids, organic acids, nucleotides, nucleosides and related compounds, enzymes, vitamins, antibiotics and SCP. Fermentation economics, Immobilization of enzymes and microbial cells.

Textbooks:

1. Allman, A.R, 2007. Fermentation Microbiology and Biotechnology, Taylor and Francis, New York, USA.
2. Crueger, W. and A. Crueger, 2004. Biotechnology – A TextBook of Industrial Microbiology, Panima Publishing Corporation, New Delhi, India.

3. Charles, W.B, 2010. Food Fermentation and Microorganisms. John Wiley & Sons Inc., New Jersey, USA.

Course Objectives

The main objectives of the course are,

- To offer students a good command of basic principles of food science and technology
- To Understand the various processes and protocols involved in the food industry.
- To Understand about food borne pathogens detection and enumeration
- To impart in-depth knowledge on the cutting-edge techniques and glimpse on food production techniques
- To Impart practical skills to the students to preserve the food materials
- To learn the nutritive value of foods

Course Outcomes

The students will be able to

1. Demonstrate a level of comprehension of concepts of food science
2. Critically evaluate issues or problems pertaining to food science
3. Perform the production of dairy products
4. Intensive knowledge acquisition in food borne pathogens
5. Have a grasp knowledge in food preservation
6. To identify the Nutritive value of foods

UNIT - I

Introduction: History and Scope of Food Biotechnology, Nutritive value of food, Role of microbes in food biotechnology – bacteria, fungi and yeast. Fermented foods – Types, Changes during Fermentation, Nutritive value of fermented foods.

UNIT - II:

Food Microbiology: Primary Sources of Microorganisms in food. Food borne Bacteria, Molds and Yeasts. Intrinsic and Extrinsic Parameters of food affecting microbial count. Detection of Microorganisms in food - SPC, Membrane filters, Dry films. Bacterial Toxin - Botulism and Staphylococcal toxin. Fungal Toxins - Aflatoxin.

UNIT - III

Dairy Biotechnology: Milk - Definition, Composition and Types. Fermented Milk Products - Butter, Yoghurt and Cheese. Preservation of milk by heat treatment - Pasteurization and Ultra High Temperature. Physicochemical characterization of milk. Milk Tests - Dye Reduction (MBRT and Resazurin)

UNIT - IV

Food Production: Food safety - HACCP System to food protection, Responsibility for food safety. Food Additives - Definition, Types and Functional characteristics. Natural Colors -Types, Applications, Advantages of natural colours. Sweeteners - Types and Applications.

UNIT - V

Food Spoilage and Preservation: Causes of Food Spoilage, Spoilage of Fruits, Vegetables, Meat, Soft Drinks, Eggs, Dairy products. Food Preservation through chemicals - Acids, Salts, Sugars, Antibiotics, Ethylene oxide, Antioxidants. Other Methods of Food Preservation -Radiations, Low and High temperature and Drying.

2. Jay, J.M, 1992. Modern Food Microbiology, IV Ed. Chapman and Hall, New York, USA.

Course Objectives

The main objectives of the course are

- To obtain basic concepts of biotechnology to solve the environmental problems
- To ascertain the knowledge about solid waste management and wastewater treatment.
- To achieve a novel treatment strategy for waste to Bioenergy.
- To gain knowledge about the biological and biotechnological measures for restoring environment.
- To involve in the present scenarios and find valuable solutions for remedy
- To update about the management strategies followed up by the industries and government.

Course Outcomes

On completion of the course, students are able to apply their knowledge on

1. Bio-management of soil
2. Pollution and pollution control
3. Environmental significance of genetically modified microbes, plants and animals
4. Biofuel production
5. Treatment of municipal waste and Industrial effluents
6. Genetic engineering of bacteria and their potential for bioremediation

UNIT - I

Introduction: Introduction to Biotechnology. Role of Environmental Biotechnology. Market for Environmental Biotechnology. Microbes and metabolism. Fundamentals of biological intervention.

UNIT - II

Pollution and pollution control: Classifying pollution - toxicity; persistence; mobility; ease of control; bioaccumulation; chemistry. Pollution control strategies – dilution and dispersal, concentration and containment. Practical applications to pollution control – biofilters, biotrickling filters, bioscrubbers. 'Clean' Technology - process changes, biological control, bio-substitutions.

UNIT - III

Contaminated land and bioremediation: Remediation Methods - generalised categories, biological, chemical, physical, solidification/vitrification, thermal, Intensive and Extensive technologies. *In situ* techniques – Biosparging, Bioventing, Biofuel, Injection recovery. *Ex situ* techniques - Land farming, Soil banking, Soil slurry reactor. Bioenergy, use of bioremediation, Factors affecting the use of bioremediation.

UNIT - IV

Aerobes and effluents: Biological decomposition of organic carbon, Nitrogen and Phosphate removal. Biological removal, biotransformation, and biosorption of metal ions. Aerobic and Anaerobic Degradation of Xenobiotics. Bioaugmentation for degradation of Xenobiotics. Industrial sources of waste water. Wastewater management, Treatment strategies.

UNIT - V

Phytotechnology and Photosynthesis: Terrestrial phyto-systems (TPS) - Metal phytoremediation, Organic phytoremediation. Hydraulic containment. Aquatic phyto-systems (APS), Macrophyte treatment systems (MaTS), Nutrient film techniques (NFT), Algal treatment systems (ATS).

2. Mara, D, 2003. The Handbook of Water and Wastewater Microbiology. Academic Press, London, England.

Total hours/week: L:5 T:0 P:0

Marks: Internal: 40 External: 60 Total:100

Course Objectives**The main objectives of the course are,**

- To give knowledge on Bioinformatics and its application
- To offer knowledge to assess biological databases
- To understand and to analyze protein/nucleotide sequences and to predict its 3D structure
- To understand the various online databases for submitting and retrieving data's
- To understand how the phylogeny plays a vital role in finding ambiguities.
- To get practiced with the tools and techniques for analyzing the data.

Course Outcomes**On completion of the course, students are able to**

1. Understand The relationship between sequence - structure - function of genes
2. Familiarize with the algorithms required to compare sequences and require to know the phylogenetic relationship between the gene sequences
3. Inculcate knowledge on building 3D structures of genes.
4. Locate and use the main databases at the NCBI and EBI resources
5. Know the difference between databases, tools, repositories and be able to use each one to extract specific information
6. Use selected tools at NCBI and EBI to run simple analyses on genomic sequences

UNIT - I

Introduction: Definitions, Objectives, Scope, Applications of Bioinformatics, History and milestones of bioinformatics, Genome sequencing projects – Steps, Human Genome Project and other genome projects.

UNIT - II

Basic concepts of biomolecules and computers: Basic concepts of biomolecules – Protein and amino acid, DNA and RNA - Sequence, Structure and function.

Basic computer components - Hardware, software, operating systems, computer networks, programming, internet, browsers, search engines, email, databases.

UNIT - III

Biological databases: Types of databases, Sequence databases, Nucleic acid sequence databases - Primary (GenBank, EMBL, DDBJ), Secondary (UniGene, SGD, EMI Genomes, Genome Biology), Protein sequence database – Primary (PIR, SWISS-PROT), Secondary (PROSITE, Pfam), Structural databases (PDB, SCOP, CATH), Bibliographic databases and Organism specific databases.

UNIT - IV

Database searching and Sequence Alignment: Similarity searching programs-BLAST, Sequence alignment - Pair-wise and Multiple-sequence alignment (Methods and Algorithms), CLUSTAL-W, Protein structure alignment (Methods, algorithms- DALI) Phylogenetic analysis (Methods, algorithms).

UNIT - V

Gene prediction: Gene prediction in prokaryote and eukaryotes. Extrinsic approaches and Ab initio approaches. Predicting the protein secondary structure (Domain, blocks, motifs), Predicting protein tertiary structure (Homology, Ab-initio, threading and fold recognition) and visualization of predicted structure.

3. Web resources: <http://www.ncbi.nlm.nih.gov/> ; <http://www.ebi.ac.uk/2can/databases/>

Course Objectives**The main objectives of the course are**

- To demonstrate the application of the unique properties of biomolecules at nano-scale level in different fields of biotechnology.
- To understand the principles that governs the structure at nano-scale level.
- To comprehend the function of biomolecules at nano-scale level.
- To conceptualize the biomolecules-based nanostructures
- To get a keen insight on applications of nanotechnology in medicine
- To foster the scientific knowledge in future of nanotechnology

Course Outcomes**On completion of the course, students are able to**

1. Demonstrate a level of comprehension of concepts in nanotechnology
2. Critically analyze the concept of atoms
3. Analyze clusters formation in Nano synthesis
4. Gain sound knowledge in nanomedicine
5. Intensive knowledge acquisition in biomedical fields
6. Have a grasp knowledge in Molecular nanotechnology

UNIT I: Definition of Nanoscale system – Feymann theory of Nanotechnology – Types of nanotechnology – Molecular Nanotechnology – Molecular and atomic size – Surface and dimensional space – Scope and opportunities at the Nanoscale.

UNIT II: Forces between atoms and molecules, particles and grain boundaries – Vander Waals and electrostatic forces between surface – Nano and Mesopores – size dependent variation in magnetic, electronic transport, resistivity, optical and etc – Misnomers and misconception of Nanotechnology.

UNIT III: Biomolecules based nanostructures - DNA based Nanostructures- DNA-protein nanostructures- Methods- Self assembled DNA nanotubes—Nucleic acid Nanoparticles, DNA as a Biomolecular template-DNA branching-Metallization- Properties.

UNIT IV: Applications of nanobiotechnology in early medical diagnostics, drug targeting, drug delivery, nanosurgery and other biomedical field.

UNIT V: Future of bio-nanobiotechnology - advances for Molecular Nanotechnology, Nanotube synthesis - nanoscale assembler, applications.

Textbooks:

1. Niemeyer and Mirkin (ed). 2004. Nanobiotechnology: concepts, applications & perspectives. WILEY-VCH Verlag GmbH & Co. K aA, Weinheim

Course Objectives**The main objectives of the course are**

- To understand the concepts of biological fertilizer production and entrepreneurs.
- To develop with the specific objective to acquaint and enrich the students with the basic knowledge of microbial inoculants production.
- To get trained to apply the aspects of fertilizer application
- Understanding basics of microbial fertilizers and its mechanism
- Visionary approach on students to make entrepreneur
- This paper helps to make the students to understand the microorganisms as potential biofertilizer organisms and the technology of inoculum production.

Course Outcomes**On completion of the course, students are able to**

1. Understand the concept of biofertilizer productions
2. Perform the production of microbial biofertilizers
3. Have a grasp knowledge in isolation of microbes
4. Get knowledge in mass cultivation of microbes
5. Having a chance to become an entrepreneurship
6. Get knowledge in composting waste

UNIT-I: Introduction to fertilizers - natural fertilizers, synthetic fertilizers, inorganic fertilizers, organic fertilizers, **Liquid fertilizers, bio-fertilizers** - importance, advantages and constraints.

UNIT-II: Characters of biofertilisers- Morphology of *Rhizobium*, *Azospirillum*, *Azotobacters*, blue green algae and phosphate solubilisers and maintenance - inoculant preparation.

UNIT-III: Isolation, culturing methods, enumeration and identification of microbial species - *Rhizobium*, *Azospirillum* *Azotobacters*, blue green algae and phosphate solubilisers.

UNIT-IV: Preparation of microbial inoculants - large-scale production of microbes - their application as biofertilizers - crop responses to biofertilizers.

UNIT-V: Azolla - distribution, morphological and biochemical characteristics - cyanobacterial symbionts - Azolla biofertilizer technology - organic matter and composting - method of processes, applications and limitations.

Course Objectives

The main objectives of the course are

- To know the practical understanding of nucleic acid (DNA and RNA) isolation and their quantification
- To focus on cloning, construction of genomic DNA libraries followed by the library screening
- In-depth understanding of various techniques involved in gene amplification, DNA fingerprinting, labelling and detection of nucleic acid sequences
- To Concentrate on the importance of *E. coli* organisms and its growth, maintenance and isolation & amplification of nucleic acids
- To know about the fermentation, bioprocess development of recombinant DNA (rDNA) products
- To train in rDNA Techniques

Course Outcomes

On completion of the course, students are able to

1. Acquire practical knowledge of nucleic acids isolation
2. Acquire the knowledge about the methodology for biomolecule quantification separation in prokaryotes and eukaryotes.
3. Comprehend the basics of cloning which are necessary large-scale processing of rDNA products, southern blotting and hybridization.
4. Analyze the determination of water quality for a particular experiment
5. Understand different types of important enzymes production
6. Trained to get placed in Laboratory

List of Practicals

rDNA Technology

1. Estimation of DNA
2. Agarose Gel Electrophoresis
3. SDS-Polyacrylamide gel Electrophoresis method
4. Isolation of total DNA from plant tissue
5. Isolation of total DNA from microbes (*E. coli*)
6. Isolation of total DNA from animal tissue
7. Isolation of plasmid DNA
8. Isolation of RNA from yeast
9. Restriction digestion of DNA
10. Ligation of DNA
11. Amplification by PCR-Demonstration

Environmental Biotechnology

1. Water quality tests for pH
2. Determination of total solids
3. Determination of Chemical Oxygen Demand
4. Determination of Biological Oxygen Demand
5. Analysis of heavy metals (Iron/Chromium)

Food and Bioprocess Techniques

1. Isolation and identification of microbes from food samples
2. Wine production
3. Citric acid production
4. Production of Industrially important enzymes – protease, amylase
5. Immobilization of enzymes
6. Working of fermenters

ANIMAL HOUSE MANAGEMENT

0H-4C

Total hours/week: L:0 T:0 P:0

Marks: Internal: 00 External: 100 Total:100

Course Objective**The main objectives of the course are**

- To manifest the significance of CPCSEA guidelines to the student
- Acquiring the depth knowledge in developing animal houses with superior facilities
- Understand and adapt to the policies pertaining to animal house management.
- Learning the record keeping and practicing SOP guideline in house management services
- To gain adequate knowledge on production of transgenic animals
- To emphasize the molecular genetics in animal production.

Course Outcomes**On completion of the course, students are able to**

1. Conceptualize the CPCSEA guidelines
2. Able to accomplish animal houses with adequate knowledge
3. Portfolio the policies and adhere to the governance of animal house management
4. Follow the SOP in animal houses
5. Understand the production methodology of transgenic animals
6. Get vast idea on molecular genetics of animal production

UNIT - I

Animal procurement: Committee for the Purpose of Control and Supervision on Experiments on Animals (CPCSEA) guidelines. Methods of transportation, quarantine and stabilization according to species.

UNIT - II

Physical Facilities: Building materials - efficient and hygienic operation of animal facilities. Corridor(s) - movement of personnel as well as equipment. Utilities - water lines drain pipes, electrical connections - service panels. Animal room doors, exterior windows, floors and floor drains, walls and ceilings, storage areas, sanitizing equipment and experimental area. Environment: Temperature and humidity, ventilation, power and lighting, noise control.

UNIT - III

Animal husbandry: Caging/Housing system, Sheltered or Outdoor housing, social environment, food, bedding, water, sanitation and cleanliness, waste disposal, pest control. Precautions while handling animals - common injuries and ailments in animals. Emergency situations: escaping animals - use of fire extinguishers

UNIT - IV

Record keeping: Animal house plans, staff, technical and non-technical, health record of staff & animals, Standard Operating Procedures (SOPs) for animals, Breeding stock, purchase or sales records, Animal Ethics Committee Meetings, Death record, Clinical Record of sick animals, Training record of staff involved in animal activities, water reports.

UNIT - V

Laboratory animal ethics: Transgenic animals, maintenance, disposal, breeding and genetics.

References:

CPCSEA Guidelines for Laboratory Animal Facility, Govt. of India. www.cpcsea.com

Course Objective**The main objectives of the course are**

- To manifest the significance of Sericulture guidelines to the student
- Acquiring the depth knowledge in developing rearing houses with superior facilities
- Understand and adapt to the policies pertaining to rearing house management.
- Learning the record keeping and practicing SOP guideline in house management services
- To gain adequate knowledge on production of good quality silk threads
- To emphasize on production of good quality mulberry plants.

Course Outcomes**On completion of the course, students are able to**

1. Conceptualize the sericulture guidelines
2. Able to accomplish rearing houses with adequate knowledge
3. Portfolio the policies and adhere to the governance of rearing house management
4. Follow the SOP in rearing houses
5. Understand the production methodology of mulberry plants
6. Get vision on production of good quality mulberry plants.

UNIT – I

Introduction: Sericulture: Definition, history and present status; Silk route, Types of silkworms, Distribution and Races, Exotic and indigenous races, Mulberry and non-mulberry Sericulture.

UNIT – II

Biology of Silkworm – Life cycle of *Bombyx mori*, Structure of Silk gland and Secretion of silk.

UNIT -III

Rearing of Silkworms: Selection of mulberry variety and establishment of mulberry garden, Rearing house and rearing appliances, Disinfectants: Formalin, bleaching powder, RKO, Silkworm rearing technology; Early age and Late age rearing, Types of mountages, Spinning, Harvesting and storage of cocoons.

UNIT -IV

Pests and Diseases: Pests of silkworm: Uzi fly, dermestid beetles and vertebrates, Pathogenesis of Silkworm diseases; protozoan, viral, fungal and bacterial control and prevention of pests and diseases.

UNIT -V

Entrepreneurship in Sericulture: Prospectus of Sericulture in India; sericulture industry in different states, employment, potential in mulberry and non- mulberry sericulture. Visit to various sericulture centers.

2. Handbook of silkworm rearing: Agriculture and Technical Manual-1, 1972. Fuzi Pub. Co. Ltd., Tokyo, Japan
3. Narasimhanna, M. N. 1988. Manual of Silkworm Egg Production; CSB, Bangalore.

Course Objectives

The main objectives of the course are

- To impart the knowledge on basic tissue culture techniques
- To apply the state of art knowledge of subject for the production of transgenic animals and production modern drug delivery or vaccination methods.
- To become familiarize with the ethical practices in animal biotechnology
- To understand the concept of transgenic animal production
- To grasp knowledge on molecular techniques in animal reproduction
- The students will learn overall the basic concept in cell culture.

Course Outcomes

On completion of the course, students are able to

1. To understand principles of animal culture, media preparation.
2. To explain Invitro fertilization and embryo transfer technology.
3. To get insight in applications or recombinant DNA technology in
4. production of therapeutic proteins in transgenic animals.
5. To explain the Organ culture and its types
6. To handle and maintain the animal in animal houses

UNIT - I

Scope of Animal Tissue Culture: Laboratory design: aseptic techniques – handling instruments: Microscopes, Clean-bench, etc., and bio safety.

UNIT - II

Animal Cell Culture Media: Natural and artificial media – their constituents; Physicochemical properties of media; Serum supplemented and serum-free media; Sterilization methods.

UNIT - III

Primary Cell Culture: Methods of tissue disaggregation - isolations of tissues from chick embryo, mouse and human; Continuous and established cell cultures; Cell separation and characterization; Organ culture- types.

UNIT - IV

Specialized techniques: Cytotoxic assays; cell fusion methods; *in situ* hybridization; somatic cell fusion; Microinjection – DNA transfer; lipofection; electroporation.

UNIT - V

Transgenic Animals: Production and applications; transgenic animals: mouse, cow, sheep, fish, hen; Expression of bovine growth hormone; production of human proteins in milk and meat.

Total hours/week: L:5 T:0 P:0

Marks: Internal: 40 External: 60 Total:100

Course Objectives**The main objectives of the course are,**

- To introduce biotechnological methods for production of transgenic plants.
- To give knowledge about various methods of gene transfer in plants.
- To cognize and get the knowledge on micro propagation to protect endangered plants.
- To explain the basics of the physiological and molecular processes that occur during plant growth and development and during environmental adaptations
- To use basic biotechnological techniques to explore molecular biology of plants
- To understand the processes involved in the planning, conduct and execution of plant biotechnology experiments

Course Outcomes**On completion of the course, students are able to**

1. Understand the growth conditions required to culture the plants in *invitro* conditions.
2. Inculcate the deep understanding of Gene expression system of plants
3. Acquire knowledge on producing Transgenic plants
4. Inculcate the deep knowledge the processes involved in the planning, conduct and execution of plant biotechnology experiments
5. Learn the structure and organization of plant genome
6. Learn the basic techniques for hybridization in producing transgenic plants

UNIT - I

Theory and methods: Introduction of plant tissue culture and cell suspension culture; Physico-chemical conditions for propagation of plant cells and tissues; Composition of media, nutrient and hormone requirement, Continuous culture, techniques for immobilization of plant cells, continuous product recovery system using immobilized plant cell system.

UNIT - II

Product and recovery: Primary and secondary metabolic products (phytochemicals) of plant cells, biosynthesis of secondary metabolites of biotechnological importance, **biotransformation** for product development and selection of cell culture, process technology with salient features for specific products.

UNIT -III

Genetic engineering A: Structure and organisation of plant genome, regulation of plant genome expression, transcriptional, translational and post transcriptional regulation of plant genome. Transposons, chloroplast and mitochondrial genome.

UNIT - IV

Genetic engineering B: Transfer of nucleic acid to plant cells - Direct transformation by electroporation and particle gun bombardment. - Agrobacterium, Ti plasmid vector Theory and techniques for the development of new genetic traits, conferring resistance to herbicide, pesticide, plant pathogens. Plant engineering towards development of enriched food products, plant growth regulators.

UNIT - V

Applications: Transgenic plants, herbicides and pest resistant plants; Molecular farming / pharming: carbohydrates, lipids, therapeutic proteins, edible vaccines, purification strategies; Oleosin partition technology.

Textbooks:

1. Singh, B.D. 1998. Text Book of Biotechnology, Kalyani Publishers, India.
2. Neal Stewart, C. 2008. Plant Biotechnology & Genetics. John Wiley & Sons Inc., NJ.

References:

1. Slater, A., W. Nigel & M.R. Fowler. 2008. Plant Biotechnology, Oxford University Press, Oxford.

Course Objectives

The main objectives of the course are,

- Students obtain deeper knowledge and understanding about the subject tissue engineering and tissue engineering
- Students will learn about key technologies used in tissue engineering and regenerative medicine
- Students will deal with the basic and clinical aspects of stem cell research
- To analyze the conversion of stem cell types into a variety of suitable tissues
- To understand the potential of stem cells for the regeneration of a wide range of tissues and organs
- To make acumen in biomaterials in tissue engineering

Course Outcomes

On completion of the course, students are able to

1. To isolate the stem cells
2. To demonstrate the Stem cell differentiation
3. To grasp knowledge on extra cellular matrix
4. To understand the production of bioreactors
5. To theorize the biomaterials used in tissue engineering
6. To have a grasp knowledge in nerve regeneration

UNIT - I

Tissue engineering – Introduction, organization and complexity of vertebrate body. Elements of tissue development – Tissue types, dynamics, repair.

UNIT - II

Biochemical process in cells – cell biology, cell growth, cell culture: primary cells vs. cell lines, sterile techniques, plastics, enzymes, reactors and cryopreservation, cell differentiation and migration. Cell morphology, number, viability, motility, and division – mitotic cell cycle, cell death – biological apoptosis.

UNIT - III

Cell-extracellular matrix interactions; cell-cell interactions: Different cell types, staining, growth factors (receptor- ligand binding) and chemokines in signaling (eg. G-proteins). Growth factor delivery and applications (angiogenesis) in tissue engineering. Cell junctions in tissues, malfunctions in direct cell-cell contact signaling and response to stimuli.

UNIT - IV

Isolation of cells: methods of cell separation and their characteristics. Stem cells. **Biomaterials for tissue engineering:** metals, ceramics, polymer (synthetic and natural) and polymer scaffold processing, biodegradable materials, native matrix.

UNIT - V

Bioreactors in Tissue engineering: Bone & Cartilage Tissue Engineering. **Cell & Tissue engineering case studies:** Basic wound healing, artificial skin, blood vessels, pancreas & liver. Regeneration of bone and muscle. Nerve regeneration.

CORE ELECTIVE – II

APPLIED BIOTECHNOLOGY

5H – 4C

Total hours/week: L:5 T:0 P:0

Marks: Internal: 40 External: 60 Total:100

Course Objectives**The main objectives of the course are,**

- To understand the fundamental basis of biotechnology
- To conceptualize the application of biotechnology in industrial sectors
- To comprehend the basic techniques in biofertilizers productions using fungi
- To get adequate knowledge on mushroom cultivation
- To acquire basic domain knowledge on dairy products manufacturing process
- To get exposure on beverages.

Course Outcomes**On completion of the course, students are able to**

1. To perpetuate the formulation and production of biofertilizers
2. To demonstrate the mushroom cultivation
3. To perform the fermented drinks (alcoholic)
4. To execute the production of cheese, yoghurt
5. To theorize the biotechnological approaches in food biotechnology
6. To have a grasp knowledge in food canning and processing

UNIT – I

Biofertilizers: Definition and advantages, Strain selection – Inoculum development – Mass production – Packaging – Quality control of different Biofertilizer (Rhizobium, Phosphate solubilizers, Azotobacter, Mycorrhizae, Azolla)

UNIT - II

Mushroom cultivation: Spawning of edible mushrooms, methods of cultivation, Agaricus (button) and Plerotus (Dhingri, Oyster mushroom), Volvariella (paddy Straw mushroom), nutritive value of mushroom.

UNIT - III

Beverages: Definition and types, non alcoholic and alcoholic and natural, **Non alcoholic:** Processing of tea, coffee, cocoa. **Alcoholic:** Fermented and distilled, their preparation and sources.

UNIT - IV

Production of dairy products: Cheese. Yoghurt, buttermilk, Pickles – Dill pickles, slippery pickles, soft and black pickles.

UNIT - V

Fermented foods: Meat, Poultry and Sea Foods Food Preservation – Tin preservation, Salt preservation, Freeze preservation and food packing methods.

Textbooks:

1. Frazier, W.C., 2004. Food Microbiology. Tata McGraw Hill Publishing, New York.
2. Prescott, S.C. and C.G. Dunn, 1999. Industrial Microbiology. ABI-Publishing Company, West Port, New York.
3. Aneja, K.R., 2005. Experiments in Microbiology. Plant pathology, Tissue culture and Mushroom Production Technology. III Edition. New Age International Publishers, New Delhi.

Course Objectives

The main objectives of the course are,

- To understand the ethno pharmacological principles of plants
- To conceptualize the pharmacognosy of herbals
- To comprehend the basic techniques in phytochemical analysis of plants
- To get adequate knowledge on analytical evaluation of drugs
- To acquire basic domain knowledge on medicinal plant biotechnology
- To get exposure on plant tissue culture.

Course Outcomes

On completion of the course, students are able to

1. To perpetuate the natural product drug discovery process
2. To learn the ideology of siddha medicines
3. To identify the medicinally important plants and its pharmacological values
4. To elucidate the bioactive molecules from plant extracts
5. To theorize the biotechnological approaches in plant genetics
6. To have a grasp knowledge in plant tissue culture

UNIT-I: Herbal medicines: history and scope - definition of medical terms - role of medicinal plants in Siddha systems of medicine; cultivation - harvesting - processing - storage - marketing and utilization of medicinal plants.

UNIT-II: Pharmacognosy - systematic position - chemical constitution and medicinal uses of the following herbs in curing various ailments; Tulsi, Ginger, Fenugreek, Indian Goose berry and Ashoka.

UNIT-III: Phytochemistry - active principles and methods of their testing - identification and utilization of the medicinal herbs.

UNIT-IV: Analytical pharmacognosy: Drug adulteration - types, methods of drug evaluation - Biological testing of herbal drugs - Phytochemical screening tests for secondary metabolites (alkaloids, flavonoids, steroids, triterpenoids, phenolic compounds, fatty acids, tannins, glycosides and volatile oils).

UNIT-V: Medicinal Plant Biotechnology: Genetics - mutation - polyploidy. Plant tissue culture source - Historical developments - types of cultures - phytopharmaceuticals in tissue cultures.

4. Sivarajan, V.V, Balachandran Indra. 1994. Ayurvedic drugs and their plant source. Oxford IBH publishing Co, UK.

Course Objectives

The main objectives of the course are,

- To understand the practical aspects of plant and animal biotechnology
- To familiarize the practical concepts in animal tissue cell culture
- To comprehend the basic techniques in plant tissue culture
- To get adequate hands on exposure in cell lines
- To get expertise in molecular techniques related to plants and animals
- To get knowledge on the use of cell lines and preservation methods

Course Outcomes

On completion of the course, students are able to

1. To demonstrate the plant tissue culture
2. To execute the DNA extraction from plants and animal
3. Perform the preparation of Culture media
4. To prepare primary cell culture from animal sources
5. To cryopreserve the cell lines
6. To quantify the cells by dye exclusion method

Animal Biotechnology

1. Preparation of Animal Tissue Culture Medium
2. Preparation of Primary culture
3. Quantification of cells by trypan blue dye exclusion method.
4. Identification of leukocyte subsets and total count
5. Cryopreservation of cell lines

Plant Tissue Culture Techniques

1. Culture media preparation
2. *In vitro* germination of seeds
3. Callus induction and differentiation
4. Isolation of protoplasts
5. Micro propagation
6. Artificial seed production

Course Objectives

The main objectives of the course are,

- To emphasize the introductory knowledge on marketing strategies in biological field
- To acquire Entrepreneurial spirit and resourcefulness
- To familiar with various uses of human resource for earning dignified means of living Understanding the concept and process of entrepreneurship
- To acquire entrepreneurial quality, competency and motivation
- To learn the process and skills of creation and management of entrepreneurial venture
- To expose the students in various bio-entrepreneurship and marketing approaches.

Course Outcomes

On completion of the course, students are able to

1. Gain rich knowledge on Bioentrepreneurship
2. Acquire basic knowledge on different biotechnological industries origin and development.
3. Get new vista on production of industrial fermented foods.
4. Instigate the use of natural resources for industrial production of foods
5. Understand the concept of biofertilizers.
6. Comprehend the basis of vaccine production

UNIT -I

Introduction to Biotechnology related industries – Immunological, Pharmaceutical and Agriculture based industries.

UNIT - II

Plant Tissue Culture industry, Food industries, Enzyme production industries, Biomedical industries.

UNIT -III

Preparation of wine, Beer, sauerkraut, pickle preparation – soft pickle preservation industries.

UNIT -IV

Biofertilizer – Rhizobium, azospirillum, blue green algae, Single cell protein.

UNIT -V

Vaccine- types of vaccine, dose of vaccine, duration of vaccine, production industries, scope and major requirements of vaccine production industries.

Total hours/week: 10Hrs**Marks: Internal: 40 External: 60 Total:100**

Course Objectives

The main objectives of the course is

- The hands-on training through one full semester project with thesis gives special expertise within one of the research areas represented at The Department of Biotechnology.

Course Outcomes

On completion of the course, students are able to apply their knowledge on

1. This dissertation programme provides the candidate with knowledge, general competence, and analytical skills on an advanced level, needed in industry, consultancy, education and research

Blue – Employability Green – Entrepreneurship Red- Skill Development

Master of Science in Biotechnology 2015, Karpagam Academy of Higher Education, Coimbatore – 641 021 India.

PROGRAMME OUTCOMES (POs)

- a) Graduates will be able to have knowledge on the basic and applied theories.
- b) Providing a broad educational and analytical knowledge necessary to make the students for appearing in competitive examinations
- c) Ability to design and conduct experiments as well as to interpret the results.
- d) An expert to work on Biotechnological concepts and allied fields (immuno, medical, microbial, Food, agricultural, environmental, plant and animal) with modern tools and techniques towards product and process development for academic, industrial and research application.
- e) Generating the graduates with an ability to identify, formulate and solve to deliver process/product with professional, societal and ethical responsibilities.
- f) Graduates will be able to visualize and work on multidisciplinary laboratory problems.
- g) Graduates will be able to update the current knowledge of interdisciplinary subjects related to biotechnology

PROGRAMME SPECIFIC OUTCOMES (PSOs)

To enable the student to emerge as:

- h) Biotechnologist to recognize the societal need and lifelong learning.
- i) Proficient to demonstrate entrepreneurial and leadership skills with life-long learning.

PROGRAMME EDUCATIONAL OBJECTIVES (PEOs)

PEO I: The post-graduates of Biotechnology will be able to acquire in-depth knowledge of the basic and applied subjects of Biotechnology and allied fields.

PEO II: The post-graduates of Biotechnology are equipped to design, analyze, conduct and interpret the experiments and data for the development of process/product within the realistic constraints.

PEO III: The post-graduates of Biotechnology will be able to acquire the knowledge and ability to use the concept of theories, practical skills and recent technological tools in solving any technological and professional issues independently in a global and societal context.

PEO IV: The graduates of Biotechnology will continue learning to update and to become an entrepreneur in a competitive world of technology and also contribute to all forms of life.

MAPPING OF PEOs AND POs

PEOs			Programme Outcome (s)						
	(a)	(b)	(c)	(d)	(e)	(f)	(g)	(h)	(i)
PEO I	x	x							
PEO II			x	x					
PEO III					x	x			
PEO IV							x	x	x

Course Objectives

The main objectives of the course are,

- To study the qualitative and quantitative determination of the biochemical substances
- To study the structure and functions of macromolecules
- To identify the molecular interactions between the atoms and molecules
- To derive the mathematical equations of enzyme kinetics
- To understand the metabolic pathways that occurs in the normal human life
- To elucidate the role of macromolecules for growth and development of organisms

Course Outcomes

On successful completion of the course, the learner will be able to

1. Demonstrate and understand the fundamental biochemistry principles including topics specific to chemistry and biochemistry
2. Acquire knowledge in understanding the enzyme structure/function
3. Understand the metabolic pathways and the regulation of biological/biochemical processes
4. Get insight into protein structures and folding mechanism
5. Applications of protein engineering in academia and industry
6. Acquire knowledge about the carbohydrates and its metabolisms

UNIT - I

Introduction: Chemical basis of life; Composition of living matter; Water – properties, pH, ionization and hydrophobicity; Emergent properties of biomolecules in water; Biomolecular hierarchy; Macromolecules; Molecular assemblies; Structure-function relationships.

UNIT - II

Biomolecules: Structure and properties of carbohydrates, fatty acids amino acids, proteins. Structure and properties of purines, pyrimidines, nucleosides, nucleotides, polynucleotides, Ribonucleic acids and deoxy ribonucleic acids, nucleoprotein complexes.

UNIT - III

Enzymology: Enzymes classification and nomenclature, Mechanism of action, regulation of enzymatic activity, enzyme kinetics – Michaelis Menton equation, Line Weaver Burk plot and Eadie Hoffstee and Haneswoll equation, enzyme inhibition.

UNIT - IV

Metabolism: Biosyntheses and degradation of fatty acids and cholesterol, Biosyntheses and degradation of amino acids, peptides and proteins; Biosyntheses and degradation of Purines, pyrimidines and nucleic acids.

UNIT - V

Bioenergetics: TCA Cycle, glycolysis, gluconeogenesis, Pentose phosphate shunt, Embden Meyerhof pathway, urea cycle, interconnection of pathways, Metabolic regulation, Bioenergetics: Respiratory chain, TP cycle, energy rich compounds.

Course Objectives

The main objectives of the course are,

- To inculcate knowledge on fundamentals of microorganisms
- To learn the structural organization, morphology and reproduction of microbes.
- To know the principles of Microscopy and advancements in Microscopy
- To understand the classification of microorganisms
- To know about the microbiological scientists and their experimental proof
- To understand the application of microorganisms in different fields of life sciences

Course Outcomes

On successful completion of the course, the learner will be able to

1. Gain rigorous knowledge on historical perspective of Microbiology
2. Acquire basic knowledge on different structure of microbes
3. Get Ideas on different type of microscope.
4. Acquaint knowledge on the scientific proofs in microbiology
5. Understand the mechanisms of microorganisms in causing diseases
6. Get a brief idea about the host-pathogen interactions

UNIT - I

Microbial Diversity: Definition, history, scope, discovery and development of microorganisms. Diversity-Bacteria, fungi, algae - distribution, reproduction and characteristics divisions. Autotrophic and heterotrophic utilization.

UNIT - II

Microscopy Techniques: Principles, types and applications of light, phase contrast, fluorescence, scanning and transmission electron microscopy, cytophotometry and flow cytometry, fixation and staining. Types of media preparation, methods of sterilization, techniques of pure culture, maintenance and preservation. Staining – types of stains and dyes, staining methods. Microbial growth.

UNIT - III

Microbial metabolism: Common nutrient requirements, nutritional types, uptake of nutrients, culture media, isolation of pure cultures. Microbial growth, growth curve, measurement of microbial growth, continuous culture, influence of environmental factors on growth, control of microorganisms by physical and chemical agents.

UNIT - IV

Biomass production: Production of carbohydrates - higher alkanes and methanol; Edible mushrooms and its types. Oyster, paddy straw, button and medicinal mushroom production and its applications.

UNIT - V

Microbial Diseases: Causative agent, pathology, diagnosis, control and treatment of Bacterial - TB, Cholera and Typhoid. Protozoan – Amoebiasis and Malaria. Viral - AIDS. Control of microorganisms – drugs, chemotherapy, antimicrobial agents.

Course Objectives

The main objectives of the course are,

- To enable students to learn the basics of prokaryotic and eukaryotic cells
- To Understand how the cellular components are used to generate and utilize energy in cells
- To prepare students for subsequent biological courses that require an understanding of the physiology of organisms such as cell division, enzyme activity etc.
- To understand the genetic variability and traits of an individual
- To gain the information about the level of genome organization in various living organisms
- To obtain the knowledge about transmission of genetic information across generation at the individual and population level

Course Outcomes

On successful completion of the course, the learner will be able to

1. Understand the unique features of plant and animal cells
2. Illustrate how the cellular components are used for various cellular activities
3. Acquire knowledge about the central theories and methodologies in traditional, molecular and population genetics
4. Acquire information on sex- linked inheritance and associated diseases
5. Understand the principles of gene expression
6. Illustrate the effect of chromosomal abnormalities in human diseases

UNIT - I

Cell Organization: Structure of prokaryotic and eukaryotic cells, cellular organelles – Plasma membrane – Properties and functions, cell wall, mitochondria, chloroplast, peroxisomes, golgi complex, Endoplasmic reticulum and lysosome. Cell division.

UNIT - II

Nucleic Acid - Replication –Types of replication, Transcription and post transcriptional Modification, Translation and post translational modification, regulation of gene expression.

UNIT - III

Genetics: Mendelian and Non-Mendelian principles. Genetic recombination, Genetic mapping, linkage and crossing over. Mutations- Types of Mutation, Genetic analysis of Mutations, DNA repair Mechanisms.

UNIT - IV

Transposons: Types of bacterial transposons, Transposition, Detection of Transposition in Bacteria, Excision of Transposons, Types of Transposons in Eukaryotic cells.

UNIT - V

Bacterial genetics - Gene transfer in Bacteria, Transformation, Transduction and Conjugation. Bacteriophages - General properties, Structure, Lytic and Lysogenic phages, Role of phages as vectors.

Course Objectives

The main objectives of the course are,

- To impart technical information on Instrumentation related to Biotechnology
- To know the working principle of instruments in biotechnology
- To understand the procedure for handling the instruments
- To understand the analytical experiments like GC-MS, LC-MS etc.
- To impart the knowledge of basic statistical methods to solve problems
- To attain strong knowledge on the applications of biostatistics and its relevant software

Course Outcomes

On successful completion of the course, the learner will be able to

1. Understand the working principles of instruments
2. Know the working principle, maintenance, and calibrations of bioanalytical tools and technique
3. Quantify the biomolecules using the bioanalytical tool
4. Implement the bioanalytical techniques to analyze the biomolecules
5. Have sufficient scientific understanding of the basic concepts in instrumentation used in biotechnology
6. To implement the statistical knowledge in analyzing the biological data used in modern biology and biotechnology research

UNIT - I

Colorimetry: Colour and absorption spectra, Beer's and Lambert's law. Principle of photoelectric colorimeter, Spectroscopy – Properties of electromagnetic radiations, Instrumentation and applications of – UV Visible light spectroscopy, Spectrofluorimeter, atomic spectroscopy, NMR spectroscopy and MALDI – TOF, Mass spectroscopy GC – MS, IR and FTIR.

UNIT - II

Centrifugation: Principle, types of centrifuges, Principles and applications of analytical and preparative centrifuge, density gradient and ultra centrifuge. **Chromatography:** Principles, Type – Paper, thin layer, ion exchange, affinity, gel filtration, HPLC and HPTLC

UNIT - III

Electrophoresis: Principle, instrumentation and applications of agarose gel electrophoresis, sodium dodecyl sulphate – polyacrylamide gel (SDS-PAGE), native PAGE, isoelectric focusing, immuno, pulse field, gel, capillary, 2D electrophoresis, gel documentation, **PCR methods.**

UNIT - IV

Biostatistics: Data collection, classification and presentation of tabulation. Measures of central tendency – mean, median and mode. Measures of dispersion – mean deviation, standard deviation, standard error and analysis of variance.

UNIT - V

Applications of biostatistics: Probability and probability distribution – theorems, binomial, poisson and normal distribution. Correlation and regression – simple correlation, correlation coefficient, simple and linear regression analysis. Test of significance -F, t, DMRT and chi-square test. Statistical and graphical software.

Course Objectives

The main objectives of the course are,

- To introduce the fundamental knowledge of food science and technology
- To integrate different aspects of technologies involved in food processing and product development
- To understand the methods and techniques involved in food production, processing, preservation, packaging, labelling, quality management, and distribution
- To emphasize on the importance of food safety, food quality, plant sanitation, packaging, marketing in food industry
- To transform raw materials into edible and nutritious food items
- To Acquire knowledge about the food preservation methods

Course Outcomes

On successful completion of the course, the learner will be able to

1. Understand the principles and current practices of processing techniques and the effects of processing parameters on product quality
2. Understand the principles that make a food product safe for consumption
3. Get experience on food processing and preservation
4. Develop new methods to improve their productivity and profitability
5. Able to seek Governments and non-governmental public advocates to offset global hunger
6. Identify ways to control microorganisms in foods and thus know the principles involving various methods of food preservation

UNIT - I

Introduction: History and Scope of Food Biotechnology, Nutritive value of food, Role of microbes in food biotechnology – bacteria, fungi and yeast. Fermented foods – Types, Changes during Fermentation, Nutritive value of fermented foods.

UNIT - II

Food Microbiology: Primary Sources of Microorganisms in food. Food borne Bacteria, Molds and Yeasts. Intrinsic and Extrinsic Parameters of food affecting microbial count. Detection of Microorganisms in food - SPC, Membrane filters, Dry films. Bacterial Toxin - Botulism and Staphylococcal toxin. Fungal Toxins - Aflatoxin.

UNIT - III

Dairy Biotechnology: Milk - Definition, Composition and Types. Fermented Milk Products - Butter, Yoghurt and Cheese. Preservation of milk by heat treatment - Pasteurization and Ultra High Temperature. Physicochemical characterization of milk. Milk Tests - Dye Reduction (MBRT and Resazurin)

UNIT - IV

Food Production: Food safety - HACCP System to food protection, Responsibility for food safety. Food Additives - Definition, Types and Functional characteristics. Natural Colors -Types, Applications, Advantages of natural colours. Sweeteners - Types and Applications.

UNIT - V

Food Spoilage and Preservation: Causes of Food Spoilage, Spoilage of Fruits, Vegetables, Meat, Soft Drinks, Eggs, Dairy products. Food Preservation through chemicals - Acids, Salts, Sugars, Antibiotics, Ethylene oxide, Antioxidants. Other Methods of Food Preservation -Radiations, Low and High temperature and Drying.

TEXT BOOKS

1. Adam, M.R. and Moss, M.O., 2003. Food Microbiology, New Age International Pub. New Delhi, India.
2. Frazier, W.C. and Westhoff, D.C., 2005. Food Microbiology, IV Ed., Tata Mc Graw Hill Pub. Company Ltd. New Delhi, India.

REFERENCES

2. Jay, J.M., 1992. Modern Food Microbiology, IV Ed. Chapman and Hall, New York, USA.

Course Objectives

The main objectives of the course are,

- To train the students on handling various experimental methods and techniques in biochemistry, cell biology and molecular genetics
- To analyze the given biological samples from biochemical stand points
- To handle the instruments with safety precautions
- To develop practical skills such as identification of cell types, cellular component and cell division, etc.
- To apply knowledge of modern techniques in cellular biology
- To grasp the structures of prokaryotic and eukaryotic cells, exclusively their membranes, and organelles

Course Outcomes

On completion of the course, students are able to

1. Acquire skills to quantitatively estimate various biomolecules and to carryout enzyme kinetics
2. Be efficient in handling the instruments
3. Acquaint knowledge on the working principle and the techniques
4. Understand the unique features of plant cells and animal cells
5. Gain knowledge on the fractionation of cellular components
6. Gain insight into the most significant molecular and cell-based methods to understand the biological concepts

List of Practicals

BIOCHEMISTRY

1. Quantification of proteins – Lowry *et al*/ Bradford method
2. Quantification of sugars – Anthrone method
3. Total free amino acids
4. Quantification of lipids
5. Quantification of Ascorbic acid
6. Membrane based separation (e.g. Microfiltration/ Ultrafiltration)
7. Thin Layer Chromatography (Amino acids / fatty acids/ sugar/ nucleic acids)
8. Effect of pH, temperature, substrate concentration (any one enzyme - catalase / SOD by OD method))

CELL BIOLOGY

1. Identification of cell types- Microbe/plant /Human
2. Fractionation of cellular component – Nuclear Components, Mitochondria, Chloroplast.
3. Sucrose Fractionation of Castor Bean
4. Lipid Solubility of Membranes
5. Cell permeability – RBC/plant cells.

MOLECULAR GENETICS

1. Drosophila Giant Chromosome preparation
2. Nuclear staining (Giemsa / acridine orange / feulgen)
3. Metaphase preparation and karyotyping (Human leucocytes/ onion root tip)
4. Conjugation
5. Transduction

MICROBIOLOGY AND FOOD BIOTECHNOLOGY - PRACTICAL II

Total hours/week: L:0 T:0 P:4

Marks: Internal:40 External:60 Total: 100

Course Objectives

The main objectives of the course are,

- To understand the concept of microbial diversity and characterization of microbes
- To get familiarity with products obtained from microorganisms
- To understand methods of preservation of pharmaceutical products
- To impart knowledge on detection of microbes in food, risk assessment in food and food safety
- To gain experience in microbiological laboratory practices and skills in the design and execution of microbiology related research
- To provide foundation in various methods to cultivate the microbes and maintenance of the microorganism

Course Outcomes

On completion of the course, students are able to,

1. Comprise out line knowledge on isolation, sub culture and maintenance of microbes
2. Work well on their own as well as a part of a team, effective communication skills and a discerning approach to food items
3. Express genuine interest in science and to know the importance of high standards of cleanliness, commitment, enthusiasm and motivation
4. Understand nutritional requirements of bacteria
5. Able to understand basic and advanced techniques of various instrumentation like pH meter, spectroscopy, colorimetric, and microscopy
6. Develop adequate skills in microbial product synthesis and purification

List of Practicals**Microbiology**

1. Pure culture technique - pour spread, loop out technique and streaking, preservation
2. Staining technique - Simple, grams, negative, endospore and fungal
3. Motility - Flagellar staining, hanging drop and soft agar analysis
4. Isolation of Mutants - physical and chemical
5. Growth curve
6. Biomass estimation

Food Biotechnology

1. Isolation and identification of microbes from food samples
2. Wine production
3. Citric acid production
4. Production of Industrially important enzymes – protease, amylase
5. Immobilization of enzymes
6. Working of fermentors

8. USA. <http://homepages.gac.edu/~cellab/index-1.html>.

Course Objectives

The main objectives of the course are,

- To familiarize the students with the basic concepts in genetic engineering
- To acquaint the students with versatile tools and techniques employed in genetic engineering and recombinant DNA technology
- To enlighten the applications of genetic engineering
- To gain knowledge on methods of gene cloning
- To understand the mechanisms of hybridization techniques
- To learn different aspects of recombinant gene expression systems

Course Outcomes

On completion of the course, students are able to

1. Express adequate knowledge in principles and methods of genetic engineering and their applications
2. Discuss various types of cloning vectors and their application
3. Have good knowledge of application of recombinant DNA techniques in life sciences research
4. Explain the significance of model organisms in recombinant DNA technology
5. Describe recombinant gene expression systems
6. Gain knowledge on the principles of analytical techniques such as PCR and RAPD

UNIT - I

Tools in Genetic Engineering: Nucleic acid manipulating enzymes- restriction- nucleases, ligases, polymerases, modification enzymes - kinases, phosphatases, adapters and linkers. Polynucleotide tailing.

UNIT - II

Cloning Vectors: Plasmid - conjugative and non conjugative plasmid, **Types of Plasmid- Natural plasmids, Artificial plasmid- pBR322 and PUC series.** Phage vectors. Plant Vector – Ti plasmid. Animal viral vectors - Retroviral viral vectors, Shuttle vectors, cosmid, phagemid, phasmid. Artificial chromosomes –BACs, YACs.

UNIT - III

Gene transfer methods: Physical, chemical and biological methods of gene transfer- prokaryotes - eukaryotes. Screening and analysis of recombinants, DNA and RNA probes – construction. Analysis of cloned foreign genes. Hybridization techniques – Southern Blotting, Northern Blotting and Western Blotting.

UNIT - IV

Analytical Techniques: PCR, RAPD, RFLP, AFLP, SSCP, protein engineering- site directed mutagenesis, PCR mediated. Alteration of restriction sites, Molecular diagnosis and therapy of cancer, DNA based detection of microbial infection/ contamination.

UNIT - V

Application: Antisense technology, RNAi technology, terminator gene technology, gene therapy- *in vivo* and *ex vivo*. Gene delivery systems - viral and non viral; DNA marker technology in plants, DNA fingerprinting, genetically engineered biotherapeutics and vaccines.

4. Watson, J.D., M. Gilman and J. Witkowski, 2000. Recombinant DNA. II Edition, Freeman Publication, New York.

Course Objectives

The main objectives of the course are,

- To understand the fermentation process for food manufacturing
- To learn about the microbial metabolism, the use of starter cultures, the process of food transformation
- To know the technological and nutritional impact of fermentation in different foods
- To make the students to understand various techniques involved in the characterization of the microorganism in fermentation and downstream processing
- To understand the technologies which have been adopted for downstream processing
- To Acquire knowledge about the fermented products

Course Outcomes

On completion of the course, students are able to

1. Acquaint knowledge on the designing of fermenter
2. Process the kinetics that will enable them to manipulate it for improvement
3. Discuss the impact of kinetics during fermentation process
4. Understand the nutritional impact of fermentation in different foods
5. Impart knowledge on the various process involved in the fermentation technology
6. Acquaint knowledge on the use of microbes and their role in fermentation process

UNIT - I

Introduction: Isolation and screening of industrially important strains- primary and secondary screening. Strain improvement, mutation, selection of mutants, recombination – bacteria, fungi and actinomycetes, assay and fermented products. Fermentations- submerged, solid state.

UNIT - II

Media: Media formulation – sterilization – batch and continuous sterilization, sterilization of air, fibrous filters. Microbial kinetics: batch, fed-batch and continuous cultures, phases of batch growth. kinetics of cell growth, product formation, substrate utilization, product inhibition kinetics, yield concept and productivity.

UNIT - III

Design of fermenter: Types – CSTR, Tower, Jet loop, Air lift fermenter, Fluidized bed reactor, bubble column, packed bed. Fundamentals of process control and monitoring – on line and off line analysis, feed back control, PID controller, computer aided control.

UNIT - IV

Kinetics: Transport phenomena – Rheological properties, determination of O₂ mass transfer, heat transfer, role of aeration and agitation, factors affecting O₂ transfer. Production of chemicals – alcohol, antibiotics – Penicillin and Streptomycin, Single cell proteins.

UNIT - V

Downstream processing: Cell distribution methods for intracellular products; foam separation, precipitation. filtration – micro and ultra-filtration; Solvent extraction, Liquid extraction, chromatographic separation, dialysis, centrifugation, distillation, drying, crystallization, turbidity analysis and cell yield determination. Fermentation products- available in market.

3. Doran P.M. (1995) Bioprocess Engineering Principles, 2nd Edition, Academic Press, London.
4. Shuler ML and Kargi F (2008) Bioprocess Engineering Basic concepts, 2nd Edition, Prentice Hall, Upper Saddle River, NJ.

Course Objectives

The main objectives of the course are,

- To understand the basic concepts of ecosystem and waste management
- To realize the importance of microbes as a source of food biomass, fuel and to understand the methodologies available for treatment of solid wastes
- To integrate the appropriate aspects of pollution, its control measures and various treatment strategies
- To study the physic-chemical parameters with regards to environmental pollution
- To impart knowledge on the conservation strategy of numerous organisms
- To understand the environmental stress related factors

Course Outcomes

On completion of the course, students are able to

1. Comprehend the various biotechnological approaches to environmental management
2. Learn the strategies for obtaining energy from various natural sources and for energy conservation
3. Understand the concept of bioremediation to handle environmental toxins
4. Analyze the harmful effects of waste water disposal to the environment and the biotechnological solutions
5. Able to develop strategies for the conservation of existing organisms
6. Acquaint knowledge on the environmental impact assessment

UNIT - I

Introduction: Introduction to Biotechnology. Role of Environmental Biotechnology. Market for Environmental Biotechnology. Microbes and metabolism. Fundamentals of biological intervention.

UNIT - II

Pollution and pollution control: Classifying pollution - toxicity; persistence; mobility; ease of control; bioaccumulation; chemistry. Pollution control strategies – dilution and dispersal, concentration and containment. Practical applications to pollution control – biofilters, biotrickling filters, bioscrubbers. 'Clean' Technology - process changes, biological control, bio-substitutions.

UNIT - III

Contaminated land and bioremediation: Remediation Methods - generalised categories, biological, chemical, physical, solidification/vitrification, thermal, Intensive and Extensive technologies. *In situ* techniques – Biosparging, Bioventing, Injection recovery. *Ex situ* techniques - Land farming, Soil banking, Soil slurry reactor. Use of bioremediation, Factors affecting the use of bioremediation.

UNIT - IV

Aerobes and effluents: Biological decomposition of organic carbon, Nitrogen and Phosphate removal. Biological removal, biotransformation, and biosorption of metal ions. Aerobic and

Anaerobic Degradation of Xenobiotics. Bioaugmentation for degradation of Xenobiotics. Industrial sources of waste water. Treatment strategies.

UNIT - V

Phytotechnology and Photosynthesis: Terrestrial phyto-systems (TPS), **phytoremediation of metals and pollutants**. Organic phytoremediation. Hydraulic containment. Aquatic phyto-systems (APS), Macrophyte treatment systems (MaTS), Nutrient film techniques (NFT), Algal treatment systems (ATS).

TEXT BOOKS

2. Mara, D., 2003. The Handbook of Water and Wastewater Microbiology. Academic Press, London, England.

Course Objectives

The objectives of the course are to make the students to

- Obtain fundamental concepts of nanobiotechnology
- Offer a strong knowledge in the interface between chemistry, physics and biology on the nano structural level with a focus on biotechnological usage
- Provide advanced training in the area of nanobiotechnology
- Understand the interaction of nanomaterials with biological molecules and cells
- Learn nanomaterials and their use with biocomponents to synthesize and address larger systems
- Produce highly skilled individuals suited for the fast-changing requirements of today's advanced workforce

Course Outcomes

On successful completion of the course, students will be able to:

1. Recognize the role of bionanotechnology as an interdisciplinary tool and to understand how to use these new tools in to solve problems in biological systems
2. Demonstrate knowledge and understanding of biomolecules and biomolecular interactions, and the relationship between molecular dynamics, nanoscale physics and macroscopic system behaviour
3. Explain biophysical mechanisms in the context of nanobiotechnology application areas
4. Analyze and discuss the engineering requirements of multidisciplinary technology based on biology
5. Explain the challenges of commercializing new technologies
6. Demonstrate technical and cognitive skills associated with nanobiotechnology

UNIT - I

Nanotechnology: Definition, The fundamental Science behind nanotechnology- electrons, atoms and ions, molecules, metals, biosystems Nanoanalysis

UNIT - II

Microfluidics and Lab-on-a-chip: Materials of Microfluidic Components. Silicon, Glass, polymers, fluid structure, fabrication methods. Surface modifications, Spotting, Detection mechanics.

UNIT - III

Natural Nano scale sensors. Biosensors. Biomedical applications: drugs, drug delivery, molecular motors. Neuro electronic interfaces, Nanoluminescent tags, imaging and mapping. Defined networks of Neuronal cells *in vitro*, physiology of information processing within Neuronal Networks, Topographical patterning, Photolithographic patterning, Photochemical patterning.

UNIT - IV

Microcontact printing of proteins: Strategies for printing proteins on surfaces, Contact processing with hydrogel stramps, Affinity contact printing, Micro contact printing polypeptides and proteins, Printing one type of biomolecules, substrates, resolution and contrast of patterns, Activity of printed molecules, Printing multiple types of proteins, Molds and stamps, Surface chemistry, Characterization of printed patterns.

UNIT - V

Applications of Nanotechnology: Nanoparticles in bio- degradation, nanomaterial-based adsorbents for water treatment, possible mutagenic properties of nanoparticles, nanoparticle bioaccumulation. Nanoparticles in biomedical and clinical applications.

TEXT BOOKS

1. Niemeyer, C.M. and C. A. Mirkin, 2004. Nanobiotechnology Concepts, Application and Properties. Wiley – Vch Publishers, New york.

REFERENCES

4. Dinh, T.V. 2007. Nanotechnology in Biology and Medicine: Methods, Devices and Applications. CRC Press. New Delhi.

Course Objectives

The objectives of the course are to make the students to

- Obtain basic skills necessary for employing biotechnology principles in together with various pharmaceutical parameters
- Understand novel formulation approaches for better delivery of biotechnology derived drugs, such as reverse micelles, liposomes, microemulsions and microencapsulation
- Attain knowledge on the delivery of peptides and proteins by the parenteral, oral, transdermal and nasal routes of administration
- Recognize novel biotechnology products and their use in therapeutics and diagnostics.
- Comprehend the physical and chemical properties of the solution/colloidal/dispersion that influence physical stability of the bioactive macromolecule with emphasis on aggregation behavior, its identification and its impact on bioactivity
- Learn about special storage, handling, reconstitution and administration conditions and techniques for drug delivery systems containing bioactive macromolecules

Course Outcomes

On successful completion of the course, students will be able to

1. Evaluate different pharmaceutical parameters of current biotechnology products
2. Determine parameters related to stability and formulation of biotechnology products
3. Discuss the quality control procedures related to biotechnology products
4. Demonstrate novel formulation methods for better delivery of biotechnology derived drugs
5. Evaluate different techniques related to separation and purification of cell types; conduct techniques for measuring cell turnover and growth, conduct cytotoxicity assays
6. Join pharmaceutical biotechnology lab and industries as a research assistant

UNIT - I

Introduction: Classification of Pharmaceuticals - Solutions, suspensions, tablets, capsules. Drugs and its sources, Routes of Drug Administration, Absorption and Bioavailability, Distribution, Drug metabolism, Drug theories, Drug Receptor interactions, Pro-drug concept.

UNIT - II

Biotechnology and health: Drug design; drug development; random screen up, target identification and validation, drug discovery, drug delivery. Drug abuse, self-poisoning. pharmacogenomics, biochip.

UNIT - III

Biotechnology and Pharmacy: Genetically engineered protein and peptide agents, novel drug delivery systems – non convectional routes of administration, Anti-AIDS drug development,

oncogenes as targets for drugs, Multi-drug resistance, vaccine development and role of genetic engineering in controlling infectious diseases, gene therapy, and stem cell therapy.

UNIT - IV

Enzyme Technology: Sources of enzymes, extraction and purification: Applications pharmaceutical, therapeutic and clinical. Production of amyloglucosidase, glucose isomerase, amylase and trypsin, Techniques of immobilisation of enzymes and their applications in the industry. Reactors for immobilised systems and perspective of enzyme engineering.

UNIT - V

Novel Drug Delivery Systems: Introduction to the drug carrier, liposomes as a drug carrier, biodegradable polymers as a drug carrier. Modified Drug Release: The sustained release, first order release approximation, multiple dosing.

Course Objectives

The objectives of the course are to make the students to

- Provide an overview of the basic process of bioenergy
- Understand different strategies to convert biomass to biofuels
- Obtain knowledge on the available technologies and how these could meet the growing demand for energy in the future
- Understand biomass biodegradability and bioconversion rate in relation to energy yields
- Describe biochemical processes of biomass conversion to bioenergy production with focus on fermentation and anaerobic digestion
- Understand technological potentials of biogas, bioethanol, biofuel and biohydrogen

Course Outcomes

On successful completion of the course, students will be able to

1. Demonstrate bioenergy production processes adequate to diverse biomass characteristics
2. Discuss state-of-the-art technologies of generating biofuels from sustainable bioresources
3. Discuss and propose feasible biofuel technologies and biofuel products from selected biomasses
4. To illustrate a bio-energy thermo-chemical conversion process
5. Design biogas reactor capacity and propose optimal and economically viable technical operational condition
6. Demonstrate sequential bioethanol and biogas production and compare bioethanol and biogas scenarios with respect to energy recovery

UNIT - I

Biofuel: Introduction, features, undesirable features, Energy crops – wood, sugar and starch crops, hydrocarbon producing crops. Modes of utilization of biomass.

UNIT - II

Biogas: Substrate, digester, microorganisms, process of biogas production, factors affecting biogas yield, precautions, advantages and disadvantages.

UNIT - III

Bioethanol: Introduction, bioethanol vs. petrol, production of bioethanol – yeast, sugar and starch crops, ethanol recovery.

UNIT - IV

Biodiesel: Introduction, lipids as a source of biodiesel – algae, sunflower, rapeseed, linseed, soybean, jatropha, peanut, biodiesel from hydrocarbons. Biobutanol – *Clostridium*, molasses.

UNIT - V

Biohydrogen: Single cell microbial oil, Hydrogen as fuel – production - methods - electrolysis of water, gasification, biological agents. Biohydrogen production – anaerobic fermentation, photolyses and photosynthetic methods.

Course Objectives

The objectives of the course are to make the students to

- Learn about the biochemical parameters used in the identification and utilization of medical plants
- Understand the extraction procedures of phytochemicals
- Exploit and explore the medicinal values of plants
- Gain knowledge about various drugs, its effects, drug metabolism, drug receptors, drug tolerance, dependence and resistance with therapeutic monitoring of drugs
- Understand comprehensive information and insights in pharmaceutical biotechnology and the development of biopharmaceuticals in pharmaceutical industry
- Obtain scientific knowledge of designing and mechanism of action of drugs

Course Outcomes

On successful completion of the course, students will be able to

1. Know the biosynthesis of primary and secondary metabolites involved in plants
2. Understand the concept of phyto-chemical extraction and principles involved in DNA and chemical fingerprinting techniques
3. Know about applications of phyto-constituents in development of drug
4. Validate the results obtained using the techniques involved in photochemical analysis
5. Imparting a comprehension of basic skills necessary for employing biotechnology principles
6. Understand and evaluate the different pharmaceutical parameters of the current and future biotechnology related products on the market

UNIT - I

Phytochemistry: Biosynthesis of primary and secondary metabolites - alkaloids, terpenoids, Phenolic compounds and coumarins. Classification of alkaloids and phenolic compounds.

UNIT - II

General extraction and isolation techniques: Alkaloids and phenolic compounds from plants. Techniques involved in extraction of phytochemicals – Perculation, Soxhlet extraction, reflux and other methods.

UNIT - III

Biotechnology of medicinal plants: Production of secondary metabolites from cultured plant cells, elicitation, immobilization and biotransformation. DNA bar coding. DNA fingerprinting of medicinal plants – DNA isolation and fingerprinting techniques.

UNIT - IV

Bioactive studies: Anticancer, antidiabetic, anti-inflammatory, hepatoprotectives, antimicrobials from medicinal plants. Antioxidants of plant origin – Reactive Oxygen Species (ROS). Toxicity studies on medicinal plant products and herbal formulations.

UNIT - V

Pharmacognosy: Authentication of medicinal plants – Organoleptic and other pharmacognostic studies. Anatomical studies. Organic cultivation of medicinal plants

Course Objectives

The objectives of the course are to make the students to

- To familiarize with aspects of animal farming, problems and prospectus, principles of housing, breeding, feeding and health care of animals
- The student should be able to apply principles and concepts to make management decisions
- The course will present and explore options available to livestock producers in techniques
- The students will gain experience with different livestock management practices
- To explain the methodology of selection and breeding systems for genetic improvement of livestock
- To educate about basic principles of animal physiology and their applications in improving farm animals

Course Outcomes

On successful completion of the course, students will be able to

1. This course is designed to provide an overview and understanding of common and routine livestock management techniques, facilities and decision making
2. Students will know how to palpate cattle, to administer vaccinations, minor surgical techniques, freeze branding, hoof care, proper restraint, and safety in working with animals
3. Students are expected to show proficiency in all topics presented on the course outline.
4. This course will provide adequate knowledge about the animal breeding techniques to students
5. Gain knowledge about various drugs to treat animal diseases
6. Gain knowledge commercial production of livestock and its maintenance

Unit - I

Introduction to livestock: Importance of livestock management; characteristics of a good farm manager; livestock population and its trends; role of farm animals in the national economy; **types and breeds of livestock; principles of farm animal management;** importance and objectives of housing; farm sanitation and waste disposal; transportation of farm animals; quarantine measures; behaviour and welfare of farm animals.

Unit - II

Animal physiology and behaviour: Functional histomorphology male and female reproductive system; Endocrine glands- Concepts in hormone function. Blood and its components constituents' properties and functions of blood. Importance of animal behaviour studies - Patterns of behaviour - Daily and seasonal cycles of behaviour. Environmental modification of behaviour - Developmental changes in behaviour - Genetic differences in behaviour.

Unit - III

System of housing and hygiene: Housing - General principles, planning, layouts for livestock farm of different sizes indifferent climatic zones, Farm structures. Hygiene: air hygiene, Composition of air, Air pollution – Factors, Assessment, control measures; water hygiene, Importance of water - Impurities – Sterilization - Hygienic requirements and standards for drinking water- Quantity of water - Methods of watering.

Unit - IV

Nutrients and Feedings: Fundamental concepts of Digestion and metabolism of Carbohydrate, Fat and Protein in different species of animals. Gluconeogenesis, Recent advances in glucogenic precursors on acetate utilization. NPN metabolism, measures of feed energy, feeding standards, commercially available feeds.

Unit - V

Breeding Management and disease control: Breeding seasons - fitness of purchase for first breeding - methods of detection of heat - Natural Service and artificial insemination - Care of the pregnant Animals - Breeding stock - Use of teaser- Culling. Common diseases and their control measure. Management of specific pathogen free and gnotobiotic animals, concepts to related to welfare of laboratory animals; Transportation of Laboratory animals – marketing of meat and fur. Importance and applications of laboratory animals.

Course Objectives

The objectives of the course are to make the students to

- This paper will help in develop entrepreneurship among the students
- To identify the edible and nonedible mushrooms
- Enable the students to identify edible and poisonous mushrooms
- Provide hands on training for the preparation of bed for mushroom cultivation and spawn production
- Give the students exposure to the experiences of experts and functioning mushroom farms
- Help the students to learn a means of self-employment and income generation

Course Outcomes

On successful completion of the course, students will be able to

1. Appreciate the importance of embarking on self-employment and has developed the confidence and personal skills for the same.
2. Identify business opportunities in chosen sector / sub-sector and plan and market and sell products / services
3. Start a small business enterprise by liaising with different stake holders
4. Effectively manage small business enterprise
5. Take up Mushroom Cultivation and run it profitably
6. Selection of important types of Mushroom and their cultivation

UNIT - I

Introduction: Historical Development, Fungal Habitat, Mushroom Taxonomy, Types of Mushrooms, Cultivation Modalities - Parasitic, Mycorrhizal, Saprobic and Opportunistic.

UNIT - II

Mushroom Cultivation: Methods in mushroom cultivation- Paper Sack Capture, Raised Bed Mushroom Culture, Compost Making, Log Mushroom Culture, Mycorrhizal Mushrooms, Straw Bale Culture, Making, Mycelial Mats and Mycoremediation.

UNIT - III

Substrate Preparation: Phase-I Composting - Windrow formation – Temperature – Oxygen Requirement – Bed preparation for Spawn production. Phase-II Composting - Elimination of ammonia – Pasteurization of composting – Spawn production – Spawning.

UNIT - IV

Mushroom Fermentation: Substrate Fermentation – Carbon to Nitrogen ratio (C/N) – water - Acidity requirement. Applying and Stacking Mushroom Culture in Developing and Established Farms and Gardens. Choosing Mushroom species.

UNIT - V

Fruit bodies - Mushroom formation - Fruiting body formation – Picking and packaging -Processing problems - Pest Management - Marketing Mushrooms - Market Demand - Market Research- Adding Value to Fresh Mushrooms and value-added products.

Course Objectives

The objectives of the course are to make the students to

- Be familiarize with practical knowledge in the emerging field of biotechnology: Recombinant DNA technology
- Perform basic molecular biology techniques including DNA and RNA isolation from microbes, plants and animals
- Acquaint versatile tools and techniques employed in recombinant DNA technology such as restriction and digestion, ligation, transformation and PCR
- Obtain practical knowledge on blotting techniques
- Acquire knowledge on quality and quantity checking of nucleic acids
- Comprehend the applications of recombinant DNA technology in human health care

Course Outcomes

On successful completion of the course, students will be able to

1. Carry out DNA and RNA isolation from microbes, plants and animals
2. Perform recombinant DNA techniques including restriction-digestion, ligation, transformation and PCR
3. Carry out versatile recombinant DNA techniques
4. Perform quality and quantity checking of nucleic acids
5. Demonstrate various blotting techniques
6. Join in research and clinical labs as a project/ research assistant

List of Practicals

1. Isolation of total DNA from Microbes (*E. coli*)
2. Isolation of total DNA from plant
3. Isolation of total DNA from animal cells
4. Isolation of plasmid DNA
5. Isolation of total RNA from Yeast
6. Quality and quantity checking of Nucleic acids
7. Restriction digestion of DNA
8. Ligation of DNA
9. Transformation of plasmid DNA using calcium chloride
10. Amplification by PCR
11. SDS-Polyacrylamide gel electrophoresis method
12. Southern blotting
13. Northern blotting
14. Western blotting

Course Objectives

The objectives of the course are to make the students to

- Be familiarize with practical knowledge in fermentation and environmental biotechnology fields
- Perform isolation and secondary screening of industrially important microorganisms
- Acquaint versatile tools and techniques employed in fermentation biotechnology such as enzyme immobilization, wine production and downstream processing
- Obtain practical knowledge on basic environmental techniques such as water quality test
- Gain hands on experience in quantifying chemical and biological oxygen demand
- Comprehend the protocol to analyze heavy metals

Course Outcomes

On successful completion of the course, students will be able to

1. Carry out isolation and screening of industrially important microorganisms
2. Perform analytical techniques including thermal death point and thermal death time
3. Explain the principles of enzyme immobilization, wine production and downstream processing
4. Describe the basic knowledge about testing the water quality via pH analysis
5. Perform various techniques to quantify total solids, chemical oxygen demand and biological oxygen demand
6. Join as a technician in quality control section in fermentation-based industries and environmental analysis labs

List of Practicals

Fermentation Technology

1. Isolation and secondary screening of industrially important microorganisms.
2. Auxotrophic mutants
3. Thermal death point and Thermal death time.
4. Production of amylase and protease.
5. Enzyme immobilization
6. Wine Production and alcohol determination by chromic acid method
7. Down stream processing by Solvent extraction,
8. Partial purification by Ammonium sulphate precipitation,
9. Partial purification by Dialysis
10. Quality checking by SDS PAGE

Environmental Biotechnology

1. Water quality tests for pH
2. Determination of total solids
3. Determination of Chemical Oxygen Demand
4. Determination of Biological Oxygen Demand
5. Analysis of heavy metals (Iron/Chromium)

Course Objectives

The objectives of the course are to make the students

- To provide various techniques and aspects regarding Plant biotechnology
- To equip students with theoretical knowledge regarding the techniques and applications of Plant Biotechnology and Genetic Engineering
- To provide comprehensive training in the plant biotechnology and its application for increasing agricultural production, environment improvement, human, nutrition and health
- To get a career in Industry/R&D/Academic
- To learn about genome organization in plants, basic techniques in tissue culture and its applications
- To acquire knowledge about the genetic transformation in plants, metabolic engineering, production of pharmaceuticals and industrial products and plant molecular farming

Course Outcomes

On successful completion of the course, students will be able to

1. Describe the genome organizations in plants
2. Elaborate on the plant cell and tissue culture systems
3. Explain the genetic transformation techniques in plants
4. Demonstrate the application of genetic transformation techniques in plants
5. Evaluate the importance of metabolic engineering and molecular farming in plants
6. Join as a project assistant in Phyto pharma Industries

UNIT - I

Introduction: Principles of Plant Breeding: Important conventional methods of breeding – self, cross pollinated and vegetatively propagated crops. Non-conventional methods. Polyploidy, Genetic variability. Genome organization in plants – mitochondria and chloroplast. Cytoplasmic male sterility.

UNIT - II

Micropropagation: Tissue culture media – composition and preparation, Callus and suspension culture, somoclonal variation, micropropagation, organogenesis, somatic embryogenesis, Embryo culture and embryo rescue. Haploidy; protoplast fusion and somatic hybridization; cybrids; anther, pollen and ovary culture for production of haploid plants and homozygous lines. Plant hardening transfer to soil, green house technology.

UNIT - III

Plant Genome Organization – Chloroplast, Mitochondria, and Nucleus Strategies in bioconversion. Production of pharmaceutical compounds. Mass cultivation of plant cells. Secondary metabolite Production from Suspension Culture, Bioreactors – Photo bioreactor. Production of secondary metabolite in plants, stages of secondary metabolite production, uses of tissue culture techniques in secondary metabolites.

UNIT - IV

Plant genetic Engineering: Methodology; Plant transformation with Ti plasmid of *Agrobacterium tumefaciens*; Ti plasmid derived vector systems, Ri plasmids; Physical methods of transferring genes to plants - Microprojectile bombardment, Electroporation; Manipulation of gene expression in plants; Production of marker free transgenic plants.

UNIT - V

Application of Genetic transformation: Productivity and performance: herbicide resistance, insect resistance, virus resistance, fungal resistance, nematode resistance, Induction of abiotic stress and cold stress. Delay in fruit ripening, terminator seed technology, plantibodies, edible vaccines - primary and secondary metabolite modification, biopolymers, plant-based enzyme engineering.

5. Nirmala, C.B., G. Rajalakshmi and C. Karthik, 2009. Plant Biotechnology. MJP Publication, Chennai.

Course Objectives

The objectives of the course are to make the students to

- Provide an experience for the students in an interdisciplinary research program connecting animal genomics with animal reproduction and biotechnology
- Introduce biotechnological methods for production of transgenic animals
- Give knowledge about various methods of gene transfer in animals
- Cognize and get the knowledge on techniques to protect endangered animals
- Explain the basics of the physiological and molecular processes for animals facing environmental adaptations
- Use basic biotechnological techniques to explore molecular biology of animals
- Understand the processes involved in the planning, conduct and execution of animal biotechnology experiments

Course Outcomes

On successful completion of the course, students will be able to

1. Understand the growth conditions required to culture the animals in *in vitro* conditions.
2. Inculcate the deep understanding of Gene expression system of animals
3. Acquire knowledge on producing Transgenic animals
4. Inculcate the deep knowledge on the processes involved in planning, conduct and execution of animal biotechnology experiments
5. Discuss the structure and organization of animal genome
6. Work as a research assistant in animal biotechnology industries

UNIT - I

Animal cells: culture media, types of media, balances salt solutions. Physical, chemical and metabolic functions of different constituents of culture medium; role of carbon dioxide, serum, growth factors, glutamine in cell culture; serum and protein free defined media and their applications.

UNIT - II

Cell culture: Types, disaggregation of tissue, primary culture, established culture; suspension culture, organ culture, three-dimensional culture and tissue engineering, feeder layers; cell synchronization; cryopreservation. Biology and characterization of cultured cells, tissue typing; cell – cell interaction; measuring parameters of growth; measurement of cell death – apoptosis and its determination.

UNIT - III

Molecular cell techniques: cell transformation- physical, chemical and biological methods; manipulation of genes; cell and organism cloning; green fluorescent protein and its application. Gene therapy.

UNIT - IV

Embryology: Collection and preservation of embryos; culturing of embryos; gametogenesis and fertilization in animals; types of cleavage pattern; role of maternal contributions in early embryonic development; *In vitro* fertilization and stem cell research.

UNIT - V

Transgenics: Transgenic animals; production and application; transgenic animals as models for human diseases; transgenic animals in live- stock improvement; expression of the bovine growth hormone; transgenics in industry. Ethical issues in animal biotechnology.

Course Objectives

The objectives of the course are to make the students to

- Expose the students with the immune system of human body
- Understand about our immune system and the immune response of cells and organs
- Obtain key concepts on gene-re-arrangement of immunoglobulin and T-cell receptor genes, and antigen processing and presentation.
- Comprehend the principles of immunological techniques like hybridoma technology and catalytic antibodies synthesis
- Understand strong fundamental knowledge in tumor immunology
- Attain the principles involved in vaccine technology including recombinant vaccines
- Recognize the basic concepts in bone marrow and other organs transplantation

Course Outcomes

On successful completion of the course, students will be able to

1. Demonstrate various immunological process including innate and adaptive immunity, cells and organs of immune system, antigen and antibody interaction, immunogenicity and antigenicity, epitopes and antibody structure
2. Describe the organization of Ig genes, class switching in constant regions of genes and expression and regulation of Ig genes
3. Recognize how antigens are processed, presented and immune activation occurs via B- and T- cells activation
4. Appreciate the underlying mechanisms of auto-immune diseases and allergic reactions
5. Illustrate the role of immune system in tumor formation
6. Apply the knowledge of this course in research and pharmacological industries

UNIT - I

Introduction: History and scope, Immunity – types, Antigen and Antibody - biology, structure and functions, super antigens, antigen- antibody interactions, primary and secondary immune response. Humoral and cell mediated immunity.

UNIT - II

Immune system: Hematopoiesis and differentiation, Lymphocytes, Lymphoid organs: Primary and secondary lymphoid organs. Antigen recognition and presentation, activation of B and T lymphocytes, cytokines and their role in immune regulation. **Complement system** - Classical and alternate pathway.

UNIT - III

Transplantation: MLR, MHC and HLA typing, bone marrow transplantation, organ transplants, immunosuppressive therapy. Hybridoma technology and monoclonal antibodies, immuno-diagnosis and application of monoclonal antibodies in biomedical research, human monoclonal antibodies and catalytic antibodies, Xeno transplantation from various species

UNIT - IV

Hyper sensitivity reactions, auto immune disorders. Tumour immunology: Tumour antigens, immune response to tumours, cancer immunotherapy. Immunodeficiencies – primary and secondary.

UNIT - V

Vaccines: Vaccine technology including DNA vaccines, identification of B and T epitopes for vaccine development. Immuno diagnosis of infectious diseases, immuno screening of recombinant library.

6. Surendranath, A. and R. Narain, 2004. Immunobiotechnology. Dominant Publishers and Distributors, New York.

Course Objectives

The objectives of the course are to make the students to

- Teach the students a thorough knowledge on genome and proteome identification, analysis and applications.
- Educate students on stand-alone and online software for genetic studies.
- Import the basic and recent developments in the field of genome sequencing, genome mapping, proteomic data analysis
- Develop the knowledge on gene sequencing methods.
- Know the structure and interactions of proteins.
- Describe advanced genomics and proteomics technologies and the ways in which their data are stored
- Use bioinformatics techniques to query examples of genomic and proteomic databases to analyse cell biology
- Describe the different types of genome variation and their relationship to human diseases

Course Outcomes

On successful completion of the course, students will be able to

1. Have a clear understanding on the application of genetic markers in genome mapping.
2. Application of 2D technique to analyze the structure of protein.
3. Analyze the genomic and proteomic data.
4. Acquire knowledge and understanding of fundamentals of genomics and proteomics, transcriptomics and metabolomics and their applications in various applied areas of biology.
5. Discuss how biological systems information relating to genes, proteins and cellular structures can be used to model living cells, and even to create new synthetic cells.
6. Solve problems in new or little-known situations within broader (or multidisciplinary) contexts related to the field of study.

UNIT - I

Genome Sequencing: Gene and pseudogenes, Gene structure, Genomes, Sequencing Genomes- methodology, chain termination method, chemical degradation method, automated DNA sequencing, shotgun sequencing and assembly of contiguous DNA sequence. cDNA and Genomic library construction.

UNIT - II

Genomic Mapping: Different types of genome maps and their practical uses, Genetic and Physical mapping techniques. Map resources. Practical uses of genome maps. Genetic Markers - Mini and Micro satellite, STS and EST, SNPs.

UNIT - III

Gene Expressions and Microarrays: Expression systems - Bacteria, Yeast and Viral. Concepts of microarrays, spotter analysis, Normalization –total intensity, using regression techniques, ratio statistics. Clustering Gene expression profiles-hierarchical, single-linkage, complete linkage, and average linkage. Tools for microarray analysis- MADAM, spot finder, SAGE Applications of Microarrays- Bioinformatics challenges in micro array design and analysis.

UNIT - IV

Experimental Proteomics: Proteome analysis- 2D gel electrophoresis: general strategy, immobilized pH gradients, sample preparation, isoelectric focusing, staining, transfer of proteins from gels, image acquisition and analysis of gels. 2DE databases.

UNIT - V

Analytical Proteomics: RP-HPLC, Mass Spectrometry – ESI MS and MALDI techniques and applications. Characterization of protein complexes – Protein - DNA, Protein-protein interactions, yeast two-hybrid system and protein micro arrays – biomarkers.

6. Bourne, P.E. and H. Weissig, 2003. Structural Bioinformatics. John Wiley & Sons, Singapore.

Course Objectives

The objectives of the course are to make the students to

- Introduce basic concepts of safety that is essential for different disciplines of science and procedures involved and protection of intellectual property and related rights
- Discuss about various aspects of biosafety regulations and IPR concerns arising from the commercialization of biotech products
- Understand balanced integration of scientific and social knowledge in sustainable development
- Attain the benefits of GM technology and related issues
- Identify and discuss the issues and concepts salient to the research process
- Recognize and discuss the complex issues inherent in selecting a research problem, selecting an appropriate research design, and implementing a research project

Course Outcomes

On successful completion of the course, students will be able to

1. Interpret basics of biosafety and its impact on all the biological sciences and the quality of human life
2. Recognize importance of biosafety practices and guidelines in research
3. Apply intellectual property law principles including copyright, patents, designs and trademarks to real problems and analyze the social impact of intellectual property law and policy
4. Comprehend the importance of protection of new knowledge and innovations and its role in business
5. Gain more insights into the regulatory affairs
6. Demonstrate knowledge of research processes such as reading, evaluating, and developing, and to identify, explain, compare, and prepare the key elements of a research proposal and report

UNIT - I

Biosafety: Introduction; Historical Background; Biological Safety Cabinets; Primary Containment for Biohazards; Biosafety Levels; Biosafety Levels of Specific Microorganisms; Recommended Biosafety Levels for Infectious Agents. Cartagena protocol on biosafety.

UNIT - II

Biological risk assessment: Biosafety guidelines for Genetically Modified Micro organisms (GMM) and Plants (GMP)-Risk assessment and contained use of GMM and GMPs-guidelines for research activities-import and shipment quality control of biologicals produced by rDNA technology. Guidelines for environmental release of GMM, GMP and GLP.

UNIT - III

Intellectual Property Rights: Types of IP: Patents, Trademarks, Copyright and Related Rights. **Agreements and Treaties:** History of GATT and TRIPS Agreement; Madrid Agreement; Hague Agreement; WIPO Treaties; Budapest Treaty; PCT; Indian Patent Act 1970 and recent amendments

UNIT - IV

Research methodology: Scope and significance – Types of Research – Research Process – Characteristics of good research – Problems in Research – Identifying research problems. Research Designs – Features of good designs, Report writing – Introduction, review of Literature, Result interpretation, bibliography.

UNIT - V

Sampling Design: Meaning – Concepts – Steps in sampling – Criteria for good sample design. Scaling measurements – Techniques – Types of scale.

Course Objectives

The objectives of the course are to make the students to

- Give knowledge on Bioinformatics and its applications
- Offer knowledge to assess biological databases
- Understand and to analyze protein/nucleotide sequences and to predict its 3D structure
- Understand the various online databases for submitting and retrieving data
- Attain how the phylogeny plays a vital role in finding ambiguities
- Get practiced with the tools and techniques for analyzing the data

Course Outcomes

On successful completion of the course, students will be able to

1. Understand The relationship between sequence - structure - function of genes
2. Familiarize with the algorithms required to compare sequences and require to know the phylogenetic relationship between the gene sequences
3. Inculcate knowledge on building 3D structures of genes
4. Locate and use the main databases at the NCBI and EBI resources
5. Know the difference between databases, tools, repositories and be able to use each one to extract specific information
6. Use selected tools at NCBI and EBI to run simple analyses on genomic sequences

UNIT - I

Introduction: Definitions, Objectives, Scope, Applications of Bioinformatics, History and milestones of bioinformatics, Genome sequencing projects – Steps, Human Genome Project and other genome projects.

UNIT - II

Basic concepts of biomolecules and computers: Basic concepts of biomolecules – Protein and amino acid, DNA and RNA - Sequence, Structure and function.

Basic computer components - Hardware, software, operating systems, computer networks, programming, internet, browsers, search engines, email, databases.

UNIT - III

Biological databases: Types of databases, Sequence databases, Nucleic acid sequence databases - Primary (GenBank, EMBL, DDBJ), Secondary (UniGene, SGD, EMI Genomes, Genome Biology), Protein sequence database – Primary (PIR, SWISS-PROT), Secondary (PROSITE, Pfam), Structural databases (PDB, SCOP, CATH), Bibliographic databases and Organism specific databases.

UNIT - IV

Database searching and Sequence Alignment: Similarity searching programs-BLAST, Sequence alignment - Pair-wise and Multiple-sequence alignment (Methods and Algorithms), CLUSTAL-W, Protein structure alignment (Methods, algorithms- DALI) Phylogenetic analysis (Methods, algorithms).

UNIT - V

Gene prediction: Gene prediction in prokaryote and eukaryotes. Extrinsic approaches and Ab initio approaches. Predicting the protein secondary structure (Domain, blocks, motifs), Predicting protein tertiary structure (Homology, Ab-initio, threading and fold recognition) and visualization of predicted structure.

Course Objectives

The objectives of the course are to make the students to

- Acquire knowledge and learn the terminology of the field of Industrial toxicology, understand and be able to describe in detail the toxicological effects of certain dangerous substances
- Describe the relationship of dose - response, and the principle of determining the theoretical expertise on the mutagenic, teratogenic and carcinogenic effects of toxic substances
- Obtain knowledge of current legislation on health protection while working with chemical agents, carcinogenic and mutagenic factors, and biological factors
- Learn about toxic effects of elements and their compounds
- Understand the classification of substances under the new legislation
- Gather and critically interpret toxicological information from diverse resources for human health hazard and risk assessment

Course Outcomes

On successful completion of the course, students will be able to

1. Describe toxicology as a discipline in the overall health sciences framework
2. Explain the basic concepts of chemical hazard and exposure as determinants of chemical toxicity
3. Describe key pathways and mechanisms of chemical absorption, distribution, metabolism, storage and excretion in the human body
4. Explain dose-response relationships as the basis of toxicity
5. Outline the derivation of reference dose and other related measures of occupational exposure
6. Describe the scientific basis of occupational exposure assessments and practical methods for their determination

UNIT - I

Introduction: Scope, Divisions of Toxicology, General principles of toxicology, - Classification of Toxic Agents. Mechanism of action of toxicants, Routes of exposure-absorption and translocation.

UNIT - II

Toxicokinetics: Absorption, Distribution, Metabolism and Excretion, Factors influencing Toxicity, Dose-effect and Dose response relationship- LD50, LC50.

UNIT - III

Human Toxicology: Pollution induced biochemical, hematological and pathological changes, Immunotoxicity, genotoxicity and carcinogenic effects

UNIT - IV

Ecotoxicology: Influence of ecological factors on the effects of toxicity; Pollution of the Ecosphere by industries; degradable and non-degradable toxic substances; food chain. Eco-system influence on the fate and transport of toxicants.

UNIT - V

Regulatory issues and testing: Bacterial mutation assays, Mammalian cell mutation assays, in vitro chromosome aberration assays, In vivo carcinogenicity assays and comet assay.

4. Omkar, 1988. Concepts of toxicology. Shoban lal Nagir, Chand & Co, Delhi.

Course Objectives

The objectives of the course are to make the students to

- Give an overview of fundamental concepts in tissue engineering and regenerative medicine
- Understand tissue growth and development as well as the tools and theoretical information necessary to design tissues and organs
- Recognize the need of controlling all factors related to biomaterials architecture such as cell biology, biochemistry pathways, and surface characterization and modification
- Comprehend various physical and chemical stimuli that control the structure of biomaterials
- Get knowledge in which cell types are available to be used in tissue engineering applications
- Understand the relevance of the extracellular matrix and its interaction with materials

Course Outcomes:

On successful completion of the course, students will be able to

1. Describe and use the fundamental tools and techniques used in tissue engineering
2. Compare and contrast various strategies for repairing tissues
3. Show mastery of fundamental topics in tissue engineering including stem cells, plasticity, trans differentiation, and cloning
4. Describe and the developments of biomaterials for regenerative therapies and tissue engineering
5. Discuss and give an example of how biomaterials are used to fabricate devices for clinical use
6. Illustrate the basic concepts of cell culture and critical components of bioreactor/tissue design

UNIT - I

Tissue engineering: Introduction to tissue engineering; Basic definition; Cell sources and stem cells; Cell isolation and selection; Tissue preservation; Tissue types; Structure and organization of tissues; Epithelial, connective; vascularity and angiogenesis; Extracellular matrices; Cell-matrix interactions; development and use in therapeutic and *in-vitro* testing.

UNIT - II

Cell culture types and morphology: cell biology, Isolation, cell growth, Different cell types, progenitor cells and differentiations, different kind of matrix, cell-cell interaction. sterile techniques, plastics, enzymes, reactors and cryopreservation and migration; cell expansion, cell transfer, cell storage and cell characterization, Bioreactors.

UNIT - III

Cell analysis: Different cell types, staining, hormones, growth factors (receptor- ligand binding) and chemokines in signaling (eg. G-proteins). Growth factor delivery and applications (angiogenesis) in tissue engineering. Cell junctions in tissues, Growth factor delivery in tissue engineering and Cell surface markers.

UNIT - IV

Scaffold and transplant: Engineering biomaterials, Degradable materials (collagen, silk and polylactic acid), porosity, mechanical strength, 3-D architecture and cell incorporation. Engineering tissues for replacing bone, cartilage, tendons, ligaments, skin and liver.

UNIT - V

Bioreactors in Tissue engineering: Importance of tissue engineering, applications in pharmaceuticals industry. Case study and regulatory issues: Case study of multiple approaches: cell transplantation for liver, musculoskeletal, cardiovascular, neural, visceral tissue engineering. Ethical, FDA and regulatory issues of tissue engineering.

Course Objectives

The objectives of the course are to make the students to

- Understand the new concept of system biology applied to the area of biotechnology
- Build the knowledge in computational methods in biotechnology
- Acquire requisite skills for the design and development of high throughput screening and to retrieve and submit the data, genome database and other databases and analysis
- Learn the computational tools for applying biotechnology in research
- Study the techniques involved in structural and functional proteomics
- Utilize the bioinformatics tools to design and development of novel drugs

Course Outcomes

On successful completion of the course, students will be able to

1. Understand the basic concepts of System Biology
2. Differentiate various Metabolic Networks and Models in System Biology
3. Understand the various databases available for data collection and interpretation
4. Understand the scope and applications of tools
5. Utilize the computational tools for applying biotechnology in research
6. Study and deduce the molecular characterization of human genome

UNIT - I

Introduction to Systems Biology: Introduction to Systems Biology. Need for System Analysis in Biology. Basic Concepts in System Biology: Component vs System, Links and Functional States, Links to Networks, Hierarchical Organization in Biology.

systems, scales, static/dynamic, approaches, limitations, reductionism; central dogma; mathematical models; computational analysis; statistics of prokaryotes and eukaryotes.

UNIT - II

Metabolic Networks and Models in System Biology: Basic Features of Metabolic Networks. Reconstruction Methods of Metabolic Networks. Models as Dynamical Systems. Parameter Problem. Meanings of Robustness.

UNIT - III

Systems Biology Databases KEGG (Kyoto Encyclopedia of Genes and Genomes). BRENDA (Braunschweig ENzyme DAtabase). BioSilico. EMP (Embden-Meyerhof-Parnas). MetaCyc and AraCyc. SABIO-RK (System for the Analysis of Biochemical Pathways - Reaction Kinetics). BioModels.

UNIT - IV

Tools for System Biology: Cell Designer. Ali Baba. Cell Profiler. JDesigner. Bio-SPICE (Biological Simulation Program for Intra and Inter Cellular Evaluation). SBML (Systems Biology Markup Language). SBGN (Systems Biology Graphical Notation). SBML-SAT (SBML based Sensitivity Analysis Tool).

UNIT - V

Premises & Promises of Systems Biology: Premise of Systems Biology. Promise of Systems Biology. Challenges of Systems Biology. Applications of Systems Biology.

Course Objectives

The objectives of the course are to make the students

- To learn various bio-entrepreneurship and marketing approaches
- To know about the entrepreneurship including identifying a business opportunity in the area of biotechnology through resource generation and launching a biotech business, growing and nurturing the organization as well as harvesting the rewards.
- To familiarize students with the scope of issues and decisions that managers in biotechnology face as their company progresses from its earliest stages to self-sustainability
- To give students the vocabulary to participate and contribute to the business side of scientific enterprises
- To provide a general procedural road map for bioscience students who are interested in starting their own companies

Course Outcomes

On successful completion of the course, students will be able to

1. Differentiate between Wage employment, Self-employment and Entrepreneurship
2. Understand, appreciate and develop the self-confidence for embarking on self-employment
3. Understand and internalize entrepreneurial competencies and know their importance for becoming a successful entrepreneur.
4. Candidate will be able to mobilize resources required for starting the enterprise
5. Trainee is able to appreciate need for continuous growth and expansion of an enterprise

UNIT - I

Accounting and Finance: Starting a venture; Bank loan; Sources of financial assistance; Business proposal; Statutory and legal requirements for starting a company. Budget planning and cash flow management; accounting practices: balance sheet, P&L account, and double entry bookkeeping; Estimation of income, expenditure, profit, income tax.

UNIT - II

Marketing: Assessment of market demand for potential product(s) of interest; Market conditions, segments; Prediction of market changes; Identifying needs of customers including gaps in the market, packaging the product; Market linkages, Advertising.

UNIT - III

Information Technology: IT for business administration; IT in improving business performance; Available software for better financial management; E-business setup and management.

UNIT - IV

Human Resource Development: Leadership skills; Managerial skills; Organization structure, pros & cons of different structures; Team building, teamwork; Appraisal; Rewards in small scale set up.

UNIT - V

Entrepreneurship and R&D

Support mechanism for entrepreneurship in India. Knowledge centers like universities and research institutions; Role of technology and upgradation; Assessment of scale of development of Technology; Managing Technology Transfer; Regulations for transfer of foreign technologies; Technology transfer agencies.

Course Objectives

The objectives of the course are to make the students to

- Understand the new concept of plant biotechnological techniques applied to the area of biotechnology
- Gain hands-on experience and to learn the principles behind plant biotechnology
- Know the process involved in isolation, separation, manipulation of plant tissues
- Apply the technology in research and development and pharmaceutical industries
- Execute the recent technology involved in plant tissue culture
- Describe the principles of gene manipulation.

Course Outcomes:

On successful completion of the course, students will be able to

1. Acquaint with principles, technical requirement, scientific and commercial applications in plant biotechnology
2. Support methodologies in plant tissue culture
3. Be able to describe basic principles and techniques in genetic manipulation and genetic engineering
4. Be able to describe gene transfer technologies in plants
5. Be able to describe techniques and problems in plant cloning
6. Become motivated to set goals towards pursuing higher-level positions, such as lab manager and key scientist in plant biotechnological research institutes and industries

List of Practicals**Plant Tissue Culture Techniques**

1. Sterilization Techniques in tissue culture
2. Laboratory organization in plant tissue culture.
3. Media Preparation
4. *In-Vitro* Germination of Seeds
5. Micropropagation
6. Callus induction, differentiation and regeneration
7. Suspension culture
8. Embryo Culture
9. Synthetic seed production.
10. Protoplast Isolation
11. Agrobacterium mediated gene transformation

REFERENCES

1. Aneja, K R., 2004. Experiments in Microbiology Plant Pathology and Biotechnology. IV Edition, New age international Pvt. Ltd. Publishers, New Delhi.

Course Objectives

The objectives of the course are to make the students to

- Gain hands-on experience and to learn the principles behind animal biotechnology
- Know the process involved in isolation, separation, manipulation of animal cells
- Apply the technology in research and development and pharmaceutical industries
- Obtain practical knowledge on basic immunological techniques such as serum/plasma preparation and ABO blood grouping
- Gain hands on experience in immunological tools used in diagnosis, such as immunoelectrophoresis, ELISA and WIDAL test
- Comprehend the applications of recombinant DNA technology and Immunological techniques in human health care

Course Outcomes

On successful completion of the course, students will be able to

1. Support methodologies in animal cell culture
2. Describe basic principles and techniques in genetic manipulation and genetic engineering in animals
3. Explain the preparation of antigens and antibody in the blood sample
4. Describe the basic knowledge about antigen and antibody interaction
5. Perform various techniques like Immunoelectrophoresis, and ELISA etc.
6. Join in research and clinical labs as a project/ research assistant.

List of Practicals**Immunology**

1. ABO blood grouping
2. Preparation of serum from blood
3. Methods of immunization
4. Methods of bleeding
5. Hemolysis
6. Single radial immunodiffusion
7. Double immunodiffusion
8. Immunoelectrophoresis
9. Rocket Immunoelectrophoresis
10. Counter Current Immunoelectrophoresis
11. WIDAL test
12. DOT-ELISA

Animal Biotechnology

13. Preparation of Animal Tissue Culture Medium
14. Preparation of Primary culture
15. Quantification of cells by trypan blue dye exclusion method.
16. Identification of leukocyte subsets and total count.
17. Cryopreservation of cell lines
18. MTT assay

REFERENCES

2. Hay, F.C. and M.R. Westwood, 2004. Practical Immunology. Blackwell Science Publishers, London.
3. Weir, D.M., 1992. Immunological Techniques. Blackwell Scientific Publications, London.

Course Objectives

The objectives of the course are to make the students to

- To understand the importance of the methodological approach to research.
- To acquire the required skills to approach a research project in a scientifically sound manner, from forming the hypothesis to publication of the research findings.
- To understand the importance of research methodology concepts and to put them in practice while working on dissertation projects.
- To acquire the technical writing skills and presentation skills apart from practically utilizing all aspects of research methodology that they had learnt earlier.
- To be able to integrate all aspects of the research project into a dissertation of print form as can be evaluated by internal and external experts

Course Outcome

Upon completing this course, each student will be able to

1. Demonstrate knowledge of research processes (reading, evaluating, and developing);
2. Perform literature reviews using print and online databases;
3. Identify, explain, compare, and prepare the key elements of a research proposal/report;
4. Define and develop a possible biotechnology research interest area using specific research designs;
5. Compare and contrast quantitative and qualitative research paradigms, and explain the use of each in biotechnology research;
6. Describe, compare, and contrast descriptive and inferential statistics, and provide examples of their use in biotechnology research;
7. Describe sampling methods, measurement scales and instruments, and appropriate uses of each;

UNIT- I

Analysis and Identification of research requirements: Prioritization of research area. Review of work done in identified area, choice of research topic – Methodology experiment design.

UNIT - II

Dissertation writing: Guidelines for review of literature - Materials and methods, results and discussion. Interpretation of results, summary, presentation of references and appendix.

UNIT - III

Experiment design: Regarding observation, Types of observation, Data collection – Presentation and analysis of collected data. Preparation of result reports and Publication of research findings in peer reviewed journals, impact factor, **citation and its calculation.**

UNIT - IV

Methods of data collection and analysis: Frequency distribution. Measures of central tendency – Mean, median and mode; Measures of dispersion – Standard deviation, standard error, and variance. Correlation and regression – simple correlation, correlation co-efficient, simple and linear regression analysis. Test of significance.

UNIT - V

Objective and roll of higher education - Important characteristics of an effective Lecture - Quality teaching and learning, Project, Brain storming, case Discussion, and assignment, Self evaluation, Question banking – Electronic media in education.

Course Objectives

The main objectives of the course is

- The hands-on training through one full semester project with thesis gives special expertise within one of the research areas represented at The Department of Biotechnology.

Course Outcomes

On completion of the course, students are able to apply their knowledge on

1. This dissertation programme provides the candidate with knowledge, general competence, and analytical skills on an advanced level, needed in industry, consultancy, education and research

15CHU507	Spectroscopy	-	40	60	100	3	06
SEMESTER – VI							
15CHU605	Bio - Organic Chemistry	-	40	60	100	3	06
Total			80	120	200	-	12

Programme Outcome

1. Have firm foundations in the fundamentals and application of current chemical and scientific theories.
2. Are able to design, carry out, record and analyze the results of chemical experiments.
3. Knows the proper procedures and regulations for safe handling and use of chemicals and can follow the proper procedures and regulations for safe handling when using chemicals.
4. Students should have a working knowledge of the main areas of chemistry: organic, inorganic, analytical, and physical.
5. Students should possess critical thinking and problem solving abilities.
6. Students should be able to perform and understand chemical research.

7. Students should be able to describe, both in writing and orally, chemical processes and procedures
8. Students should be able to work in a chemical or related field.

Programme Specific Outcome

9. Are able to use modern instrumentation and classical techniques, to design experiments, and to properly record the results of their experiment.
10. Students should have a basic level understanding of the following areas of chemistry - Analytical, Inorganic, Organic, and Physical Chemistry.
11. Students should be able to work in a chemical or related field.

Programme Educational Objectives

PEO-1

Acquire the fundamental principles of science and demonstrate broad knowledge of descriptive chemistry and will be able to nurture the needs of industries/laboratories related to chemistry

PEO-2

To motivate critical thinking and analytical skills to solve chemical problems of practical relevance to society while complying with economical, environmental, ethical, and safety factors.

PEO-3

To synthesize, separate and characterize compounds using published reactions, protocols, standard laboratory equipment, and modern instrumentation.

PEO-4

Demonstrate professional excellence, ethics and will be able to communicate effectively the scientific information and research results in written and oral formats, to both professional scientists and to the public.

Green- Entrepreneurship

Red – Skill development

பகுதி - I, தமிழ்
15LAU101 :

தமிழ் முதல் தாள்

பருவம் I
5-H,5-C

அலகு - I : இக்கால இலக்கியம்

தத்துவம் : மகாகவி பாரதியார் - பகைவனுக்கு அருள்வாய்.

கவிஞர் ந.பிச்சமூர்த்தி - கிளிக்கூண்டு

இயற்கை : பாவேந்தர் பாரதிதாசன் - அழகின் சிரிப்பு - ஞாயிறு.

சமுதாயம் : கவிக்கோ அப்துல் ரகுமான் - இன்றைய நிலை

அறிவியல் : கவிஞர் சிற்பி பாலசுப்பிரமணியன் - காலம்.

பெண்ணியம் : கவிஞர் சிவரமணி - வையகத்தை வெற்றிகொள்ள

சூழலியல் : அன்பாதவன் - மரணம்

காதல் : வைரமுத்து - காதல் உயில்

தன்னம்பிக்கை பா.விஜய் - தன்னம்பிக்கை

அலகு - II : அற இலக்கியம்

1. திருக்குறள் - தேர்ந்தெடுக்கப்பட்ட குறள்கள் 20

2. நான்மணிக்கடிகை - தேர்ந்தெடுக்கப்பட்ட ஐந்து பாடல்கள்

3. திரிகடுகம் - தேர்ந்தெடுக்கப்பட்ட ஐந்து பாடல்கள்

அலகு - III : சிற்றிலக்கியம்

1. நரிவிருத்தம் - அறன் வலியுறுத்தல்

2. தமிழ் விடு தூது - தமிழின் சிறப்புரைத்தல்

3. மதுரை மீனாட்சியம்மைப் பிள்ளைத்தமிழ் - தொடுக்கும் கடவுள் பழம்பாடல்

அலகு - IV : சிறுகதை

1. புதுமைப்பித்தன் - நிகும்பலை

2. தனுஷ்கோடி ராமசாமி - கந்தகக் கிடங்கிலே

3. கந்தர்வன் - துண்டு

4. வாஸந்தி - வடிகால்

5. சி.ஆர். ரவீந்திரன் - வழுக்குமரம்

அலகு - V : மொழிப்பயிற்சி

1. விண்ணப்பங்கள் எழுதுதல் மற்றும் கடிதப் பயிற்சி

2. மொழிபெயர்ப்புப் பயிற்சி

பாட நூல்: கற்பகச்சோலை - தமிழ் ஏடு. கற்பகம் பல்கலைக்கழகத் தமிழ்த் துறை வெளியீடு.

Part I TAMIL 2015. Karpagam University, Coimbatore - 21.

Course Objectives

- To enable the learners to acquire English language skills at a faster pace.
- To train the learners to reflect on the literary works and communicate flexibly.
- Know about the Prose and Poetry
- To develop the Short Story:
- Learn about Vocabulary, Grammar and Composition:
- Know about Proverb Expansion

Course Outcomes

1. Enable the learners to acquire English language skills at a faster pace.
2. Trained the learners to reflect on the literary works and communicate flexibly.
3. Knowledge about the Prose and Poetry
4. Development of the Short Story:
5. Learnt about Vocabulary, Grammar and Composition:
6. Knowledge about Proverb Expansion

UNIT I:

Prose: Google Guys (Extract) – Richard L Brandt

Poetry: The Blind Pedlar – Osbert Sitwell

Short Story: A Garden So Rich – Christie Craig

Vocabulary: Prefixes, Antonyms, Sentence Completion

Grammar: Articles, Adverbs, Pronouns

Composition: Proverb Expansion

UNIT II:

Prose: Happiness 101 – Geeta Padmanabhan

Poetry: An Old Woman – Arun Kolatkar

Vocabulary: Suffixes, Analogies

Grammar: Nouns, Adjectives

Composition: Dialogue Writing

UNIT III:

Prose: Structured Procrastination – John Perry

Short Story: The Umbrella Man – Roald Dahl

One-Act Play: The Boy Who Stopped Smiling – Ramu Ramanathan

Vocabulary: Synonyms, Euphemisms, Word Definitions

Grammar: Verbs, Conjunctions and Interjection, Indirect/Reported Speech

UNIT IV:

Poetry: No Sentence – Anjum Hassan

One-Act Play: While the Auto Waits- O' Henry
Vocabulary: Words Often Confused, Anagrams
Grammar: Prepositions, Voice- Active and Passive
Composition: Letter Writing- Informal

UNIT V:

Short Story: The Bird – Amar Jalil
One-Act Play: The Cellphone Epidemic – Claudia I. Haas
Vocabulary: Portmanteau Words, One Word Substitute
Grammar: Questions, Pronunciation
Composition: Letter Writing- Formal

PRESCRIBED TEXTS:

Rao, G. Chandralekha and et al. Spring 2013. Emerald Publishers: Chennai.

REFERENCE BOOK:

Syamala, V. English for Communication. 2006. Emerald Publishers: Chennai

Course Objectives

Students should be able

- To understand the limitations of classical mechanics and its drawbacks.
- To understand the fundamentals of quantum mechanics and Schrödinger equation for simple atoms.
- To understand and write the electronic configuration of elements.
- To understand a versatile knowledge of different types of bonding like ionic and covalent bonding.
- To understand the basic reactions and properties of alkenes and dienes.
- To know the classification of reagents

Course Outcomes

The students

1. Understand the drawbacks of classical mechanics
2. Understand the fundamentals of quantum mechanics and Schrödinger equation for Hydrogen atom.
3. Know the various rules and principles to write the electronic configuration of elements
4. Have a versatile knowledge of different types of bonding like ionic and covalent bonding.
5. Have knowledge of reactions and properties of alkenes and dienes.
6. Gained knowledge about the classification of reagents.

Methodology

Blackboard teaching, Powerpoint presentation and group discussion.

UNIT-I

Periodic Properties - General group discussion restricted to Atomic radii, Ionic radii, Oxidation state, Ionization energy, Electron affinity and Electronegativity.

UNIT-II

Chemical bonding-Theories of bonding-Ionic bonding - Ionic crystals - NaCl and CsCl crystal structure - Lattice energy and its determination using Born-Haber cycle - Factors affecting crystal lattice energy - properties of ionic crystals - melting point, hardness, electrical conductivity in molten condition and in solution - Fajan's rules -Covalent bonding - sigma and pi bonding - partial ionic character of covalent bonds from electronegativity and dipole moment data - three centered bond - Geometry of molecules-Bonding weaker than covalent -Vanderwaal's forces- Hydrogen bonding - nature, energy and effect on structure and properties.

UNIT-III

Basic principles of qualitative analysis of cations and anions in the inorganic mixture. Polar effects - Inductive effect, Mesomeric effect, Electromeric effect, hyper conjugation. Classification of reagents - Electrophile, Nucleophile and Free radical.

Types of reaction - Polar reactions involving carbonium ions and carbanions with simple examples. Aliphatic hydrocarbons - Restricted rotation about single bond and preferred rotational conformations in ethane.

UNIT-IV

Alkenes: Preparation by Wittig reaction, mechanism of Beta elimination. E_1 , E_2 and Syn elimination. Hofmann rule and Saytzeff rule.

Dienes: Stability of isolated and conjugated compounds. 1, 2 and 1, 4 additions - Diels Alder reaction. Free radical addition – Polymerization - Synthetic rubber.

Cyclo-Alkanes: Preparation by Dieckmann ring closure and by reduction of aromatic hydrocarbons - Ring opening reactions of cyclo propane with H_2 , Br_2 and HI.

UNIT-V

Blackbody radiation, Planck's radiation law, photoelectric effect, Compton effect, de Broglie's hypothesis, Heisenberg's uncertainty principle. Quantum numbers - Postulates of quantum mechanics. Schrodinger wave equation and a particle in a box, energy levels, wave functions and probability densities. Schrodinger wave equation for H-atom. Separation of variables, Radial and angular functions, hydrogen like wave functions, quantum numbers and their importance.

CHEMISTRY PRACTICAL- I
15CHU111 (INORGANIC QUALITATIVE ANALYSIS) 5H-3C
Instruction Hours/week: L:0, T:0, P:5 Marks: Internal:40 External: 60 Total:100

Course Objective

- To understand and develop the skill to analyse qualitatively the anions
- To understand and develop the skill to analyse qualitatively the cations present in a mixture.
- To Learn about the qualitative analysis of cations
- To Learn about the qualitative analysis anions in a mixture by Semi micro methods.
- To analyse the cations like Lead, Copper, Bismuth, Calcium, Strontium, Magnesium and Ammonium.
- To analyse the anion like Carbonate, Sulphide, Sulphate, Nitrate, Chloride, Bromide, Fluoride, Borate, Oxalate and Phosphate.

Course outcomes:

1. Understood and develop the skill to analyse qualitatively the anions
2. Understood and develop the skill to analyse qualitatively the cations present in a mixture.
3. Learnt about the qualitative analysis of cations
4. Learnt about the qualitative analysis anions in a mixture by Semi micro methods.
5. Analysis the cations like Lead, Copper, Bismuth, Calcium, Strontium, Magnesium and Ammonium.
6. Analysis the anion like Carbonate, Sulphide, Sulphate, Nitrate, Chloride, Bromide, Fluoride, Borate, Oxalate and Phosphate.

Methodology

Demonstration of Experiments and Black board teaching.

Analysis of mixture containing two cations and two anions which contain one interfering ion. Semi micro methods using the conventional scheme with hydrogen sulphide may be adopted.

CATIONS TO BE STUDIED: Lead, Copper, Bismuth, Calcium, Strontium, Magnesium and Ammonium.

ANIONS TO BE STUDIED: Carbonate, Sulphide, Sulphate, Nitrate, Chloride, Bromide, Fluoride, Borate, Oxalate and Phosphate.

TEXT BOOKS:

4. Mendham, J., R.C.Denney, J.D.Barnes and M.Thomas, 2002. Vogel's textbook of quantitative Chemical Analysis, 6th Edition, Pearson Education Ltd., Singapore .

Course Objectives:

- To understand basic theories and experiments in Physics.
- To understand the fundamentals of physics.
- To educate and motivate the students in the field of science
- To know about Debroglie's concept of matter waves
- To learn about Amplifiers
- To Learn about Digital Electronics And Optics

Course Outcomes:

1. Students will demonstrate proficiency in mathematics and the mathematical concepts to understand physics.
2. Students will design and conduct an experiment (or series of experiments) demonstrating their understanding of the scientific method and processes.
3. Students will demonstrate an understanding of the analytical methods required to interpret and analyze results and draw conclusions as supported by their data.
4. Knowledge about Debroglie's concept of matter waves
5. Learnt about Amplifiers
6. Learnt about Digital Electronics And Optics

UNIT – I

MODERN PHYSICS

Debroglie's concept of matter waves- Debroglie's wavelength –Characteristics of Debroglie's matter waves- calculation of Debroglie's wavelength of material particles like electrons –experimental study of matter waves-Thomson's experiment

UNIT – II

ANALOG ELECTRONICS

Construction, characteristics and applications of Zener diode, Photo diode, Light emitting diode (LED); working, efficiency, ripple factor and advantages of a full wave rectifier-Qualitative analysis of a common emitter amplifier;Phase reversal of the output voltage;advantage of common emitter amplification circuit.

UNIT - III

AMPLIFIERS

Circuit symbol polarity conventions and virtual ground or summing point of an operational amplifier; characteristics of an ideal operational amplifier; amplifier as an adder, subtractor, differentiator and integrator.

UNIT – IV

DIGITAL ELECTRONICS

Number systems-Binary Octal-Hexa decimal-ASCII and EBCDIC-Redundant coding for error detection and correction. Basic logic design using digital integrated circuits. Truth tables, Boolean algebra, Simple arithmetic circuits-exclusive half adder-full adder-half subtractor, full subtractor. NAND AND NOR As Universal Building Block-De Morgan's theorem and its proof.

UNIT –V

OPTICS

Reflection – Refraction – Snell's law – Total internal reflection – Interference – Diffraction – Polarisation – Coherence

TEXT BOOKS:

1. Murugesan. R., Modern Physics, S.Chand & CO, New Delhi
2. Aruldas G. and P.Rajagopal, 'Modern Physics', Printice Hall of India, New Delhi, 2009

REFERENCES:

1. Rajam. J.B., Atomic Physics, S.Chand & Co, New Delhi.
2. Gupta and Kumar, 2000, Solid State Physics - Pragati Prakashan, Meerut.
3. Kittel. C., 1996, Introduction to Solid State Physics, 7TH Edition, John Willey & sons, New Delhi.
4. Dekkar. A.J. , 1900, Solid State Physics - Macmillan India Ltd., New Delhi.

Course Objective

- To acquire basic understanding of laboratory technique and
- To educate and motivate the students in the field of Physics
- To allow the students to have a deep knowledge of fundamentals of optics.
- To work efficient in the Young modulus, rigidity modulus
- Refractive Index of a liquid prism-Spectrometer
- Thickness of a thin wire-Air wedge method

Course outcome**Students can able to**

1. Perform basic experiments in mechanics and electricity and analyze the data.
2. Acquire engineering skills and Practical knowledge, which help the student in their everyday life.
3. Knowledge about the physical Principles and applications of Electronics.
4. Work efficiently in the Young modulus, rigidity modulus
5. Refractive Index of a liquid prism-Spectrometer
6. Thickness of a thin wire-Air wedge method

Any 8 Experiments

1. Young's Modulus-Non Uniform bending-Optic lever
2. Young's Modulus-Static cantilever
3. Rigidity modulus- Dynamic method
4. Acceleration due to gravity-Compound pendulum
5. Refractive Index of a liquid prism-Spectrometer
6. Refractive Index of a solid prism (I-d) curve-Spectrometer
7. Co-efficient of thermal conductivity-Lee's disc method
8. Wavelength of spectral lines -Grating-minimum deviation method-Spectrometer.
9. Characteristics of a Junction diode
10. μ of a lens-Newton's ring method
11. Thickness of a thin wire-Air wedge method
12. Frequency of tuning fork and density of solid and liquid – Melde's String

Instruction Hours/week: L: 2 T: 0 P: 0 Marks: Internal: 100 External: Nil Total: 100

Course Objectives:

- To improve the integral development of human beings
- To train the students towards sustainable lifestyle
- To create awareness about the values and their significance and role
- To imbibe the concept of discipline and freedom
- To know about goal setting
- To know about responsibility

Course outcomes:

1. Improved the integral development of human beings
2. Trained the students towards sustainable lifestyle
3. Created awareness about the values and their significance and role
4. Imbined the concept of discipline and freedom
5. Knowledge about goal setting
6. Knowledge about responsibility

UNIT – I

Concept of Self, self-esteem and self-confidence. Concept of personality, determinants and disorganisation of it. Personality development – meaning.

UNIT – II

Goal setting – meaning and importance; steps in goal setting Manners and Etiquette – meaning need and importance; means to improve. Positive thinking.

UNIT – III

Discipline – meaning. Concept of Roles and Responsibility Time Management – Meaning and steps for effective time management.

UNIT – IV

Interpersonal relationship – meaning and importance; means to improve it. Healthy friendship.

UNIT – V

Family Relationship importance of it; Means to improve. Spirituality – meaning. Its relationship with Altruism, sacrifice, self control, tolerance and truthfulness.

TEXT BOOKS

1. Karpagam Academy of Higher Education, Study Material, 2015.

Instruction Hours / week: L: 2 T: 0 P: 0 Marks: Internal: 100 External: Nil
Total: 100

Course Objective

- To achieve the analytical skills
- To know about reasoning competencies
- To improve their communication and presentation skills
- Gain the knowledge on both Aptitude and Soft skills to the students
- Reinforcing competencies in soft skills which are crucial in a social setting
- Learn critically evaluate and demonstrate various principles involved in solving mathematical problems and to adopt new and faster methods of calculations

Course Outcomes

1. achieve the analytical skills
2. To know about reasoning competencies
3. To improve their communication and presentation skills
4. Gained the knowledge on both Aptitude and Soft skills to the students
5. Learnt critically evaluate and demonstrate various principles involved in solving mathematical problems and to adopt new and faster methods of calculations.
6. Reinforcing competencies in soft skills which are crucial in a social setting

UNIT - I

Introduction to Quantitative Aptitude, Speed Maths, Problems on Numbers, Averages, Ratios and Proportions, Problems on Ages

UNIT - II

Number Series, Blood Relation, Image Analysis, Direction Sense, Syllogism, Coding and Decoding

UNIT – III

Percentages, Data Interpretation, Profit and Loss, Simple Interest and Compound Interest

UNIT – IV

Parts of Speech, Tense, Subject Verb Agreement, Active and Passive Voice, Articles, Prepositions

UNIT - V

Conditional Clause, Degrees of Comparison, Goal Setting, Interpersonal Skills

பகுதி - I, தமிழ்

15LAU201 :

தமிழ் இரண்டாம் தாள்

பருவம் II

5-H,5-C

அலகு - I : பக்தி இலக்கியம்

1. சைவம் - மூவர் தேவாரத்திலிருந்து தேர்ந்தெடுக்கப்பெற்ற 15 பாடல்கள்
2. வைணவம் - ஆண்டாள் நாச்சியாரின் திருப்பாவையிலிருந்து 11 பாடல்கள்

அலகு - II : சங்கஇலக்கியம்

அ). எட்டுத்தொகை

- நற்றிணை: 1. இலை இல பிடவம், திணை - முல்லை, ஆசிரியர் - விழிக்கட் பேதைப் பெருங்கண்ணனார்.
2. மடல் மா ஊர்ந்து, திணை - குறிஞ்சி, ஆசிரியர் - மடல் பாடிய மாதங்கீரனார்.

- குறுந்தொகை: 1. உள்ளார் கொல்லோ, திணை - பாலை, ஆசிரியர் - பெருங்கடுங்கோ,
2. யாரினும் இனியன், திணை - மருதம், ஆசிரியர் - வடமவண்ணக்கன் தாமோதரனார்.

- ஐங்குறுநூறு: 1. நுண்ணேர் புருவத்த, திணை - குறிஞ்சி, ஆசிரியர் - கபிலர்.
2. அவறொறுந் தேரை, திணை - முல்லை, ஆசிரியர் - பேயனார்.

பதிற்றுப்பத்து - ததைந்த காஞ்சி, ஆசிரியர் - பாலைக் கௌதமனார்.

பரிபாடல் - வையை - திரை இரும் பனிப் பெளவம், ஆசிரியர் - மையோடக் கோவனார்.

கலித்தொகை - கடும் புனல் கால் பட்டு, திணை - பாலை, ஆசிரியர் - பெருங்கடுங்கோ.

- அகநானூறு - 1. ஆடு அமைக் குயின்ற, திணை - குறிஞ்சி, ஆசிரியர் - கபிலர்.
2. யான் எவன் செய்கோ தோழி, திணை - பாலை, ஆசிரியர் - நோய்பாடியார்.

புறநானூறு - 1. சிறப்பில் சிதடு முறுப்பில், திணை - பொதுவியல்,

ஆசிரியர் - உறையூர் முதுகண்ணன் சாத்தனார்.

2. இளையரு முதியரும் வேறுபுலம் படா - ஆசிரியர் - கயமனார்.

ஆ). பத்துப்பாட்டு - சிறுபாண் ஆற்றுப்படை - கடையெழு வள்ளல்களின் சிறப்பு,

நல்லியக்கோடனின் சிறப்பு, ஈகைத் திறம்.

அலகு - III : காப்பியங்கள்

1. மணிமேகலை - பாத்திரம் பெற்ற காதை - தீவதிலகை, மணிமேகலைக்குச் சொல்லியது, சிறைக்கோட்டம் அறக்கோட்டமாக்கிய காதை - மணிமேகலை வேண்ட, மாவண்கிள்ளி, சிறைக்கோட்டத்தை அறக்கோட்டமாக்கியது.

2. கம்பராமாயணம் - இலக்கியநயம் மிக்க, தேர்ந்தெடுக்கப்பெற்ற 41 பாடல்கள்.

அலகு - IV : கட்டுரைகள்

1. திருக்குறளில் மனிதவன மேலாண்மைக் கருத்துக்கள் - திருமிகு ஹரி விஜயலட்சுமி.

2. தமிழர் வளர்த்த நுண்கலைகள்: சிற்பமும் ஓவியமும் - தொ.மு. பாஸ்கரத் தொண்டைமான்.

3. சமயமும் தமிழும் - பேராசிரியர் அ.ச.ஞானசம்பந்தன்.

4. தமிழில் அறிவியல் - ஒரு பார்வை - பேராசிரியர் சிவகுமார்.

5. இன்றைய நெருக்கடிப் பிரச்சனைகள் - நீர்வளம் - முனைவர் ச. முத்துக்குமரன்.

அலகு - V : இலக்கணமும் மொழிப்பயிற்சியும்

1. எழுத்து, சொல், பொருள் இலக்கண எழுத்துப்பயிற்சிகள்

2. பொதுக் கட்டுரைகள்

பாட நூல்: கற்பகச்சோலை - தமிழ் ஏடு. கற்பகம் பல்கலைக்கழகத் தமிழ்த் துறை வெளியீடு.

Part I TAMIL 2015. Karpagam University, Coimbatore - 21, India

Instruction Hours/week:L: 4 T:0 P:0 Marks: Internal:40 External: 60 Total:100

Course Objectives

- To enable the learners to acquire English language skills at a faster pace.
- To train the learners to reflect on the literary works and communicate flexibly.
- Know about the Prose and Poetry
- To develop the Short Story:
- Learn about Vocabulary, Grammar and Composition:
- Know about Proverb Expansion

Course Outcomes

1. Enable the learners to acquire English language skills at a faster pace.
2. Trained the learners to reflect on the literary works and communicate flexibly.
3. Knowledge about the Prose and Poetry
4. Development of the Short Story:
5. Learnt about Vocabulary, Grammar and Composition:
6. Knowledge about Proverb Expansion

UNIT I:**Prose:** The Unexpected- Robert Lynd**Poetry:** The Village Schoolmaster – Oliver Goldsmith**Short Story:** The Lion's Share – Arnold Bennett**Vocabulary:** Homonyms**Grammar:** Irregular Verbs**UNIT II:****Prose:** Travel by Train – J. B. Priestly**Poetry:** The Gift of India – Sarojini Naidu**Grammar:** Sentence patterns**Composition:** Reading Comprehension**UNIT III:****Prose:** Women's Education is Almost More Important than the Education of Boys and Men – Indira Gandhi**Short Story:** The Necklace – Guy De Maupassant**One-Act Play:** The Referee – W.H. Andrews and Geoffrey Dearmer**Vocabulary:** Similes**Grammar:** Discourse Markers**Composition:** Report Writing**UNIT IV:****Poetry:** Ozymandias – P.B. Shelley**One-Act Play:** The Pot of Broth- W.B. Yeats

Vocabulary: Collective Nouns
Grammar: Correction of Sentences
Composition: Picture Reading

UNIT V:

Short Story: The Silver Butterfly– Pearl S. Buck

One-Act Play: The Bear – Anton Chekov

Vocabulary: Acronyms

Grammar: Question Tags

Composition: Drafting Advertisement

PRESCRIBED TEXT:

Wings of Communication 2014. Board of Directors. Emerald Publishers:
Chennai

REFERENCE:

Syamala, V. English for Communication. 2006. Emerald Publishers: Chennai.

Course objectives:

- The course allows one to get a fundamental idea about the subject concerned.
- The course helps the students in improving their diverse skills in various areas such as
- Laboratory skills,
- Numerical and computing skills, ability to approach to the problems both analytically and logically, etc.
- The principles in this course are used in almost every field such as medicines, food products, and electronics and even in construction industry.
- The principles of coordination Chemistry

Course Outcomes:

On successful completion of the course the students should understand

1. The principles of coordination Chemistry
2. Different types of reactions of aromatic and aliphatic compounds
3. Principles of Thermodynamics.
4. The course helps the students in improving their diverse skills in various areas such as Laboratory skills,
5. Numerical and computing skills, ability to approach to the problems both analytically and logically, etc.
6. The principles in this course are used in almost every field such as medicines, food products, and electronics and even in construction industry.

Methodology

Black board Teaching and Group discussion.

UNIT - I

Nomenclature of coordination compounds - conductivity and precipitation studies-Werner's coordination theory-Electronic interpretation of coordinate bond by Sidgwick. Isomerism: Examples of Geometrical and optical isomerism in square planar and octahedral coordination compounds. Examples of linear and tetrahedral coordination compounds - magnetic properties of coordination compounds and their interpretation by Pauling's valence bond theory and crystal field theory.

UNIT - II

Ozone and hydrogen peroxide-preparation, properties, structure and uses - comparison between the two.

Aromaticity - Huckel's rule - benzenoid and non benzenoid aromatic compounds. Benzene resonance and resonance energy, structure -. Polar effects in electrophilic substitution in benzene-Mechanism of nitration, sulphonation, halogenation, Friedel-Crafts alkylation and acylation - diazo coupling.

UNIT – III

Grignard reagents - preparation and synthetic applications- Aliphatic Nucleophilic substitution mechanism- S_N1 , S_N2 , S_Ni mechanism -Effect of solvent - nucleophile, structure of substrate and neighbouring group participation, elimination versus substitution. Aromatic nucleophilic substitution-Benzyne mechanism, Intermediate complex mechanism.

Alkynes: Acidity of alkynes - formation of acetylides, addition of water with $HgSO_4$ catalyst - Hydroboration.

UNIT - IV

The laws of thermodynamics, generalities and the Zeroth law - kinds of energy - scope of the first and second laws of thermodynamics, thermodynamic terms – Definitions - heat-work of expansion - work of compression - Maximum and minimum quantities of work- Reversible and irreversible transformations - Energy and the first law of thermodynamics - properties of energy changes in relation to changes in properties of the system - Isothermal and adiabatic changes. Meaning of the thermodynamic state function versus path function - properties of exact and inexact differentials - Joule Thomson experiment. Relation between E and H , C_p and C_v .

UNIT - V

Applications of the first law of thermodynamics to chemical reactions. The heat of reaction – Conventional values of H - The determination of heat of formation – Sequences of reactions - Hess's Law, Heats of combustion - Determination by Bomb calorimeter - Bond energies - Resonance energy - Heat of solution - integral and differential dilution. Heats of reaction at constant volume -Dependence of the heat of reaction on temperature and Kirchoff's equation.

Instruction Hours/week: L: 0 T:0 P:5 Marks: Internal:40 External: 60 Total:100

Course Objective:

- To understand the basic principles of volumetric estimations and inorganic preparations.
- It enables the students to learn about the basic principles of quantitative analysis in Chemistry.
- To estimate the complexometric titrations
- To prepare inorganic complexes
- To estimate the hardness of water
- Analyse the prepared complexes.

Course Outcomes:

1. Understood and develop the skill to perform complexometric titrations
2. Learned about the development of a skill in the preparation of inorganic complexes and characterise them.
3. Estimation of the complexometric titrations
4. Preparation of inorganic complexes
5. Estimation the hardness of water
6. Analysis the prepared complexes.

Methodology

Demonstration of Experiments and Black board teaching

A. Complexometric titrations

1. Estimation of hardness of water
2. Estimation of calcium using EDTA
3. Estimation of magnesium ions using EDTA

B. Preparation of inorganic complexes

1. Preparation of Tetrammine Copper II Sulphate
2. Preparation of Ammonium Sulphate
3. Preparation of Chrome Alum
4. Preparation of Ferrous Ammonium Sulphate
5. Preparation of Potassium trioxalatochromate
6. Preparation of copper I chloride

TEXT BOOKS:

1. Venkateswaran,V., R.Veerarwamy and A.R.Kulandaivelu, 2004. Basic Principles of Practical Chemistry, 2nd Edition, S.Chand Publications, New Delhi .
2. Thomas, A.O., 2003. Practical Chemistry, Scientific Book Center, Cannanore.

REFERENCES :

1. Lepse Paul, A. and Lyle B.Peter, 1986. Lab Manual for Lingren's Essentials of Chemistry, Prentice Hall, New Delhi.
2. Mendham, J. R.C.Denney, J.D.Barnes and M.Thomas, 2002. Vogel's textbook of quantitative Chemical Analysis, 6th Edition, Pearson Education Ltd., Singapore.
3. Siddhiqui Zeba, N., 2002. Practical industrial Chemistry, 1st Edition, Anmol Publications Pvt. Ltd., New Delhi.

Course Objectives:

- Many basic natural processes in nature can be explained by physics. So it is essential to know basic physics any science student. This paper is aimed at giving some insight into the basic physics, theory as well as experiment.
- To gain a knowledge of elasticity of solids.
- To understand the basics of surface tension
- To learn Eienstein's photoelectric effect.
- To knowledge about laser physics
- To gain a knowledge about solar physics.

Course Outcomes

The students have gained knowledge about

1. Basic natural processes of Physics
2. Gained about elasticity of solids.
3. Learned about Eienstein's photoelectric effect.
4. Understood the basics of surface tension.
5. Laser physics
6. Gained knowledge about solar physics

UNIT-I**ELASTICITY OF SOLIDS**

Elastic constants of an isotropic solid - Relations connecting them - Poisson's ratio - Bending of beams - Uniform and non-uniform bending - Bending moment of a bent beam - cantilever - Static and dynamic methods - Torsion in a wire - Rigidity modulus determination by Static and dynamic methods.

UNIT-II**SURFACE TENSION**

Surface tension and Surface energy- Pressure difference across a spherical surface- Pressure difference across a curved surface - Angle of contact - Angle of contact for water in a glass - Vapour pressure over a flat and curved surface - Variation of Surface tension with temperature - Jaegar's method - Quinke's method.

UNIT-III

MODERN PHYSICS: Photo electric effect – Einstein's photo electric equation – verification of Einstein's photo electric equation by Millican's experiment – photo electric cells – applications

Nuclear physics : characteristics of nuclear forces – nuclear structure by liquid drop model – Binding energy – mass defect – particle accelerators – cyclotron and betatron
nuclear Fission and nuclear Fusion

UNIT-IV

LASER PHYSICS: Purity of spectral lines – Coherence length and time – spontaneous and induced emissions – population inversion – meta stable state – conditions for laser actions – Ruby laser – Helium – neon laser – applications of lasers – Raman effect – Raman shift – stokes and anti stokes lines – Laser Raman Spectrometer.

UNIT-V

SOLAR PHYSICS: solar constant – measurement of solar radiations by Pyroheliometer and Pyranometer – general applications of solar energy – flat–plate collector - box type cooker - solar water heaters – solar photo – voltaic cells – general applications of solar cells.

TEXT BOOKS:

1. Murugesan. R., Modern Physics, S.Chand & CO, New Delhi
2. Aruldas and P.Rajagopal, Modern Physics, Prentice Hall of India, New Delhi.

REFERENCES:

1. Mathur. D.S., 2003, Elements of properties of matter - Shyamlal Charitable Trust, New Delhi.
2. Brijlal and N. Subramanyam, 2004, Properties of matter, S. Chand & Company, New Delhi.
3. Rai. G.D, Solar energy and its utilization, S.Chand & Co., New Delhi.
4. Rajam. J.B., Atomic Physics, S.Chand & Co, New Delhi.

Course objectives

The students are able to

- Determine Field Intensity-Circular coil- Vibration magnetometer
- Co-efficient of thermal conductivity-Lee's disc method
- Refractive Index of a prism (I-I') curve-Spectrometer
- Moment of a magnet-Circular coil-Deflection Magnetometer
- Analyse the Temperature coefficient of resistance of a thermistor-Post office box
- Comparison of viscosities of two liquids
- To Study of logic gates using IC's
- To Study of NOR gate as Universal building block.
- To Study of NAND gate as Universal building block.
- Determine the Verification of Basic logic gates using discrete components.
- Determine the Cauchy's constant – Spectrometer
- AC frequency – Sonometer

Course Outcomes

1. Field Intensity-Circular coil- Vibration magnetometer
2. Co-efficient of thermal conductivity-Lee's disc method
3. Refractive Index of a prism (I-I') curve-Spectrometer
4. Moment of a magnet-Circular coil-Deflection Magnetometer
5. Temperature coefficient of resistance of a thermistor-Post office box
6. Comparison of viscosities of two liquids
7. Study of logic gates using IC's
8. Study of NOR gate as Universal building block.
9. Study of NAND gate as Universal building block.
10. Verification of Basic logic gates using discrete components.
11. Determination of Cauchy's constant – Spectrometer
12. AC frequency – Sonometer

ANY TEN EXPERIMENTS

1. Field Intensity-Circular coil- Vibration magnetometer
2. Co-efficient of thermal conductivity-Lee's disc method
3. Refractive Index of a prism (I-I') curve-Spectrometer
4. Moment of a magnet-Circular coil-Deflection Magnetometer
5. Temperature coefficient of resistance of a thermistor-Post office box
6. Comparison of viscosities of two liquids

7. Study of logic gates using IC's
8. Study of NOR gate as Universal building block.
9. Study of NAND gate as Universal building block.
10. Verification of Basic logic gates using discrete components.
11. Determination of Cauchy's constant – Spectrometer
1. AC frequency – Sonometer

**FOUNDATION COURSE - B
(ENVIRONMENTAL STUDIES)**

SEMESTER II

2H - 1C

Total hours/week: L:2 T:0 P:0

Marks: Internal: 100 External: - Total:100

Course Objective:

- The study creates awareness among the people
- To know about various renewable and nonrenewable resources of the region,
- Enables environmentally literate citizens (by knowing the environmental acts, rights, rules, legislation, etc.)
- To make appropriate judgments and decisions for the protection and
- Improve of the earth life
- Know about eco system and environment.

Couse Outcomes

1. Creating the awareness about environmental problems among people.
2. Developed an attitude of concern for the environment.
3. Students have a Motivation to public to participate in environment protection and improvement.
4. Makes appropriate judgments and decisions for the protection and
5. Improvement of the earth life
6. Knowledge about eco system and environment.

UNIT - I: Eco system and natural resources: Environment – Definition – components - Ecosystem -Definition, Concept, Scope, importance, structure and functions of ecosystem. Energy flow, Ecological succession. Food chains and food webs. Classification of ecosystem. Natural resources: Forest resources; water resources

UNIT - II: Environmental pollution: Cause, effects and control measures of Air pollution, water pollution, soil pollution, marine pollution, noise pollution, thermal pollution and nuclear hazards pollution. Solid waste management.

UNIT - III: Biodiversity and its conservation: Introduction- Definition, genetic, species and ecosystem diversity, biogeographical classification of India- Value of biodiversity: Consumptive, productive uses; social, ethical, aesthetic and option values. Threats to biodiversity: habitat loss, poaching of wildlife, man-wildlife conflicts.

UNIT - IV: Social issues and the environment: Urban problems related to energy-water conservation and management -Rain water harvesting- water shed management. Resettlement and Rehabilisaion. Natural resources and associated problems and sustainable utilization. Environmental Education.

UNIT - V: Environment ethics: Environmental Ethics - Gender equity, ethical basis of environment education and awareness, conservation ethic and traditional value systems

of India. Valuing nature, cultures, social justice, Human heritage, equitable use of resources, preserving resources for future generation, common property resources, Ecology and its uses and its degradation, Introduction to Environmental Protection Act (EPA).

TEXT BOOKS

1. Agarwal, K.M., P.K. Sikdar and S.C. Deb, 2002. A Text Book of Environment, Mac Millan India Ltd, Kolkatta, India.
2. Kotwal, P.C. and S. Banerjee, 2002. Biodiversity Conservation – In Managed forest and protected areas, Agrobios, India.

REFERENCES

5. Patrick L.Abbott, 2008. Natural Disasters, Mc Graw Hill, New York. Page: 1-7.

Instruction Hours / week: L: 2 T: 0 P: 0 Marks: Internal: 100 External: Nil
Total: 100

Course Objective

- To achieve the analytical skills
- To know about reasoning competencies
- To improve their communication and presentation skills
- Gain the knowledge on both Aptitude and Soft skills to the students
- Reinforcing competencies in soft skills which are crucial in a social setting
- Learn critically evaluate and demonstrate various principles involved in solving mathematical problems and to adopt new and faster methods of calculations

Course Outcomes

1. achieve the analytical skills
2. To know about reasoning competencies
3. To improve their communication and presentation skills
4. Gained the knowledge on both Aptitude and Soft skills to the students
5. Learnt critically evaluate and demonstrate various principles involved in solving mathematical problems and to adopt new and faster methods of calculations.
6. Reinforcing competencies in soft skills which are crucial in a social setting

UNIT - I

Introduction to Quantitative Aptitude, Speed Maths, Problems on Numbers, Averages, Ratios and Proportions, Problems on Ages

UNIT - II

Number Series, Blood Relation, Image Analysis, Direction Sense, Syllogism, Coding and Decoding

UNIT – III

Percentages, Data Interpretation, Profit and Loss, Simple Interest and Compound Interest

UNIT – IV

Parts of Speech, Tense, Subject Verb Agreement, Active and Passive Voice, Articles, Prepositions

UNIT – V

Conditional Clause, Degrees of Comparison, Goal Setting, Interpersonal Skills

Instruction Hours/week:L: 4 T:0 P:0 Marks: Internal:40 External: 60 Total:100

Course Objective

- To develop confidence to respond in English during situations where the use of English is imperative.
- To develop fluency in actual conversation in the English language.
- To develop speech skills necessary for confident and intelligent participations in Group Discussions and develop skills related to teamwork in work places.
- To write the paragraph practice & letter writing
- To learn about vocabulary
- To learn about functional grammar

Course Outcomes:

1. The students have confidence to respond in English during situations where the use of English is imperative.
2. They develop fluency in actual conversation in the English language.
3. They develop speech skills necessary for confident and intelligent participations in Group Discussions and develop skills related to teamwork in work places.
4. write the paragraph practice & letter writing
5. Learnt about vocabulary
6. Learnt about functional grammar

UNIT I

Listening: Listening comprehension – Listening for Specific Information –Note Taking – Interpreting Charts and Diagrams.

UNIT II

Speaking: Essentials of effective communication – Greeting and Introducing – Making requests – Asking for permission – Giving and Denying Permission – Offering and Accepting Help – Asking for and Declining Help – Giving Instructions and Orders - Talking about likes and dislikes.

Telephone Skills – Understanding telephone conversation – handling calls – leaving messages –making requests - giving instructions and orders

Discussion Skills – Giving your opinion – agreeing and disagreeing – Making suggestions – Interrupting – questioning – reporting – Dealing with questions.
(Completing dialogues)

UNIT III

Reading: Reading – Reading with a purpose – Skimming and Scanning – locating main points – reading critically – Sequencing of sentences – Reading comprehension.

UNIT IV

Writing: Paragraph Writing – Descriptive and Narrative. Safety Instructions/ Suggestions. Expansion of Abbreviations – Spellings- Report writing.

Translation- Translating short sentences and passages from English to Tamil and from Tamil to English.

UNIT V

Vocabulary: Improve English vocabulary: Synonyms – Antonyms – Prefixes – Suffixes – Idioms – Collocations – Different types of English – British and American (Choose the best answer type from a database of 50 words each for each topic)

Functional Grammar: Forming questions, getting answers – Articles – Parts of Speech – Punctuation – Common mistakes in English (Homophones)(Exercise based)

REFERENCE BOOKS:

1. Language in Use: Kenneth Anderson, Cambridge University Press.
2. Study Speaking: A course in Spoken English for Academic Purpose: Kenneth Anderson, Joan MacLean and Tony Lynch, Cambridge University Press, 2008.
3. Spoken English Part I & II (for Tamil speakers), Orient Longman Pvt. Ltd.
4. Dr. J. John Love Joy, Dr. Francis M. Peter S.J. “Let's Communicate – Basic English for Everyone”, Vaigarai Publications, 1st edition, Dindigul 2007.

Course Objectives

- To learn the different concepts in metallurgy
- To understand the extraction process of ores
- To understand the reactions of aldehydes, ketones and carboxylic acids.
- Learn about tautomerism of esters
- To understand the principles of second law of Thermodynamics,
- Concept of free energy and third law of thermodynamics.

Course Outcomes:

1. Students learnt the different concepts in metallurgy
2. Understood the extraction process of ores
3. Learnt about tautomerism of esters
4. They understood the reactions of aldehydes, ketones and carboxylic acids.
5. They understood the principles of second law of Thermodynamics,
6. Concept of free energy and third law of thermodynamics.

Methodology:

Black board teaching and Group discussion

UNIT-I

General methods of extraction of metals: Concentration: Gravity separations, Froth flotation, Magnetic separation, Extraction, Chemical and Electrolytic methods. Refining-zone refining, Van Arkel Refining and Electrolytic refining; Comparative study- Physical properties of alkali metals: Electric structure, density, atomic volume, atomic radius, ionic radius, ionization energy and electro negativity.

UNIT-II

Occurrence, Extraction properties, thermodynamic aspects of extraction of ores – Ellingham diagram and uses of Gallium, Thallium, Germanium, Titanium, Zirconium, Vanadium, Molybdenum, Tungsten and their important compounds such as GeCl_4 , GeO_2 , TiO_2 , ZrOCl_2 , V_2O_5 , Ammonium Molybdate and WO_2 .

UNIT-III

Reactions of aldehydes and ketones: Nucleophilic addition of Grignard reagents - Aldol condensation, Perkin, Knoevenagel, Claisen, Dieckmann, Reformatsky reactions, Cannizzaro reaction. Reduction using LiAlH_4 and NaBH_4 - Wolf-Kishner and M.P.V. reduction.

Malonic ester and acetoacetic ester their synthetic applications-Tautomerism of acetoacetic ester.

UNIT-IV

Halogen derivatives of carboxylic acids: mono, di and tri chloro acetic acids, their reactivity. Ester hydrolysis. Hydroxy acids: citric acids.

Introduction to II law of thermodynamics: Entropy - Definition - Entropy changes in isothermal transformations-Troutons rule. Entropy as a function of T, P and V- change of entropy with T- Entropy changes in ideal gas-Entropy of mixing of ideal gases.

UNIT-V

Partial molar properties-Chemical potential-General conditions of equilibrium and spontaneity under constraints- Definitions of A and G - Physical significance of Δ_A and Δ_G -Temperature and pressure dependence of Δ_G – Gibbs-Helmholtz equation.Gibbs-Duhem equation. Chemical equilibrium in a mixture of ideal gases - Third law of Thermodynamics - statement and applications - Exceptions to 3rd law.

7. Soni, P.L., 2004. A textbook of Organic Chemistry, S.Chand & Co., New Delhi.
8. Wiley and A.K.De, 1998. A text book of Inorganic Chemistry, New age international publishers, New Delhi.

Course Objective

To learn the basic principles of Surface Chemistry.

- It enables the students to learn about the basic principles of Chemistry involved in surface phenomena.
- The course helps the students in improving their diverse skills in various areas such as laboratory skills,
- numerical and computing skills, ability to approach to the problems both analytically and logically, time management skills, etc.
- The principles in this course are used in almost every field such as medicines, food products, and electronics and even in construction industry.
- Learn about emulsion
- Understand Liquid gas and liquid interfaces

Course Outcomes:

1. Students learnt the Adsorption and surface phenomenon
2. The course helps the students in improving their diverse skills in various areas such as laboratory skills,
3. numerical and computing skills, ability to approach to the problems both analytically and logically, time management skills, etc.
4. The principles in this course are used in almost every field such as medicines, food products, and electronics and even in construction industry.
5. Learnt about emulsion
6. Understood Liquid gas and liquid interfaces

Methodology:

Black board teaching and Group discussion.

UNIT- I**Adsorption and surface phenomenon**

Physisorption and chemisorption, adsorption isotherms, Langmuir and B. E. T. equation and significance in surface area determination, surface films, states of insoluble films, L. B. films and their application, adsorption from solution, adsorption types, surface excess concentration, Gibb's adsorption equation: derivation, significance and experimental verification, catalytic activity of surfaces.

UNIT –II**Micelle**

Surface activity, surface active agents and their classification, micellisation, critical micelle concentration (cmc) thermodynamics of micellisation, factors affecting cmc,

methods of determination of cmc , reverse micelle , solubisation of water insoluble organic substances , use of surfactants in oil recovery.

UNIT-III

Emulsion

Types of emulsion, theories of emulsion and emulsion stability, identification of emulsion types, inversion emulsion, microemulsion : theory and application.

UNIT –IV

Liquid gas and liquid interfaces

Surface tension, capillary action, methods of determination of surface tension, surface tension across curved surfaces, vapor pressure of droplet (Kelvin equation) , surface spreading , spreading coefficient, cohesion and adhesion energy, contact angle, constant angle hystereis, wetting and detergency.

UNIT-V

Solid - Solid interfaces

Surface energy of solids, adhesion and adsorption, sintering and sintering mechanism, Tammann temperature and its importance, surface structure and surface composition.

TEXT BOOKS:

4. J. K. Laidler, 2005. Theories of chemical reaction rates, McGraw Hill, New York.
5. J. J. Bikermann, 1958. Surface chemistry, Academic Press Inc., New York.

Instruction Hours/week:L: 0 T:0 P:4 Marks: Internal:40 External: 60 Total:100

Course Objective:

- To understand the basic principles of volumetric analysis.
- It enables the students to learn about the fundamental aspects of different types of titrations in volumetric analysis in Chemistry
- Estimate of Acidimetry and alkalimetry
- Estimate permanganometry
- Estimate Dichrometry
- Estimate iodimetry and argentometry

Course Outcomes:

1. Understood the basic principles of volumetric analysis.
2. It enables the students to learn about the fundamental aspects of different types of titrations in volumetric analysis in Chemistry
3. Understand and develop the skill to perform Acidimetry and alkalimetry Titrations.
4. Understood and develop the skill to perform permanganometry
5. Understood and develop the skill to perform dichrometry
6. Learnt the skill for performing iodimetry and argentometry

Methodology

Demonstrations of experiments and Black board teaching.

A. Acidimetry & Alkalimetry

1. Estimation of Na_2CO_3
2. Estimation of HCl

B. Permanganometry

1. Estimation of Ferrous sulphate
2. Estimation of Oxalic acid
3. Determination of Iron in Ferric Alum
4. Estimation of Calcium-Direct method.

C. Dichrometry

Estimation of Ferrous ion-Internal indicator method.

D. Iodimetry

1. Estimation of $\text{K}_2\text{Cr}_2\text{O}_7$.
2. Estimation of Copper

E. Argentometry- Demonstration experiments
Estimation of chloride-Fajan's and Volhards method.

5. Thomas, A.O., 2003. Practical Chemistry, Scientific Book Center, Cannanore .

Course Objectives

This course enables the students to learn

- The concepts of Matrices and their properties.
- Techniques of differentiation and integration.
- Solve simultaneous equations with the help of matrices.
- Mastery in the concepts of vector and scalar fields.
- Knowledge the properties of definite integrals.
- Learn about integral calculus

Course Outcomes (COs)

On successful completion of this course, the students will be able to

1. Solve simultaneous equations with the help of matrices.
2. Mastery in the concepts of vector and scalar fields.
3. Gain the intellectual knowledge of complex functions and their applications.
4. Acquire fundamental knowledge in the techniques of differentiation.
5. Know the properties of definite integrals.
6. Learnt about integral calculus

UNIT I

Matrices: Different types of matrices – Inverse of a matrix – Solution of simultaneous equations by matrix method- Cayley-Hamilton theorem(Statement only)-Verification.

UNIT II

Vector calculus: Concepts of vector and scalar fields- Derivative of a vector - The Del operator, Gradient – Divergence of a vector – Curl of a vector- Directional derivative – Formula involving ∇ operator. Laplacian Operator.

UNIT III

Complex variables: Analytical function –Cauchy –Reimann equations – The necessary and sufficient condition for $f(z)$ to be analytic – Polar form of C-R equation-Properties of analytic function – Construction of analytic functions – Milne Thomson method.

UNIT IV

Differential Calculus: Differentiation- Curvature and radius of Curvature in Cartesian and Polar form – Evolutes – Involute .

UNIT V

Integral Calculus: Definite and Indefinite integrals – Methods of Integration – Integration by substitution – Integration by parts.

TEXT BOOKS

1. Venkataraman. M. K.,1998. Engineering Mathematics, The National Publications & Co., Chennai. (Unit I , II)
2. Manickavasagam Pillai.T.K , and S. Narayanan, 2002. “Calculus”, Volume I, and Volume II S.V Printers & Publishers, Chennai. (Unit IV , V)
3. Sastry .S.S,2009, Engineering mathematics, PHI learning Pvt. Ltd, New Delhi(Unit III)

REFERENCES

- 2.Venkataraman.M.K., 2001. Engineering Mathematics Vol 2, National Publishing Company, Chennai.

Course Objective

Students get an idea about

- Collection, interpretation and presentation of statistical data and also learn how to analyze and interpret the data for decision making.
- Measures of Central tendency
- Understand the Meaning and definition of statistics.
- Understand the Measures of Central tendency - Arithmetic Mean, Median
- Understand the Measures of Dispersion – Range, Inter Quartile range, Quartile deviation, Mean Deviation, Standard deviation and Coefficient of variation
- Learn about correlation and regression

Course Outcomes:

1. Collection, interpretation and presentation of statistical data and also learn how to analyze and interpret the data for decision making.
2. Measures of Central tendency
3. Understood the Meaning and definition of statistics.
4. Understood the Measures of Central tendency - Arithmetic Mean, Median
5. Understood the Measures of Dispersion – Range, Inter Quartile range, Quartile deviation, Mean Deviation, Standard deviation and Coefficient of variation
6. Learnt about correlation and regression

UNIT I

Meaning and definition of statistics – sources of data – collection of data – primary and secondary data - methods of primary data collection –sources of secondary data – Classification of data . Diagrammatic representation– Bar diagram and Pie diagram – Graphic representation – Histogram , Frequency distribution , Ogives.

UNIT II

Measures of Central tendency - Arithmetic Mean, Median, Mode - problems on individual, discrete and continuous series, Harmonic Mean and Geometric Mean.

UNIT III

Measures of Dispersion – Range, Inter Quartile range, Quartile deviation, Mean Deviation, Standard deviation and Coefficient of variation – problems on individual, discrete and continuous series.

UNIT IV

Correlation – meaning and definition – types of Correlation – degrees of Correlation – Methods of finding Correlation coefficient – scatter diagram – Karl Pearson’s correlation coefficient – Rank correlation coefficient - Computation and interpretation.

UNIT V

Regression - meaning and definition - Regression equation Regression in two variables – two regression lines - X on Y and Y on X – properties of regression equation – problems using normal equations and regression coefficients.

TEXT BOOK:

1. Pillai R.S.N., and Bagavathi V., 2002. Statistics , S. Chand & Company Ltd, New Delhi.

REFERENCE BOOKS:

1. Dr.P.N.Arora, 1997, A foundation course statistics, S.Chand & Company Ltd, New Delhi.
2. Navnitham P.A , 2004, Business Mathematics And Statistics, Jai Publications, Trichy,
3. Gupta S.C., and Kapoor V.K., 1999. Fundamentals of Mathematical statistics, Sultan Chand & Sons, Educational Publishers, New Delhi.
4. Gupta S.P., 2001, Statistical methods, Sultan Chand & Sons, New Delhi.

Course Objectives

- Identify various functional groups in compounds, especially drugs and other pharmaceuticals where possible.
- Make correct predictions of the general reactivity, chemical reactions, and possible synthesis of compounds.
- Discuss the use of the compounds in pharmacy and in medicine.
- Discuss physico-chemical concepts as the basis of drug analysis, drug stability, and reaction spontaneity, maximum yields in synthesis, solubility's and drug actions.
- Classify drugs according to their physiological and biochemical actions.
- Explain the principles on which analytical instruments have been based.

Course Outcomes

The students understood the

1. Knowledge about drug discovery
2. Procedures to prepare analgesic, antipyretic, anti-inflammatory agents
3. Synthesis of Central Nervous System and cardiovascular drugs.
4. Fermentation process and preparation of antibiotics.
5. Classify drugs according to their physiological and biochemical actions.
6. Explain the principles on which analytical instruments have been based.

Methodology

Black Board Teaching

UNIT I

Drug Design

Concept of isosterism and bioisosterism and their applications in drug design
Antimetabolite approach to drug design, Analog drug design, Prodrugs and drug
latentiation, Carrier-linked prodrugs– Bioprecursors– Role of functional groups in
prodrug design–

UNIT II

Drug Discovery

Drug Discovery Historical perspective, Drug Discovery Strategies in Direct Drug Design
(Structure based) and Indirect drug design, Target selection and lead identification,
Natural product sources,

Specific and non-specific drug action Drug receptors, Basic concept and classification of receptors, Forces involved in drug receptors- interactions, Receptor agonism and antagonism,

UNIT III

Drugs & Pharmaceuticals

Drug discovery, design and development; Basic Retrosynthetic approach. Synthesis of the representative drugs of the following classes: analgesics agents, antipyretic agents, anti-inflammatory agents (Aspirin, paracetamol, Ibuprofen);

UNIT IV

Fermentation

Aerobic and anaerobic fermentation. Production of (i) Ethyl alcohol and citric acid, (ii) Antibiotics; Penicillin, Cephalosporin, Chloromycetin and Streptomycin, (iii) Lysine, Glutamic acid, Vitamin B2, Vitamin B12 and Vitamin C.

UNIT V

Pharmaceutical Compounds: Structure and Importance

Classification, structure and therapeutic uses of antipyretics: Paracetamol (with synthesis), Analgesics: Ibuprofen (with synthesis), Antimalarials: Chloroquine (with synthesis). An elementary treatment of Antibiotics and detailed study of chloramphenicol, Medicinal values of curcumin (haldi), azadirachtin (neem), vitamin C and antacid (ranitidine).

TEXT BOOKS:

		Semester-III
		L T P C
15FCC301A	INTRODUCTION TO COMPUTERS	4 0 0 2

COURSE OBJECTIVES

- Know the basic concept of computers.
- Understand the concept of Ms-word,
- Understand the concept of Ms-Excel.
- Be able to work in Ms-PowerPoint.
- Knowledge about internet and the usage of E-Mail services.
- Data sheet printing

Course Outcomes

The student understood

1. Knowledge about the basic concept of computers.
2. the concept of Ms-word,
3. the concept of Ms-Excel.
4. Able to work in Ms-PowerPoint.
5. Knowledge about internet and the usage of E-Mail services.
6. Data sheet printing

Unit-I

Introduction- Characteristics of computers- development of computers- generations of computers- classification of computers-the computer system- types of Input/ Output and memory devices-computer software-categories of software.

Unit-II

Starting with MS Office Word – Working with Text – working with tables-Checking spelling and grammar- adding graphics to document- Mail merge- printing a document – Advanced features of MS Office Word- Keyboard shortcuts.

Unit III

Starting with MS Office Excel- Working with Excel workbook-working with worksheet-formulas and functions-inserting charts-sorting-importing data-printing in excel- Advanced features of MS Office Excel.

Unit IV

Starting with MS Office PowerPoint – Working with PowerPoint- Working with different views-Designing Presentations- Slide Show.- Printing in PowerPoint.

Unit-V

The Internet-Evolution of Internet-Owner of Internet- Anatomy of Internet – Internet Terminology- Getting Connected to Internet- Web Brower- Electronic Mail- Search engines- Uses of internet to society.

Text Book

1. Fundamentals of Computers: For Undergraduate Courses in Commerce and Management, ITL Education Solutions.2011. Pearson, New Delhi.

References

1. Pradeep K.Sinha ,Priti Sinha. Computer Fundamentals, 2007, 6th Edition BPB Publications, New Delhi.
2. V. Rajaraman. Fundamentals of Computers, Prentice-Hall Of India Pvt. Limited, 2003.
3. Wallace Wang. Microsoft Office 2007 For Dummies,1st Edition Wiley Publishing Inc.

Course Objectives

- This course in curriculum is an introduction to the multimedia and Applications of multimedia.
- This course enables students to understand how the web pages are designed interactively.
- How to critically evaluate website quality,
- Learn how to create and maintain quality web pages learn to create and manipulate images.
- To gain the skills and project-based experience needed for entry into web design and development careers.
- Introducing Photoshop elements

Course Outcomes

1. Learnt the introduction to the multimedia and its applications.
2. Students have understood how the web pages are designed interactively.
3. Critically evaluate website quality,
4. Learnt how to create and maintain quality web pages learn to create and manipulate images.
5. Gained the skills and project-based experience needed for entry into web design and development careers
6. Introducing Photoshop elements

UNIT - I

Multimedia – An overview: Introduction – Multimedia presentation and production – Characteristics of Multimedia presentation – Hardware and Software Requirements – Uses of Multimedia. Text: Types of text - Font - Text File formats. Image: Image data representation – Image file formats – Image processing software. Graphics: Advantages of graphics – Uses – Components of a graphics system.

UNIT - II

Audio: Sound waves – Types and properties of sound – Components of audio system – Digital audio - Musical Instrument Digital Interface (MIDI) – Audio file formats – Audio processing software. Video: Motion video – Television systems – Video file formats – Video processing software. Animation: Uses of animation – Computer based animation – Animation file formats – Animation software.

UNIT - III

Introducing Photoshop elements: About elements – Welcome screen – Create mode – Menu bar – Toolbox – Options bar – Panels. Organizing images: Obtaining images –

Tagging images - Searching for images - Opening and saving images. Selecting Areas – Layers – Text and Drawing Tools.

UNIT - IV

Understanding Flash: Understanding Flash basic elements – Creating a simple animation. Learning Flash Toolbox: Learning the toolbox – Using tools. Learning Flash Panels: Understanding the panels. Using timeline and layers: Understanding how timeline works – Understanding layers. Drawing objects: Drawing lines and fills – Using colors – Rotating, skewing and scaling – Grouping objects.

UNIT - V

Creating animation – How animation works – Creating motion tweens – Creating shape tweens. Understanding masks – Creating masks. Creating symbols and using the library: Learning about symbols – Creating symbols – Using libraries. Learning Basic ActionScript concepts: ActionScript basics – Data type basics.

TEXT BOOKS

1. Ranjan Parekh, 2013, Principles of Multimedia, 2nd Edition, Tata McGraw hill . (Unit I, Unit II)
2. Nick Vandome, 2011, Photoshop Elements 9, Tata McGraw hill. (Unit III)
3. Brian Underdahl, 2002, Macromedia Flash MX – A Beginners Guide, Dreamtech Press. (Unit IV, Unit V)

REFERENCES

1. Tay Vaughan, 2002, Fundamentals of Multimedia, 5th Edition, Tata McGraw-Hill.
2. Bill Sanders. 2001. Flash5 Action Script, 1st Edition, Dream Tech Press, New Delhi

Instruction Hours / week: L: 2 T: 0 P: 0 Marks: Internal: 100 External: Nil
Total: 100

Course Objective

- To achieve the analytical skills
- To know about reasoning competencies
- To improve their communication and presentation skills
- Gain the knowledge on both Aptitude and Soft skills to the students
- Reinforcing competencies in soft skills which are crucial in a social setting
- Learn critically evaluate and demonstrate various principles involved in solving mathematical problems and to adopt new and faster methods of calculations

Course Outcomes

1. achieve the analytical skills
2. To know about reasoning competencies
3. To improve their communication and presentation skills
4. Gained the knowledge on both Aptitude and Soft skills to the students
5. Learnt critically evaluate and demonstrate various principles involved in solving mathematical problems and to adopt new and faster methods of calculations.
6. Reinforcing competencies in soft skills which are crucial in a social setting

UNIT - I

Time, Speed and Distance, Time and Work, Pipes and Cisterns, Geometry, Data Arrangement

UNIT – II

Analogy, Logic based Venn diagram, Probability, Permutation and Combination, Logarithms

UNIT – III

Data Sufficiency, Clocks, Calendar, Reading Comprehension, Sentence Correction, Sentence Completion, Spotting the Errors, Jumbled Sentences

UNIT – IV

Synonyms, Antonyms, Verbal Analogy, Statements and Assumptions, Group Discussion

UNIT - V

Resume Writing, Introduction to HR rounds, Time Management, Attitude and Behaviour

Course Objectives:

- To train the students in understanding the concepts of communication.
- To train the students in developing their written communication and presentation skills.
- To Learn Listening Comprehension
- To write Dicto Composition
- To present Effective Presentation
- To understand Group Discussion

Course Outcomes:

1. Students understanding the concepts of communication.
2. Trained the students in developing their written communication and presentation skills.
3. Learn Listening Comprehension
4. Learn Dicto Composition
5. Understood Effective Presentation
6. Understood Group Discussion

UNIT I – Concept of Communication – Barrier to Communication –Body language – Personality Development – Etiquette and Manners- Soft Skills – Emotional Intelligence

UNIT II – Listening Comprehension – Reading Comprehension – Paragraph writing – Precis Writing – Writing Resume and Covering Letter -Speaking – Welcome Address, Vote of Thanks, Compering, Debates, Role Play, Dialogues – Vocal Communication Techniques. Voice, Quality, Volume, Pitch

UNIT III – Dicto Composition – Letter Writing (Informal, Letters to the Editor etc) – Term paper – Book reviews

UNIT IV – Business Correspondence – Layout of Business Letter – Formal Styles of Business Letters – Letters of Acceptance, Appointment, Resignation, Complaint, Sending E-mails.

UNIT V – Effective Presentation – Planning – Audience Analysis –Logical Sequencing – Timing of the Presentation – Conclusion – Answering Queries – Group Discussion – Interview.

15CHU401	GENERAL CHEMISTRY - IV	Semester -IV 6H-6C
Instruction Hours/week: L: 6 T:0 P:0 Marks: Internal:40 External: 60 Total:100		

Course Objective

- To learn metallurgy of iron, cobalt, nickel
- To learn metallurgy of platinum
- To understand the reactions of phenols and
- To understand the reactions of amines.
- To understand the principles of Phase rule and
- To understand the principles of solutions.

Course Outcomes:

1. Learn metallurgy of iron, cobalt, nickel
2. Learn metallurgy of platinum
3. Understood the reactions of phenols and
4. Understood the reactions of amines.
5. Understood the principles of Phase rule and
6. Understood the principles of solutions.

Methodology

Blackboard teaching and group discussion

UNIT I

Metals: Iron, Cobalt, Nickel - metallurgy-industrial importance-platinum group metals – isolation, properties and uses, their important alloys. Platinum black, spongy platinum, platinized asbestos.

UNIT II

Phenols: Preparation, physical and chemical properties of monohydric phenols - Reactions of monohydric phenols with mechanism - alkylation, esterification, nitration, sulphonation, halogenation, coupling with diazonium salts - Kolbe, Riemeier - Tiemann, Schotten - Baumann, Hoesch and Houben reactions, Gattermann reaction. Preparation,

properties of alpha and beta Naphthols, Dihydric and trihydric Phenols- catechol, resorcinol, quinol, pyrogallol, phloroglucinol and hydroxy quinol.

UNIT III

Amines: Aliphatic amines - Primary, secondary and tertiary amines-separation and comparison of their basicity. Aromatic amines- Preparation and reactions of aromatic amines. Ring substitution, Diazotisation and coupling reaction.

Diazomethane and diazoacetic ester - preparation, structure and their synthetic applications.

UNIT IV

Phase rule and phase equilibria – Conditions for equilibrium between the Phases. Derivation of Gibbs phase rule. Phase equilibria in one component system. Phase diagram for sulphur, water, carbondioxide system. Phase diagram for two component system. Construction of the phase diagram - Thermal analysis method – B- Cd; Zn - Mg; Na - K system. Pressure dependence of U and T curves - Clapeyron and Clapeyron-Clausius equations.

UNIT V

Solutions: Ideal and non ideal solutions- Raoult's law – Henry's law. Nernst distribution law and its applications. Colligative properties - relative lowering of vapour pressure, elevation of boiling point, depression of freezing point and osmotic pressure.

7. Robert Thornton Morrison, Robert Neilson and Saibal Kanthi Bhattacharjee, 2012, Organic chemistry, 2nd edn, New York.

Course Objectives

- To study about the order and rate of reactions.
- To derive the expression for rate constant of first and pseudo-first order reactions.
- To know the experimental methods of determination of order of reaction. Graphical method of determination of order and rate constant of a reaction is also to be studied.
- To learn about the effect of temperature on the rates and rate constants of reaction.
- To know about Arrhenius equation and Arrhenius parameters.
- To differentiate between simple and complex reactions.
- To learn about consecutive, opposing and parallel reactions.

Course Outcomes:

1. Study about the order and rate of reactions.
2. Derive the expression for rate constant of first and pseudo-first order reactions.
3. Know the experimental methods of determination of order of reaction.
4. Graphical method of determination of order and rate constant of a reaction is also to be studied.
5. Learnt about the effect of temperature on the rates and rate constants of reaction. To know about Arrhenius equation and Arrhenius parameters.
6. Differentiate between simple and complex reactions.
7. Learnt about consecutive, opposing and parallel reactions.

Methodology

Black Board Teaching, power point presentation and Group discussion

UNIT - I

Chemical kinetics - Empirical laws and experimental aspects. Rate laws. Stoichiometry, order and molecularity of reactions, setting up and solving simple differential equation for first order, second order, third order and zero order reactions, pseudo order reactions with examples.

UNIT - II

Expression for half-life periods of first order, second order, zero order and third order reactions. Determination of order of reactions. Experimental techniques involved in the following kinetics of reaction.

Volumetry, manometry, dilatometry, polarimetry and colorimetry. Typical examples for each of the techniques.

UNIT - III

Theoretical aspects: effects of temperature on the rate constant. The activation energy. The collision theory of reaction rates and its limitation. The theory of absolute reaction rates. Comparison of the collision theory with the absolute reaction rate theory. Significance of free energy of activation and entropy of activation.

UNIT - IV

Error analysis – terms and definitions – absolute and relative errors – precision and accuracy – classification of errors – sources and minimization of errors – significant figures and computation – mean and standard deviation – method of least squares – student T test and Q test.

UNIT - V

Thermal chain reaction. H_2/Br_2 reactions. Chain reactions – characteristics- steady state approximation, complex reaction. Kinetics of photochemical reactions. Adsorption of light and photochemical processes. The Stark - Einstein law of photochemical equivalence. Photochemical chain reaction H_2/Br_2 reaction. Quantum yield of photochemical reactions. Comparison of thermal and photochemical kinetics of H_2/Br_2 , H_2/Cl_2 reaction. Photosensitized reactions.

Instruction Hours/week:L: 0 T:0 P:6 Marks: Internal:40 External: 60 Total:100

Course Objective

To understand and develop the skill to perform organic qualitative analysis.

- Preliminary tests
- Detection of elements present
- Aromatic or Aliphatic
- Saturated or Unsaturated
- Nature of the functional group (Aldehydes, Ketones, Amines, Diamide, Carbohydrates, Phenols, Acids, Esters & Nitro compounds)
- Confirmatory tests
- Preparation of derivatives.

Course Outcomes

Understood and develop the skill to perform organic qualitative analysis.

1. Preliminary tests
2. Detection of elements present
3. Aromatic or Aliphatic
4. Saturated or Unsaturated
5. Nature of the functional group (Aldehydes, Ketones, Amines, Diamide, Carbohydrates, Phenols, Acids, Esters & Nitro compounds)
6. Confirmatory tests
7. Preparation of derivatives.

Methodology

Black board teaching and Demonstration.

Systematic analysis of an organic compound

- ✓ Preliminary tests
- ✓ Detection of elements present
- ✓ Aromatic or Aliphatic
- ✓ Saturated or Unsaturated
- ✓ Nature of the functional group (Aldehydes, Ketones, Amines, Diamide, Carbohydrates, Phenols, Acids, Esters & Nitro compounds)
- ✓ Confirmatory tests
- ✓ Preparation of derivatives.

4. Mendham, J., R.C.Denney, J.D.Barnes and M.Thomas, 2002. Vogel's textbook of quantitative Chemical Analysis, 6th Edition, Pearson Education Ltd., Singapore.

Course Objectives:

This course enables the students to learn

- The Concept of Fourier analysis and
- Solving boundary value problems.
- Techniques of Fourier transform
- Laplace transform
- To solve differential equations.
- Numerical techniques of differentiation and integration.

Course Outcomes (COs)

On successful completion of this course, the students will be able to

1. Appreciate the physical significance of Fourier series
2. Understood the mathematical principles on transforms.
3. Apply mathematical foundation to formulate and solve problems arising in physics
4. Synthesize numerical techniques for practical problems
5. Techniques of Fourier transform
6. Laplace transform

UNIT I

Fourier series: Definition – Finding Fourier coefficients for a given periodic function with period 2π – Odd and Even functions – Half Range Series

UNIT II

Fourier Transforms: Definition of Fourier Transform-Properties of Fourier Transform-Inverse Fourier transform-Convolution theorem-Finite Fourier Sine & Cosine Transform – Parseval's theorem.

UNIT III

Laplace Transforms: Definition of Laplace Transform - Properties of Laplace Transform, Inverse Laplace Transform. Application of Laplace Transform.

UNIT IV

Differential Equations: Types of Linear differential equations with constant coefficients – Simultaneous differential equations with constant coefficient.

UNIT V

Numerical methods: Solving simultaneous equations–Gauss Elimination method, Gauss Jordan method, Gauss – Seidel method. Numerical Integration – Trapezoidal Rule, Simpson's Rule.

TEXT BOOKS

Mathematics – Vol III, Vikas Publishing House PVT., LTD, New Delhi.

Course Objective

- To enable the students to learn the Statistical methods and their applications.
- On successful completion of this course the students shall enrich to solve the Statistical problems in commerce and business.
- Learn about Probability distribution
- Know about test of significance
- Understand index numbers
- To learn about time series

Learn about time series

Course Outcomes:

1. The students learnt the Statistical methods and their applications.
2. On successful completion of this course the students shall enrich to solve the Statistical problems in commerce and business.
3. Learnt about Probability distribution
4. Knowledge about test of significance
5. Understood index numbers
6. Learnt about time series

UNIT I

Probability – definitions – addition and multiplication rules (only statements), permutation and combination, diagrammatic representation of probability (Venn diagram) – simple problems.

UNIT II

Probability distribution - Binomial distribution – Poisson Distribution – properties, mean and variance, Normal distribution–characteristics of normal curve (No derivations) simple problems only.

UNIT III

Test of Significance: Basic concepts – Z-test for two means – Small sample tests- t- test for single mean, two means – Chi Square Test.

UNIT IV

Index numbers – meaning and definition – uses – methods of construction – Unweighted and weighted index number – Laspeyre's, Paasche's and Fischer's method – Tests for an ideal index number – Wholesale and Cost of living index .

UNIT V

Time Series: Meaning – Components – Models – Business forecasting – methods of estimating trend – graphic, semi average, moving average and least square method – Seasonal variation – Methods of Simple Average.

TEXT BOOK:

1. Pillai R.S.N., and Bagavathi V., 2002., Statistics , S. Chand & Company Ltd, New Delhi.

REFERENCES:

5. Richard. I. Levin., & David. S. Rubin., 1998. Statistics for management, Seventh edition, Prentice hall of India, New Delhi.

Course Objectives

- To identify various functional groups in compounds, especially drugs and other pharmaceuticals where possible.
- To make correct predictions of the general reactivity, chemical reactions, and possible synthesis of compounds.
- To discuss the use of the compounds in pharmacy and in medicine.
- To discuss physico-chemical concepts as the basis of drug analysis, drug stability, and reaction spontaneity, maximum yields in synthesis, solubility's and drug actions.
- To classify drugs according to their physiological and biochemical actions.
- Explain the principles on which analytical instruments have been based.

Course Outcomes:

1. Identify various functional groups in compounds, especially drugs and other pharmaceuticals where possible.
2. Make correct predictions of the general reactivity, chemical reactions, and possible synthesis of compounds.
3. Discuss the use of the compounds in pharmacy and in medicine.
4. Discuss physico-chemical concepts as the basis of drug analysis, drug stability, and reaction spontaneity, maximum yields in synthesis, solubility's and drug actions.
5. Classify drugs according to their physiological and biochemical actions.
6. Explain the principles on which analytical instruments have been based.

Methodology

Black Board Teaching

UNIT-I

Molecular basis of drug action: Receptor: Drug Receptor Interaction: Basic ligand concept, agonist, antagonist, partial agonist, inverse agonist, receptor Theories - Occupancy, Rate & Activation Theories.

UNIT -II

Analgesics - Definition - Different types of pain superficial, deep non visceral, visceral, referred and psychogenic, Classification - Morphine and its derivatives. Antipyretic analgesics – Salicylic acid derivatives – Paracetamol, phenacetin – Propanoic acid derivative – Ibuprofen. Antibiotics: Definition - Microbial synthesis, structure,

assay and uses of chloramphenicol and pencillin - Structure and uses of streptomycin and tetracyclines.

UNIT - III

Antiseptics and disinfectants : Definition and distinction - Examples - Phenolic compounds and chloro compounds. Tranquilizers – Definition and examples. Vitamins –Definition – Classification, sources and deficiency, diseases of Vitamins A, B, C, D, E and K. Importance of vitamin A in vision.

UNIT-IV

Synthon approach: Definition of terms - disconnection, synthon, functional group interconversion (FGI), Basic rules in Disconnection.

Combinatorial Chemistry Introduction, combinatorial approaches, chemical Peptide and small molecule libraries.

UNIT-V

Enzyme Inhibition – Enzyme structure: primary, secondary, tertiary and quaternary, enzyme Kinetics, enzyme Inhibitors - reversible, irreversible. Drug binding to nucleic acid -- Antimalarial, anti-cancer, antiviral.

Instruction Hours / week: L: 2 T: 0 P: 0 Marks: Internal: 100 External: Nil Total: 100

Course Objective

- To achieve the analytical skills
- To know about reasoning competencies
- To improve their communication and presentation skills
- Gain the knowledge on both Aptitude and Soft skills to the students
- Reinforcing competencies in soft skills which are crucial in a social setting
- Learn critically evaluate and demonstrate various principles involved in solving mathematical problems and to adopt new and faster methods of calculations

Course Outcomes

1. achieve the analytical skills
2. To know about reasoning competencies
3. To improve their communication and presentation skills
4. Gained the knowledge on both Aptitude and Soft skills to the students
5. Learnt critically evaluate and demonstrate various principles involved in solving mathematical problems and to adopt new and faster methods of calculations.
6. Reinforcing competencies in soft skills which are crucial in a social setting

UNIT - I

Time, Speed and Distance, Time and Work, Pipes and Cisterns, Geometry, Data Arrangement

UNIT – II

Analogy, Logic based Venn diagram, Probability, Permutation and Combination, Logarithms

UNIT – III

Data Sufficiency, Clocks, Calendar, Reading Comprehension, Sentence Correction, Sentence Completion, Spotting the Errors, Jumbled Sentences

UNIT – IV

Synonyms, Antonyms, Verbal Analogy, Statements and Assumptions, Group Discussion

UNIT - V

Resume Writing, Introduction to HR rounds, Time Management, Attitude and Behaviour

Course Objective

- To learn and understand the fundamental aspects of stereochemistry.
- Learn about R and S notations
- To understand different types of rearrangement reactions.
- To learn about carbohydrates.
- To understand the amino acids and proteins
- To learn about heterocyclic compounds

Course Outcomes:

1. Learnt and understand the fundamental aspects of stereochemistry.
2. Learnt about R and S notations
3. Understand different types of rearrangement reactions.
4. Learnt about carbohydrates.
5. Understand the amino acids and proteins
6. Learnt about heterocyclic compounds

Methodology:

Black board teaching and Group Discussion.

UNIT-I

Optical activity: compounds with asymmetric carbon- racemisation-Resolution-Asymmetric synthesis-Configuration –DL and RS nomenclature for compounds containing one asymmetric carbon. Walden inversion. Optical activity of Biphenyls, Allenes. Geometrical isomerism for olefin compounds. E-Z nomenclature.

UNIT-II

Mechanism of molecular rearrangement reaction: Pinacol-Pinacolone, Wagner-Meerwein, Beckmann, Hofmann, Curtius, Benzilic acid and Claisen rearrangements, Fries rearrangement and Cope rearrangement.

UNIT-III

Carbohydrates: Chemistry of monosaccharide- Glucose and Fructose. Chemistry of disaccharide- Sucrose and Maltose. Chemistry of polysaccharide - Starch and Cellulose - an elementary account (Elucidation of structure not necessary). Inter conversion of Sugars – Muta rotation – Epimerization.

UNIT-IV

Amino acids– Classification, Preparation and properties –Peptides and synthesis of Polypeptides. Proteins- classification based on physical properties and biological functions, colour reactions – Primary, Secondary and tertiary structure.

UNIT-V

Heterocyclic compounds: Preparation, properties and use of Furan, Pyrrole, Thiophene, Pyridine, Quinoline, α and β -Flavones.

Course Objectives

- Understand the structure of metals and alloys
- To learn the principles of radioactivity.
- To learn about isotopes and isobars
- To understand the fundamentals of acids and bases.
- To understand about the structure of metals and alloys.
- To learn about different aspects of solvents

Course Outcomes:

1. Understood the structure of metals and alloys
2. Learnt the principles of radioactivity.
3. Learnt about isotopes and isobars
4. Understood the fundamentals of acids and bases.
5. Understood about the structure of metals and alloys.
6. Learnt about different aspects of solvents

Methodology

Black board teaching and Group discussion.

UNIT- I

Structure of metals and alloys - substitutional and interstitial solid solutions - Hume – Rothery ratios - metallic bonding –theories-VBT, MOT and free electron theory- electrical, optical and mechanical properties of metals -semi conductors, intrinsic and extrinsic – uses, Crystal defects.

UNIT - II

Radio activity – General properties of Radio activity radiations, detection and measurement of radio activity. Natural radio activity & artificial radioactivity: Artificial transmutation of new elements, synthesis of radio isotopes of elements. Nuclear fission and fusion. Nuclear reactors - principles of working - production of electrical energy. Atomic energy projects in Industries - Safety measures, pollution, disposal of reactor wastes.

UNIT - III

Nature of isotopes and isobars - Detection and isolation of isotopes- various methods- importance of discovery of isotopes - uses of isotopes in various fields. Nuclear stability n/p ratio, magic numbers, C-12 and C-14 and nuclear binding energies. Nuclear reactions, mechanism and different types. Stellar energy. Radioactive disintegration series.

UNIT - IV

Acids and Bases - Arrhenius concept, proton transfer theory – concept of Lowry and Bronsted –Luxflood concept – the solvent system concept – Lewis concept – relative strength of acids and bases – effect of solvent – leveling effect – effect of polarity and dielectric constant – effect of substituents – factors influencing relative strengths of acids and bases. Applications and Limitations of HSAB concept.

UNIT - V

The solvent - solubility's of compounds - effect of temperature on solubility - Chemical structure and solubility of solvents. Classification of solvents - general behavior - properties of ionizing solvents. Types of reaction in solvents. Aqueous and non aqueous solvents –Protonic solvents- Ammonia. Non-protonic solvents - SO₂.

6. Soni, P.L., 2004. Inorganic Chemistry, Sultan Chand & Sons.
7. Wiley and A.K.De, 1998. A text book of Inorganic Chemistry, New age international publishers, New Delhi.

Course Objective

- To learn and understand the electrical condition in solutions.
- To understand about the ionic equilibrium,
- Learn about electrochemical cells and
- Learn about fuel cells.
- Learn about redox reactions
- Know about application of EMF measurements

Course Outcomes

1. Learnt and understand the electrical condition in solutions.
2. Understood about the ionic equilibrium,
3. Learnt about electrochemical cells and
4. Learnt about fuel cells.
5. Learnt about redox reactions
6. Knowledge about application of EMF measurements

Methodology

Black board teaching and Group Discussion.

UNIT-I

Electrical conduction: Conduction in metals and in electrolytic solutions. Measurement of conductivity in electrolytic solution. Migration of ions-Kohlrausch's law. Arrhenius theory of electrolytic dissociation – Ostwald's dilution law. Theory of strong electrolytes-Debye-Huckel-Onsagar theory Elementary account only verification – Debye – Falkenhagen effect- Wien effect. Transport numbers –Determination. Conductometric titrations.

UNIT-II

Ionic Equilibria- Solubility and solubility product- Determination of solubility product - Application of solubility product principle-Dissociation of weak acids and bases-Dissociation constants – pH scale - common ion effect – buffer solutions –Determination of pH values of buffer mixtures - Henderson's equation –Hydrolysis of salts –Degree of hydrolysis.

UNIT-III

Electrochemical cells: Electrode potentials-The standard hydrogen electrode- kinds of electrodes and their potentials- Nernst equation. EMF –computation and measurement of

cell emf- Single electrode potential –Determination and significance of electrode potentials- Electrochemical series –Temperature dependence of the cell EMF. Thermodynamic quantities of cell reactions.

UNIT-IV

Reference electrodes-calomel electrode-hydrogen electrode-glass electrode- Electrodes for measurement of pH –Concentration cells with and without transport- Liquid junction potential –Application of EMF measurements. Redox potentials –Redox indicators – Uses. Potentiometric titrations.

UNIT-V

Fuel cells: Hydrogen – Oxygen cell and hydrocarbon oxygen cell. Storage cells. Lead storage cell and Nickel Cadmium cell. Decomposition voltage – Over voltage-Deposition and discharge potential.

TEXT BOOK:

1. Puri Sharma and Pathania, 2003. Physical Chemistry, Vishal Publishing Co., Jalandar.

REFERENCES:

1. Atkins, P.W., 1983. Physical Chemistry, ELBS & Oxford university press, Oxford.
2. Glasstone, S., 2002. An Introduction to Electrochemistry, Affiliated East West press, New Delhi.
3. Whittakar, A.G., 2001. Physical Chemistry, Mount & Heal Viva Books Pvt. Ltd.,
4. Peter Atkin's and Julio De Paula, 2010, Physical Chemistry, 9th edn, Oxford University Press, New York.

Course Objective

- To learn and understand the fundamentals of Nanochemistry.
- To understand the use of nano particles in molecular electronics,
- To learn about super Conductors
- To learn about the synthesis and stabilization of nano particles
- To characterize them by experimental techniques.
- Know about nano rods nano tubes

Course Outcome

1. Learnt and understood the fundamentals of Nanochemistry.
2. Understand the use of nano particles in molecular electronics,
3. Learnt about Super Conductors
4. Learnt about the synthesis and stabilization of nano particles
5. Characterization of them by experimental techniques
6. Know about nano rods nano tubes

Methodology:

Black board teaching, Discussion and Powerpoint Presentation.

UNIT-I

Basics of Nanochemistry: Introduction – definition – length scales – importance of nanoscale and its technology – self assembly of materials – self assembly of molecules – porous solids, nanowires, nanomachines and quantum dots.

UNIT-II

Nano Particles: Introduction – types of nanoparticles – preparation, properties and uses of gold, silicon, silver, zinc oxide, iron oxide, alumina and titania nanoparticles.

UNIT-III

Synthetic Techniques: Techniques to synthesize nanoparticles – top down and bottom up approaches – common growth methods – characterization of nanoparticles – applications and toxic effects of nanomaterials.

UNIT-IV

Nano Materials: Preparation, properties and applications of carbon nanotubes, nanorods, nano fibre and nanoclay.

UNIT-V

Instrumental Techniques: Electron microscopes – scanning electron microscopes (SEM) – transmission electron microscopes (TEM) – scanning probe microscopy – atomic force

microscopy (AFM) – scanning tunneling electron microscope (STEM) – basic principles only.

TEXT BOOKS:

1. Shanmugam.S, 2010, Nanotechnology, MJP Publishers, Chennai.
2. Patrick Salomon, A Handbook on Nanochemistry, Dominant Publishers and Distributors, New Delhi.
3. S. Balaji, 2010, Nanobiotechnology, MJP Publishers, Chennai.

REFERENCES:

3. Segreev, G. B., 2006, Nanochemistry, Elsevier, New York.
4. T.Pradeep, 2013, Nano- The Essentials, Mcraw Hill Edn, New York.

Course objectives

This course enables the student to

- Apply the principles and the practical aspects of green chemistry
- Prepare biodiesel from vegetable oil.
- Prepare phthalocyanine complex of Cu (II).
- Characterise the biodiesel.
- Mechano chemical solvent free synthesis of azomethine.
- Solvent free, microwave assisted one pot synthesis of phthalocyanine complex of copper(II)

Course outcome

The students have to use

1. The basic principles and practical aspects like preparations and characterization in green approach.
2. Preparation and characterization of biodiesel from vegetable oil.
3. Characterization of biodiesel from vegetable oil.
4. Preparation of phthalocyanine complex of Cu(II).
5. Mechano chemical solvent free synthesis of azomethine.
6. Solvent free, microwave assisted one pot synthesis of phthalocyanine complex of copper(II).

Methodology:

Black board teaching, Group discussion and Powerpoint Presentation.

UNIT-I

Introduction to green chemistry

Green chemistry-relevance and goals, Anastas' twelve principles of green chemistry - Tools of green chemistry: alternative starting materials, reagents, catalysts, solvents and processes with suitable examples.

UNIT-II

Microwave mediated organic synthesis (MAOS)

Microwave activation – advantage of microwave exposure – specific effects of microwave – Neat reactions – solid supports reactions – Functional group transformations – condensations reactions – oxidations – reductions reactions – multi-component reactions.

UNIT III

Ionic liquids and PTC :

Introduction – synthesis of ionic liquids – physical properties – applications in alkylation – hydroformylations – epoxidations – synthesis of ethers – Friedel-Craft reactions – Diels-Alder reactions – Knoevenagel condensations – Wittig reactions – Phase transfer catalyst - Synthesis – applications.

UNIT IV

Supported catalysts and bio-catalysts for Green chemistry

Introduction – the concept of atom economy – supported metal catalysts – mesoporous silicas – the use of Biocatalysts for green chemistry - modified bio catalysts – fermentations and biotransformations – fine chemicals by microbial fermentations – vitamins and amino acids — Baker's yeast –mediated transformations– Bio-catalyst mediated Baeyer-Villiger reactions— Microbial polyester synthesis.

UNIT V

Alternative synthesis, reagents and reaction conditions

A photochemical alternative to Friedel-Crafts reactions - Dimethyl carbonate as a methylating agent – the design and applications of green oxidants – super critical carbon dioxide for synthetic chemistry.

TEXT BOOK:

3. Rshmi Sanghi & M. M. Srivastava, 2003. Green Chemistry – Environment friendly alternatives. Narora Publishing House, Chennai.

Course Objectives

- To learn about atmospheric pollution
- To understand the chemistry of pollution in land
- To learn about the biosphere
- To understand the lithosphere and biosphere interactions
- To learn the control of pollution
- To learn about agricultural pollution

Course Outcomes

1. Learnt about atmospheric pollution
2. Understand the chemistry of pollution in land
3. Learnt about the biosphere
4. Understand the lithosphere and biosphere interactions
5. Learnt the control of pollution
6. Learn about agricultural pollution

Methodology

Black board teaching and Group discussion.

UNIT-I

Atmospheric Chemistry

The structure of the earth's atmosphere- chemistry of the lower and upper atmosphere. The chemistry of air pollution- oxides of nitrogen- hydrogen sulphide and oxides of sulphur- Aerosols – ozone depletion and consequences- dioxins burning plastics- other atmospheric chemicals- smog- radio activity and fallout- air pollution abatement. Green house effect- Global warming, oxides of carbon.

UNIT-II

The earth

The lithosphere- the chemical composition of earth- the structure and composition of inner earth- the mantle, and the crust. The exploitation of mineral resources and the abuse of earth – earth resources – changing the face of the land- the earth as a dump- recycle- earth resource conservation steps.

The hydrosphere : The fresh water chemistry – the structure and properties of liquid water – lakes, rivers, ponds and stream –The role of water in our total environment- the hydrologic cycle- snow and ice – nucleation and precipitation – the chemical composition of rain water- phase changes and isotopic fractionation.

UNIT- III

The biosphere

The structure of the biosphere, Man's perturbation of the biosphere – Man as a chemical factory – material use and waste – energy use and thermal pollution – ecological

disruption – chemical sensation, hormonal imbalance and mutagens- internal pollution. Hydrosphere - lithosphere interaction: The structure of water at an interface – chemical composition of mineral water- weathering and the changing face of the land- the origin of the oceans- sedimentation and the deposition of materials from the hydrosphere – chemical exchange between sediments and the water column.

UNIT- IV

Interactions

Lithosphere- biosphere interaction: soil chemistry – the prospects of agriculture-agricultural pollution – pesticides and other persistent pollutants – the deposition of coal and petroleum – theories of origin of petroleum. Atmosphere – biosphere interaction and atmosphere– hydrosphere interaction: history of earth’s atmosphere – the nitrogen cycle – the carbon cycle – air – sea interactions.

UNIT-V

Pollution control

Pollution control in the following: Fertilizer, petroleum, pulp and paper, tanning, sugar, alcohol, electroplating and nuclear reactors.

Analysis of pollutants: Sum, specific and group parameters BOD, COD, specific oxygen demand, DOC, DOCl, DOS, Fe, Cr, Cu, Pb, and Ni-So₂, NO_x, H₂S, O₃ and CO.

3. Mahajan S.P, 1985. Pollution control in process industries. Mc.Graw Hill Publishing, New York.

Instruction Hours/week:L: 5 T:0 P:0 Marks: Internal:40 External: 60 Total:100

Course Objective

- To acquaint the students with the applications of Bioinorganic Chemistry to the medicinal chemistry.
- To Identify key structural molecules for metal bonding in biological molecules.
- To learn about the metals in life process
- To understand oxygen carrier systems.
- To understand about the metals used in plant life and about metal poisoning.
- To learn about nitrogen fixation

Course Outcomes

1. Students know the applications of Bioinorganic Chemistry to the medicinal chemistry.
2. Identify key structural molecules for metal bonding in biological molecules.
3. Learnt about the metals in life process.
4. Understand about the metals used in plant life and about metal poisoning.
5. Understood about Oxygen carrier systems
6. Learn about nitrogen fixation

Methodology

Black board teaching and Group discussion.

UNIT-I

Metals in Life Processes

Na-K-charge carriers & osmotic pressure, relation to sensitivity of nerves and control on muscles, Mg-Ca complexes with nucleic acid, nerve impulse transmission, trigger reaction, Mn, Fe, Co, Cu, Mo, ferridoxins, Zn-super acid catalysis.

UNIT-II

Oxygen Carrier Systems

Structure and mechanism of hemoglobin, vitamin B12, B12 co-enzyme myoglobin, synthesis of oxygen carriers.

Photosynthesis : Porphyrins ring complexes and redox mechanism.

UNIT-III

Nitrogen Fixation

Nitrogen in biosphere, nitrogen cycle, nitrification role of microorganisms, nitrogen fixation in soils

UNIT-IV

Metal poisoning and drug action of Inorganic complexes compounds

Metal poisoning, treatment by using chelating agent, mercury, lead & cadmium poisoning & treatment. Platinum complexes in treatment of cancer, metal deficiency and use of metal chelates.

UNIT-V

Trace Metals in Plant Life

Micronutrients in soil, role of micronutrients in plant life

Biogeochemistry : Biodegradation of minerals bacteria leaching and its applications.

TEXT BOOK:

Instruction Hours/week:L: 0 T:0 P:5 Marks: Internal:40 External: 60 Total:100

Course Objective

- To understand and develop the skill to perform organic qualitative analysis.
- To understand the factors which affect the crystallinity/size of precipitate.
- To understand the steps to be taken to ensure that the precipitates formed are large and easily filtered and avoid peptization.
- Estimate the Barium as Barium chromate
- Estimate of Lead as Lead Chromate.
- Estimate of Lead as Lead Sulphate.

Course Outcomes

1. Understand and develop the skill to perform organic qualitative analysis.
2. Understand the factors which affect the crystallinity/size of precipitate.
3. Understand the steps to be taken to ensure that the precipitates formed are large and easily filtered and avoid peptization.
4. Estimation the Barium as Barium chromate
5. Estimation of Lead as Lead Chromate.
6. Estimation of Lead as Lead Sulphate

Methodology

Black board teaching and Demonstration.

LIST OF PRACTICALS

1. Estimation of Barium as Barium chromate.
2. Estimation of Barium as Barium Sulphate.
3. Estimation of Lead as Lead Chromate.
4. Estimation of Lead as Lead Sulphate.
5. Estimation of Calcium as Calcium Oxalate
6. Estimation of Nickel as Nickel Dimethylglyoxime complex.
7. Estimation of Mg as Oxinate.

Instruction Hours/week:L:0 T:0 P:0**Marks: External: 100 Total:100****Course Objectives:**

This skill enhancement course helps the student to

- Develop the preparation of hair dyes, hair spray and shampoos
- Develop the preparation of Hair spray
- Describe the preparation and uses of lotions,
- Describe the preparation and uses lipsticks
- Describe the preparation and uses talcum powder and Creams.
- Demonstrate the chemistry of essential oils

Course outcome

The students have formulate the knowledge about

1. The preparation of hair dyes, hair spray and shampoos
2. The preparation and uses of lotions,
3. The preparation and uses of lipsticks and
4. The preparation and uses of talcum powder
5. The preparation and uses of creams
6. The chemistry of essential oils

Methodology

Self study

UNIT I**Soaps**

Saponification of oils and fats. Manufacture of soaps. Formulation of toilet soaps-different ingredients used. Their functions. Medicated soaps. Herbal soaps. Mechanism of action of soap. Soft soaps. Shaving soaps and creams. ISI specifications. Testing procedures/limits.

UNIT II**Detergents**

Anionic detergents: Manufacture of LAB (linear alkyl benzene). Sulphonation of LAB – preparation of acid slurry. Different ingredients in the formulation of detergent powders and soaps. Liquid detergents. Foam boosters. AOS (alpha olefin sulphonates. cationic detergents: examples. Manufacture and applications.

Non-ionic detergents: examples. Manufacture of ethylene oxide condensater.

Mechanism of action of detergents. Comparison of soaps and detergents.
Biodegradation – environmental effects. ISI specifications / limits.

UNIT III

Shampoos

Manufacture of SLS and SLES. Ingredients. Functions. Different kinds of shampoos – anti-dandruff, anti-lice, herbal and baby shampoos. Hair dye. Manufacture of conditioners. Coco betaines or coco diethanolamides – ISI specifications. Testing procedures and limits.

UNIT IV

Skin preparations

Face and skin powders. Ingredients, functions. Different types. Snows and face creams. Chemical ingredients used. Anti perspirants. Sun screen preparations. UV absorbers. Skin bleaching agents. Depilatories. Turmeric and Neem preparations. Vitamin oil.

Nail polishes: nail polish preparation, nail polish removers. Article removers. Lipsticks, roughes, eyebrow pencils. Ingredients and functions – hazards. ISI specifications.

UNIT V

Oils, fats and Waxes

Classification of oils fats and waxes: distinction between oil, fats and waxes
Hydrogenation of oils-principle and manufacturing details. Definition and determination of saponification value, acid value, iodine value, RM value and their signification. Elaidin test for oils. Some common waxes like spermaceti, Bees wax, baybeery wax and their uses.

TEXT BOOKS:

Instruction Hours/week:L: 5 T:0 P:0 Marks: Internal:40 External: 60 Total:100

Course Objectives

- To understand the field of natural products chemistry;
- To identify natural products and their probable synthetic pathways.
- To enhance their understanding of biological and biochemical sciences.
- To learn about the Natural products including terpenoids
- To learn about the alkaloids,
- To learn about the vitamins, hormones and chemotherapeutic agents

Course Outcomes

1. Understand the field of natural products chemistry;
2. Identify natural products and their probable synthetic pathways.
3. Enhance their understanding of biological and biochemical sciences.
4. Learnt about the Natural products including terpenoids
5. Learnt about the alkaloids,
6. Learnt about the vitamins, hormones and chemotherapeutic agents

Methodology:

Black board teaching, Discussion and Power Point Presentations

UNIT-I

Terpenoids : Introduction – Classification – General methods of isolation – Isoprene rule- Structural elucidation and synthesis of geraniol, terpinol, dipentene and alpha-pinene.

UNIT-II

Alkaloids – Introduction –Classification – General characteristics – General methods of determining structures – Hofmann's exhaustive methylation, structural elucidation and synthesis of Nicotine, Conine, Piperine and Papaverine.

UNIT-III

Vitamin's – Introduction – Importance of vitamins – structural elucidation and synthesis of Retinol, Thiamine, Riboflavin, Ascorbic acids.

UNIT-IV

Hormones: Introduction – Structural elucidation and synthesis of adrenaline and thyroxin.
Steroids: Introduction -Chemistry and structure of cholesterol. Synthesis (not necessary), Enzymes.

UNIT-V

Chemotherapy: Introduction – Classification of drugs – lethal dose –chemistry and application of sulpha drugs, Antimalarials, and Amoebicidal drugs, Antiseptics, Antipyretics, Analgesics and Antibiotics, Penicillin, Streptomycin, Chloromycetin, Tetracycline- Structure and uses only.

TEXT BOOK:

1. Agarwal,.O.P, 2003. Natural Product Chemistry, Goel Publishing House, Meerut.

REFERENCES:

4. Gurdeep R.Chatwal, 2004. Organic Chemistry Of Natural Products, Vol. II, Himalaya Publishing House, New Delhi.
5. Madan.R.L, 2005. Organic Chemistry Q & A, S.Chand And Company, New Delhi.

Course Objectives

- To enable and impart the knowledge of crystal classes,
- To learn about polarization,
- To understand magnetic properties and spectroscopy.
- To understand how to characterize a compound.
- Identify functional groups
- Interpret a spectrum.

Course Outcomes

1. The students have knowledge of crystal classes
2. Learnt about polarization,
3. Understood magnetic properties and spectroscopy.
4. Understood how to characterize a compound.
5. Identify functional groups
6. Interpret a spectrum.

Methodology

Black board teaching and Group discussion.

UNIT-I

Electrical properties of molecules: Molar polarization, Orientation polarization and distortion polarization – polar and non polar molecules. Determination of dipole moment of polar gases, liquids and solids – Applications of dipole moment in the study of simple molecules.

UNIT-II

Magnetic properties of molecules: Meaning of the terms magnetic susceptibility, magnetic moment, diamagnetism, paramagnetism and ferromagnetism. Determination of magnetic susceptibility by Gouy's method. Application of magnetic measurements.

UNIT-III

Spectroscopy: Absorption spectra- Fundamental concepts of electromagnetic spectrum- The various regions of the spectrum and the relative energies of the radiation in each region-Type of changes induced by the interaction of the radiation with matter. Theory of rotation spectra – Diatomic molecule as rigid rotor and non rigid rotor - Intensities of spectral lines.

Theories of IR spectra – simple harmonic oscillator, model anharmonic oscillator, model of diatomic molecules information on molecular constitution from IR spectra; Application of IR spectra.

UNIT-IV

Theory of Raman spectra – Comparison of IR and Raman spectra - Theory of UV and visible spectra–Franck-Condon principle-Application of UV spectra to simple molecules.

NMR spectra – Basic principles – Chemical shift – Application of NMR spectra to simple molecules. High resolution Raman spectra (details not expected). Examples-Ethanol and o, m & p-xylenes.

UNIT-V

Chromatography – classification- Principles of Column, Paper and Thin Layer chromatography.

**Instruction Hours/week: L: 5 T:0 P:0
Total:100**

Marks: Internal:40 External: 60

Course Objectives

- To learn about the effect of radiation on plants and animals
- To understand about the radiochemical separation
- To learn about the principles of tracer chemistry,
- To Learn about detection of radiation
- To learn about the use of lasers in chemistry.
- To learn about isotopes.

Course Outcomes

1. Know about the effect of radiation on plants and animals
2. Understand about the radiochemical separation
3. Learn about the principles of tracer chemistry,
4. Learnt about detection of radiation
5. To learn about the use of lasers in chemistry
6. Learnt about isotopes.

Methodology:

Black board teaching and Group discussion

UNIT-I

Isotopes

Isotope separation, thermodynamic and kinetic isotope effects, isotope exchange reaction kinetics, determination of exchange rate constant, production of radio isotopes.

Biological effects of Radiation:

Introduction, genetic and somatic effect on human being, effect of radiation on plants and aquatic Environment .

UNIT-II

Radiochemical Separation

The need of radiochemical separation techniques, carrier techniques, isotope and nonisotopic carriers, co precipitation and adsorption, ion exchange, solvent extract, electrolytes behavior of carrier free tracer radionuclide.

UNIT-III

Principle of tracer chemistry

Application of tracers in physiochemical studies, diffusion studies, isotopic and exchange reactions, tracer in the study of the mechanism of the inorganic chemical reaction, atom transfer & electron transfer mechanisms. Heterogeneous catalysis and surface area measurements, radio carbon dating, tracer studies with tritium, application in metallurgy and preservation of food, geochemical application and hot atom chemistry.

UNIT-IV

Radiation detection and measurements

Ionization current measurements, multiplicative ion collector, methods not based on ion collection, auxiliary Instrumentation and health physical instruments and counting statistics.

UNIT-V**Lasers and Lasers in Chemistry**

Introduction, characteristics of laser, uses of lasers in chemical process, laser induced chemical reactions, organic photochemistry, lasers as a photochemical tool, laser induced selective bond chemistry, overview, bond selective chemistry of light atom molecules.

7. Gerald R. Van Hecke & Kerry K. Karukstis, 1998. A Guide To lasers in chemistry, Boston.

Instruction Hours/week:L: 5 T:0 P:0 Marks: Internal:40 External: 60 Total:100

Course Objectives

- To know about colour and chemical constituents.
- To introduce the application of colourants (dyes) on various substrate- fibres, food, plastics, etc.
- To provide students with opportunities to appreciate and know the basic skills in dyeing.
- To learn about different types of dyes like Direct, Acid & basic dyes, Mordant, Azo and Vat Dyes ,
- Disperse dyes and about optical brightening agents.
- Know about mechanism of fading

Course Outcomes

1. Knowledge about colour and chemical constituents.
2. Introduce the application of colourants (dyes) on various substrate- fibres, food, plastics, etc.
3. Students have opportunities to appreciate and know the basic skills in dyeing.
4. Learnt about different types of dyes like Direct, Acid & basic dyes, Mordant, Azo and Vat Dyes ,
5. Disperse dyes and about optical brightening agents.
6. Knowledge about mechanism of fading

Methodology

Black board teaching and Group discussion

UNIT I**Colour and chemical constitution**

Colour and chemical constitution - chromophore, auxochrome and resonance, various theories; History of natural and synthetic dyes; Names of commercial dyes; Study of raw materials and dyestuff intermediates; Unit operations - nitration, sulphonation, halogenation, amination, diazotisation and alkali fusion; Classification of dyes based on chemical constitution.

UNIT II**Direct, Acid and Basic Dyes**

Direct cotton dyes (substantive dyes) – Classification, properties, structure and mechanism of dyeing, post treatment of dyeing.

Acid dyes and Basic dyes – Classification, Characteristics, Mechanism of dyeing, Nature of affinity on cellulose and protein fibres.

UNIT III

Mordant, Azo and Vat Dyes

Mordant dyes – classification, methods of application; Metal complex dyes – types of bond formation between dye and various fibres.

Azo dyes – Azoic coupling components, protective colloids, electrolytes, stabilisation of diazonium salts, principles and application.

Vat dyes and solubilised vat dyes – classification, methods of application, principles and application, Stripping agents and correction of faulty dyeing.

UNIT IV

Disperse dyes

Chemistry involved in the production of Aniline black; Prussian black and phthalocyanines.

Disperse dyes - classification based on chemical structure, properties and principles of application; Solvent soluble dyes - Nigrosines and Indulines; Cyanine dyes.

UNIT V

Colour and Brightening Agents

Fluorescent brightening agents (FBA) - Theory and applications; Identification and estimation of dyes on fibres; The action of light on dyes and dyed fibres; Mechanism of fading.

5. Directory of safe dyes conforming to German Consumer Goods Ordinances, The Dyestuff Manufacturers Association of India, 1996.

Instruction Hours/week:L: 5 T:0 P:0 Marks: Internal:40 External: 60 Total:100

Course Objectives

- To review the chemistry in the context of materials science & engineering.
- To learn the introduction to metals, ceramics, polymers, and electronic materials in the context of a molecular level understanding of bonding.
- To learn about composite and nano material
- To understand the relation between processing, structure, and physical properties.
- To know about High Tc materials
- To know about Thin films and Langmuir- Blodgett Films

Course Outcomes

1. Understand the chemistry in the context of materials science & engineering.
2. Learnt the introduction to metals, ceramics, polymers
3. Knowledge about electronic materials in the context of a molecular level understanding of bonding.
4. Understood the relation between processing, structure, and physical properties.
5. Learn about composite and nano material
6. Knowledge about thin films

Methodology:

Black board teaching and Group discussion

UNIT-I

Glasses and Ceramics

Glassy state, glass formers and glass modifiers, applications, Ceramic structures, mechanical properties, clay products. Reformatories, characterizations, properties and applications.

UNIT – II

Composite and Nanomaterials

Microscopic composites; dispersion - strengthened and particle - reinforced, fibre - reinforced composites, macroscopic composites. Nanocrystline phase, preparation procedures, special properties, and applications.

UNIT-III

High Tc Materials

Defect perovskites, high T_c superconductivity in cuprates, anisotropy; temperature dependence of electrical resistance; optical phonon modes, superconducting state; heat capacity; coherence length, elastic constants, position lifetimes, microwave absorption - pairing and multigap structure in high T_c materials, applications of high T_c materials.

UNIT- IV

Polymeric Materials

Molecular shape, structure and configuration, crystallinity, stress-strain behavior, thermal behavior, polymer types and their applications, conducting and ferro-electric polymers.

UNIT- V

Thin films and Langmuir- Blodgett Films

Preparation techniques; evaporation / sputtering, chemical processes, MOCVD, sol-gel etc. Langmuir-Blodgett (LB) film, growth techniques, photolithography, properties and application of thin and LB films.

Materials of Solid Devices: Rectifiers, transistors, capacitors IV-V compounds, low dimensional quantum structure; optical properties.

TEXT BOOKS:

1. N. W. Ashcroft and N. D. Mermin, 1976. Solid State Physics, Saunders College Publishing, USA.
2. W. D. Callister, 2007. Material Science and Engineering: An introduction, John Wiley & Sons, New York.

REFERENCES:

1. H. V. Keer, 1993. Principles of Solid State, Willey Easton Ltd., New Delhi.
2. G. W. Gray, 1987. Thermotropic Liquid Crystals, John Willey, New York.
3. Kelkar and Halz, Text book of liquid crystals, Chemie Verlag.

Course Objectives

- To provide the skill of the Physical chemistry experiments.
- To provide students with basic laboratory skills and techniques including partition, Rast method and Eutectic system and some basic instrumental methods.
- To develop skills in determining the rate constant of a reaction
- Determination of critical solution temperature of Phenol-water system
- Determination of effect of added electrolyte on critical solution temperature of Phenol-water system.
- Phase Diagram- Simple Eutectic system.

Course Outcomes

1. Students have the skill of the Physical chemistry experiments.
2. Students with basic laboratory skills and techniques including partition, Rast method and Eutectic system and some basic instrumental methods.
3. They have a Skills in determining the rate constant of a reaction
4. Determination of critical solution temperature of Phenol-water system
5. Determination of effect of added electrolyte on critical solution temperature of Phenol-water system.
6. Phase Diagram- Simple Eutectic system.

Methodology

Black board teaching and demonstration.

Content

- 1.Determination of partition coefficient of iodine between Carbontetrachloride and water.
- 2.Determination of partition coefficient of iodine between Benzene and Water.
- 3.Determination of equilibrium constant for the reaction between Potassium iodide and iodine.
- 4.Determination of rate constant of acid- catalyzed hydrolysis of an ester Methyl acetate or Ethyl acetate
- 5.Determination of K_f molecular weight by Rast method –Naphthalene, Diphenyl and m-dinitrobenzene as solvents.
- 6.Determination of critical solution temperature of Phenol-water system.
- 7.Determination of effect of added electrolyte on critical solution temperature of Phenol-water system.
- 8.Determination of concentration of an electrolyte NaCl/KCl/Succinic acid.

9. Determination of transition temperature of sodium acetate, sodium thiosulphate and $\text{SrCl}_2 \cdot 6\text{H}_2\text{O}$
10. Phase Diagram- Simple Eutectic system.

TEXT BOOK:

1. Pandey, O.P, D.N.Bajpai and S.Giri, 2001. Practical Chemistry, 8th Edition, S.Chand Publications, New Delhi

REFERENCES:

2. Santi Rajan palit and Sadhan Kumar, 1971. Practical Physical Chemistry, Ist Edition, Joy Publishers, Calcutta
3. Siddhiqui, Zeba N, 2002. Practical industrial Chemistry, 1st Edition, Anmol Publications Pvt. Ltd., New Delhi

Course Objectives

- Through this course the student gains knowledge on the technology involved in processing of leathers.
- To learn about principles involved in different process of leather manufacturing
- To understand the tanning of leather and dyeing
- To learn the pollution problems accompanied with the leather manufacturing.
- To understand about animal by products.
- To know about Tannery effluents and treatment

Course Outcomes

1. Through this course the student gained knowledge on the technology involved in processing of leathers.
2. Learnt about principles involved in different process of leather manufacturing
3. Understand the tanning of leather and dyeing
4. Learnt the pollution problems accompanied with the leather manufacturing.
5. Understand about animal by products.
6. Knowledge about Tannery effluents and treatment

Methodology

Self Study

UNIT I

Hides, Skins, Leather-An elementary knowledge of the structure and composition of hides and skins. proteins and their characteristics, Anatomy and histology of protein constituents of leather (an elementary concept).

Basic principle involved in pre-tanning such as soaking, liming, deliming, bating, pickling involved in pre-tanning such as soaking, liming, deliming, bating, pickling and depickling.

UNIT II

Types of tanning-vegetable and mineral tanning, Different types of vegetable tanning materials classification and chemistry of vegetable tanning. Factors and Physio-chemical principle involved in vegetable tanning, Fixation of vegetable tanning. Synthetic tannings-their classifications, general methods of manufacture and use.

UNIT III

The preparation and chemistry of chrome tanning liquids, Olation, Oxolation and hydrolysis of chrome liquids. Effect of adding tanning agents-Role of pH in the reaction of chromium complexes with hide proteins. Factors governing chrome tanning-chemistry of neutralization process.

A brief survey of chemistry of other tanning like Al, Zr and Te salts and their relative merit in contrast with chrome tanning.

Chemistry of combination of tannages involving vegetable tanning aldehydes, chrome and other mineral tanning agents.

UNIT IV

Chemical methods of curing and preservation of hides and skins in acid and alkaline solution.

Principles of analytical methods employed in curing, liming, deliming, bating, pickling. Analysis of vegetable tanning materials and extract.

Process of dyeing leather-Use of mordants, dyeing auxiliaries such as leveling, wetting and dispersing agents-Dye fixations.

UNIT V

Animal by-products-their collection, handling and preservation methods (such as hair, blood, bones, glands, Keratinous materials and their utilization).

Tannery effluents and treatment: Types of water pollution-physical, chemical, physiological and biological. Different types of tannery effluents and wastes-beamhouse waste-liquors-tanning and finishing yard waste liquors, solid waste-origin and disposal.

REFERENCES:

1. Chemical technology of Leather (ISI).
2. Fundamentals of Leather Science-Woodroffe.
3. Tanning processes-Crthmann.
4. Chemistry of Leather manufacture-Mchangelils.
5. Vegetable tanning materials-Howes.

15CHU604	Self study course FORENSIC CHEMISTRY	Semester -VI 4C
Instruction Hours/week:L: 0 T:0 P:0		Marks: External: 100

Course Objectives

- To give the students the importance of forensic chemistry and an exposure to find,
- analyse and find a suitable method to detect the crime .
- To know about food adulteration
- To gain knowledge about transportation
- To gain knowledge about crime detection
- To know about Forgery and counterfeiting
- To learn about Medical aspects

Course Outcomes

1. Students know the importance of forensic chemistry and an exposure to find,analyse and find a suitable method to detect the crime .
2. Knowledge about food adulteration
3. Gained knowledge about transportation
4. Gained knowledge about crime detection
5. Knowledge about Forgery and counterfeiting
6. Learnt about Medical aspects

Methodology

Self study

UNIT I

Food adulteration

Contamination of wheat, rice, dhal, milk, butter, etc. With clay, sand, stone, water and toxic chemicals (e.g. Kasseridhal with mentanil yellow).

Food poisons: natural poisons (alkaloids, nephrotoxins), pesticides (DDT, BHC, Follidol), Chemical poisons (KCN). First aid and Antidotes for poisoned persons.

Heavy metal (Hg, Pb, Cd) Contamination of Sea food. Use of neutron activation analysis in detecting poisoning (e.g., As in human hair)

UNIT II

Transportation

Drunken driving: breath analyzer for ethanol. Incendiary and timed bombs in road and railway tracks. Defusing live bombs.

Hit -and-go traffic accidents : paint analysis by AAS. Soils of toxic and corrosive chemicals (e.g., conc.acids) from tankers.

UNIT III

Crime detection

Accidental explosions during manufacture of matches and fire-works (as in Sivakasi). Human bombs, possible explosives (gelatin sticks,RDX). Metal detector devices and other security measures for VVIP. Composition of bullets and detection of powder burns. Scene of crime: finger prints and their matching using computer records. Smell tracks and police dogs. Analysis of blood and other body fluids in rape cases. Typing of blood. DNA finger printing for tissue identification in dismembered bodies. Blood stains on clothing. Cranial analysis (head and teeth).

UNIT IV

Forgery and counterfeiting

Detecting forgery in bank cheques / drafts and educational records (mark lists, certificates), using UV-light. Alloy analysis using AAS to detect counterfeit coins. Checking silverline water mark in currency notes.

Jewellery : detection of gold purity in 22 carat ornaments, detecting gold plated jewels, authenticity of diamonds (natural, synthetic and glassy).

UNIT V

Medical aspects

AIDS : Cause and prevention . Misuse of scheduled drugs. Burns and their treatment by plastic surgery. Metabolite analysis, using mass spectrum - gas chromatography. Detecting steroid consumption among athletes and race horses.

TEXT BOOKS:

1. B.R. Sharma, Forensic Science in Criminal Investigation and Trial, 4th edn. Universal Law Publishing Company. New Delhi., 2011.

REFERENCES:

1. Stuart H. James, Forensic Science: An Introduction to Scientific and Investigative Techniques 3rd ed. 2013
2. Richard Saferstein, Criminalistics: An Introduction to Forensic Science, 9th edn., 2014.
3. R.K. Tiwari, Computer Crime and Computer Forensic., 2002.
4. Brent E. Turvey, Criminal Profiling: An Introduction to a Behavioral Evidence Analysis, 3rd edn. 2011.

Course Objectives

This course enables the students to

- Discuss the principle and the theory behind the UV spectroscopy.
- Discuss the principle and the theory behind the IR spectroscopy.
- Explain the principle and the theory behind the NMR spectroscopy.
- Explain the principle and the theory behind the mass spectroscopy.
- Explain the principle and the theory behind the ESR spectroscopy.
- Identify the free radicals using ESR

Course Outcome

The Student have gained knowledge about

1. The principle and the theory behind the UV spectroscopy.
2. The principle and the theory behind the IR spectroscopy.
3. The principle and the theory behind the NMR spectroscopy.
4. The principle and the theory behind the Mass spectroscopy
5. The principle and the theory behind the ESR spectroscopy
6. Identification of the free radicals using ESR

Methodology

Self study

UNIT – I

Ultraviolet and Visible Spectroscopy: Electronic spectra of diatomic molecules - laws of photochemistry - electronic absorption transitions-correlation of electronic structure with molecular structure - Simple chromophoric groups - effects of conjugation - Instrumentation.

UNIT – II

Infrared Spectroscopy: The vibrating diatomic molecules-the simple harmonic oscillator, identification of fundamental groups. Finger print region-application to organic and inorganic compounds-Instrumentation.

UNIT – III

NMR Spectroscopy: Principle of NMR spectroscopy – description of the PMR instrument, factors affecting chemical shifts-chemical shift equivalence and magnetic equivalence - spin-spin coupling -double resonance-shift reagents-applications to organic and inorganic compounds - problems. FT NMR

UNIT – IV

Mass Spectroscopy: Principles of mass spectrometry – resolution - description of single focusing and double focusing electron impact mass spectrometers - presentation and analysis of spectra - determination of molecular formulae - nitrogen rule- stevenson's rule - isotope abundance analysis - meta stable ions and peaks the molecular ion peak - fragmentation processes .

UNIT - V

ESR spectroscopy - theory - derivative curves - g shift - hyperfine splitting-isotropic and anisotropic systems-zero field splitting and Kramer's degeneracy. Identification of free radicals – applications to copper complexes.

TEXT BOOKS:

1. Jag Mohan, 2001. Organic Spectroscopy Principles and Applications. Narose Publishing House, New Delhi.
2. Kemp W., 2004. Organic Spectroscopy. III Edition, Pal Grave, New York.

REFERENCES

1. Russell S. Drago, 1965. Physical Methods in Inorganic Chemistry. Reinhold Publishing Corporation, New York.

Course Objectives

- To give the students the importance of Greener reagents and chemicals and an exposure to knowledge about the clinical training and synthesis of drugs.
- Summarize the twelve principles of green chemistry
- To know the special emphasis of an atom economy.
- Explain the catalysis and alternate sources of energy.
- Explain the basics of medicinal chemistry
- Pharmacokinetics and clinical trial

Course Outcomes

1. The students know the importance of Greener reagents and chemicals and an exposure to knowledge about the clinical training and synthesis of drugs.
2. Summarize the twelve principles of green chemistry
3. Knowledge about the special emphasis of an atom economy.
4. the catalysis and alternate sources of energy.
5. the basics of medicinal chemistry
6. Pharmacokinetics and clinical trial

Methodology

Self study

UNIT – I

Introduction to green chemical principles: Definition, tools and twelve principles of green chemistry, solvent less reactions and reactions in water, microwaves and fluorosolvents, green resolution of racemic mixtures, atom efficient processes,

UNIT – II

Greener reagents and Products: Greener reagents and products, minimizing bioavailability and use of auxiliary materials, examples of greener reagents including replacement of phosgene, solid state polymerizations, alternative nitrile synthesis.

UNIT - III

Basics of Medicinal chemistry: Brief history of medicinal chemistry, classification of drugs- brief description of biological, design of pro drugs system- multiple pro drug formation – soft drug principle and application

UNIT - IV**Pharmacokinetics and drug metabolism and development of new drugs**

Natural resources of lead compounds – absorption, distribution, metabolism, elimination – oxidation and hydrolysis - Five classic steps in the design of a new drug – procedures in drug design isolation of bio active compounds - accidental discovery

UNIT – V

Clinical training and synthesis of drugs

Various phases in pre-clinical testing– designing organic synthesis – convergent synthesis – patenting and manufacture – complexes and chelating agents – metal clusters – detoxification – drug action and metal chelation.

M.Sc. CHEMISTRY

CHOICE BASED CREDIT SYSTEM (CBCS)

Curriculum and Syllabus

Regular (2015 – 2016)

DEPARTMENT OF CHEMISTRY
FACULTY OF ARTS, SCIENCE AND HUMANITIES

KARPAGAM ACADEMY OF HIGHER EDUCATION

(Deemed to be University)
(Established Under Section 3 of UGC Act, 1956)
Pollachi Main Road, Eachanari (Post), Coimbatore – 641 021,
Tamil Nadu, India

Phone: 0422- 2980011 – 15 Fax No: 0422- 2980022-23
Email: info@karpagam.com web: www.kahedu.edu.in

Programme Learning Outcomes (PLO)

- a. Students will have a firm foundation in the fundamentals and application of current chemical and scientific theories including those in Analytical, Inorganic, Organic and Physical Chemistries.
- b. Students will be able to design and carry out scientific experiments as well as accurately record and analyze the results of such experiments.
- c. Students will be skilled in problem solving, critical thinking and analytical reasoning as applied to scientific problems.
- d. Students will be able to clearly communicate the results of scientific work in oral, written and electronic formats to both scientists and the public at large.
- e. Students will be able to explore new areas of research in both chemistry and allied fields of science and technology.
- f. Students will appreciate the central role of chemistry in our society and use this as a basis for ethical behavior in issues facing chemists including an understanding of safe handling of chemicals, environmental issues and key issues facing our society in energy, health and medicine.
- g. Students will be able to function as a member of an interdisciplinary problem solving team.
- h. The graduate has specific skills in planning and conducting advanced chemical experiments and applying structural-chemical characterisation techniques.
- i. Are able to use modern instrumentation and classical techniques, to design experiments, and to properly record the results of their experiment.
- j. Are able to use modern library searching and retrieval methods to obtain information about a topic, chemical, chemical technique, or an issue relating to chemistry.

Programme Specific outcome (PSO)

- k. A graduate with a Master's degree in Chemistry has in-depth and detailed functional knowledge of the fundamental theoretical concepts and experimental methods of chemistry.
- l. Students should have an advanced level understanding of the following areas of chemistry - Analytical, Inorganic, Organic, and Physical Chemistry. They should master graduate level understanding of their major area(s) of research.
- m. Students should be able to communicate scientific results in writing and in oral presentation.
- n. Students should become proficient in their specialized area of chemistry and acquire the basic tools needed to carry out independent chemical research

Programme Educational Objectives

PEO-1

The Masters in Chemistry will extend your depth and breadth of knowledge in all branches of chemistry, suitable for a professional chemist capable of conducting research.

PEO-2

To carryout research in the trust areas of chemistry. Will be able to communicate effectively the scientific information and research results in written and oral formats, to both professional scientists and to the public.

PEO-3

To motivate critical thinking and analytical skills to solve complex chemical problems and the Ability to handle problems of practical relevance to society while complying with economical, environmental, ethical, and safety factors.

PEO-4

To practice chemistry by performance of experiments in the laboratory classes. To perform accurate quantitative measurements with an understanding of the theory and use of contemporary chemical instrumentation, interpret experimental results, perform calculations on these results and draw reasonable, accurate conclusions

Course Objectives

- To understand aromaticity.
- To provide a versatile knowledge of different name reactions and their application in synthesis.
- To learn about familiar addition and elimination reactions.
- To gain knowledge about reaction intermediates.
- To understand the principles and reaction mechanisms involving various electrophilic and nucleophilic, addition and elimination reactions.
- To relate the different organic reaction mechanisms.

Course outcomes (CO's)

1. Learned the concept aromaticity and various types of aromaticity
2. Familiarized the various types of electrophilic and nucleophilic substitution reactions and their Mechanism
3. Learned the familiar addition and elimination reactions
4. Learned the concept of reaction intermediates.
5. Understood about the synthesis aromatic compounds using electrophilic and nucleophilic substitution, addition and elimination reactions.
6. Described the various organic reaction mechanisms.

Methodology

Blackboard teaching, Powerpoint presentation and group discussion.

UNIT – I

Aromaticity and chemical methods in mechanisms: Aromaticity - introduction - aromaticity of benzenoid and heterocyclic compounds. Non-benzenoid aromatics – annulenes, azulenes, ferrocenes and fulvenes.

Kinetic and non-kinetic methods of study of reaction mechanisms - kinetic methods-Primary and secondary kinetic isotopic effects. Non-kinetic methods - study of intermediates, isotopic labeling, stereochemical studies, energy profile diagrams and cross over experiments. Hammond's postulate. Kinetic and thermodynamic control.

Linear free energy relationship - Hammett equation and Taft equation.

UNIT – II

Addition reactions: Electrophilic, nucleophilic and free radical addition to double and triple bonds - hydration, hydroxylation, Michael addition, hydroboration and epoxidation. Addition reactions to carbonyl compounds – Mannich reaction, Meerwein Ponderoff-Verley reduction, Grignard, Claisen, Dieckmann, Stobbe, Knoevenagel, Darzen, Wittig, Thorpe and Benzoin reactions.

UNIT – III

Electrophilic substitution reactions: Aromatic electrophilic substitution reactions-formylations–Gattermann, Gattermann Koch and Riemer Tiemann reactions. Kolbes, Bischler-Napieralski and Hofmann-Martius reactions. Friedel crafts alkylation and acylations.

Aliphatic electrophilic substitution reactions - mechanisms- SE1, SE2 and SEi - structure reactivity relationship, typical electrophilic substitution reactions - Friedel crafts acylation at olefinic carbon, Stork enamine reaction and decarboxylation of aliphatic acids.

UNIT – IV

Nucleophilic substitution reactions: Aliphatic nucleophilic substitution reactions-mechanisms - SN1, SN2, ion pair and SNi- substitution at vinyl carbon. Stereochemistry of nucleophilic substitution reaction - effect of substrate structure - solvent effects - leaving group effect – nucleophilicity, ambident nucleophiles and ambident substrates-neighbouring group participation.

Aromatic nucleophilic substitution reactions - benzyne mechanism, intermediate complex mechanism and SN1 mechanism, structure reactivity relationship.

Ziegler alkylation and Chichibabin reaction.

UNIT – V

Elimination reactions: Mechanisms - E1, E2, Ei and E1cB mechanisms- stereochemistry of eliminations. Hofmann rule-Saytzeff rule-Bredts rule – Substitution versus Elimination. Typical elimination reaction - Chugaev reaction, Hofmann degradation and Cope elimination.

Carbenes and nitrenes - structure, generation and reactions.

3. Agarwal, O.P., 2004. Natural Product Chemistry. Vol. II, Goel Publishing House, Meerut.
4. Gurdeep R. Chatwal, 2001. Organic Chemistry of Natural Products. Vol. I, Himalaya Publishing House, New Delhi.

Course Objectives

- To learn the nuclear structure, stable and unstable atomic nuclei, nuclear reactions and different modes of radioactive decay and also methods for measurements of radioactivity.
- To analyses the various defects and its application on inorganic crystals.
- To understand the detection of radioactive rays and to measure the radiation.
- To learn about the fundamentals of metallic clusters.
- To understand the chemistry of boranes and related compounds.
- To apply the knowledge to know about the various forms of inorganic compounds

Course outcomes

1. Described the basic concepts of nuclear chemistry and types of nuclear reactions.
2. Discriminate the various defects and also known about its application on inorganic crystals
3. Understood the Basics of metallic clusters, preparation, properties and applications of metallic clusters
4. Learned the structure and bonding in molecules / ions and predict the structure of molecules / ions.
5. Described the type of defects in metals and about semi conductors
6. Understood the inorganic and organometallic chemistry, catalysis in the molecular level

Methodology

Blackboard teaching, Powerpoint presentation and group discussion.

UNIT – I

Inorganic chains – rings - cages and clusters (definition and structure) - metal clusters - dinuclear clusters - trinuclear clusters - tetranuclear clusters - hexanuclear clusters – organometallic clusters.

Boranes, boron hydrides (structure and properties) – carboranes - metallocarboranes - Wade's theory -closo-nido and arachno structures - borazines, phosphazenes – Sulphur-Nitrogen ring compounds. Isopoly and heteropoly acids of V, Cr, Mo and W.

UNIT – II

Metallic state-free electron, band and zone theories - non stoichiometry - point defects in solids - Schottky and Frenkel defects - linear effects - dislocation - effects due to dislocation - electrical properties of solids - insulators-intrinsic semiconductors - n and p type and super conductors - ceramics elementary treatment.

Organometallic compounds in homogeneous catalytic reactions-coordinative unsaturation – acid-base behavior reaction – migration of atoms or groups from metal to ligand – insertion reaction – reactions of coordinated ligands – catalytic reactions of alkenes – isomerisation of alkenes – hydrogenation – hydroformylation and hydrosilation of alkenes – alkene polymerization and oligomerisation – fluxional molecules.

UNIT – III

Nuclear Chemistry - the nucleus - subatomic particles and their properties, binding energy. N/P ratios in stable and meta stable nuclei - different type of nuclear forces - liquid model- shell model. Modes of radioactive decay - α , β and γ decay radiation, electron capture, nuclear isomerism, internal conversion.

UNIT – IV

Experimental methods - Cloud chamber, nuclear emulsion, bubble chamber, proportional counters-G.M counter, scintillation counters, semi conductor detector.

Particle accelerators - Cyclotron, synchrotron, betatron and bevatron.

UNIT – V

Nuclear reactions - Bethes's notation, Q-value, columbic barrier, cross section, different types of nuclear reactions - projectiles capture - particle emission, spallation, fission, fusion, theories of fission, use of fission products, nuclear reactors - fissile and fertile isotopes- U^{233} , U^{235} , Pu^{239} , Th^{232} , -atomic power projects in India, stellar energy, synthetic elements - application of radio isotopes - Hot atom chemistry.

7. Wahid Malik, R. D.Madan and G. D. Tuli, 2004. Selected topics in Inorgani Chemistry. S. Chand & Co., New Delhi.

Course Objectives

- To study the fundamentals and applications of classical mechanics and quantum chemistry
- To understand the structure of an atom and different approximation methods
- To learn the concept of Group theory and their applications.
- To discuss the molecular phenomena and its model problems
- To explain the probabilities, amplitudes, averages, expectation values and observables.
- To analyses the concept of group theory to predict the spectroscopic properties of a molecules

Course Outcomes (CO's)

Students have learned and understood

1. The differences between classical and quantum mechanics. The limitations of classical mechanics.
2. the connection of quantum mechanical operators to observables
3. probabilities, amplitudes, averages, expectation values, and observables
4. how molecular phenomena can be related to model problems
5. the fundamentals of group theory
6. the connection between common approximation methods and standard chemical frameworks (Born-Oppenheimer approximation, molecular orbitals, for example)
7. Identified the point groups of molecules and apply the concept of group theory to predict the spectroscopic properties.

Methodology

Blackboard teaching, Powerpoint presentation and group discussion.

UNIT – I

Failure of classical mechanics and the success of quantum theory in explaining black body radiation and photoelectric effect.

The time dependent and time independent Schrodinger equations - Born's interpretation of the wave function. Requirements of the acceptable wave function.

Algebra of operators. Sums and products of operators - commutator - linear operators-eigen functions and eigen values - correspondence between physical quantities in classical mechanics and operators in quantum mechanics - Hamiltonian operator - angular momentum operator. Quantization of angular momentum and its spatial orientation - average values - postulates of quantum mechanics.

UNIT – II

Particle in a one-dimensional box - quantization of energy - normalization of wave function - orthogonality of the particle in a one-dimensional box wave functions. Illustration of the uncertainty principle and correspondence principle with reference to the particle in a one-dimensional box - particle in a three dimensional box - separation of variables.

Solving of Schrodinger equation for one-dimensional harmonic oscillator. Harmonic oscillator model of a diatomic molecule. Illustration of the uncertainty principle and correspondence principle with reference to harmonic oscillator.

Solving of Schrodinger equation for a rigid rotor. Rigid rotor model of a diatomic molecule.

UNIT – III

Schrodinger equation for the H-atom (or H-like species)- separation of variables - energy levels. Radial distribution functions - orbitals and orbital shapes. Probability density and radial distribution functions.

Need for approximation methods. The perturbation theory- application of perturbation method to systems such as anharmonic oscillator and He-atom.

The variation method - application of variation method to systems such as anharmonic oscillator and He-atom.

UNIT – IV

Symmetry elements and symmetry operations - definition of identical and equivalent elements configurations - effect of performing successive operations commutative and non-commutative - inverse operations.

Groups and their basic properties - definition of a group - basic properties of a group- definition of abelian - cyclic- isomorphic, finite, infinite groups and subgroup. Symmetry classification of molecules into point groups-Schoenflies symbol (only-difference between point group and space group).

Matrices- Definition of matrix, square matrix, diagonal matrix, null matrix, unit matrix, row matrix, column matrix, symmetric matrix, skew symmetric matrix and conjugate matrix. Multiplication, commutative and non commutative-determination of inverse of a matrix, block multiplication of matrices-addition and subtraction of matrices.

Matrix notations for symmetry operations of C_{2v} and C_{3v} groups-construction of character tables for C_{2v} and C_{3v} point groups.

UNIT – V

Definition of reducible and irreducible representations - irreducible representations as orthogonal vectors - direct product rule, the great orthogonality theorem and its

consequences - determinations of the characters for irreducible representation of C_{2v} and C_{3v} point groups using the orthogonality theorem.

Group theory and Vibrational spectroscopy - vibrational modes as basis for group representation - symmetry selection rules for IR and Raman spectra, Mutual exclusion principle - classification of vibrational modes.

Group theory and dipole moment.

15CHP104 ORGANIC AND INORGANIC SPECTROSCOPY 4H 4C
Instruction Hours/week:L: 4 T:0 P:0 Marks: Internal: 40 External: 60 Total:100

Course Objective

- To learn about Electronic spectroscopy.
- To understand about IR spectroscopy.
- To understand the basic concept of NMR spectroscopy
- To apply the different aspects of NMR spectroscopy to predict the structure of compounds.
- To learn about the mass spectroscopy and Mossbauer spectroscopy.
- To learn about the invaluable tools in synthetic chemistry for the confirmation of known molecules and elucidation of shape and structures of unknown compounds of high complexity with a high degree of certainty.

Course outcomes

1. Understood the basic concepts of Electronic and IR spectroscopy.
2. Understood the valuable concepts in NMR spectroscopy.
3. Learned the basic knowledge about Mass spectroscopy.
4. Applied the different aspects of NMR spectroscopy to predict the structure of compounds.
5. Analyzed and identified simple organic molecules by using UV, IR, ^1H -NMR and ^{13}C -NMR and Mass spectral data.
6. The students learned how to interpret the spectral data and to identify the structure of the molecules

Methodology

Blackboard teaching, Powerpoint presentation and group discussion.

UNIT- I

Ultraviolet and Visible Spectroscopy: Electronic spectra of diatomic molecules - laws of photochemistry - electronic absorption transitions-correlation of electronic structure with molecular structure - Simple chromophoric groups - effects of conjugation - Woodward -Fisher rules for α,β unsaturated carbonyl compounds & dienes - Aromatic systems with extended conjugation - applications to Organic and Inorganic compounds - Instrumentation.

UNIT-II

Infrared Spectroscopy: The vibrating diatomic molecules-the simple harmonic oscillator and unharmonic oscillator - the diatomic rotor - factors influencing vibrational frequencies - identification of fundamental groups. Fingerprint region-application to organic and inorganic compounds-Instrumentation.

UNIT-III

NMR Spectroscopy: Principle of NMR spectroscopy – description of the PMR instrument, factors affecting chemical shifts-chemical shift equivalence and magnetic equivalence - spin-spin coupling - first order and non first order spectra - Hetero nuclear coupling in ^1H NMR - deuterium exchange - high field spectra - double resonance-shift reagents-applications to organic and inorganic compounds. FT NMR.

^{13}C NMR spectroscopy- factors affecting the chemical shifts - broad band and off-resonance decoupling - applications in organic chemistry.

UNIT – IV

Mass Spectroscopy: Principles of mass spectrometry – resolution - description of single focusing and double focusing electron impact mass spectrometers - presentation and analysis of spectra - determination of molecular formulae - Nitrogen rule- Stevenson's rule - isotope abundance analysis - meta stable ions and peaks the molecular ion peak - fragmentation processes - Retro Diels - Alder rearrangement - McLafferty rearrangement - Ortho Effect - fragmentation associated with functional groups - aldehydes, ketones, carboxylic acids, esters, amides, alcohols, thiols, amine, ethers, sulphides and halides..

UNIT – V

Mossbauer and Problems: Mossbauer spectroscopy – Principles - Spectrometer - Isomer shift - Quadrapole interaction - Nuclear Zeeman Splitting – Applications.

Problems involving UV, IR, NMR, Mass spectral data (for compounds not more than 10 carbon atoms).

TEXT BOOKS:

1. Jag Mohan, 2001. Organic Spectroscopy Principles and Applications. Narose Publishing House, New Delhi.
2. Kemp W., 2004. Organic Spectroscopy. III Edition, Pal Grave, New York.
3. Sharma Y.R., 2005. Elementary Organic Spectroscopy: Principles and Chemical Applications. S. Chand Limited, New Delhi.
4. Silverstein, R. M., F. X. Webster and D. Kiemle, 1998. Spectroscopy of Organic Compounds. VI Edition, John Wiley & Sons, New York.

REFERENCES:

2. Prasad R.K., 2002. Quantum Chemistry. II New Age International Pvt. Ltd., New Delhi.
3. Russell S. Drago., 1965. Physical Methods in Inorganic Chemistry. Reinhold Publishing Corporation, New York.

Course Objectives

- To introduce the concept of Green chemistry.
- To understand the basics of Medicinal chemistry.
- To introduce the 12 principles of Green chemistry as well as the tools of Green chemistry.
- To demonstrate how to evaluate a reaction or process and determine “Greener” alternatives.
- To focus on the application of greener routes to improve industrial processes and to produce important products.
- To understand the drug targets, drug metabolism and about clinical training.

Course outcomes

The student understood the following

1. Designed of chemical products and processes that reduce or eliminate the use and generation of hazardous substances.
2. Created awareness for reducing waste, minimizing energy consumption in organic synthesis.
3. Implemented techniques of green synthesis in organic reactions
4. Used the various alternative resources for green technology in organic synthesis.
5. Understood the drug targets, metabolism and about clinical training.
6. Applied the concept of microwaves and ionic liquids in various chemical reactions.

Methodology

Blackboard teaching, Powerpoint presentation and group discussion.

UNIT-I

Introduction to green chemical principles: Definition, twelve principles of green chemistry, solventless reactions - reactions in water, microwaves and fluorous solvents - Atom efficient processes: evaluating chemical reactions according to their yield and atom efficiency - examples of enzymatic reactions and catalytic processes- Planning of green synthesis in a chemical lab.

UNIT – II

Greener reagents and reactions: Methods of designing safer chemicals. Examples of greener reagents including replacement of phosgene and solid state polymerizations.

Green reactions: Acyloin condensation, Aldol condensation, Arndt Eistert synthesis, Baker Venkatraman synthesis, Beckmann rearrangement, Clemmenson reduction and Baeyer Villiger oxidation.

UNIT - III

Basics of Medicinal chemistry: Classification of drugs- basics of molecular modeling and docking - prodrugs and soft drugs- types of pro drugs system.

Drug targets and drug solubility: Enzymes and enzyme inhibitor – competitive and non-competitive inhibitors – reversible and irreversible inhibitors – ligand receptor theories:- Clarke's theory and Paton's rate theory – effect of pH, pKa and polarity on drug solubility

UNIT – IV

Pharmacokinetics and drug metabolism and development of new drugs: Absorption, distribution, metabolism, elimination – oxidation and hydrolysis of a drug- Design of a new drug – procedures in drug design - accidental discovery - molecular modification of lead compounds.

UNIT – V

Clinical training and synthesis of drugs: Various phases in pre-clinical testing and clinical testing – designing organic synthesis – different types of synthesis –complexes and chelating agents – natural resources of lead compounds – extraction and isolation of bio active compounds.

TEXT BOOKS:

1. Ahluwalia V.K., 2012. Green Chemistry-Environmentally Benign Reactions. Ane Books Pvt Ltd, New Delhi.
2. Ghose J., 2005. A Text book of Pharmaceutical Chemistry, S. Chand Pub Ltd., Delhi.
3. Ilango K & P. Valentina, 2007. Text Book of Medicinal Chemistry. Vol I, Keerthi Publishers, Chennai.

REFERENCES:

1. Ashutosh Kar, 2005. Medicinal Chemistry. III Edition, New Age International Publishers, New Delhi.
2. Stanley E. Manahan, 2006. Green Chemistry and the Ten Commandments of Sustainability. II Edition, ChemChar Research, Inc Publishers Columbia, Missouri U.S.A.
3. Chatterjea, M. N and R. Shinde, 2012. Textbook of Medicinal Biochemistry. Jaypee Brothers, Medical Publishers (P) Ltd, New Delhi.

Course Objectives

- To provide the knowledge about the qualitative analysis by separation techniques of a two component mixture.
- To develop skills for the preparation of organic compounds by name reactions.
- To familiarizes the test involving identification special elements.
- To learn confirmation test of various functional groups.
- To learn systematic procedure for bimixture organic substance analysis
- To understand the solubility nature of different types of organic substances.
- To calculate the limiting reagent, yield and purity of the compounds.
- To list the various techniques of preparation and analysis of organic substances.

Course outcomes

1. Familiarized the solubility nature of organic substances of different functional group.
2. Learned the pilot separation of bimixtures and familiarize the systematic procedure of organic substances analysis
3. Learned two stage preparations involving molecular rearrangement and well known organic reactions.
4. Familiarized the test involving identification of special elements
5. Learned the confirmatory test for various functional groups.
6. Understand the techniques involving drying and recrystalliation by various method
7. Expertise the various techniques of preparation and analysis of organic substances.
8. Calculated a limiting reagent, yield and purity

Evaluated collected data to determine the identity, purity, and yield of products

Methodology

Blackboard teaching and Demonstration.

Contents

Analysis of two – component mixtures: Separation and characterization of compounds.

Note: Each student should analyze a minimum of six organic mixtures.

Preparations involving one stage comprising of the following process: Nitration, acylation, halogenation, diazotisation, rearrangement, hydrolysis, reduction, alkylation and oxidation and one preparation illustrating the following: Benzoin condensation, Canizzaro reaction, Perkin reaction, Reimer-Tiemann reaction, Sandmayer reaction, Fries rearrangement, Skraup synthesis- single stage.

Note: Each student should do a minimum of six preparations involving single stage.

6. Mendham, J., R. C. Denney, J. D. Barnes and M. Thomas, 2002. Vogel's textbook of quantitative Chemical Analysis. VI Edition, Pearson Education Ltd., Singapore.

Objectives

On successful completion of the course the students should have

- To learn about the basic concept of quantitative analyses of organic compounds.
- to measure the Iodine value on oil
- To analyses the amount of glucose, phenol, ethyl methyl ketone, ascorbic acid and aniline in the given solutions.
- To learn the two stage preparation of organic compounds by important name reactions.
- To calculate the saponification and Iodine number of various oils for identifies its purity
- To understand preparation of various organic compounds in single step or in double step.

Course Outcomes

1. The students have learned about basic concept in quantitative analyses
2. Learned how to estimate the Glucose, Phenol, ethyl methyl ketone, Ascorbic acid and aniline.
3. Measured the Iodine number of oil
4. Understood the two stage preparation of organic compounds by important name reactions.
5. Measured the saponification and Iodine number of value to justify their purity.
6. Learned to prepare para-Nitro Benzamide for para-Nitro toluene and also know about double stage preparations like Anthranilic acid and pthalimides preparations

Methodology

Blackboard teaching and Demonstration.

Contents

Estimation of phenol, Ethyl methyl ketone, glucose, nitro, amino and methoxy groups, unsaturation in an organic compound.

Analysis of oils Reichert- Meissl value, Iodine value, saponification value and acetyl value.

Double stage preparations- Anthranilic acid and pthalimides.

Extraction and estimation of active constituents

Only for learning purpose and demo (Not for exam)

- a. Lactose from milk.
- b. Caffeine from tea.
- c. Nicotine from tobacco extract.
- d. Citric acid or ascorbic acid from a tablet or from a natural source.

- e. Curcumin from turmeric.
- f. Lycopene from tomato.

(REARRANGEMENTS, REACTIONS, PHOTOCHEMISTRY AND PERICYCLIC REACTIONS)

Instruction Hours/week:L: 4 T:1 P:0 Marks: Internal: 40 External: 60 Total:100

Course Objectives

On successful completion of the course the students should have

- To know about versatile knowledge of rearrangements
- To understand the different organic (radical and concerted) reactions and their applications in synthesis.
- To learn the principles of conformational analysis and stereochemistry.
- To explain the concepts in organic photochemistry
- To describe the basic ideas about pericyclic reactions
- To implement this basic concept to design and produce the new organic molecules

Course outcomes (CO's)

1. Understood the versatile knowledge of rearrangements
2. Understood the different organic reactions (radical and concerted).
3. Learned about the principle of conformational analysis and stereochemistry.
4. Explained about the molecular rearrangements, Pericyclic reactions and Cyclo addition and sigmatropic reactions
5. Described the basic ideas of pericyclic reactions.
6. Designed new form of organic compounds using these basic concepts.

Methodology

Blackboard teaching, Powerpoint presentation and group discussion.

UNIT – I

Molecular rearrangements: Intramolecular 1,2 - shifts - Wagner - Meerwein and Pinacol-Pinacolone rearrangements.

Migration to carbonyl carbon – Demyanov and Neber rearrangements.

Rearrangements to electron deficient nitrogen and oxygen – Baeyer – Villiger, Dienone - phenol, Favorskii, Fries, Wolff, Benzidine and Stevens rearrangements.

Non-cyclic rearrangements – Chapman and Wallach rearrangements.

UNIT – II

Conformational analysis and stereochemistry: Stereochemistry of sulphur and nitrogen compounds, stereoselective and stereospecific reactions - R/S-notation of optically active carbon compounds. Optical isomerism of biphenyls, allenes and spiranes. Planar chirality - cyclophanes and ansa compounds - geometrical isomerism - E/Z notation-configuration in aldoximes and ketoximes. Conformation in cyclic system-decalins, perhydrophenanthrene and perhydroanthracene. Conformation and reactivity of cyclohexanes.

UNIT – III

Radical reactions: Configuration and generation of short lived free radicals- characteristics of free radical reactions – radical substitution, radical additions and rearrangement of free radicals. Typical reactions such as Sandmeyer, Gomberg, Pechmann, Ullmann, Pschorr and Hunsdiecker reactions.

Oxidation and reductions- mechanisms – aromatisation, oxidation of alcohols and glycols, ozonolysis, Sommelet reaction and selectivity in reduction-metal hydride reduction- reduction of nitro compounds and acyloin condensation.

UNIT – IV

Organic photochemistry: Introductory theory of light absorption- Jablonski diagram- photophysical processes- excimers and exciplexes - energy transfer-geometry of excited states – quantum efficiency - photochemical reaction of ketones- Norrish type-I and type-II reactions. Paterno Buchi reaction- cis and trans isomerisation-Photo-Fries rearrangement and Ene reaction.

UNIT – V

Pericyclic reactions: Definition-classification-characteristic features- the electrocyclic reaction-Woodward – Hofmann rules- orbital correlation diagram- the Frontier molecular orbital theory-electrocyclic conversion of 1,3-dienes and 1,3,5-trienes. Cycloaddition – [2+2] addition-Diel's Alder reaction- stereochemistry of Diel's Alder reaction. Sigmatropic reactions – [1,3], [1,5] and [3,3] sigmatropic shifts - Cope and Claisen rearrangements.

TEXT BOOKS:

Instruction Hours/week:L: 4 T:1 P:0 Marks: Internal:40 External: 60 Total:100

Course objectives

- To understand the theories of bonding in coordination compounds.
- To study the kinetics and mechanisms of reactions of complex compounds.
- To understand the magnetic properties of coordination compounds.
- To learn about the coordination compounds present in the biological systems and their functions.
- To remember the types of coordination compounds like metal carbonyls, carbocyclic pi complex in coordination compounds
- To evaluate the geometries of simple molecules.

Course Outcomes

1. Learned how to name coordination compounds and to be able to draw the structure based on its name
2. Used Crystal Field Theory to understand the magnetic properties (and in simple terms the colour) of coordination compounds
3. Described the stability of metal complexes by the use of formation constants and to calculate thermodynamic parameters from them
4. Recognized the types of coordination compounds like metal carbonyls, carbocyclic pi complexes in coordination compounds
5. Familiar with some reactions and applications of coordination compounds
6. Predicted the geometries of simple molecules

Methodology

Blackboard teaching, Powerpoint presentation and group discussion.

UNIT-I

Coordination Chemistry: Nomenclature, Isomerism and methods of preparation of coordination complexes- types of ligands.

Bonding: Valence bond theory- Crystal field theory – Crystal field effects in tetrahedral, octahedral and square planar symmetries. Crystal field stabilization energy - weak and strong fields- spectrochemical series. Molecular orbital theory: based on group theoretical approach. M.O. diagram of Oh, Td & square planar symmetries involving pi bonding- experimental evidence for the presence of pi bonding. Magnetic behaviour of the transition metal ions in crystal field and molecular orbital theories.

UNIT-II

Electronic spectra of complexes: Term symbols for d configuration. Characteristics of d-d transition and selection rules. Weak and strong field limits. Orgel and Tanabe - Sugano diagrams. Jahn-Teller tetrahedral distortion and spin orbit couplings. Nephelauxetic effect - charge transfer spectra.

UNIT-III

Metal carbonyls: Methods of preparation, structure, bonding and reactions. Carbonylate ions. Carbonyl hydrides–Vaska's compound, complexes of molecular nitrogen and oxygen. Nitrosyl complexes, **dinitrogen complexes**. Complexes of unsaturated hydrocarbons- alkenes, allyl and pentadienyl complexes.

UNIT-IV

Carbocyclic pi complexes: Cyclopentadienyl and related complexes synthesis, bonding, structure and reaction. Arene complexes-Complexes of biochemical importance: Cytochromes, Haemoglobin, Myoglobin, Cyanocobalamin, Chlorophyll- structure and functions.

UNIT-V

Reaction of coordination compounds: Substitution reactions in square planar and octahedral complexes – Trans effect – mechanism of redox reactions.

Homogeneous catalysis by coordination compounds – hydroformylation –carboxylation of methanol – hydrogenation of unsaturated organic compounds.

6. Drago, R.S. 1965. Physical Methods in Inorganic Chemistry. Rein Gold Publishing Corporation, New York.

Course Objectives

- To provide knowledge on fundamental understanding of chemical kinetics and to establish a relationship between the rate of reaction and the concentration of the reactants (the rate law, or rate equation).
- To apply the chemical kinetics concept to study the enzyme mechanisms.
- To provide knowledge to the students about coulometric methods and its application.
- To investigate the adsorption, classification of adsorption and factors affecting of adsorption over corrosion application.
- To remember the basic polarography concepts.
- To understand the theories of catalysis and types of catalysis.

Course outcomes

1. Student understood theories of reaction rates, how reaction rates are measured and represented in rate laws.
2. Understood the applications of chemical kinetics in studying enzyme mechanisms
3. Provided the knowledge of coulometric methods and applications.
4. Evaluated the electrochemical principles involved in corrosion and energy storage.
5. Remembered the basic polarography techniques.
6. Understood the theories of catalysis and types of catalysis

Methodology

Black-board teaching, Powerpoint presentation and group discussion.

UNIT-I

Theories of reaction rates: Arrhenius theory- hard - sphere collision theory of gas – phase reactions. Activated complex theory or Absolute reaction rate theory (ARRT) for ideal gas reactions (in terms of partition functions).

Reactions in solution: Comparison between gas-phase and solution reactions. The influence of the solvent on the reactions between ions. Influence of ionic strength on rates of reactions in solution - Primary salt effect-influence of pressure on rates of reactions in solution -significance of volume and entropy of activations.

Study of Fast reactions: Flow methods, pulse methods, relaxation methods, shock-tube method and nuclear magnetic resonance method.

UNIT-II

Homogeneous catalysis: Specific and general acid - base catalysis. Bronsted catalysis law- Hammett acidity functions. Enzyme catalysis (single substrate reaction only). Michaelis Menten law - Influence of pH and temperature on enzyme catalysis.

Surface phenomenon and heterogeneous catalysis: Adsorption and free energy relation at interfaces. Gibb's adsorption isotherm- physisorption and chemisorptions- Adsorption

isotherms (Freundlich & Langmuir). Kinetics of heterogeneous catalysis- Langmuir - Hinshelwood and Langmuir - Rideal - Eley mechanisms.

UNIT-III

Inter ionic attraction theory: Debye – Huckel – Onsager equation - Falkenhagen effect- Wien effect. Activity and activity coefficient- Ionic strength- Debye – Huckel limiting law and its applications.

Theories of double layer. Helmholtz – Perrin - Gouy chapmann – Stern theories.

UNIT – IV

Polarography: Current – voltage relationships-The dropping mercury electrode. Diffusion current- Half – wave potentials. Applications of polarography- Amperometric titrations.

Fundamental principles of coulometric methods- Constant current and controlled potential methods- Simple applications.

UNIT – V

Kinetics of corrosion: Importance–Graphical presentation of kinetic data-exchange current density- different types of polarization of electrodes. Activation polarization and Tafel plots-Mixed potential theory-Application of electrode kinetics to experimental observations-Faradic impedance and corrosion.

Instruction Hours/week:L: 0 T:0 P:0External: 100 Total: 100

Course Objectives

- To make non-chemistry graduates to get exposed to different chromatographic techniques.
- To learn the terms and definitions in general chemistry and use of popularly used chemicals.
- To enable the student to understand about instrumentation in chromatography.
- To explain the basic ideas of separation techniques.
- To implement the some chromatography techniques to separate the compounds from mixtures.
- To describe the concepts in Gas-Liquid and HPLC.

Course Objectives

1. Make non-chemistry graduates to get exposed to different chromatographic techniques.
2. Learned the terms and definitions in general chemistry and use of popularly used chemicals.
3. Enabled the student to understand about instrumentation in chromatography.
4. Understood the basic ideas of separation techniques.
5. Apply the some chromatography techniques to separate the compounds from mixtures.
6. Described the concepts in Gas-Liquid and HPLC.

Methodology

Self study

UNIT- I

Chromatographic methods, general aspects of chromatography, classification and types, mechanism.

UNIT- II

Column chromatography, construction and operation of column, choice of adsorbent elements, applications. Ion exchange chromatography : Anion and cation exchangers techniques applications.

UNIT- III

Paper chromatography: Mechanism of separation, development and applications. Thin layer chromatography: Techniques, choice of adsorbent solvents and applications.

UNIT- IV

Gas-liquid Chromatography, Principles, Retention Volumes, Instrumentation, Carrier Gas, Columns, Stationary Phase, Detectors, Thermal Conductivity, Flame Ionization, Electron Capture, application of G.L.C.

UNIT -V

High Performance Liquid chromatography: Scope, Column efficiency, Instrumentation, Pumping Systems, Columns, Column packing, Detectors, Applications.

Instruction Hours/week:L: 4 T:0 P:0 Marks: Internal: 40 External: 60 Total:100

Objectives

On successful completion of the course the students should have:

- To describe heterocyclic compounds, synthetically important name reactions in organic chemistry.
- To list the various reagents used in organic synthesis
- To understand the composition of chemotherapy.
- To learn about some basic anti biotics.
- To remember the various vitamins and its synthesis.
- To construct a small organic moiety with basic pharmacokinetics property.

Course Outcomes

1. Described the heterocyclic compounds and some important naming reactions.
2. Listed the various reagents used in organic synthesis.
3. Understood the composition of chemotherapy.
4. Learned about some basic anti-biotics
5. Remembered the various vitamins and its synthesis.
6. Applied to make a small organic moiety with basic pharmacokinetics property.

Methodology

Black-board teaching, Power point presentation and group discussion.

UNIT-I

Heterocyclic compounds: Nomenclature-methods of preparation and important reactions of indole, pyrazole, imidazole, quinoline, isoquinoline, uric acid and adenine. Structure elucidation of caffeine.

A general study of flavones, isoflavones and anthocyanins – structure and synthesis of quercetin and cyanidin chloride.

UNIT-II

Reagents in organic synthesis: Use of the following reagents in organic synthesis and functional group transformations: Gilman's reagent, Diazomethane, N-Bromosuccinimide, Lead Tetraacetate, Raney Nickel, Trimethylsilyl Iodide, Tri-n-Butyltin hydride, Periodic Acid, Sodium Amide, Jones reagent, Wilkinsons catalyst, 1,3-dithiane and Fenton's reagent.

UNIT-III

Some typical reactions and their applications in organic synthesis: C-C and C=C bond forming reactions-Vilsmeier – Haack, Shapiro, Wittig – Horner, Peterson synthesis and Heck reactions. Ring formation by Robinson annulation Simmons-Smith reaction.

Woodward Prevost hydroxylation, Oppenauer oxidation, Birch reduction, Clemmenson reduction, Wolff Kishner reduction, Sharpless asymmetric epoxidation.

UNIT-IV

Chemotherapy: Introduction-Sulphonamides-Antimalarials-Arsenical drugs.

Antibiotics: A detailed study of structure, stereochemistry and synthesis of Penicillin, Cephalosporin C, Chloramphenicol and Patulin. The macrolide group of antibiotics-polypeptide antibiotics-polyacetylene antibiotics.

UNIT- V

Vitamins: Structure and synthesis of vitamin B complex : Vitamin B1 (aneurin) - vitamin B2 (riboflavin) - pantothenic acid - folic acid - vitamin H (biotin) - vitamin B6 (pyridoxine) - vitamin E (tocopherol) - vitamin K1 (phyloquinone) and vitamin K2.

Instruction Hours/week:L: 4 T:0 P:0 Marks: Internal:40 External: 60 Total:100

Course objectives

This course enables the students

- To learn about quantitative inorganic analysis.
- To understand the different colorimetric analysis.
- To learn about electrochemical methods of analysis.
- To learn different chromatographic techniques.
- To understand how to analyze the data obtained.
- To Explain about various analytical techniques for inorganic compounds.

Course Outcomes (CO's)

On successful completion of the course the students should have to

1. Learned about quantitative inorganic analysis.
2. Understood the different colorimetric analysis.
3. Learned the electrochemical methods of analysis.
4. Understood the different chromatographic techniques.
5. Learned about how to analyze the data obtained.
6. Explained the various analytical techniques for inorganic compounds.

Methodology

Black-board teaching, Powerpoint presentation and group discussion.

UNIT-I

Quantitative Inorganic Analysis: Theoretical basis of quantitative inorganic analysis-common ion effect solubility product, effect of acid, temperature and solvent upon the solubility of a precipitate.

Supersaturation-Von Weimarn concept. Formation and treatment of precipitates-co-precipitation and post-precipitation. Precipitation from homogeneous solution. Specific and selective precipitants.

Principles of acid-base, oxidation-reduction, precipitation and complexometric titrations-indicators used in such titrations. Uses of organic reagents in inorganic quantitative and qualitative analysis.

UNIT-II

Data Analysis: Errors in chemical analysis-Defining terms: Mean median, accuracy and precision – classification of errors: Systematic errors and random errors. Improving accuracy of analysis – mean, standard deviation and Q-test. Comparison of results – Least square, 't'-test, 'F'-test and 'Chi' square test.

UNIT-III

Techniques in Inorganic Chemistry: Colorimetry: Theoretical and practical aspects of colorimetric analysis. Flame emission and atomic absorption spectroscopy – types of

atomic spectroscopy – emission methods – absorption methods – fluorescence methods – source and atomizers for atomic spectroscopy – flame atomizers – Electrothermal atomizers – principle and applications of atomic absorption spectroscopy. Advantages of atomic absorption spectrometry over flame photometry.

UNIT-IV

Electrochemical Methods of Analysis: Cyclic Voltammetry, Coulometry and amperometry-principle and applications.

Thermal Characterization techniques: Principle and applications of Differential Thermal Analysis (DTA), Differential Scanning Calorimetry (DSC) and Thermogravimetric Analysis (TGA) Thermometric titration.

UNIT- V

Chromatographic Methods: Classification – techniques and applications in column, size-exclusion, ion exchange, paper and thin layer chromatography.

Gas chromatography and high performance liquid chromatography (HPLC)-principle, equipment design, sample injection system, columns, detectors and applications.

TEXT BOOKS:

Instruction Hours/week:L: 4 T: 0 P: 0 Marks: Internal: 40 External: 60 Total:100

Course objectives

This course enables the students

- To learn about nature of the bonding between organic ligands and metals.
- To understand about the metal alkyl complexes.
- To learn about the alkene and cyclopentadienyl complexes.
- To understand about the usage of organometallic compounds as catalysts
- To learn about the organometallic compound used as the catalyst in hydrogenation and hydroxylation of olefins.
- To study the concept of oxidation and polymerization of olefins.

Course Outcomes

On the completion of the course

1. Learned about the Alkyls and Arene complexes
2. Understood the bonding in olefin, acetylene and allyl systems
3. Known about the concepts of synthesis, structure and bonding in metallocenes
4. Understood the Organometallic reaction mechanisms and its applications
5. Learned about the Catalysis, hydrogenation of olefins and oxoprocess
6. Studied the concept of oxidation of olefins and polymerization

Methodology

Blackboard teaching, Powerpoint presentation and group discussion.

UNIT- I

Metal carbonyls: Definition of organometallic compound - 18 electron rule - effective atomic number rule classification of organometallic compounds - the metal carbon bond types - ionic bond - sigma covalent bond - electron deficient bond - delocalised bond - dative bond - metal carbonyl complexes - synthesis - structure and reactions of metal carbonyls - the nature of M- CO bonding - binding mode of CO and IR spectra of metal carbonyls - metal carbonyls- metal carbonyl anions - metal carbonyl hydrides - metal carbonyl halides - metal carbonyl clusters - Wades rule and isolobal relationship - metal nitrosyls - dinitrogen complexes - dioxygen complexes.

UNIT- II

Metal alkyl complexes: Stability and structure - synthesis by alkylation of metal halides - by oxidative addition - by nucleophilic attack on coordinated ligands - metal alkyl and 18 electron rule - reactivity of metal alkyls - M-C bond cleavage reactions - insertion of CO to M-C bonds - double carbonylation - insertions of alkenes and alkynes - insertions of metals with C-H bonds - alkylidene and alkylidyne complexes - synthesis of alkylidene complexes in low oxidation states and in high oxidation states - bonding in

alkylidene complexes - synthesis and bonding in alkylidyne complexes - reactivity of alkylidene and alkylidyne complexes.

UNIT- III

Alkene complexes: Synthesis of alkene complexes by ligand substitution - by reduction and by metal atom synthesis - bonding of alkenes to transition metals - bonding in diene complexes - reactivity of alkene complexes - ligand substitution - reactions with nucleophiles - olefin hydrogenation - hydrosilation - Wacker process - C-H activation of alkenes - alkyne complexes - bonding in alkyne complexes - reactivity of alkynes - alkyne complexes in synthesis - cobalt catalysed alkyne cycloaddition.

UNIT- IV

Cyclopentadienyl complexes: Metallocenes - synthesis of metallocenes - bonding in metallocenes - reactions of metallocenes - $\text{Cp}_2\text{Fe}/\text{Cp}_2\text{Fe}^+$ couples in biosensors - bent sandwich complexes - bonding in bent sandwich complexes - metallocene halides and hydrides - metallocene and stereospecific polymerisation of 1-alkenes - cyclopentadiene as a non-spectator ligand - monocyclopentadienyl (half-sandwich) complexes - synthesis and structures of allyl complexes - arene complexes - synthesis - structure and reactivity of arene complexes - multidecker complexes.

UNIT - V

Organometallic compounds in homogeneous catalytic reactions: Coordinative unsaturation - acid-base behaviour reaction - migration of atoms or groups from metal to ligand - insertion reaction - reactions of coordinated ligands - catalytic reactions of alkenes - isomerisation of alkenes - hydrogenation - hydroformylation and hydrosilation of alkenes - alkene polymerisation and oligomerisation - fluxional molecules.

Instruction Hours/week: L: 4 T: 0 P: 0 Marks: Internal: 40 External: 60 Total:100

Course Objectives

- To understand bonding parameters in cubic and distorted geometries from absorption spectra.
- To identify coordination compounds with noble electrochemical and photochemical properties suitable for the construction of supramolecular assemblies and nanostructures.
- To envision the importance of inorganic photosensitizers for solar energy conversion.
- To identify complexes suitable for application in medicinal inorganic chemistry.
- To implement these ideas to synthesis any new metal coordinate compounds.
- To set research goals in the highly topical areas of research in coordination chemistry.

Course Outcomes

1. Understood bonding parameters in cubic and distorted geometries from absorption spectra.
2. Identified the coordination compounds with noble electrochemical and photochemical properties suitable for the construction of supramolecular assemblies and nanostructures.
3. Proposed the importance of inorganic photosensitizers for solar energy conversion.
4. Remembered the complexes suitable for application in medicinal inorganic chemistry.
5. Applied these ideas to synthesis any new metal coordinate compounds.
6. Set research goals in the highly topical areas of research in coordination chemistry.

Methodology

Blackboard teaching, Powerpoint presentation and group discussion.

UNIT- I

Electronic Structure and Geometry of Coordination Compounds: Electronic spectroscopy: crystal field spectra of Oh and Td complexes, effect of distortion on the spectra, structural evidence from electronic spectra, evaluation of Δ_o values in Co(III) and Ni(II) Oh and Td complexes, quantification of covalency nephelauxetic ratio.

Nuclear magnetic resonance spectroscopy: application of spin-spin coupling to inorganic structural determinations, NMR spectra of quadrupolar nuclei, NMR of paramagnetic transition metal complexes: scalar shift and pseudocontact shift, scalar shift and covalency.

Electron spin resonance spectroscopy: hyperfine and zero field effects on the epr spectra of coordination compounds, ligand field interpretation of the g- and A- tensors, nuclear quadrupole interaction.

Mossbauer spectroscopy: quadrupole and magnetic interactions, isomer shift and site symmetry of metal ions in coordination compounds, Mossbauer emission spectroscopy and applications.

UNIT- II

Electrochemical Studies and Photochemistry: Applications of AC polarography, cyclic voltammetry, and differential pulse voltammetry to the study of coordination compounds: computation of electrochemical parameters and evaluation of reversibility. Spectroelectrochemistry: optically transparent electrodes and cells, chrono absorptometry.

Solar and renewable energy: light- to-chemical energy conversion in lamellar solids and thin films, solar energy conversion by dye-sensitized photovoltaic cells and by coordination compounds anchored onto semiconductor surfaces.

Photochemistry of lanthanide complexes: A-ET-E processes, NIR- to-visible photon up conversion, nonlinear optical behavior, exciting multiplication and relaxation dynamics in quantum dots and applications.

UNIT- III

Supramolecular Assemblies and Devices: Supramolecular assemblies: design principles, homo- and heteropoly metallic polypyridyl systems, inter component energy and electron transfer, role of bridging ligands.

Dendrimers and metallodendrimers: synthetic methodology-divergent and convergent methodologies; types of metallodendrimers, dendrimer encapsulated catalysis.

Molecular devices: supramolecular photochemistry, photo- and electrochemical sensors, molecular electronic devices.

UNIT-IV

Inorganic Biochemistry and Medicinal Inorganic Chemistry: Photosynthesis: biological photosynthesis, chemical approaches to artificial photosynthesis-light harvesting dendrimers and multiporphyrin arrays.

Bioredox agents: rubredoxins and ferredoxins- functions and structural features.

Contrast enhancing agents for MRI: theory of MRI imaging, synthesis of Gd-based contrast agents.

Metal complexes for radiotherapy: diagnostic radiopharmaceuticals, non- technetium for diagnostic imaging, Tc-labelled small molecules and peptides as diagnostic radiopharmaceuticals.

Metal complexes as photosensitizers.

UNIT-V

Synthesis of Novel Coordination Compounds and Assemblies: Synthesis of Schiff base macrocycles and macrocyclic binucleating ligands by coordination template effects.

Polyazamacrocycles and macrocycles with pendant arms.

Construction of polynuclear supramolecular assemblies and nanostructures.

Instruction Hours/week: L: 4 T: 0 P: 0 Marks: Internal: 40 External: 60 Total:100

Course Objectives

This course enables the students

- To understand the elements of chemical engineering in organic synthesis.
- To know the unit processes in organic chemical technology.
- To understand the techniques involved in typical organic synthesis.
- To know the thermodynamics in organic unit processes.
- To apply the knowledge of chemical reactions in organic synthesis.
- To study the detailed manufacture techniques to synthesis dye, pigment and dugs.

Course Outcomes

On the completion of the course, students to

1. Understood the elements of chemical engineering in organic synthesis.
2. Knew the unit processes in organic chemical technology.
3. Understood the techniques involved in typical organic synthesis.
4. Learned the thermodynamics in organic unit processes.
5. Applied the knowledge of chemical reactions in organic synthesis.
6. Studied the detailed manufacture techniques to synthesis dye, pigment and dugs.

Methodology

Blackboard teaching, Powerpoint presentation and group discussion.

UNIT- I

Elements of Chemical Engineering: Unit operations in chemical engineering: Fluid flow: Reynold's number; Laminar and turbulent flow. Bernoullis' equation, head loss in piping. Calculation of head as an aid in selecting pumps. Turbulent flow and its relevance in heat transfer. Agitation and mixing of liquids.

UNIT- II

Heat transfer: Heat transfer coefficient, Importance of heat transfer in chemical process. Special provisions for heat transfer in highly exothermic reactions. Corrosion and scale formation in heat exchangers and condensers. Preliminary data to aid design of heat transfer equipment.

Mass transfer: Distillation- two and three component systems. Ideal and non- ideal systems, various types of fractioning columns. Calculation of HETP from distillation curves. Leaching and extract ion based on process parameters.

Filtration and Drying: Select ion of proper equipment for above operations.

UNIT- III

Applications of Thermodynamics in Organic Unit Processes: Energy balance over a flow system, heat of reaction, effect of temperature upon heat of reaction Chemical equilibrium, calculation of equilibrium conversion, entropy changes, simultaneous reactions, vapour phase and liquid phase catalytic reactions.

Organic Chemical Process Kinetics: Factors affecting chemical processes Type and shape of reactors used, the method of operation, temperature control Batch or flow process, batch mixing, fixed or fluidized bed.

UNIT- IV

Unit Process in Industrial Organic Synthesis: Study of Organic reactions as they apply to industrial processes. Process parameters of importance in scaling up of these reactions from laboratory to pilot plant to main plant.

Selection of suitable plant equipment, especially the shape and size of the reactor stirrer, condenser etc. choice of material of construction.

Study of industrial scale nitration, sulphonation, homogeneous and heterogeneous hydrogenation, oxidation and halogenations reactions.

UNIT-V

Study of Detailed Technologies of Manufacture- a dye, a drug and a pigment: Three specific chemicals, one each from the above category will be discussed, illustrating the chemical engineering principles used in proper selection of equipment.

The logic involved in the layout of the plant, the control tests for the process itself and isolation methods of the product and its standardization.

Importance of quality control and technical service to customers will be pointed out.

TEXT BOOKS:

1. Chris A. Clausen and Guy Matson, 1978. Principles of Industrial Chemistry, John Wiley & Sons, New York.

3. Dridens, 2001. Outlines of Chemical Technology. Affiliated East-West Press Pvt. Ltd., New Delhi.

Course Objectives

The course enables the students should have

- To learn about the qualitative analysis by semi micro-qualitative analysis method.
- To learn the preparation of inorganic complexes.
- To describe the basic concept and advantages of semi- micro qualitative analysis.
- To understand the systematic separation d-block elements
- To study the step wise procedure to predict the anions along with metals
- To identify the d-block elements with their special tests.

Course Outcomes

Students have to,

1. Learned about the qualitative analysis by semi micro-qualitative analysis method.
2. Learned the preparation of inorganic complexes.
3. Described the basic concept and advantages of semi- micro qualitative analysis.
4. Understood the systematic separation d-block elements
5. Studied the step wise procedure to predict the anions along with metals
6. Identified the d-block elements with their special tests.

Methodology

Blackboard teaching and Demonstration.

Contents

Thallium, Tungsten, Selenium, Tellurium, Molybdenum, Cerium, Thorium, titanium, Zirconium, Vanadium, Beryllium, Uranium and Lithium.

Note: Each student should analyze a minimum of six inorganic mixtures.

About ten preparations involving different techniques selected from the following:

Lead tetra acetate, dipyrindinium hexaplumbate, hydroxylamine hydrochloride, ortho and para- hydroxy phenyl mercuric chloride, potassium cupric chloride, chrome alum, copper(I) chloride, tris(thio urea) copper(I) Chloride, potassium trioxalato- aluminato(III), potassium trioxalato-chromate(III), potassium trioxalato- ferrate(III), hexammine cobalt(III)chloride, chloropentammine chromium(III), chloro aquo pentammine chromium(III) nitrate, tetrammine copper(II) sulphate, ammonium hexa chloro stanate(IV).

Note: Each student should do a minimum of ten preparations.

Course Objectives

Course enables the students should have

- To learn about the basic principles about quantitative analyses.
- To study the concepts and systematic procedure in gravimetric analysis.
- To must know about the systematic procedure for estimation.
- To describe the synthesis method for in-organic co-ordination complexes
- To separate the molecules and identify its nature through chromatography technique.
- To apply this ideas and concepts to water treatment process, food science and forensic fields.

Course Outcomes

On successful completion of the course the students should have

1. Learned about the basic principles about quantitative analyses.
2. Studied the concepts and systematic procedure in gravimetric analysis.
3. Knew about the systematic procedure for estimation.
4. Described the synthesis method for in-organic co-ordination complexes
5. Known about separate the molecules and identify its nature through chromatography technique.
6. Applied this ideas and concepts to water treatment process, food science and forensic fields.

Methodology

Blackboard teaching and Demonstration.

Contents

Analysis of mixture of ions – Volumetry and Gravimetry. Any four Complexometric titration- estimation of Zinc, nickel, magnesium and calcium ions using Eriochrome black-T or murexide indicator.

Titrimetry: Oxidation using ceric and vanadium salts.

Chromatography: Column, Paper and Thin layer chromatography.

Titration in non aqueous solvents.

Preparation, analysis and study of co-ordination complexes (any 5).

Course Objectives

On successful completion of the course the students should have,

- To Study about Isolation, classification and structure determination of simple terpenoids.
- To learn about Isolation, classification and structure determination of simple steroids and alkaloids
- To know the structure of proteins, enzymes and nucleic acids.
- To discuss about the biological application of DNA and RNA.
- To list the various reagents used in organic synthesis
- To apply this fundamentals to clarify the pharmacological and biological activity of organic molecules

Course outcomes

The students have

1. Studied about Isolation, classification and structure determination of simple terpenoids.
2. Learned about Isolation, classification and structure determination of simple steroids and alkaloids
3. Knew the structure of proteins, enzymes and nucleic acids.
4. Discussed about the biological application of DNA and RNA.
5. Remembered the various reagents used in organic synthesis
6. Applied this fundamentals to clarify the pharmacological and biological activity of organic molecules

Methodology

Blackboard teaching, Powerpoint presentation and group discussion.

UNIT-I

Terpenoids: Isolation and classification of terpenoids – general methods of determining structure of terpenoids –structural elucidation and synthesis of Zingiberene, Eudesmol, Abietic acid, Caryophyllene and Santonin-biosynthesis of monoterpenoids.

UNIT-II

Steroids: Introduction – structural elucidation and synthesis of Cholesterol (synthesis not necessary), Ergosterol, Vitamin D, Equilenin, Oestrone, Testosterone and Progesterone. Bile acids – biosynthesis of sterols.

UNIT-III

Alkaloids: Definition of an alkaloid-extraction of alkaloids-general properties - general methods of determining structure of alkaloids – structural elucidation and synthesis of Atropine, Morphine and Quinine -biosynthesis of quinoline alkaloids.

UNIT-IV

Proteins: General nature of proteins - classification of proteins – synthesis of peptides – oxytocin- insulin.

Enzymes: Nomenclature and classification - cofactors – specificity of enzyme action-mechanism of enzyme action. Nucleic acids- structures of RNA and DNA and their biological importance.

UNIT- V

Reagents in organic synthesis: Preparations and synthetic applications of DDQ, DBU, Ozone, Diborane, Osmium tetroxide, Selenium dioxide, Dicyclohexylcarbodiimide (DCC), LDA, DIBAL-H and Mercuric acetate.

TEXT BOOKS:

1. Gurdeep R. Chatwal, 2004. Organic Chemistry of Natural Products. Vol. II, Himalaya Publishing House, New Delhi.
2. Finar, I.L., 2000. Organic Chemistry Vol. II: Stereochemistry and the Chemistry of Natural Products. V Edition, Addison Wesley Longman (Singapore) Pte. Ltd- Indian Branch, New Delhi.
3. Jerry March, 1992, Advanced Organic Chemistry. IV Edition, John Wiley & Sons (Asia) Pte. Ltd., Singapore.
4. Agarwal O.P, 2004. Natural Product Chemistry. Vol. II, Goel Publishing House, Meerut.

3. Tewari, N., 2011. Advanced Organic Reaction Mechanism. III Edition, Books and Allied (P) Ltd, Kolkata.

Instruction Hours/week:L: 4 T:0 P:0 Marks: Internal: 40 External: 60 Total:100

Course Objectives

The course enables the student to

- Understand about thermodynamics and Non-ideal systems
- Learn the third law of thermodynamics
- Study the classical Maxwell-Boltzman and quantum statistics
- Know about partition functions and determining thermodynamic properties
- Understand heat capacity of solids.
- Apply the thermodynamic factors in various organic synthesis processes (how the reaction condition and reaction rate various depend on the thermodynamic factors).

Course Outcomes

The students have to,

1. Understood about thermodynamics and Non-ideal systems
2. Learned the third law of thermodynamics
3. Studied the classical Maxwell-Boltzman and quantum statistics
4. Knew about partition functions and determining thermodynamic properties
5. Understood heat capacity of solids.
6. Applied the thermodynamic factors in various organic synthesis processes (how the reaction condition and reaction rate various depend on the thermodynamic factors).

Methodology

Blackboard teaching, Powerpoint presentation and group discussion.

UNIT – I

Thermodynamics and Non-ideal systems: Chemical potential and the definition of fugacity. Determination of fugacity of gases by graphical method and from equations of state. Variation of fugacity with temperature. Fugacity and the standard states for non ideal gases.

Definition of activity. Activity coefficient. Temperature coefficient of activity. Standard states. Applications of activity concept to solutions. The rational and practical approaches. Measurement of activity of solvent from colligative properties. Determination of activity of solute.

UNIT – II

Third Law of Thermodynamics: Probability and third law. Need for third law. Nernst heat theorem and other forms stating third law. Thermodynamic quantities at absolute zero. Statistical meaning of third law and apparent exception.

Mathematical Introduction: Theories of permutation & combination, Laws of probability. Distribution laws. Gaussian distribution.

UNIT – III

Classical Maxwell – Boltzmann Statistics: Maxwell distribution law for molecular velocities and molecular speeds in an ideal gas. Velocity and speed distribution functions. Experimental verification of Maxwell distribution law. Evaluation of average speed, root mean square speed and most probable speed from distribution law. Distribution function in terms of the kinetic energy of an ideal gas. The principle of equipartition of energy and the calculation of heat capacities of ideal gases. Limitations of the principle of equipartition of energy.

Quantum statistics: Maxwell-Boltzmann statistics. Thermodynamic probability. Thermodynamic probabilities of systems in equilibrium. Boltzmann expression for entropy. Stirling's approximation. State of maximum thermodynamics probability. Legrangian multipliers. Thermodynamic probabilities of systems involving energy levels. Maxwell-Boltzmann distribution law. Evaluation of alpha and beta in MB distribution law.

UNIT – IV

Partition function: Definition, justification of nomenclature, microcanonical and canonical ensembles. Molecular partition and canonical function. The relation between the total partition function of a molecule and the separate partition functions. Translational partition function, rotational partition function. Effect of molecular symmetry on rotational partition function. Ortho and Para hydrogen. Vibrational partition function. Electronic partition function. Evaluation of thermodynamic properties E, H, S, A, G, C_v and C_p from monoatomic and diatomic ideal gas molecules partition functions. Thermodynamic properties of polyatomic ideal gases. Calculation of equilibrium constants of reaction involving ideal gases from partition functions.

UNIT – V

Heat capacities of solids: Einstein's and Debye's theories of heat capacities of solids. Bose-Einstein and Fermi-Dirac Statistics: Bose Einstein distribution law- Entropy of Bose Einstein gas. Planck distribution law of black body radiation. Fermi-Dirac distribution law. Entropy of a Fermi-Dirac gas. Heat capacities of the electron gas and the heat capacities of metals. Negative absolute temperature.

TEXT BOOKS:

4. Whittakar, A.G., 2001. Physical Chemistry. Mount & Heal Viva Books Pvt. Ltd., New Delhi.

Instruction Hours/week:L: 4 T:0 P:0 Marks: Internal: 40 External: 60 Total:100

Course Objectives

The course successfully enables the student,

- To understand different chromatographic methods.
- To discuss about electron spectroscopy and thermal analysis
- To learn Circular Dichroism and Optical Rotatory Dispersion
- To describe the Electron Spin Resonance spectroscopy
- To know about flame emission spectroscopy.
- To apply the chromatographic and spectroscopic concepts for separation and identification of mixture compounds/complex/metals.

Course outcomes

The students have to

1. Understood different chromatographic methods.
2. Discussed about electron spectroscopy and thermal analysis
3. Learned Circular Dichroism and Optical Rotatory Dispersion
4. Described the Electron Spin Resonance spectroscopy
5. Knew about flame emission spectroscopy.
6. Applied the chromatographic and spectroscopic concepts for separation and identification of mixture compounds/complex/metals.

Methodology

Blackboard teaching, Powerpoint presentation and group discussion.

UNIT – I

Chromatography: Theory, instrumentation, basic principles & application in the chemical analysis of the following – columns, paper, thin layer and ion exchange-gel permeation-HPLC applications in chemical analysis-gas chromatography.

UNIT – II

Thermal analysis: Differential thermal analysis DTA and differential scanning calorimetry DSC - basic principles - thermo gravimetric analysis.

Electron spectroscopy: ESCA XPS: Principle, chemical shifts - description of ESCA spectrometer, X-ray sources, samples, analysis, detectors and recording devices-applications.

Auger electron spectroscopy AES and Ultra-Violet photo electron spectroscopy UPS/PES principles and applications.

UNIT – III

Circular Dichroism and Optical Rotatory Dispersion: Basic principles - Cotton effects-Octants rule –axial halo ketone rule-application of ORD and CD. Tyndal Scattering-turbidimetry and nephelometry-applications. Atomic Absorption Spectroscopy.

UNIT – IV

ESR spectroscopy: Theory - derivative curves - g shift - hyperfine splitting-isotropic and anisotropic systems-zero field splitting and Kramer degeneracy. Identification of free radicals – applications to copper complexes.

UNIT – V

Flame Emission Spectroscopy: Introduction, Flames and flame spectra, Flames temperature, Chemical reaction in flame and flame background. Flame photometers, Flame spectrophotometers, Photosensitive detectors, Single beam and double beam instruments, calibration curve, Errors in flame photometers, applications.

Course Objectives

The course enables the students

- To know about the basic concepts of polymerization.
- To understand about the coordination polymerization.
- To discuss the various molecular weight determination methods of the polymers and its application.
- To explain the various polymer processing and properties of commercial polymers.
- To study the fundamentals in nano-chemistry and its instrumentation techniques.
- To Apply the polymerization technique to prepare polymers and nanocompounds and characterized by using various electron spectroscopic technique.

Course outcomes

On the successful completion of the course, students have

1. Knew about the basic concepts of polymerization.
2. Understood about the coordination polymerization.
3. Discussed the various molecular weight determination methods of the polymers and its application.
4. Explained the various polymer processing and properties of commercial polymers.
5. Studied the fundamentals in nano-chemistry and its instrumentation techniques.
6. Applied the polymerization technique to prepare polymers and nanocompounds and characterized by using various electron spectroscopic technique.

Methodology

Blackboard teaching, Powerpoint presentation and group discussion.

UNIT – I

Step polymerization: Kinetics of step polymerization, self catalyzed polymerization, external catalysis of polymerizations.

Radical chain polymerization: Kinetic scheme for polymerization in presence of initiator.

Ionic chain polymerization: Comparison of radical and ionic polymerizations.

Chain copolymerization: Types of copolymers, the copolymer equation, the Q-e scheme and rate of copolymerization. Ziegler-Natta catalysis and polymerization.

UNIT - II

Plastic Technology: Production of ethenic polymers (polythene, PVC polyvinyl acetate, polyvinyl alcohol, polymethyl methacrylate. Polyacrylonitrile). Production of polycondensation polymers (phenol – formaldehyde, urea formaldehyde and epoxy resins).

Polymer additives – use of fillers in plastics – antioxidants and other stabilizers – plasticizers – effect of plasticizers on polymer properties (Tg. Fluidity, mechanical properties and dielectric properties) – use of flame retardants and colourants.

UNIT - III

Fibre technology: Production of natural and synthetic fibre, cellulosic fibres, polyamide fibres, polyester and acrylic fibres. Properties of textile fibres – criteria for fibre formation orientation of molecules on drawing.

Spinning processes – melt spinning- dry spinning and wet spinning.

UNIT- IV

Nano materials: Preparation: - plasma assisted chemical vapour deposition-sol-gels-electro deposition.

Carbon nano materials: New form of carbon-fullerene C₆₀ nano tubes-types of nano tubes-single walled nano tube-multi walled nano tube. Formation, purification, properties and uses of nano tubes.

UNIT- V

Molecular nanotechnology: Scanning electron microscope (SEM) - modern transmission electron microscope (TEM) - Atomic force microscope (AFM)-scanning tunneling microscope (STM).

Instruction Hours/week:L: 4 T:0 P:0 Marks: Internal:40 External: 60 Total:100

Course Objectives

The course enables the student

- To study about the basic concepts of polymerization.
- To explain the coordination polymerization and apply the Ziegler-natta catalyst in polymer synthesis.
- To understand the molecular weight determination methods of the polymer and apply it to identify the polymer properties.
- To discuss about the polymer processing and properties of commercial polymers
- To apply the polymer processing technique to prepare the polymer products
- To list out the commercial polymers and its application

Course outcomes

The students have

1. Studied about the basic concepts of polymerization.
2. Explained the coordination polymerization and apply the Ziegler-natta catalyst in polymer synthesis.
3. Understood the molecular weight determination methods of the polymer and apply it to identify the polymer properties.
4. Discussed about the polymer processing and properties of commercial polymers
5. Applied the polymer processing technique to prepare the polymer products
6. Remembered the commercial polymers and its application

Methodology

Blackboard teaching, Powerpoint presentation and group discussion.

UNIT – I

Polymer Basic Concepts: Monomers, repeat units, degree of polymerization, Linear, branched and network Polymers. Condensation Polymerization: Mechanism of stepwise polymerization. Kinetics and statistics of linear stepwise polymerization. Addition polymerization : Free radical, cationic and anionic polymerization. Polymerization conditions. Polymerization in homogeneous and heterogeneous systems.

UNIT – II

Co-ordination Polymerization: Kinetics, mono and bimetallic mechanism of co-ordination polymers. Ziegler Natta catalyst, co-polymerization: Block and graft co-polymers, kinetics of copolymerization. Types of co-polymerization. Reactivity ratio.

UNIT-III

Molecular Weight and Properties: Polydispersion – average molecular weight concept, number, weight and viscosity average molecular weights. Measurement of molecular weights. Viscosity, light scattering, osmotic and ultracentrifugation methods. Polymer

structure and physical properties – crystalline melting point T_m . The glass transition temperature. Determination of T_g . Relationship between T_m and T_g .

UNIT – IV

Polymer Processing: Plastics, elastomers and fibres. Compounding, processing techniques: calendering, die casting, rotational casting, film casting, injection moulding, blow moulding extrusion, moulding, thermoforming, foaming, reinforcing and fibre spinning.

UNIT – V

Properties of Commercial Polymers: Polyethylene, polyvinyl chloride, polyamides, polyesters, phenolic resins, epoxy resins and silicone polymers. Functional polymers, Fire retarding polymers and electrically conducting polymers. Biomedical polymers – contact lens, dental polymers, artificial heart, kidney, skin and blood cells.

TEXT BOOKS:

1. Billmeyer, F.W., 2003. Text Book of Polymer Science. III Edition, John Wiley, New York.
2. Gowariker, V. R., N. V. Viswanathan and J. Sreedhar, 1986. Polymer Science, New Age International Private Ltd., New Delhi.

3. Odian, G., 1981. Principles of Polymerization. II Edition, John Wiley & Sons, New York.

Instruction Hours/week:L: 4 T:0 P:0 Marks: Internal:40 External: 60 Total:100

Course Objectives

The course enables the student

- To understand about the classification, Chemical structure, production, properties and uses of fibers.
- To learn about the dyeing process on fibers.
- To discuss the classification of dyes
- To learn the Pollution Control in Textile Industry.
- To explain the various finishing process of fibers.
- To apply this fundamentals to fabricate the material and its dying process.

Course outcomes

On the successful completion of this course, Students

1. Understood about the classification, Chemical structure, production, properties and uses of fibers.
2. Learned about the dyeing process on fibers.
3. Discussed the classification of dyes
4. Learned the Pollution Control in Textile Industry.
5. Explained the various finishing process of fibers.
6. Applied these fundamentals to fabricate the material and its dying process.

Methodology

Blackboard teaching, Powerpoint presentation and group discussion.

UNIT- I

Fibers: General classification of fibres-chemical structure, production, properties and uses of the following natural fibres (a) natural cellulose fibres (cotton and jute) (b) natural protein fibre (wool and silk).

Chemical structure, production, properties and uses of the following synthetic fibres. (i) Man made cellulosic fibres (Rayon, modified cellulose fibres) (ii) Polyamide fibres (different types of nylons) (iii) Poly ester fibres.

UNIT- II

Dyeing Process: Impurities in raw cotton and grey cloth, wool and silk- general principles of the removal – Scouring – bleaching – Desizing – Kierboiling- Chemicking.

Dyeing - Dyeing of wool and silk –Fastness properties of dyed materials – dyeing of nylon, terylene and other synthetic fibres.

UNIT- III

Finishing: Finishes given to fabrics- Mechanical finishes on cotton, wool and silk, method used in process of mercerizing –Anti-crease and Anti-shrink finishes –Water proofing

UNIT-IV

Types of Dyes: Quinonoid Dyes-Examples and structure-Anthroquinone and Mordant Dyes-Synthesis and Applications of Alizarin-Phthalocyanin dyes-Copper Phthalocyanin-Synthesis and Applications.

Diphenylmethane Dyes- Auramine-Triphenylmethane Dyes-Malachite Green, Crystal Violet, Pararosaniline-Preparation and applications.

Indigo Dyes-Preparation and application-Derivatives of Indigo- Synthesis and uses of Indigosol and tetrahaloindigo.

Phthalein Dyes-Phenolphthalein- Preparation and applications.

Xanthene Dyes-Rhodamine B, Fluorescein-Eosin- Preparation and applications.

UNIT-V

Pollution Control in Textile Industry: Textile Effluent-Characteristics, effect of untreated effluent, degradability of wastes. Effluent treatment plants-Aerated lagoon, photo oxidation process.

TEXT BOOKS:

1. Chatwal, R., 1995. Synthetic Dyes, Himalayan Publishing House, Mumbai.
2. Sadov F and M. Horschagin, 1978. Chemical Technology of fibrous Materials, A. Matetshy, Mir Publishers Easton's Books, Inc. Mount Vernon, WA, U.S.A.

ELECTIVE-II
15CHP305C INDUSTRIAL CHEMISTRY
(APPLIED BIOINORGANIC CHEMISTRY, INORGANIC
DRUG TARGETS AND METALS IN MEDICINE)

Semester - II
4H 4C

Instruction Hours/week:L: 4 T:0 P:0 Marks: Internal:40 External: 60 Total:100

Course Objectives

This course enables the students

- To give the knowledge of the role of metals in human body
- To learn about the physical methods in bioinorganic chemistry, metal biomolecules interactions, complexes, and drug discovery.
- To give knowledge in Binding of Metal Ions and Complexes to Biomolecules
- To Learn about complexes and chelating agents
- To Provide fundamental knowledge in Drug Discovery and Design
- To Apply these parameters to discover new pharmacokinetic molecules.

Course Outcomes

On the completion of this course, student should

1. Knew the knowledge of the role of metals in human body
2. Learned about the physical methods in bioinorganic chemistry, metal biomolecules interactions, complexes, and drug discovery.
3. Understood the knowledge in Binding of Metal Ions and Complexes to Biomolecules
4. Learned about complexes and chelating agents
5. Provided the fundamental knowledge in Drug Discovery and Design
6. Applied these parameters to discover new pharmacokinetic molecules.

Methodology

Black-board teaching, Powerpoint presentation and group discussion.

UNIT- I

Metals in the Human Body: General principles - the elements in the human body - biological significance, storage and transport of Fe, Zn, Cu, Mo, Co, Cr, V and Ni - metal functions in metalloproteins - metallo enzyme functions -supplying elements to the body - metals and human health.

UNIT- II

Physical Methods in Bioinorganic Chemistry: X-ray methods - magnetic resonance methods - Mossbauer spectroscopy - magnetic measurements -other instrumental methods -Atomic Force Microscopy - Fast and Time-Resolved Methods - Stopped-Flow Kinetic Methods - Flash Photolysis - Time-Resolved Crystallography.

UNIT- III

Binding of Metal Ions and Complexes to Biomolecules: Nucleic acid structures - fundamental interactions with nucleic acids - binding interactions of tris(phenanthroline) metal complexes with DNA - techniques to monitor binding - applications of metal complexes that bind to nucleic acids -biopolymer promoted metal ligand interactions.

UNIT- IV

Complexes and Cheating Agents: Labile and inert complexes - metal-ligand selectivity- HSAB approach-chelate effect and Irving-William series -survey of metals used for diagnosis and chemotherapy-radiodiagnostic agents-Magnetic Resonance Imaging(MRI) - gold and other metal phosphines-main-group and transition metal compounds - miscellaneous metals in medicine-chelating agents and therapy - EDTA-evolution, chemical properties, in vivo chelation of radionuclides, dosage and toxicity .

UNIT-V

Drug Discovery and Design: Outline- therapeutic index, chemotherapeutic index, structure- activity relationship (SAR) and quantitative structure-activity relationship (QSAR)- Factors governing drug design- Computer aided drug design-Cancer chemotherapy-bioinorganic chemistry (DNA binding) of platinum anticancer drugs (cisplatin and carboplatin)-mechanism of action studies-clinical trials and their significance- production and quality control- patent protection.

TEXT BOOKS:

1. David M. Taylor and David R. Williams, 1995. Trace element medicine and Chelation therapy, The Royal Society of Chemistry, United Kingdom.
2. Ashutosh Kar, 2000. Medicinal Chemistry, New Age International Publishers, New Delhi.
3. Gareth Thomas, 2000. Medicinal Chemistry, John-Wiley & Sons Ltd., United Kingdom.

2. Rosette M. Roat-Malone, 2002. Bioinorganic Chemistry, John Wiley & Sons, Inc., NJ.

Instruction Hours/week:L: 4 T:0 P:0 Marks: Internal:40 External: 60 Total:100

Course Objectives

This course enables the students,

- To make non-chemistry graduates to get exposed to day to day chemistry related materials and science.
- To learn the terms and definitions in general chemistry and use of popularly used chemicals.
- To discuss the various fields about industrial fuels, sugar and paper industry.
- To understand the fertilizers in the agriculture field.
- To list some of the commercial polymers along with their application
- By applying these concepts they can get job opportunities in various industrial sectors.

Course Outcomes

This course enables the students,

1. Understood the non-chemistry graduates to get exposed to day to day chemistry related materials and science.
2. Learned the terms and definitions in general chemistry and use of popularly used chemicals.
3. Discussed the various fields about industrial fuels, sugar and paper industry.
4. Understood the fertilizers in the agriculture field.
5. Listed some of the commercial polymers along with their application
6. Applying these concepts they can get job opportunities in various industrial sectors.

Methodology

Black-board teaching, Powerpoint presentation and group discussion.

UNIT- I

Industrial Fuels: Energy sources: non-renewable, classification of fuels, solid, liquid and gaseous. Calorific value of fuels and its determination.

Solid fuels: Coal: types, properties and uses of lignite, sub-bituminous coal, bituminous coal and anthracite. Coking and non-coking coal.

Liquid fuels: Refining of crude petroleum and uses of fractions. Hydrodesulphurisation.

Cracking: thermal and catalytic (fixed bed and fluidized bed catalysis). Octane number.

Gaseous fuels: Natural gas and gobar gas: production, composition and uses, Gobar electric cell.

UNIT- II

Chemistry and agriculture: Fertilizers: Discussion on ammonium nitrate, urea, superphosphate, triple superphosphate, diammonium phosphate, potassium nitrate, uses of mixed fertilizers, micronutrients and their role.

Pesticides: Classification of pesticides with examples.

Insecticides: stomach poisons, contact insecticides, fumigants, manufacture and uses of insecticides. DDT, BHC(gammexane: conformation of gamma isomer) pyrethrin mention of aldrin, dieldrin, endrin and pentachlorophenol (and its Na salt) (structures excluded)
Herbicides: 2,4-D and 2,4,5-T.

Fungicides: Bordeaux mixture, mention of lime sulphur, creosote oil and formula.

UNIT- III

Sugar and Paper industry: Sugar industry: Double sulphitation process, refining, and grading of sugar.

Saccharin: synthesis and uses as a sugar substitute. Ethanol: manufacture from molasses by fermentation.

Paper industry: Manufacture of paper: production of sulphite pulp and conversion to paper (bleaching, filling, sizing and calendaring)

UNIT-IV

High Polymers: Classification, types of polymerization.

Natural polymers: polysaccharides (starch and cellulose), polyhydrocarbons (natural rubber) and proteins.

Synthetic polymers: Polyhydrocarbons (polythene, synthetic rubber), polychlorohydrocarbons (PVC, neoprene), polyamides (nylon) and polyphenols (phenolformaldehyde resin). Addition and condensation polymerization, step growth and chain growth polymers.

Comparison and properties of thermoplastics and thermosetting polymers, copolymers. Synthesis, structure and uses: a) rubber: cis-structure and elasticity, Synthetic rubber: neoprene and Buna-S, vulcanization of rubber, additives used in rubber manufacture. Plastics: polythene, polypropene (isotactic structure), Ziegler-Natta polymerization, PVC, PVA, Polystyrene and Bakelite. Blow moulding and injection moulding.

Fibres: rayon, terylene and nylon.

UNIT- V

Articles used in daily life: Glass: composition, manufacture and uses.

Cement: Manufacture: wet and dry processes, composition and setting of cement

Dyes: classification based on structure and application. Synthesis of congo red and malachite green.

Pharmaceuticals: Manufacture of aspirin and penicillin (fermentation process) mention of antibiotics.

TEXT BOOKS:

1. Biswas, A.K., 1989. Frontiers in Applied Chemistry, Narosa publishing House, New Delhi.

REFERENCES:

1. Vermani, O.P and A.K. Narula, 2008. Applied chemistry theory and Practice. New Age International Pvt Ltd Publishers, New Delhi.

Instruction Hours/week:L: 4 T:0 P:0 **Marks: Internal:40 External: 60 Total:100**
End Semester Exam: 3 Hrs

Course Objectives

This course enables the students

- To learn about nature of the light source and its spectral properties.
- To understand about the colour mixing process and its applications in photography and printing.
- To study about the various color measurement techniques.
- To discuss about the colour matching technique through automatically and manually.
- To know about the colour differences and its effect in various application.
- To describe the various instrumentation and its handling in printing process.

Course Outcomes

On the completion of this course, students

1. Learned about nature of the light source and its spectral properties.
2. Understood about the colour mixing process and its applications in photography and printing.
3. Studied about the various color measurement techniques.
4. Discussed about the colour matching technique through automatically and manually.
5. Knew about the colour differences and its effect in various applications.
6. Described the various instrumentations and its handling in printing process.

Methodology

Blackboard teaching, Powerpoint presentation and group discussion.

UNIT- I

Light and colour: Sources of light. Colour rendering, reflection, refraction, transmission, absorption and scattering. Colour attributes. Relation between colour and optical spectrum. Spectral colours and metamerism.

Colour perception: Reflection, transmission and absorption spectra. The physical basis of colour. The human colour vision system. Scotopic and photopic vision. Colour receptors and their spectral response. Hue and saturation, lightness and luminance

UNIT- II

Colour Description: Arrangement of colour, visual attribution of colour, Beer-Lambert's law, colour primaries and color mixing, additive and subtractive color mixing. Applications in photography, electronic colour monitors and colour printing. Colour specification, colour order systems-Munsell colour order system and Ostwald colour order system.

UNIT- III

Colour measurement: Principles of colour measurement, Tristimulus values, CIE diagram, standard illuminant, standard observer and colour matching functions. Spectral reflectance, graphical representation and numeric representation. CIEXYZ and CIELab representation. Colour gamut, RGB, CMY and CYMK gamuts and limitations.

UNIT- IV

Colour matching: Definition. Manual colour matching, single constant (K/S) Kubelka-Munk theory, spectral match, tristimulus match. Color matching and metamerism.

Computer colour matching: Colour sensors, spectral sensitivity. Filters-neutral density and colour filters. Absorption and interference filters. Concept of computer color matching (CCM) system. Application of CCM system to textile processing. Advantages of CCM system. Limitations of CCM system. Colour reproduction-characteristics of electronic monitors.

UNIT- V

Color Differences: Perceptibility and acceptability, methods of assessment, colour difference formula. Measurement of fluorescence- Visual photoelectric and spectrophotometric colourimeter. Advantage of spot spectral measurements- fibre optic spectrophotometer.

TEXT BOOKS:

Semester-III

15CHP311 PHYSICAL CHEMISTRY PRACTICAL -I 4H 2C
(MOLECULAR WEIGHT DETERMINATION AND CONDUCTOMETRIC
TITRATIONS)

Instruction Hours/week:L: 0 T:0 P:4 Marks: Internal:40 External: 60 Total:100

Course Objectives

This course enables the students should have

- To Learn about the heat of solution, determination of molecular weight and distribution coefficient
- To study about basic concepts of conductometric titrations.
- To understand the various laws in electrochemistry.
- To apply the conductometric method for the solutions and measure its conductivity
- To know about how to handle the conductivity meter, spectrophotometer.
- To may realize the how distribution co-efficient influence the solubility of various systems.

Course Outcomes

On the completion of this course, students

1. Learned about the heat of solution, determination of molecular weight and distribution coefficient
2. Studied about basic concepts of conductometric titrations.
3. Understood the various laws in electrochemistry.
4. Applied the conductometric method for the solutions and measure its conductivity
5. Knew about how to handle the conductivity meter, spectrophotometer.
6. Applied the knowledge to realize the how distribution co-efficient influence the solubility of various systems.

Methodology

Blackboard teaching and Demonstration.

Contents

Heat of solution from solubility.

Molecular weight determination by

- i. Freezing point depression of solvents benzene and water by Beckmann method
- ii. By Rast micro methods

Distribution of activity and activity co-efficient by freezing point method.

Distribution co-efficient and determination of equilibrium constant.

Conductivity experiments:

Determination of

- i) Equivalent conductance of a strong electrolyte and verification of Debye-Huckel Onsager law
- ii) Verification of Ostwald dilution law and Kohlraush law for weak electrolytes.

Conductometric determination of Pka of a weak acid.

Hydrolysis constant of aniline hydrochloride.

Determination of the solubility of a sparingly soluble salt.

Conductometric titrations:

Acid-base and precipitation titrations including mixture of halides.

15CHP312 PHYSICAL CHEMISTRY PRACTICAL- II 4H 2C
(CHEMICAL KINETICS AND POTENTIOMETRIC TITRATIONS)

Instruction Hours/week:L: 0 T:0 P:4 Marks: Internal:40 External: 60 Total:100

Course Objectives

This course enables the students should have

- To learn about the principles of electrochemistry and determination EMF
- To understand about the basic needs of Chemical Kinetics and Potentiometric titrations.
- To study the principles about adsorption process.
- To know about how to handle the potentiometer, electrodes and spectrophotometer.
- To apply the knowledge of chemical kinetics in various preparation organic/inorganic compounds.
- To investigate the metal concentration in water samples using adsorption technique.

Course Outcomes

On the completion of this course, students to

1. Learned about the principles of electrochemistry and determination EMF
2. Understood about the basic needs of Chemical Kinetics and Potentiometric titrations.
3. Studied the principles about adsorption process.
4. Knew about how to handle the potentiometer, electrodes and spectrophotometers.
5. Applying the knowledge of chemical kinetics in various preparation organic/inorganic compounds.
6. Investigating the metal concentration in water samples using adsorption technique.

Methodology

Blackboard teaching and Demonstration.

Contents

Electromotive force determination of standard potentials of Cu, Zn, Ag.

Determination of pH and pKa values using hydrogen and quinhydrone electrodes and glass electrode pH meter- potentiometric acid-base titrations.

Determination of formal redox potential of a redox system and redox titrations.

Determination of solubility product of a sparingly soluble salt concentration cell and chemical cell.

Determination of activity co-efficients from emf data.

Precipitation titration of a mixture of halides.

Chemical Kinetics:

- i . Evaluation of Arrhenius parameters using acid hydrolysis of an ester.
- ii. Base catalysed hydrolysis of an ester conductometrically.
- iii. Rate of reaction between persulphate and iodide ions study of salt over the persulphate- iodide reaction.

Evaluation of catalytic constants for weak acids and verification of Bronsted catalysis law.

Adsorption Experiments:

Adsorption of oxalic acid and acetic acid on activated charcoal-Fruendlich isotherm.

Instruction Hours/week: L: 0 T: 0 P: 0**External: 100 Total: 100****Course Objectives**

The course enables the student

- To know the history and perspectives of Nanotechnology.
- To learn about the various types and significant of 1D, 2D and 3D nanoparticles
- To list the various types of nanoparticles and its application.
- To discuss about carbon based nanomaterials and its properties
- To explain the metal oxide based nano materials
- To motivate and lead the student in the field of nanotechnology.

Course Outcomes

The completion of this course, students

1. Knew about the history and perspectives of Nanotechnology.
2. Learned about the various types and significant of 1D, 2D and 3D nanoparticles
3. Remembered the various types of nanoparticles and its application.
4. Discussed about carbon based nanomaterials and its properties
5. Explained the metal oxide based nano materials
6. Motivated and lead them in the pathway of nanotechnology

Methodology

Self study

UNIT- I

Nanotechnology: Introduction-definition-origin of nanotechnology-difference between bulk and nanomaterials-size dependent properties (magnetic, electronic, transport and optical).

UNIT- II

Classification of nanomaterials: Classification based on dimensional property - zero D, 1D, 2D and 3D nanostructures.

UNIT- III

Types of nanomaterials: Metal oxides and metal nano particles-ceramic nano particles-semi conducting quantum dots-coveshell, quantum dots-nanocomposites - micellar nanoparticles

UNIT- IV

Carbon based nanomaterials: Fullerenes- Carbon nanotubes-single walled and multiwalled nano tubes- structures-carbon nanofibre.

UNIT- V

Metallic and oxide based nanomaterials: Metallic and oxide based nanomaterials – ceramic oxide nanomaterials – semiconductor oxide nanomaterials – nanocomposites and core-shell nanomaterials – micellar nanomaterials.

Instruction Hours/week: L: 0 T: 0 P: 0

External: 100 Total: 100

Course Objectives

This course enables the students,

- To understand the basic concepts in UV-Visible, IR and Raman spectroscopic analysis.
- To study important terms in NMR of ^1H , ^{13}C , ^{31}P , ^{19}F .
- To discuss the ESR Spectroscopy and the magnetic property of molecules.
- To explain the colourimetric analysis and its relationship with UV-Visible spectroscopy.
- To learn about basic thermal analysis instruments.
- To apply this techniques to identify the molecular structure of compounds and predict their properties.

Course Outcomes

On the completion of this course, students have to

1. Understood the basic concepts in UV-Visible, IR and Raman spectroscopic analysis.
2. Studied the important terms in NMR of ^1H , ^{13}C , ^{31}P , ^{19}F .
3. Discussed the ESR Spectroscopy and the magnetic property of molecules.
4. Explained the colourimetric analysis and its relationship with UV-Visible spectroscopy.
5. Learned about basic thermal analysis instruments.
6. Apply these techniques to identify the molecular structure of compounds and predict their properties.

Methodology

Self study

UNIT- I

Analytical Chemistry: Introduction to Analytical Chemistry and its interdisciplinary nature. Concept of sampling. Importance of accuracy, precision and sources of error in analytical measurements. Presentation of experimental data and results, from the point of view of significant figures.

UNIT- II

Colourimetric Analysis and UV-Visible Spectroscopy: Beer Lambert's law, Principles of single and double beam instruments – applications for analysis of inorganic and organic samples.

Infrared spectrophotometric analysis – principle and instrumentation and molecular structure determination.

Raman Spectra – principle, basic instrumentation – structural analysis.

UNIT- III

NMR, NQR and Mossbauer Spectroscopy: Nuclear Magnetic Resonance – Principle, instrumentation, structure determination. NMR of ^1H , ^{13}C , ^{31}P , ^{19}F .

NQR - Nitrosyl compounds, Mossbauer of Fe and Sn systems.

UNIT- IV

Electron Spin Resonance: Principle, instrumentation, applications to coordination compounds.

Magnetic Susceptibility and measurements- Guoy method, Faraday method-applications.

UNIT-V

Thermal Analysis: Thermo gravimetric and differential thermal analysis, thermometric titrations, differential scanning colourimetry – basic instrumentation and applications.

PROGRAM OUTCOMES (PO)

- a. Graduates will demonstrate solid foundation in bookkeeping, accounting and professional fundamentals required to record the business transaction ability.
- b. Graduates will apply IT skills in Accounting, Taxation and business management for effective decision making.
- c. Graduates will obtain the ability to analyse and solve the complex business problems using quantitative; qualitative tools and technologies.
- d. Graduates will exhibit critical thinking skills in understanding the real-time business issues and advocate solutions.
- e. Graduates will acquire and demonstrate the interpersonal and communication skills to convey and negotiate ideas for achieving the common goals.
- f. Graduates will attain and exhibit skills to work as team to take effective decisions in achieving the common goals.
- g. Graduates will demonstrate the leadership skills to initiate, lead and deliver the best performance together with the team members.

PROGRAM SPECIFIC OUTCOMES (PSO)

- h. Graduates will gain lifelong learning practice by identifying, formulating, and analysing complex business problems to reach substantiated conclusions through research considering the changing environmental factors.
- i. Graduate will demonstrate legal, ethical code and socially sustainable code of conduct in both personal and professional decision making process pertaining to their career.

PROGRAM EDUCATIONAL OBJECTIVES (PEO)

- I. Graduates will acquire knowledge in accounting, taxation, finance and management concepts and apply it in business to become qualified professionals.
- II. Graduates will possess the professional skills and competence to perform effectively in higher studies, jobs and entrepreneurial ventures.
- III. Graduates will develop a lifelong learning by applying the gained knowledge and skills in research and practice.
- IV. Graduates will demonstrate high standard of ethical conduct and become socially responsible citizens contributing to the sustainable growth of the career and the community.

Program Educational Objectives	Program Outcomes								
	a	b	c	d	e	f	g	h	i
Graduates will acquire knowledge in accounting, taxation, finance, management concepts and computer applications and apply it in business to become qualified professionals.	✓		✓	✓			✓	✓	✓
Graduates will possess the professional skills, computer skills and competence in field related to accounting and commerce which will enable them to perform effectively in higher studies, KPO/BPO field of IT sector and entrepreneurial ventures.	✓	✓			✓	✓ ✓			✓
Graduates will continuously improve accounting and computer skills required to develop a life long learning through IT enabled research and practice.			✓	✓				✓	
Graduates will demonstrate high standard of ethical conduct in application of computer in accounting and finance and become socially responsible citizens contributing to the sustainable growth of profession and the community.	✓		✓	✓			✓	✓	✓

பகுதி – I. தமிழ் பருவம் I
15LAU101 : தமிழ் முதல் தாள்
(இளநிலை கலையியல் பட்ட வகுப்புகளுக்குரியது)

பாடத்திட்டப் பொதுநோக்கம்

- கற்றல் வழி சிந்தனைத் திறனையும், கருத்து வெளிப்பாட்டுத் திறனையும், மேம்படுத்துதல்.
- ஆய்வுநோக்கை மேம்படுத்துதல்.
- இலக்கியங்கள் உணர்த்தும் வாழ்வின் நுட்பமான பகுதிகளை உணர்த்துதல்.
- மனித மனத்தினைப் பக்குவப்படுத்துதலில் இலக்கியம் தரும் பங்கினை உணர்த்துதல்.
- வளர்ந்து வரும் சமூகத்தில் அறஉணர்வு, பண்பாடு போன்றவை குறித்து அறிவூட்டல்.
- அரசுத் தேர்வுகளுக்கு மாணவர்களை ஆயத்தமாக்குதல்.

பாடத்திட்டப் பயன் விளைவு

- இந்திய குடியுரிமைப் பணி முதலான போட்டித் தேர்வுகளில், விருப்பப் பாடமாக இடம்பெறுகின்ற, 'தமிழ் இலக்கிய வரலாறு' குறித்த முழுமையான அறிமுகம் பெற்றிருத்தல்.
- கல்வெட்டியல், ஓலைச்சுவடியியல் மற்றும் தொல்லியல் சார்ந்த ஆவணத் தேடலுக்குரிய ஆய்வுமனப்பான்மையுடன், இலக்கியங்களை அணுகுதல்.
- தமிழின் வளர்ச்சித் துறையாகிய, 'அறிவியல் தமிழ்' ; 'இணைய தமிழ்' குறித்த பன்னோக்கு அணுகுமுறையிலான ஆய்வுச் சிந்தனை மேம்பாடு.
- வேலைவாய்ப்புக்குரிய சுயதிறன் மேம்பாட்டுடன், படைப்பாக்கத்திறன் மேம்பாடும் பெற்றிருத்தல் .
- சமுதாய மற்றும் வாழ்வியல் மதிப்புகளைப் பேணுவதற்குக் கருவியாக இலக்கியங்களை நாடுகின்ற மனப்பான்மை வளர்ச்சி.
- மொழிபெயர்ப்புத் துறைசார்ந்த வேலைவாய்ப்புத் திறன் பெற்றிருத்தல்

அலகு I தற்கால இலக்கியம்	
1.மனோன்மனீயம்	- கந்தரம்பிள்ளை
2.பாரதியார்	- பாரதியார் கவிதைகள்
3.பாரதிதாசன்	- குன்றம் (அழகின் சிரிப்பு)
4.நாமக்கல் கவிஞர்	- தமிழன் இதயம்
5.அப்துல் ரகுமான்	- கூடுதற்கும் பறவைகள்
6.சிற்பி	- ஒடு ஒடு சங்கிலி (ஒரு கிராமத்து நதி)
7.எவாழ்ந்து	- மரங்களைப்பாடுவேன்
8.நாமரை	- அவசரம் ஒரு அகர ஊசி
9.புதியமாதவி	- (ஒருகதவும் கொஞ்சம் கள்ளிப்பாலும்) மகளே வந்துவிடு (ஹேராம்)
அலகு II பகுதி இலக்கியம்	
1. சைவம் - பன்னிரு திருமுறைகளில் 12 பாடல்கள்	
2. வைணவம் - ஆழ்வார் பாடல்கள் 12)	
அலகு III உரைநடை	
1. பழந்தமிழ்நாடு	- டாக்டர். கு. கதிரேசன்
2. நொய்யல் நாகரிகம்	- புலவர் செ. இராக
3. அறிவியல் தமிழாக்கம் இன்றைநிலை	- வா.செ. குழந்தைசாமி
4. கணிப்பொறி	- கஜாதா
5. கற்றுச்சூழல் மேலாண்மை	- தமிழ்நாடு அரசு
அலகு IV பயிற்சி	
இலக்கணம், கடிதங்கள் - அலுவலகநிலை, மொழிபெயர்ப்பு நிகழ்ச்சித் தொகுப்புகள்	
(பயிற்சி ஏடு - கல்லூரி வெளியீடு)	
அலகு V இலக்கிய வரலாறு	
1.தற்காலத் தமிழ்க் கவிதைகளின் வரலாறும், வளர்ச்சியும்	
2.புதுக்கவிதைப் பிதாமகன்கள் குறித்த அறிமுகம்	
3.பாரதியார், பாரதிதாசனின் தமிழ்த்தொண்டு	
4.உரைநடையின் தோற்றமும் வளர்ச்சியும்	

Course Objectives:

1. To enable the learners to acquire English language skills at a faster pace.
2. To introduce different kinds of literary works
3. To familiarize different genres of Literature
4. To instruct moral values through literature.
5. To improve their productive and receptive skills
6. To strengthen the basic knowledge about grammar.

Course Outcomes:

1. Learn to reflect on the literary works and communicate flexibly.
2. Reading and comprehending literary works
3. Genres of literature to provide moral education
4. Develop communication skills in business environment
5. Interpersonal skills will be developed.
6. Betterment of language competence

UNIT I:

Prose: Google Guys (Extract) – Richard L Brandt

Poetry: The Blind Pedlar – Osbert Sitwell

Short Story: A Garden So Rich – Christie Craig

Vocabulary: Prefixes, Antonyms, Sentence Completion

Grammar: Articles, Adverbs, Pronouns

Composition: Proverb Expansion

UNIT II:

Prose: Happiness 101 – Geeta Padmanabhan

Poetry: An Old Woman – Arun Kolatkar

Vocabulary: Suffixes, Analogies

Grammar: Nouns, Adjectives

Composition: Dialogue Writing

UNIT III:

Prose: Structured Procrastination – John Perry

Short Story: The Umbrella Man – Roald Dahl

One-Act Play: The Boy Who Stopped Smiling – Ramu Ramanathan

Vocabulary: Synonyms, Euphemisms, Word Definitions

Grammar: Verbs, Conjunctions and Interjection, Indirect/Reported Speech

UNIT IV:

Poetry: No Sentence – Anjum Hassan

One-Act Play: While the Auto Waits- O’ Henry

Vocabulary: Words Often Confused, Anagrams

Grammar: Prepositions, Voice- Active and Passive

Composition: Letter Writing- Informal

UNIT V:

Short Story: The Bird – Amar Jalil

One-Act Play: The Cellphone Epidemic – Claudia I. Haas

Vocabulary: Portmanteau Words, One Word Substitute

Grammar: Questions, Pronunciation

Composition: Letter Writing- Formal

Prescribed Texts:

Rao, G. Chandralekha and et al. *Spring 2013*. Emerald Publishers: Chennai.

Reference

Syamala, V. English for Communication. 2006. Emerald Publishers: Chennai

COURSE OBJECTIVES:

To make the students

1. To make the students learn the basic concepts, conventions, nature of accounting and also to acquire Conceptual Knowledge in different accounting standards.
2. To know about the accounting process and preparation of final accounts
3. To understand about the Accommodation of bills, Average Due Date and Account Current.
4. To understand and apply the techniques for preparing accounts in different business organizations like consignment and joint venture.
5. To know about the Bank Reconciliation Statement process and Accounting Standards
6. To have a in depth knowledge on partnership accounts

COURSE OUTCOMES:

Learners should be able to

1. Comprehend the accounting concepts, principles and to comply the accounting standards.
2. Acquire knowledge on accounting process and preparation of final accounts
3. To apply appropriate judgment derived from knowledge about bill of exchange
4. Recognize the accounting process of financial statement and critically think in preparing Accounts, rectification of errors, Consignment and Joint Venture.
5. Recognize the Bank Reconciliation Statement process and Accounting Standards
6. Acquired an in-depth knowledge on various partnership concepts

UNIT I

Introduction: Need for Accounting-Definition, Branches and Functions of Accounting-Book-Keeping Vs Accounting-Principles- Concepts and Conventions-Nature of Accounts and Rules of Debit and Credit – Journal – Ledger – **Trail Balance**.

UNIT II

Subsidiary Books and Final Account: Subsidiary Books - Cash book - Single, Two Columnar, Three Columnar and **Petty Cash Book** - Errors and its Rectifications - Preparation of Final Accounts with Adjustments.

UNIT III

Bills of Exchange: Introduction - Definition - Features - Advantages -Trade Bills and Accommodation of Bills-Distinguish between Bills of Exchange and Promissory Note - Accounting for Bills of Exchange-Recording Bills Transaction in Journal and Ledger-**Retiring Bills under Rebate - Dishonour and Renewal of Bills.**

UNIT IV

Bank Reconciliation Statement (BRS), Average Due Date and Account Current: BRS-Meaning, Definition and Causes for Differences-Method of Preparation of BRS. **Average Due Date and its Calculation- Preparation of Account Current.**

UNIT V

Consignment and Joint Venture: Consignment - Meaning, Features, Important terms - Differences between Sale and Consignment-Recurring and Non-recurring Expenses-Accounting treatment. Joint Venture Accounts-Meaning, Features and Distinguish between Joint Venture and Partnership-Different method of Joint Venture account.

Note: Distribution of marks between problems and theory shall be 80% and 20%.

5. T.S.Reddy and A.Murthy (2012) , “Financial Accounting” Margham Publications, Chennai.

COURSE OBJECTIVES :

To make the students

1. To understand the concept, functions and form of business organization.
2. To know the different finance sources of business and location of the business.
3. To impart the importance of human behavior and personality to resolve conflict and managing change.
4. To understand the leadership and motivation theories and realise the practical implication in the individual performance and organization behavior.
5. To realise the importance of groups and teamwork and managing of conflict between the members of the organization.
6. To demonstrate the importance and functions of stock exchange in India

COURSE OUTCOMES:

Learners should be able to

1. Understand the concepts of business and form of business organization.
2. Execute the managerial functions of planning, organizing and controlling in a variety of circumstances.
3. Assess the impact of the personality traits and their perception in day to day performance.
4. Exhibit the leadership skills whenever required and work in groups and teams by motivating and resolving conflict arising in groups and adapting to change.
5. Understand the Office machines and equipments.
6. In depth knowledge about the functioning of stock exchange in India

UNIT I

Business and Organization: Nature and Scope of Business- Forms of Business Organisation –Sole Trader, Partnership Firms, Companies and Co-operative Societies –Public Enterprise.

UNIT II

Location of Business: Factors Influencing Location, Localization of Industries- Sources of Finance – Shares, Debentures, Public Deposits, Bank Credit and Trade Credit –Merits and Demerits.

UNIT III

Stock Exchange: Functions – Procedure of Trading – Functions of SEBI – DEMAT of Shares- Trade Association-Chamber of Commerce.

UNIT IV

Office: Functions - Significance – Office Layout and Office Accommodation – Filing and Indexing

UNIT V

Office Machines and Equipments: Data Processing Systems – EDP –Uses and Limitations – Office Furniture.

TEXT BOOK

1. M.C. Shukla - Business Organisation and Management – (2012) S.Chand & Company Ltd.,

REFERENCES

1. R.K.Chopra – Office Management– (2009)Himalaya Publishing House
2. Y.K.Bhushan – Business Organisation and Management–(2009)Sultanchand & sons
3. S.C Saksena – Business Administration and Management– (1983)Sahitya Bhawan
4. Singh.B.P & Chopra - Business Organisation and Management –(1985) Dhanpat Rai & sons

COURSE OBJECTIVES**To make the students**

1. To understand the concept of matrices
2. To acquire the knowledge of differential calculus
3. To know the concepts of central tendency and dispersion
4. To understand the correlation and regression concepts
5. To be aware of the index numbers and trend analysis
6. To understand the concept of Linear Programming Problem Formulation and Graphical Method

COURSE OUTCOMES:**Learners should be able to**

1. Utilize the concept of matrices, differential calculus to solve business problems
2. Calculate and apply the measure of central tendency and dispersion in decision making.
3. Evaluate the relationship and association between variables to formulate the strategy in business.
4. Apply the concept of index numbers and trend analysis in business decisions.
5. Demonstrate capabilities as problem-solving, critical thinking, and communication skills related to the discipline of statistics.
6. Understand the concept of Linear Programming Problem Formulation and Graphical Method

UNIT I

Matrix - Basic Concepts –Addition and Multiplication of matrices – Inverse of a Matrix – Rank of a matrix – Solution of Simultaneous Linear equations by matrix method.

UNIT II

Basic concept - Simple and Compound Interest – Effective Rate of Interest, Depreciation. Annuities – Present value of an immediate annuity, present value of an annuity due, Amount of an immediate annuity, Amount of an annuity due.

UNIT III

Limits of Algebraic Functions – Simple Differentiation of Algebraic Functions – Meaning of Derivatives – Evaluation of First and Second order derivatives – Maxima and Minima – Application to Business problems.

UNIT IV

Elementary Integral Calculus – Determining Indefinite and definite Integrals of simple functions – Integration by parts-Applications to business problems.

UNIT V

Linear Programming Problem Formulation – Solution by Graphical Method - Solution by Simplex Method(problems using slack variables only).

TEXT BOOK

3. Eugene Don.,& Joel lerner., 2004. Basic Business Mathematics, Tata Mc Graw-Hill, New Delhi.

COURSE OBJECTIVES

To make the students

1. To improve the integral development of human beings
2. To train the students towards sustainable lifestyle
3. To create awareness about the values and their significance and role
4. To imbibe the concept of discipline and freedom
5. To impart the Indian family traditions in students
6. To learn the concept of personality and personality development

COURSE OUTCOMES:

Learners should be able to

1. Impart knowledge on both human beings and Life Style.
2. Gain knowledge on human values roles and its significance.
3. Develop a sense of competitive spirit, co-operation, leadership and diligence.
4. Enrich on punctuality, and team-spirit as well as to provide a backdrop for the development of their creative talents
5. Acquired the knowledge about the importance of Indian family values and traditions
6. Acquired knowledge about the concept of personality and personality development

UNIT – I

Concept of Self, self-esteem and self-confidence. Concept of personality, determinants and disorganisation of it. Personality development – meaning.

UNIT – II

Goal setting – meaning and importance; steps in goal setting Manners and Etiquette – meaning need and importance; means to improve. Positive thinking.

UNIT – III

Discipline – meaning. Concept of Roles and Responsibility Time Management – Meaning and steps for effective time management.

UNIT – IV

Interpersonal relationship – meaning and importance; means to improve it. Healthy friendship.

UNIT – V

Family Relationship importance of it; Means to improve. Spirituality – meaning. Its relationship with Altruism, sacrifice, self control, tolerance and truthfulness.

TEXT BOOKS

1. Karpagam Academy of Higher Education, Study Material, 2015.

COURSE OBJECTIVES**To make the students**

1. To impart knowledge on both Aptitude and Soft skills to the students
2. To critically evaluate and demonstrate various principles involved in solving mathematical problems and to adopt new and faster methods of calculations.
3. To Reinforce competencies in soft skills which are crucial in a social setting
4. To achieve the analytical and reasoning competencies and to improve their communication and presentation skills
5. To gain knowledge about the data interpretation
6. To improve the writing skill of the students

COURSE OUTCOMES:**Learners should be able to**

1. Impart knowledge on both Aptitude and Soft skills to the students
2. Demonstrate various principles involved in solving mathematical problems and to adopt new and faster methods of calculations.
3. Reinforcing competencies in soft skills which are crucial in a social setting
4. Achieve the analytical and reasoning competencies and to improve their communication and presentation skills
5. Acquired understanding about the data interpretation
6. Enhanced the writing skill of the students

UNIT - I

Introduction to Quantitative Aptitude, Speed Maths, Problems on Numbers, Averages, Ratios and Proportions, Problems on Ages

UNIT - II

Number Series, Blood Relation, Image Analysis, Direction Sense, Syllogism, Coding and Decoding

UNIT – III

Percentages, Data Interpretation, Profit and Loss, Simple Interest and Compound Interest

UNIT – IV

Parts of Speech, Tense, Subject Verb Agreement, Active and Passive Voice, Articles, Prepositions

UNIT - V

Conditional Clause, Degrees of Comparison, Goal Setting, Interpersonal Skills

L	T	P	C

பகுதி - I. தமிழ்

பருவம் II

தமிழ் இரண்டாம் தாள்
(இளநிலை கலையியல் பட்ட வகுப்புகளுக்குரியது)

பாடத்திட்டப் பொதுநோக்கம்

- கற்றல் வழி சிந்தனைத் திறனையும், கருத்து வெளிப்பாட்டுத் திறனையும், மேம்படுத்துதல்.
- ஆய்வுநோக்கை மேம்படுத்துதல்.
- இலக்கியங்கள் உணர்த்தும் வாழ்வின் நுட்பமான பகுதிகளை உணர்த்துதல்.
- மனித மனத்தினைப் பக்குவப்படுத்துதலில் இலக்கியம் தரும் பங்கினை உணர்த்துதல்.
- வளர்ந்து வரும் சமூகத்தில் அறஉணர்வு, பண்பாடு போன்றவை குறித்து அறிவூட்டல்.
- அரசுத் தேர்வுகளுக்கு மாணவர்களை ஆயத்தமாக்குதல்.

பாடத்திட்டப் பயன் விளைவு

- இந்திய குடியுரிமைப் பணி முதலான போட்டித் தேர்வுகளில், விருப்பப் பாடமாக இடம்பெறுகின்ற, 'தமிழ் இலக்கிய வரலாறு' குறித்த முழுமையான அறிமுகம் பெற்றிருத்தல்.
- கல்வெட்டியல், ஓலைச்சுவடியியல் மற்றும் தொல்லியல் சார்ந்த ஆவணத் தேடலுக்குரிய ஆய்வுமனப்பான்மையுடன், இலக்கியங்களை அணுகுதல்.
- தமிழின் வளர்ச்சித் துறையாகிய, 'அறிவியல் தமிழ்' ; 'இணைய தமிழ்' குறித்த பன்னோக்கு அணுகுமுறையிலான ஆய்வுச் சிந்தனை மேம்பாடு.
- வேலைவாய்ப்புக்குரிய சுயதிறன் மேம்பாட்டுடன், படைப்பாக்கத்திறன் மேம்பாடும் பெற்றிருத்தல் .
- சமுதாய மற்றும் வாழ்வியல் மதிப்புகளைப் பேணுவதற்குக் கருவியாக இலக்கியங்களை நாடுகின்ற மனப்பான்மை வளர்ச்சி.

மொழிபெயப்புத் துறைசார்ந்த வேலைவாய்ப்புத் திறன் பெற்றிருத்தல்

அலகு I செய்யுள்	
1.சங்கஇலக்கியம்	அகநானூறு, புறநானூறு, நற்றிணை,குறுந்தொகை, ஐங்குறுநூறு, பதிற்றுப்பத்து,பரிபாடல்
2. நீதி இலக்கியம்	திருக்குறள் (ஈகை, தெரிந்து செயல்வகை) நாலடியார் (நல்லிளம் சேர்தல்)
3.பக்தி இலக்கியம்	திருஞானசம்பந்தர் தேவாரம், திருவாசகம், பெரியாழ்வார் திருமொழி, நாச்சியார் திருமொழி
அலகு II சிறுகதை	
காலனும் கிழவியும்	- புதுமைப்பித்தன்
அக்கிளிப்பிரவேசம்	- ஜெயகாந்தன்
கன்னகி	- இராஜம் கிருஷ்ணன்
பாதுகை	- பிரபஞ்சன்
உருமாற்றம்	- க. வேணுகோபால்
அலகு III இலக்கணம்	
அகம்,புறம், திணை,துறை	
அலகு IV. பயிற்சி	
விண்ணப்பங்கள்- கட்டுரைகள்- கடிதங்கள்	
அலகு V இலக்கிய வரலாறு	
1.எட்டுத்தொகை, பத்துப்பாட்டு நூல்கள் அறிமுகம்	
2. பன்னிரு திருமுறை, நாலாயிரதில்யபிரபந்தம்	
3. சைவ, வைணவ இலக்கியங்கள் தமிழுக்குச் செய்த தொண்டு	
4. சிறுகதையின் தோற்றமும் வளர்ச்சியும்	

Course Objectives:

1. To enable the learners to acquire English language skills through literature.
2. To familiarize them with English literature.
3. To acquire Grammar knowledge.
4. To help learners imbibe cultural values.
5. To acquire skill of making correct sentences.
6. To reflect originality on the application of soft skills and express in writing their views.

Course Outcomes:

1. Learn to enjoy the ecstasy of literature.
2. The select literary pieces will develop the confidence level of the learners.
3. To get the social values.
4. To know the importance of communication
5. Get sound knowledge in English
6. Trained to communicate well for business purpose.

UNIT I

Prose: The Unexpected- Robert Lynd

Poetry: The Village Schoolmaster – Oliver Goldsmith

Short Story: The Lion's Share – Arnold Bennett

Vocabulary: Homonyms

Grammar: Irregular Verbs

UNIT II

Prose: Travel by Train – J. B. Priestly

Poetry: The Gift of India – Sarojini Naidu

Grammar: Sentence patterns

Composition: Reading Comprehension

UNIT III

Prose: Women's Education is Almost More Important than the Education of Boys and Men – Indira Gandhi

Short Story: The Necklace – Guy De Maupassant

One-Act Play: The Referee – W.H. Andrews and Geoffrey Dearmer

Vocabulary: Similes

Grammar: Discourse Markers

Composition: Report Writing

UNIT IV

Poetry: Ozymandias – P.B. Shelley

One-Act Play: The Pot of Broth- W.B. Yeats

Vocabulary: Collective Nouns

Grammar: Correction of Sentences

Composition: Picture Reading

UNIT V

Short Story: The Silver Butterfly– Pearl S. Buck

One-Act Play: The Bear – Anton Chekov

Vocabulary: Acronyms

Grammar: Question Tags

Composition: Drafting Advertisement

Prescribed Texts

Wings of Communication 2014. Board of Directors. Emerald Publishers: Chennai

Reference

Syamala, V. English for Communication. 2006. Emerald Publishers: Chennai.

COURSE OBJECTIVES:**To make the students**

1. To make the students learn the basic concepts, conventions, nature of accounting and also to acquire Conceptual Knowledge in different accounting standards.
2. To know about the accounting process and preparation of final accounts
3. To understand about the Accommodation of bills, Average Due Date and Account Current.
4. To understand and apply the techniques for preparing accounts in different business organizations like consignment and joint venture.
5. To know about the Bank Reconciliation Statement process and Accounting Standards
6. To give an insight about the company accounts

COURSE OUTCOMES:**Learners should be able to**

1. Comprehend the accounting concepts, principles and to comply the accounting standards.
2. Acquire knowledge on accounting process and preparation of final accounts
3. To apply appropriate judgment derived from knowledge about bill of exchange
4. Recognize the accounting process of financial statement and critically think in preparing Accounts, rectification of errors, Consignment and Joint Venture.
5. Recognize the Bank Reconciliation Statement process and Accounting Standards
6. Apply the concepts of company accounts

UNIT I

Depreciation Accounting: Meaning – Types – Definition – Causes of Depreciation - Need and Significance of Depreciation- Methods of Providing Depreciation- Reserves and Provisions.

UNIT II

Investment Accounts and Royalty: Meaning - Nature of Investment- Types of Securities- Purchase and Sale of Investment- Cum- Interest and Ex-Interest Quotations-Investments in Equity Shares. **Meaning of Royalty- Explanation of Technical Terms - Preparation of Royalty Accounts (Excluding Sublease).**

UNIT III

Single Entry System: Meaning- Features- Difference between Double Entry and Single Entry -Difference between Balance Sheet and Statement of Affairs - Step for Calculating Profit or Loss - Statement of Affairs Method and Conversion Method.

UNIT IV

Branch Accounts and Departmental Accounts: Branch - Meaning, Objectives, Types of Branches - Dependant Branches - Goods Invoiced at Cost Price and at Selling Price-Stock and Debtors System - Final Account System. **Departmental Accounts - Meaning, Need, Features - Distinction between Departmental and Branches - Types and Techniques of Departmental Accounting.**

UNIT V

Hire Purchase and Installment Purchase System: Hire Purchase - Definition, Features and Distinction between Hire Purchase and Installment Purchase Systems - Accounting Treatment-Calculation of Interest - Default and Repossession-Hire Purchase Trading Account. Installment Accounting-Installment Purchase System - Accounting Treatment.

Note: - Distribution of Marks: Theory - 20% and Problems - 80%

TEXT BOOK

5. R.L. Gupta and Rathaswamy, 2009, Advanced Accounting , Sultan Chand & Sons. New Delhi

COURSE OBJECTIVES:**To make the students**

1. To apply the learning of the bank functions and operations lifelong.
2. To comprehend and apply the laws related to banking.
3. To Critically evaluate the appropriate alternative products and services suitable for customer needs and draw a solution.
4. To imparting knowledge about the Collecting and Paying Banker.
5. To know the process of Negotiable Instruments.
6. To have a knowledge about banking principles and practice in India.

OBJECTIVES

1. Apply the learning of the bank functions and operations lifelong.
2. Critically evaluate the appropriate alternative products and services suitable for customer needs and draw a solution.
3. Comprehend and apply the laws related to banking.
4. Imparting knowledge about the Collecting and Paying Banker.
5. The process of Negotiable Instruments.
6. knowledge about banking principles and practice in India.

UNIT I

Introduction: Definition of Banker and Customer - General Relationship – Special Relationship.

UNIT II

Types of Bank Account: Opening of a New Account – General Precautions – Types of Accounts – Fixed Deposit – Savings Account – Current Account – Recurring Deposits – Pass Book – Functions – Nomination – Special Types of Customers – Minor – Lunatic – Married Women – Drunkards – Joint Account – Partnership Account – Limited Company – Non Trading Associations – Trust Accounts – Closure of a Bank Account.

UNIT III

Negotiable Instruments: Characteristics of Negotiable Instruments – Different Types of Negotiable Instruments – Bills of Exchange – Essentials – Promissory Note – Cheques – Kinds - Characteristics – Crossing of Cheques – Material Alteration – Signature - Endorsement – Definition – Types – Significance.

UNIT IV

Collecting and Paying Banker: Collection and Payment of Cheques – Collecting Banker – Duties and Responsibilities -Statutory Protection – Paying Banker – Duties and Responsibilities - Statutory Protection – Precautions for the Paying Banker – Cheque Transaction System.

UNIT V

Employment of Funds: Meaning -Loans and Advances – Principles of Sound Lending – Modes of Creating Charge – Lien, Pledge, Hypothecation and Mortgage – Advances against Collateral Securities – Guarantees – Stock Exchange Security – Goods – Documents of Title to Goods – Immovable Property – LIC Policy – Gold and Silver- Recent Trends in Banking- ATM, Debit Card, Credit Card – Smart Card.

COURSE OBJECTIVES**To make the students**

1. To understand the concept of matrices
2. To acquire the knowledge of differential calculus
3. To know the concepts of central tendency and dispersion
4. To understand the correlation and regression concepts
5. To be aware of the index numbers and trend analysis
- 6 To be able to apply various analysis needed for business research

COURSE OUTCOMES:**Learners should be able to**

1. Utilize the concept of matrices, differential calculus to solve business problems
2. Calculate and apply the measure of central tendency and dispersion in decision making.
3. Evaluate the relationship and association between variables to formulate the strategy in business.
4. Apply the concept of index numbers and trend analysis in business decisions.
5. Demonstrate capabilities as problem-solving, critical thinking, and communication skills related to the discipline of statistics.
- 6 Apply various analysis needed for business research

UNIT I

Meaning and definition of statistics – Classification of data - Frequency distribution - Diagrammatic Presentation – Bar diagram and Pie diagram – Graphic Presentation – Histogram, Frequency Polygon, Frequency curve and Ogives.

UNIT II

Measures of central tendency : Arithmetic Mean , Median , Mode . Measures of dispersion – Range, Quartile deviation, Standard deviation and Coefficient of variation.

UNIT III

Correlation : Definition , Type of correlation , Method of correlation - scatter diagram – Karl Pearson's coefficient of correlation – Spearman's Rank correlation.

Regression: Definition, Regression equations – Methods of forming the regression equations - Problems.

UNIT IV

Index numbers – meaning and definition – uses – methods of construction – Unweighted and weighted index number – Laspeyre's, Paasche's and Fischer's method – Tests for an ideal index number – Wholesale and Cost of living index .

UNIT V

Time Series: Meaning – Components – Models – Business forecasting – methods of estimating trend – graphic, semi average, moving average and least square method – Seasonal variation – Methods of Simple Average.

FOUNDATION COURSE – B
ENVIRONMENTAL STUDIES

2H - 1C

Total hours/week: L:2 T:0 P:0

Marks: Internal: 100 External: - Total: 100

COURSE OBJECTIVES:**To make the students**

1. To understand the ecosystem and its functions
2. To be aware of the difference between the renewable and non-renewable resources.
3. To know about biodiversity and the importance of conservation.
4. To be aware of the different pollution that affects the environment.
5. To know about the social issues prevailing in the environment.
6. To impart the students with the importance of nature and thus create a responsibility towards protecting the natural resources

COURSE OUTCOMES:**Learners should be able to**

1. Understand the ecosystem and its impact on human beings.
2. Preserve the non – renewable energy and effectively utilize the renewable energy.
3. Avoid the threats to biodiversity habitat losses.
4. Prevent pollution in the environment
5. Apply the laws relevant to the environment conservation
6. Develop a responsibility in protecting the natural resources

Unit I

Eco system and natural resources: Environment – Definition – components - Ecosystem - Definition, Concept, Scope, importance, structure and functions of ecosystem. Energy flow, Ecological succession. Food chains and food webs. Classification of ecosystem. Natural resources: Forest resources; water resources

Unit II

Environmental pollution: Cause, effects and control measures of Air pollution, water pollution, soil pollution, marine pollution, noise pollution, thermal pollution and nuclear hazards pollution. Solid waste management.

Unit III

Biodiversity and its conservation: Introduction- Definition, genetic, species and ecosystem diversity, biogeographical classification of India- Value of biodiversity: Consumptive, productive uses; social, ethical, aesthetic and option values. Threats to biodiversity: habitat loss, poaching of wildlife, man-wildlife conflicts.

Unit IV

Social issues and the environment: Urban problems related to energy- water conservation and management -Rain water harvesting- water shed management. Resettlement and Rehabilitation. Natural resources and associated problems and sustainable utilization. Environmental Education

Unit V

Environment and human health: Environment and human health-physical fitness, human rights, value of education, Environmental Ethics, EPA Act, Population-Growth explosion-Family welfare programs- population control methods, HIV and AIDS.

COURSE OBJECTIVES**To make the students**

1. To impart knowledge on both Aptitude and Soft skills to the students
2. To critically evaluate and demonstrate various principles involved in solving mathematical problems and to adopt new and faster methods of calculations.
3. To Reinforce competencies in soft skills which are crucial in a social setting
4. To achieve the analytical and reasoning competencies and to improve their communication and presentation skills
5. To enhance the writing skill of students
6. To improve the interpersonal skill of students

COURSE OUTCOMES:**Learners should be able to**

1. Impart knowledge on both Aptitude and Soft skills to the students
2. Demonstrate various principles involved in solving mathematical problems and to adopt new and faster methods of calculations.
3. Reinforcing competencies in soft skills which are crucial in a social setting
4. Achieve the analytical and reasoning competencies and to improve their communication and presentation skills
5. Develop the writing skill of students
6. Improve the interpersonal skill of students

UNIT - I

Introduction to Quantitative Aptitude, Speed Maths, Problems on Numbers, Averages, Ratios and Proportions, Problems on Ages

UNIT - II

Number Series, Blood Relation, Image Analysis, Direction Sense, Syllogism, Coding and Decoding

UNIT – III

Percentages, Data Interpretation, Profit and Loss, Simple Interest and Compound Interest

UNIT – IV

Parts of Speech, Tense, Subject Verb Agreement, Active and Passive Voice, Articles, Prepositions

UNIT - V

Conditional Clause, Degrees of Comparison, Goal Setting, Interpersonal Skills

Course Objectives:

1. To develop confidence to respond in English during situations where the use of English is imperative.
2. To develop fluency in actual conversation in the English language.
3. To develop speech skills necessary for confident and intelligent participations in Group Discussions and develop skills related to teamwork in work places.
4. To develop confidence to respond in English during situations where the use of English is imperative.
5. To develop fluency in actual conversation in the English language.
6. To develop knowledge about business communication.

Course Outcomes:

1. Students learnt the basics and purposes of listening skill.
2. Students understand importance of speaking.
3. Students developed the speaking skills on telephone, business and also in travel
4. Learnt some effective vocabulary learning strategies.
5. Students will able to communicate clearly and effectively and handle their day to day affairs well with their knowledge of language skills.

UNIT I

Listening: Listening comprehension – Listening for Specific Information –Note Taking – Interpreting Charts and Diagrams.

UNIT II

Speaking: Essentials of effective communication – Greeting and Introducing – Making requests – Asking for permission – Giving and Denying Permission – Offering and Accepting Help – Asking for and Declining Help – Giving Instructions and Orders - Talking about likes and dislikes.

Telephone Skills – Understanding telephone conversation – handling calls – leaving messages –making requests - giving instructions and orders

Discussion Skills – Giving your opinion – agreeing and disagreeing – Making suggestions – Interrupting – questioning – reporting – Dealing with questions.

(Completing dialogues)

UNIT III

Reading: Reading – Reading with a purpose –Skimming and Scanning – locating main points – reading critically – Sequencing of sentences – Reading comprehension.

UNIT IV

Writing: Paragraph Writing – Descriptive and Narrative. Safety Instructions/ Suggestions. Expansion of Abbreviations – Spellings- Report writing.

Translation- Translating short sentences and passages from English to Tamil and from Tamil to English.

UNIT V

Vocabulary: Improve English vocabulary: Synonyms – Antonyms – Prefixes – Suffixes – Idioms – Collocations – Different types of English – British and American (Choose the best answer type from a database of 50 words each for each topic)

Functional Grammar: Forming questions, getting answers – Articles – Parts of Speech – Punctuation – Common mistakes in English (Homophones)(Exercise based)

Reference Books:

1. Language in Use: Kenneth Anderson, Cambridge University Press.
2. Study Speaking: A course in Spoken English for Academic Purpose: Kenneth Anderson, Joan MacLean and Tony Lynch, Cambridge University Press, 2008.
3. Spoken English Part I & II (for Tamil speakers), Orient Longman Pvt. Ltd.
4. Dr. J. John Love Joy, Dr.Francis M.Peter S.J. “Lets Communicate – Basic English for Everyone”, Vaigarai Publications, 1st edition, Dindigul 2007.

COURSE OBJECTIVES

- 1 To understand the basic accounting concepts like average due date, Ledger
- 2 To understand the concept of depreciation.
- 3 To knowledge in departmental accounts
- 4 To knowledge in various accounting standards
- 5 To understand the concepts Branch Accounts
- 6 To be aware of the Partnership Accounts

COURSE OUTCOMES:**Learners should be able to**

1. Understand the basic accounting concepts like average due date, ledgers
2. Comprehend the accounting methods in depreciation accounting .
3. Acquire knowledge on accounting process and preparation of branch accounts
4. To apply appropriate judgment derived from knowledge about Hire Purchase and Installment System.
5. Recognize the concepts of accounting Standards
6. Acquire knowledge on partnership accounts.

UNIT 1

Partnership Accounts: Fixed and Fluctuating Capital- Admission and Retirement of a Partner - Death of a Partner.

UNIT II

Dissolution: Insolvency of a Partner(s) – Rule in Garner Vs Murray-Piecemeal Distribution.

UNIT III

Fire Insurance and Farm Accounting: Claim for Loss of Stock and Loss of Profits - Farm Accounting- Objectives – Characteristics - Preparation of Final Accounts of Farms.

UNIT IV

Voyage Accounts: Voyage Accounts – Meaning – Objectives – Characteristics – Preparation of Voyage Accounts.

UNIT V

Insolvency: Insolvency Accounts – Statement of Affairs and Deficiency Account - Insolvency of an Individual.

Note: Distribution of marks for theory and problems shall be 20% and 80% respectively.

COURSE OBJECTIVES :

To make the students

1. To Understand the Concept of marketing, and 4Ps of Marketing
2. To communicate orally and in written form the concepts of marketing and 4 Ps of marketing
3. To apply the marketing concepts and skills lifelong.
4. To give an in depth knowledge about the consumer buying behavior
5. To understand the product policy, product life cycle, product strategies and new product development
6. To have an in depth knowledge about Pricing

COURSE OUTCOMES:

Learners should be able to

1. Understand the Concept of marketing, and 4Ps of Marketing
2. Communicate orally and in written form the concepts of marketing and 4 Ps of marketing
3. Apply the marketing concepts and skills lifelong.
4. Understand the consumer buying behavior
5. Apply the concepts of product life cycle, product strategies and new product development
6. Gain the knowledge about various pricing strategies

UNIT I

3. Create report for the PRODUCT database.

Tally:

1. Create a new company in integrate accounts mode and account with inventory mode
2. Create a primary and sub groups using single or multiple ledger mode
3. Create minimum 10 ledgers using single or multiple ledger, and alter and delete any 2 ledger
4. Enter the following voucher
 - Payment vouchers
 - Receipt
 - Purchase
 - Sales
 - Credit note
 - Debit note
 - Journals
 - Memo
 - Optional
5. Preparation of reports for the following
 - Trail Balance
 - Profit & loss a/c
 - Balance sheet
 - Bank reconciliation statement

TEXT BOOK

1. .R.K.Taxali. 1999 P.C.Software Made Simple. Tata McGraw-Hill Publishing Company Ltd., New Delhi.

Semester III

COURSE OBJECTIVES**To make the students**

1. To impart knowledge on both Aptitude and Soft skills to the students
2. To critically evaluate and demonstrate various principles involved in solving mathematical problems and to adopt new and faster methods of calculations.
3. To Reinforce competencies in soft skills which are crucial in a social setting
4. To achieve the analytical and reasoning competencies and to improve their communication and presentation skills
5. To enhance the writing skill of students
6. To impart the students with discipline and time management

COURSE OUTCOMES:**Learners should be able to**

1. Impart knowledge on both Aptitude and Soft skills to the students
2. Demonstrate various principles involved in solving mathematical problems and to adopt new and faster methods of calculations.
3. Reinforcing competencies in soft skills which are crucial in a social setting
4. Achieve the analytical and reasoning competencies and to improve their communication and presentation skills
5. Improve the writing skill
6. Impart the students with discipline and time management

UNIT - I

Time, Speed and Distance, Time and Work, Pipes and Cisterns, Geometry, Data Arrangement

UNIT – II

Analogy, Logic based Venn diagram, Probability, Permutation and Combination, Logarithms

UNIT – III

Data Sufficiency, Clocks, Calendar, Reading Comprehension, Sentence Correction, Sentence Completion, Spotting the Errors, Jumbled Sentences

UNIT – IV

Synonyms, Antonyms, Verbal Analogy, Statements and Assumptions, Group Discussion

UNIT - V

Resume Writing, Introduction to HR rounds, Time Management, Attitude and Behaviour

Course Objectives:

1. To train the students in understanding the concepts of communication.
2. To be familiar with the four basic skills of English.
3. To train students in developing their written communication.
4. To train students in developing their presentation skills.
5. To acquire the skill of making grammatically correct sentences.
6. To reflect originality on the application of soft skill views and express in writing their views.

Course Outcome:

1. Students have acquired proficiency in communication.
2. Students have become adept in written communication and presentation skills.
3. Developed the skill of writing in English and that of public speaking.
4. Establish and maintain social relationships.
5. Develop communication skills in business environment.
6. Enhanced communication competency through LSRW skills

UNIT I –

Concept of Communication – Barrier to Communication –Body language – Personality Development – Etiquette and Manners- Soft Skills – Emotional Intelligence

UNIT II

Listening Comprehension – Reading Comprehension – Paragraph writing – Precis Writing – Writing Resume and Covering Letter -Speaking – Welcome Address, Vote of Thanks, Compering, Debates, Role Play, Dialogues – Vocal Communication Techniques. Voice, Quality, Volume, Pitch

UNIT III

Dicto Composition – Letter Writing (Informal, Letters to the Editor etc) – Term paper – Book reviews

UNIT IV

Business Correspondence – Layout of Business Letter – Formal Styles of Business Letters – Letters of Acceptance, Appointment, Resignation, Complaint, Sending E-mails.

UNIT V

Effective Presentation – Planning – Audience Analysis –Logical Sequencing – Timing of the Presentation – Conclusion – Answering Queries – Group Discussion – Interview.

COURSE OBJECTIVES

To make the students

1. To impact knowledge on both Aptitude and Soft skills to the students
2. To critically evaluate and demonstrate various principles involved in solving mathematical problems and to adopt new and faster methods of calculations.
3. To Reinforce competencies in soft skills which are crucial in a social setting
4. To achieve the analytical and reasoning competencies and to improve their communication and presentation skills
5. To enhance the writing skill of students
6. To acquire the knowledge of importance of discipline and time management

COURSE OUTCOMES:

Learners should be able to

1. Impact knowledge on both Aptitude and Soft skills to the students
2. Demonstrate various principles involved in solving mathematical problems and to adopt new and faster methods of calculations.
3. Reinforcing competencies in soft skills which are crucial in a social setting
4. Achieve the analytical and reasoning competencies and to improve their communication and presentation skills
5. Improved writing skill
6. Enhanced discipline and time management

UNIT - I

Time, Speed and Distance, Time and Work, Pipes and Cisterns, Geometry, Data Arrangement

UNIT – II

Analogy, Logic based Venn diagram, Probability, Permutation and Combination, Logarithms

UNIT – III

Data Sufficiency, Clocks, Calendar, Reading Comprehension, Sentence Correction, Sentence Completion, Spotting the Errors, Jumbled Sentences

UNIT – IV

Synonyms, Antonyms, Verbal Analogy, Statements and Assumptions, Group Discussion

UNIT - V

Resume Writing, Introduction to HR rounds, Time Management, Attitude and Behaviour

COURSE OBJECTIVES:

To make the students

1. To understand the concepts on Amalgamation of companies and financial statement of insurance companies.
2. To gain knowledge in the Accounting practices in electricity companies and banking companies.
3. To understand the accounting standard and its application in inter-holding companies
4. To solve problems relating to Holding Company Accounts, Liquidation of Companies and various other Accounts
5. To understand and apply accounting process for Banking industry.
6. To have a knowledge about the life insurance and General Insurance

COURSE OUTCOMES:

Learners should be able to

1. To enable the students to understand the concepts on Amalgamation of companies and financial statement of insurance companies.
2. To make the students gain knowledge in the Accounting practices in electricity companies and banking companies.
3. Understand the accounting standard and apply the same for corporate entity and amalgamation.
4. Understand the difference of banking balance sheet and non-banking balance sheet
5. Enhance the problem-solving skills and analytical skills in the accounting context.
6. Understand the Life insurance and General Insurance

UNIT I

Banking: Banking Company Accounts – Introduction – General Information - Principal Accounting Policies – Final Accounts – Profit and Loss Account and Balance Sheets

UNIT II

Insurance: Insurance Company Accounts - Types of Insurance – LIC - Fire - Marine- Accounting Principles for Preparation of Financial Statements Form A - Revenue Account - Profit and loss Account - Balance Sheet.

UNIT III

Holding Company: Definition - Holding Companies and Subsidiary - Treatment of Fictitious Assets - Unrealized Profit - Contingent Liabilities – Revaluation of Assets – Bonus Shares - Treatment of Dividend - Debentures of Subsidiary Company - Number of Subsidiary Companies.

UNIT IV

Double Accounting System: Double Accounts (Excluding Trial Way) including Final Statement of Accounts of Electricity Companies - Treatments of Repairs and Renewals.

UNIT V

Human Resources Accounting: Introduction to Government Accounts – Human Resources Accounting – Accounting Standards – Basic Knowledge of Financial Reporting Practice – Accounting for Price Level Changes (Theoretical Aspects only).

Note: Distribution of marks for theory and problems shall be 20 % and 80 % respectively.

14. Life Insurance and mutual fund -account opening form.
15. Post Office- Money order form.

Computer Applications Oriented

1. Online Purchase and settlement
2. Online Electricity Bill payment
3. E-Ticket Reservation (Bus, Railways, Airways, etc.)
4. Online Insurance Premium payment
5. Online Mobile recharge
6. Usage of resume wizard
7. Creation of Website
8. Online fund transfer, RTGS, NTF

NOTE:

Students may be asked to collect original or Xerox copies of the documents and affix them on the record note book after having filled up. Drawing of the documents should not be insisted. Distribution of Marks: Practical 75% and Record Note Book 25%

COURSE OBJECTIVES:

To make the students

1. To identify an issue to be analysed and to be solved in a business setup or real time scenario using primary or secondary data collection.
2. To understand the application of Research process in the area of accounting/Finance/Marketing/HR/International business etc.
3. To analyse the data and critically evaluate the result and formulate the suggestion for the problem identified.
4. To apply the theoretical and practical learning of doing research into lifelong practice.
5. To Communicate in oral and written form and prepare report
6. To utilize the IT applications for analysis and preparation of report.

COURSE OUTCOMES:

Learners should be able to

1. Identify an issue to be analysed and to be solved in a business setup or real time scenario using primary or secondary data collection.
2. Understand the application of Research process in the area of accounting/Finance/Marketing/HR/International business etc.
3. Analyse the data and critically evaluate the result and formulate the suggestion for the problem identified.
4. Apply the theoretical and practical learning of doing research into lifelong practice.
5. Communicate in oral and written form and prepare report
6. Utilise the IT applications for analysis and preparation of report.

COURSE OBJECTIVES:**To make the students**

1. To Understand the Concept of management accounting, costing behaviour, budgeting and enrich the lifelong learning.
2. To comprehend on the contemporary issues relevant to accounting concepts.
3. To analyse the alternatives using appropriate tools and techniques.
4. To solve the problems and take decisions based on the result.
5. To communicate orally and in written form the concepts and solutions.
6. To have an knowledge about the ratio analysis

COURSE OUTCOMES:**Learners should be able to**

1. Understand the Concept of management accounting, costing behaviour, budgeting and enrich the lifelong learning.
2. Comprehend on the contemporary issues relevant to accounting concepts.
3. Analyse the alternatives using appropriate tools and techniques.
4. Solve the problems and take decisions based on the result.
5. Communicate orally and in written form the concepts and solutions.
6. Apply ratio analysis to take important business decisions

UNIT I

Management Accounting: Meaning - Nature - Scope - Functions - Comparison of Management Accounting, Cost accounting and Financial Accounting - Role of Management Accounting in Decision Making – Management Accountant – Functions.

UNIT II

Financial Statements Analysis: Meaning - Nature – Objectives - Limitations –Tools - Common Size Statement - Comparative Statement – Trend Analysis - Ratio Analysis- Meaning – Objectives - Significance - Limitations - Classifications of Ratio – Short term Solvency Ratio – Long term Solvency Ratio - Activity Ratio - Profitability Ratio.

UNIT III

Fund Flow Statement and Cash Flow Statement: Meaning - Definition - Objectives - Uses - Limitation – Procedure. Cash Flow Statement - Meaning – Objectives - Significance - Distinguish between Fund Flow Statement and Cash Flow Statement.

UNIT IV

Marginal Costing: Meaning – Definition - Objectives - Scope - Advantages and Disadvantages of Marginal Costing - Cost Volume Profit Analysis - Profit Volume Ratio – Contribution - Break Even Point - Margin of Safety - Break Even Chart.

UNIT V

Budgetary Control: Definition – Objectives - Advantages - Limitations - Classification of Budgets – Time – Flexibility – Functions - Zero Based Budgets(ZBB) – Steps in Budgetary Control

Note: Distribution of marks for theory and problems shall be 20 % and 80 % respectively.

3. Sethurajan (2005) Indirect Taxation including Wealth Tax, Speed Publications
4. Singhanian (2014), Indirect Taxes”, Taxmann Publications (P) Ltd., New Delhi (2010)

COURSE OBJECTIVES:

To make the students

- 1.Explain need of Research, introduction to business research
- 2.Analyze various types of research and the sampling techniques
- 3.Analyze collections of data and to draft the questionnaire
- 4.Describe Knowledge on the application of various statistical tools
- 5.Experiment preparation of reports
- 6.To understand the scaling techniques

COURSE OUTCOMES:

Learners should be able to

- 1.Describe the Basics, types and the stages of the research process and enables to apply and adapt them with relevance to specific research context
- 2.Apply an advanced understanding of business research design options, methodologies, sampling technique in a research.
- 3.Analyze the collected data using appropriate statistical tools for interpretation of the data.
- 4.Apply various statistical tools in a research.
- 5.Understand and prepare and present research findings in the report.
- 6.Gain an in depth knowledge about the scaling techniques

UNIT I

Research: Meaning – Objectives – Types of Research – Significance of Research – Research Process – Criteria of Good Research – Identification of Research Problem – Research Design.

UNIT II

Sampling: Meaning – Steps in Sample Design – Characteristics of a Good Sample Design – Determination of Sample Size – Sampling Techniques – Probability and Non-Probability Sampling – Sampling Error

UNIT III

Sources of Data: Methods of Data Collection – Primary Data – Interview Method – Observation Method – Questionnaire – Schedule – Secondary Data – Processing of Data - Editing – Coding - Classification – Tabulation

UNIT IV

Analysis of Data: Hypothesis – Characteristics – Concepts of Hypothesis – Null Hypothesis - Alternative Hypothesis - Level of Significance - Test of Hypothesis - Type I and Type II error – Chisquare test – t test – F test – ANOVA – Scaling Techniques.

UNIT V

Interpretation and Report Writing: Interpretation – Meaning – Technique of Interpretation, Precautions – Report Writing- Steps in Writing Report – Types of Reports – Technical and Popular Report – Oral Presentation – Precaution for Writing Research Reports.

Note: The question paper shall cover 80% theory and 20% problem.

		Semester VI
	CORE ELECTIVE II	LTPC
15CMU603C	EXPORT MANAGEMENT	5 - - 5

COURSE OBJECTIVES:

To make the students

1. To make the students understand the features of exports.
2. To learn about the scope and activities of export management
3. To enlighten the students' knowledge in global exports markets.
4. To provide the strategies, ethics in export financing
5. To give an insight about the EXIM policy
6. To learn about the importance of **Export Financing**

COURSE OUTCOMES:

Learners should be able to

1. Making the students understand the features of exports.
2. Learning about the scope and activities of export management
3. Enlightening the students' knowledge in global exports markets.
4. Providing the strategies, ethics in export financing
5. Giving an insight about the EXIM policy
6. Learning about the importance of **Export Financing**

UNIT-I

Foreign Trade : Importance – Trends of India's Foreign Trade – Theories of Foreign Trade – Scope and Stages of Export Marketing – Barriers of Exporting – Identification of Foreign Markets - Selection of Export Products – Export Strategies.

UNIT-II

Entering Foreign Markets: Methods of Entering Foreign Markets – Direct and Indirect Exporting – Licensing – Joint Ventures – Foreign Subsidiaries – Export Procedures – Excise and Custom Formalities – Shipping – Documentation.

UNIT-III

EXIM Policy: EXIM Policy 2002-2007 – Restrictive List – Negative List – Registration of Exporters – Duty Entitlement Pass Book Scheme – Duty Exemption Entitlement Certificate – Export Promotion Capital Goods Scheme – Software Technology Parks – Export House – Trading House – Advance Licenses.

UNIT-IV

Export Financing: Export Pricing – INCOTERMS – Export Incentives – Export Finance – EXIM Bank – Export Credit Guarantee Corporation of India.

UNIT-V

Export Institutions: Ministry of Commerce – Director General of Foreign Trade – Indian Trade Promotion Organisation – Commodity Boards – Export Promotion Councils – Special Economic Zones – Export Processing Zones – Export Oriented Units – Federation of Indian Export organization.

M.A Shewan, Export Management, Sonali Publications, (discovery Pub.house), Darya Ganj, (2010)

REFERENCES:

P K. Kurana , Export Management, Golgotia Publishing company, New Delhi (2008)

COURSE OBJECTIVES:**To make the students**

1. Describe nature and scope of Human Resources management
2. Evaluate human resource planning, recruitment process and selection methods in the organization
3. Discuss need for motivating employees in an organisation.
4. Assess labour relations, industrial disputes and settlement in the organization
5. To know the concept of industrial relations.
6. To describe the performance appraisal, Job evaluation, promotion and punishment

COURSE OUTCOMES:**Learners should be able to**

1. Understand the HR environment in India and human resource functions within organizations
2. Plan human resources requirement and formulate HR policy of the organisation with regard to recruitment, selection, training and career planning.
3. Appraise the employee's performance and formulate compensation policy which helps to make organizational excellence.
4. Understand the importance of career planning, job evaluation and factors influencing compensation levels.
5. Analyse the ethical issues in HR management
6. Understand the performance appraisal, Job evaluation, Promotion and Punishment

UNIT –I

Introduction to HRM: Definition, Objectives and Functions of HRM –Role and Structure of Personnel Functions in Organization - Personal Principles and Policies.

UNIT –II

Human Resource Planning(HRP): - Characteristics of HRP, Need for Planning HRP Process - Job Analysis, Job Design, Job Description, Job Specification. Selection Process - Placement and Induction, Training and Development, Promotion, Demotions, Transfers, Separation.

UNIT –III

Wage and Salary Administration: - Factors Principles - Compensation Plan – Individuals and Group Incentives – Bonus - Fringe Benefits - Job Evaluation Systems.

UNIT –IV

Employee Maintenance and Integration:- Welfare and Safety - Accident Prevention - Administration of Discipline - Employee Motivation - Need and Measures.

UNIT –V

Personnel Records and Reports: - Personnel Research and Personnel Audit – Objectives - Scope and Importance.

TEXT BOOK:

S.S.Khanka. (2013), Human Resource Management, Sultan Chand & Sons, New Delhi

REFERENCE

- 1) V.S.P.Rao (2010) Human Resource Management Text and Cases. New Delhi: Excel Books.
- 2) Tripathi P C, Personnel Management and Industrial Relations, Sulhan Chand & Sons , (2013), New Delhi

COURSE OBJECTIVES:

To make the students

1. To identify an issue to be analysed and to be solved in a business setup or real time scenario using primary or secondary data collection.
2. To understand the application of Research process in the area of accounting/Finance/Marketing/HR/International business etc.
3. To analyse the data and critically evaluate the result and formulate the suggestion for the problem identified.
4. To apply the theoretical and practical learning of doing research into lifelong practice.
5. To Communicate in oral and written form and prepare report
6. To Work in team and exhibit leadership skills
7. To utilise the IT applications for analysis and preparation of report.

COURSE OUTCOMES:

Learners should be able to

1. Identify an issue to be analysed and to be solved in a business setup or real time scenario using primary or secondary data collection.
2. Understand the application of Research process in the area of accounting/Finance/Marketing/HR/International business etc.
3. Analyse the data and critically evaluate the result and formulate the suggestion for the problem identified.
4. Apply the theoretical and practical learning of doing research into lifelong practice.
5. Communicate in oral and written form and prepare report
6. Work in team and exhibit leadership skills
7. Utilise the IT applications for analysis and preparation of report.

KARPAGAM ACADEMY OF HIGHER EDUCATION
COIMBATORE-641021
Department of Commerce
B.COM (Hons)

For the Student admitted during the year 2015 Batch
Scheme of Examination

Code	Subjects	Ins*	Marks			Exams/hrs	Credit
			CIA	ESE	TOT		
SEMESTER-V							
15CMU507	Financial Services	-	-	100	100	3	5
SEMESTER-V1							
15CMU605	Working Capital Management	-	-	100	100	3	5
	TOTAL	-	-	200	200	-	10

Note: The candidates who have secured 75% aggregate marks in each I, II, III and IV semester passed in single attempt are eligible to register for Honours Degree.

The Student who have registered for Honours Degree shall have to write two theory papers(self study) of 5 credit each one with 5th semester regular papers and another one with 6th semester regular papers.

COURSE OBJECTIVES:**To make the students**

1. To Understand the Concept of Financial markets, Financial Institutions and regulatory body.
2. To communicate orally and in written form the Concept of Financial markets, Financial Institutions and regulatory body.
3. To apply the Concept of Financial markets, Financial Institutions and regulatory body in lifelong practice.
4. To Understand the Concept of banking and treasury operations.
5. To communicate orally and in written form the Concept of investment banking and private equity
6. To apply the Concept of mutual fund and commodity market.

COURSE OUTCOMES:**Learners should be able to**

1. Understand the Concept of Financial markets, Financial Institutions and regulatory body.
2. Communicate orally and in written form the Concept of Financial markets, Financial Institutions and regulatory body.
3. Apply the Concept of Financial markets, Financial Institutions and regulatory body in lifelong practice.
4. Understand the Concept of banking and treasury operations.
5. Communicate orally and in written form the Concept of investment banking and private equity
6. Apply the Concept of mutual fund and commodity market.

Unit – I

Financial Services: Meaning – Classification – Scope – Fund Based Activities – Non Fund Based Activities – Modern Activities – Sources of Revenue – Causes for Financial Innovation – Challenges facing the Financial Service Sector. Merchant Banking in India- Merchant Banks and Commercial Banks – Services of Merchant Banks.

Unit – II

Hire Purchase: Meaning – Features – Legal Position – Hire Purchase and Credit Sale – Hire Purchase and Installment Sale – Hire Purchase and Leasing – Origin and Development – Banks and Hire Purchase Business – Bank Credit for Hire Purchase. Leasing – Definition – Steps in Leasing Transactions – Types of Lease – Advantages and Disadvantage of Lease – Problems of Leasing.

Unit – III

Venture Capital: Concept – Meaning – Features – Scope of Venture Capital – Importance – Method of Venture Financing – Suggestion for the Growth of Venture Capital – Factoring – Meaning – Functions – Types – Factoring Vs Discounting – Benefits of Factoring.

Unit – IV

Mutual Funds: Types – Importance – Selection of a Fund – Securitization – Stages of Securitization – Benefits – Derivatives – Kinds – Forward, Future, Options and Swaps.

Unit – V

Credit Rating: Definition and Meaning – Functions of Credit Rating – Origin – Credit Rating in India – Benefits of Credit Rating – Credit Rating Agencies in India: CRISIL, ICRA, CARE- Limitations of Rating – Future of Credit Rating in India

| 1.மனோன்மனீயம் | - | சுந்தரம்பிள்ளை |
| 2.பாரதியார் | - | பாரதியார் கவிதைகள் |
| 3.பாரதிதாசன் | - | குன்றம் (அழகின் சிரிப்பு) |
| 4.நாமக்கல் கவிஞர் | - | தமிழன் இதயம் |
| 5.அப்துல் ரகுமான் | - | கூடுதற்கும் பறவைகள் |
| 6.சிற்பி | - | ஒடு ஒடு சங்கிலி (ஒரு கிராமத்து நதி) |
| 7.வைரமுத்து | - | மரங்களைப்பாடுவேன் |
| 8.தாமரை | - | அவசரம் ஒரு அசுர ஊசி |
| 9.புதியமாதவி | - | (ஒருகதவும் கொஞ்சம் கள்ளிப்பாலும்)
மகளே வந்துவிடு (ஹேராம்) |

அலகு II பக்தி இலக்கியம்

1. சைவம் - பன்னிரு திருமுறைகளில் 12 பாடல்கள்
2. வைணவம் - ஆழ்வார் பாடல்கள் 12)

அலகு III உரைநடை

- | | | |
|----------------------------------|---|-----------------------|
| 1. பழந்தமிழ்நாடு | - | டாக்டர். கு. கதிரேசன் |
| 2. நொய்யல் நாகரிகம் | - | புலவர் செ. இராக |
| 3. அறிவியல் தமிழாக்கம் இற்றைநிலை | - | வா.செ. குழந்தைசாமி |
| 4. கணிப்பொறி | - | சுஜாதா |
| 5. சுற்றுச்சூழல் மேலாண்மை | - | தமிழ்நாடு அரசு |

அலகு IV பயிற்சி

இலக்கணம், கடிதங்கள் - அலுவலகநிலை, மொழிபெயர்ப்பு
நிகழ்ச்சித் தொகுப்புகள்
(பயிற்சி ஏடு - கல்லூரி வெளியீடு)

அலகு V இலக்கிய வரலாறு

- 1.தற்காலத் தமிழ்க் கவிதைகளின் வரலாறும், வளர்ச்சியும்
- 2.புதுக்கவிதைப் பிதாமகன்கள் குறித்த அறிமுகம்
- 3.பாரதியார், பாரதிதாசனின் தமிழ்த்தொண்டு
- 4.உரைநடையின் தோற்றமும் வளர்ச்சியும்

Course Objectives:**To make the students**

1. To enable the learners to acquire English language skills at a faster pace.
2. To introduce different kinds of literary works
3. To familiarize different genres of Literature
4. To instruct moral values through literature.
5. To improvise their productive and receptive skills
6. To strengthen the basic knowledge about grammar.

Course Outcomes:**Learners should be able to**

1. Learn to reflect on the literary works and communicate flexibly.
2. Reading and comprehending literary works
3. Genres of literature to provide moral education
4. Develop communication skills in business environment
5. Interpersonal skills will be developed.
6. Betterment of language competence

UNIT I:

Prose: Google Guys (Extract) – Richard L Brandt

Poetry: The Blind Pedlar – Osbert Sitwell

Short Story: A Garden So Rich – Christie Craig

Vocabulary: Prefixes, Antonyms, Sentence Completion

Grammar: Articles, Adverbs, Pronouns

Composition: Proverb Expansion

UNIT II:

Prose: Happiness 101 – Geeta Padmanabhan

Poetry: An Old Woman – Arun Kolatkar

Vocabulary: Suffixes, Analogies

Grammar: Nouns, Adjectives

Composition: Dialogue Writing

UNIT III:

Prose: Structured Procrastination – John Perry

Short Story: The Umbrella Man – Roald Dahl

One-Act Play: The Boy Who Stopped Smiling – Ramu Ramanathan

Vocabulary: Synonyms, Euphemisms, Word Definitions

Grammar: Verbs, Conjunctions and Interjection, Indirect/Reported Speech

UNIT IV:

Poetry: No Sentence – Anjum Hassan

One-Act Play: While the Auto Waits- O’ Henry

Vocabulary: Words Often Confused, Anagrams

Grammar: Prepositions, Voice- Active and Passive

Composition: Letter Writing- Informal

UNIT V:

Short Story: The Bird – Amar Jalil

One-Act Play: The Cellphone Epidemic – Claudia I. Haas

Vocabulary: Portmanteau Words, One Word Substitute

Grammar: Questions, Pronunciation

Composition: Letter Writing- Formal

Prescribed Texts:

COURSE OBJECTIVES:**To make the students**

1. To make the students learn the basic concepts, conventions, nature of accounting and also to acquire Conceptual Knowledge in different accounting standards.
2. To know about the accounting process and preparation of final accounts
3. To understand about the Accommodation of bills, Average Due Date and Account Current.
4. To understand and apply the techniques for preparing accounts in different business organizations like consignment and joint venture.
5. To know about the Bank Reconciliation Statement process and Accounting Standards
6. To have a in depth knowledge on partnership accounts

COURSE OUTCOMES:**Learners should be able to**

1. Comprehend the accounting concepts, principles and to comply the accounting standards.
2. Acquire knowledge on accounting process and preparation of final accounts
3. To apply appropriate judgment derived from knowledge about bill of exchange
4. Recognize the accounting process of financial statement and critically think in preparing Accounts, rectification of errors, Consignment and Joint Venture.
5. Recognize the Bank Reconciliation Statement process and Accounting Standards
6. Acquired an in depth knowledge on various partnership concepts

Unit I

Theoretical Frame work: Meaning and scope of Accounting- Accounting concepts, principles and conventions- Accounting standards, Concepts, objectives and benefits- Accounting policies- Accounting as a measurement discipline, valuation principles, Accounting estimates and ASI. Accounting Process: Preparation of journal, Ledger, trial balance, capital and revenue Expenditure, Capital and Revenue Receipts, Contingent Liabilities

Unit II

Fundamental Errors including rectifications thereof- Bank Reconciliation Statement- Stock Reconciliation Statement - Debtor Reconciliation Statement - Creditor Reconciliation Statement.

Unit III

Preparation of Final Accounts for Sole proprietors.

Unit IV

Consignment and Joint Venture - Accounting entries in the books of Consignor and Consignee - Joint Venture Accounting.

Unit V

Partnership Accounts: Past adjustments and guarantees- Basic concepts of Admission, Retirement and death of a partner including treatment of goodwill.

Note: Distribution of marks between problems and theory shall be 80% and 20%.

TEXT BOOKS

4. R.L.Gupta, V.K.Gupta, (2014) Financial Accounting, Sultan Chand & Sons, New Delhi.

COURSE OBJECTIVES:**To make the students**

1. To know the essential elements of contract and also the Indian Contract Act 1872.
2. To understand about the Banking Regulation Act 1949
3. To learn the fundamental regulation about the sale of goods act, 1930.
4. To impart basic knowledge of Indian Partnership Act 1932 and Limited Liability Partnership Act, 2008
5. To enhance knowledge in the Negotiable Instruments Act 1881.
6. To make the students learn about the various laws essential for working in a competitive business environment

COURSE OUTCOMES:**Learners should be able to**

1. Recognize the basic legal principles behind contractual agreements.
2. Understand the workings of banking companies and RBI.
3. Understand the relevance of business law in economic and social context.
4. Acquire problem solving techniques and will be able to present coherent, concise legal argument in partnership for achieving common goals.
5. Exhibit attributes in understanding various negotiable instruments, its features and utilization in real-time.
6. Gained knowledge about the mercantile law to work in a competitive business environment

Unit I

The Indian Contract Act 1872- An Overview of Sections 1 to 75 covering the general nature of contract, Considerations.

Unit II

Other Essential elements of a valid contract- Capacity to Contract- Free consent- Elements vitiating free contract- Lawful object and the consideration- Unlawful object- Unlawful consideration- Agreements expressly declared void.

Unit III

Performance of Contract- Breach of Contract- Contingent and Quasi – Contracts

Unit IV

The Sale of Goods Act, 1930: Formation of the contract of sales- Conditions and warranties- Transfer of Ownerships and delivery of goods- Unpaid seller and his rights.

Unit V

The Indian Partnership Act, 1932: General nature of Partnership- Rights and Duties of Partners- Registration and Dissolution of firm.

TEXT BOOKS

1. Kapoor N.D, (2013), Elements of Mercantile Law, S.Chand & Co, New Delhi.

REFERENCES

1. Shukla M.C. (2010), Mercantile Law. PHI India Pvt., Ltd., New Delhi.

3. M.C. Kuchhal, (2012), Mercantile Law, Vikas Publishing House Pvt Ltd, New Delhi.
4. S.S.Gulshan and G.K. Kapoor (2011), Business Law, New Age International Pvt Ltd, New Delhi.

COURSE OBJECTIVES**To make the students**

1. To understand the concept of matrices
2. To acquire the knowledge of differential calculus
3. To know the concepts of central tendency and dispersion
4. To understand the correlation and regression concepts
5. To be aware of the index numbers and trend analysis
6. To be aware on of issues in the construction of index numbers

COURSE OUTCOMES:**Learners should be able to**

1. Utilize the concept of matrices, differential calculus to solve business problems
2. Calculate and apply the measure of central tendency and dispersion in decision making.
3. Evaluate the relationship and association between variables to formulate the strategy in business.
4. Apply the concept of index numbers and trend analysis in business decisions.
5. Demonstrate capabilities as problem-solving, critical thinking, and communication skills related to the discipline of statistics.
6. To overcome on issues in the construction of index numbers

UNIT I

Ratio: Concept of Ratio, inverse ratio, Proportion as equality of two ratios – Proportions: properties of proportion,

Indices: laws of indices, Logarithm: fundamental laws of logarithm, change of base properties of logarithm - Word problems.

UNIT II

Equations: Introduction- Simple Equation- Simultaneous linear Equation with three variable- Quadratic Equation- Nature of Roots- Cubic Equation- Graphical Solution of Linear Equation.

UNIT III

Set theory- Simple and Compound Interest: Definition, Related Terms- Effective rate of interest- Annuity- Future value- Present value- Sinking Fund- Applications.

Permutation and Combination: Introduction- Factorials- Permutations- Circular permutations- Combinations.

UNIT IV

Sequence and series: AP, GP, Geometric Mean- Sets, Function, Relations- De Morgans Law- Domain, Range and Functions- Various types of Functions

UNIT V

Limits and Continuity: Introduction- Types of Functions- Concepts- Important Limits- Continuity. Basic Concepts of differential and integral calculus: Introduction- Iterative- Implicit Function- Parametric Equation- Logarithmic differentiation- Integration. Basic formulae- Substitution- Integration by Parts- Partial Fraction- Definite Integration

3. D.R.Agarwal, (2005). Business Mathematics, Vrinda Publications Pvt. Ltd., Delhi.
4. Navnitham.PA. (2009), Business Mathematics and Statistics, Jai Publications, Trichy.

COURSE OBJECTIVES**To make the students**

1. To improve the integral development of human beings
2. To train the students towards sustainable lifestyle
3. To create awareness about the values and their significance and role
4. To imbibe the concept of discipline and freedom
5. To impart the Indian family traditions in students
6. To learn the concept of personality and personality development

COURSE OUTCOMES:**Learners should be able to**

1. Impact knowledge on both human beings and Life Style.
2. Gain knowledge on human values roles and its significance.
3. Develop a sense of competitive spirit, co-operation, leadership and diligence.
4. Enrich on punctuality, and team-spirit as well as to provide a backdrop for the development of their creative talents
5. Acquired the knowledge about the importance of Indian family values and traditions
6. Acquired knowledge about the concept of personality and personality development

UNIT – I

Concept of Self, self-esteem and self-confidence. Concept of personality, determinants and disorganisation of it. Personality development – meaning.

UNIT – II

Goal setting – meaning and importance; steps in goal setting Manners and Etiquette – meaning need and importance; means to improve. Positive thinking.

UNIT – III

Discipline – meaning. Concept of Roles and Responsibility Time Management – Meaning and steps for effective time management.

UNIT – IV

Interpersonal relationship – meaning and importance; means to improve it. Healthy friendship.

UNIT – V

Family Relationship importance of it; Means to improve. Spirituality – meaning. Its relationship with Altruism, sacrifice, self control, tolerance and truthfulness.

TEXT BOOKS

1. Karpagam Academy of Higher Education, Study Material, 2015.
-

COURSE OBJECTIVES**To make the students**

1. To impart knowledge on both Aptitude and Soft skills to the students
2. To critically evaluate and demonstrate various principles involved in solving mathematical problems and to adopt new and faster methods of calculations.
3. To Reinforce competencies in soft skills which are crucial in a social setting
4. To achieve the analytical and reasoning competencies and to improve their communication and presentation skills
5. To gain knowledge about the data interpretation
6. To improve the writing skill of the students

COURSE OUTCOMES:**Learners should be able to**

1. Impart knowledge on both Aptitude and Soft skills to the students
2. Demonstrate various principles involved in solving mathematical problems and to adopt new and faster methods of calculations.
3. Reinforcing competencies in soft skills which are crucial in a social setting
4. Achieve the analytical and reasoning competencies and to improve their communication and presentation skills
5. Acquired understanding about the data interpretation
6. Enhanced the writing skill of the students

UNIT - I

Introduction to Quantitative Aptitude, Speed Maths, Problems on Numbers, Averages, Ratios and Proportions, Problems on Ages

UNIT - II

Number Series, Blood Relation, Image Analysis, Direction Sense, Syllogism, Coding and Decoding

UNIT – III

Percentages, Data Interpretation, Profit and Loss, Simple Interest and Compound Interest

UNIT**– IV**

Parts of Speech, Tense, Subject Verb Agreement, Active and Passive Voice, Articles, Prepositions

UNIT - V

Conditional Clause, Degrees of Comparison, Goal Setting, Interpersonal Skills

COURSE OBJECTIVES:**To make the students**

1. Learning way of thinking and expressive ability.
2. Improving the scope of research.
3. Realizing the subtle parts of life that literature conveys.
4. Realizing the role that literature plays in the maturation of the human mind.
5. Awareness raising on awareness, culture etc. in the growing community.
6. Preparing students for government exams.

COURSE OUTCOMES:**Learners should be able to**

1. Complete introduction to 'History of Tamil Literature', which is an optional subject in competitive examinations such as Indian Citizenship.
2. Access to literature with a research-oriented approach to inscriptional, manuscript, and archaeological research.
3. 'Scientific Tamil', the field of development of Tamil; Development of multi-pronged research thinking on 'Internet Tamil'.
4. Having creative self-improvement and creativity development for employment.
5. An attitude of seeking literature in support of social and biological values.
6. Skill development for translation-based employment.

09ABTLA201 : தமிழ் இரண்டாம் தாள்

4-H,3-C

அலகு I செய்யுள்**1.சங்கஇலக்கியம்**

அகநானூறு, புறநானூறு, நற்றிணை,குறுந்தொகை, ஐங்குறுநூறு,
பதிற்றுப்பத்து,பரிபாடல்

2. நீதி இலக்கியம்

திருக்குறள் (ஈகை, தெரிந்து செயல்வகை)
நாலடியார் (நல்லினம் சேர்தல்)

3.பக்தி இலக்கியம்

திருஞானசம்பந்தர் தேவாரம், திருவாசகம், பெரியாழ்வார் திருமொழி,
நாச்சியார் திருமொழி

அலகு II சிறுகதை

காலனும் கிழனியும்	- புதுமைப்பித்தன்
அக்கினிப்பிரவேசம்	- ஜெயகாந்தன்
கண்ணகி	- இராஜம் கிருஷ்ணன்
பாதுகை	- பிரபஞ்சன்
உருமாற்றம்	- சு. வேணுகோபால்

அலகு III இலக்கணம்

அகம்,புறம், திணை,துறை

அலகு IV. பயிற்சி

விண்ணப்பங்கள்- கட்டுரைகள்- கடிதங்கள்

அலகு V இலக்கிய வரலாறு

- 1.எட்டுத்தொகை, பத்துப்பாட்டு நூல்கள் அறிமுகம்
2. பன்னிரு திருமுறை, நாலாயிரதிவ்யபிரபந்தம்
3. சைவ, வைணவ இலக்கியங்கள் தமிழுக்குச் செய்த தொண்டு
4. சிறுகதையின் தோற்றமும் வளர்ச்சியும்

Part I TAMIL 2009. Karpagam University, Coimbatore - 21, India

COURSE OBJECTIVES:**To make the students**

1. To enable the learners to acquire English language skills through literature.
2. To familiarize them with English literature.
3. To acquire Grammar knowledge.
4. To help learners imbibe cultural values.
5. To acquire skill of making correct sentences.
6. To reflect originality on the application of soft skills and express in writing their views.

COURSE OUTCOMES:**Learners should be able to**

1. Learn to enjoy the ecstasy of literature.
2. The select literary pieces will develop the confidence level of the learners.
3. To get the social values.
4. To know the importance of communication
5. Get sound knowledge in English
6. Trained to communicate well for business purpose.

UNIT I:

Prose: The Unexpected- Robert Lynd

Poetry: The Village Schoolmaster – Oliver Goldsmith

Short Story: The Lion's Share – Arnold Bennett

Vocabulary: Homonyms

Grammar: Irregular Verbs

UNIT II:

Prose: Travel by Train – J. B. Priestly

Poetry: The Gift of India – Sarojini Naidu

Grammar: Sentence patterns

Composition: Reading Comprehension

UNIT III:

Prose: Women's Education is Almost More Important than the Education of Boys and Men – Indira Gandhi

Short Story: The Necklace – Guy De Maupassant

One-Act Play: The Referee – W.H. Andrews and Geoffrey Dearmer

Vocabulary: Similes

Grammar: Discourse Markers

Composition: Report Writing

UNIT IV:

Poetry: Ozymandias – P.B. Shelley

One-Act Play: The Pot of Broth- W.B. Yeats

Vocabulary: Collective Nouns

Grammar: Correction of Sentences

Composition: Picture Reading

UNIT V:

Short Story: The Silver Butterfly– Pearl S. Buck

One-Act Play: The Bear – Anton Chekov

Vocabulary: Acronyms

Grammar: Question Tags

Composition: Drafting Advertisement

Prescribed Texts

COURSE OBJECTIVES:

To make the students

1. To make the students learn the basic concepts, conventions, nature of accounting and also to acquire Conceptual Knowledge in different accounting standards.
2. To know about the accounting process and preparation of final accounts
3. To understand about the Accommodation of bills, Average Due Date and Account Current.
4. To understand and apply the techniques for preparing accounts in different business organizations like consignment and joint venture.
5. To know about the Bank Reconciliation Statement process and Accounting Standards
6. To give an insight about the company accounts

COURSE OUTCOMES:

Learners should be able to

1. Comprehend the accounting concepts, principles and to comply the accounting standards.
2. Acquire knowledge on accounting process and preparation of final accounts
3. To apply appropriate judgment derived from knowledge about bill of exchange
4. Recognize the accounting process of financial statement and critically think in preparing Accounts, rectification of errors, Consignment and Joint Venture.
5. Recognize the Bank Reconciliation Statement process and Accounting Standards
6. Apply the concepts of company accounts

Unit I

Depreciation Accounting- Methods – Straight Line Method, Written Down Value Method, Sinking Fund Method, Sum of Digit Method, Machine Hours Method, Production Units Method computation and accounting treatment of Depreciation - Change in Depreciation methods

Unit II

Bills of exchange and promissory notes- Sale of goods on approval or return basis

Unit III

Basis of inventory - valuation and record keeping

Unit IV

Company Accounts - Issue of Shares - Forfeiture of shares - Re issue of Forfeited of shares

Unit V

Issue of Debentures and Redemption of Debentures- Issue of preference shares and redemption of preference shares – Types of preference share, Types of debentures.

Note: - Distribution of Marks: Theory- 20% and Problems -80% respectively.

TEXT BOOKS

1. Vinayagam N, Mani.P.L. and Natarajan.K.L, (2010), Financial Accounting, Sultan Chand and sons, New Delhi.

REFERENCES

1. S. P. Jain and K. L. Narang, (2010), Advanced Accountancy, Sultan Chand & Sons, New Delhi.
2. M.C. Shukla, (2010), Advanced Accounting, Sultan Chand & Sons, New Delhi.
3. S.N. Maheshwari, (2012), Advanced Accounting, Kalyani Publishers, Ludhiana.
4. M.A. Arulanandam and K.S. Raman, (2010), Advanced Accounting, Vikas Publishers, New Delhi.
5. R.L. Gupta and Rathaswamy, (2009), Advanced Accounting, Sultan Chand & Sons, New Delhi.

COURSE OBJECTIVES:**To make the students**

1. To understand the accounts heads available to create a company in the accounting software
2. To know the mechanics of creating the vouchers and ledgers
3. To be aware of the inventory valuations methods available in the software
4. To understand various financial statements that are built in the software
5. To be aware of financial analysis tools available in the software
6. To make students capable in preparing power point presentation

COURSE OUTCOMES:**Learners should be able to**

1. Understand the different accounting heads and its importance
2. Create vouchers and ledgers by understanding the reason for posting under different heads
3. Calculate valuation of assets using the software
4. Prepare the financial statements and analyze the financial statement using the option of ratio analysis
5. Exhibit communication skills to communicate the output derived from the program
6. Apply power point presentation

MS WORD

1. Type Chairman's speech/ Auditor's report / Minutes/ Agenda and perform the following operations:
Bold, Underline, Font Size, style, Background color, Text color, Line spacing, Spell Check, Alignment, Header & Footer, Inserting pages and page numbers, Find and Replace.
2. Prepare an invitation for the college function using Text boxes and clip parts.
3. Design an invoice and Account sales by using Drawing tool bar, Clip Art, Word Art, Symbols, Borders and Shading.
4. Prepare a Class Time Table and perform the following operations: Inserting the table, Data Entry, Alignment of Rows and Columns, Inserting and Deleting the Rows and Columns and Change of Table Format.
5. Prepare a Shareholders meeting letter for 10 members using mail merge operation.
6. Prepare Bio-Data by using Wizard/ Templates.

MS EXCEL

1. Prepare a mark list of your class (minimum of 5 subjects) and perform the following operations:
Data Entry, Total, Average, Result and Ranking by using arithmetic and logical functions and sorting.

2. Prepare Final Accounts (Trading, Profit & Loss Account and Business Sheet) by using formula.
3. Draw the different type of charts (Line, Pie, Bar) to illustrate year-wise performance of sales, purchase, profit of a company by using chart wizard.
4. Prepare a statement of Bank customer's account showing simple and compound interest calculations for 10 different customers using mathematical and logical functions.
5. Prepare a Product Life Cycle which should contain the following stages:
Introduction, Growth, Maturity, Saturation, Decline.

MS POWERPOINT

1. Design presentation slides for a product of your choice. The slides must include name, brand name, type of product, characteristics, special features, price, special offer etc. Add voice if possible to explain the features of the product. The presentation should work in manual mode.
2. Design presentation slides for organization details for 5 levels of hierarchy of a company by using organization chart.
3. Design slides for the headlines News of a popular TV Channel. The Presentation Should contain the following transactions: Top down, Bottom up, Zoom in and Zoom out. - The presentation should work in custom mode.
4. Design presentation slides about an organization and perform frame movement by interesting clip arts to illustrate running of an image automatically.
5. Design presentation slides for the Seminar/Lecture Presentation using animation effects and perform the following operations: Creation of different slides, changing background color, font color using word art.

MS ACCESS

1. Prepare a payroll for employee database of an organization with the following Details:
Employee id, Employee name, Date of Birth, Department and Designation, Date of appointment, Basic pay, Dearness Allowance, House Rent Allowance and other deductions if any. Perform queries for different categories.
2. Create mailing labels for student database which should include at least three Table must have at least two fields with the following details: Roll Number, Name, Course, Year, College Name, University, Address, Phone Number.
3. Gather price, quantity and other descriptions for five products and enter in the Access table and create an invoice in form design view.
4. Create forms for the simple table ASSETS.
5. Create report for the PRODUCT database.

TEXT BOOKS

1. R.K.Taxali. (2010), P C Software Made Simple, Tata McGraw-Hill Publishing Company Ltd, New Delhi.

COURSE OBJECTIVES**To make the students**

1. To understand the concept of matrices
2. To acquire the knowledge of differential calculus
3. To know the concepts of central tendency and dispersion
4. To understand the correlation and regression concepts
5. To be aware of the index numbers and trend analysis
- 6 To be able to apply various analysis needed for business research

COURSE OUTCOMES:**Learners should be able to**

1. Utilize the concept of matrices, differential calculus to solve business problems
2. Calculate and apply the measure of central tendency and dispersion in decision making.
3. Evaluate the relationship and association between variables to formulate the strategy in business.
4. Apply the concept of index numbers and trend analysis in business decisions.
5. Demonstrate capabilities as problem-solving, critical thinking, and communication skills related to the discipline of statistics.
- 6 Apply various analysis needed for business research

UNIT I

Statistical description of data - Tabular Representation – Diagrammatic Representation – Frequency distribution- Graphical Representation – Ogives.

UNIT II

Measures of Central Tendency: Introduction to Mean - Median - Harmonic Mean – Standard deviation – Quartile Deviation – Mode –Mean Deviation – Range.

UNIT III

Probability – definitions – addition and multiplication rules (only statements) – simple business problems.

Probability distribution - Binomial, Poisson and Normal – simple problems applied to business.

UNIT IV

Correlation : Definition , Type of correlation , Method of correlation - scatter diagram – Karl Pearson's coefficient of correlation – Spearman's Rank correlation.

Regression: Definition, Regression equations – Methods of forming the regression equations - Problems.

UNIT V

Index numbers – meaning and definition – uses – methods of construction – Unweighted and weighted index number – Laspeyre’s, Paasche’s and Fischer’s method – Tests for an ideal index number – Wholesale and Cost of living index .

FOUNDATION COURSE - B
ENVIRONMENTAL STUDIES

15FCB201

2 - - 1

COURSE OBJECTIVES:

To make the students

1. To understand the ecosystem and its functions
2. To be aware of the difference between the renewable and non-renewable resources.
3. To know about biodiversity and the importance of conservation.
4. To be aware of the different pollution that affects the environment.
5. To know about the social issues prevailing in the environment.
6. To impart the students with the importance of nature and thus create a responsibility towards protecting the natural resources

COURSE OUTCOMES:

Learners should be able to

1. Understand the ecosystem and its impact on human beings.
2. Preserve the non – renewable energy and effectively utilize the renewable energy.
3. Avoid the threats to biodiversity habitat losses.
4. Prevent pollution in the environment
5. Apply the laws relevant to the environment conservation
6. Develop a responsibility in protecting the natural resources

Unit – I

Eco system and natural resources: Environment – Definition – components - Ecosystem -Definition, Concept, Scope, importance, structure and functions of ecosystem. Energy flow, Ecological succession. Food chains and food webs. Classification of ecosystem. Natural resources: Forest resources; water resources

Unit – II

Environmental pollution: Cause, effects and control measures of Air pollution, water pollution, soil pollution, marine pollution, noise pollution, thermal pollution and nuclear hazards pollution. Solid waste management.

Unit – III

Biodiversity and its conservation: Introduction- Definition, genetic, species and ecosystem diversity, biogeographical classification of India- Value of biodiversity: Consumptive, productive uses; social, ethical, aesthetic and option values. Threats to biodiversity: habitat loss, poaching of wildlife, man-wildlife conflicts.

Unit – IV

Social issues and the environment: Urban problems related to energy- water conservation and management -Rain water harvesting- water shed management. Resettlement and Rehabilisaion. Natural resources and associated problems and sustainable utilization. Environmental Education

Unit – V

Environment ethics: Environmental Ethics - Gender equity, ethical basis of environment education and awareness, conservation ethic and traditional value systems of India. Valuing nature, cultures, social justice, Human heritage, equitable use of resources, preserving resources for future generation, common property resources, Ecology and its uses and its degradation, Introduction to Environmental Protection Act (EPA).

	Semester II
SOFT SKILL DEVELOPMENT – I	LTPC
15SSD201	2 - - 1

COURSE OBJECTIVES

To make the students

1. To impact knowledge on both Aptitude and Soft skills to the students
2. To critically evaluate and demonstrate various principles involved in solving mathematical problems and to adopt new and faster methods of calculations.
3. To Reinforce competencies in soft skills which are crucial in a social setting
4. To achieve the analytical and reasoning competencies and to improve their communication and presentation skills
5. To enhance the writing skill of students
6. To improve the interpersonal skill of students

COURSE OUTCOMES:

Learners should be able to

1. Impact knowledge on both Aptitude and Soft skills to the students
2. Demonstrate various principles involved in solving mathematical problems and to adopt new and faster methods of calculations.
3. Reinforcing competencies in soft skills which are crucial in a social setting
4. Achieve the analytical and reasoning competencies and to improve their communication and presentation skills
5. Develop the writing skill of students
6. Improve the interpersonal skill of students

UNIT - I

Introduction to Quantitative Aptitude, Speed Maths, Problems on Numbers, Averages, Ratios and Proportions, Problems on Ages

UNIT - II

Number Series, Blood Relation, Image Analysis, Direction Sense, Syllogism, Coding and Decoding

UNIT – III

Percentages, Data Interpretation, Profit and Loss, Simple Interest and Compound Interest

UNIT – IV

Parts of Speech, Tense, Subject Verb Agreement, Active and Passive Voice, Articles, Prepositions **UNIT -**

V

Conditional Clause, Degrees of Comparison, Goal Setting, Interpersonal Skills

COURSE OBJECTIVES:

To make the students

1. To develop confidence to respond in English during situations where the use of English is imperative.
2. To develop fluency in actual conversation in the English language.
3. To develop speech skills necessary for confident and intelligent participations in Group Discussions and develop skills related to teamwork in work places.
4. To develop confidence to respond in English during situations where the use of English is imperative.
5. To develop fluency in actual conversation in the English language.
6. To develop knowledge about business communication.

COURSE OUTCOMES:

Learners should be able to

1. Students learnt the basics and purposes of listening skill.
2. Students understand importance of speaking.
3. Students developed the speaking skills on telephone, business and also in travel
4. Learnt some effective vocabulary learning strategies.
5. Students will able to communicate clearly and effectively and handle their day to day affairs well with their knowledge of language skills.
6. Students will have honed the skills of communication which is needed for business purpose

UNIT I

Listening: Listening comprehension – Listening for Specific Information –Note Taking – Interpreting Charts and Diagrams.

UNIT II

Speaking: Essentials of effective communication – Greeting and Introducing – Making requests – Asking for permission – Giving and Denying Permission – Offering and Accepting Help – Asking for and Declining Help – Giving Instructions and Orders - Talking about likes and dislikes.

Telephone Skills – Understanding telephone conversation – handling calls – leaving messages – making requests - giving instructions and orders.

Discussion Skills – Giving your opinion – agreeing and disagreeing – Making suggestions – Interrupting – questioning – reporting – Dealing with questions. (Completing dialogues)

UNIT III

Reading: Reading – Reading with a purpose – Skimming and Scanning – locating main points – reading critically – Sequencing of sentences – Reading comprehension.

UNIT IV

Writing: Paragraph Writing – Descriptive and Narrative. Safety Instructions/ Suggestions.

Expansion of Abbreviations – Spellings- Report writing.

Translation- Translating short sentences and passages from English to Tamil and from Tamil to English.

UNIT V

Vocabulary: Improve English vocabulary: Synonyms – Antonyms – Prefixes – Suffixes – Idioms – Collocations – Different types of English – British and American (Choose the best answer type from a database of 50 words each for each topic)

Functional Grammar: Forming questions, getting answers – Articles – Parts of Speech – Punctuation – Common mistakes in English (Homophones)(Exercise based)

COURSE OBJECTIVES:**To make the students**

- 1 To know the basic concepts of MIS
- 2 To enable the students to learn the management information system and their applications in organization.
- 3 To know about various Input and output devices.
- 4 To create awareness among students in telecommunication revolution
- 5 To be able to understand the MIS support for specific business functions
- 6 To demonstrate the basic concepts of ERP

COURSE OUTCOMES:**Learners should be able to**

1. Understand the basic concepts of management information system
- 2 Apply management information system and their applications in organization.
- 3 Understand the usage of various input, output and storage devices.
- 4 Understand telecommunication revolution and IT Act 2000.
- 5 Gain knowledge about the MIS support for specific business functions
- 6 Apply the basic concepts of ERP

UNIT I

Introduction to Information Systems - Definition - Features - Steps in Implementation of MIS - Need for Information - Information System for Decision making- MIS as Competitive Advantages – MIS Structures.

UNIT II

MIS - Strategic Information System - MIS Support for Planning - Organizing - controlling - MIS for Specific Functions – Personnel – Finance - Marketing Inventory Production Data Base Management System Models - Hierarchical - Network - Relational - Modular.

UNIT III

Computer Hardware - Description of Electronic Computers – CPU Operations - Classification of Computers - Main - Mini – Workstations - Micro Computers - Super Computers - Personal Computers. Computer Software - Types of Software - Data Representation in Computers - Introduction to Client-Server.

UNIT IV

Input Devices - Mouse - Touch Screens - MICR - OCR - Keyboard - Pen Based Input - Digital Scanners - Voice Input Devices - Sensors. Output Devices - Impact Printers - Non-Impact Printers - Video Display Terminals - Plotters - Voice Output Devices. Secondary Storage Devices - Magnetic Disk, Floppy, Magnetic Tape, Optical Disk Storage - DROM

UNIT V

Telecommunication Revolution - Introduction to Email- Internet - Intranet – Teleconferencing - www Architecture - Introduction to E-Commerce - Models B_B, B_C, and EDI, EDI Applications in Business - Electronic Payment Cash - Smart Cards - Credit Cards - Fundamentals of ERP- Information Technology Act, 2000.

COURSE OBJECTIVES**To make the students**

1. To impact knowledge on both Aptitude and Soft skills to the students
2. To critically evaluate and demonstrate various principles involved in solving mathematical problems and to adopt new and faster methods of calculations.
3. To Reinforce competencies in soft skills which are crucial in a social setting
4. To achieve the analytical and reasoning competencies and to improve their communication and presentation skills
5. To enhance the writing skill of students
6. To impart the students with discipline and time management

COURSE OUTCOMES:**Learners should be able to**

1. Impact knowledge on both Aptitude and Soft skills to the students
2. Demonstrate various principles involved in solving mathematical problems and to adopt new and faster methods of calculations.
3. Reinforcing competencies in soft skills which are crucial in a social setting
4. Achieve the analytical and reasoning competencies and to improve their communication and presentation skills
5. Improve the writing skill
6. Impart the students with discipline and time management

UNIT - I

Time, Speed and Distance, Time and Work, Pipes and Cisterns, Geometry, Data Arrangement

UNIT – II

Analogy, Logic based Venn diagram, Probability, Permutation and Combination, Logarithms

UNIT – III

Data Sufficiency, Clocks, Calendar, Reading Comprehension, Sentence Correction, Sentence Completion, Spotting the Errors, Jumbled Sentences

UNIT – IV

Synonyms, Antonyms, Verbal Analogy, Statements and Assumptions, Group Discussion

UNIT - V

Resume Writing, Introduction to HR rounds, Time Management, Attitude and Behaviour

Course Objectives:**To make the students**

1. To train the students in understanding the concepts of communication.
2. To be familiar with the four basic skills of English.
3. To train students in developing their written communication.
4. To train students in developing their presentation skills.
5. To acquire the skill of making grammatically correct sentences.
6. To reflect originality on the application of soft skill views and express in writing their views.

Course Outcome:**Learners should be able to**

1. Students have acquired proficiency in communication.
2. Students have become adept in written communication and presentation skills.
3. Developed the skill of writing in English and that of public speaking.
4. Establish and maintain social relationships.
5. Develop communication skills in business environment.
6. Enhanced communication competency through LSRW skills

UNIT I – Concept of Communication – Barrier to Communication –Body language – Personality Development – Etiquette and Manners- Soft Skills – Emotional Intelligence

COURSE OBJECTIVES:**To make the students**

- 1.Explain need of Research, introduction to business research
- 2.Analyze various types of research and the sampling techniques
- 3.Analyze collections of data and to draft the questionnaire
- 4.Describe Knowledge on the application of various statistical tools
- 5.Experiment preparation of reports
- 6.To understand the scaling techniques

COURSE OUTCOMES:**Learners should be able to**

- 1.Describe the Basics, types and the stages of the research process and enables to apply and adapt them with relevance to specific research context
- 2.Apply an advanced understanding of business research design options, methodologies, sampling technique in a research.
- 3.Analyze the collected data using appropriate statistical tools for interpretation of the data.
- 4.Apply various statistical tools in a research.
- 5.Understand and prepare and present research findings in the report.
- 6.Gain an in depth knowledge about the scaling techniques

Unit I

Business Research : Meaning – Scope and Significance – Utility of Business Research – Qualities of Good Researcher – Types of Research – Research Process – Identification, Selection and formulation of research problems – Hypothesis – Research Design

Unit II

Sampling: Methods and techniques – Sample size – Sampling error – Field work and Data Collection. Tools of Data Collection – Interview Schedule – Questionnaire – Observation, Interview and Mailed Questionnaire – Pilot Study and final collection of data

Unit III

Measurement and Scaling Techniques: Processing and analysis of data – Editing and Coding – Transcription and Tabulation – Statistical tools used in Research – Interpretations and Report Writing – Types and contents and style of reports – Steps in drafting reports

Unit IV

Measures of Central Tendency –Mean, Median and Mode - Standard deviation – Correlation – Regression Models

Unit V

Test of Significance: ‘t’ Test – large sample and ‘f’ test, test of significance for attributes – Analysis of Variance – Business Forecasting – Exponential Smoothing – Chi-square test

Note: The question paper shall cover 60% theory and 40% problem

SEMESTER – V							
15PAU507	MICRO FINANCE	-	-	100	100	3	04
SEMESTER – VI							
15PAU604	SUPPLY CHAIN MANAGEMENT	-	-	100	100	3	04
	TOTAL	-	-	100	200	-	08

COURSE OBJECTIVES

To make the students

- 1 To make the students acquire conceptual knowledge of the micro financing system in India.
- 2 To enhance the students to gain knowledge in commercial micro finance
- 3 To describe the credit lending models and emerging practices in micro finance
- 4 To demonstrate the pricing of microfinance products
- 5 To have an understanding of micro finance models
- 6 To demonstrate the market analysis, Technological analysis, Socio-economic analysis, Environmental analysis.

COURSE OUTCOMES

Learners should be able to

- 1 Understand the conceptual knowledge of the micro financing system in India
- 2 Gain knowledge in commercial micro finance
- 3 Gain insight about the credit lending models
- 4 Acquire knowledge about the pricing of microfinance products
- 5 Understand about micro finance models and emerging practices in micro finance
- 6 Acquire knowledge about the market analysis, technological analysis, socio-economic analysis and environmental analysis

Unit I: Overview of Microfinance : Indian Rural financial system, introduction to Microfinance, Microfinance concepts, products, (Savings, Credit, Insurance, Pension, Equity, Leasing, Hire-purchase service, Microfinance in kind, Micro remittances, Micro-Securitization, franchising etc.,) Microfinance models (Generic models viz, SHG, Grameen, and Co-operative, variants SHG NABARD mode, SIDBI model, SGSY model, Grameen Bangladesh model, NMDFC model, credit unions, etc. unbranded primitive models) Emerging practices of Microfinance in India state wise cases, Emerging Global Microfinance practices. Need of Microfinance.

Unit II: Microfinance, Development, Income generating activities and Micro enterprise:

Market (demand) analysis, financial analysis including sources. Technological analysis, Socio-economic analysis, Environmental analysis. Logical framework Implementation & Monitoring.

Unit III: Credit Delivery Methodology : Credit Lending Models : Associations; Bank Guarantees Community Banking, Cooperatives, Credit Unions, Grameen Model, SHG, Individual, Intermediaries, Could be individual lenders, NGOs, micro credit programmers, and Commercial banks.

Unit IV: Pricing of Microfinance products: Purpose base, Activity base, Economic class base Open bidding, etc., Pricing saving products, Amount of savings base, Attendance at periodical meeting Adding to corpus. Gender issues in Microfinance and Conflict resolution in Microfinance - Client impact studies measuring impact of Microfinance and Micro enterprises.

Unit V: Commercial Microfinance: MFIs – Social and performance metrics, fund structure, value-added services. The Rise of Commercial Microfinance: - Transforming NGOs. Structure of Microfinance Industry and Constraints on MFI Growth. The partnership model – MFT as the servicer.

SELF STUDY PAPER
SUPPLY CHAIN MANAGEMENT

Semester VI
LTPC

15PAU604

- - - 4

COURSE OBJECTIVES

To make the students

- 1 To create awareness among the students about the supply chain activities
- 2 To gain knowledge about the inventory management and supply contracts
- 3 To impart students knowledge on the dimension of customer value
- 4 To learn the push and pull strategies and demand strategies
- 5 To understand the retailer and supplier partnership, Distributor integration
- 6 To demonstrate procurement and outsourcing

COURSE OUTCOMES

Learners should be able to

1. Understand the supply chain activities
2. acquire insight about the inventory management and supply contracts
3. demonstrate dimensions of customer value
4. apply push and pull strategies and demand strategies
5. Gain knowledge about the retailer and partnership, Distributor integration
6. Understand procurement and outsourcing

UNIT I

Supply Chain Management – Global Optimisation – importance – key issues – Inventory management – economic lot size model. Supply contracts – centralized vs. decentralized system.

UNIT II

Supply chain Integrates- Push, Pull strategies – Demand driven strategies – Impact on grocery industry – retail industry – distribution strategies.

UNIT III

Strategic Alliances: Frame work for strategic alliances – 3PL – merits and demerits – retailer – supplier partnership – advantages and disadvantages of RSP – distributor Integration.

UNIT IV

Procurement and Outsourcing: Outsourcing – benefits and risks – framework for make/buy decision – e-procurement – frame work of e-procurement.

UNIT V

Dimension of customer Value – conformance of requirement – product selection – price and brand – value added services – strategic pricing – smart pricing – customer value measures.

SEMESTER –VI							
15PAU605	SERVICE MANAGEMENT	-	-	100	100	3	04
	TOTAL	-	-	100	200	-	08

COURSE OBJECTIVES:

To make the students

1. To Understand the strategic management concept, strategic process, strategic evaluation and formulation techniques.
2. To critically analyse and evaluate the internal and external environment using appropriate technique and formulate the strategy suitable for an organization.
3. To communicate orally and in written form the understanding of strategic management concept, strategic process, strategic evaluation and formulation techniques.
4. To apply the understanding of the strategic management concept, strategic process, strategic evaluation and formulation techniques in lifelong practice.
5. To demonstrate the strategic decision framework and strategy options
6. To study the Resource allocation, Planning and Controlling system, Evaluation Criteria, Quantitative and Qualitative factors, Feedback and Information

COURSE OUTCOMES:

Learners should be able to

1. Understand the strategic management concept, strategic process, strategic evaluation and formulation techniques.
2. Critically analyse and evaluate the internal and external environment using appropriate technique and formulate the strategy suitable for an organization.
3. Communicate orally and in written form the understanding of strategic management concept, strategic process, strategic evaluation and formulation techniques.
4. Apply the understanding of the strategic management concept, strategic process, strategic evaluation and formulation techniques in lifelong practice.
5. Apply the strategic decision framework and strategy options
6. Understand the Resource allocation ,Planning and Controlling system, Evaluation Criteria, Quantitative and Qualitative factors ,Feedback and Information

UNIT I

Introduction-concept of Strategy – Need – Dimensions - Strategic Planning - Process- Benefits – McKinsey's 7s Model – Strategic vision – Corporate Mission – Objectives – Goals – Social Responsibility – Business ethics – Linking Strategies with ethics – Social audit.

UNIT II

Environmental Analysis – Need – Scanning – Approaches – Forecasting – Techniques. Internal Analysis – Need – SWOT analysis – Value Chain – Functional Analysis – Grid approach – Criteria for evaluating internal capabilities.

UNIT III

Strategic Decision Framework – Developing alternatives – Strategy Options – Diversification strategies – Retrenchment Strategy – Factors influencing strategy – generic strategy – cultural context of strategy – comparing alternatives – BCG Model.

UNIT IV

Implementation – Role of Top Management – Process – Matching Structure of strategy – Resource allocation – Planning and Controlling system. Evaluation – Criteria – Quantitative and Qualitative factors – Feedback and Information – Industry attractiveness – Application of 9 Cell Matrix.

UNIT V

Core Competencies – Building Core Competencies – Building Strategic Supportive Corporate Culture Strategic Advantage – Managing Strategic Change – Strategic Change Process – Diagnosing Change Need.

SELF STUDY PAPER
SERVICE MANAGEMENT

Semester VI
LTPC

15PAU605

- - - 4

COURSE OBJECTIVES

To make the students

- 1.To learn the concepts in service management
- 2.To enlighten the students' knowledge in financial services.
- 3.To have an in depth knowledge about the marketing mix, pricing, promotion, distribution, positioning and differentiation strategy
- 4.To acquire knowledge about the marketing of hospitality service
- 5.To understand the marketing of non-profit organization
- 6..To understand relationship marketing, elements of design and marketing plan

COURSE OUTCOMES

Learners should be able to

- 1 Understand the important concepts in service management
- 2 Gain knowledge in financial services
- 3 Describe marketing mix, pricing, promotions, distribution, positioning and differentiation strategy
- 4 Apply marketing in hospitality services
- 5 Learn marketing of non-profit organization
- 6 Describe Relationship marketing, elements of design and marketing plan

Unit I

Service Management – Meaning – Features of Services – Types & Importance – Relationship Marketing – Mission, Strategy, Elements of design & marketing plan.

Unit II

Marketing Mix Decisions – Unique Features of Developing Pricing, Promoting & Distribution of services – Positioning & Differentiation Strategy, Quality of Service Industries.

Unit III

Marketing of Hospitality – Prospective of Tourism, Hotel & Travel services – Airlines, Railway, Passenger & Goods Transport – Leisure services – Information Technology.

Unit IV

Marketing of Financial Services, Concepts – Features of Banking, Insurance, Lease, Mutual Fund, Factoring, Portfolio & Financial Intermediary services.

Unit V

Marketing of Non-Profit Organization: NGO'S – Services offered by trust/Societies – Educational Services – Miscellaneous service.

PROGRAMME OUTCOMES (PO)

- a) Postgraduates will develop an understanding of various commerce functions such as finance, accounting, financial analysis, project evaluation, cost accounting.
- b) Postgraduates will have exposure to solve complex commerce problems and analyze problems critically through research based or project based approach of learning.
- c) Postgraduates will excerpt information from various sources and apply mathematical, analytical, statistical and IT tools for financial and accounting analysis.
- d) Postgraduates will develop an ability to effectively communicate both orally and in written forms.
- e) Postgraduates will appreciate the importance of working independently and in a team in order to achieve common goals.
- f) Postgraduates will acquire critical and analytical thinking and will be able to apply the same in effective decision making.
- g) Postgraduates will acquire professional and intellectual integrity, professional code of conduct, ethics and values to contribute for sustainable development of society by becoming socially responsible citizen.

PROGRAMME SPECIFIC OUTCOMES (PSO)

- h) Postgraduates will apply the lifelong learning and exhibit high level of commitment to identify a timely opportunity and use business innovation to pursue that opportunity to create value and wealth for the betterment of the individual and society at large.
- i) Postgraduates will acquire managerial positions or take up entrepreneurial ventures by applying the skills and knowledge gained.

PROGRAM EDUCATIONAL OBJECTIVES (PEO)

- I. Postgraduates will gain advanced knowledge in the domain of commerce, management and finance
- II. Postgraduates will be able to apply the accounting, finance and management tools and techniques to implement systematic decision making process.
- III. Postgraduates will attain research insights, professional skills and competencies to enhance lifelong learning and excel in diverse career path.
- IV. Postgraduates will adapt to a rapidly changing global environment and become socially responsible and value driven citizens committed to sustainable growth.

Postgraduates will be able to apply the accounting, finance and management tools and techniques to implement systematic decision making process.	✓				✓				
Postgraduates will attain research insights, professional skills and competencies to enhance lifelong learning and excel in diverse career path.			✓	✓		✓			
Postgraduates will adapt to a rapidly changing global environment and become socially responsible and value driven citizens committed to sustainable growth.		✓					✓	✓	✓

15CMP101	CORPORATE FINANCE	Semester – I			
		L	T	P	C
		5	-	-	4

COURSE OBJECTIVES:

To make the students

1. To Explain the core concepts of corporate finance and its importance in managing a business
2. To understand the nature, importance, structure of corporate finance related areas.
3. To impart knowledge regarding source of finance for a business.
4. To develop a conceptual framework of finance function
5. To acquaint the participants with the tools, techniques
6. To know the process of financial management in the realm of financial decision making.

COURSE OUTCOMES:

Learners should be able to

1. Understand the role of a financial manager and their role in taking decisions professionally.
2. Demonstrate knowledge and compute value of money over time
3. Apply the concept to Evaluate the business proposal applying capital budgeting techniques
4. Compute the cost of capital and financial leverage to estimate the optimal capital structure
5. Comprehend the knowledge of assessing the working of organization to assess the liquidity position of the firm.
6. Demonstrate capabilities of teamwork, problem-solving, critical thinking, and communication skills related to finance decisions.

Unit – I

Scope and Functions of Finance – Role of Financial Manager – Goals of Financial Management – Functions of Controller and Treasurers in India

Unit – II

Cost of Capital – Significance – Concepts of Cost of Capital – Cost of Debt Capital, Preference Capital, Equity Capital and Retained Earnings – Weighted Average Cost of Capital

Unit – III

Capital Structure – Concept – Capital Structure Theories – Net Income Theory, Net Operating Income Theory – MM’s Proportion on Capital Structure – Determinants of Optimal Capital Structure – Financial and Operating Leverage

Unit – IV

Capital Budgeting Decisions – Investment Evaluation Criteria – Payback Method – ARR – NPV Method – IRR – Profitability Index – Risk Analysis in Capital Budgeting – Nature of Risk – Conventional and Statistical Technique to handle risk

Unit –V

Management of Working Capital – Determinants of Working Capital – Management of Accounts Receivable, Inventory and Cash – Financing of Working Capital – Dividend Theories – Walter’s Model – Gordon’s Model – MM’s Hypothesis – Dividend Policy – Determinants of Dividend Policy.

Note: Theory :60 Marks and Problems : 40 Marks

TEXT BOOK

15CMP102	MANAGERIAL ECONOMICS	Semester – I			
		L	T	P	C
		4	-	-	3

COURSE OBJECTIVES:

To make the students

1. To obtain fundamental knowledge on economic concepts and tools that have direct managerial applications.
2. To illustrate the application of economic theory and methodology as an alternative in managerial decisions.
3. To gain a rigorous understanding of competitive markets as well as alternative market structures.
4. To obtain familiarity on the macro level business components like money, banking, monetary policy, fiscal policy, trade, business cycles and balance of payment and understand the forces determining macroeconomic variables such as inflation, unemployment, interest rates, and the exchange rate.
5. Demonstrate capabilities of teamwork, problem-solving, critical thinking, and communication skills
6. To enable students to obtain managerial problem solving skills.

COURSE OUTCOMES:

Learners should be able to

1. Apply the economic way of thinking to individual decisions and business decisions
2. Measure the responsiveness of consumers' demand to changes in the price of a goods or service, and understand how prices get determined in markets,
3. Understand the different costs of production and how they affect short and long run decisions and derive the equilibrium conditions for cost minimization and profit maximization
4. Demonstrate an understanding of monetary and fiscal policy options as they relate to economic stabilization in the short run and in the long run
5. Critically evaluate the consequences of basic macroeconomic policy options under differing economic conditions within a business cycle.
6. Understand and exhibit the communication skills to convey the thoughts and ideas to the individuals and group.

Unit - I

Nature, Objectives and Scope of Managerial Economics – Role and Responsibilities of Managerial Economist – Circular Flow of Economic Activity – Nature of the Firm – Economic Profit – Profits in the Market System

Unit – II

Demand Theory and Analysis – Supply Theory and Analysis

Unit – III

Production Theory – Cost Theory – Cost Concept – Cost Output Relationship – Break Even Analysis

Unit – IV

Perfect Competition, Monopoly, Monopolistic Competition, Oligopoly, Duopoly, Bilateral Monopoly – Monopsony.

Unit – V

Pricing Decision – Pricing of Goods and Services – Pricing and Employment of Inputs – Pricing in Public Sector – Risk and Decision Making – Input – Output Analysis

TEXT BOOK

15CMP103	OPERATIONS RESEARCH	Semester – I			
		L	T	P	C
		4	1	-	4

COURSE OBJECTIVES:

Course Objectives

This course enables the students

1. To provide essential knowledge on Linear programming
2. To offer practical exposure to transportation and assignment problems
3. To gain the knowledge on Assignment and Queuing Theory Problems
4. To train students on Inventory Control
5. To helps to facilitates the learning of network analysis
6. To enhance learner knowledge in optimal use of performance measures of queues, optimal use of Inventory and Network scheduling with various applications in mathematics

Course Outcomes

On successful completion of this course, the students will be able to

1. Students may gather relevant knowledge for minimizing Operation Cost
2. Students are equipped to cut total cost and able to minimize time required for completing assigned task
3. Students could learn to maintain optimal level of inventory
4. Understand various mathematical applications in industries.
5. Decision making for real time environment.
6. course concentrates on Linear programming, transportation model, Queuing theory and Inventory

Unit – I

Introduction to Operations Research – Application in Management Decision Making – Linear Programming: Formulation of LPP – Graphical Solution to LPP – Simplex Method (using slack variables only)

Unit - II

Transportation Model: Introduction – Mathematical Formulation –Finding Initial Basic Feasible Solutions – Optimum Solution for Nondegeneracy and Degeneracy Model - Unbalanced Transportation Problems and Maximization case in Transportation Problem- Traveling Sales Man Problem.

Unit- III

The Assignment problem - Mathematical Formulation of the Problem – Hungarian Method –Unbalanced Assignment Problem- Maximization Case in Assignment Problem - Travelling Salesman Problem. Queuing Theory : Introduction – Characteristics of Queuing System. Problems in $(M/M/1):(\infty/\text{FIFO})$ and $(M/M/1):(N/\text{FIFO})$ models

Unit - IV

Inventory Control: Introduction – Costs involved in Inventory – Deterministic EOQ Models – Purchasing Model without and with Shortage, Manufacturing Model without and with Shortage -Price Break

Unit - V

PERT and CPM: Network Representation – Calculation of Earliest expected time, latest allowable occurrence time. CPM - Various Floats for Activities – Critical Path- PERT –Time Estimates in PERT- Probability of Meeting scheduled date of Completion of Projects

TEXT BOOK

4. **Hamdy A.Taha.**, Operations Research, (2007), Pearson education, Prentice Hall.
5. **Vittal** – Operations Research – Margham Publications

COURSE OBJECTIVES:**To make the students**

1. To Understand the Concept of marketing, and 4Ps of Marketing
2. To communicate orally and in written form the concepts of marketing and 4 Ps of marketing
3. To apply the marketing concepts and skills lifelong.
4. To understand the recent trends in marketing strategies of a companies.
5. To understand the consumer behavior and to adopt the decision according to the consumer.
6. To know the promotion strategies followed by a company.

COURSE OUTCOMES:**Learners should be able to**

1. Understand the Concept of marketing, and 4Ps of Marketing
2. Communicate orally and in written form the concepts of marketing and 4 Ps of marketing
3. Apply the marketing concepts and skills lifelong.
4. Apply the marketing strategies of a company's effectively.
5. To be familiar in behavior of consumer in related to market and to take decision effectively.
6. To implement the correct promotion strategies.

Unit-I

Definition of Marketing and Marketing Management – Object and Importance of Marketing – Evolution of Concept of Marketing – Recent Development in Marketing Concept – Marketing Functions – Approaches to the Study of Marketing – Market Segmentation – Basis – Criteria – Benefits.

Unit-II

Product Policy: Product Planning and Development – Product Life Cycle – Product Line and Product Mix Strategies. Branding: Features – Types – Functions. Packaging: Features – Types – Advantages – Brand Name and Trademark.

Unit-III

Pricing: Definition - Objectives of Pricing Decisions - Factors influencing Pricing Decisions – Methods of Setting Prices – Cost – Demand and Competition – Pricing Policies and Strategies.

Unit-IV

Sales Promotion: Meaning and Definition – Objectives and Importance of Sales Promotion – Personal Selling – Steps in Personal Selling - Advertising – Meaning – Objectives – Functions and Importance – Kinds of Media – Direct Marketing – Multi-level Marketing. Distribution Channels: Types of Channels – Factors affecting Choice of Distribution.

Unit-V

Marketing of Services – E-Marketing – Marketing Ethics – Consumerism – Meaning – Evolution – Types of Exploitation – Consumer Rights – Laws Protecting the Consumer Interest – Consumer Protection Acts – Consumer Courts - Retail Marketing – Methods – Problems – Retail Marketing in India – Customer Relationship Management

TEXT BOOK

15CMP105	ADVANCED CORPORATE ACCOUNTING	Semester – I			
		L	T	P	C
		6	-	-	5

COURSE OBJECTIVES:

To make the students

1. To understand the Redemption of Preference shares, Mergers& Acquisitions, Internal Reconstruction, Liquidation of shares, recent Development in Accounting.
2. To Post the journal, ledger Prepare the balance sheet for corporate Accounting.
3. To comprehend on recent developments and accounting standards
4. To enable the students to have working knowledge in corporate and special accounts.
5. To enable the students to have working knowledge in corporate and special accounts.
6. To provide knowledge on the importance of Human Resources Accounting

COURSE OUTCOMES :

Learners should be able to

1. Understand the Redemption of Preference shares, Mergers & Acquisitions, Internal Reconstruction, Liquidation of shares, recent Development in Accounting.
2. Post the journal, ledger Prepare the balance sheet for corporate Accounting.
3. Comprehend on recent developments and accounting standards
4. Demonstrate capabilities of problem-solving, critical thinking, and communication skills related to the discipline of accounting.
5. course includes preparation of final accounts, Amalgamation, Absorption and Reconstruction, Holding Company, Insurance and Banking Company Accounts, Inflation and Human Resource Accounting
6. Provide knowledge on the importance of Human Resources Accounting

Unit – I

Preparation of Company Final Accounts – Treatment and Provisions for Income Tax – Divisible Profit – Bonus Shares – Calculation of Managerial Remuneration

Unit –II

Amalgamation, Absorption and Reconstruction of Companies (Advanced Problems in Amalgamation, Absorption and Reconstruction of Companies including adjustment regarding elimination of Unrealized Profit, Inter Company Owings and Inter-Company Holdings)

Unit – III

Holding Company Accounts – Capital Profit – Revenue Profit – Minority Interest – Cost of Control – Preparation of Consolidated Balance Sheet

Unit – IV

Insurance Company Accounts – Life and General Insurance Accounts – Preparation of Revenue Accounts and Balance Sheet (Under the New Format) - Banking Company Accounts – Rebate on Bills Discounted – Classification of Advances and Investments – Preparation of Profit and Loss Account and Balance Sheet (Under the New Format)

Unit – V

Inflation Accounting – Human Resource Accounting –International Accounting Standards (Theory Only) – International Financial Reporting Standards.

Note: Theory 20%; Problems 80%

-	-	4	2

15CMP111 PRACTICAL:1 ACCOUNTING PACKAGE - TALLY

COURSE OBJECTIVES:

To make the students

1. To understand the accounts heads, vouching, inventory valuations, available in the accounting software
2. To classify the items under items heads
3. To Generate the financial Reports evaluate the output.
4. To communicate the outputs in written form identifying the objective and outcome of each exercise.
5. To apply the utilization of computerized system as a lifelong learning.
6. To develop practical skills for maintain the book of accounts.

COURSE OUTCOMES:

Learners should be able to

1. Familiarize on the account's heads, vouching, inventory valuations available in the accounting software
2. Classify the items under items heads
3. Generate the financial Reports, evaluate the output.
4. Communicate the outputs in written form identifying the objective and outcome of each exercise.
5. To apply the utilization of computerized system as a lifelong learning.
6. Course covers Company Creation, Ledger, Voucher, Trading and Profit and Loss Account, Balance Sheet, Inventory Valuation and Ratio Analysis

Creating a Company

1. Create a Company with all relevant details including VAT options

Creating Ledger

2. Create the ledgers under appropriate predefined groups

Cash a/c	Computer sales a/c
Buildings a/c	Machinery a/c
Furniture a/c	Commission received a/c
Printer purchase a/c	Commission paid a/c
Rent received a/c	Salary a/c
Rent paid a/c	Indian bank a/c
Wages a/c	Sales returns a/c
Capital a/c	Depreciation a/c
Purchase returns a/c	John & Co. a/c (purchased goods from this company)
Ram agency a/c (sold goods to this company)	

Create vouchers**3. Create vouchers and view Profit and loss a/c and Balance sheet for the following:**

Hindustan Ltd. started the business on 01-04-2011

- 1 Apr. Contributed capital by cash Rs 2, 00,000
- 1 Apr. Cash deposited in Indian bank Rs 50,000
- 2 Apr. Credit purchases from Krishna traders Rs. 20000 invoice no 12
- 3 Apr. Credit purchases from PRAVIN traders Rs 20,000 invoice no 12
- 4 Apr. Credit purchase from KRISHNA traders Rs 20000 invoice no 14
- 5 Apr. Credit purchase from PRAVIN traders Rs 20,000 invoice no 44
- 6 Apr. Returned goods to KRISHNA traders Rs 5000 invoice no 12
- 7 Apr. Returned goods to PRAVIN traders Rs 5000 invoice no 44
- 8 Apr. Credit sales to RAVI & Co Rs 50,000 inv no 1
- 9 Apr. Credit sales to KUMAR & Co Rs 50,000 inv no 2
- 10 Apr. Cash sales Rs 20,000 inv no 3
- 11 Apr. Credit sales to RAVI & Co Rs 50,000 inv no 2
- 12 Apr. Credit sales to RAVI & Co Rs 50000 inv no 5
- 14 Apr. Goods returned by RAVI & Co Rs 5000 inv no 1
- 14 Apr. Goods returned by KUMAR & Co Rs 5000 inv no 1
- 15 Apr. Payment made by cheque to Krishna Traders Rs 30,000 ch no 505580
- 16 Apr. Payment made by cheque to Pravin Traders Rs 30,000 ch no 505592
- 17 Apr. Received cheque from: Ravi & Co and Kumar & Co 75,000 each.

Payments made by cash

- 3 Apr. Paid to petty cash by cash Rs.1000
- 4 Apr. Furniture purchased Rs.20000
- 5 Apr. Salaries paid Rs. 10000
- 6 Apr. Rent Rs.4000
- 7 Apr. Electricity charges Rs.3000
- 8 Apr. Telephone charges Rs.3500
- 9 Apr. Cash purchases Rs.5000

Payments made by petty cash

- 10 Apr. Conveyance Rs.150
- 11 Apr. Postage Rs.100
- 12 Apr. Stationeries Rs.200
- 14 Apr. Staff welfare Rs.100
- 14 Apr. Stationeries purchased from Sriram & Co 1500 on credit
- 15 Apr. Depreciation on furniture 10%

4. Emerald & Co., started a business of home appliances from 1-4-2011

01-04 received cash for capital 5, 00,000
 07-04 credit purchases from LG Limited invoice no 123
 Oven 100nos at Rs 800,Mixes 100nos at Rs 1000,DVD player 100nos at Rs 1500,
 Fridge 100nos at Rs 2000
 10-04 Credit Sales to AMN invoice no 1:
 Oven 70nos at Rs 1000,Mixes 70nos at Rs 1500,DVD player 70nos at Rs 2000
 Fridge 70nos at Rs 2500+TNGST 4% ON TOTAL SALES
 10-04 Cash Sales invoice no 2:
 Oven 10nos at Rs 1000,Mixes 10nos at Rs 1500,DVD player 10nos at Rs 2000,
 Fridge 10nos at Rs 2500+TNGST 4% ON TOTAL SALES CASH discount 5%
 15-4 Paid cheque to LG limitedRs 2,00,000
 15-4 Received cheque from AMN&coRs 3,00,000

5.Payment made by cash

Paid to petty cash Rs 2000, Furniture Rs 15000, Salaries Rs 10000
 Wages Rs 7000, Carriage inward Rs 1500.
 25-04 Payment made by petty cash
 Conveyance Rs 200, Postage Rs 150, Stationeries Rs 150, Staff Welfare Rs 200
 30-04 Journal depreciate 10% on furniture:

Prepare Trading Profit and Loss Account and Balance sheet.

6. From the Balances of Ms. Kavitha, Prepare Trading A/C, Profit And Loss A/C and Balance Sheet for The Year Ending

Stock - 9,300	Misc. income - 200
Repairs - 310	Purchases - 15,450
Machinery - 12,670	Purchase return - 440
Furniture - 1430	Sales return - 120
Office expenses - 750	Sundry creditors -
Trading expenses -	12,370
310	Advertisement - 500
Land & Building -	Cash in hand - 160
15,400	Cash at bank - 5,870
Bank charges - 50	Sales - 20,560
Capital - 24,500	Sundry expenses -
Loan - 5,000	150
Closing stock - 7,580	Insurance - 500
	Traveling expenses -
	200

INVENTORY VALUATION

7. From the Information given below create unit of measurement, stock groups and stock items

Find the stock summary:

Stock groups: 1. Magazine 2. Baby drinks 3. Cool drinks 4.dailynews paper 5. Hot drinks
6.Stationeries 7. Vegetables

Stock items:

Item	Qty	Rate	Units
Boost	25	80	nos
Sports star	20	15	nos
Potato	260	30	kgs
Star dust	20	25	nos
The Hindu	50	3.25	nos
Tomato	150	15	kgs
Fanta	10	25	lit
Dinamalar	40	2.50	nos
Coco	55	120	nos
Horlicks	60	70	nos
India today	10	10	nos
Lactogin	10	100	nos

MAINTAIN BILLWISE DETAILS**8. Create bill wise details from the following**

1. Ravi commenced business with a capital of Rs 2,00,000
2. Purchased goods from Kumar & Co Rs.15, 000 Paid in three installments within 5 days gap
3. Purchased goods for cash Rs.8000
4. Sold goods to Ratna & co Rs. 20,000 amount to be paid in two installment
5. Sold goods for cash for Rs .5000
6. Received cash from Ratna & co Rs. 75000
7. Paid to Kumar & co Rs. 7500
8. Sold goods for cash Rs.5000

CONSOLIDATION OF ACCOUNTS**9. Bharath Agencies, A Wholesaler Gives The Following Information:**

Opening balances:

Capital: 20, 00,000 cash at bank: 10, 00,000

Cash in hand: 5, 00,000 furniture: 5, 00,000

Bharath agencies are dealing in stationeries. The selling prices are as follows;

Pen Rs 35 per dozen, pencil Rs. 30 per dozen, Ink pens Rs 140 per dozen

The following transactions take on a particular date:

- 1.purchased 100 dozens of pens from Ravana bros. @ Rs.25 per dozen for cash
- 2.purchased 200 dozens of pencils from Gughan bros.@ Rs.21.50 per dozen for credit less discount of Rs 100
- 3.sold 10 dozens of pens to Dharma bros. For cash
- 4.sold 10 dozens of pens to Bema bros for credit
- 5.sold 50 dozens of pencils to Arjuna bros.
- 6.purchased from Ravana bros 50 dozens of ink pens @ Rs.120 and by cheque.

Prepare following statements using Ex-accounting packages:

Stores ledger, Trading account, Income statement, Balance sheet, Account summary
Ignore dates

FOREIGN GAINS/LOSS

10. Calculate

01.01.2005 Purchased goods from U.K supplier 1000 £

02.01.2005 Sold goods to U.S buyer 1500

03.01.2005 Cash received from U.S buyer 1500

(Selling rate rs.46/\$)

04.02.2005 Paid cash to U.K supplier 1000

(Selling rate Rs 53/ £)

Dollar \$:

Std rate - 1\$ - 43 Rs

Sales rate - 1\$ - 44 Rs

Buying rate - 1\$ - 42 Rs

Pound £:

Std rate - 1 £ - 51 Rs

Sales rate - 1 £ - 50 Rs

Buying rate - 1 £ - 52 Rs

11. MEMO VOUCHER

An advance amount paid Rs 1500 given to sales executive for traveling. The actual expenses for traveling expenses for the sales is Rs 500

12. CHEQUE PRINTING

Print a cheque:

Company name on cheque: Wipro India Ltd.: name of the bank Indusind bank.

Width 168, height 76, starting location 116, distance from top 23.

13. RATIO ANALYSIS

Enter the following details comment upon the short-term solvency position of the company:

Working capital Rs 20560492

Cash 14500

Bank 18500

Debtors 518260

Creditors 429337

Sales 515252

Purchases 433310

Stock 125982

Net profit ...?

14. INTEREST CALCULATIONS

Cash deposited in Scotia bank Rs 1,00,000

Sold goods to Ganesh Rs 25,000

31-12- cash deposited at Scotia bank Rs 50,000

Sold goods to Ganesh 50,000

Interest parameters rate 14% per 365 days year

15. Calculate Interest

Cash deposited in SBI 1, 00,000 Rs

1-12 purchased goods from suppliers Rs 20,000

Deposited in SBI Rs.50, 000

Purchased goods from suppliers Rs 40,000

Interest parameters rate 16% per 365 days year

16. Display the interest calculations for the period 1-4-2011 to 31-12-2011

Opening balance

Ram & Co Rs 25,000

Krishna traders Rs 20,000

Interest parameters rate 12% per 365 days year

Interest parameters rate 12% and 16% for sundry creditors per 365 days year

Purchased goods from Krishna for 25,000(credit period 45 days)

Sold goods to Ram for Rs. 50,000(credit period 30 days)

Paid to Krishna the amount plus interest

Received from Ram plus interest

17. Create stock items, stock groups, sales categories, godowns, units of measure.

Stock	Category	Group	Godown	Unit of measure	Std cost	Sell Price	Op. Qty	Total Value
Inter	Processor	Celeron	Mumbai	Nos.	15000	20000	2	30000

<u>Celeron</u>								
<u>Intel Premium III</u>	<u>Processor</u>		<u>Chennai</u>	<u>Nos</u>	<u>20000</u>	<u>25000</u>	<u>3</u>	<u>60000</u>
<u>Tally Silver</u>	<u>Accounting</u>	<u>Tally</u>	<u>Chennai</u>	<u>Nos</u>	<u>20000</u>	<u>22500</u>	<u>5</u>	<u>100000</u>
<u>Tally gold</u>	<u>Accounting</u>	<u>Tally</u>	<u>Chennai</u>	<u>Nos</u>	<u>42000</u>	<u>45000</u>	<u>5</u>	<u>210000</u>
								<u>400000</u>

18. Using the above exercise create various vouchers including VAT calculation for the following

Date Transactions	Transcation
<u>09/4/2006</u>	Intel Pentium III (3 Nos) @ 25,000 delivered to Vijay & CO, from Madras Go down.
<u>10/4/2006</u>	10 Nos of Intel Celeron @ 15000 per unit received from Jayaram and Co, and sent to Madras Go down.
<u>12/4/2006</u>	2Nos of Intel Premium III received from Vijay & CO, as it was not in a working position.
<u>14/4/2006</u>	2Nos of Intel Celeron returned to Jayaram & Co from Madras Go down.
<u>14/4/2006</u>	Physical Stock verification shows Shortage of 1 No Intel Pentium III.

19. Create the following Inventory vouchers with data from any cost accounting book.

- Purchase order
- sales order
- Rejection out
- Rejection in
- Stock journal
- Delivery note
- Receipt note
- Physical stock

20. In addition to the above mentioned lab exercises work out a problem from any advanced accountancy book with a minimum of 20 transactions and generate the tally reports in full.

		Semester – II			
		L	T	P	C
15CMP201	APPLIED COST ACCOUNTING	5	-	-	4

COURSE OBJECTIVES:

To make the students

1. To Explain the core concepts of costing, costing types and its importance in managing a business
2. To develop a conceptual framework of costing and to acquaint the participants with the tools, techniques
3. To know the process of cost reduction and control in the realm of decision making.
4. To familiarizes students with the various concepts and elements of cost
5. To Create cost consciousness among the students
6. To provide the students knowledge about use of costing data for Planning, Control and decision making

COURSEOUTCOMES:

Learners should be able to

1. Explain the core concepts of costing, costing types and its importance in managing a business
2. Develop a conceptual framework of costing and to acquaint the participants with the tools, techniques and process cost reduction and control in the realm of decision making
3. Compute using different costing methods.
4. Demonstrate capabilities of teamwork, problem-solving and critical thinking
5. Communication skills related to finance decisions.
6. course include Material Cost, Labour Cost, Overheads, Process Costing, Activity Based Costing and Target Costing

Objectives

Unit – I

Cost Accounting – Meaning and Objectives – Importance – Limitations – Limitations of Financial Accounting – Differences between Cost Accounting and Financial Accounting, Cost Accounting and Management Accounting – Methods of Costing – Elements of Cost – Preparation of Cost Sheet – Tender – Quotations – Reconciliation of Cost and Financial Accounting

Unit – II

Material Control – Objectives – Levels of Inventory – EOQ – Methods of Inventory Control – Methods of Valuing Material Issues – Control over Wages – Scrap and Spoilage - Labour - Labour Cost Control – Importance – Systems of Wage Payment – Incentives – Idle Time – Control Over Idle Time – Labour Turnover

Unit – III

Overheads – Classification of Overheads – Allocation, Apportionment and Absorption of Overheads – Methods of Absorption of Overheads

Unit – IV

Process Costing – Features – General Principles – Comparison between Job Costing and Process Costing – Process Losses – Normal Loss – Abnormal Loss – Abnormal Gains – Inter Process Profit – Equivalent Production – Procedure for Evaluation – Joint Product and by Product

Unit-V

Activity Based Costing: Meaning and Methodology of Activity Based Costing (ABC Analysis)-Merits, Demerits and Suitability of Activity Based Costing- Implementation of Activity Based Costing- Draw Back of Conventional Costing - Target costing: Meaning-Characteristics-Principles-Implementation of Target Costing- Installation of Target Costing-Target Costing Vs. Traditional Costing- Life Cycle Costing-Meaning-Definition-Applications of LCC -Importance-Process of LCC

COURSE OBJECTIVES:

To make the students

1. To Understand the Concept of assessment, assessee, Income heads and the Income Tax laws.
2. To help students to understand different heads of income
3. To learn the tools and techniques to compute the tax for the various income heads.
4. To select the best ways to compute the income tax based on the income heads for various assessee and to gain a lifelong learning for applying the IT calculation for various income heads based on each case of assessee.
5. To communicate orally and in written form the income tax concepts and computations.
6. To be familiar with the laws pertaining to the Income Tax and apply it lifelong.

COURSE OUTCOMES:

Learners should be able to

1. Comprehend on the concepts related to assessment, assessee, Income heads and the Income Tax laws.
2. Compute Income Tax Returns.
3. Provide the students knowledge about Tax planning
4. Formulate the Income Tax calculations by critically analyzing the assessee's situation under various income heads and deductions and acquire a Lifelong practice for computation of Tax under various income heads and deductions for any assessee
5. Communicate orally and in written the Income tax computation under various income heads and deductions.
6. Familiar with the laws pertaining to the Income Tax and its apply it lifelong.

Unit- I

Income Tax Act 1961- Scope of income - Total Income and residential status - income which do not form part of the total income – Income from Salaries.

Unit - II

Income from House Property – Profits and gains of business or profession – Income From business- Income from Profession.

Unit - III

Capital Gains – Capital Gain –Short Term and Long Term Gain - Income from other sources – Aggregation of income- set off and carry forward of losses.

Unit - IV

Deduction out of Gross Total Income - Computation of Total Income- Assessment of Individual.

Unit - V

Tax Planning – Advance payment of tax –Tax Deducted at Source - ETDS Software - Returns to be submitted by various assesses-Different Types of Tax Planning – Tax Software – e-filing Procedure e-filing of income tax return.

Note: The question paper shall cover 40% theory and 60% problems

		Semester – II			
		L	T	P	C
15CMP203	INSURANCE AND RISK MANAGEMENT	5	-	-	4

COURSE OBJECTIVES:

To make the students

1. To Understand the Concept of risk, and insurance a product to mitigate risk, its design and pricing
2. To comprehend on the reforms in Indian insurance industry.
3. To understand the categorization and application of the life and non-life insurance as a risk mitigation instrument,
4. To create awareness among students on various insurance policies and the procedures followed on availing policies
5. To communicate orally and in written form the understanding of insurance, insurance types, designing and pricing.
6. To create awareness among students on various insurance policies and the procedures followed on availing policies

COURSE OUTCOMES:

Learners should be able to

1. Understand the Concept of risk, and insurance a product to mitigate risk, its design and pricing
2. Comprehend on the reforms in Indian insurance industry.
3. Understand the categorization and application of the life and non-life insurance as a risk mitigation instrument,
4. Communicate orally and in written form the understanding of insurance, insurance types, designing and pricing.
5. course consists of types of risks, risk management, Life and General Insurance
6. Create awareness among students on various insurance policies and the procedures followed on availing policies

Objective

Unit – I

Introduction to Risk Management : The Concept of Risk – Risk Vs Uncertainty – Types of Risks: Market Risk, Credit Risk, Operational Risk, Interest Risk, Business Risk, Systematic Risk – Classifying Pure Risks – Methods of Handling Pure Risks – Risk Management Process – Risk Financing Techniques – Risk Management Objectives – Risk Management Information System (RMIS) – Risk Control

Unit - II

Risk Management by Individuals: Factors affecting individual demands for insurance – Risk Management by Corporations – Corporate Risk Management Process – Types of Risk Managing Firms

Unit – III

Growth and Development of Indian Insurance Industry – Regulations of Insurance Business and the Emerging Scenario – Introduction to Life and General Insurance – Life Insurance: Features of Life Insurance – Essentials of Life Insurance Contract – Kinds of Insurance Policies – Premium Determination – Life Policy Conditions

Unit – IV

Fire Insurance – Fire Insurance Contracts – Fire Insurance Coverage – Policies for Stocks – Rate Fixation in Fire Insurance – Settlement of Claims – Marine Insurance: Marine Insurance Contract – Types of Marine Insurance – Marine Cargo Losses and Frauds – Settlement of Claims

Unit – V

Miscellaneous Insurance: Motor Insurance – Employer's Liability Insurance – Personal Accident and Sickness Insurance – Aviation Insurance – Burglary Insurance – Fidelity Guarantee Insurance – Engineering Insurance – Cattle Insurance – Crop Insurance

15CMP204A	ORGANIZATIONAL BEHAVIOUR	Semester – II			
		L	T	P	C
		4	-	-	3

COURSE OBJECTIVES:

To make the students

1. To understand the basic concepts of organizational behavior.
2. To analyze the individual behavior traits required for performing as individual or group.
3. To obtain the knowledge and skills of perceiving, motivating using different learning styles.
4. To understand how to perform in group and team and how to manage the power, politics and conflict.
5. To recognize the importance of organizational culture and organizational change.
6. The course comprise of Organizational behavior, Personality, Attitude, Stress and Organizational Conflict

COURSE OUTCOMES:

Learners should be able to:

1. Analyze behavior issues in the context of the organizational behavior theories and concepts.
2. Assess the behavior of the individuals and groups in organization by applying personality, motivation and learning theories.
3. Manage team and resolve conflict arising between the members.
4. Explain how organizational changes held in the company
5. and culture affect working relationships within organizations.
6. Exhibit the communication skills to convey the thoughts and ideas to the individuals and group.

Unit – I

Organizational Behaviour – Nature – Disciplines contributing to Organizational Behavior – Role of Organizational Behavior – Foundations of Organizational Behavior – Implications of Hawthorne Experiments

Unit – II

Individual Difference – Nature – Causes – Models of Man – Perception – Perceptual Process – Perceptual Selectivity – Distortion in Perception – Personality – Determinants of Personality

Unit – III

Attitude – Concepts – Theories of Attitude Formation – Factors in Attitude Formations – Attitude Change. Stress – Causes of Stress – Effects of Stress – Stress Coping Strategies – Individual and Organizational

Unit – IV

Group Dynamics – Concepts and Features of Group – Types of Groups – Formal and Informal Groups – Causes of Informal Organizations – Types of Industrial Organization – Effects of Informal Organization – Group Cohesiveness

Unit – V

Organizational Conflicts – Functional and Dysfunctional Aspects of Conflicts – Role Conflicts – Interpersonal Conflict – Conflict Management

15CMP204B	MODERN MANAGEMENT PRACTICE	Semester – II			
		L	T	P	C
		4	-	-	3

COURSE OBJECTIVES:

To make the students

1. To Understand the concept of management
2. To understand on the concept of Strategic Management.
3. To understand on the concept of Organizational Structures
4. To identify the concept of Leadership and Quality of Work Life
5. To understand the concept of Team Management
6. To understand the concept of Team Conflict

COURSE OUTCOMES:

Learners should be able to

1. Understand the concept of management
2. Understand on the concept of Strategic Management.
3. Understand on the concept of Organizational Structures
4. Identify the concept of Leadership and Quality of Work Life
5. Understand the concept of Team Management
6. Understand the concept of Team Conflict

Unit – I

Fundamentals of Management - Characteristics of Well managed companies – Managerial Process –Managerial Skills and roles –Managing the Internal and External Environment –Strategies of the Environment Management –Managing for Competitive Advantage –Cost –Quality –Speed –Innovations –Globalization –Challenges of a Manager in the 21st Century

Unit – II

Strategic Management - SWOT Analysis –BCG matrix –Classification of Strategies -Managerial Decision Making –Group Decision Making –Corporate Social Responsibility –Strategies -Indian experiences in CSR

Unit – III

Organizational Structures - Kinds of Organizational Structures - Hybrid and Matrix Structures - Span of Control - Delegation of Authority - Centralized and Decentralized Structures - Organizing for Optimal Size - Strategies of Responsive Organization - Customer Relationship Management - TQM - 6 Sigma.

Unit – IV

Leadership - Transactional and Transformational Leaders - Traditional and Contemporary Perspective on Leadership - Situational Theories - Developing Leadership Skills - Motivating for Performance - Reinforcements for Performance - Expectancy Theory - Job Enrichment - Empowerment - Establishing Equity and Quality of Work Life.

Unit – V

Management Teams - Managing High Performance Teams - Team Development - Cohesiveness - Managing Conflicts in Team - Managing Technology and Innovations in Competitive Environment - Managing Change - Shaping the future.

15CMP204C	CONSUMER BEHAVIOUR	Semester – II			
		L	T	P	C
		4	-	-	3

COURSE OBJECTIVES:

To make the students

1. To understand the consumer behavior concepts, dimensions used in consumer behaviour research.
2. To recognize the Internal Influencing factors that affect the Consumer Behaviour
3. To identify the external Influencing factors that affect the Consumer Behaviour
4. To conceptualize on the consumer decision making process.
5. To know the application consumer behaviour concepts to access the changing behavior of the customers.
6. To appreciate the personal and environmental factors that influence consumer decisions. To understand the strategic implications of consumer influences, and marketing decisions

COURSEOUTCOMES:

Learners should be able to

1. Understand the importance of Culture, Subculture, Social Class, Reference Groups
2. Understand the importance of Family Influences in Consumer Behaviour.
3. Explore, analyze and compare the core theories of consumer behaviour and its application in both consumer and organizational markets
4. Appraise models of Consumer Behaviour and determine their relevance to particular marketing situations
5. Critique the theoretical perspectives associated with consumer decision making, including recognizing cognitive biases and heuristics
6. Demonstrate capabilities of teamwork, critical thinking, and communication skills related to investment decisions.

Unit – I

Definition, Scope, and Application of Consumer Behavior-Evolution of Consumer Behavior as a field of study and its relationship with Marketing; Behavioral Dimension-Interdisciplinary Nature of Consumer Behavior studies

Unit – II

Consumer Decision Making Process - Buying Motives - Buying Roles, Consumer Decision Making Process, Levels of Consumer Decision Making, Perspectives-Models

Unit – III

Psychological Influence on Consumer Decision Making – Consumers Needs & Motivation, Emotions and Mood, Consumer Involvement; Consumer Learning, Personality, Self-concept and Self-image; Consumer Perception, Risk and Imagery; Consumer Attitude: Belief, Attitude and Intention, Formation-Change-Consumer Communication.

Unit – IV

Sociological Influences – Consumer Groups - Consumer Reference Groups, Family and Life cycle, Social Class and Mobility, Lifestyle Analysis - Culture; Sub-Culture, Cross Culture - Interpersonal Communication and influence, Opinion Leadership.

Unit – V

Diffusion of Motivation - Consumer Orientation - Diffusion Process, Adoption Process, Consumer Innovators, Multiplicative Innovation Adoption (MIA) Model.

15CMP204D	WORKING CAPITAL MANAGEMENT	Semester – II			
		L	T	P	C
		4	-	-	3

COURSE OBJECTIVES:

To make the students

1. To Understand the Concept of financial management, objective of financial management,
2. To know the major four decisions taken by finance manager and its impact and enrich the lifelong learning.
3. To analyze the alternatives using appropriate tools and techniques.
4. To solve the problems and take decisions based on the result.
5. To communicate orally and in written form the concepts and solutions.
6. To analyse cases in a team and exhibit leadership skills.

COURSE OUTCOMES:

Learners should be able to

1. Understand the Concept of financial management, objective of financial management, the major four decisionstakenbyfinancemanageranditsimpactandenrichthelifelong learning.
2. Working Capital Management, Cash Management, Inventory Management, Receivables Management and Modes of financing Current Asset
3. Analyze the alternatives using appropriate tools and techniques.
4. Solve the problems and take decisions based on the result.
5. Communicate orally and in written form the concepts and solutions.
6. Analyze cases in a team and exhibit leadership skills.

Unit - I

Working Capital Policy Overall Considerations - Importance of Working Capital Management - Concept of Working Capital - Risk and Return Trade off Financing Working Capital - Sources and Uses of Working Capital - Factor influencing Working Capital Requirements Issues in Working Capital Policy - Size of Working Capital Forecasting and Management of Working Capital.

Unit - II

Cash Management: Importance - Factors influencing Cash Balance
Determining minimum Cash Balance - Cash Budgeting - Cash Control Monitoring
Collections and Disbursement - Cash Management Models.

Unit - III

Inventory Management - Need for inventories and importance of its Management
- Techniques for Managing Inventory - Different Models Recorder - Point - Pricing of
Raw Materials and Valuation of Stock - Monitoring and Control of Inventories

Unit - IV

Receivables Management Credit Policy - Credits evaluation credit granting
decisions - Control receivables - Collection policy

Unit - V

Financing Current Assets: Trade Credit - Short - term Bank Finance -
Commercial paper - Public Deposits - Committees on Working Capital Regulation of
Bank credit - Recommendation

15CMP206	FINANCIAL MARKETS AND INSTITUTIONS	Semester – II			
		L	T	P	C
		5	-	-	4

COURSE OBJECTIVES:

To make the students

1. To comprehend on the concept financial markets, instruments and financial institution and its role in economic development
2. To understand the regulatory bodies governing the functioning of financial markets and financial institution
3. To analyze the structure of financial markets and its functions
4. To provide knowledge on Financial System of India and
5. To provide knowledge on Financial System of India and to familiarize the structure of financial markets
6. To familiarize the structure of financial markets

COURSE OUTCOMES:

Learners should be able to

1. Comprehend on the concept financial markets, instruments and financial institution and its role in economic development
2. Understand the regulatory bodies governing the functioning of financial markets and financial institution
3. Obtain the capacity to do lifelong learning on financial markets, instruments, financial institution and its applications.
4. To communicate orally and in written format about the financial markets and institutions
5. The course includes Money Market, Money Market Instruments, Capital Market, Depository System and various types of Financial Institutions
6. Course includes Money Market, Money Market Instruments, Capital Market, Depository System and various types of Financial Institutions

Unit – I

Financial Concept: Financial Assets, Intermediaries, Financial Markets, Financial Rate of Return, Financial Instruments. Financial Markets Classification – Development of Financial System in India, Legislative Support – Weakness of Indian Financial System

Unit - II

Money Market – Definition – Money Market Vs Capital Market- Objectives – Importance of Money Market – Composition of Money Market – Participants – Commercial Bill Market – Types of Bills – Importance of Bill Market –Discount Market

– Acceptance Market – Bill Market Scheme – Treasury Bill Market – Types of Treasury Bills – Importance – Commercial Paper – Certificate of Deposit – REPO – Structure of Indian Money Market – Recent Developments in Money Markets.

Unit – III

Capital Market – Meaning – Stock Exchange – Distinction between New Issue Market and Stock Exchange – Relationship between New Issues Market and Stock Exchange – Functions of New Issue Market – Instruments of Issues – Players in the New Issue Market – Book Building – Follow on Public Offer – Recent Trends – Reasons for Poor Performance – Suggestions

Unit - IV

Depository System : Definition and Meaning – Objectives – Interacting Institutions – Depository Process – Trading in a Depository System – Depository System in India – Depository Participants – Benefits – NSDL – Central Depository Services (India) Ltd. – Drawbacks – Remedial Measures - Derivatives

Unit - V

RBI – Commercial Banks – Public and Private – Co-operative Banks - LIC – IDBI – IFCI – ICICI – NHB – SFCs – DIC – TIIC. SEBI – Objectives – Functions of SEBI - Guidelines for Investor Protection

TEXT BOOK

COURSE OBJECTIVES:**To make the students**

1. To comprehend on the concept financial markets, instruments and financial institution
2. To understand role of stock market on economic development
3. To understand the regulatory bodies governing the functioning of financial markets and financial institution
4. To analyze the structure of financial markets and its functions
5. To enable the students from students other than Commerce
6. To understand the concepts, tools and techniques of investment in stock market

COURSE OUTCOMES:**Learners should be able to**

1. Comprehend on the concept financial markets, instruments and financial institution
2. Understand role of stock market on economic development
3. Understand the regulatory bodies governing the functioning of financial markets and financial institution
4. Analyze the structure of financial markets and its functions
5. Enable the students from students other than Commerce
6. Understand the concepts, tools and techniques of investment in stock market

Unit – I

Investment: Basics of Investment – Investment, Speculation and Gambling – Investment Environment – Investment Categories – SEBI Functions

Unit – II

Stock Market: Markets for Securities and their functions – Primary Markets – Secondary Markets – Processes of Buying and Selling Securities – Types of Securities – Security Market Indicators.

Unit – III

Risk – Return Framework: Security Returns – Measurement of Returns – Concept of Risk – Systematic Risk – and Unsystematic Risk

Unit -IV

Fundamental Analysis: Basics of Economic Analysis and Industry Analysis – Company Analysis – Non Financial Parameters – Financial Parameters – Analysis of Financial Statements.

Unit-V

Technical Analysis: The Dow Theory – Technical indicators of the Overall Market – Indicators for Individual Stocks – Charting Techniques.

15CMP221	INSTITUTIONAL TRAINING	Semester – II			
		L	T	P	C
		-	-	-	3

15CMP301	MANAGEMENT ACCOUNTING	Semester – III			
		L	T	P	C
		6	-	-	5

COURSE OBJECTIVES:

To make the students

1. To Understand the Concept of management accounting, costing behaviour, budgeting and enrich the lifelong learning.
2. To comprehend on the contemporary issues relevant to accounting concepts.
3. To analyse the alternatives using appropriate tools and techniques.
4. To solve the problems and take decisions based on the result.
5. To communicate orally and in written form the concepts and solutions.
6. To provide the students knowledge about budgetary control.

COURSE OUTCOMES:

Learners should be able to

1. Understand the Concept of management accounting, costing behaviour, budgeting and enrich the lifelong learning.
2. Comprehend on the contemporary issues relevant to accounting concepts.
3. Analyse the alternatives using appropriate tools and techniques.
4. Solve the problems and take decisions based on the result.
5. Communicate orally and in written form the concepts and solutions.
6. Gain knowledge about budgetary control.

Unit – I

Management Accounting – Meaning – Definition – Objectives and Scope – Relationship between Management Accounting and Financial Accounting – Management Accounting and Cost Accounting

Unit – II

Financial Statement Analysis – Types of Financial Statement Analysis - Ratio Analysis – Meaning – Uses – Limitations – Classification of Ratios – Computation of Ratios from Financial Statements

Unit – III

Fund Flow Analysis – Cash Flow Analysis – Working Capital Statements – Funds from Operations

Unit – IV

Budgetary Control – Flexible Budget – Sales Budget – Cash Budget – Production Budget – Purchase Budget

Unit – V

Marginal Costing – Break Even Analysis – Applications of Marginal Costing Techniques – Determination of Sales Mix – Key factor – Make or Buy Decision (Simple Problems Only)

Note: Theory -20% Problems - 80%

15CMP302	BUSINESS RESEARCH METHODS AND TECHNIQUES	Semester – III			
		L	T	P	C
		5	-	-	4

COURSE OBJECTIVES:

To make the students

1. To understand the basic framework of research and research process and its important in business decision.
2. To develop an understanding of various research designs and sampling techniques and its application.
3. To identify appropriate sources of information and methods of data collection for solving a business issue.
4. To understand the selection of appropriate tools to analyse the quantitative and qualitative data.
5. To understand the ethical norms for research and select the best type of research report and be familiar with the content to be included in the report.
6. To gain the sampling techniques along with hypothesis testing.

COURSE OUTCOMES :

Learners should be able to

1. Assess the best suitable research type and formulate the research objective for the business problem.
2. Formulate the suitable research designs and select appropriate sampling techniques for the research.
3. Select the appropriate data collection method for solving the business issue and decide the appropriate measurement scale for designing the instrument for data collection.
4. Apply appropriate analytical tools for the data collected and formulate a suitable suggestion for the business problem.
5. Demonstrate capabilities of team work, problem-solving, critical thinking, and communication skills and design a suitable research report based on the ethical norms of research.
6. The course comprise of Types of Research, Research Design, Sampling, Data Collection, Scaling Techniques, Hypothesis Testing and Statistics

Unit-I

Introduction to Research: Meaning – Purpose – Types of Research – Significance
– Qualities of a good research – Steps in Research - Identification, Selection and Formulation

of Research Problem. Research Design: Components of Research Design – Methods of Research Design.

Unit-II

Sampling Design: Census and Sample Survey – Characteristics of a Good Sample Plan – Steps in Sampling – Types of Sampling – Advantages and Limitations of Sampling. Data Collection: Primary Data - Meaning – Significance – Methods of Collecting Data: Observation – Interview Schedule – Questionnaire. Secondary Data – Meaning - Sources of Secondary Data – Precautions while using Secondary Data.

Unit-III

Scaling Techniques: Meaning of Scale–Measurement of Scale – Important Scaling Techniques - Processing of Data - Editing – Purpose – Analysis and Interpretation of Data: Meaning – Need for Interpretation – Techniques of Interpretation.- Report Writing: Types of Research Reports – Layout of the Report – Steps in Writing the Report – Contents of Research Reports

Unit-IV

Hypothesis: Characteristics of a good Hypothesis – Formulation of Hypothesis – Procedure for Testing of Hypothesis – T test, F test and Chi Square Test, Analysis of Variance - Business Forecasting – Exponential Smoothing

Unit-V

Descriptive Statistics - Measures of Central Tendency: - Mean, Median and Mode - Standard deviation – Karl Pearson Correlation – Spearman Rank Correlation - Regression Models – Inferential Statistics – Multivariate Analysis - Factor Analysis – Kruskal Wallis Test

Note:

The question paper shall cover 80% theory and 20% problems

TEXT BOOK

1. **C. R. Kothari**, (2014) Research Methodology – Methods and Techniques, New Age International (P) Limited, Publishers, New Delhi

REFERENCES

2. **Anil Kumar Gupta** (2011) Research Methodology: Methods and Techniques, Vayu Education of India, New Delhi

6. **Saravanavel** (2008) Research Methodology, Kitab Mahal
7. **Rao** (2013) Research Methodology in Commerce and Management, Streling Publishers

COURSE OBJECTIVES:**To make the students**

1. To Understand the Concept of indirect taxes emphasizing VAT and customs law.
2. To learn and compute the VAT liabilities.
3. To know how to register VAT and apply the VAT provisions.
4. To communicate orally and in written form the indirect taxations concepts and provisions.
5. To be familiar with the standards and laws pertaining to the VAT and customs and utilize for lifelong practical application.
6. To understand the statutory compliance under indirect taxes.

COURSE OUTCOMES:**Learners should be able to**

1. Comprehend on the Concept of indirect taxes emphasizing VAT and customs law.
2. Comprehend and compute VAT liabilities.
3. Know the procedure to register VAT and apply VAT provisions to business situations.
4. Communicate orally and in written form the indirect taxations concepts and provisions.
5. Familiar with the standards and laws pertaining VAT and customs and utilize for lifelong practical application.
6. The course covers Indirect Tax, Central Excise, Customs Laws, Service Tax and Central Sales Tax and VAT

Unit-I

Indirect Taxes- Features of Indirect Tax- Indirect Tax Laws-Administration and Relevant Procedures - Advantages and Disadvantages of Indirect Taxes

Unit-II

Central Excise - The Central Excise Law – Goods- Excisable goods, Manufacture and Manufacturer- Classification- Valuation-Related Person-Captive Consumption- Powers of Officers-Tariff Commission and other Tariff Authorities.

Unit-III

Customs Laws -Basic Concepts of Customs Law - Types of Custom Duties.- Anti- Dumping Duty, Safeguard Duty- Valuation -Customs Procedures- Import and Export Procedures-Baggage- Exemptions – Warehousing- Demurrage - Project Imports and Re- Imports- Penalties and Offences- Export Promotion Schemes- Duty Drawback.

Unit-IV

Service Tax - Introduction, Nature of Service Tax-Service Provider and Service Receiver- Registration procedure- Records to be Maintained - Classification of Taxable Services - Valuation of Taxable Services- Exemptions and Abatements - Payment of Service Tax- Return - Export and Import of Services- Other aspects of Service Tax- Taxable Services.

Unit-V

Central Sales Tax Act & VAT Act- Introduction, Definition of Sale under CST – VAT- Salient Features of State VAT Acts- Treatment of Stock & Branch Transfer under State VAT Acts - Filing & Return under State VAT Act.

TEXT BOOK

1. **V.S.Datey(2015)-** , Indirect Taxes, Taxmann Publications (P) Ltd., New Delhi.

REFERENCES

1. **V.Balachandran** (2006) Indirect Taxation, Sultan Chand & Sons, New Delhi

	Semester – III			
	L	T	P	C
15CMP304B INTERNATIONAL FINANCIAL MANAGEMENT	4	-	-	3

Course Objectives

To make the students

1. To make the students understand principles of financial management
2. To enable the students to take investment decisions.
3. To help the students to make financial decisions.
4. To provide the students with the basic knowledge of Dividend decisions.
5. To impart knowledge of working capital and cash management.
6. To provide knowledge on Foreign exchange and its significance in a developing economy

Course Outcomes

Learners should be able to

1. Students will be familiarized with basic concepts of financial management.
2. Students will know the technicalities of making investment decisions.
3. Students will be capable of making financing decisions.
4. Students will be familiarized with concepts of dividend decisions.
5. Students will be capable of making working capitalization and cash management.
6. course includes Balance of Payment, International Monetary System, Foreign Exchange Market, Foreign Exchange Risk and International Financial Market Instruments

Unit - I

IFM- Nature and Scope, IFM and Domestic Financial Management- Balance of payments - Significance- Preparation of BOP Statement - Link between BOP and the Economy.

Unit - II

International Monetary System - Gold Standard - IMF and World Bank Exchange Rate Mechanism - Factors influencing Exchange Rate - Purchasing Power Parity and Interest Rate Parity Theorems.

Unit - III

Foreign Exchange Market Transactions Spot, Forward, Futures, Options and Swaps - Arbitrage and Speculation in Foreign Exchange Market.- Exchange Arithmetic, Spread, Premium and Discount. – Currency Derivatives and Swaps

Unit - IV

Foreign Exchange Exposure - Managing Transaction, Translation and Operating Exposure - Techniques for covering the Foreign Exchange Risk - Internal and External Techniques of Risk.

Unit -V

International Financial Market Instruments - International Equities - ADR and GDR - Foreign Bond and Euro-bond - Short-term and Medium-term instruments.

15CMP304C	INTERNATIONAL BUSINESS	Semester – III			
		L	T	P	C
		4	-	-	3

COURSE OBJECTIVES:

To make the students

1. To Understand the Concept of International business, environment context, International Economic Institutions, Agreements and multinational Corporation.
2. To communicate orally and in written form the understanding of International business, environment context, International Economic Institutions, Agreements and multinational Corporation.
3. To apply the understanding of International business, environment context, International Economic Institutions, Agreements and multinational Corporation. in lifelong practice.
4. To Understand the Concept of International Financial Environment And *International Accounting Practices*:
5. To communicate orally and in written form the understanding of Multinational Corporations And Their Involvement In International Business:
6. To apply the understanding of International business Emerging Developments and Other Issues: Growing concern for ecology; Counter trade; IT and international business

COURSE OUTCOMES:

Learners should be able to

1. Understand the Concept of International business, environment context, International Economic Institutions, Agreements and multinational Corporation.
2. Communicate orally and in written form the understanding of International business, environment context, International Economic Institutions, Agreements and multinational Corporation.
3. Apply the understanding of International business, environment context, International Economic Institutions, Agreements and multinational Corporation. in lifelong practice.
4. Understand the Concept of International Financial Environment And *International Accounting Practices*:
5. Communicate orally and in written form the understanding of Multinational Corporations And Their Involvement In International Business:
6. Apply the understanding of International business Emerging Developments and Other Issues: Growing concern for ecology; Counter trade; IT and international business

UNIT I INTRODUCTION TO INTERNATIONAL BUSINESS:

Importance nature and scope of International business; modes of entry into International Business internationalization process and managerial implications.

Meaning of Culture, Country Culture, and Culture in an International Business Organization

UNIT II ENVIRONMENTAL CONTEXT OF INTERNATIONAL BUSINESS:

Framework for analyzing international business environment – Domestic, foreign and global environments and their impact on international business decisions.

Global Trading Environment: World trade in goods and services – Major trends and developments; World trade and protectionism – Tariff and non-tariff barriers; Counter trade.

UNIT III INTERNATIONAL FINANCIAL ENVIRONMENT AND *INTERNATIONAL ACCOUNTING PRACTICES*:

Foreign investments-Pattern, Structure and effects; Movements in foreign exchange and interest rates and then impact on trade and investment flows.

Introduction, International Accounting Standards, Accounting for International Business, International Regulatory Bodies, International Financial Reporting Standards

4. Gupta C.B.(2014), International Business, S.Chand, New Delhi.
5. Varma Sumati (2013), Fundamentals of International Business, 4th edition, Pearson Education, New Delhi.

15CMP305	HUMAN RESOURCE MANAGEMENT	Semester – III			
		L	T	P	C
		4	-	-	3

COURSE OBJECTIVES:

To make the students

1. To acquire knowledge in human resource management, HR audit, and HR analytics.
2. To gain knowledge of HR planning, Selection, Recruitment, job analysis and its interrelations.
3. To understand the concepts and practical implications of performance management, Training methods and career planning.
4. To know about compensation and reward management and its practice in industry.
5. To be familiar with Employee relations and its application for the development of Human resources.
6. To understand the Job analysis and Design

COURSE OUTCOMES:

Learners should be able to

1. Assess the job analysis for a profile and understand its linkage with HR planning
2. Evaluate the training needs and draft a training programme.
3. Understand the compensation and reward system applicable to the industry based and understand its linkage with performance management
4. Understand and apply the appropriate employee relations measures.
5. Understand the HR functions and latest developments in the field of HR and effectively communicate ideas, explain procedures and interpret results and solutions in written and oral forms to different audiences.
6. consists of Job Analysis, Job Evaluation, Orientation, Performance Appraisal, Rewards, Punishment, Industrial Relations, Collective Bargaining and Grievances Handling

Unit -I

Evolution of HRM: Role of Human Resource in Management - Human Resource Philosophy- Organization of HR Departments- Line and Staff functions- HR Planning –

factors affecting HR Planning. Changing Environments of HRM- Strategic Human Resource Management- Using HRM to attain Competitive Advantage- Trends in HRM- Qualities and Role of HR Managers.

Unit - II

Job analysis and Design: Job evaluation- Computerized Job Evaluation. Recruitment and Selection Process: Employment Planning and Forecasting- Building Employee Commitment: Promotion from within- Sources. Developing and Using Application Forms. IT and Recruiting on the Internet - Employee Testing and Selection process.

Unit - III

Orientation and Training: Orienting the employees, The Training Process, Need Analyses, Training Techniques, Special Purpose Training, Training via the Internet. Performance Appraisal- Traditional and Modern Techniques of Performance Appraisal- 360° Feedback

Unit - IV

Establishing pay plans: Basics of Compensation- Factors determining Pay Rate- Current Trends in Compensation - Pricing Managerial and Professional Jobs- Pay for Performance and Financial Incentives - Benefits and Services-Promotion – Rewards and Punishment.

Unit - V

Auditing and HR functions: Future of HRM function – International HRM. Industrial Relation and Collective Bargaining - Discipline Administration- Grievances

Handling - Managing Dismissals and Separation-Trade Union activities and Workers Participation in Management

	L	T	P	C
15CMP306 LOGISTIC AND SUPPLY CHAIN MANAGEMENT	-	-	-	3

COURSE OBJECTIVES:

To make the students

1. To understand the concept and functions of logistics management.
2. To learn the basics of supply chain management and supply chain relationship
3. To communicate the knowledge on logistics information system
4. To critically evaluate the design of operational mechanism of warehouse and logistics administration
5. To Introduce the concept and impact of Logistics and Supply Chain Management, with a competitive strategy overview.
6. Expose the various dimensions of Financial Supply Chain Management with the perspective of e-finance and its legal aspects

COURSEOUTCOMES:

Learners should be able to

1. Understand the concept and functions of logistics management.
2. Learn the basics of supply chain management and supply chain relationship
3. Communicate the knowledge on logistics information system
4. Critically evaluate the design of operational mechanism of warehouse and logistics administration
5. Introduce the concept and impact of Logistics and Supply Chain Management, with a competitive strategy overview.
6. Expose the various dimensions of Financial Supply Chain Management with the perspective of e-finance and its legal aspects

Unit – I

Introduction to Logistics- Fundamentals of Logistics-Definition and Activities- Aims and Importance-Progress in Logistics and Current trends-Organization and achieving integration

Unit-II

Planning the Supply Chain - Logistics Strategy-Implementing the Strategy-
Locating Facilities-Planning Resources-Controlling Material Flow

Unit-III

Measuring and Improving Performance of Supply Chain - Procurement-Inventory
Management -Warehousing and Material Handling Transport-Global Logistics

Unit-IV

Supply Chain Management - Basic Concepts of Supply Chain Management-
Planning and Sourcing-Making and Delivering Returns-IT and Supply Chain
Management

Unit - V

Financial Supply Chain-Elements of Financial Supply Chain Management-The
Evolution of e-Financial Supply Chain-E-Financial Supply Chain' (Banks Perspective)-
Legal Aspects of e-Financial Supply Chain

TEXT BOOK

1. **Agarwal** (2003), Logistics and Supply Chain Management, Mac Millan India
Pvt., Ltd., New Delhi

REFERENCES

1. **Donald Waters** (2009), Supply Chain Management : An: Introduction to
Logistics, Palgrave Macmillan
2. **Christopher Martin** (2005), Logistics and Supply Chain Management: Creating
Value Adding Networks, 2nd Edition, FT Prentice Hall

COURSE OBJECTIVES:**To make the students**

1. To understand the Importance of SPSS and the features for entering the data according to the variable type.
2. To understand and apply the descriptive analytical tools
3. To know the univariate tools and its application
4. To comprehend the application of Bivariate analysis
5. To understand and compute the multivariate analysis using the package
6. To understand the correlation analysis

COURSEOUTCOMES:**Learners should be able to**

1. Create datasheet and enter the data
2. Compute descriptive statistics using the package and graphically represent the data.
3. Perform univariate and bivariate analysis in the software package.
4. Perform multivariate analysis in the software package.
5. Demonstrate capabilities of problem-solving, critical thinking, and communication skills to infer the output.
6. Demonstrate capabilities of problem-solving, critical thinking, and communication skills to infer the output.

Workout the following statistics:

1. Descriptive Statistics
2. Chi-square
3. Independent Sample 't' Test
4. Paired 't' Test
5. Analysis of Variance (ANOVA)
6. Karl Pearson Correlation
7. Spearman Rank Correlation
8. Regression
9. Factor Analysis
10. Kolmogorov and Smirnov test
11. Mann Whitney U Test

12. Wilcoxon Test
13. Friedman Rank Test
14. Kruskal Wallis H-Test
15. Garrett Ranking

COURSE OBJECTIVES:**To make the students**

1. To Understand the Concept financial services its impact on economy
2. To categorise financial services as fund based and fees based services
3. To understand the application of the fee and fund based services in economic development.
4. To communicate orally and in written form the understanding of financial services concepts and application.
5. To expose the students to the contemporary theory and practice of Indian Financial Services Sector
6. To familiarize the students with various types of Financial Services and their role in Social Change.

COURSE OUTCOMES:**Learners should be able to**

1. Understand the Concept financial services its impact on economy
2. Categorise financial services as fund based and fees based services
3. Understand the application of the fee and fund based services in economic development.
4. Communicate orally and in written form the understanding of financial services concepts and application.
5. comprise of Financial Instruments, Merchant Banking, Hire Purchase, Leasing, Venture Capital, Factoring, Mutual Funds and Credit Rating
6. Know the various types of Financial Services and their role in Social Change.

Unit – I

Financial Services – Meaning – Classification – Scope – Fund Based Activities – Non Fund Based Activities – Modern Activities – Sources of Revenue – Causes for Financial Innovation – New Financial Products and Services – Innovative Financial Instruments – Challenges facing the Financial Service Sector. Merchant Banking – Definition – Origin – Merchant Banking in India- Merchant Banks and Commercial Banks – Services of Merchant Banks- Qualities required of Merchant Bankers – Problems – Scope of Merchant Banking in India

Unit – II

Hire Purchase – Meaning – Features – Legal Position – Hire Purchase and Credit Sale – Hire Purchase and Instalment Sale – Hire Purchase and Leasing – Origin and Development – Banks and Hire Purchase Business – Bank Credit for Hire Purchase. Leasing – Definition – Steps in Leasing Transactions – Types of Lease – Advantages and Disadvantage of Lease – Problems of Leasing

Unit – III

Venture Capital – Concept – Meaning – Features – Scope of Venture Capital – Importance – Method of Venture Financing – Suggestion for the Growth of Venture Capital – Factoring – Meaning – Functions – Types – Factoring Vs Discounting – Benefits of Factoring

Unit – IV

Mutual Funds – Types – Importance – Selection of a Fund – Securitization – Stages of Securitization – Benefits – Derivatives – Kinds – Forward, Future, Options and Swaps.

Unit – V

Credit Rating – Definition and Meaning – Functions of Credit Rating – Origin – Credit Rating in India – Benefits of Credit Rating – Credit Rating Agencies in India: CRISIL, ICRA, CARE- Limitations of Rating – Future of Credit Rating in India

COURSE OBJECTIVES:**To make the students**

1. To Understand the Concept of risk, and insurance a product to mitigate risk, its design and pricing
2. To comprehend on the reforms in Indian insurance industry.
3. To understand the categorization and application of the life and non-life insurance as a risk mitigation instrument,
4. To communicate orally and in written form the understanding of insurance, insurance types, designing and pricing.
5. To enable the students to understand the procedures in Company Law.
6. To enable them to acquire skills needed for socially relevant and good corporate governance

COURSE OUTCOMES:**Learners should be able to**

1. Understand the Concept of risk, and insurance a product to mitigate risk, its design and pricing
2. Comprehend on the reforms in Indian insurance industry.
3. Understand the categorization and application of the life and non-life insurance as a risk mitigation instrument,
4. Communicate orally and in written form the understanding of insurance, insurance types, designing and pricing.
5. Enable the students to understand the procedures in Company Law.
6. Enable them to acquire skills needed for socially relevant and good corporate governance

Unit – I

Company Administration – Hierarchy – Share Holders – Membership – Termination – Rights and Duties – Board of Directors – Qualification – Appointment – Powers – Duties – Other Managerial Personnel

Unit – II

Company Secretary – Meaning – Types – Qualities – Appointment – Dismissal – Power – Rights – Duties and Liabilities – Role of a Secretary in the Administration of a Company

Unit – III

Meeting – Law Governing Meetings – Requisites of a Valid Meeting – Chairman of a Meeting – Appointment – Duties – Powers – Notice – Agenda – Minutes – Quorum – Motion – Resolution – Methods of Voting

Unit – IV

Kinds of Company Meetings – Board of Directors Meeting – Share holder Meeting – Statutory Meeting – Annual General Meeting – Extraordinary General Meeting – Duties of a Company Secretary relating to the Meetings

Unit – V

Drafting of Correspondence relating to the Meetings – Drafting of Notices – Agenda and Minutes of the Meetings of Shareholders and Directors – Drafting of Chairman’s Speech – Annual Report and Auditors Report

COURSE OBJECTIVES:**To make the students**

1. To Understand the Concept of entrepreneurship, types of entrepreneurs, entities of business, creating ideas, mobilizing funds and support from government.
2. To communicate orally and in written form the Concept of entrepreneurship, types of entrepreneurs, entities of business, creating ideas, mobilizing funds and support from government.
3. To apply the understanding of entrepreneurship, types of entrepreneurs, entities of business, creating ideas, mobilizing funds and support from government in lifelong practice.
4. To initiate the required skills for entrepreneurial development.
5. To help students understand the process of establishing and developing an enterprise
6. To make the students Small Business as seed bed of Entrepreneurship

COURSE OUTCOMES:**Learners should be able to**

1. Assess the best suitable research type and formulate the research objective for the business problem.
2. Formulate the suitable research designs and select appropriate sampling techniques for the research.
3. Select the appropriate data collection method for solving the business issue and decide the appropriate measurement scale for designing the instrument for data collection.
4. Apply appropriate analytical tools for the data collected and formulate a suitable suggestion for the business problem.
5. Demonstrate capabilities of team work, problem-solving, critical thinking, and communication skills and design a suitable research report based on the ethical norms of research.
6. The course comprise of Types of Research, Research Design, Sampling, Data Collection, Scaling Techniques, Hypothesis Testing and Statistics

Unit – I

Small Business Enterprise - Small Business framework - Concept and Definition- Nature and Characteristics - Relationship between Small and Large Business - Scope and Types of Small Business - Rationale and Objectives - Small Business as seed bed of Entrepreneurship

Unit –II

Entrepreneurship - Entrepreneur and Entrepreneurship Concept - Distinction between Entrepreneur and Manager - Entrepreneurial Competency - Functions - Types (including women and rural).

Unit – III

Establishing a Small Enterprise - Learning the important steps for starting a Business - Project Identification and Selecting the Product - Generation and Screening the Project Ideas - Market Analysis - Technical Analysis, Financial Analysis (up to cost of production) Project Formulation - Assessment of Project Feasibility - Preparation of Project Report - Dealing with basic startup problems.

Unit –IV

Growth Strategy - Growth strategy for Small Business - Need for Growth - Types of Growth Strategy - Expansion - Diversification-Sub contracting.

Unit-V

Institutional Support - Sources of Finance - Financial Support to Small Business- Various Incentives and Subsidies - Central and State Government Schemes

COURSE OBJECTIVES:**To make the students**

1. To understand the international marketing environment.
2. To enlighten learners about overseas market research, sources of marketing information and the guidelines to identify foreign markets.
3. To guide global product planning, standardization and adaptation
4. To Understand the Concept of marketing, and 4Ps of Marketing
5. To communicate orally and in written form the concepts of marketing and 4 Ps of marketing
6. To apply the marketing concepts and skills lifelong.

COURSE OUTCOMES:**Learners should be able to**

1. Understand the international marketing environment.
2. Enlight learners about overseas market research, sources of marketing information and the guidelines to identify foreign markets.
3. Guide global product planning, standardization and adaptation
4. Understand the Concept of marketing, and 4Ps of Marketing
5. Communicate orally and in written form the concepts of marketing and 4 Ps of marketing
6. Apply the marketing concepts and skills lifelong.

Unit – I

Introduction to International and Global Marketing- The Marketing Concept- The Three Principles of Marketing-Global Marketing-Importance of Global Marketing-Management Orientations-Driving and Restraining forces affecting Global Integration and Global Marketing

Unit - II

Global Marketing Environment- Economic, Socio-cultural, and Political Environments-Global Market Segmentation – Global Product Positioning – Product Adoption – International Product Life Cycle – International Marketing Strategies – Product Policy, Pricing Policy and Place Policy

Unit - III

Entry and Expansion strategies: Marketing and Sourcing-Decision criteria for International Business-Entry and Expansion Model-Exporting-Additional International Alternatives-Marketing Strategy Alternatives-Cooperative Strategies and Global Strategic Partnerships (GSP)-Nature of GSP- International Partnerships in Developing Countries-Competitive Analysis and Strategy- Industry Analysis: Forces influencing Competition-Strategic Positions-Competitive Innovation and Strategic Intent.

Unit – IV

Product and Channel Decisions - Product Decisions- Product Saturation levels in Global Markets- Product Design Considerations- Attitudes toward Country of Origin-Geographic Expansion: Strategic Alternatives- New products in Global marketing-Global marketing channels and Physical Distribution-Channel objectives and Constraints-Distribution Channels: Terminology and structure-International channel Innovation-Channel strategy for New Market Entry-Physical Distribution and Logistics

Unit-V

Pricing and Promotion Decisions- Pricing Decisions-Basic Pricing Concepts-Environmental influences on Pricing Decisions-Global Pricing Objectives and Strategies-Gray market goods-Dumping-Transfer Pricing-Global Pricing: Three pricing alternatives-Global Advertising and Branding-Selecting an Advertising Agency-Advertising Appeals-Public relations and Publicity-Personal Selling-Sales Promotion-Direct Marketing-Trade shows and exhibitions-Sponsorship promotion.

COURSE OBJECTIVES:**To make the students**

1. To identify an issue to be analyzed and to be solved in a business setup or real time scenario using primary or secondary data collection.
2. To understand the application of Research process in the area of accounting/Finance/Marketing/HR/International business etc.
3. To analyze the data and critically evaluate the result and formulate the suggestion for the problem identified.
4. To apply the theoretical and practical learning of doing research into lifelong practice.
5. To Communicate in oral and written form and prepare report
6. To Work in team and exhibit leadership skills

COURSE OUTCOMES:**Learners should be able to**

1. Identify an issue to be analyzed and to be solved in a business setup or real time scenario using primary or secondary data collection.
2. Understand the application of Research process in the area of accounting/Finance/Marketing/HR/International business etc.
3. Analyze the data and critically evaluate the result and formulate the suggestion for the problem identified.
4. Apply the theoretical and practical learning of doing research into lifelong practice.
5. Communicate in oral and written form and prepare report
6. Work in team and exhibit leadership skills

The students should select a problem in Accounting, Finance, Marketing or any other areas related to commerce.

Report should contain

- Introduction
 - Introduction about the industry
 - Introduction about the Company
 - Review of literature – Minimum 10 papers from referred journal
 - Need for the Study
 - Objectives

- Research Methodology
 - Research Design
 - Sampling Design
 - Sources of Data Collection
 - Tools used for analysis
 - Limitation
- Data analysis and interpretation
- Findings and Suggestions
- Conclusion
- Bibliography (APA format)

PROGRAM OUTCOMES [PO]

- Graduates will have solid foundation in bookkeeping, accounting, computers and professional fundamentals required to record the business transactionability.
- Graduates will apply technological skills in accounting, taxation by creating and applying the appropriate software and software tools for business management.
- Graduates will obtain the ability to analyze and develop programs for system based applications which will help in solving complex business problems to make effective decisions.
- Graduates will exhibit critical thinking skills in understanding the real-time business issues and advocate solutions.
- Graduates will acquire and demonstrate the interpersonal and communication skills to convey and negotiate ideas for achieving the common goals.
- Graduates will attain and exhibit skills to work as team to take effective decisions

in achieving the common goals.

- g. Graduates will demonstrate the leadership skills to initiate, lead and deliver the best performance together with the team members.

PROGRAM SPECIFIC OUTCOMES (PSO)

- h. Graduates will apply a lifelong learning gained through knowledge and skills in continuous adaption of new technologies and the changes in environment factors pertaining to accounting, IT, and finance.
- i. Graduates will demonstrate legal, ethical compliance (including IT norms) and socially sustainable code of conduct in both personal and professional decision making process.

PROGRAM EDUCATIONAL OBJECTIVES (PEO)

- I. Graduates will acquire knowledge in accounting, taxation, finance, management concepts and computer applications and apply it in business to become qualified professionals.
- II. Graduates will possess the professional skills, computer skills and competence in field related to accounting and commerce which will enable them to perform effectively in higher studies, KPO/BPO field of IT sector and entrepreneurial ventures.
- III. Graduates will continuously improve accounting and computer skills required to develop a lifelong learning through IT enabled research and practice.
- IV. Graduates will demonstrate high standard of ethical conduct in application of computer in accounting and finance and become socially responsible citizens contributing to the sustainable growth of profession and the community.

(For I-UG Arts Degree Classes)

15LAU101

பாடத்திட்டப் பொதுநோக்கம்

1. கற்றல் வழி சிந்தனைத் திறனையும், கருத்து வெளிப்பாட்டுத் திறனையும், மேம்படுத்துதல்.
2. ஆய்வுநோக்கை மேம்படுத்துதல்.
3. இலக்கியங்கள் உணர்த்தும் வாழ்வின் நுட்பமான பகுதிகளை உணர்த்துதல்.
4. மனித மனத்தினைப் பக்குவப்படுத்துதலில் இலக்கியம் தரும் பங்கினை உணர்த்துதல்.
5. வளர்ந்து வரும் சமூகத்தில் அறஉணர்வு, பண்பாடு போன்றவை குறித்து அறிவூட்டல்.
6. அரசுத் தேர்வுகளுக்கு மாணவர்களை ஆயத்தமாக்குதல்.

பாடத்திட்டப் பயன் விளைவு

1. இந்திய குடியுரிமைப் பணி முதலான போட்டித் தேர்வுகளில், விருப்பப் பாடமாக இடம்பெறுகின்ற, 'தமிழ் இலக்கிய வரலாறு' குறித்த முழுமையான அறிமுகம் பெற்றிருத்தல்.
2. கல்வெட்டியல், ஓலைச்சுவடியியல் மற்றும் தொல்லியல் சார்ந்த ஆவணத் தேடலுக்குரிய ஆய்வுமனப்பான்மையுடன், இலக்கியங்களை அணுகுதல்.
3. தமிழின் வளர்ச்சித் துறையாகிய, 'அறிவியல் தமிழ்' ; 'இணைய தமிழ்' குறித்த பன்னோக்கு அணுகுமுறையிலான ஆய்வுச் சிந்தனை மேம்பாடு.
4. வேலைவாய்ப்புக்குரிய சுயதிறன் மேம்பாட்டுடன், படைப்பாக்கத்திறன் மேம்பாடும் பெற்றிருத்தல் .
5. சமுதாய மற்றும் வாழ்வியல் மதிப்புகளைப் பேணுவதற்குக் கருவியாக இலக்கியங்களை நாடுகின்ற மனப்பான்மை வளர்ச்சி.
6. மொழிபெயப்புத் துறைசார்ந்த வேலைவாய்ப்புத் திறன் பெற்றிருத்தல்

15LAU101 : தமிழ் முதல் தாள்

L	T	P	C
5	-		5

அலகு I தற்கால இலக்கியம்

- 1.மனோன்மனியம் - சுந்தரம்பிள்ளை
- 2.பாரதியார் - பாரதியார் கவிதைகள்
- 3.பாரதிதாசன் - குன்றம் (அழகின் சிரிப்பு)
- 4.நாமக்கல் கவிஞர் - தமிழன் இதயம்
- 5.அப்துல் ரகுமான் - கூடுதுறக்கும் பறவைகள்
- 6.சிற்பி - ஒடு ஒடு சங்கிலி (ஒரு கிராமத்து நதி)
- 7.வைரமுத்து - மரங்களைப்பாடுவேன்
- 8.தாமரை - அவசரம் ஒரு அசுர ஊசி
(ஒருகதவும் கொஞ்சம் கள்ளிப்பாலும்)
- 9.புதியமாதவி - மகளே வந்துவிடு (ஹேராம்)

அலகு II பக்தி இலக்கியம்

1. சைவம் - பன்னிரு திருமுறைகளில் 12 பாடல்கள்
2. வைணவம் - ஆழ்வார் பாடல்கள் 12)

அலகு III உரைநடை

1. பழந்தமிழ்நாடு - டாக்டர். கு. கதிரேசன்
2. நொய்யல் நாகரிகம் - புலவர் செ. இராக
3. அறிவியல் தமிழாக்கம் இற்றைநிலை - வா.செ. குழந்தைசாமி
4. கணிப்பொறி - சுஜாதா
5. சுற்றுச்சூழல் மேலாண்மை - தமிழ்நாடு அரசு

அலகு IV பயிற்சி

இலக்கணம், கடிதங்கள் - அலுவலகநிலை, மொழிபெயர்ப்பு
நிகழ்ச்சித் தொகுப்புகள்
(பயிற்சி ஏடு - கல்லூரி வெளியீடு)

அலகு V இலக்கிய வரலாறு

- 1.தற்காலத் தமிழ்க் கவிதைகளின் வரலாறும், வளர்ச்சியும்
- 2.புதுக்கவிதைப் பிதாமகன்கள் குறித்த அறிமுகம்
- 3.பாரதியார், பாரதிதாசனின் தமிழ்த்தொண்டு
- 4.உரைநடையின் தோற்றமும் வளர்ச்சியும்

(For all under graduates students admitted from 2015 onwards)

Course Objectives:

1. To enable the learners to acquire English language skills at a faster pace.
2. To introduce different kinds of literary works
3. To familiarize different genres of Literature
4. To instruct moral values through literature.
5. To improvise their productive and receptive skills
6. To strengthen the basic knowledge about grammar.

Course Outcomes:

1. Learn to reflect on the literary works and communicate flexibly.
2. Reading and comprehending literary works
3. Genres of literature to provide moral education
4. Develop communication skills in business environment
5. Interpersonal skills will be developed.
6. Betterment of language competence

UNIT I:

Prose: Google Guys (Extract) – Richard L Brandt

Poetry: The Blind Pedlar – Osbert Sitwell

Short Story: A Garden So Rich – Christie Craig

Vocabulary: Prefixes, Antonyms, Sentence Completion

Grammar: Articles, Adverbs, Pronouns

Composition: Proverb Expansion

UNIT II:

Prose: Happiness 101 – Geeta Padmanabhan

Poetry: An Old Woman – Arun Kolatkar

Vocabulary: Suffixes, Analogies

Grammar: Nouns, Adjectives

Composition: Dialogue Writing

UNIT III:

Prose: Structured Procrastination – John Perry

Short Story: The Umbrella Man – Roald Dahl

One-Act Play: The Boy Who Stopped Smiling – Ramu Ramanathan

Vocabulary: Synonyms, Euphemisms, Word Definitions

Grammar: Verbs, Conjunctions and Interjection, Indirect/Reported Speech

UNIT IV:

Poetry: No Sentence – Anjum Hassan

One-Act Play: While the Auto Waits- O' Henry

Vocabulary: Words Often Confused, Anagrams

Grammar: Prepositions, Voice- Active and Passive

Composition: Letter Writing- Informal

UNIT V:

Short Story: The Bird – Amar Jalil

One-Act Play: The Cellphone Epidemic – Claudia I. Haas

Vocabulary: Portmanteau Words, One Word Substitute

Grammar: Questions, Pronunciation

Composition: Letter Writing- Formal

Prescribed Texts:

Rao, G. Chandralekha and et al. *Spring* 2013. Emerald Publishers: Chennai.

Reference

COURSE OBJECTIVES:

To make the students

1. To learn the basic concepts and conventions of accounting and basic accounting framework.
2. To learn to debit and credit side of accounting Principles.
3. To learn to Bank Reconciliation Statement.
4. To give insight into the business income and preparation of final accounts.
5. To learn accounting for hire purchase and installment system.
6. To learn the consignment feature and joint venture and Non -Profit Organization.

COURSE OUTCOMES:

Learners should be able to

1. Understand the bookkeeping and purpose and functions of accounting.
2. Know the accounting principles.
3. Know the Bank Reconciliation statement.
4. Understand the depreciation and preparation of final accounts.
5. Describe the accounting for hire-purchase and installment system.
6. Identify the consigner and consignee & joint venture.

UNIT I

Fundamentals of Book Keeping – Accounting Concepts and Conventions – Journal – Ledger – Subsidiary Books – Trial Balance - Rectification of Errors - Bank Reconciliation Statement.

UNIT II

Final Accounts: Final Accounts of a Sole Trader with Adjustment Entries.

UNIT III

Bills of Exchange – Accommodation Bills – Account Current and Average due date - Apportionment of Capital and Revenue Expenditure.

UNIT IV

Consignment and Joint Venture - Accounting entries in the books of Consignor and Consignee - Joint Venture Accounting.

UNIT V

Non-Profit Organization - Accounts of Non-Profit Organization – Receipts and Payments- Income and Expenditure Accounts and Balance Sheet.

Note: Distribution of marks for theory and problems shall be 20 % and 80 % respectively.

Text Book :

1. S.P.Jain, K.L.Narang - Advanced Accounting (Vol – I – 2013) , 18th Edition - Kalyani Publishers, Ludhiana.

Reference Books:

3. R.L. Gupta & M. Radhaswamy - Advanced Accountancy - Vol. I Sultan Chand & Sons
4. Vinayagam N, Mani P.L. and Nagarajan K.L - Principles of Accountancy, Sultan Chand and Sons, New Delhi.
5. Maheswari S.N. Maheswari S.K. 10th edition, 2012 Advanced Accountancy. Vikash Publishing House Pvt. Ltd ,New Delhi.

COURSE OBJECTIVES:**To make the students**

1. To Identify the components of a computer, components in a CPU and its functions.
2. To Provide foundational or “computer literacy” curriculum that prepares students for life-long learning of computer concepts and skills.
3. To provide the applications Word, Excel, Access and PowerPoint.
4. To familiarize the students in preparation of documents and presentations with office automation tools.
5. To Create, edit, save, and print documents to include documents with lists and tables.
6. To Use the Spelling and Grammar Checker as well as Microsoft Help

COURSE OUTCOMES:**Learners should be able to**

1. Describe the usage of computers and why computers are essential components in business and society.
2. Utilize the Internet Web resources and evaluate on-line e-business system.
3. Solve common business problems using appropriate Information Technology applications and systems.
4. Identify categories of programs, system software and applications. Organize and work with files and folders.
5. Describe various types of networks network standards and communication software.
6. Perform the presentation skills.

I - MS WORD

1. Type Chairman’s speech/ Auditor’s report / Minutes/ Agenda and perform the following operations: Bold, Underline, Font Size, style, Background color, Text Book color, Line spacing, Spell Check, Alignment, Header & Footer, Inserting pages and page numbers, Find and Replace.
2. Prepare an invitation for the college function using Text Box boxes and clip parts.
3. Design an invoice and Account sales by using Drawing tool bar, Clip Art, Word Art, Symbols, Borders and Shading.
4. Prepare a Class Time Table and perform the following operations: Inserting the table, Data Entry, Alignment of Rows and Columns, Inserting and Deleting the Rows and Columns and Change of Table Format.
5. Prepare a Shareholders meeting letter for 10 members using mail merge operation.
6. Prepare Bio-Data by using Wizard/ Templates.

II - MS EXCEL

1. Prepare a mark list of your class (minimum of 5 subjects) and perform the following operations: Data Entry, Total, Average, Result and Ranking by using arithmetic and logical functions and sorting.
2. Prepare Final Accounts (Trading, Profit & Loss Account and Business Sheet) by using formula.
3. Draw the different type of charts (Line, Pie, Bar) to illustrate year-wise performance of sales, purchase, profit of a company by using chart wizard.
4. Prepare a statement of Bank customer's account showing simple and compound interest calculations for 10 different customers using mathematical and logical functions.
5. Prepare a Product Life Cycle which should contain the following stages: Introduction, Growth, Maturity, Saturation, Decline.

III - MS POWERPOINT

1. Design presentation slides for a product of your choice. The slides must include name, brand name, type of product, characteristics, special features, price, special offer etc. Add voice if possible to explain the features of the product. The presentation should work in manual mode.
2. Design Presentation slides for Organization details for 5 levels of hierarchy of a company by using organization chart.
3. Design slides for the headlines News of a popular TV Channel. The Presentation Should contain the following transactions: Top down, Bottom up, Zoom in and Zoom out. - The presentation should work in custom mode.
4. Design presentation slides about an organization and perform frame movement by interesting clip arts to illustrate running of an image automatically.
5. Design presentation slides for the Seminar/Lecture Presentation using animation effects and perform the following operations: Creation of different slides, changing background color, font color using word art.

IV - MS ACCESS

1. Prepare a payroll for employee database of an organization with the following Details: Employee id, Employee name, Date of Birth, Department and Designation, Date of appointment, Basic pay, Dearness Allowance, House Rent Allowance and other deductions if any. Perform queries for different categories.

2. Create mailing labels for student database which should include at least three Table must have at least two fields with the following details: Roll Number, Name, Course, Year, College Name, University, Address, Phone Number.
3. Gather price, quantity and other descriptions for five products and enter in the Access table and Create an invoice in form design view.
4. Create forms for the simple table ASSETS.
5. Create report for the PRODUCT database.

Reference Books

1. June Jamrich Parsons, 2010, “Practical Microsoft Office 2010”, Cengage Learning; 1 edition.
2. Dr. S.V. Srinivasa Vallabhan, 2011, Computer Application in Business, Sultan Chand & Sons.

COURSE OBJECTIVES :**To make the students**

1. To understand the concept of matrices.
2. To acquire the knowledge of differential calculus.
3. To provide college students with reinforcement of mathematical computations.
4. Challenge the student to understand how to process and interpret information to arrive at logical conclusions to common business math applications.
5. To Develop proficiency in the application to solve business math problems.
6. To Apply the knowledge in mathematics (algebra, matrices, calculus) in solving business problems

COURSE OUTCOMES:**Learners should be able to**

1. Understand the important role math plays in all facets of the business world.
2. Utilize the concept of matrices, differential calculus to solve business problems.
3. Evaluate the relationship and association between variables to formulate the strategy in business.
4. Analyze problems in economics, business, and accounting to determine appropriate methods for solving them using business math concepts and applications.
5. Develop proficiency in the application to solve business math problems.
6. Apply the knowledge in mathematics (algebra, matrices, calculus) in solving business problems.

UNIT I

Matrix: Basic Concepts – Addition and Multiplication of matrices – Inverse of a Matrix – Rank of a matrix – Solution of Simultaneous Linear equations by matrix method.

UNIT II

Basic concept – Simple and Compound Interest – Effective Rate of Interest, Depreciation. Annuities – Present value of an immediate annuity, present value of an annuity due, Amount of an immediate annuity, Amount of an annuity due.

UNIT III

Limits of Algebraic Functions – Simple Differentiation of Algebraic Functions – Meaning of Derivatives – Evaluation of First and Second order derivatives – Maxima and Minima – Application to Business problems.

UNIT IV

Elementary Integral Calculus – Determining Indefinite and definite Integrals of simple functions – Integration by parts-Applications to business problems.

UNIT V

Linear Programming Problem Formulation – Solution by Graphical Method - Solution by Simplex Method(problems using slack variables only)

TEXT BOOKS

1. Navanitham.Pa., 2004. Business Mathematics and Statistics, Jai Publishers, Trichy.
(Unit I - IV)
- 2.Sundaresan.V., K.S.Ganapathy Subramanian.,K. Ganesan. Operations Research (Resource Management Techniques), 2005, A.R.Publications, Nagapattinam. (Unit V)

COURSE OBJECTIVES:**To make the students**

1. To learn the basic concepts of value education.
2. To learn the role of values.
3. To learn the fostering culture of peace through education.
4. To identify and apply the practices for value development and clarification.
5. To educate students with the professional behaviors.
6. To make aware of moral and ethical dilemmas.

COURSE OUTCOMES**Learners should be able to**

1. Understand the core values that shape the ethical behavior.
2. Recognize the awareness on professional ethics with stress management.
3. Understand the basic perception of various moral issues in ethical theories.
4. Manipulate the various social issues.
5. Solve the several of global issues by ethical principles.
6. Promote socio cultural values to create well-being and identify the human excellence.

UNIT I: Human Values

Self-Discipline, Concern for others, Empathy, Kindness, Valuing Time, Self Esteem, Dignity, Caring and Sharing, Honesty, Cooperation and Commitment, Responsible Citizenship. Significance of Practicing Human Values in Daily Life.

UNIT II: Culture and Adolescent dilemma

Culture: Meaning and Definition. Characteristics and Functions, Features of Indian culture, Impact of Westernization and Globalization on Indian Culture. Peer Pressure: Meaning, Types and Overcoming Peer Pressure, Infatuation, Mobile Phone Usage: Advantages and Disadvantages, do's and don'ts, Influence of Media, Alcoholism, Smoking: Causes, Effects and Quitting, Substance Abuse, Suicidal Tendency (Introduction, Causes, Effects and Remedies).

UNIT III: Character Building

Self-introspection, Self-confidence, Courage, Team Work, Motivation, Adjustments, Accepting differences, Conflict resolution, Assertiveness, Critical thinking, Decision making.

UNIT IV: Health Education

Personal Hygiene, Fitness and health, Importance of Yoga and Meditation, Balanced Nutritional Diet. Sex Education: Healthy Life Style Choices, Sexually Transmitted Diseases, HIV/AIDS Awareness.

UNIT V: Social Emotional Skills

Human Duties, Ethics and Responsibilities Towards Self, Family and Community. Emotional Balance and Coping Skills, Positive Living Skills and Fundamentals of Transactional Analysis.

15LAU201 : தமிழ் இரண்டாம் தாள்

அலகு I செய்யுள்

1.சங்கஇலக்கியம்

அகநானூறு, புறநானூறு, நற்றிணை, குறுந்தொகை, ஐங்குறுநூறு, பதிற்றுப்பத்து, பரிபாடல்

2. நீதி இலக்கியம்

திருக்குறள் (ஈகை, தெரிந்து செயல்வகை)
நாலடியார் (நல்லினம் சேர்தல்)

3.பக்தி இலக்கியம்

திருஞானசம்பந்தர் தேவாரம், திருவாசகம், பெரியாழ்வார் திருமொழி, நாச்சியார் திருமொழி

அலகு II சிறுகதை

காலனும் கிழவியும்	- புதுமைப்பித்தன்
அக்கினிப்பிரவேசம்	- ஜெயகாந்தன்
கண்ணகி	- இராஜம் கிருஷ்ணன்
பாதுகை	- பிரபஞ்சன்
உருமாற்றம்	- சு. வேணுகோபால்

அலகு III இலக்கணம்

அகம், புறம், திணை, துறை

அலகு IV. பயிற்சி

விண்ணப்பங்கள்- கட்டுரைகள்- கடிதங்கள்

அலகு V இலக்கிய வரலாறு

- 1.எட்டுத்தொகை, பத்துப்பாட்டு நூல்கள் அறிமுகம்
2. பன்னிரு திருமுறை, நாலாயிரதிவ்யபிரபந்தம்
3. சைவ, வைணவ இலக்கியங்கள் தமிழுக்குச் செய்த தொண்டு
4. சிறுகதையின் தோற்றமும் வளர்ச்சியும்

(For all undergraduates students admitted from 2015 onwards)

Course Objectives:

1. To enable the learners to acquire English language skills through literature.
2. To familiarize them with English literature.
3. To acquire Grammar knowledge.
4. To help learners imbibe cultural values.
5. To acquire skill of making correct sentences.
6. To reflect originality on the application of soft skills and express in writing their views.

Course Outcomes:

1. Learn to enjoy the ecstasy of literature.
2. The select literary pieces will develop the confidence level of the learners.
3. To get the social values.
4. To know the importance of communication
5. Get sound knowledge in English
6. Trained to communicate well for business purpose.

UNIT I

Prose: The Unexpected- Robert Lynd

Poetry: The Village Schoolmaster – Oliver Goldsmith

Short Story: The Lion's Share – Arnold Bennett

Vocabulary: Homonyms

Grammar: Irregular Verbs

UNIT II

Prose: Travel by Train – J. B. Priestly

Poetry: The Gift of India – Sarojini Naidu

Grammar: Sentence patterns

Composition: Reading Comprehension

UNIT III

Prose: Women's Education is Almost More Important than the Education of Boys and Men – Indira Gandhi

Short Story: The Necklace – Guy De Maupassant

One-Act Play: The Referee – W.H. Andrews and Geoffrey Dearmer

Vocabulary: Similes

Grammar: Discourse Markers

Composition: Report Writing

UNIT IV

Poetry: Ozymandias – P.B. Shelley

One-Act Play: The Pot of Broth- W.B. Yeats

Vocabulary: Collective Nouns

Grammar: Correction of Sentences

Composition: Picture Reading

UNIT V

Short Story: The Silver Butterfly– Pearl S. Buck

One-Act Play: The Bear – Anton Chekov

Vocabulary: Acronyms

Grammar: Question Tags

Composition: Drafting Advertisement

Course Objectives:**To make the students**

1. To learn the basic concepts of Depreciation and methods of depreciation.
2. To better knowledge in single entry system.
3. To learn to departmental accounts and foreign branches a/c.
4. To acquire the valuation of the goodwill.
5. To study the partnership accounting and goodwill.
6. To learn the dissolution of partnership and Rule in Garner vs Murray.

Course Outcomes:**Learners should be able to**

1. Understand the depreciation and methods of depreciation.
2. Know the Single-Entry System and Statement of affairs Method.
3. Describe the departmental accounts and branch A/c.
4. Understand the valuation of goodwill and methods of valuation of shares.
5. Know the accounting for partnership and calculation of profit-sharing ratio.
6. Recognize the dissolution of partnership and Garner vs Murray methods of insolvent partners.

UNIT I

Depreciation Accounting: Accounting for Depreciation – Need and Significance of Depreciation, Methods of Providing Depreciation- Reserves and Provisions.

UNIT II

Single Entry System: Single Entry System-Meaning and Features-Statement of affairs Method and Conversion Method

UNIT III

Departmental Accounts: Departmental Accounts – Transfers at Cost or Selling Price – Branch accounts Excluding Foreign Branches

UNIT IV

Partnership Account- Valuation of Goodwill-Calculation of Profit Sharing Ratio- Admission - Retirement - Death

UNIT V

Dissolution of Partnership: Insolvency of Partners - Rule in Garner vs Murray -Piecemeal Distribution - Sale of a Company.

Note: - Distribution of Marks: Theory- 20% and Problems -80% Respectively.

Text Book:

1. Jain and Narang. 2010. “Advanced Accounting”, New Delhi, Kalyani Publishers.

Reference Books:

1. T.S.Grewal. 2009. “Advanced Accounting” . New Delhi: Sultan Chand & Sons.
2. M.C.Shukla, T.S.Grewal, S.P.Gupta.2009. “Advanced Accounting”. New Delhi: Sultan Chand & Sons.
3. S.N.Maheswari. 2010. “Advanced Accounting”, New Delhi: Vikas Publishing Co. Ltd.
4. R.L.Gupta & Radhaswamy. 2011. “Advanced Accounting”. New Delhi: Sultan Chand & Sons.
5. N.Vinayagam,B.Charumati. 2009. “Financial Accounting”. New Delhi: S.Chand & Co Ltd.
6. T.S.Reddy, A.Moorthy,2011, “Finaicial Accoutning”,Chennai Margham Publications.

COURSE OBJECTIVES:

To make the students

1. To introduce the students to the Basic of Accounts and the usage of Tally for accounting purpose.
2. To helps students to work with well-known accounting software i.e. Tally ERP.9.
3. To Student will learn to create company, enter accounting voucher entries including advance voucher entire and reconcile bank statement and accrual adjustments.
4. To Gaining knowledge on accounting, inventory and Taxation including GST, TDS with Payroll management also.
5. To learn the prepare to financial statements, etc. in Tally ERP.9 software.
6. To make students ready with required skill for employability in the job market.

COURSE OUTCOMES:

Learners should be able to

1. Understand the create company and enter accounting voucher entries including advance voucher entries.
 2. Manage accounting of any Business or individuals
 3. Creating Computerized Books of accounts with finalizing reports
 4. Various extra topics related to computerized accounting like Auditing, Grouping companies.
 5. Getting Automated Printing salary slips, Scheduled reports, Outstanding reports etc.
 6. Understand the financial statements and taxation and GST.
-
1. Create a primary and sub groups using single or multiple ledger mode
 2. Create minimum 10 ledgers using single or multiple ledger, and alter and delete any 2 ledger
 3. Create a new company, ledger and Enter the following voucher
 - Payment vouchers
 - Receipt
 - Purchase
 - Sales
 - Credit note
 - Debit note
 - Journals
 - Memo
 - Optional
 - Post Dated
 1. Prepare trail balance for the company
 2. Prepare profit & loss a/c and balance sheet
 3. Create stock, stock groups and enter the vouchers
 4. Prepare inventory statements using (calculate inventory using all methods)
 - FIFO & LIFO
 - Simple Average Method
 - Weighted Average Method
 5. Prepare the following
 - Cash flow statement
 - Fund flow statement

6. Prepare the following ratio analysis

Financial ratio
Operating ratio
Investment ratio

7. Prepare the following Statutory and Taxation

Value Added Tax (VAT)
Tax Deducted at Source (TDS)
Tax Collected at Source (TCS)
Service Tax
Backup & Restore

Reference Books:

1. Shraddha Singh, Navneet Mehra , “Tally ERP 9: Power of Simplicity”.
2. Nadhani. 2013. **Tally9.2**. New Delhi: PBP Publication.
3. Rita Bhargava. 2011. **Tally 9.2**. New Delhi. Cyber the Publication.

COURSE OBJECTIVES :**To make the students**

1. To know the concepts of central tendency and dispersion.
2. To understand the correlation and regression concepts.
3. To be aware of the index numbers and trend analysis.
4. To create tables and graphs to format, organize, and interpret data; summarize and present data.
5. To demonstrate capabilities as problem-solving, critical thinking, and communication skills related to the discipline of statistics.
6. Summarize and analyze statistical data to solve practical business related problems.

COURSE OUTCOMES:**Learners should be able to**

1. Produce appropriate graphical and numerical descriptive statistics for different types of data.
2. Calculate and apply the measure of central tendency and dispersion in decision making.
3. Apply the concept of index numbers and trend analysis in business decisions.
4. Demonstrate capabilities as problem-solving, critical thinking, and communication skills related to the discipline of statistics.
5. Interpret the relevance of statistical findings for business problem solving and decision making.
6. Summarize and analyze statistical data to solve practical business related problems.

UNIT I

Meaning and definition of statistics – Classification of data - Frequency distribution - Diagrammatic Presentation – Bar diagram and Pie diagram – Graphic Presentation – Histogram, Frequency Polygon, Frequency curve and Ogives.

UNIT II

Measures of central tendency : Arithmetic Mean , Median , Mode, Measures of dispersion – Range, Quartile deviation, Standard deviation and Coefficient of variation.

UNIT III

Correlation : Definition , Type of correlation , Method of correlation - scatter diagram – Karl Pearson's coefficient of correlation – Spearman's Rank correlation.
Regression: Definition, Regression equations – Methods of forming the regression equations - Problems.

UNIT IV

Index numbers – meaning and definition – uses – methods of construction – Unweighted and weighted index number – Laspeyre's, Paasche's and Fischer's method – Tests for an ideal index number – Wholesale and Cost of living index .

UNIT V

Time Series: Meaning – Components – Models – Business forecasting – methods of estimating trend – graphic, semi average, moving average and least square method – Seasonal variation – Methods of Simple Average.

TEXT BOOK

1. Pillai R.S.N., and Bagavathi V., 2002., Statistics , S. Chand & Company Ltd, New Delhi.

REFERENCES

1. Dr.P.N.Arora, 1997, A foundation course statistics, S.Chand & Company Ltd, New Delhi.

4. Richard .I.Levin., & David.S.Rubin., 1998. Statistics for management, Seventh edition, Prentice hall of India, New Delhi.

Course Objectives

To make the students

1. To understand the basic concepts of environment and ecosystem
2. To create the awareness the environmental problems among people.
3. To developing an attitude of concern for the environment and biodiversity and its conservation.
4. To know the environmental pollution, causes, effects and control measures of urban and industrial waste.
5. To study the special issue and the environment from unsustainable to sustainable development.
6. To know the Disaster Management including professional and personal activities.

Course Outcomes

Learners should be able to

1. Understand key concepts from economic, political, and social analysis as they pertain to the design and evaluation of environmental policies and institutions.
2. Developing critical thinking for shaping strategies (scientific, social, economic and legal) for environmental protection and conservation of biodiversity, social equity and sustainable development.
3. Predicting the consequences of human actions on the web of life, global economy and quality of human life.
4. Reflect critically about their roles and identities as citizens, consumers and environmental actors in a complex, interconnected world.
5. Understood the environment ethics for climate change, global warming, acid rain and ozone layer depletion.
6. Describe a system, component, or process to meet desired needs within realistic constraints such as economic, environmental, social, political, ethical, health and safety, manufacturability, and sustainability

UNIT I

Environment – Definition – Components - Ecosystem -Definition, Concept, Scope, Importance, Structure and Functions of Ecosystem. Energy Flow, Ecological Succession. Food Chains and Food Webs. Classification of Ecosystem. Environmental Pollution –Causes, Effects and Preventive Measures of Air, Water, Soil, Noise and Thermal Pollution.

UNIT II

Biodiversity and its Conservation: Introduction- Definition, Genetic, Species and Ecosystem Diversity, Biogeographical Classification of India- Value of Biodiversity: Consumptive, Productive Uses; Social, Ethical, Aesthetic and Option Values. Threats to Biodiversity: Habitat Loss, Poaching of Wildlife, Man-Wildlife Conflicts.

UNIT III

Social Issues and the Environment- Urban Problems Related to Energy- Water Conservation and Management -Rain Water Harvesting- Water Shed Management. Resettlement and Recapitalization. Natural Resources and Associated Problems and Sustainable Utilization. Environmental Education

UNIT IV

Environment and Human Health-Physical Fitness, Human Rights, Value of Education. Environmental Ethics. Global Warming, EPA Act. RIO-Summit. Solid Waste Management: Causes, Effects and Control Measures. Disaster and Rehabilitation Management: Floods, Earthquake, Cyclone and Landslides.

UNIT V

Disaster Management - Basic Terms: Disaster, Hazard, Vulnerability and Risk. Disaster: Definition, Causal Factors and Types: Natural and Man-made Disaster (Causes, Consequences and Mitigation Measures). Disaster Management: Meaning and Definition. Disaster Management Cycle: Disaster Phase, Response Phase, Recovery/Rehabilitation Phase, Risk Reduction/Mitigation Phase and Preparedness Phase (including professional and personal activities).

Instruction Hours / Week: L: 2 T:0 P: 0 Marks: Internal:100 External: Nil Total: 100

Course Objectives:

1. To make the students learn the Quantitative aptitude problems.
2. To critically evaluate and demonstrate various principles involved in solving mathematical problems and to adopt new and faster methods of calculations.
3. To make the students aware of the importance, the role and the content of soft skills through instruction, knowledge acquisition, demonstration and practice.
4. To develop and nurture the soft skills of the students through individual and group activities.
5. To expose students to right attitudinal and behavioral aspects and to build the same through activities.
6. To reinforce the competencies in soft skills which are crucial in a social setting.

Course Outcomes:

1. Students will be able to learn the Quantitative aptitude problems.
2. Students will be able to critically evaluate and demonstrate various principles involved in solving mathematical problems and to adopt new and faster methods of calculations.
3. Students will be aware of the importance, the role and the content of soft skills through instruction, knowledge acquisition, demonstration and practice.
4. Students will be able to develop and nurture the soft skills of the students through individual and group activities.
5. Students will be exposed to right attitudinal and behavioral aspects and to build the same through activities.
6. Students will be able to reinforce the competencies in soft skills which are crucial in a social setting.

UNIT – I

Introduction to Quantitative aptitude, speed maths, problems on numbers, averages, ratios and proportions, problems on ages.

UNIT – II

Number series, Blood relation, Image Analysis, Direction Sense, Syllogism, Coding and Decoding

UNIT III

Percentages, Data interpretation, Profit and loss, Simple interest and Compound interest

UNIT IV

Parts of speech, tense, subject verb agreement, active and passive voice, articles, prepositions.

UNIT V

Conditional Clause, Degrees of Comparison, Goal setting, Interpersonal skills.

(For undergraduates students admitted from 2015 onwards)

Course Objectives:

1. To develop confidence to respond in English during situations where the use of English is imperative.
2. To develop fluency in actual conversation in the English language.
3. To develop speech skills necessary for confident and intelligent participations in Group Discussions and develop skills related to teamwork in work places.
4. To develop confidence to respond in English during situations where the use of English is imperative.
5. To develop fluency in actual conversation in the English language.
6. To develop knowledge about business communication.

Course Outcomes:

1. Students learnt the basics and purposes of listening skill.
2. Students understand importance of speaking.
3. Students developed the speaking skills on telephone, business and also in travel
4. Learnt some effective vocabulary learning strategies.
5. Students will able to communicate clearly and effectively and handle their day to day affairs well with their knowledge of language skills.
6. Students developed confidence to respond in English during situations where the use of English is imperative.

UNIT I

Listening: Listening comprehension – Listening for Specific Information –Note Taking – Interpreting Charts and Diagrams.

UNIT II

Speaking: Essentials of effective communication – Greeting and Introducing – Making requests – Asking for permission – Giving and Denying Permission – Offering and Accepting Help – Asking for and Declining Help – Giving Instructions and Orders - Talking about likes and dislikes.

Telephone Skills – Understanding telephone conversation – handling calls – leaving messages –making requests - giving instructions and orders

Discussion Skills – Giving your opinion – agreeing and disagreeing – Making suggestions – Interrupting – questioning – reporting – Dealing with questions.
(Completing dialogues)

UNIT III

Reading: Reading – Reading with a purpose –Skimming and Scanning – locating main points – reading critically – Sequencing of sentences – Reading comprehension.

UNIT IV

Writing: Paragraph Writing – Descriptive and Narrative. Safety Instructions/ Suggestions. Expansion of Abbreviations – Spellings- Report writing.

Translation- Translating short sentences and passages from English to Tamil and from Tamil to English.

UNIT V

Vocabulary: Improve English vocabulary: Synonyms – Antonyms – Prefixes – Suffixes – Idioms – Collocations – Different types of English – British and American (Choose the best answer type from a database of 50 words each for each topic)

Functional Grammar: Forming questions, getting answers – Articles – Parts of Speech – Punctuation – Common mistakes in English (Homophones)(Exercise based)

Reference Books:

1. Language in Use: Kenneth Anderson, Cambridge University Press.
2. Study Speaking: A course in Spoken English for Academic Purpose: Kenneth Anderson, Joan MacLean and Tony Lynch, Cambridge University Press, 2008.

4. Dr. J. John Love Joy, Dr.Francis M.Peter S.J. “Lets Communicate – Basic English for Everyone”, Vaigarai Publications, 1st edition, Dindigul 2007.

COURSE OBJECTIVES:**To make the students**

1. To make the students learn the techniques of issue of shares and debentures.
2. To understand the Acquisition of Business and Profits prior to incorporation.
3. To enable the students to prepare profit and loss a/c and balance sheet.
4. To understand amalgamation of companies.
5. To understand the Liquidator's Final Statement of Account.
6. To give them an exposure to calculate the value of Goodwill and shares.

COURSE OUTCOMES:**Learner should be able to**

1. The students will be able to raise capital through shares and debentures.
2. Maintain the financial statements of a business entity.
3. The students will be proficient in final accounts.
4. The students will have knowledge about amalgamation of companies.
5. The students will be able to prepare consolidated balance sheet by incorporating accounting standards.
6. The students will have knowledge on the value pf goodwill and shares.

UNIT I

Shares and Debentures: Books of accounts and Statutory Books – Issue of shares and Debentures- Forfeiture and Re- issue of Shares - Underwriting.

UNIT II

Redemption and Acquisition: Redemption of Preference shares and debentures – Acquisition of Business- Profits prior to incorporation.

UNIT III

Final Accounts of Joint Stock Companies: Preparation and Presentation of Final Accounts of Joint Stock Companies as per Company Law Requirements – Determination of Managerial Remuneration.

UNIT IV

Reconstruction: Reduction and Reorganization of Share Capital – Amalgamation, Absorption and Reconstruction (excluding inter-company holdings and Owings)

UNIT V

Valuation: Valuation of Shares and Goodwill – Liquidation of companies – Modes of Winding Up – Order of payments – Procedure of Preparation of Statement of Affairs – List to be Attached to the Statement of Affairs - Liquidator's Final Statement of Account.

Note: Distribution of marks for theory and problems shall be 20% and 80 % respectively.

15CCU302 CORE - OBJECT ORIENTED PROGRAMMING WITH C ++**COURSE OBJECTIVES:****To make the students**

1. To Introduces Object Oriented Programming concepts using the C++ language.
2. To stresses the object paradigm including classes, inheritance, virtual functions, and templates in the development of C++ programs.
3. To Develop, compile and run simple to moderately complex C++ programs
4. To Identify, compare, select, and use classes and algorithms from the C++ Standard Library.
5. To Provide the principles of data abstraction, inheritance and polymorphism and principles of virtual functions and polymorphism
6. To Introduces handling formatted I/O and unformatted I/O and exception handling. The gain the knowledge about the real-life entity using the objects.

COURSE OUTCOMES:**Learner should be able to**

1. Identify importance of object-oriented programming and difference between structured oriented and object-oriented programming features.
2. Creating simple programs using classes and objects in C++.
3. Implement Object Oriented Programming Concepts in C++.
4. Develop applications using stream I/O and file I/O.
5. Implement simple graphical user interfaces.
6. Implement Object Oriented Programs using templates and exceptional handling concepts.

UNIT I

Principles of Object Oriented Programming: Basic Concepts of Object Oriented Programming – Benefits of OOP – Structure of C++ Program – Declaration of Variables. Control Statements – Decision Making Statements – If ..Else, Jump, Goto, Break, Continue-Switch Case Statements – Do-While – While Statement, For Statement. Inline Functions – Function Overloading.

UNIT II

Classes and Objects: Specifying a Class – Defining Member Functions – Static Data Members – Static Member Functions - Array of Objects –Friendly Functions. Constructors and Destructors: - Constructors – Multiple Constructors in a Class – Constructors with Default Arguments - Copy Constructor – Destructors.

UNIT III

Operator Overloading: Defining Operator Overloading – Overloading Unary Operators – Overloading Binary Operators – Overloading Binary Operators using Friends – Type Conversions. Inheritance: Introduction – Defining Derived Classes – Single, Multilevel, Multiple, Hierarchical Inheritance- Hybrid Inheritance – Virtual Base Classes – Abstract Classes.

UNIT IV

Pointers: Pointers to Objects – this Pointer – Pointers to Derived Classes – Virtual Functions. Managing Console I/O Operations :- C++ Streams – C++ Stream Classes –

unformatted I/O Operations – Formatted Console I/O Operations – Managing Output with Manipulators.

UNIT V

Files: Classes for File Stream Operations – Opening and Closing a File – Sequential Input and Output Operations – Updating a File Random Access. **Templates and Exceptions:-** Templates – Class Templates – Function Templates – Member Function Templates – Exception Handling.

15CCU303 CORE -PRINCIPLES OF MARKETING

COURSE OBJECTIVES:

To make the students

1. To enable the students to understand the basic of marketing.
2. To understand how organizations, identify customers and their wants/needs.
3. To provide thorough knowledge of various concepts and their application relating to marketing planning and management decisions.
4. To provide thorough knowledge of Promotional activities and Physical distribution
5. To comprehend marketing decisions, based upon the combination of product, price, promotion, and distribution elements.
6. To apply key frameworks and methods, and develop analytical skills to solve marketing problems.

COURSE OUTCOMES:

Learner should be able to

1. The students will have the understanding of the importance of marketing.
2. Be familiar with the basic elements of the marketing mix and to provide a framework to evaluate marketing decisions and initiatives.
3. Students will demonstrate analytical skills in identification and resolution of problems pertaining to marketing management.
4. Scan the marketing environment and Discuss ethics and social responsibility in marketing.
5. Recognize organizational markets and buyer behavior and Formulate pricing strategies for products and services.
6. Create strategies for managing marketing channels and supply chains and Integrate marketing communications and direct marketing.

UNIT I

Need and Scope of marketing: Definition and Features – Meaning and Objectives – Functions of Marketing - Modern Marketing Concepts. Market Forecasting – Marketing Research – Meaning and Scope – Objective and Functions – Future of Marketing Research.

UNIT II

Market Information System: Consumer Marketing, Product Planning and Development-Market Segmentation - Product Policy Decision – Product Line and Product Mix – Concept of Product Life Cycle - Market Integration – Product and Branding Strategies

UNIT III

Promotional activities: Need and Importance – Promotional Mix - Sales Promotion – Methods of Sales Promotion – Advertising Functions and Objectives – Media of Advertising – Personal Selling Process.

UNIT IV

Pricing System: Role of Pricing – Objectives – Basic Methods of Price Setting -Factors Affecting Pricing Decision- Procedure of Price Determination.

UNIT V

Channels of Distribution: Meaning – Importance – Objectives – Functions -Types of Different Channels –Distribution Policies-Wholesaler-function and Services-Retailers Functions and Services– Establishment of Sales Policies – Sales Organization Structure – Objectives and Principles.

Text Book:

1. R.S. Pillai & Mrs. Bagavathi . 2014. "Marketing". New Delhi. Sultan Chand & sons.

Reference Books:

1. S. A. Sherlekar, 2000. "Marketing Management". Bangalore: Himalayas publishing house.
2. Richard Still & Gowani. 1999. "Sales Management". New Delhi: Prentice Halls of India.
3. William J. Standon. 1994. "Fundamentals of Marketing". New Delhi: Tata Mcgraw Hil publishing house.

COURSE OBJECTIVES:**To make the students**

1. To familiarize the students with the basic concept of microeconomics.
2. To make student understand the demand and supply analysis in business applications
3. To familiarize students with the production and cost structure under different stages of production.
4. To understand the pricing and output decisions under various market structure.
5. To help students understand and apply the various decision tools to understand the market structure.
6. To learn the National Income Analysis.

COURSE OUTCOMES:**Learner should be able to**

1. Understand the concepts of cost, nature of production and its relationship to Business operations.
2. Understand and apply supply and demand analysis to relevant economic issues.
3. Understood the causes and consequences of different market conditions.
4. Integrate the concept of price and output decisions of firms under various market structure.
5. Understand the links between production costs and the economic models of supply
6. Represent demand, in graphical form, including the downward slope of the demand curve and what shifts the demand curve.

UNIT I

Business Economics and Economic Theory: Economics - Definition - Economic Analysis - Micro and Macro Economics – Meaning – Definition - Scope of Business Economics – Profit Maximization- Economic Cost of Using Resources - Social Responsibilities of Business -Maximizing the Value of a Firm – Basic Techniques of a Firm.

UNIT II

Demand, Supply and Market equilibrium: Demand - Law of Demand- Determinants, Elasticity, Demand Function, Forecasting. Supply-Law of Supply-Elasticity of Supply-Supply Functions-Market Equilibrium –Changes in Market Equilibrium.

UNIT III

Production and Cost Analysis: Production Function- Isoquant Curves Production in the Short Run and Long Run-. Law of Diminishing Marginal Product. Short Run and Long Run Cost of Production –Short Run Total Costs- Cost Curves. Cost Analysis- Concept of Cost and its Types, Cost Output Relationship in Short and Long Period-.

UNIT IV

Market Structure and Pricing Decisions: Classification of Markets – Pricing Under Perfect Competition – Pricing Under Monopoly – Price Discrimination – Pricing Under Monopolistic Competition - Kinked Demand Curve Model – Cournot Model of Duopoly – Monopsony.

UNIT V

National Income Analysis: National Income Measures, Types and Difficulties-Trade Cycles - Concept and Causes of Trade Cycles. Measures to Control Trade Cycles. Macro Economic

Text Book:

1. Sankaran. 2013.”Business Economics” Margham publications Ltd . Chennai

Reference Books:

1. Varshney and Maheshwari 22nd Edition - 2014 Managerial Economics. Sultan Chand & Sons
2. H.L.Ahuja. 2007 Reprint . “Business Economics.” New Delhi. S.Chand & Company Ltd.
3. P.N.Reddy & H.R.Appanaiah. 1995.” Principles of Business Economics.” New Delhi..S.Chand & Company Ltd.
4. Ferguson & R.Rothschild. 1993. “Business Economics”Hong Kong. Macmillan Press Ltd.
5. H.S.Agarwal. 1995. “Business Economics” Ratan Prakashan Mandir.
6. K.P.Sundaram and E.Sundaram 1997. Business Economics. New Delhi: Sultan Chand & Sons

COURSE OBJECTIVES:

To make the students

1. To analyses the overall business environment and evaluate its various components in business decision making.
2. To provides an analysis and examination of significant contemporary ethical issues and challenges existing throughout the professional business arena.
3. To know the different environment like, political, technological and economic environment in the business.
4. To evaluate the implication of Global Environment variables in the Indian Economy.
5. To elucidate the factors of the political environment that influence Business decision making.
6. To examine the impact of Technological, Socio-cultural and Natural environmental factors affecting Business decision making and Legal framework regulating to Competition.

COURSE OUTCOMES:

Learner should be able to

1. Familiarize with the nature of business environment and its components and influence Business decisions.
2. The students will be able to demonstrate and develop conceptual framework of business environment and generate interest in international business.
3. Understand the definition of ethics and the importance and role of ethical behavior in the business world today.
4. Evaluate the implication of Global Environment variables in the context of Indian Economy.
5. Understood the factors of the political environment that influence Business decision making.
6. Understood the impact of Technological, Socio-cultural and Natural environmental factors affecting Business decision making.

UNIT I

Concept of Business Environment- Significance-Types of Environment-External and Internal – Inter - Relationship between Economic and Non-economic environment-Impact of Environment on Business and Strategic Decisions - Culture and Business - Social Responsibilities of Business .

UNIT II

Industrial Policies and Regulations - Industrial Policy up to 1991 - New Industrial Policy - Public, Private, Joint and Co-operative Sectors - Privatization and Disinvestment - Ways of Privatization - Benefits and Arguments Against Privatization - Privatization in India.

UNIT III

Economic Systems – Meaning – Characteristics -Types of Economic Systems-Capitalism-Socialism-Mixed Economy - Economic Planning - Nature, Scope and Significance of Economic Planning in India - Achievements and Failures of Economic Planning.

UNIT IV

Technological environment-Factors Governing Technological Environment-Management of Technology - Patents and Trademarks - Financial Institution in India-IFCI-ICICI-IDBI-IIBISIDBI- SFC's.

UNIT V

Globalisation - Meaning and Dimensions - Features of Current Globalisation –Essential Conditions for Globalisation - Globalisation of Indian Business - Foreign Direct Investment - Concept, Advantages, Disadvantages and Determinants- India's policy towards FDI - Multinational Corporation – Meaning - Merits and Demerits - Control over MNC's-MNC in India.

Text Books

1. Francis Cherunilum - Business Environment: Text and Cases, Himalaya Publishing House, Mumbai.
2. K. Ashwathappa - Essentials of Business Environment, Himalaya Publishing House, Mumbai.

Reference Books

1. Ruddar Dutt and K.P.M. Sundaram - Indian Economy, S. Chand Co. Ltd., New Delhi.
2. Francis Cherunilum, Global Economy and Business Environment, Himalaya Publishing House, Mumbai.

COURSE OBJECTIVES:

To make the students

1. To provide knowledge on Financial System of India and to familiarize the structure of financial markets
2. To introduce students to the world of financial services.
3. To study the various instruments of the money market.
4. To understand the characteristics of a highly developed money market and the recent trends in the money market.
5. To equip students with the knowledge and skills necessary to become employable in the financial service industry.
6. To equip students with the technical and analytical tools, and strategic abilities necessary to understand the evolution and workings of the commercial banking industry.

COURSE OUTCOMES:

Learner should be able to

1. Demonstrate an awareness of the current structure and regulation of the Indian financial services sector.
2. Evaluate and create strategies to promote financial products and services.
3. Students would understand instruments that are operational in the money market.
4. Students would be aware about the contribution that the money market does in the economic stability and development of a country.
5. Understand the risk and return portion of different financial instruments.
6. Developing technical, analytical and decision-making skills in preparation for managerial responsibility in the financial management of the banking firm.

UNIT I

Financial Concept: Financial Assets, Intermediaries, Financial Markets, Financial Rate of Return, Financial Instruments. Financial Markets Classification – Development of Financial System in India, Legislative Support – Weakness of Indian Financial System

UNIT II

Money Market – Definition – Money Market Vs Capital Market- Objectives – Features of a Developed Money Market – Importance of Money Market – Composition of Money Market – Participants – Advantages – Drawbacks – Commercial Bill Market – Types of Bills – Importance of Bill Market – Operations in Bill Market – Discount Market – Acceptance Market – Drawbacks – Bills Market Scheme – Treasury Bill Market – Types of Treasury Bills – Operations and Participants – Importance – Commercial Paper – Certificate of Deposit – REPO – Structure of Indian Money Market – Features of Money Market – Recent Developments

UNIT III

Capital Market – Meaning – Stock Exchange – Distinction between New Issue Market and Stock Exchange – Relationship Between New Issues Market and Stock Exchange – Functions of New Issue Market – Instruments of Issues – Players in the New Issue Market – Book Building – Follow on Public Offer – Recent Trends – Reasons for Poor Performance – Suggestions

UNIT IV

Depository System : Definition and Meaning – Objectives – Interacting Institutions – Depository Process – Trading in a Depository System – Depository System in India – Depository Participants – Benefits – NSDL – Central Depository Services (India) Ltd. – Drawbacks – Remedial Measures - Derivatives

UNIT V

RBI – Commercial Banks – GTI – LIC – IDBI – PF – MF- Stock Holding - Corporation – IFCI, SFCI, SEBI – Objectives – Guidelines for Investor Protection

Text Book

2. **Khan, M.Y** – Indian Financial System, Sultan Chand and Sons, New Delhi
3. **Srivastava, R.M.** – Management of Indian Financial Institution, Himalaya Publishing House, Mumbai

COURSE OBJECTIVES:**To make the students**

1. To Introduces Object Oriented Programming concepts using the C++ language.
2. To stresses the object paradigm including classes, inheritance, virtual functions, and templates in the development of C++ programs.
3. To Develop, compile and run simple to moderately complex C++ programs
4. To Identify, compare, select, and use classes and algorithms from the C++ Standard Library.
5. To Provide the principles of data abstraction, inheritance and polymorphism and principles of virtual functions and polymorphism
6. To Introduces handling formatted I/O and unformatted I/O and exception handling. The gain the knowledge about the real-life entity using the objects.

COURSE OUTCOMES:**Learner should be able to**

1. Identify importance of object-oriented programming and difference between structured oriented and object-oriented programming features.
2. Creating simple programs using classes and objects in C++.
3. Implement Object Oriented Programming Concepts in C++.
4. Develop applications using stream I/O and file I/O.
5. Implement simple graphical user interfaces.
6. Implement Object Oriented Programs using templates and exceptional handling concepts.

Write a C++ Program for the Following Concepts

Object and classes:

1. Create a class to implement the data structure STACK . write a constructor to initialize the top of the stack to zero .write a member function PUSH() to insert an element and a member function POP() to delete an element. check for overflow and underflow conditions.
2. Create a class ARITH which consists of a FLOAT and an INTEGER variable. write member functions ADD(),SUB(),MUL(),DIV(),MOD() to perform addition, subtraction, multiplication, division and modulus respectively. write member functions to get and display MAT() object values.

Operator overloading:

3. Create a class MAT as a 2D matrix and R, C represents rows and columns of the matrix. Overload the operators +,-,* to add, subtract, multiply two matrices. Write member functions to get and display MAT() object values.
4. Create a class STRING. Write member functions to initialize to get and display strings. overload the operator + to concatenate two strings, == to compare two strings and a member function to find the length of the strings.

Inheritance:

5. Create a class which consist of EMPLOYEE detail like eno, ename, dept, basic salary, grade. Write member functions to get and display them. Derive a class PAY from the above class and write a member functions to calculate da, hra, pf depending on the grade and display the pay slip in a neat format using console I/O.
6. Create a class SHAPE which consist of two virtual functions cal_Area() and cal_Per() to calculate area & perimeter of various figures. Derive three classes

SQUARE, RECTANGLE and TRIANGLE from the class SHAPE and calculate area and perimeter of each class separately and display the result.

7. Create two classes which consist of two private variables, one integer and one float variable in each class. Write member functions to get and display them. Write a FRIEND function common to both classes which takes the object of the above two classes as arguments and the integer and float values of both the objects separately and display the result.

Console I/O:

8. Write a user-defined function USERFUN() which has the formatting commands like setw(), showpos(), precision(). Write a program which prints a multiplication table and uses userfun() for formatting.

Files:

9. Write a program to perform insertion, deletion and updation using files.
10. Write a program which takes a file as arguments and copies into another file with line numbers using command line arguments.

Reference Books:

1. Balagurusamy. E. 2007. Object Oriented Programming with C++. 3rd Edition, Tata McGraw Hill publishing company Ltd, New Delhi.
2. Ashok N. Kamthane. 2013. Object Oriented Programming with ANSI and Turbo C++, Pearson Education
3. Chandra .B. 2005. OOPS using C++, 2nd Edition, Narosa Publishing House
4. Yashavant Kanetkar. 2013. Let Us C++, 2nd Edition, BPB Publications.
5. John R. Hubbard. 2006. Programming with C++, 2nd Edition, Tata McGraw Hill Publishers

Course Objectives:

1. To make the students learn the Quantitative aptitude problems.
2. To critically evaluate and demonstrate various principles involved in solving mathematical problems and to adopt new and faster methods of calculations.
3. To make the students aware of the importance, the role and the content of soft skills through instruction, knowledge acquisition, demonstration and practice.
4. To develop and nurture the soft skills of the students through individual and group activities.
5. To expose students to right attitudinal and behavioral aspects and to build the same through activities.
6. To reinforce the competencies in soft skills which are crucial in a social setting.

Course Outcomes:

1. Students will be able to learn the Quantitative aptitude problems.
2. Students will be able to critically evaluate and demonstrate various principles involved in solving mathematical problems and to adopt new and faster methods of calculations.
3. Students will be aware of the importance, the role and the content of soft skills through instruction, knowledge acquisition, demonstration and practice.
4. Students will be able to develop and nurture the soft skills of the students through individual and group activities.
5. Students will be exposed to right attitudinal and behavioral aspects and to build the same through activities.
6. Students will be able to reinforce the competencies in soft skills which are crucial in a social setting.

UNIT – I

Introduction to Quantitative aptitude, speed maths, problems on numbers, averages, ratios and proportions, problems on ages.

UNIT – II

Number series, Blood relation, Image Analysis, Direction Sense, Syllogism, Coding and Decoding

UNIT III

Percentages, Data interpretation, Profit and loss, Simple interest and Compound interest

UNIT IV

Parts of speech, tense, subject verb agreement, active and passive voice, articles, prepositions.

UNIT V

Conditional Clause, Degrees of Comparison, Goal setting, Interpersonal skills.

(For undergraduates students admitted from 2015 onwards)

Course Objectives:

1. To train the students in understanding the concepts of communication.
2. To be familiar with the four basic skills of English.
3. To train students in developing their written communication.
4. To train students in developing their presentation skills.
5. To acquire the skill of making grammatically correct sentences.
6. To reflect originality on the application of soft skill views and express in writing their views.

Course Outcome:

1. Students have acquired proficiency in communication.
2. Students have become adept in written communication and presentation skills.
3. Developed the skill of writing in English and that of public speaking.
4. Establish and maintain social relationships.
5. Develop communication skills in business environment.
6. Enhanced communication competency through LSRW skills

OBJECTIVES

To train the students in understanding the concepts of communication.

To train the students in developing their written communication and presentation skills.

UNIT I – Concept of Communication – Barrier to Communication –Body language – Personality Development – Etiquette and Manners- Soft Skills – Emotional Intelligence

UNIT II – Listening Comprehension – Reading Comprehension – Paragraph writing – Precis Writing – Writing Resume and Covering Letter -Speaking – Welcome Address, Vote of Thanks, Compering, Debates, Role Play, Dialogues – Vocal Communication Techniques. Voice, Quality, Volume, Pitch

UNIT III – Dicto Composition – Letter Writing (Informal, Letters to the Editor etc) – Term paper – Book reviews

UNIT IV – Business Correspondence – Layout of Business Letter – Formal Styles of Business Letters – Letters of Acceptance, Appointment, Resignation, Complaint, Sending E-mails.

UNIT V – Effective Presentation – Planning – Audience Analysis –Logical Sequencing – Timing of the Presentation – Conclusion – Answering Queries – Group Discussion – Interview.

Prescribed Text:

Juneja. P. Om and Aarati Mujumdar, “*Business Communication -Techniques and Methods*”, Orient Blackswan Pvt. Ltd., Hyderabad: 2010.

COURSE OBJECTIVES:**To make the students**

1. To acquaint the students with basic concepts used in cost accounting and material management.
2. To make the students understand the various cost involved the respect to labour and overheads.
3. To Identify and calculate various types of costs such as direct, indirect, total, variable, mixed and fixed costs.
4. To determine the costs of producing a product or providing a service using job costing, activity-based costing and process costing
5. To create cost allocation and apportionment of the product of the industry
6. To provide the student knowledge about use of costing data for planning, controls and decision making.

COURSE OUTCOMES:**Learners should be able to**

1. Describe how cost accounting is used for decision making and performance evaluation.
2. Understand the basic concept of cost and how costs are presented in financial statements.
3. Demonstrate how materials, labor and overhead costs are added to a product at each stage of the production cycle.
4. Analyze the basic cost flow model and be able to assign costs in a job cost system.
5. Formulate overhead using predetermined rates and Activity-Based costing.
6. Assess how cost-volume-profit are related and use CVP analysis as a planning and decision making.

UNIT I

Cost Accounting – Definition – Meaning and Scope – Concept and Classification – Costing an aid to Management — Types and Methods of Cost – Elements of Cost Preparation of Cost Sheet and Tender.

UNIT II

Material Control: Levels of Material Control – Need for Material Control – Economic Order Quantity – ABC Analysis – Perpetual Inventory – Purchase and Stores Control: Purchasing of Materials – Procedure and Documentation Involved in Purchasing – Requisition for Stores – Stores Control – Methods of Valuing Material Issue.

UNIT III

Labour and Overhead: System of Wage Payment – Idle Time – Control over Idle Time – Labour Turnover. Overhead – Classification of Overhead – Allocation and Absorption of Overhead.

UNIT IV

Process costing – Features of Process Costing – Process Losses, Wastage, Scrap, Normal Process Loss – Abnormal Loss, Abnormal Gain. (Excluding Inter Process Profits and Equivalent Production).

UNIT V

Operating Costing - Contract Costing – Reconciliation of Cost and Financial accounts.

NOTE: Distribution of marks : Theory 40% and Problems 60%

Text Book:

1. S.P. Jain and K.L. Narang, 2013, “Cost Accounting”, Kalyani Publishers, New Delhi.

Reference Books:

1. **R.S.N. Pillai and V. Bagavathi**, 2013, “Cost Accounting”, S. Chand and Company Ltd., New Delhi.
2. **S.P.Iyyengar**, 2005, “Cost Accounting Principles and Practice”, Sultan Chand, New Delhi.
3. **V.K.Saxena & C.D.Vashist**, 2012, “Cost Accounting”, Sultan Chand, New Delhi.
4. **M.N.Arora**, 2013, “Cost Accounting”, Sultan Chand, New Delhi.

COURSE OBJECTIVES:**To make the students**

1. To understand the different issues involved in the design and implementation of a database system.
2. To study the physical and logical database designs, database modeling, relational, hierarchical, and network models
3. To understand and use data manipulation language to query, update, and manage a database
4. To develop an understanding of essential DBMS concepts such as: database security, integrity, concurrency,
5. To design and build a simple database system and demonstrate competence with the fundamental tasks involved with modeling, designing, and implementing a DBMS.
6. To Identifies the entity, attributes, identify entity relationship diagrams

COURSE OUTCOMES:**Learners should be able to**

1. Understand the fundamental elements of relational database management systems
2. Understand the basic concepts of relational data model, entity-relationship model, relational database design, relational algebra and SQL.
3. Design ER-models to represent simple database application scenarios
4. Convert the ER-model to relational tables, populate relational database and formulate SQL queries on data.
5. Improve the database design by normalization.
6. Familiar with basic database storage structures and access techniques: file and page organizations, indexing methods including B tree, and hashing.

UNIT I

Database System Architecture Basic concepts: Data System, Data Models, Data Independence, Architecture For a Database System, Distributed Databases. Storage Structures: Representation of Data. Data Structures and Corresponding Operators: Introduction, Relation Approach, Hierarchical Approach, Network Approach.

UNIT II

Relational Model: Entity – Relational Model – Basic Concepts – Keys – Entity – Relationship Diagram –Structure of Relational Database – Relational Algebra – Extended Relational Algebra Operations – Modification of the Database – Integrity Constraints.

UNIT III

SQL: Data Definition Language – Data Manipulation Language – Data Control Language – Transaction Control Language. Embedded SQL: Introduction – Operations not Involving Cursors –Operations involving Cursors – Dynamic statements. Query by Example – Retrieval Operations, Built-in Functions, Update Operations.

UNIT IV

PL/SQL: Introduction to PL/SQL – Advantages of PL/SQL – Architecture of PL/SQL Block –Introduction to PL/SQL Block – Attributes – Control Structures – Concept of Error Handling – Cursor Management.

UNIT V

Normalization: Decomposition, Functional Dependency, First, Second, Third Normal Forms, BCNF, Relations with more than one Candidate Key.

Text Book

1. **Abraham Silber Sehatz, Henry F. Korth & S. Sudharasan**, 2008, “Database System Concepts”, New Delhi. Mc Graw Hill Publication.

Reference Books:

1. C.J.Dates, 2010, “An Introduction to Database System”, 3rd Edition , Narosa Book Distributors Pvt Ltd.
2. Bipin C Desai, 2001 “An Introduction to Database Systems”, Galgotia Publications Pvt Limited.
3. Raghu Ramakrishnan, Johannes Gehrke ,2010 “Database Management Systems”, 3rd Edition, McGraw-Hill Higher Education.
4. Elmasri, Navathe, 2010 “Fundamentals of database Systems”, 6th Edition, Addison Wesley.

COURSE OBJECTIVES:**To make the students**

1. To equip the students with the understanding time value of money & use it for decision making.
2. To evaluate projects and investments is the basic objective of the course.
3. To enable the students to take investment decisions and financial decisions.
4. To acquaint the students about the various aspects of capital structure
5. To provide the students with the basic knowledge of Dividend decisions.
6. To impart knowledge of working capital and cash management.

COURSE OUTCOMES:**Learners should be able to**

1. Students who complete this course will be able understand the use of finance for decision making
2. The students will able to describe time value of money, how a project is made and appraised.
3. Students will know the technicalities of making investment decisions.
4. Students of the course will able to differentiate between the various sources of finance and their pros & cons.
5. Students who complete this course will be able to outline capital requirements for starting a business & management of working capital.
6. Students of the course will able to recommend whether and why an investment should be accepted or rejected.

UNIT I

Introduction: Meaning, Definition, Scope of Financial Management- Financial Decisions Financial Planning – Objectives and Principles of Sound Financial Planning –Long Term – Short Term -Role and Functions of a Finance Manager.

UNIT II

Cost of Capital and Capital Budgeting: Meaning, Definition, Importance of Cost of Capital- Classification of Cost of Capital. Cost of Debt – Preference, Equity and Retained Earnings- Weighted Average Cost of Capital. Capital Budgeting – Significance – Methods of Evaluating Capital Expenditure Proposals. Payback Method – Accounting Rate of Return – Discounted Cash Flow Method

UNIT III

Leverages & Capital Structure: Meaning, Definition, Types of Leverage-EBIT – EPS Analysis. Financial and Operating Risk – Operating Leverage – Financial Leverage-Combined Leverage. Capital Structure Theories – Net Income Approach -Net Operating Income Approach MM Approach and Traditional Approach– Determinants of Capital Structure.

UNIT IV

Working Capital Management: Meaning–Importance– Kinds-Concept- Disadvantages of Excessive and Inadequate Working Capital – Determinants of Working Capital – Cash Management – Motives of Holding Cash – Cash Budget – Receivables Management – Meaning – Purpose of Maintaining Receivables – Inventory Management – Meaning and Kinds - Need of Holding Inventories – Reorder level, Minimum and Maximum, Average Stock Level, Economic Order Quantity.

UNIT V

Dividend policy: Meaning of Dividend –Determinants of Dividend Policy – Classifications of Dividend- Dividend policy- MM Hypothesis, Walter's Model and Gordon's Model.

Text Book

1. Dr. R. Ramachandran and Dr. R. Srinivasan (2010), "Financial Management", Sriram Publications, Trichy.

Reference Books:

1. I. M. Pandey, 2009, Financial Management New Delhi..Vikas Publications.
2. S. Prassanna Chandra 2006, Financial Management, New Delhi Tata McGraw Hill Publications.
3. Shashi K.Gupta and R.K. Sharma, "Financial Management Theory and Practice", Kalyani Publication, New Delhi.

COURSE OBJECTIVES:**To make the students**

1. To enrich students with the knowledge of the functioning of banks.
2. To help students realize the quintessential role of banks in the world today.
3. To make the students understand the various services offered and various risks faced by banks.
4. To make them aware of various banking innovations after nationalization.
5. To impart comprehensive knowledge concerning the practical aspects of banking.
6. To help the students with knowledge of electronic banking services

COURSE OUTCOMES:**Learners should be able to**

1. Understand the knowledge on banking and financial system in India.
2. Understand the functions of Commercial Banks.
3. Provide the knowledge about commercial banks and its products.
4. Understand the customer relationship.
5. Understood the digital financial infrastructure.
6. Enable them to understand better customer relationship create awareness about modern banking services like e-banking, m-banking and internet banking

UNIT I

Banks: Origin of Banks – Definition of Bank – Classification of Banks – Banking system – UNIT Banking – Branch Banking – Functions of Modern Commercial Banks – Credit Creation by Commercial Banks.

UNIT II

Central Banking: Functions – Credit Control Measures – Qualitative and quantitative credit control measures – Role of RBI in regulating and controlling banks.

UNIT III

Development Banks: Functions, State Bank of India – Commercial banks and rural financing – Regional Rural Banks – Co-operative banks - NBFC-- IDBI – ICICI.-NBFC- NHB- IFCI

UNIT IV

Services Banking: Automated Teller Machine – Merchant Banking – Mutual Fund – Factoring service – Privatization of commercial.

UNIT V

E-Banking: E-Banking Services- ATM Card- Debit Card- Credit Card- Master Card-Visa Card- NEFT-RTGS-ECS.

TEXT BOOK

1. Natarajan, Parameswaran. (2013), Indian Banking,,: S. Chand and sons, New Delhi

REFERENCE BOOKS

1. Santhanam.(2001) Banking and Financial System Margham Publications, Chennai.
2. Sundaram K.P.M. and Sundaram E.N. (1996) Modern Banking, Sultan Chand and Sons, New Delhi.

COURSE OBJECTIVES:**To make the students**

1. To Understand the basics of Relational Databases.
2. To Write SQL code based on ANSI/ISO standards to build and maintain database structures.
3. To Update database content with SQL and transaction handling and Retrieve data from single or multiple tables.
4. To Process data with row and aggregate functions
5. To Manipulate data with correlated and noncorrelated subqueries
6. To Apply views to break down problems and enhance security

COURSE OUTCOMES:**Learners should be able to**

1. Understood the Oracle 11g PL/SQL programming training, attendees write stored procedures, functions, packages, and triggers, and implement complex business rules with oracle 11g.
2. Students will be learning the programming, management, and security issues of working with PL/SQL program units.
3. Students will be learning the built-in packages that come with Oracle, the creation of triggers, and stored procedure features.
4. Understood the database content with SQL and transaction handling and Retrieve data from single or multiple tables.
5. Students will be learning the data with correlated and noncorrelated subqueries.
6. Understood the views to break down problems and enhance security.

1. Create table Company with the following fields and insert the values for 10 employees.

Field Name	Field Type	Field Size
Company Name	Character	15
Proprietor	Character	15
Address	Character	25
Supplier Name	Character	15
No. of employees	Character	4
GP Percent	Number	6 decimal places

Queries:

- a) Display all the records of the company, which are in the ascending order of GP percent.
- b) Display the name of the company whose supplier name is Telco
- c) Display the details of the company whose GP percent is greater than 20 and order by GP percent.
- d) Display the details of the company having the employee ranging from 300 to 1000.
- e) Display the name of the company whose supplier's name is same as the Tata's.

2. Create table named Employee with the following fields and insert the values

Field Name	Field Type	Field Size
Employee Name	Character	15
Employee Code	Number	6
Address	Character	25
Designation	Character	15
Grade	Character	1
Date of Joining	Date	-
Salary	Number	10 with 2 decimal places.

Queries:

- Display the name of the employees whose salary is greater than Rs. 10,000
- Display the details of employees in ascending order according to Employees Code.
- Display the total salary of the employees whose grade is 'A'.
- Display the details of employees earning the highest salary.
- Display the names of the employees who earn more than 'Ravi'.

3. Create table named Student with the following fields and insert the values

Field Name	Field Type	Field Size
Employee Name	Character	15
Gender	Character	6
Roll No	Character	10
Department Name	Character	15
Address	Character	25
Percent	Number	4 with 2 decimal places

Queries:

- Calculate the average percentage of students.
- Display the name of students whose percentage is greater than 80.
- Display the details of the students who got the highest percentage.
- Display the details of the student whose percentage is between 50 and 70.
- Display the details of the student whose percentage is greater than the percentage of the rollno=12CA01.

4. Create table Product with the following fields and insert the values

Field Name	Field Type	Field Size
Product No	6	Number
Product Name	Character	15

Unit of Measure	Character	15
Quantity	Number	6 decimal places.
Total Amount	Number	8 decimal places.

Queries:

- Using update statements calculate the total amount and then record.
- Select the records whose unit of measure is Kg.
- Select the records whose quantity is greater than 10 and less than or equal to 20.
- Calculate the number of records whose unit price is greater than 50 with count operation.

5. Create table PayRoll with the following fields and insert the values

Field Name	Field Type	Field Size
Employee No	Number	8
Employee Name	Character	8
Department	Character	10
Basic Pay	Number	8 with 2 decimal places.
HRA	Number	6 with 2 decimal places.
DA	Number	6 with 2 decimal places.
PF	Number	6 with 2 decimal places.
Net Pay	Number	8 with 2 decimal places.

Queries:

- Update the records to calculate the net pay.
- Arrange the records of employees in ascending order of their net pay.
- Display the details of the employees whose department is Sales.
- Select the details of the employees whose $HRA \geq 1000$ and $DA \leq 900$
- Select the records in descending order.

6. Create table Deposit and loan with the following fields

Field Name	Field Type	Field Type
Account	VarChar	6
Branch Name	VarChar	15
Customer Name	VarChar	20
Balance Amount	VarChar	10
Loan Number	VarChar	7
Loan Amount	VarChar	6

Queries:

- Find the number of loans with amount between 10000 and 50000.
- List in the alphabetical orders the names of all customers who have a loan at the Coimbatore branch.
- Find the average account balance at the Coimbatore branch.
- Update deposit to add interest at 5% to the balance.

- e) Arrange the records in descending order of the loan amount.
 - f) Find the maximum loan amount.
 - g) Find the total amount of deposit in Erode branch.
7. Write a PL/SQL Block to print natural numbers up to n.
 8. Write a PL/SQL Block to print the number in reverse order.
 9. Write a PL/SQL Block to check whether the number is even or odd.
 10. Write a PL/SQL block to print the Fibonacci series.

Reference Books:

1. Abbey Mischael. (1998).Oracle 8.FirstEdition.: McGraw Hill Publishing Company, New Delhi
2. Kevinloney (2008).Oracle 9i Complete References .First Edition.: McGraw Hill Publishing Company, New Delhi
3. Brown Bradley.(2000). Oracle 8i. First Edition.: Tata McGraw-Hill Publishing House. New Delhi
4. Dorsey Paul. (2000). Oracle Designer 2000. First Edition.: Tata McGraw-Hill Publishing House. New Delhi

COURSE OBJECTIVES:**To make the students**

1. To represents the concept of economic development of various fields and human resource.
2. To learn the basics of economic development of agriculture, industry, public finance and economic planning.
3. To understand how planning and infrastructure support can develop an economy.
4. To learn the environmental and resource economics, development economics and international trade.
5. To learn the Industrial Labour Organization and Industrial Policy.
6. To identify the Agricultural Productivity and Reforms.

COURSE OUTCOMES:**Learners should be able to**

1. It will result in comprehensive understanding of Indian Economy
2. Understood the efficiency and equity implications of market interference, including government policy.
3. Understood of the students related to different sectors of Indian Economy.
4. Insight into special fields of your choice, like energy economic, competition policy, industrial economics, financial markets, environmental and resource economics, development economics and international trade.
5. Understood the Foreign Trade and Balance of Payments. GATT and WTO.
6. Understood the Agricultural Productivity and Reforms.

UNIT I

Under Development – Meaning, Characteristics and Causes –Determinants of Economic Development – Economic and Non Economic Factors – Concepts of Growth and Development.

UNIT II

Human Resources – Population Growth as a Retarding Factor – Population Policy, National Income – Concept – Its Measurement – Limitations – Recent Trends in National Income.

UNIT III

Agriculture – Features – Role of Agriculture – Agricultural Productivity and Reforms – Food Problem– Green Revolution.

UNIT IV

Industrialisation – Role of Industries in Economic Development – Major Industries – Iron & Steel, Cotton, Textiles, Sugar – Cottage and Small Scale Industries – Industrial Sickness – Industrial Labour Organisation – Industrial Relation –Industrial Policy – 1948, 1956, 1977, 1980 and 1991.

UNIT V

Economic Planning – A Brief Resume of Five Years Plans – The Tenth Five Year Plan – 2002-2007. India's Foreign Trade and Balance of Payments – GATT – WTO and Indian Economy.

Reference Books:

1. Dutt and Sundaram , 2013, “Indian Economy”, 10th edition,Sulthan Chand & Sons.
2. Dhinagara,2013, “I.C Indian Economy”, I st edition,Sulthan Chand& Sons.
3. Jheingan M.L,2011, “Economic Development and Planning”, Vrinda Publication,PLT.
4. Five Year Plan Reports - Govt. of India
5. Jain P.C,1969, “Indian Economic Problem” ,Chitanya Publication house

COURSE OBJECTIVES:

To make the students

1. To know about the concepts of advertising and various types of advertising.
2. To provide students with detailed knowledge of some of the marketing mixes such as Sales and Promotion.
3. To identify the terms and concepts that are commonly used in promotion and advertising.
4. To demonstrate preparation of evaluation tools for promotion and advertising campaigns
5. To understand the motivational aspects of salesmen.
6. To demonstrate preparation to comprehend the basic advertising and promotion concepts and functions.

COURSE OUTCOMES:

Learners should be able to

1. Analyze the expanding environment of media and communication techniques.
2. Assess the strengths, weaknesses, opportunities and threats (SWOT) of different kinds of promotional campaigns.
3. understood the importance of market segmentation, position and action objectives to the development of an advertising and promotion program.
4. Develop creative strategies for advertising.
5. Plan media strategy, scheduling, and vehicle selection.
6. Assess strategic uses of sales promotions.

UNIT I

Advertising – Meaning - Importance – Objectives – Media - Forms of Media- Press - Newspaper, Trade Journal- Magazines- Outdoor Advertising – Posters - Banners- Neon Signs, Publicity, Literature Booklets, Folders - House Organizations - Direct Mail Advertising- Cinema and Theatre Programme – Radio And Television Advertising- Exhibition - Trade Fair – Transportation Advertising.

UNIT II

Advertising Agencies – Advertising Budgets - Advertising Appeals - Advertising Organisations – Social Effects of Advertising - Advertising Copy - Objectives – Essentials – Types - Elements of Copy Writing - Headlines, Body Copy- Illustration- Catchy Phrases and Slogans - Identification Marks.

UNIT III

Advertising Layout – Functions - Design of Layout- Typography Printing Process- Lithography – Printing Plates and Reproduction Paper, and Cloth - Size Of Advertising - Repeat Advertising - Advertising Campaign - Steps In Campaign Planning.

UNIT IV

Sales Force Management - Importance- Sales Force Decision- Sales Force Size – Recruitment and Selection - Training – Methods - Motivating Salesman Controlling - Compensation and Incentives - Fixing Sales Territories - Quota – Evaluation.

UNIT V

Sales Promotion - Meaning - Methods – Promotional Strategy – Marketing Communication and Persuasion – Promotional Instruments - Techniques of Sales Promotion – Consumer and Dealers Promotion - After Sales Service – Packing – guarantee – Personal Selling – Objectives – Salesmanship – Process of Personal Selling – Types of Salesman.

TEXT BOOK

1. Sontaki C.N. 2000. Advertising and Sales Management. Ludhiana: Kalyani Publishers.

REFERENCES

COURSE OBJECTIVES:

To make the students

1. To Understanding the basic concepts of ethics and its role in business, entrepreneurship and economy,
2. To Apply ethical principles in the process of leadership and decision-making,
3. To Become familiar with the benefits of corporate social responsibility in the context of globalized economic and social relations
4. To Identify consequences of unethical business activities on the development of Croatian / transition / global society
5. To be able to recognize the essential characteristics of "good society".
6. To make students aware of the social responsibilities of business.

COURSE OUTCOMES:

Learners should be able to

1. Augmenting the importance of ethics in business and business communication interpersonal relationships.
2. Ability to apply critical and argumentative thinking in the business judgment.
3. Understood the application of fundamental ethical principles in the business decision-making and action taking.
4. Analyze the relationship between macroeconomic policy and good economics, the importance of corporate social responsibility.
5. Understood the importance of the care for the environment and education.
6. Be able to prepare a code of ethics as a statement of norms and beliefs, and shape the company and strategy in business practice companies.

UNIT I

Introduction to Business Ethics – Definition – Meaning - Nature and Objectives of Ethics; Meaning and Nature of Business Ethics; Factors Affecting Business Ethics – Ethical Organization -Characteristics of an Ethical Organization; Corporate Moral Excellence – Corporate Citizenship, Theories of Ethics – Utilitarian, Separatist and Integrative View of Ethics; Stages of Ethical Consciousness in Business; Relationship between Law and Moral Standards.

UNIT II

Ethical Issues in Human Resource Management – The Principle of Ethical Hiring – Equality of Opportunity – Ethics and Remuneration – Ethics in Retirement; Ethical Issues in Operation and Purchase Management – Quality Control; Ethical Problems and Dilemmas in Operations Management; Role of Purchase Manager – Code of Ethics for Purchases; Ethical Issues in Global buyer – Supplier Relationships.

UNIT III

Ethical Issues in Marketing Strategy – Ethical Issues in Marketing Mix – Product – Price – Promotion – Place – Process – People – Physical Evidence; Ethical issues and Consumerism – Consumer Protection – Consumer Welfare – Consumer Delight – Consumer Rights.

UNIT IV

Ethical Issues in Finance – Ethical Issues in Mergers and Acquisitions – Hostile Takeovers – Insider Trading – Money Laundering; Ethical Issues in Accounting Professional Conduct of

Accountants; Ethics and Financial Statements – Fictitious Revenues – Fraudulent Timing Differences – Concealed Liabilities and Expenses – Fraudulent Disclosures and Omissions – Fraudulent Valuation of Assets – Ethical Auditing.

UNIT V

Corporate Social Responsibility (CSR) Meaning – Definition – Methods – Evaluation; Internal Stakeholders – Share holders – Employees – Management; External Stakeholders – Consumers – Suppliers – Creditors – Competitors – Community; Global and Local issues in Management – Black Money – Poverty – Child Labour – Gender equality and so on. Ethical issues in MNCs; Environmental Ethics – Environmental Issues in India – Greening and Green Initiatives – Sustainable Development – Waste Management.

2. John R Boatright (2009), Ethics and the conduct of Business, Pearson Education (Singapore) Pvt.Ltd, Indian Branch, Delhi.
3. Cyriac K, 2000, "*Managerial Ethics and Social Issues — Readings and Cases*", *Reading material for Business Ethics, XLRI Jamshedpur*.
4. Fr. McGrath, (2008), SJ Basic Managerial skills for all, Prentice Hall of India, New Delhi.
5. Davis Keith and Blomstorm, (1987), Business, Society and Environment, Tata McGraw – Hill Ltd., New Delhi.

COURSE OBJECTIVES:**To make the students**

1. To help students learn the basic concepts and importance of Management Accounting.
2. To help the students analyze and interpret financial statements.
3. To enlighten students on Financial Statement Analysis with the emphasis on the preparation of fund flow and cash flow statement.
4. To support management in planning, organizing, directing, controlling and decision-making in a variety of business.
5. To help the students estimate working capital with the help of data given
6. To develop skills for decision making.

COURSE OUTCOMES:**Learners should be able to**

1. Students understand the significance of basic concept, importance & Functions of Management Accounting.
2. Students learn Vertical format of Balance Sheet and Profit & Loss Account and also Trend Analysis, Comparative Analysis and also Common Size Statement.
3. Give proper idea on financial statement analysis in practical point of view.
4. Understood the concept of fund flow and cash flow statement.
5. Gain the knowledge about budget control keeping in mind the scope of the concept.
6. Students learn to concept of marginal costing with practical problems.

UNIT I

Introduction to Management Accounting: Meaning, Nature and Scope and Functions of Management Accounting – Relationship between Management Accounting, Cost Accounting and Financial Accounting – Role of Management Accounting in Decision Making – Installation of Management Accounting System.

UNIT II

Financial Statements and Accounting Ratios: Meaning, Nature and Limitations of Financial Statements – Analysis and Interpretations – Types – Common Size, Comparative and Trend Analysis – Meaning, Objectives, Significance and Limitations of Ratios – Classifications of Ratios – Profitability or Activity Ratios, Turnover Ratios, and Financial Ratio.

UNIT III

Fund flow and Cash flow Analysis: Fund Flow Analysis: Meaning – Definition- Uses and Limitation – Procedure for Preparing Fund Flow Statement. Cash Flow Analysis: Meaning – Objectives – Uses and Significance of CFS – Comparison between Funds Flow and Cash Flow Statements – Preparation of Cash Flow Statement as per Cost Accounting Standards.

UNIT IV

Marginal Costing: Meaning, Scope and Objectives of Marginal Costing – Cost Volume Profit Analysis – Contribution – Break Even Point – Margin of Safety – Break Even Chart – Problems Excluding Decision Making.

UNIT V

Budgetary Control: Definition, Objectives, Advantages and Limitations of Budgetary Control, Classification of Budgets, Purchase Budget, Production Budget, Sales Budget, Cash Budget, Flexible Budget, Master Budgets and Zero Based Budgets – Steps in Budgetary Control.

Note: Distribution of marks for theory and problems shall be 20 % and 80 %.

Text Book

1. Jain and Narang,. (2012) Cost and Management Accounting. Ludhiana Kalyani Publishers.

Reference Books:

1. Man Mohan & Goyal. Management Accounting. New Delhi. Sahitya bhavan..

4. Khan M.Y. and Jain. P.K. (2008). Management and Cost Accounting. New Delhi Tata McGraw-Hill Publishing Company Ltd.

COURSE OBJECTIVES:

To make the students

1. To provide working knowledge of framework of taxation system in India.
2. To provide thorough knowledge of various concepts and their application relating to direct tax laws with a view to integrating the relevance of these laws with financial planning and management decisions.
3. To provide thorough knowledge of laws and practices of income tax.
4. The course aims to help students to comprehend the basic principles of the laws governing Direct and Indirect taxes.
5. To provide students with a working knowledge of the fundamental tax principles and rules that apply to commonly encountered transactions undertaken by companies and individuals
6. To enable students to appreciate the wider economic, social, administrative-compliance and political contexts within which taxes are imposed.

COURSE OUTCOMES:

Learners should be able to

1. Utilize the definitions of the various components of income tax law.
2. Analyze simple fact situations and recognize income tax ramifications
3. Apply basic tax concepts to simple fact situations and communicate potential income tax ramifications in writing and orally.
4. Apply an understanding of the different ways a case can progress from audit to court.
5. Students with a working knowledge of the fundamental tax principles and rules that apply to commonly encountered transactions undertaken by companies and individuals.
6. Understood the students to appreciate the wider economic, social, administrative-compliance and political contexts within which taxes are imposed.

UNIT I

Income Tax Act 1961: Definition of Income – Agricultural Income – Person - Assessment Year – Previous Year – Assessee – Assessee in Default – Total Income - Scope of income – Charge of Tax – Residential Status – Exempted Income.

UNIT II

Salaries: Computation of Income from Salaries – Different Forms Salary – Allowances – Perquisites and Their Valuation – Deduction from Salary.

UNIT III

House Property and Business Income: Computation of Income from House Property - Profits and Gains of Business or Profession – I – Meaning of Business or Profession – Computation of Profits and Gains of Business or Profession of an Individual – Expenses Expressly Allowed – Expenses Expressly Disallowed.

UNIT IV

Capital Gain and Income from other Sources: Computation of Capital Gain – Computation of Income from other Sources

UNIT V

Computation of Total Income: Deductions to be made in Computing Total Income of Individual – Aggregation of Income - Set off and Carry Forward of Losses. Rates of Tax for Individuals – Computation of Tax Liability.

Note: Distribution of marks for theory and problems shall be 20 % and 80 % respectively.

15CCU503 CORE- SOFTWARE DEVELOPMENT WITH VISUAL BASIC

COURSE OBJECTIVES:

To make the students

1. To enable the students to know the concepts.
2. To introduces computer programming using the Visual BASIC programming language with object-oriented programming principles.
3. To Emphasis is on event-driven programming methods, including creating and manipulating objects, classes, and using object-oriented tools such as the class debugger.
4. To learn to students should be able to design, code, test and debug at a beginning level.
5. To understand about the tools and properties.
6. To understand about application and Window based features.

COURSE OUTCOMES:

Learners should be able to

1. Design, create, build, and debug Visual Basic applications.
2. Explore Visual Basic's Integrated Development Environment (IDE).
3. Implement syntax rules in Visual Basic programs.
4. Explain variables and data types used in program development.
5. Apply arithmetic operations for displaying numeric output and decision structures for determining different operations.
6. Apply loop structures to perform repetitive tasks and procedures, sub-procedures, and functions to create manageable code.

UNIT I

VB Fundamentals: Getting Started – The Visual Basic Environment – Customizing a Form - First Step in Programming: The Code Window, Variables, Datatypes, Constants, Strings, Numbers, Statements in Visual Basic: The Comment and the End Statement.

UNIT II

First Steps in Building the User Interface : The Tool Box – Creating Controls –Name Property – Properties of Command Button – Simple Event Procedures for Command Buttons – Image Controls – Text boxes – Labels – Navigating between Controls – Message Boxes – The Grid – Picture Box – Rich Text Box.

UNIT III

Organizing Information via Controls: Control Arrays – List and Combo Boxes – Flex Grid Controls. Controlling Program Flow: Determinant Loops – Indeterminant Loops – Making Decisions - Select Case - Nested - If - Then – The GOTO Statement.

UNIT IV

Built-in Functions. String Functions – Numeric Functions – Date and Time Functions – Financial Functions. Functions and Procedures: Function Procedures and Sub Procedures.

UNIT V

Tool Box Revisited : Frames – Option Buttons – Check Boxes - Scrollbars – Timers - Image List Control – List View Control – Progress Bar Control – Slider Control – Status Bar Control – Menus – MDI forms. Database Objects (DAO & ADO)

Text Book:

1. Gary Cornell. 2005. “Visual Basic 6 from the Ground up”. New Delhi: Tata McGraw Hill Publishing house.

Reference Books

1. Varalakshmi. 2003. “Visual Basic Programmes for Beginners”. New Delhi: Scitech Publication India Ltd.
2. Scoh Jarol. 1995. “Visual Basic Multimedia”. New Delhi: Galgotia Publishing House.

COURSE OBJECTIVES:**To make the students**

1. To enable the students to know the concepts.
2. To understand about the tools and properties.
3. To understand about application and Window based features
4. To E 102 is a technology applications course that is designed to introduce students to formulating and implementing.
5. To analysis and design problems in a digital environment.
6. To formulate one or more solution techniques or algorithms, and code

COURSE OUTCOMES:**Learners should be able to**

1. Demonstrate knowledge of programming terminology and how applied using Visual Basic (e.g., variables, selection statements, repetition statements, etc).
 2. Develop a Graphical User Interface (GUI) based on problem description
 3. Develop an Event Planning Chart based on problem description so as to define the processing that is to occur based on specific events
 4. Develop an Algorithm to verify processing is accurate
 5. Develop and debug applications using Visual Basic 2010 (or version required for the course) that runs under Windows operating system
 6. Develop programs that retrieve input from a file as opposed to input only provided by user
-
1. Write a Program to perform the text manipulation using alignment and format function.
 2. Write a VB program to find the given number is Prime or not.
 3. Write a VB program to calculate the simple interest and the compound interest.
 4. Write a VB program to compute the Total Marks and Display the Results of a Student in the Exams.
 5. Write a VB program to calculate the Quadratic Equation.
 6. Write a VB Program for performing String Operations.
 7. Write a VB program to implement the calculator.
 8. Write a VB program to perform Menu Operations.
 9. Write a VB program to implement flex grid.
 10. Write a VB program to present product details like purchase, sales, profit, etc., by declaring array functions and present details in a rich Text Book box (RTF).
 11. Write a VB program to implement Employee Details Using ADO.
 12. Write a VB program to implement pay slip for an organization and create a database using SQL and ADO control.
 13. Write a VB program to create a bank customer database by declaring simple array and multiple arrays using ADO control.
 14. Write to VB Program to display tree view and list view of folders and files from a directory of an organization.
 15. Write a VB program to implement the Animated Dice.

References Books

1. Gary Cornell. 2005. “Visual Basic 6 from the Ground up”. New Delhi: Tata McGraw Hill Publishing house.
2. Varalakshmi. 2003. “Visual Basic Programmes for Beginners”. New Delhi: Scitech Publication India Ltd.
3. Scoh Jarol. 1995. “Visual Basic Multimedia”. New Delhi: Galgotia Publishing House.

COURSE OBJECTIVES:

To make the students

1. To enhance the student's practical exposure in both Commerce and Computer oriented applications
2. To Knowledge the basic and broad knowledge in business laws in management.
3. To Ability to apply concepts, principles and theories to understand simple business laws.
4. To learn the global Perspective of Awareness of the different business law and its impacts on businesses.
5. To know for shares & allotment, letter of shares and transfer of shares.
6. To learn the students Tax liability, PAN, Filling form-16.

COURSE OUTCOMES:

Learners should be able to

On completion of this course, the students will be able to:

1. Understood the concepts in business laws with respect to foreign trade
2. Students will be able to global business laws to current business environment
3. Understood the principle of international business and strategies adopted by firms to expand globally
4. Integrate concept of business law with foreign trade.
5. Understood the Filling up application forms for admission to Co-operative Societies
6. Understood loan application forms and deposit Challan.

EXERCISES

1. Preparation of Purchase Book, Sales Book, Purchase Return Book, Sales Return Book, Bills Receivable Book and Bills Payable Book
2. Preparation of Entry Pass, Gate Pass
3. Preparation of Inward bill and Outward bill register
4. Preparation of Cost Sheet and Bin Card
5. Applications for shares & allotment, letter of shares and transfer of shares
6. Opening of Savings Account, Current Account and FDR's
7. Filling up application forms for admission to Co-operative Societies
8. Filling up loan application forms and deposit Challan
9. Filling Jewel application for, releasing of Jewellery in jewel loans and repayment
10. Preparation of Agenda and Meeting minutes
11. Computation of Tax liability, PAN, Filling form-16, Preparation of Saral form
12. Drawing, endorsing and Crossing of Cheques, Bills of Exchange and Promissory Note
13. Preparation of an Advertisement copy, collection of advertisement in dailies and journal, critically evaluating the advertisement copy

14. Life Insurance account opening form

15. Post Office- Money order form

Computer Applications Oriented

1. Online Purchase and settlement

2. online Electricity Bill payment

3. E-Ticket Reservation(Bus, Railways, Airways, etc.,)

4. Online Insurance Premium payment

5. Online Mobile recharge

6. Usage of resume wizard

7. Creation of Website

8. Online fund transfer, RTGS, NFT

NOTE:

Students may be asked to collect original or Xerox copies of the documents and affix them on the record note book after having filled up. Drawing of the documents should not be insisted. Distribution of Marks: Practical 75% and Record Note Book 25%

15CCU504A	CORE – ELECTIVE-I CORE- INVESTMENT MANAGEMENT	Semester V				
		L	T	P	C	
		5	-	-	5	

COURSE OBJECTIVES:

To make the students

1. To learn the knowledge and skills to select and employ base level tools for financial analysis.
2. To Understand different investment alternatives in the market
3. To Understand how securities are traded in the market
4. To able to analyze and price different securities
5. To able to Recent Trends Stock market operations
6. To learn the measurement of return

COURSE OUTCOMES:

Learners should be able to

1. Understood the students in understanding the scope of investment.
2. Understood with the stock markets operations in the economy.
3. Understood understanding the various prospects of investment and market operations.
4. Understood the students the company analysis and market structure and Efficient Frontier Portfolio Selection.
5. Familiarizes the students in understanding the scope of investment.
6. Acquaint them with the stock markets operations in the economy and various prospects of investment.

UNIT I

Investment: Nature, Meaning and Scope of Investment – Importance of Investment – Factors Influencing Investment – Investment Media- Features of Investment Programme – Investment Process – Alternative Forms of Investment – Mutual Funds.

UNIT II

Capital Market and Stock Exchange in India- Structure of Capital Market – New Issue Market – Stock Exchanges in India- Mechanics of Trading in Stock Exchange- Legal Control of Stock Exchanges – SEBI and its Role , Guidance- NSE - OTCEI- Recent Trends- Stock Market Operations- Security Market Indicators.

UNIT III

Risk- Causes of Risk- Types of Risk- Return- Measurement of Return.

UNIT IV

Fundamental and Technical and Security Evaluation: Economic Analysis- Industry Analysis- Company Analysis- Technical Analysis-Scope-Basic Theories.

UNIT V

Portfolio Analysis and Management: Portfolio Analysis, Scope-Elements of Portfolio- Markowitz Theory- Sharpe Ideal Model- Efficient Frontier Portfolio Selection - Types of Portfolio- Internal Diversification.

Note: the question paper shall be covered of 100% theory.

Text Book:

1. Avadani, 2009 Edition, Investment Management New Delhi Himalaya Publications.

Reference Books

1. Gopalakrishnan, 2005, Investment Management, Ludiana. Kalyani Publications.
2. Khan & Jain 2002. Investment Management New Delhi.Tata Mcgraw hill.

4. Avadani,2005 Investment Management and Portfolio analysis, New Delhi Himalaya Publications.
5. Rustagi, Investment Management and Portfolio analysis, edition 2009, Iain Book House., New Delhi

COURSE OBJECTIVES:

To make the students

1. To understand consumer behavior in an informed and systematic way.
2. To appreciate the personal and environmental factors that influence consumer decisions.
3. To understand the strategic implications of consumer influences, and marketing decisions.
4. To analyse personal, socio-cultural, and environmental dimensions that influence consumer decisions making
5. To knowledge about Consumer Decision Making Process
6. To know about leadership quality.

COURSE OUTCOMES:

Learners should be able to

1. Understood the personal and Environmental factors.
2. Students will be able to the personal, environmental factors that influence consumer decisions.
3. Understood the consumer groups.
4. Understood the consumer orientation progress.
5. Know about consumer behaviour process.
6. Students will be able to consumer perspectives.

UNIT I

Introduction: Definition, Scope, and Application of Consumer Behavior- Evolution of Consumer Behavior as a Field of Study and its Relationship with Marketing; Behavioral Dimension - Interdisciplinary Nature of Consumer Behavior Studies

UNIT II

The Consumer Decision Making Process: Buying Motives - Buying Roles, Consumer Decision Making Process, Levels of Consumer Decision Making, Perspectives - Models

UNIT III

Psychological Influences on Consumer Decision Making: Consumers Needs and Motivation, Emotions and Mood, Consumer Involvement; Consumer Learning, Personality, Self-concept and Self-image; Consumer Perception, Risk and Imagery; Consumer Attitude: Belief, Attitude and Intention, Formation - Change - Consumer Communication.

UNIT IV

Sociological Influences: Consumer Groups - Consumer Reference Groups, Family and Life Cycle, Social Class and Mobility, Lifestyle Analysis - Culture; Sub-Culture, Cross Culture - Interpersonal Communication and Influence, Opinion Leadership.

UNIT V

Diffusion of Innovation: Consumer Orientation - Diffusion Process, Adoption Process, Consumer Innovators, Multiplicative Innovation Adoption (MIA) Model.

Text Books:

1. Schiffman, Leon.G, Kanuk Leslie Lazar, and Kumar Ramesh. S., “Consumer Behavior”, Pearson Education, 10th Edition, 2012.

CORE – ELECTIVE – II
RETAIL MANAGEMENT

COURSE OBJECTIVES:

To make the students

1. To Retailing and its Evolution, in the Indian and Global Markets.
2. To Exposure to Customer Relationship Management and its Operations in Retailing.
3. To Provide exposure and skills to establish service operations and marketing channel systems.
4. To familiarize the students with organized retail and, the value it creates.
5. To strategic and operational decision-making processes in the organized retail.
6. To supply chain activities which create the value in the organized retail industry

COURSE OUTCOMES:

Learners should be able to

1. Understood the functions of retail business and various retail formats and retail channels.
2. Understood the difference between Retail and Manufacturing Supply Chain.
3. Understand, key drivers of retail supply chain and how to select a retail store location.
4. Analyze Retail Market and Financial Strategy including product pricing.
5. Integrate the various Supply Chain partners and how to collaborate with them?
6. Students will be able to Information Base, Process, Technology, People, Privacy Issues.

UNIT I

Introduction To Retailing: Retail Functions - Rise of Retailing - Consumerism - Challenges - Consumer Proximity - Technology - Rise of Retailing in India - Key Markets - FDI in Retail; Challenges in India - New Entrants - Emerging Sectors - Suppliers and Buyers – Rivalry.

UNIT II

Evolution of Retail: Theories - Retail Lifecycle - Business Models - Ownership, Merchandise Offered, Franchise, Non Store, Direct Marketing, Tele, Vending Machines, Kiosks, Cash and Carry Global Experience - Brand Management.

UNIT III

Customer Relationship Management: Definition - Goals - Concepts - Components - Customer Lifecycle - B2B, B2C, Innovations - Customer Touch Points - CRM leaders, Choice and Establishment, Training - CRM Functions - Support Channels – Strategy Development - Building Components, Analysis, Customer Segments, Common Barriers - Building Infrastructure, Information Base, Process, Technology, People, Ensuring Quality, Privacy Issues.

UNIT IV

Service Operations: Characteristics - Operations - Bench Marking - Strategy – Enterprise Design - Service Quality - Facility Location - Management of Operations -Supply Relationships - Vehicle Routing - Optimizing Techniques - Models – Training.

UNIT V

Marketing Channel Systems: Concepts - Participants - Environment - Behavioral Process - Developing a Marketing Channel - Strategy - Design - Platform - Product / Pricing Issues - Brand Management - Positioning - Repositioning – Franchising.

Text Books

1. Pradhan Swapna, “Retailing Management: Text and Case’s”, McGraw Hill Education. 4th Ed., New Delhi
2. J.N.Jain & P.P.Singh, “Modern Retail Management”, Deep & Deep Publications, New Delhi

15CCU521	INSTITUTIONAL TRAINING	Semester V			
		L	T	P	C
		-	-	-	3

COURSE OBJECTIVES:
To make the students

1. To know the working of Internet, uses of search engines and procedure to develop a web page.
2. To make the students expertise in creating Web Page.
3. To Make After the successful completion of the course the student must know the concepts of Internet and design a Web Page. understand the principles of creating an effective web page,
4. To become the familiar with graphic design principles the relate to web design and learn how to implement theories into practice.
5. To develop skills in analyzing the usability of a web site.
6. To understand how to plan and conduct user research related to web usability.

COURSE OUTCOMES:
Learners should be able to

1. Understood develop the resource of internet
2. Understood the formatting the table organizations
3. Know about the multimedia and control.
4. Understood the about layout positions
5. Students will be able to Evaluate the web technology.
6. Understood the familiar with graphic design principles the relate to web design and learn how to implement theories into practice

UNIT I

Introduction to Internet - Resources of Internet – Hardware and Software Requirements of Internet. Internet Service Providers – Internet Services – Protocols – Concepts – Internet Client and Internet servers.

UNIT II

Introduction to HTML – Functions of HTML in Web Publishing – Basic Structural Elements and their Usage – Traditional Text and Formatting – Using Tables for Organisation and Layout – Forms – Frames and Frame sets - Style Sheets of Formatting - Advanced Layouts and Positioning with Style Sheets.

UNIT III

Using images with HTML – Merging Multimedia, Controls, and Plug-ins with HTML – Using the HTML Object Model and Creating Dynamic HTML Pages – Manipulating Objects and Responding to User Interaction.

UNIT IV

Scripting Basics – Client Side Image Maps – Introducing Java Script – Creating Simple Java Scripts – Using Java Scripts for Forms – Using Java Scripts with Style Sheets.

UNIT V

Introduction to ASP – Active Server Objects – Active Server Components – Cookies - Database Management with ASP. Emerging and Alternate Web Technologies – Active X Controls for the WWW - XML

Text book:

1. Shelly Powers, 2008. “Dynamic Web publishing”, Techmedia.

Reference Books:

1. Harley Hann. 2009. “The Internet Complete Reference”. New Delhi: Tata McGraw Hill Publishing house.
2. Scot Johnson et al.2010. “Using Active Server Pages”. Que.
3. Merser Dave. 2010. “HTML”. New Delhi: Tata McGraw Hill Publishing House.
4. Wyke R Allen. 2012. “Java Scirpt” Unleashed 2000. NewDelhi: Tech media.

COURSE OBJECTIVES:

To make the students

1. To study about the Import and Export Duty in India
2. To gain knowledge of various provisions of Excise Duty
3. To know about Central Sales Tax
4. To know about general procedure of center duty
5. To understand Registration
6. To know Filing of Returns

COURSE OUTCOMES:

Learners should be able to

1. Describe the indirect taxes and criticisms of these taxes
2. Able to Compare and contrast direct tax and indirect tax
3. Understood the Generate examples of indirect tax
4. Understood the General Procedure of Central Excise
5. Students will be able to custom duty Excise.
6. Understood the Abatement of Duty in Damaged or Deteriorated Good

UNIT I

Indian Tax System : Direct and Indirect Taxes – Principles of Taxation – Taxable Capacity – Scope and Functioning - Shifting and Incidence of Indirect Taxes

UNIT II

Central Exercise: Nature and Scope of Central Excise – Important Terms and Definitions Under the Central Excise Act – General Procedure of Central Excise – Clearance and Excisable Goods – Concession to Small Scale Industry Under Central Excise Act, CENVAT.

UNIT-III

Customs Duty - Different Types of Customs Import Duties - Abatement of Duty in Damaged or Deteriorated Goods - Remission on Duty on Lost, Destroyed or Abandoned Goods - Customs Tariff Act 1985 - Customs Duty Drawback.

UNIT-IV

Central Sales Tax Act 1956 - Objectives of the CST – Levy and Collection of CST – Sales and Deemed Sales - Subsequent Sales - Registration - Compulsory Registration - Voluntary Registration - Security from Dealer-Registration Procedure.

UNIT-V

VAT: Introduction to VAT, Goods and Dealers – Categories of Sales – Assessment and Audit – Registration of Dealers – Input and Output Tax – Exempted Sales and Zero Rated Sales – Filing of Returns- Penalties.

REFERENCE:

1. V.S.Datey, “Indirect Taxes”, Taxmann Publications (P) Ltd., New Delhi 2002
2. Balachandran, “Indirect Taxation”, Sultan Chand &Co., New Delhi 2006.
3. R.L.Gupta V.K.Gupta, “Indirect Tax”

CORE – ELECTIVE-II

15CCU602B E-COMMERCE AND INFORMATION TECHNOLOGY

COURSE OBJECTIVES:

To make the students

1. To enable the students to be aware on the emerging changes in marketing and advertising.
2. To successful completion of the course the student must be well versed with the e-Commerce strategies in Practical application.
3. To ecommerce market has also evolved beyond the narrow buying and selling of goods
4. To entertainment and communications
5. To fundamental daily personal services
6. To ecommerce that have the opportunity to substantially enhance the daily lives of all individuals.

COURSE OUTCOMES:

Learners should be able to

1. Understood the Resource Discovery Paradigms
2. Provide Electronic Commerce
3. Understood the informal structure
4. students will be able to concept on video and electronic concepts
5. Understood the information consumer discovery.
6. Students will be able to the opportunity to substantially enhance the daily lives of all individuals.

UNIT I

Advertising and Marketing on the Internet: The New Age of Information-Based Marketing Advertising on the Internet – Charting the On-line Marketing Process-Market Research. Consumer Search and Resource Discovery: Search and Resource Discovery Paradigms – Information Search and Retrieval – Electronic Commerce Catalogs or Directories – Information Filtering –Consumer Data Interface.

UNIT II

Software Agents: Characteristics and Properties of Agents –Technology Behind software Agents – Telescript Agent Language- Safe-Tcl –Applets, Browsers and Software agents – Software Agents in Action. Internet Protocol Suite: Layers and Networking – Internet Protocol Suite – SLIP and PPP – Other Forms of IP-Based Networking-Mobile TCP/IP-Based Networking- Multicast IP- Next Generation IP.

UNIT III

Multimedia and Digital Video: Concepts-Digital Video and Electronic Commerce-Desktop Video Processing-Desktop Video Conferencing. Broadband Telecommunications: Concepts-Frame Relay-Cell Relay-Switched Multimegabit Data Service-ATM.

UNIT IV

Mobile and Wireless Computing Fundamentals Framework- Wireless delivery Technology and Switching Methods –Mobile Information Access Devices-Mobile Data Internetworking Standards- Cellular Data Communication Protocols-Mobile Computing Applications-Personal Communication Service.

UNIT V

Structure Documents: Fundamentals-SGML. CORBA: Distributed Objects. Transaction Processing- Online Purchases-Online Share Trading –Railway/Air Ticket Reservation.

Text Books:

1. Ravi Kalakota & Andrew b. Whinston , “Frontiers of Electronic Commerce”, Dorling Kindersley (India) Pvt.Ltd-2006

Reference Books:

1. Bharat Bhasker , “Electronic Commerce”, Tata Mc Graw Hill Publishing Co Ltd, New Delhi-2006.
2. Daniel Minoli, Emma Minoli “Web Commerce Technology Handbook”, Tata McGraw Hill Publishing, New Delhi.
3. .Dr.C.S.Rayudu,”E-Commerce &E-Business”, Himalaya Publishing House, New Delhi, 2004.

COURSE OBJECTIVES:

To make the students

1. To expose the students to the basics of cyber laws.
2. To enable students to learn laws and rules governing electronic commerce, contracts, IPRs etc.
3. To know rapid growth of the information technology
4. To understand Cyber Law prevents or reduces the damage from cybercriminal activities
5. To understanding the protecting information access, privacy, communications, intellectual property
6. To about the Internet, World Wide Web (WWW), email, computers

COURSE OUTCOMES:

Learners should be able to

1. Understood the Regulation and Cyber law
2. Understood copyright in digital media
3. Know the about Regulators under IT
4. Understand Software Development & Licensing Agreements
5. Understood Legal, Security & Technical Issues in Cyber Contracts
6. Understood Indian Penal Codes and Cyber Crimes.

UNIT I

Cyber Space - Meaning - Interface of Technology - Scope - Regulation. Cyber law: Meaning, Scope of Cyber Laws – UNICTRAL Model Law.

UNIT II

Intellectual Property Issues in Cyber Space - Domain Names and Related Issues- Copyright in the Digital Media - Patents in the Cyber World.

UNIT III

Digital Signature and Information Technology Act 2000 - Reasons - Aims - Objectives and Applications. Regulators under IT Act - Role of Certifying Authority- Digital Signature Certificates - Duties of the Subscribers.

UNIT IV

Electronic Contracts – Meaning – Essential Features – Legal, Security & Technical Issues in Cyber Contracts - Types of Contracts - Employment Contracts - Consultant Agreements – Agreement Related to Sales - Non-Disclosure Agreements – Software Development & Licensing Agreements –Shrink Wrap Contract – Browse Wrap Contract – Escrow Agreements- Provisions Under Information Technology Act 2000.

UNIT V

Cyber Crimes – Types – Indian Penal Codes and Cyber Crimes - Offences and Contraventions.

Text Book

1. Vakul.Sharma, 2011 'Information Technology Law & Practice', Universal law publishing company, New Delhi.

Reference Books

1. Yatindra Singh, 2010, 'Cyber Laws', Universal law publishing company, New Delhi.
2. Sood Vivek, 2001, 'Cyber Law Simplified', Tata McGraw-Hill Education, New Delhi.

COURSE OBJECTIVES:**To make the students**

1. To familiar with graphic design principles that relate to web design and learn how to implement theories into practice.
2. To Develop skills in analyzing the usability of a web site.
3. To Understand how to plan and conduct user research related to web usability.
4. To Learn the language of the web: HTML and CSS grid layout and flexbox.
5. To Learn techniques of responsive web design, including media queries and digital imaging (Adobe Photoshop.)
6. To Develop basic programming skills using Javascript and jQuery and embed social media content into web pages

COURSE OUTCOMES:**Learners should be able to**

1. Students will develop an understanding of the formalistic (aesthetic) aspects of design and visual communication. [MM/MAC]
 2. Students will demonstrate cross-platform (web, mobile, broadcast, print) storytelling skills. [MM/MAC: 4.2]
 3. Students will become familiar with graphic design and/or game theory and be able to apply this theory to real world projects. [IM]
 4. Analyze a web page and identify its elements and attributes.
 5. Students will be able to create web pages using XHTML
 6. Enables students to create Cascading Style Sheets using JavaScript (Client side programming).
-
1. Students will be able to develop basic programming skills using Javascript and jQuery and embed social media content into web pages. Create web pages for a business organization using HTML frames.
 2. Write a program using HTML to display the ordered list and unordered list of a departmental store.
 3. Program to display image and text using HTML tag for an advertisement of a Company product.
 4. Create a table to list out products using HTML tag.
 5. Create a document using formatting and alignment using Java script to display sales letter.
 6. Prepare a resume using Java script.
 7. Create a web site of your department with minimum 5 links using HTML.
 8. Create a document using form to support local process of order form using Java script.
 9. Create a form of the customer survey of the user to enter general name and address Information using Java Script.
 10. Create a frame to display a multiform document using Java script.

Reference Books

2. Mr Mark Lassoff , 1 edition (April 9, 2013), Javascript for beginners, LearnToProgram Incorporated.

15CCU691	PROJECT	Semester VI			
		L	T	P	C
		-	-	15	5

COURSE OBJECTIVES:**To make the students**

1. To create interest in the minds of students towards Auditing Profession.
2. To familiarize the students with the Principles of Auditing.
3. On successful completion of this course, the student should be well versed in the fundamental concepts of Auditing.
4. To apply the rules and procedures when there is a change in professional.
5. To apply the procedures surrounding conflicts of interest when giving corporate and financial advice.
6. To learn the appointment and Discuss the principles and legal rules applying to books and papers.

COURSE OUTCOMES:**Learners should be able to**

1. Demonstrate an understanding of the nature and scope of auditing and related services.
2. Describe and discuss the regulatory framework of auditing and related services.
3. Understood the ethical standards of an auditor.
4. Understood the stages of an audit and methods of gathering audit evidence.
5. Show understanding and be able to interpret different types of audit reports
6. Be able to the need for the auditor to display integrity, independence and objectivity and importance of ethical conduct for the accounting profession.

UNIT I

Auditing– Origin – Definition – Objectives – Types – Advantages and Limitations – Qualities of an Auditor – Audit Programmes.

UNIT II

Internal Control – Internal Check and Internal Audit –Audit Note Book – Working Papers. Vouching – Voucher – Vouching of Cash Book – Vouching of Trading Transactions – Vouching of Impersonal Ledger.

UNIT III

Verification and Valuation of Assets and Liabilities – Auditor's position regarding the valuation and verifications of Assets and Liabilities – Depreciation – Reserves and Provisions – Secret Reserves.

UNIT IV

Audit of Joint Stock Companies – Qualification – Dis-qualifications – Various modes of Appointment of Company Auditor – Rights and Duties – Liabilities of a Company Auditor – Share Capital and Share Transfer Audit – Audit Report – Contents and Types.

UNIT V

Investigation – Objectives of Investigation – Audit of Computerized Accounts – Electronic Auditing – Investigation under the Provisions of Companies Act.

Reference Books:

1. B.N. Tandon, "Practical Auditing", S Chand Company Ltd.

2. F.R.M De Paula, “Auditing-the English language Society and Sir Isaac Pitman and Sons Ltd,London.
3. Spicer and Pegler, “Auditing: Khatalia’s Auditing” .
4. Kamal Gupta, “Auditing “ , Tata Mcgriall Publications.

COURSE OBJECTIVES:**To make the students**

1. To enlighten the students' knowledge on Banking and Insurance regulation acts.
2. To gain an appreciation of the principles of insurance law and the particular operation of contract law in the insurance context.
3. To develop ability to analyze insurance problems and apply legal doctrine and policy considerations to them.
4. To acquire insight into the structure and substance of insurance policies;
5. To evaluate the effectiveness of legislation in controlling the insurance industry
6. To learn the protecting the interests of consumers of insurance products and insurers.

COURSE OUTCOMES:**Learners should be able to**

1. Understand basic legal concepts and general principles of law;
2. Gain knowledge and understanding of the laws relevant to insurance;
3. Gain knowledge and understanding of the system which applies these laws; and
4. Develop an analytical approach to the application of knowledge and skills to simple problems.
5. Students will be able to insight into the structure and substance of insurance policies.
6. Understood the effectiveness of legislation in controlling the insurance industry.

Unit – I

Banker and Customer – Definition – Relationship - Functions of Commercial Banks – Recent Developments in Banking,

Unit – II

Negotiable Instrument Act - Crossing - Endorsement - Material Alteration – Payment of cheques : Circumstances for dishonour - Precautions and Statutory Protection of Paying and Collecting Banker.

Unit – III

Insurance : Meaning - Functions - Principles : General, Specific and Miscellaneous. Classification of Insurance: Based on Nature, Business and Risk – Impact of LPG on Indian Insurance Industry.

Unit – IV

Legal dimension of Insurance : Insurance Act, 1938 – Life Insurance Act , 1956 – General Insurance Business Act, 1932 – Consumer Protection Act,1986.

Unit - V

IRDA - Mission - Composition of Authority - Duties, Powers and Functions - Powers of Authority - Duties, Powers and Functions- Powers of Central Government in IRDA Functioning

Reference Books:

KARPAGAM UNIVERSITY
COIMBATORE-641021
Department of Commerce with Computer Application
B.COM CA (Hons)

For the Student admitted during the year 2015 Batch
Scheme of Examination

Code	Subjects	Ins*	Marks			Exams/hrs	Credit
			CIA	ESE	TOT		
SEMESTER-V							
15CCU505	Company Law	-	40	60	100	3	5
SEMESTER-V1							
15CCU604	Banking And Insurance Law	-	40	60	100	3	5
	TOTAL	-	80	120	200	-	10

Note: The candidate who have secured 75% aggregate marks in each I, II, III and IV semester in Part III papers (Inclusive NME but Excluding Languages) and have passed in single attempt are eligible to register for Honours Degree.

The Student who have registered for Honours Degree shall have to write two theory papers (self study) of credits each one with 5th semester regular papers and another one with 6th semester regular papers(the two papers are considered as Part II papers)

SEMESTER –V

15CCU505

COMPANY LAW

5C

Objectives: To enlighten the students' knowledge on Companies Act. After the successful completion of the course the student should have a through knowledge on Formation of Company, Documents required and Acts pertaining to it.

Unit - I

Company – Definition – Characteristics – Kinds – Privileges of Private Company – Formation of a Company.

Unit - II

Memorandum of Association – Meaning – Purpose – Alteration of Memorandum – Doctrine of Ultravires – Articles of Association – Meaning – Forms – Contents – Alteration of Articles – Doctrine of Indoor management

Unit - III

Prospectus – Definition – Contents – Deemed Prospectus – Misstatement in Prospectus – Kinds of Shares and Debentures.

Unit - IV

Director and Secretary – Qualification and Disqualification – Appointment – Removal – Remuneration – Powers, Duties and Liabilities.

Unit - V

Meetings – Requisites of Valid Meeting – Types of Meeting – Winding up – Meaning - Modes of Winding Up.

Reference Books:

1. **N. D. Kapoor**, “Company Law” Sultan Chand & Sons, New Delhi 2005
2. **Bagriyal A.K**, “Company Law”, Vikas Publishing House, New Delhi
3. **Gower L.C.B**, “Principles of Modern Company Law”, Steven & Sons, London.
4. **Ramaiya A**, “Guide to the Companies Act”, Wadhwa & Co., Nagpur
5. **Singh Avtar**, “Company Law”, Eastern Book Co., Lucknow

SEMESTER – VI

15CCU604

BANKING AND INSURANCE LAW

5C

Objectives: To enlighten the students' knowledge on Banking and Insurance regulation acts. After the successful completion of the course the student should have a through knowledge on Indian Banking and Insurance system and acts pertaining to it.

Unit – I

Banker and Customer – Definition – Relationship - Functions of Commercial Banks – Recent Developments in Banking,

Unit – II

Negotiable Instrument Act - Crossing - Endorsement - Material Alteration – Payment of cheques : Circumstances for dishonour - Precautions and Statutory Protection of Paying and Collecting Banker.

Unit – III

Insurance : Meaning - Functions - Principles : General, Specific and Miscellaneous. Classification of Insurance: Based on Nature, Business and Risk – Impact of LPG on Indian Insurance Industry.

Unit – IV

Legal dimension of Insurance : Insurance Act, 1938 – Life Insurance Act , 1956 – General Insurance Business Act, 1932 – Consumer Protection Act,1986.

Unit - V

IRDA - Mission - Composition of Authority - Duties, Powers and Functions - Powers of Authority - Duties, Powers and Functions- Powers of Central Government in IRDA Functioning

Reference Books:

1. **Varshney**, “ Banking Theory, Law and Practice”, Sultan & Chand Ltd.
2. **Gordon and Nataraj**, “Banking Theory, Law and Practice”, Himalaya Publishing House..

				22	0	8	22	240	360	600
Semester IV										
15CCP401	Core: Financial Services	I, II, III	a,e c,d,f,i,j	6	-	-	5	40	60	100
15CCP402	Core: Corporate Administration and Secretarial Practices	I, II, III	a,e c,d,f,i,j	6	-	-	5	40	60	100
15CCP403	Core: Entrepreneurship and Small Business Management	IV	b,g,h	6	-	-	5	40	60	100
15CCP491	Project and Viva – Voce	III	c,d,f,i,j	-	-	12	5	80	120	200
				18	-	12	20	200	300	500
							90	920	1380	2400

PROGRAMME OUTCOMES (PO)

- a) Postgraduates will develop an understanding of various commerce functions such as finance, accounting, financial analysis, project evaluation, cost accounting and gain expertise in computer application.
- b) Postgraduates will have exposure to solve complex commerce problems and analyze problems critically through research based or project based approach of learning with the support of computer applications.
- c) Postgraduates will excerpt information from various sources and apply mathematical, analytical, statistical and IT tools for financial and accounting analysis.
- d) Postgraduates will develop an ability to effectively communicate both orally and in written forms.
- e) Postgraduates will appreciate the importance of working independently and in a team in order to achieve common goals.
- f) Postgraduates will acquire critical and analytical thinking and will be able to apply the same in effective decision making.
- g) Postgraduates will evaluate the implications of uncertainty in global perspective and cross cultural issues that affect the functioning of the system or business.
- h) Postgraduates will acquire professional and intellectual integrity, professional code of conduct, ethics and values to contribute for sustainable development of society by becoming socially responsible citizen.

PROGRAMME SPECIFIC OUTCOMES (PSO)

- i) Postgraduates will acquire ability to employ management knowledge and skills in their career advancement and personal enrichment
- j) Postgraduates will acquire ability to utilize the programming skills or the latest computer application for developing a new software or usage of the existing tool in the decision-making process.

PROGRAM EDUCATIONAL OBJECTIVES (PEO)

- I. Postgraduates will gain advanced knowledge in the domain of commerce, management and finance
- II. Postgraduates will understand the system functioning and develop the capability of modeling, designing, implementing and verifying a computing system to meet specified requirements while considering real-world constraints.

- III. Postgraduates will attain research insights, professional skills and competencies to enhance lifelong learning and excel in diverse career path
- IV. Postgraduates will adapt to a rapidly changing global environment and become socially responsible and value driven citizens committed to sustainable growth.

Program Educational Objectives	Program Outcomes

Postgraduates will gain advanced knowledge in the domain of commerce, management and finance	✓				✓					
Postgraduates will understand the system functioning and develop the capability of modeling, designing, implementing and verifying a computing system to meet specified requirements while considering real-world constraints.	✓				✓					
Postgraduates will attain research insights, professional skills and competencies to enhance lifelong learning and excel in diverse career path			✓	✓		✓			✓	✓
Postgraduates will adapt to a rapidly changing global environment and become socially responsible and value driven citizens committed to sustainable growth.		✓					✓	✓		

COURSE OBJECTIVES:**To make the students**

1. To Explain the core concepts of corporate finance and its importance in managing a business
2. To understand the nature, importance, structure of corporate finance related areas.
3. To impart knowledge regarding source of finance for a business.
4. To develop a conceptual framework of finance function
5. To acquaint the participants with the tools, techniques
6. To know the process of financial management in the realm of financial decision making.

COURSE OUTCOMES:**Learners should be able to**

1. Understand the role of a financial manager and their role in taking decisions professionally.
2. Demonstrate knowledge and compute value of money over time
3. Apply the concept to Evaluate the business proposal applying capital budgeting techniques
4. Compute the cost of capital and financial leverage to estimate the optimal capital structure
5. Comprehend the knowledge of assessing the working of organization to assess the liquidity position of the firm.
6. Demonstrate capabilities of teamwork, problem-solving, critical thinking, and communication skills related to finance decisions.

Unit – I

Scope and Functions of Finance – Role of Financial Manager – Goals of Financial Management – Functions of Controller and Treasurers in India

Unit – II

Cost of Capital – Significance – Concepts of Cost of Capital – Cost of Debt Capital, Preference Capital, Equity Capital and Retained Earnings – Weighted Average Cost of Capital

Unit – III

Capital Structure – Concept – Capital Structure Theories – Net Income Theory, Net Operating Income Theory – MM's Proportion on Capital Structure – Determinants of Optimal Capital Structure – Financial and Operating Leverage

Unit – IV

Capital Budgeting Decisions – Investment Evaluation Criteria – Payback Method – ARR – NPV Method – IRR – Profitability Index – Risk Analysis in Capital Budgeting – Nature of Risk – Conventional and Statistical Technique to handle risk

Unit –V

Management of Working Capital – Determinants of Working Capital – Management of Accounts Receivable, Inventory and Cash – Financing of Working Capital – Dividend Theories – Walter’s Model – Gordon’s Model – MM’s Hypothesis – Dividend Policy – Determinants of Dividend Policy.

Note: Theory 60 Marks Problems : 40 Marks

TEXT BOOK

1. **I.M. Pandey** (2014) Financial Management, Vikas Publishing House Pvt. Ltd., New Delhi

REFERENCES

1. **Prasana Chandra** (2012) Financial Management – Theory and Practice, Tata Mc Graw Hill Publishing Company Ltd., New Delhi
2. **Khan M.Y and P.K. Jain** (2014) Financial Management, Tata Mc Graw Hill Publishing Company Ltd., New Delhi

15CCP102	MANAGERIAL ECONOMICS	Semester – I			
		L	T	P	C
		4	-	-	3

COURSE OBJECTIVES:

To make the students

1. To obtain fundamental knowledge on economic concepts and tools that have direct managerial applications.
2. To illustrate the application of economic theory and methodology as an alternative in managerial decisions.
3. To gain a rigorous understanding of competitive markets as well as alternative market structures.
4. To obtain familiarity on the macro level business components like money, banking, monetary policy, fiscal policy, trade, business cycles and balance of payment and understand the forces determining macroeconomic variables such as inflation, unemployment, interest rates, and the exchange rate.
5. Demonstrate capabilities of teamwork, problem-solving, critical thinking, and communication skills
6. To enable students to obtain managerial problem solving skills.

COURSE OUTCOMES:

Learners should be able to

1. Apply the economic way of thinking to individual decisions and business decisions
2. Measure the responsiveness of consumers' demand to changes in the price of a goods or service, and understand how prices get determined in markets,
3. Understand the different costs of production and how they affect short and long run decisions and derive the equilibrium conditions for cost minimization and profit maximization
4. Demonstrate an understanding of monetary and fiscal policy options as they relate to economic stabilization in the short run and in the long run
5. Critically evaluate the consequences of basic macroeconomic policy options under differing economic conditions within a business cycle.
6. Understand and exhibit the communication skills to convey the thoughts and ideas to the individuals and group.

Unit - I

Nature, Objectives and Scope of Managerial Economics – Role and Responsibilities of Managerial Economist – Circular Flow of Economic Activity – Nature of the Firm – Economic Profit – Profits in the Market System

Unit – II

Demand Theory and Analysis – Supply Theory and Analysis

Unit – III

Production Theory – Cost Theory – Cost Concept – Cost Output Relationship – Break Even Analysis

Unit – IV

Perfect Competition, Monopoly, Monopolistic Competition, Oligopoly, Duopoly, Bilateral Monopoly – Monopsony

Unit – V

Pricing Decision – Pricing of Goods and Services – Pricing and Employment of Inputs – Pricing in Public Sector – Risk and Decision Making – Input – Output Analysis

TEXT BOOK

1. **Varshney and Maheswari** (2014) Managerial Economics, Sultan Chand and Sons, New Delhi

REFERENCES

1. **Heynes, Mole and Paul** (2007) Managerial Economics, Tata Mc Graw Hill Publications, New Delhi
2. **Joel Dean (2011)** – Managerial Economics, Mangal Deep Publications, Jaipur
3. **Sumitra Pal (2011)** Managerial Economics, Mac Millan

COURSE OBJECTIVES:

Course Objectives

This course enables the students

1. To provide essential knowledge on Linear programming
2. To offer practical exposure to transportation and assignment problems
3. To gain the knowledge on Assignment and Queuing Theory Problems
4. To train students on Inventory Control
5. To helps to facilitates the learning of network analysis
6. To enhance learner knowledge in optimal use of performance measures of queues, optimal use of Inventory and Network scheduling with various applications in mathematics

Course Outcomes

On successful completion of this course, the students will be able to

1. Students may gather relevant knowledge for minimizing Operation Cost
2. Students are equipped to cut total cost and able to minimize time required for completing assigned task
3. Students could learn to maintain optimal level of inventory
4. Understand various mathematical applications in industries.
5. Decision making for real time environment.
6. course concentrates on Linear programming, transportation model, Queuing theory and Inventory

Unit – I

Introduction to Operations Research – Application in Management Decision Making – Linear Programming: Formulation of LPP – Graphical Solution to LPP – Simplex Method (using slack variables only)

Unit - II

Transportation Model: Introduction – Mathematical Formulation –Finding Initial Basic Feasible Solutions – Optimum Solution for Nondegeneracy and Degeneracy Model - Unbalanced Transportation Problems and Maximization case in Transportation Problem- Traveling Sales Man Problem.

Unit- III

The Assignment problem - Mathematical Formulation of the Problem – Hungarian Method –Unbalanced Assignment Problem- Maximization Case in Assignment Problem - Travelling Salesman Problem. Queuing Theory : Introduction – Characteristics of Queuing System. Problems in $(M/M/1):(\infty/FIFO)$ and $(M/M/1):(N/FIFO)$ models

Unit - IV

Inventory Control: Introduction – Costs involved in Inventory – Deterministic EOQ Models – Purchasing Model without and with Shortage, Manufacturing Model without and with Shortage -Price Break

Unit - V

PERT and CPM: Network Representation – Calculation of Earliest expected time, latest allowable occurrence time. CPM - Various Floats for Activities – Critical Path- PERT –Time Estimates in PERT- Probability of Meeting scheduled date of Completion of Projects

15CCP104	Semester – I			
	L	T	P	C
	4	-	-	4

MARKETING MANAGEMENT

COURSE OBJECTIVES:

To make the students

1. To Understand the Concept of marketing, and 4Ps of Marketing
2. To communicate orally and in written form the concepts of marketing and 4 Ps of marketing
3. To apply the marketing concepts and skills lifelong.
4. To understand the recent trends in marketing strategies of a companies.
5. To understand the consumer behavior and to adopt the decision according to the consumer.
6. To know the promotion strategies followed by a company.

COURSE OUTCOMES:

Learners should be able to

1. Understand the Concept of marketing, and 4Ps of Marketing
2. Communicate orally and in written form the concepts of marketing and 4 Ps of marketing
3. Apply the marketing concepts and skills lifelong.
4. Apply the marketing strategies of a company's effectively.
5. To be familiar in behavior of consumer in related to market and to take decision effectively.
6. To implement the correct promotion strategies.

Unit-I

Definition of Marketing and Marketing Management – Object and Importance of Marketing – Evolution of Concept of Marketing – Recent Development in Marketing Concept – Marketing Functions – Approaches to the Study of Marketing – Market Segmentation – Basis – Criteria – Benefits.

Unit-II

Product Policy: Product Planning and Development – Product Life Cycle – Product Line and Product Mix Strategies. Branding: Features – Types – Functions. Packaging: Features – Types – Advantages – Brand Name and Trademark.

Unit-III

Pricing: Definition - Objectives of Pricing Decisions - Factors influencing Pricing Decisions – Methods of Setting Prices – Cost – Demand and Competition – Pricing Policies and Strategies.

Unit-IV

Sales Promotion: Meaning and Definition – Objectives and Importance of Sales Promotion – Personal Selling – Steps in Personal Selling - Advertising – Meaning – Objectives – Functions and Importance – Kinds of Media – Direct Marketing – Multi-level Marketing. Distribution Channels: Types of Channels – Factors affecting Choice of Distribution.

Unit-V

Marketing of Services – E-Marketing – Marketing Ethics – Consumerism – Meaning – Evolution – Types of Exploitation – Consumer Rights – Laws Protecting the Consumer Interest – Consumer Protection Acts – Consumer Courts - Retail Marketing – Methods – Problems – Retail Marketing in India – Customer Relationship Management

15CCP105	OBJECTED ORIENTED PROGRAMMING WITH C ++	Semester – I			
		L	T	P	C
		6	-	-	5

COURSE OBJECTIVES:

To make the students

1. To understand the concept of OOPS with C++
2. To familiarize on the classes, objects, pointers.
3. To comprehend on the working with the files.
4. To critically analyse and write appropriate programme with use of classes, objects and pointers.
5. To develop programming based on the need.
6. To develop programming based on the need.

COURSE OUTCOMES:

Learners should be able to

1. Understand the concept of OOPS with C++ and apply the learning for lifelong.
2. Familiarize on the classes, objects, pointers
3. Critically analyse the need and develop the program in OOPS with C++ required for the situation.
4. Write the program and present orally and in written form.
5. Develop programming based on the need. T
6. Develop practical skills by using C++ Program

Unit - I

Oriented programming- Principles of Object Oriented Programming – a Look at Procedure and Object Oriented Paradigm – Basic Concepts of Object Oriented Programming- Basic Concepts of Object Oriented Programming- Benefits of OOP – Object Oriented Languages – Application of OOP, Beginning with C++ - What is C++? – Applications of C++ - C++ Statements – Structure of C++ Program.

Unit - II

Tokens and Control Structures- Tokens , Expressions and Control Structures – Token – Keywords – Identifiers – Basic and User – Defined Data Types – Operators in C++ - Operator Overloading- Operator Precedence – Control Structure Functions in C++ - the Main Function – Call By Reference – Return by Reference – In line Function – Function Overloading.

Unit -III

Classes and objects – Introduction- Specifying a Class – Defining Member Function – Nesting of Member Functions - Private Member Functions- Arrays within a Class – Static Data Members- Static Member Functions- Array of Objects – Objects as Function Arguments- Friendly Functions- Pointers to Members. Constructors and Destructors

Unit - IV

Operator Overloading – Type Conversions – Introduction – Defining Operator Overloading– Manipulation of String using Operators – Rules for Overloading Operators- Types Conversions. Inheritance – Abstract Classes.

Unit - V

Pointers, Virtual functions and Polymorphism – Pointers to Objects – This Pointer – Pointer to Derived Classes – Virtual Functions. Working with Files – Classes for File Stream Operations Opening and Closing a File

TEXT BOOK

1. **E.Balagurusamy** (2013) Object Oriented Programming with C++, Tata McGraw Hill Publishing company limited

REFERENCES

1. **K.R.Venugopal, Rajkumar. T.Ravishankar** (2013) - Mastering C+, Tata McGraw-hill publishing company limited
2. **D.Ravichandran** (2011) Programming with C++”, Tata McGraw-Hill Publishing Company Limited

COURSE OBJECTIVES:**To make the students**

1. To understand the concept of OOPS with C++
2. To familiarize on the classes, objects, pointers.
3. To comprehend on the working with the files.
4. To critically analyse and write appropriate programme with use of classes, objects and pointers.
5. To develop programming based on the need.
6. To develop practical skills by using C++ Program

COURSE OUTCOMES:**Learners should be able to**

1. Understand the concept of OOPS with C++, classes, objects, pointers, working with file and apply the learning for lifelong.
 2. Develop Program using the Classes, objects and printers.
 3. Critically analyse the need and develop the program in OOPS with C++ required for the situation.
 4. Write the program and present orally and in written form.
 5. Develop programming based on the need.
 6. Develop practical skills by using C++ Program
1. Pay Roll calculation (Using simple program)
 2. Find out EOQ, Minimum Level, Maximum Level, Re-order level (Using simple program)
 3. Write a c++ program to calculate the working capital using class and objects (member Function should be write inside and outside the class)
 4. Calculate Simple Interest and compound interest using inline functions.
 5. Calculate Depreciation – by using constructors and Destructors
 6. Write a C++ program to calculate the sum and product numbers using operator overloading.
 7. Write a c++ program to prepare the cost sheet using inheritance
 8. Calculation of BEP and MOS (give your own data).
 9. Perform bank transactions like deposit, withdrawal, interest's calculation – by using classes and objects.
 10. Program to create the student files and prepare the marks slips by accessing the File.
 11. Write a perform to calculate over all cost of capital

12. Write a program to calculate funds from operation using (member function outside the class)

COURSE OBJECTIVES:**To make the students**

1. To Explain the core concepts of costing, costing types and its importance in managing a business
2. To develop a conceptual framework of costing and to acquaint the participants with the tools, techniques
3. To know the process of cost reduction and control in the realm of decision making.
4. To familiarizes students with the various concepts and elements of cost
5. To Create cost consciousness among the students
6. To provide the students knowledge about use of costing data for Planning, Control and decision making

COURSEOUTCOMES:**Learners should be able to**

1. Explain the core concepts of costing, costing types and its importance in managing a business
2. Develop a conceptual framework of costing and to acquaint the participants with the tools, techniques and process cost reduction and control in the realm of decision making
3. Compute using different costing methods.
4. Demonstrate capabilities of teamwork, problem-solving and critical thinking
5. Communication skills related to finance decisions.
6. course include Material Cost, Labour Cost, Overheads, Process Costing, Activity Based Costing and Target Costing

Unit – I

Cost Accounting – Meaning and Objectives – Importance – Limitations – Limitations of Financial Accounting – Differences between Cost Accounting and Financial Accounting, Cost Accounting and Management Accounting – Methods of Costing – Elements of Cost – Preparation of Cost Sheet – Tender – Quotations – Reconciliation of Cost and Financial Accounting

Unit – II

Material Control – Objectives – Levels of Inventory – EOQ – Methods of Inventory Control – Methods of Valuing Material Issues – Control over Wages – Scrap and Spoilage - Labour - Labour Cost Control – Importance – Systems of Wage Payment – Incentives – Idle Time – Control Over Idle Time – Labour Turnover

Unit – III

Overheads – Classification of Overheads – Allocation, Apportionment and Absorption of Overheads – Methods of Absorption of Overheads

Unit – IV

Process Costing – Features – General Principles – Comparison between Job Costing and Process Costing – Process Losses – Normal Loss – Abnormal Loss – Abnormal Gains – Inter Process Profit – Equivalent Production – Procedure for Evaluation – Joint Product and by Product

Unit-V

Activity Based Costing: Meaning and Methodology of Activity Based Costing (ABC Analysis) -Merits, Demerits and Suitability of Activity Based Costing- Implementation of Activity Based Costing- Draw Back of Conventional Costing - Target costing: Meaning-Characteristics-Principles-Implementation of Target Costing- Installation of Target Costing-Target Costing Vs. Traditional Costing- Life Cycle Costing-Meaning-Definition-Applications of LCC -Importance-Process of LCC

15CCP202 DIRECT TAXATION AND TAX PLANNING

COURSE OBJECTIVES:

To make the students

1. To Understand the Concept of assessment, assessee, Income heads and the Income Tax laws.
2. To help students to understand different heads of income
3. To learn the tools and techniques to compute the tax for the various income heads.
4. To select the best ways to compute the income tax based on the income heads for various assessee and to gain a lifelong learning for applying the IT calculation for various income heads based on each case of assessee.
5. To communicate orally and in written form the income tax concepts and computations.
6. To be familiar with the laws pertaining to the Income Tax and apply it lifelong.

COURSE OUTCOMES:

Learners should be able to

1. Comprehend on the concepts related to assessment, assessee, Income heads and the Income Tax laws.
2. Compute Income Tax Returns.
3. Provide the students knowledge about Tax planning
4. Formulate the Income Tax calculations by critically analyzing the assessee's situation under various income heads and deductions and acquire a Lifelong practice for computation of Tax under various income heads and deductions for any assessee
5. Communicate orally and in written the Income tax computation under various income heads and deductions.
6. Familiar with the laws pertaining to the Income Tax and its apply it lifelong.

Unit- I

Income Tax Act 1961- Scope of income - Total Income and residential status - income which do not form part of the total income – Income from Salaries.

Unit - II

Income from House Property – Profits and gains of business or profession – Income From business- Income from Profession.

Unit - III

Capital Gains – Capital Gain –Short Term and Long Term Gain - Income from other sources – Aggregation of income- set off and carry forward of losses.

Unit - IV

Deduction out of Gross Total Income - Computation of Total Income- Assessment of Individual.

Unit - V

Tax Planning – Advance payment of tax –Tax Deducted at Source - ETDS Software - Returns to be submitted by various assesses-Different Types of Tax Planning – Tax Software – e-filing Procedure e-filing of income tax return.

Note: The question paper shall cover 40% theory and 60% problems

15CCP203	INSURANCE AND RISK MANAGEMENT	Semester – II			
		L	T	P	C
		5	-	-	4

COURSE OBJECTIVES:

To make the students

1. To Understand the Concept of risk, and insurance a product to mitigate risk, its design and pricing
2. To comprehend on the reforms in Indian insurance industry.
3. To understand the categorization and application of the life and non-life insurance as a risk mitigation instrument,
4. To create awareness among students on various insurance policies and the procedures followed on availing policies
5. To communicate orally and in written form the understanding of insurance, insurance types, designing and pricing.
6. To create awareness among students on various insurance policies and the procedures followed on availing policies

COURSE OUTCOMES:

Learners should be able to

1. Understand the Concept of risk, and insurance a product to mitigate risk, its design and pricing
2. Comprehend on the reforms in Indian insurance industry.
3. Understand the categorization and application of the life and non-life insurance as a risk mitigation instrument,
4. Communicate orally and in written form the understanding of insurance, insurance types, designing and pricing.
5. Understand the types of risks, risk management, Life and General Insurance
6. Create awareness among students on various insurance policies and the procedures followed on availing policies

Unit – I

Introduction to Risk Management : The Concept of Risk – Risk Vs Uncertainty – Types of Risks: Market Risk, Credit Risk, Operational Risk, Interest Risk, Business Risk, Systematic Risk – Classifying Pure Risks – Methods of Handling Pure Risks – Risk Management Process – Risk Financing Techniques – Risk Management Objectives – Risk Management Information System (RMIS) – Risk Control

Unit - II

Risk Management by Individuals: Factors affecting individual demands for insurance – Risk Management by Corporations – Corporate Risk Management Process – Types of Risk Managing Firms

Unit – III

Growth and Development of Indian Insurance Industry – Regulations of Insurance Business and the Emerging Scenario – Introduction to Life and General Insurance – Life Insurance: Features of Life Insurance – Essentials of Life Insurance Contract – Kinds of Insurance Policies – Premium Determination – Life Policy Conditions

Unit –IV

Fire Insurance – Fire Insurance Contracts – Fire Insurance Coverage – Policies for Stocks – Rate Fixation in Fire Insurance – Settlement of Claims – Marine Insurance: Marine Insurance Contract – Types of Marine Insurance – Marine Cargo Losses and Frauds – Settlement of Claims

Unit – V

Miscellaneous Insurance: Motor Insurance – Employer's Liability Insurance – Personal Accident and Sickness Insurance – Aviation Insurance – Burglary Insurance – Fidelity Guarantee Insurance – Engineering Insurance – Cattle Insurance – Crop Insurance

TEXT BOOK

1. Dr. P.K. Gupta (2015) Insurance and Risk Management, Himalaya Publishing House

REFERENCES

1. Mishra (2012), Insurance Principles and Practice, S. Chand & Sons

2. Periasamy (2011), Insurance Principles and Practice, Himalaya Publishing House, New Delhi

COURSE OBJECTIVES:**To make the students**

1. To understand the basic concepts of organizational behavior.
2. To analyze the individual behavior traits required for performing as individual or group.
3. To obtain the knowledge and skills of perceiving, motivating using different learning styles.
4. To understand how to perform in group and team and how to manage the power, politics and conflict.
5. To recognize the importance of organizational culture and organizational change.
6. The course comprise of Organizational behavior, Personality, Attitude, Stress and Organizational Conflict

COURSE OUTCOMES:**Learners should be able to:**

1. Analyze behavior issues in the context of the organizational behavior theories and concepts.
2. Assess the behavior of the individuals and groups in organization by applying personality, motivation and learning theories.
3. Manage team and resolve conflict arising between the members.
4. Explain how organizational changes held in the company
5. and culture affect working relationships within organizations.
6. Exhibit the communication skills to convey the thoughts and ideas to the individuals and group.

Unit – I

Organizational Behaviour – Nature – Disciplines contributing to Organizational Behavior – Role of Organizational Behavior – Foundations of Organizational Behavior – Implications of Hawthorne Experiments

Unit – II

Individual Difference – Nature – Causes – Models of Man – Perception – Perceptual Process – Perceptual Selectivity – Distortion in Perception – Personality – Determinants of Personality

Unit – III

Attitude – Concepts – Theories of Attitude Formation – Factors in Attitude Formations – Attitude Change. Stress – Causes of Stress – Effects of Stress – Stress Coping Strategies – Individual and Organizational

Unit – IV

Group Dynamics – Concepts and Features of Group – Types of Groups – Formal and Informal Groups – Causes of Informal Organizations – Types of Industrial Organization – Effects of Informal Organization – Group Cohesiveness

Unit – V

Organizational Conflicts – Functional and Dysfunctional Aspects of Conflicts – Role Conflicts – Interpersonal Conflict – Conflict Management

TEXT BOOK

Aswathappa K (2012) Organizational Behaviour, Himalaya Publishing House, Mumbai

REFERENCES

Steven MC Shane (2014), Organizational Behaviour, Tata Mc Graw Hill Publishing, New Delhi

Stephen Robbins (2013), Organizational Behaviour, Prentice Hall of India learning Pvt. Ltd., New Delhi

COURSE OBJECTIVES:

To make the students

1. To Understand the concept of management
2. To understand on the concept of Strategic Management.
3. To understand on the concept of Organizational Structures
4. To identify the concept of Leadership and Quality of Work Life
5. To understand the concept of Team Management
6. To understand the concept of Team Conflict

COURSE OUTCOMES:

Learners should be able to

1. Understand the concept of management
2. Understand on the concept of Strategic Management.
3. Understand on the concept of Organizational Structures
4. Identify the concept of Leadership and Quality of Work Life
5. Understand the concept of Team Management
6. Understand the concept of Team Conflict

Unit – I

Fundamentals of Management - Characteristics of Well managed companies – Managerial Process –Managerial Skills and roles –Managing the Internal and External Environment –Strategies of the Environment Management –Managing for Competitive Advantage –Cost –Quality –Speed –Innovations –Globalization –Challenges of a Manager in the 21st Century

Unit – II

Strategic Management - SWOT Analysis –BCG matrix –Classification of Strategies -Managerial Decision Making –Group Decision Making –Corporate Social Responsibility –Strategies -Indian experiences in CSR

Unit – III

Organizational Structures - Kinds of Organizational Structures - Hybrid and Matrix Structures - Span of Control - Delegation of Authority - Centralized and

Decentralized Structures - Organizing for Optimal Size - Strategies of Responsive Organization - Customer Relationship Management - TQM - 6 Sigma.

Unit – IV

Leadership - Transactional and Transformational Leaders - Traditional and Contemporary Perspective on Leadership - Situational Theories - Developing Leadership Skills - Motivating for Performance - Reinforcements for Performance - Expectancy Theory - Job Enrichment - Empowerment - Establishing Equity and Quality of Work Life.

Unit – V

Management Teams - Managing High Performance Teams - Team Development - Cohesiveness - Managing Conflicts in Team - Managing Technology and Innovations in Competitive Environment - Managing Change - Shaping the future.

TEXT BOOK

1. **Bateman Thomas S,&. Snell Scott A**, (2008), Competing in the New Era, 8th Edition, Tata McGraw Hill Publishing Company Ltd.,

REFERENCES

1. **Certo Sameul C, Certo S. Travis**, (2011), Modern Management: Concepts and Skills; 11th Edition, PHI Pvt. Ltd.,
2. **Pyzdek Thomas** (2014), Six Sigma Project Planner, Tata McGraw Hill Education Pvt. Ltd.,

COURSE OBJECTIVES:**To make the students**

1. To understand the consumer behavior concepts, dimensions used in consumer behaviour research.
2. To recognize the Internal Influencing factors that affect the Consumer Behaviour
3. To identify the external Influencing factors that affect the Consumer Behaviour
4. To conceptualize on the consumer decision making process.
5. To know the application consumer behaviour concepts to access the changing behavior of the customers.
6. To appreciate the personal and environmental factors that influence consumer decisions. To understand the strategic implications of consumer influences, and marketing decisions

COURSEOUTCOMES:**Learners should be able to**

1. Understand the importance of Culture, Subculture, Social Class, Reference Groups
2. Understand the importance of Family Influences in Consumer Behaviour.
3. Explore, analyze and compare the core theories of consumer behaviour and its application in both consumer and organizational markets
4. Appraise models of Consumer Behaviour and determine their relevance to particular marketing situations
5. Critique the theoretical perspectives associated with consumer decision making, including recognizing cognitive biases and heuristics
6. Demonstrate capabilities of teamwork, critical thinking, and communication skills related to investment decisions.

Unit – I

Definition, scope, and application of Consumer Behavior-Evolution of Consumer Behavior as a field of study and its relationship with Marketing; Behavioral Dimension-Interdisciplinary Nature of Consumer Behavior studies

Unit – II

Consumer Decision Making Process - Buying Motives - Buying Roles, Consumer Decision Making Process, Levels of Consumer Decision Making, Perspectives-Models

Unit – III

Psychological Influence on Consumer Decision Making – Consumers Needs & Motivation, Emotions and Mood, Consumer Involvement; Consumer Learning, Personality, Self-concept and Self-image; Consumer Perception, Risk and Imagery; Consumer Attitude: Belief, Attitude and Intention, Formation-Change-Consumer Communication.

Unit – IV

Sociological Influences – Consumer Groups - Consumer Reference Groups, Family and Life cycle, Social Class and Mobility, Lifestyle Analysis - Culture; Sub-Culture, Cross Culture - Interpersonal Communication and influence, Opinion Leadership.

Unit – V

Diffusion of Motivation - Consumer Orientation - Diffusion Process, Adoption Process, Consumer Innovators, Multiplicative Innovation Adoption (MIA) Model.

15CCP204D	WORKING CAPITAL MANAGEMENT	Semester – II			
		L	T	P	C
		4	-	-	3

Course objectives:

To make the students

1. Being specialized in finance present day managers to be aware of short term movement of capital and problems related to working capital management
2. To study about the importance of working capital.
3. To learn the factors of cash management.
4. To understand credit policy of receivable management.
5. To learn the various techniques of inventory management.
6. To provide clear view of committee's recommendation on working capital.

Course outcomes (Cos):

Learners should be able to

1. Estimate the requirements and manage the working capital required for the business
2. Analyze the different sources of capital and computation of cost of capital.
3. Develop cash management techniques
4. Evaluate the components of financial leverage, dividend policies and capital structure theories and its application in business.
5. Develop new techniques in managing and controlling inventory in organizations
6. Analyze the Committee recommendations on working capital financing

Unit - I

Working Capital Policy Overall Considerations - Importance of Working Capital Management - Concept of Working Capital - Risk and Return Trade off Financing Working Capital - Sources and Uses of Working Capital - Factor influencing Working Capital Requirements Issues in Working Capital Policy - Size of Working Capital Forecasting and Management of Working Capital.

Unit - II

Cash Management: Importance - Factors influencing Cash Balance Determining minimum Cash Balance - Cash Budgeting - Cash Control Monitoring Collections and Disbursement - Cash Management Models.

Unit - III

Inventory Management - Need for inventories and importance of its Management - Techniques for Managing Inventory - Different Models Recorder - Point - Pricing of Raw Materials and Valuation of Stock - Monitoring and Control of Inventories

Unit - IV

Receivables Management Credit Policy - Credits evaluation credit granting decisions - Control receivables - Collection policy

Unit - V

Financing Current Assets: Trade Credit - Short - term Bank Finance - Commercial paper - Public Deposits - Committees on Working Capital Regulation of Bank credit - Recommendation

TEXT BOOK

15CCP204E	ADVERTISEMENT AND SALES PROMOTION	Semester – II			
		L	T	P	C
		4	-	-	3

COURSE OBJECTIVES:

To make the students

1. To know about the various types of advertising
2. To understand the motivational aspects of salesmen
3. To understand the concept of sales force management
4. To know about the social effects of advertising
5. To know about the promotional strategy.
6. To introduce the students to latest methods and tools of advertising and sales promotion.

COURSE OUTCOMES:

Learners should be able to

1. Knowing the concepts of advertising.
2. Getting the details about the various types of advertising
3. Understanding the motivational aspects of salesmen
4. Understanding the concept of sales force management
5. Knowing about the social effects of advertising
6. Knowing about the promotional strategy.

Unit - I

Advertising - Features, Purpose, Scope and Function - Classifications - Social and Economic Aspects & Ethical Issues in Advertising - Need for Advertising.

Unit – II

Advertising Process - Advertising Strategy - Psychology of Target Audience - Effectiveness of Advertising - Buying Behavior - Audience Perception -Setting Advertising Objectives, Advertisement Planning and Organization -Advertisement Copy.

Unit - III

Advertising Media - Role of Media - Print Media - Radio and Television - Online Advertising - Media research - Media Selection - Advertising Budget - Evaluation of Effectiveness of Advertising - Areas of Assessment - Media testing

Unit – IV

Sales Promotions - Scope - Functions and Importance - Sales Promotional Methods - Fundamental of Successful Selling - Retail Marketing

Unit – V

Salesmanship - Salesmen Recruitment and Training - Personnel Selling - Skills for Good Salesmanship - Training of Sales Personnel - Motivating and Evaluating Sales Personnel - Sales Records - Rewarding Good Salesmanship

TEXT BOOK

1. **Mahendra Mohan**, (2008) Advertising Management, Tata McGraw Hill Publishing Co. Ltd., New Delhi.

REFERENCES

1. **Philip Kotler, Kevin Lane Keller, Abraham Koshy, Mithileshwar Jha** (2013), 'Marketing Management', Pearson Education, New Delhi.

3. **Francis Cherunilam** (2010) Advertisement and Salesmanship, Himalaya Publishing House
4. **Varma and Agarwal** (2000), Salesmanship and Publicity, King Books, New Delhi

COURSE OBJECTIVES:**To make the students**

1. To Understand the Concept of Visual Basics.Net and its application.
2. To learn tools and utilize the tools of Visual Basic.net to design programmes.
3. To communicate orally and in written form the Concept of Visual Basics.Net and its application.
4. To understand the Visual Basic Language and Loops
5. To understand the Object-Oriented Programming
6. To understand the Data Access with ADO.NET

COURSE OUTCOMES:**Learners should be able to**

1. Understand the Concept of Visual Basics.Net and its application.
2. Learn tools and utilize the tools of Visual Basic.net to design programmes.
3. Communicate orally and in written form the Concept of Visual Basics.Net and its application.
4. Know the Visual Basic Language and Loops
5. Know the Object-Oriented Programming
6. Exhibit the Menus and Dialog-Boxes

Unit-I

Getting Started With VB.NET: The Integrated Development Environment-IDE Components- Environment Options. Visual Basic: The Language -Variables-Constants-Arrays – Variables as Objects-Flow Control Statements.

Unit-II

Writing and Using Procedures: Module Coding – Arguments. Working with Forms: Appearance of Forms- Loading and Showing Forms -Designing Menus. Multiple Document Interface

Unit- III

Basic Windows Controls: Textbox Control- ListBox, CheckedListBox-Scrollbar and TrackBar Controls. More Windows Control: The common Dialog Controls-The Rich

TextBox Control.The TreeView and ListView Controls: Examining the Advanced Controls-The TreeView Control-The ListView Control-Content Page Holder

Unit-IV

Handling Strings, characters and Dates: Handling Strings and Characters – Handling Dates. Working with Folders and Files: Accessing Folders and Files – Accessing Files. Drawing and Painting with Visual Basic: Displaying Images – Drawing with GDI – Co-ordinate Transformation – Bitmaps.

Unit-V

Databases: Architecture and Basic Concepts: What is database? - Server Explorer – Structured Query Language – The Query Builder – Building database Application with ADO.Net: The Architecture of ADO.Net-Creating the dataset – Data Binding – Programming the Data Adapter Objects – The Command and Data Reader Object. Programming the ADO.Net objects: The Structure of the dataset – The DataForm Wizard – Transactions – Performing Update Operations.

TEXT BOOK

1. **Evangelos Petroustos** (2006) Mastering Vb. Net, SYBEX Inc., USA.

REFERENCES

1. **Steven Holzner** (2005) Vb.Net Programming Black Book , Dream Tech Publications, USA
2. **Bill Evjen, Scott Hanselman, Farhan Mohammed, Srinivasa Siva Kumar and Devin Rader** (2006) Asp.Net 2.0, Wiley Publication, USA.
3. **Burrowss W.E and D. Langford** (2003) Learning Programming using Visual Basic .Net, 1st Edition, McGraw Hill, New Delhi.
4. **Jeffrey R. Shapiro** (2008) The Complete Reference Visual Basic.Net, 1st Edition, Tata -McGraw-Hill Edition, New Delhi.
5. **Richard Bowman** (2002) Visual Basic.Net, Hungry Minds Inc. Publication, Canada

COURSE OBJECTIVES:**To make the students**

1. To understand use of classes, objects and create programmes by applying it
2. To understand and write programs VB.Net
3. To Understand the basic approaches to the design of software applications
4. To understand the date and time handling functions
5. To understand the Program using classes and objects
6. To understand the concept of database connectivity

COURSEOUTCOMES:**Learners should be able to**

1. Implement Object Oriented Programming Concepts
2. Use and create packages and interfaces in a VB.Net
3. Use graphical user interface
4. Exhibit communication skills to communicate the output derived from the program.
5. Understand the date and time handling functions
6. Exhibit to develop an application to create inventory management system

VISUALBASIC .NET

1. Calculate Simple interest and compound Interest
2. Find mouse events and coordinates where the mouse is clicked.
3. Implement Calculator.
4. Implement Notepad
5. Draw several shapes and fill with color.
6. Perform the following in list box
 - a) Add an item
 - b) Delete an item
 - c) List count
 - d) Clear the List
7. Calculate the days elapsed between the given two dates.
8. Create Menu and link multiple forms with different colors.
9. Animate the picture using animation control.
10. Check whether given string is a Palindrome or not.

11. Generate Fibonacci series for the input given using Input box.
12. Calculate the total marks of the student and print the grade
13. Maintain details of students. Use Crystal Report to generate report.
14. Implement Employee Payroll.
15. Create and manipulate a File.

COURSE OBJECTIVES:**To make the students**

1. To Understand the Concept of investing and mechanics for formulating investment decisions.
2. To communicate orally and in written form the concepts of Concept of investing and mechanics for formulating investment decisions.
3. To apply the investing concepts and skills lifelong.
4. To analyse the EIC framework make decisions based on investing in different avenues.
5. To Critically evaluate the risk return parameters and select the best alternative.
6. To Communicate in written form and prepare report

COURSE OUTCOMES:**Learners should be able to**

1. Understand the Concept of investing and mechanics for formulating investment decisions.
2. Communicate orally and in written form the concepts of Concept of investing and mechanics for formulating investment decisions.
3. Apply the investing concepts and skills lifelong.
4. Analyse the EIC framework make decisions based on investing in different avenues.
5. Critically evaluate the risk return parameters and select the best alternative.
6. Communicate in written form and prepare report

Unit – I

Investment: Basics of Investment – Investment, Speculation and Gambling – Investment Environment – Investment Categories – SEBI Functions

Unit – II

Stock Market: Markets for Securities and their functions – Primary Markets – Secondary Markets – Processes of Buying and Selling Securities – Types of Securities – Security Market Indicators.

Unit – III

Risk – Return Framework: Security Returns – Measurement of Returns – Concept of Risk – Systematic Risk – and Unsystematic Risk

Unit -IV

Fundamental Analysis: Basics of Economic Analysis and Industry Analysis – Company Analysis – Non Financial Parameters – Financial Parameters – Analysis of Financial Statements.

Unit-V

Technical Analysis: The Dow Theory – Technical indicators of the Overall Market –Indicators for Individual Stocks – Charting Techniques.

TEXT BOOKS

1. **Avadhani V.A.** (2014), Securities Analysis and Portfolio management, Himalaya Publishing House, Delhi
2. **Preethi Singh**, (2014), Investment Management, Himalaya Publishing, Delhi,

REFERENCES

1. **Bhalla V.K.**, (2009), Investment Management, S. Chand & Co, New Delhi
2. **Gopalakrishnan** (2005) Investment Management, Kalyani Publications
3. **Dhanesh Kumar** (2010) Investment Management and Security Analysis, Mac Millan Publication, New Delhi

COURSE OBJECTIVES:**To make the students**

1. To Understand the Concept of management accounting, costing behaviour, budgeting and enrich the lifelong learning.
2. To comprehend on the contemporary issues relevant to accounting concepts.
3. To analyse the alternatives using appropriate tools and techniques.
4. To solve the problems and take decisions based on the result.
5. To communicate orally and in written form the concepts and solutions.
6. To provide the students knowledge about budgetary control.

COURSE OUTCOMES:**Learners should be able to**

1. Understand the Concept of management accounting, costing behaviour, budgeting and enrich the lifelong learning.
2. Comprehend on the contemporary issues relevant to accounting concepts.
3. Analyse the alternatives using appropriate tools and techniques.
4. Solve the problems and take decisions based on the result.
5. Communicate orally and in written form the concepts and solutions.
6. course incorporates Financial Statement Analysis, Ratio Analysis, Fund Flow and Cash Flow Analysis, Budgeting and Marginal Costing

Unit – I

Management Accounting – Meaning – Definition – Objectives and Scope – Relationship between Management Accounting and Financial Accounting – Management Accounting and Cost Accounting

Unit – II

Financial Statement Analysis – Types of Financial Statement Analysis - Ratio Analysis – Meaning – Uses – Limitations – Classification of Ratios – Computation of Ratios from Financial Statements

Unit – III

Fund Flow Analysis – Cash Flow Analysis – Working Capital Statements – Funds from Operations

Unit – IV

Budgetary Control – Flexible Budget – Sales Budget – Cash Budget – Production Budget – Purchase Budget

Unit – V

Marginal Costing – Break Even Analysis – Applications of Marginal Costing Techniques – Determination of Sales Mix – Key factor – Make or Buy Decision (Simple Problems Only)

Note: Theory -20% Problems - 80%

15CCP302	BUSINESS RESEARCH METHODS AND TECHNIQUES	Semester – III			
		L	T	P	C
		5	-	-	4

COURSE OBJECTIVES:

To make the students

1. To understand the basic framework of research and research process and its important in business decision.
2. To develop an understanding of various research designs and sampling techniques and its application.
3. To identify appropriate sources of information and methods of data collection for solving a business issue.
4. To understand the selection of appropriate tools to analyse the quantitative and qualitative data.
5. To understand the ethical norms for research and select the best type of research report and be familiar with the content to be included in the report.
6. To gain the sampling techniques along with hypothesis testing.

COURSE OUTCOMES :

Learners should be able to

1. Assess the best suitable research type and formulate the research objective for the business problem.
2. Formulate the suitable research designs and select appropriate sampling techniques for the research.
3. Select the appropriate data collection method for solving the business issue and decide the appropriate measurement scale for designing the instrument for data collection.
4. Apply appropriate analytical tools for the data collected and formulate a suitable suggestion for the business problem.
5. Demonstrate capabilities of team work, problem-solving, critical thinking, and communication skills and design a suitable research report based on the ethical norms of research.
6. The course comprise of Types of Research, Research Design, Sampling, Data Collection, Scaling Techniques, Hypothesis Testing and Statistics

Unit-I

Introduction to Research: Meaning – Purpose – Types of Research – Significance – Qualities of a good research – Steps in Research - Identification, Selection and Formulation of Research Problem. Research Design: Components of Research Design – Methods of Research Design.

Unit-II

Sampling Design: Census and Sample Survey – Characteristics of a Good Sample Plan – Steps in Sampling – Types of Sampling – Advantages and Limitations of Sampling. Data Collection: Primary Data - Meaning – Significance – Methods of Collecting Data: Observation – Interview Schedule – Questionnaire. Secondary Data – Meaning - Sources of Secondary Data – Precautions while using Secondary Data.

Unit-III

Scaling Techniques: Meaning of Scale–Measurement of Scale – Important Scaling Techniques - Processing of Data - Editing – Purpose – Analysis and Interpretation of Data: Meaning – Need for Interpretation – Techniques of Interpretation.- Report Writing: Types of Research Reports – Layout of the Report – Steps in Writing the Report – Contents of Research Reports

Unit-IV

Hypothesis: Characteristics of a good Hypothesis – Formulation of Hypothesis – Procedure for Testing of Hypothesis – T test, F test and Chi Square Test, Analysis of Variance - Business Forecasting – Exponential Smoothing

Unit-V

Descriptive Statistics - Measures of Central Tendency: - Mean, Median and Mode - Standard deviation – Karl Pearson Correlation – Spearman Rank Correlation - Regression Models – Inferential Statistics – Multivariate Analysis - Factor Analysis – Kruskal Wallis Test

Note:

The question paper shall cover 80% theory and 20% problems

TEXT BOOK

1. **C. R. Kothari**, (2014) Research Methodology – Methods and Techniques, New Age International (P) Limited, Publishers, New Delhi

REFERENCES

1. **Anil Kumar Gupta** (2011) Research Methodology: Methods and Techniques, Vayu Education of India, New Delhi
2. **O.R. Krishnaswami and M. Ranganatham** (2014), Methodology of Research in Social Sciences, Himalaya Publishing House Pvt. Ltd., Mumbai.
3. **S.P. Gupta** (2014), Practical Statistics, S. Chand and Co., New Delhi.
4. **Dr.A. Vinayagamoorthy** (2013), Business Research Methods, Vaishali Publications
5. **Saravanavel** (2008) Research Methodology, Kitab Mahal
6. **Rao** (2013) Research Methodology in Commerce and Management, Streling Publishers

COURSE OBJECTIVES:**To make the students**

1. To understand of fundamental programming constructs and concepts
2. To comprehend on the object-oriented programming concepts of Class and Object
3. To gain knowledge on the packages and interface and its applications.
4. To obtain the application of Multi thread models in programming
5. To know about the applet class and its application
6. To know about the Creating an executable applet

COURSEOUTCOMES:**Learners should be able to**

1. Obtain programming skills in the Java programming language,
2. Gain knowledge of object-oriented paradigm in the Java programming language
3. Know about the usage of the Java programming language for various programming technologies
4. Understand to usage tools to design webpage using the java programming and realize the usage of standard and third-party Java's API's when writing applications.
5. Exhibit the communication skills to convey the output of the programme.
6. Gain knowledge of Creating an executable applet

Unit – I

An overview of Java: Object oriented programming – Java features – Java environment - Data types, variables and arrays. Operators- Expressions - Control Statements: Branching statements – Iteration statements – Jump statements – Sample java program.

Unit – II

Classes – Objects – Methods – Constructors – The this keyword – finalize () method – Overloading methods – Returning objects – Recursion – Static – Final – Nested inner classes – Command line arguments – Inheritance.

Unit – III

Packages and Interfaces: Packages – Access protection – Importing packages – Interfaces – Exception handling: Fundamentals – Exception types – Try and catch – Multiple catch – Nested try – throw – throws – finally – Build in exception.

Unit – IV

Multithread programming: Thread model –Life cycle of thread – Creating thread – Multiple threads – Thread priorities – Synchronization – Inter thread Communication – Suspending, Resuming and Stopping threads – I/O Applets, and other topics.

Unit – V

The Applet Class: Basics – Building applet code – Applet life cycle – Creating an executable applet – Designing a web page – Running the applet – Getting input from the user – Graphics programming: The graphic class – Lines and rectangles – Circles and ellipses – Using control loops in applets – Drawing bar charts.

TEXT BOOK

Partrick Naughton (2002) Java Hand Book First edition New Delhi McGraw hill osborne Media

REFERENCES

Herbert Schmidt (2007) Java Complete Reference, Tata McGraw hill 2000. ISRD groups, ,”Introduction to object oriented programming through Java” First edition ,Tata McGraw hill.

E.Balagurysamy (2009) Programming with Java, Third edition, Tata Mcgraw-hill Publishing Company limited.

Schildt, (2011) Java Completer Reference, Seventh Edition , Tata Mcgraw-hill Publishing Company limited.

C.Muthu (2008) Java Programming Essentials ,Vijay Ni Code Imprints(P) Ltd.

COURSE OBJECTIVES:**To make the students**

1. To understand of investment concepts and investment avenues available.
2. To calculate the intrinsic value of securities and understand risk-return relationship.
3. To know about the fundamental analysis and technical analysis and its application.
4. To comprehend the investment theory and its relevance in the current context.
5. To recognize different performance measures and evaluate the performance of the portfolio.
6. To enlighten the students on the various methods of Portfolio management adopted in practice.

COURSE OUTCOMES:**Learners should be able to**

1. Choose the appropriate investment avenues based on the individual risk return profile.
2. Calculate the intrinsic value and evaluate the performance based on risk-return.
3. Select the security based on the fundamental and technical analytical tools.
4. Evaluate the performance of the portfolio using the different measures.
5. Demonstrate capabilities of teamwork, problem-solving, critical thinking, and communication skills related to investment decisions.
6. consists of Concepts of Investment, Types of Risk, Stock Market, Fundamental and Technical Analysis and Portfolio Analysis

Unit- I

Introduction of Investment: Concepts of Investment – Common Forms of Investment - Types of Securities – Government Securities – Government Securities Market — India Money Market and Capital Market Institutions- Risk and Return – Systematic and Unsystematic Risk.

Unit - II

Stock Markets: Concepts – Bull- Bear-PE Ratio-Different Stock Market Ratio - SEBI - Structure – Functioning – NSE and BSE – Functions – Listing of Securities – New Issue Market- Mechanics of Trading in Stock Exchange – Evaluation of Securities, Equity , Preference, Debt, Hybrid Securities, - OTCEI .

Unit - III

Fundamental Analysis - Economic analysis and Industry analysis: Asset Pricing Theories – APT- Option Pricing Theory – Economic Analysis –Economic Forecasting – Stock Investment Decision Techniques - Company Analysis – Industry Analysis

Unit - IV

Technical Analysis–Charting Methods – Market Indicators – Trend Analysis - Trend Reversal – Patterns Moving Average – Exponential Moving Average – Oscillators –RSI - Fundamental Analysis Vs. Technical Analysis.

Unit - V

Portfolio Analysis: Methods of Portfolio Construction – Selection of Portfolio Management- Practical Aspects – Performance Evaluation - Portfolio Revision – Problems.

Note: This Paper consisting of 80% Theory and 20% Problem.

	Semester – III			
	L	T	P	C
15CCP304B INTERNATIONAL FINANCIAL MANAGEMENT	4	-	-	3

Course Objectives

To make the students

1. To make the students understand principles of financial management
2. To enable the students to take investment decisions.
3. To help the students to make financial decisions.
4. To provide the students with the basic knowledge of Dividend decisions.
5. To impart knowledge of working capital and cash management.
6. To provide knowledge on Foreign exchange and its significance in a developing economy

Course Outcomes

Learners should be able to

1. Students will be familiarized with basic concepts of financial management.
2. Students will know the technicalities of making investment decisions.
3. Students will be capable of making financing decisions.
4. Students will be familiarized with concepts of dividend decisions.
5. Students will be capable of making working capitalization and cash management.
6. course includes Balance of Payment, International Monetary System, Foreign Exchange Market, Foreign Exchange Risk and International Financial Market Instruments

Unit - I

IFM- Nature and Scope, IFM and Domestic Financial Management- Balance of payments - Significance- Preparation of BOP Statement - Link between BOP and the Economy.

Unit - II

International Monetary System - Gold Standard - IMF and World Bank Exchange Rate Mechanism - Factors influencing Exchange Rate - Purchasing Power Parity and Interest Rate Parity Theorems.

Unit - III

Foreign Exchange Market Transactions Spot, Forward, Futures, Options and Swaps - Arbitrage and Speculation in Foreign Exchange Market.- Exchange Arithmetic, Spread, Premium and Discount. – Currency Derivatives and Swaps

Unit - IV

Foreign Exchange Exposure - Managing Transaction, Translation and Operating Exposure - Techniques for covering the Foreign Exchange Risk - Internal and External Techniques of Risk.

Unit -V

International Financial Market Instruments - International Equities - ADR and GDR - Foreign Bond and Euro-bond - Short-term and Medium-term instruments.

TEXT BOOK

15CCP304C	INTERNATIONAL BUSINESS	Semester – III			
		L	T	P	C
		4	-	-	3

COURSE OBJECTIVES:

To make the students

1. To make the students to understand the concepts of International business
2. To know the export procedure for production and shipment
3. To enhance knowledge in EXIM policy
4. To understand the Logistics and International marketing channel decision.
5. To get an insight on the need for documentation, Process of obtaining Export and Import License
6. To Understand the Concept of Export, EXIM strategies, custom clearance and Export incentive schemes.

COURSE OUTCOMES:

Learners should be able to

1. Comprehend the concepts of International business, trade procedures and Exim Policy apply lifelong
2. Understand the basics of shipment, foreign trade and international agencies and agreement.
3. Demonstrate capabilities of analysing problems, team work and communication skills
4. Develop knowledge on international financial institutions
5. Acquire knowledge on foreign trade.
6. Understand Financing of foreign trade and Documentation.

Unit – I

International Business - Meaning, Nature and Scope - Role of Foreign Trade in the Economic Development of India - Balance of Payment in the context of Economic Growth Process - Trade Balance - Current Account Position and Capital Account Position - Trends - Principles of BOP - Correction of adverse BOP.

Unit-II

Euro Currency Market - GATT - WTO, World Bank and IMF - Functions

Unit -III

Export Marketing - Meaning - An overview of export marketing - Differences between Export Marketing and Domestic Marketing - Salient Features and Basic Functions of Export Marketing - Export Barriers - Tariff and Non-tariff - Export Market Analysis - Feasibility of Market Entry - Sources of Market Information - Assessing Sale Prospects

Unit -IV

Composition and Direction of India's Imports and Exports - Past Trends, Present Position and Prospects - Project Consultancy and Service Exports - Trends, Prospects and Problems - Important Documents used in Foreign Trade.

Unit -V

Foreign Exchange - Theories of Foreign Exchange - Administration of Foreign Exchange - Rate Determination - Factors influencing fluctuations in Foreign Exchange - Exchange control in India.

15CCP304D	STRATEGIC MANAGEMENT	Semester – III			
		L	T	P	C
		4	-	-	3

Course Objectives:

1. To expose participants to various perspectives and concepts in the field of Strategic Management
2. To get the knowledge on setting mission and vision for organization growth
3. To help participants develop skills for analyzing business environment to the solution of business problems
4. To carry out effective SWOT analysis and learn core competence of business
5. To acquaint students with strategy formulation and implementation techniques
6. To help students master the analytical tools of strategic management

Course Outcomes (Cos) :

1. Set the mission and vision in personal and organizational level
2. To analyze the environment in strategic planning and ability to take Strategic decisions
3. To be able to apply the basic concepts, principles and practices associated with strategy formulation and implementation.
4. To be able to analyze industry factors, and identify their impact on profitability and strategic positioning
5. To be able to assess the resources and constraints for strategy making in a business Organization
6. Communicate effectively strategic evaluation and control techniques

Unit – I

Strategic Management – Meaning and Definition, Strategic Management Process – Forming Vision, Setting objectives, Crafting a Strategy, Implementation and Evaluation, Characteristics, Benefits of Strategic Management, Dysfunctions of Strategic Management

Unit – II

Industry Analysis and Competitive Environment. The Macro Environment – Demographic, Political, Social and Cultural. Technological, Global Environment – Assessing the impact of General Environment. The Micro Environment – the Competitive Environment – The five forces of Competition, New Entrants, Direct Competition, Buyers, Suppliers and Substitutes – Rivalry in the Industry

Unit – III

Evaluating Company Resources and Competitive Capabilities – Identifying Company Strengths and Resource Capabilities – Identifying Company Weaknesses and Resource Deficiencies, Identifying Company Competencies and Capabilities, Identifying a Company's Market Opportunities, Identifying Threat to a Company's Future Profitability (SWOT Analysis). Strategic options for achieving Cost Competitiveness. The Value Chain – Primary and Support Activities

Unit – IV

Strategy and Competitive Advantage – Low Cost Leadership Strategies, Differentiation Strategies, Focus Strategies. Merger and Acquisition – Vertical Integration Strategies. First-Mover Advantages and Disadvantages. Strategy and competitive advantage over the Life Cycle

Unit- V

Responding to shifts in competitive Advantages – New Developments affecting Competitive Advantage – New Technology –New Distribution Channel, Economic Shifts – change in the neighboring industries and change in Government Regulation. Response options – Prospecting, Defending, and Harvesting. Uncertainty – Impact of Environmental Development, Ability to Adjust

TEXT BOOK

2. **John A.Pearce II and Richard B.Robin son,Jr**, (2010), Strategic Management-Strategy Formulation and implementation, A.IT.B.S and Distributors, New Delhi.

COURSE OBJECTIVES:
To make the students

1. To Understand the Concept of risk, and insurance a product to mitigate risk, its design and pricing
2. To comprehend on the reforms in Indian insurance industry.
3. To understand the categorization and application of the life and non-life insurance as a risk mitigation instrument,
4. To communicate orally and in written form the understanding of insurance, insurance types, designing and pricing.
5. To offer knowledge on managing industrial relations and the processes, regulations and the authorities regarding industrial relations.
6. To enable students acquire knowledge on fundamental objects and principles of individual laws; understand the significant provisions of the various Acts applicable to Labour Legislation.

COURSE OUTCOMES:
Learners should be able to

1. Understand the Concept of risk, and insurance a product to mitigate risk, its design and pricing
2. Comprehend on the reforms in Indian insurance industry.
3. Understand the categorization and application of the life and non-life insurance as a risk mitigation instrument,
4. Communicate orally and in written form the understanding of insurance, insurance types, designing and pricing.
5. The course encompass Labour Problems, Trade unionism, Industrial Disputes, Management and Personnel Administration and Grievances
6. Course includes Factories Act, Workmen Compensation Act, Wages Act, Gratuity Act, Bonus Act and Industrial Dispute Act

Unit – I

Labour Problems and Labour Market, Indian Labour Market -Employers Organisations Definition, Types, Role and Functions, Origin, Growth and Pattern of Employers Organisations in India. Issues relating to Employers Organisations in India.

Unit - II

Trade Unionism: Definition, Approaches to Trade Unions, Types of Unions, Functions and Role, History of Trade Unions in India, Problems and Future.

Unit - III

Industrial Disputes, Forms, Causes Prevention and Settlement -Legislative Measures. Analysis of Disputes, Industrial Relations Machinery in India.

Unit - IV

Management and Personnel Administration - Managing, Working and living in a Changing world. Managers and their Personnel Concepts. Personnel Administration and the Line Organisation. Organisation Structure and Management Development

Unit -V

Diagnosing Organisational Health Situational Thinking; A Systematic Approach - Interviewing -Indicators of Organisational Health -Personnel Research Turnover and Internal Mobility, Complaints and Grievances, Occupational Safety and Health Trends.

15CCP305 LOGISTIC AND SUPPLY CHAIN MANAGEMENT	Semester – III			
	L	T	P	C
	-	-	-	3

COURSE OBJECTIVES:

To make the students

1. To understand the concept and functions of logistics management.
2. To learn the basics of supply chain management and supply chain relationship
3. To communicate the knowledge on logistics information system
4. To critically evaluate the design of operational mechanism of warehouse and logistics administration
5. To Introduce the concept and impact of Logistics and Supply Chain Management, with a competitive strategy overview.
6. To expose the various dimensions of Financial Supply Chain Management with the perspective of e-finance and its legal aspects

COURSEOUTCOMES:

Learners should be able to

1. Understand the concept and functions of logistics management.
2. Analysis the basics of supply chain management and supply chain relationship
3. Communicate the knowledge on logistics information system
4. Critically evaluate the design of operational mechanism of warehouse and logistics administration
5. course consists of Inventory Management, Warehousing and Supply Chain Management
6. Expose the various dimensions of Financial Supply Chain Management with the perspective of e-finance and its legal aspects

Unit – I

Introduction to Logistics- Fundamentals of Logistics-Definition and Activities-Aims and Importance-Progress in Logistics and Current trends-Organization and achieving integration

Unit-II

Planning the Supply Chain - Logistics Strategy-Implementing the Strategy-Locating Facilities-Planning Resources-Controlling Material Flow

Unit-III

Measuring and Improving Performance of Supply Chain - Procurement-Inventory Management -Warehousing and Material Handling Transport-Global Logistics

Unit-IV

Supply Chain Management - Basic Concepts of Supply Chain Management- Planning and Sourcing-Making and Delivering Returns-IT and Supply Chain Management

Unit - V

Financial Supply Chain-Elements of Financial Supply Chain Management-The Evolution of e-Financial Supply Chain-E-Financial Supply Chain' (Banks Perspective)- Legal Aspects of e-Financial Supply Chain

TEXT BOOK

15CCP311	PRACTICAL 3 - JAVA	Semester – III			
		L	T	P	C
		-	-	4	2

COURSE OBJECTIVES:

To make the students

1. To understand and write programs the JAVA programming language
2. To Use standard and third-party Java's API's when writing applications.
3. To test a Java application of medium complexity, consisting of multiple classes.
4. To understand Java-based software code of medium-to-high complexity by applying it
5. To Understand the basic approaches to the design of software applications.
6. To understand the perform string operations

COURSEOUTCOMES:

Learners should be able to

1. Implement Object Oriented Programming Concepts
2. Use and create packages and interfaces in a Java program
3. Use graphical user interface in Java programs and handle security implementations in Java
4. Create Applets; Implement exception handling in Java; implement Multithreading and use Input/output Streams
5. Exhibit the multiplication tables by multithreading
6. Exhibit communication skills to communicate the output derived from the program
1. Write a program to find the sum of series $1+X+X^2+X^3+.....$
2. Write a program to find prime or not.
3. Write a program to find average of five numbers.
4. Define a class for employee with name and data of appointment create employee objects and sort them as per their date of appointment.
5. Write a program to find factorial of number using recursion.
6. Write a program to find simple interest getting values from keyboard.
7. Write a program to find maximum of N numbers.
8. Write a program to find maximum and sum of an array.

9. Write a program to perform string operations.
10. Write a program to accept more strings and arrange them in alphabetical order.
11. Write a program to create a window and draw cross lines.
12. Write a program to create an applet and draw the shape.
13. Write a program to create a window with a background color and display the message.
14. Write a program for multiplication tables by multithreading.
15. Write a program to create an exception for mark out of bounds. If mark is greater than 100 throw an exception.

COURSE OBJECTIVES:**To make the students**

1. To understand the Importance of SPSS and the features for entering the data according to the variable type.
2. To understand and apply the descriptive analytical tools
3. To know the univariate tools and its application
4. To comprehend the application of Bivariate analysis
5. To understand and compute the multivariate analysis using the package.
6. To understand the correlation analysis

COURSEOUTCOMES:**Learners should be able to**

1. Create datasheet and enter the data
2. Compute descriptive statistics using the package and graphically represent the data.
3. Perform univariate and bivariate analysis in the software package.
4. Perform multivariate analysis in the software package.
5. Perform the correlation analysis
6. Demonstrate capabilities of problem-solving, critical thinking, and communication skills to infer the output.

Workout the following statistics:

1. Descriptive Statistics
2. Chi-square
3. Independent Sample 't' Test
4. Paired 't' Test
5. Analysis of Variance (ANOVA)
6. Karl Pearson Correlation
7. Spearman Rank Correlation
8. Regression

9. Factor Analysis
10. Kolmogorov and Smirnov test
11. Mann Whitney U Test
12. Wilcoxon Test
13. Friedman Rank Test
14. Kruskal Wallis H-Test
15. Garrett Ranking

COURSE OBJECTIVES:**To make the students**

1. To Understand the Concept financial services its impact on economy
2. To categorise financial services as fund based and fees based services
3. To understand the application of the fee and fund based services in economic development.
4. To communicate orally and in written form the understanding of financial services concepts and application.
5. To expose the students to the contemporary theory and practice of Indian Financial Services Sector
6. To familiarize the students with various types of Financial Services and their role in Social Change.

COURSE OUTCOMES:**Learners should be able to**

1. Understand the Concept financial services its impact on economy
2. Categorise financial services as fund based and fees based services
3. Understand the application of the fee and fund based services in economic development.
4. Communicate orally and in written form the understanding of financial services concepts and application.
5. comprise of Financial Instruments, Merchant Banking, Hire Purchase, Leasing, Venture Capital, Factoring, Mutual Funds and Credit Rating
6. Know the various types of Financial Services and their role in Social Change.

Unit – I

Financial Services – Meaning – Classification – Scope – Fund Based Activities – Non Fund Based Activities – Modern Activities – Sources of Revenue – Causes for Financial Innovation – New Financial Products and Services – Innovative Financial Instruments – Challenges facing the Financial Service Sector. Merchant Banking – Definition – Origin – Merchant Banking in India- Merchant Banks and Commercial Banks – Services of Merchant Banks- Qualities required of Merchant Bankers – Problems – Scope of Merchant Banking in India

Unit – II

Hire Purchase – Meaning – Features – Legal Position – Hire Purchase and Credit Sale – Hire Purchase and Instalment Sale – Hire Purchase and Leasing – Origin and Development – Banks and Hire Purchase Business – Bank Credit for Hire Purchase.

Leasing – Definition – Steps in Leasing Transactions – Types of Lease – Advantages and Disadvantage of Lease – Problems of Leasing

Unit – III

Venture Capital – Concept – Meaning – Features – Scope of Venture Capital – Importance – Method of Venture Financing – Suggestion for the Growth of Venture Capital – Factoring – Meaning – Functions – Types – Factoring Vs Discounting – Benefits of Factoring

Unit – IV

Mutual Funds – Types – Importance – Selection of a Fund – Securitization – Stages of Securitization – Benefits – Derivatives – Kinds – Forward, Future, Options and Swaps.

Unit – V

Credit Rating – Definition and Meaning – Functions of Credit Rating – Origin – Credit Rating in India – Benefits of Credit Rating – Credit Rating Agencies in India: CRISIL, ICRA, CARE- Limitations of Rating – Future of Credit Rating in India

TEXT BOOK

1. **E Gordon and K. Natarajan** (2014) Financial Markets and Services, Himalaya Publishing House, Mumbai

REFERENCES

2. **Dharmaraj** (2010) Financial Services, S. Chand & Sons Ltd., New Delhi
3. **Tripathy Nalini Prava** (2007) Financial Services, Prentice Hall of India, New Delhi

COURSE OBJECTIVES:**To make the students**

1. To Understand the Concept of risk, and insurance a product to mitigate risk, its design and pricing
2. To comprehend on the reforms in Indian insurance industry.
3. To understand the categorization and application of the life and non-life insurance as a risk mitigation instrument,
4. To communicate orally and in written form the understanding of insurance, insurance types, designing and pricing.
5. To enable the students to understand the procedures in Company Law.
6. To enable them to acquire skills needed for socially relevant and good corporate governance

COURSE OUTCOMES:**Learners should be able to**

1. Understand the Concept of risk, and insurance a product to mitigate risk, its design and pricing
2. Comprehend on the reforms in Indian insurance industry.
3. Understand the categorization and application of the life and non-life insurance as a risk mitigation instrument,
4. Communicate orally and in written form the understanding of insurance, insurance types, designing and pricing.
5. course covers Company Hierarchy, Rules relating to Directors, Company Secretary, Meetings and Types of Meetings
6. Enable them to acquire skills needed for socially relevant and good corporate governance

Unit – I

Company Administration – Hierarchy – Share Holders – Membership – Termination – Rights and Duties – Board of Directors – Qualification – Appointment – Powers – Duties – Other Managerial Personnel

Unit – II

Company Secretary – Meaning – Types – Qualities – Appointment – Dismissal – Power – Rights – Duties and Liabilities – Role of a Secretary in the Administration of a Company

Unit – III

Meeting – Law Governing Meetings – Requisites of a Valid Meeting – Chairman of a Meeting – Appointment – Duties – Powers – Notice – Agenda – Minutes – Quorum – Motion – Resolution – Methods of Voting

Unit – IV

Kinds of Company Meetings – Board of Directors Meeting – Share holder Meeting – Statutory Meeting – Annual General Meeting – Extraordinary General Meeting – Duties of a Company Secretary relating to the Meetings

Unit – V

Drafting of Correspondence relating to the Meetings – Drafting of Notices – Agenda and Minutes of the Meetings of Shareholders and Directors – Drafting of Chairman’s Speech – Annual Report and Auditors Report

15CCP403	ENTREPRENEURSHIP AND SMALL BUSINESS MANAGEMENT	Semester – IV			
		L	T	P	C
		6	-	-	5

COURSE OBJECTIVES:

1. To make the students
2. To Understand the Concept of entrepreneurship, types of entrepreneurs, entities of business, creating ideas, mobilizing funds and support from government.
3. To communicate orally and in written form the Concept of entrepreneurship, types of entrepreneurs, entities of business, creating ideas, mobilizing funds and support from government.
4. To apply the understanding of entrepreneurship, types of entrepreneurs, entities of business, creating ideas, mobilizing funds and support from government in lifelong practice.
5. To initiate the required skills for entrepreneurial development.
6. To help students understand the process of establishing and developing an enterprise

COURSE OUTCOMES:

Learners should be able to

1. Understand the Concept of entrepreneurship, entities of business, creating ideas, mobilizing funds and support from government.
2. Communicate orally and in written form the Concept of entrepreneurship, types of entrepreneurs, entities of business, creating ideas, mobilizing funds and support from government.
3. Apply the understanding of entrepreneurship, types of entrepreneurs, entities of business, creating ideas, mobilizing funds and support from government in lifelong practice.
4. course include Entrepreneur and Entrepreneurship, Market and Technical Analysis, Diversification, Sub-contracting, Incentives and Subsidies.
5. Initiate the required skills for entrepreneurial development.
6. Help students understand the process of establishing and developing an enterprise

Unit – I

Small Business Enterprise - Small Business framework - Concept and Definition- Nature and Characteristics - Relationship between Small and Large Business - Scope and Types of Small Business - Rationale and Objectives - Small Business as seed bed of Entrepreneurship

Unit –II

Entrepreneurship - Entrepreneur and Entrepreneurship Concept - Distinction between Entrepreneur and Manager - Entrepreneurial Competency - Functions - Types (including women and rural).

Unit – III

Establishing a Small Enterprise - Learning the important steps for starting a Business - Project Identification and Selecting the Product - Generation and Screening the Project Ideas - Market Analysis - Technical Analysis, Financial Analysis (up to cost of production) Project Formulation - Assessment of Project Feasibility - Preparation of Project Report - Dealing with basic startup problems.

Unit –IV

Growth Strategy - Growth strategy for Small Business - Need for Growth - Types of Growth Strategy - Expansion - Diversification-Sub contracting.

Unit-V

Institutional Support - Sources of Finance - Financial Support to Small Business- Various Incentives and Subsidies - Central and State Government Schemes

TEXT BOOKS

1. **Khanka S. S**, (2012), Entrepreneurial Development, Sultan Chand Publications
2. **Shaprio Alan C**, (2002), Multinational Financial Management, Prentice Hall of India, 4th Ed.,

REFERENCES

1. **Gupta C.B, & Srinivasan N.P**,(2014), Entrepreneurial Development, Sultan Chand & Sons
2. **Suresh Jayasree**, (2010), Entrepreneurial Development, Margham Publications

COURSE OBJECTIVES:**To make the students**

1. To understand the international marketing environment.
2. To enlighten learners about overseas market research, sources of marketing information and the guidelines to identify foreign markets.
3. To guide global product planning, standardization and adaptation
4. To Understand the Concept of marketing, and 4Ps of Marketing
5. To communicate orally and in written form the concepts of marketing and 4 Ps of marketing
6. To apply the marketing concepts and skills lifelong.

COURSE OUTCOMES:**Learners should be able to**

1. Understand the Concept of marketing, and 4Ps of Marketing
2. Communicate orally and in written form the concepts of marketing and 4 Ps of marketing
3. Apply the marketing concepts and skills lifelong.
4. comprise types of Environments in Global Marketing, Global Marketing Environments, Entry and Expansion Strategies, Product and Channel Decisions and Pricing and Promotional Decisions
5. To communicate orally and in written form the concepts of marketing and 4 Ps of marketing
6. To apply the marketing concepts and skills lifelong.

Unit – I

Introduction to International and Global Marketing- The Marketing Concept- The Three Principles of Marketing-Global Marketing-Importance of Global Marketing-Management Orientations-Driving and Restraining forces affecting Global Integration and Global Marketing

Unit - II

Global Marketing Environment- Economic, Socio-cultural, and Political Environments-Global Market Segmentation – Global Product Positioning – Product Adoption – International Product Life Cycle – International Marketing Strategies – Product Policy, Pricing Policy and Place Policy

Unit - III

Entry and Expansion strategies: Marketing and Sourcing-Decision criteria for International Business-Entry and Expansion Model-Exporting-Additional International Alternatives-Marketing Strategy Alternatives-Cooperative Strategies and Global Strategic Partnerships (GSP)-Nature of GSP- International Partnerships in Developing Countries-Competitive Analysis and Strategy- Industry Analysis: Forces influencing Competition-Strategic Positions-Competitive Innovation and Strategic Intent.

Unit – IV

Product and Channel Decisions - Product Decisions- Product Saturation levels in Global Markets- Product Design Considerations- Attitudes toward Country of Origin-Geographic Expansion: Strategic Alternatives- New products in Global marketing-Global marketing channels and Physical Distribution-Channel objectives and Constraints-Distribution Channels: Terminology and structure-International channel Innovation-Channel strategy for New Market Entry-Physical Distribution and Logistics

Unit-V

Pricing and Promotion Decisions- Pricing Decisions-Basic Pricing Concepts-Environmental influences on Pricing Decisions-Global Pricing Objectives and Strategies-Gray market goods-Dumping-Transfer Pricing-Global Pricing: Three pricing alternatives-Global Advertising and Branding-Selecting an Advertising Agency-Advertising Appeals-Public relations and Publicity-Personal Selling-Sales Promotion-Direct Marketing-Trade shows and exhibitions-Sponsorship promotion.

1. **Philip R. Cateora, John L. Graham and Prashant Salwan** (2010), International Marketing, Tata McGraw Hill Publishing Company Ltd, Special Indian 13th Edition,

2. **Rajagopal** (2010), International Marketing, Vikas Publishing House Pvt Ltd,
3. **Srinivasan** (2008) International Marketing, Prentice Hall of India, New Delhi
4. Rajendra Nargundkar (2008) International Marketing, Excel Books, New Delhi

COURSE OBJECTIVES:**To make the students**

1. To identify an issue to be analyzed and to be solved in a business setup or real time scenario using primary or secondary data collection.
2. To understand the application of Research process in the area of accounting/Finance/Marketing/HR/International business etc.
3. To analyze the data and critically evaluate the result and formulate the suggestion for the problem identified.
4. To apply the theoretical and practical learning of doing research into lifelong practice.
5. To Communicate in oral and written form and prepare report
6. To Work in team and exhibit leadership skills

COURSE OUTCOMES:**Learners should be able to**

1. Identify an issue to be analyzed and to be solved in a business setup or real time scenario using primary or secondary data collection.
2. Understand the application of Research process in the area of accounting/Finance/Marketing/HR/International business etc.
3. Analyze the data and critically evaluate the result and formulate the suggestion for the problem identified.
4. Apply the theoretical and practical learning of doing research into lifelong practice.
5. Communicate in oral and written form and prepare report
6. Work in team and exhibit leadership skills

The students should select a problem in Accounting, Finance, Marketing or any other areas related to commerce.

Report should contain

- Introduction
 - Introduction about the industry
 - Introduction about the Company
 - Review of literature – Minimum 10 papers from referred journal
 - Need for the Study

- Objectives
- Research Methodology
 - Research Design
 - Sampling Design
 - Sources of Data Collection
 - Tools used for analysis
 - Limitation
- Data analysis and interpretation
- Findings and Suggestions
- Conclusion
- Bibliography (APA format)

கற்பகம் உயர்கல்வி கலைக்கழகம்
தமிழ்த்துறை
பகுதி - I தமிழ்ப் பாடத்திட்டம் (2015 - 2016)
முதல்பருவம்
(இளநிலை அறிவியல் பட்ட வகுப்புகளுக்குரியது)

(For I-UG Science Degree Classes) 15LSU101

பாடத்திட்டப் பொதுநோக்கம்

- கற்றல் வழி சிந்தனைத் திறனையும், கருத்து வெளிப்பாட்டுத் திறனையும், மேம்படுத்துதல்.
- ஆய்வுநோக்கை மேம்படுத்துதல்.
- இலக்கியங்கள் உணர்த்தும் வாழ்வின் நுட்பமான பகுதிகளை உணர்த்துதல்.
- மனித மனத்தினைப் பக்குவப்படுத்துதலில் இலக்கியம் தரும் பங்கினை உணர்த்துதல்.
- வளர்ந்து வரும் சமூகத்தில் அறஉணர்வு, பண்பாடு போன்றவை குறித்து அறிவூட்டல்.
- அரசுத் தேர்வுகளுக்கு மாணவர்களை ஆயத்தமாக்குதல்.

பாடத்திட்டப் பயன் விளைவு

1. இந்திய குடியுரிமைப் பணி முதலான போட்டித் தேர்வுகளில், விருப்பப் பாடமாக இடம்பெறுகின்ற, 'தமிழ் இலக்கிய வரலாறு' குறித்த முழுமையான அறிமுகம் பெற்றிருத்தல்.
2. கல்வெட்டியல், ஓலைச்சுவடியியல் மற்றும் தொல்லியல் சார்ந்த ஆவணத் தேடலுக்குரிய ஆய்வுமனப்பான்மையுடன், இலக்கியங்களை அணுகுதல்.
3. தமிழின் வளர்ச்சித் துறையாகிய, 'அறிவியல் தமிழ்' ; 'இணைய தமிழ்' குறித்த பன்னோக்கு அணுகுமுறையிலான ஆய்வுச் சிந்தனை மேம்பாடு.
4. வேலைவாய்ப்புக்குரிய சுயதிறன் மேம்பாட்டுடன், படைப்பாக்கத்திறன் மேம்பாடும் பெற்றிருத்தல் .
5. சமுதாய மற்றும் வாழ்வியல் மதிப்புகளைப் பேணுவதற்குக் கருவியாக இலக்கியங்களை நாடுகின்ற மனப்பான்மை வளர்ச்சி.
6. மொழிபெயப்புத் துறைசார்ந்த வேலைவாய்ப்புத் திறன் பெற்றிருத்தல்

அலகு - I : இக்கால இலக்கியம்

தத்துவம் : மகாகவி பாரதியார் - பகைவனுக்கு அருள்வாய்.

கவிஞர் ந.பிச்சமூர்த்தி - கிளிக்கூண்டு

இயற்கை : பாவேந்தர் பாரதிதாசன் - அழகின் சிரிப்பு - ஞாயிறு.

சமுதாயம் : கவிக்கோ அப்துல் ரகுமான் - இன்றைய நிலை

அறிவியல் : கவிஞர் சிற்பி பாலசுப்பிரமணியன் - காலம்.

பெண்ணியம் : கவிஞர் சிவரமணி - வையகத்தை வெற்றிகொள்ள

சூழலியல் : அன்பாதவன் - மரணம்

காதல் : வைரமுத்து - காதல் உயில்

தன்னம்பிக்கை பா.விஜய் - தன்னம்பிக்கை

அலகு - II : அற இலக்கியம்

1. திருக்குறள் - தேர்ந்தெடுக்கப்பட்ட குறள்கள் 20

2. நான்மணிக்கடிகை - தேர்ந்தெடுக்கப்பட்ட ஐந்து பாடல்கள்

3. திரிகடுகம் - தேர்ந்தெடுக்கப்பட்ட ஐந்து பாடல்கள்

அலகு - III : சிற்றிலக்கியம்

1. நரிவிருத்தம் - அறன் வலியுறுத்தல்

2. தமிழ் விடு தூது - தமிழின் சிறப்புரைத்தல்

3. மதுரை மீனாட்சியம்மைப் பிள்ளைத்தமிழ் - தொடுக்கும் கடவுள் பழம்பாடல்

அலகு - IV : சிறுகதை

1. புதுமைப்பித்தன் - நிகும்பலை

2. தனுஷ்கோடி ராமசாமி - கந்தகக் கிடங்கிலே

3. கந்தர்வன் - துண்டு

4. வாஸந்தி - வடிகால்

5. சி.ஆர். ரவீந்திரன் - வழுக்குமரம்

அலகு- V : மொழிப்பயிற்சி

1. விண்ணப்பங்கள் எழுதுதல் மற்றும் கடிதப் பயிற்சி

2. மொழிபெயர்ப்புப் பயிற்சி

பாட நூல்: கற்பகச்சோலை - தமிழ் ஏடு. கற்பகம் பல்கலைக்கழகத் தமிழ்த் துறை வெளியீடு.

Course Objectives:

- To enable the learners to acquire English language skills at a faster pace.
- To introduce different kinds of literary works
- To familiarize different genres of Literature
- To instruct moral values through literature.
- To improvise their productive and receptive skills
- To strengthen the basic knowledge about grammar.

Course Outcomes:

1. Learn to reflect on the literary works and communicate flexibly.
2. Reading and comprehending literary works
3. Genres of literature to provide moral education
4. Develop communication skills in business environment
5. Interpersonal skills will be developed.
6. Betterment of language competence

Unit I:**Prose:** Google Guys (Extract) – Richard L Brandt**Poetry:** The Blind Pedlar – Osbert Sitwell**Short Story:** A Garden So Rich – Christie Craig**Vocabulary:** Prefixes, Antonyms, Sentence Completion**Grammar:** Articles, Adverbs, Pronouns**Composition:** Proverb Expansion**Unit II:****Prose:** Happiness 101 – Geeta Padmanabhan**Poetry:** An Old Woman – Arun Kolatkar**Vocabulary:** Suffixes, Analogies**Grammar:** Nouns, Adjectives**Composition:** Dialogue Writing**Unit III:****Prose:** Structured Procrastination – John Perry**Short Story:** The Umbrella Man – Roald Dahl**One-Act Play:** The Boy Who Stopped Smiling – Ramu Ramanathan**Vocabulary:** Synonyms, Euphemisms, Word Definitions**Grammar:** Verbs, Conjunctions and Interjection, Indirect/Reported Speech**Unit IV:****Poetry:** No Sentence – Anjum Hassan**One-Act Play:** While the Auto Waits- O' Henry**Vocabulary:** Words Often Confused, Anagrams**Grammar:** Prepositions, Voice- Active and Passive**Composition:** Letter Writing- Informal

15ENU101

ENGLISH - I

4H- 4C

Instruction Hours / week: L: 4 T: 0 P: 0 C: 4

Marks: Internal: 40 External: 60

Total: 100

End Semester Exam: 3 Hours

Unit V:

Short Story: The Bird – Amar Jalil

One-Act Play: The Cellphone Epidemic – Claudia I. Haas

Vocabulary: Portmanteau Words, One Word Substitute

Grammar: Questions, Pronunciation

Composition: Letter Writing- Formal

Text Books:

1. Rao, G. Chandralekha and et al. *Spring* 2013. Emerald Publishers: Chennai.

Reference Books:

1. Syamala, V. English for Communication. 2006. Emerald Publishers: Chennai.

Course Objectives:

- To understand the fundamentals of computer
- To learn the structure of C programming language.
- To learn how to perform structures.
- To learn how to design C using pointers.
- To learn about array concepts
- To learn dynamic memory allocation and file handling in C.

Course Outcomes (COs):

Upon completion of this course the students will be able to :

1. Understand the fundamentals of computer and its uses
2. Understand about the Input, Output Devices and types of programming languages.
3. Apply the basic concepts of C programming language.
4. Understand how to apply concepts to implement functions and different types of functions.
5. Understand the concepts of arrays and the difference between union and structures.
6. Apply the concepts of structures, pointers, file handling and able to write programs

Unit-I

Introduction to Computers: Evolution of Computers, Generation of Computers, Classification of Computers, Block Diagram of a Digital Computer, types of OS. Input / Output Devices: Input Devices -Keyboard, Mouse, Output Devices – VDU, Printers. Types of Programming Languages, Classification of software: Application software and System Software, Structured Programming, Algorithms and Flowcharts with Examples.

Unit-II

Introduction - An Overview of C – Keywords and Identifier – Variables - Declarations of Variables - Typedef – Enum - Constants – Data Types – Operators – Expressions - C Formatted I/O Operations. Decision Making and Branching Statements – Decision Making and Looping Statements – Arrays -Strings - String Handling Functions.

Unit-III

Functions : Introduction - Definition of Functions - Function Declaration - Category of Functions - Nesting of Functions – Recursion - Passing Arrays to Function. Storage Classes – Auto-extern-static-register. Structures and Unions – Introduction - Defining a Structure - Declaring Structure Variables - Accessing Structure Members - Arrays of Structure - Unions .

Unit-IV

Pointers – Introduction – Declaring Pointer Variables - Pointer and Arrays - Pointers and Strings – Array of Pointers - Functions and Pointers - Function Returning Pointers -Pointers to functions - Pointers and Structures.

Unit-V

File Management in C – Introduction - Defining a File - Closing a file – Input/output operations on files - Error handling During I/O Operations - Random Access to Files - Command Line Arguments - Dynamic Memory Allocation-The Preprocessor.

Instruction Hours / week: L: 0 T: 0 P: 5 C: 3**Marks: Internal: 40 External: 60 Total: 100****End Semester Exam: 3 Hours****Course Objectives**

- To understand the fundamentals of computer
- To learn the structure of C programming language.
- To learn how to perform structures.
- To learn how to design C using pointers.
- To learn about array concepts
- To learn dynamic memory allocation and file handling in C.

Course Outcomes (COs)

Upon completion of this course the students will be able to:

1. Understand the fundamentals of computer and its uses
2. Understand about the Input, Output Devices and types of programming languages.
3. Apply the basic concepts of C programming language.
4. Understand how to apply concepts to implement functions and different types of functions.
5. Understand the concepts of arrays and the difference between union and structures.
6. Apply the concepts of structures, pointers, file handling and able to write programs

List of Programs:

1. Write a program to solve all possible roots in Quadratic Equation
2. Write a program to implement bubble sort
3. Write a program to convert a given number into words
4. Write a program to perform matrix multiplication
5. Write a program to count the vowels in a given sentence
6. Write a program to perform Stack Manipulations
7. Write a program to check the given string is palindrome or not
8. Write a program to find a substring in the main string without using library function
9. Write a program to prepare an employee pay slip using files.
10. Write a program to copy the content of one file to another file using command line arguments.

Course Objectives

- To understand the fundamentals of digital electronics.
- To learn the basic signals by discrete bands of analog and digital.
- To learn about the number systems.
- To learn how to design the logic gates and the logic circuits
- To learn digital to analog converters.
- To learn encoder and decoder.

Course Outcomes (COs)

Upon completion of this course the students will be able to :

1. To learn the fundamentals of different numbering system, conversions and the basics laws of Boolean algebra.
2. To provide a strong foundation in construction of Sequential and Combinational Circuits.
3. To familiarize with the function of Logic Gates, Flip Flops.
4. Understand the Shift Registers, Counters.
5. Understand the Encoder, Decoder circuits.
6. Apply the concepts of A/D & D/A Converters and its Applications.

Unit I – Number System and Codes

Introduction to Digital concepts – Number Systems: Decimal, Binary, Octal and Hexadecimal Numbers – Conversion – 1's and 2's Complements of Binary Numbers – Binary Arithmetic with Signed and Unsigned Numbers – Codes: Binary Coded Decimal (BCD) — Excess-3 – Gray Code — ASCII Codes — Error Detection and Correction Codes.

Unit II – Logic Gates and Boolean Algebra

Introduction to Logic Gates – OR, AND, NOT, NAND, NOR, EX-OR and EX-NOR Gates. Boolean Logic and Expression, Laws and Rules of Boolean Algebra, DeMorgan's Theorem – Simplification using Boolean Algebra – Karnaugh Map.

Unit III – Combinational Logic Circuits

Basic overview of Logic functions – Basic Adders & Subtractor – Parallel Binary Adder – 4-bit Binary Adder/Subtractor – Comparators – Encoders and Decoders – Code Converters – Multiplexers and Demultiplexers — Parity Generators/Checkers.

Unit IV – Sequential Logic Circuits

Flip-flops: RS – Clocked RS – Edge-triggered RS, D, and JK – JK Master-Slave flip flops – Registers and its Types – SISO, SIPO, PISO, PIPO – Shift Registers and its Types – Ring Counters – Asynchronous and Synchronous Counter – UP/DOWN Counter- Ring Counter.

Unit V – D/A, A/D Converters

Digital to Analog converters: Resistor Networks - Binary Ladder – Analog to Digital converters: Counter type – Ramp type – Successive Approximation Type.

TEXT BOOKS

1. Salilvahanan , 2014. Digital Electronics and its Principles, Seventh Edition, Tata McGraw Hill , New Delhi. .[UNIT I]
2. Albert Paul Malvino, Donald P. Leach and Goutam Saha, 2010, Seventh Edition. Digital Principles and Application, Tata McGraw Hill, New Delhi.[UNIT II - IV]
3. Morris Mano, 2013. Digital Design: With an Introduction to Verilog HDL, Fifth Edition, Pearson Education.[UNIT- V]

REFERENCE BOOKS

1. Modern Digital Electronics, Jain R.P, Tata McGraw Hill Company, Fourth Edition, 2012.
2. Integrated Circuits, Botkar K.R, Khanna Publications, Fourth Edition, 2008.

Course Objectives

- To understand the fundamentals of digital electronics.
- To learn the basic signals by discrete bands of analog and digital.
- To learn about the number systems.
- To learn how to design the logic gates and the logic circuits
- To learn digital to analog converters.
- To learn encoder and decoder.

Course Outcomes (COs)

Upon completion of this course the students will be able to :

1. To learn the fundamentals of different numbering system, conversions and the basics laws of Boolean algebra.
2. To provide a strong foundation in construction of Sequential and Combinational Circuits.
3. To familiarize with the function of Logic Gates, Flip Flops.
4. Understand the Shift Registers, Counters.
5. Understand the Encoder, Decoder circuits.
6. Apply the concepts of A/D & D/A Converters and its Applications.

(Any 8 Experiments)

1. Verification of basic gates
2. Realization of Logic Gates Using Universal Gates
3. Adder using Gates
4. Subtractor using Gates.
5. Multiplexer
6. Demultiplexer
7. Encoder
8. Decoder
9. Study of Flip-flops
10. Binary to Gray and Gray to Binary Converter

Instruction Hours/week: L: 2 T: 0 P: 0 C:1**Marks: Internal: 100 External: Nil Total: 100****Course Objective:**

- To train students to acquire knowledge about the self-esteem and self confidence
- To develop the goal-setting, positive thinking, competitive spirit, cooperation.
- To improve the qualities of discipline, leadership, team-spirit, diligence, punctuality.
- To provide the backdrop for the development of their creative talents.
- To understand the inter-personal, family relationships and spirituality
- To learn about human values and social values.

Course Outcome:

After the completion of this course, a successful student will be able to:

1. understand the integral development of human beings
2. manage to adopt sustainable lifestyle
3. get awareness about the values and their significance and role
4. imbibe the concept of discipline and freedom
5. aware and face social with the basic moral values.
6. Maintain the inter-personal relationship

Unit – I

Concept of Self, self-esteem and self-confidence. Concept of personality, determinants and disorganisation of it. Personality development – meaning.

Unit – II

Goal setting – meaning and importance; steps in goal setting Manners and Etiquette – meaning need and importance; means to improve. Positive thinking.

Unit – III

Discipline – meaning. Concept of Roles and Responsibility Time Management – Meaning and steps for effective time management.

Unit – IV

Interpersonal relationship – meaning and importance; means to improve it. Healthy friendship.

Unit – V

Family Relationship importance of it; Means to improve. Spirituality – meaning. Its relationship with Altruism, sacrifice, self control, tolerance and truthfulness.

Text Books

1. Karpagam Academy of Higher Education, Study Material, 2015.

Instruction Hours / week: L: 2 T: 0 P: 0 C: 0
Total: 100

Marks: Internal: 100 External: Nil

Course Objective:

- To train students to understand the basic concepts of Quantitative Ability
- To understand the number series, analysis problems.
- To acquire knowledge about the analytical, verbal and logical reasoning.
- To practice to evaluate various real-life situations
- To develop the knowledge on communication and presentation skills.
- To improve communication skill

Course Outcome:

After the completion of this course, a successful student will be able to:

1. Understand the basic concepts of quantitative ability
2. Understand the basic concepts of logical reasoning skills
3. Acquire satisfactory competency in use of verbal reasoning
4. Solve campus placements aptitude papers covering Quantitative Ability, Logical Reasoning and Verbal Ability
5. Compete in various competitive exams like TNPSC, UPSC.etc.
6. Improve the communication skill

Unit - I

Introduction to Quantitative Aptitude, Speed Maths, Problems on Numbers, Averages, Ratios and Proportions, Problems on Ages

Unit - II

Number Series, Blood Relation, Image Analysis, Direction Sense, Syllogism, Coding and Decoding

Unit – III

Percentages, Data Interpretation, Profit and Loss, Simple Interest and Compound Interest

Unit – IV

Parts of Speech, Tense, Subject Verb Agreement, Active and Passive Voice, Articles, Prepositions

Unit - V

Conditional Clause, Degrees of Comparison, Goal Setting, Interpersonal Skills

கற்பகம் உயர்கல்வி கலைக்கழகம்
தமிழ்த்துறை
பகுதி - I தமிழ்ப் பாடத்திட்டம் (2015 - 2016)
இரண்டாம் பருவம்
(இளநிலை அறிவியல் பட்ட வகுப்புகளுக்குரியது)
(For I-UG Science Degree Classes) 15LSU201

பாடத்திட்டப் பொதுநோக்கம்

- கற்றல் வழி சிந்தனைத் திறனையும், கருத்து வெளிப்பாட்டுத் திறனையும், மேம்படுத்துதல்.
- ஐந்தாம் பருவம் மேம்படுத்துதல்.
- இலக்கியங்கள் உணர்த்தும் வாழ்வின் நுட்பமான பகுதிகளை உணர்த்துதல்.
- மனித மனத்தினைப் பக்குவப்படுத்துதலில் இலக்கியம் தரும் பங்கினை உணர்த்துதல்.
- வளர்ந்து வரும் சமூகத்தில் அறஉணர்வு, பண்பாடு போன்றவை குறித்து அறிவூட்டல்.
- அரசுத் தேர்வுகளுக்கு மாணவர்களை ஆயத்தமாக்குதல்.

பாடத்திட்டப் பயன் விளைவு

1. இந்திய குடியரிமைப் பணி முதலான போட்டித் தேர்வுகளில், விருப்பப் பாடமாக இடம்பெறுகின்ற, 'தமிழ் இலக்கிய வரலாறு' குறித்த முழுமையான அறிமுகம் பெற்றிருத்தல்.
2. கல்வெட்டியல், ஓலைச்சுவடியியல் மற்றும் தொல்லியல் சார்ந்த ஆவணத் தேடலுக்குரிய ஆய்வுமனப்பான்மையுடன், இலக்கியங்களை அணுகுதல்.
3. தமிழின் வளர்ச்சித் துறையாகிய, 'அறிவியல் தமிழ்' ; 'இணைய தமிழ்' குறித்த பன்னோக்கு அணுகுமுறையிலான ஆய்வுச் சிந்தனை மேம்பாடு.
4. வேலைவாய்ப்புக்குரிய சுயதிறன் மேம்பாட்டுடன், படைப்பாக்கத்திறன் மேம்பாடும் பெற்றிருத்தல் .
5. சமுதாய மற்றும் வாழ்வியல் மதிப்புகளைப் பேணுவதற்குக் கருவியாக இலக்கியங்களை நாடுகின்ற மனப்பான்மை வளர்ச்சி.
6. மொழிபெயப்புத் துறைசார்ந்த வேலைவாய்ப்புத் திறன் பெற்றிருத்தல்

அலகு - I : பக்தி இலக்கியம்

1. சைவம் - மூவர் தேவாரத்திலிருந்து தேர்ந்தெடுக்கப்பெற்ற 15 பாடல்கள்
2. வைணவம் - ஆண்டாள் நாச்சியாரின் திருப்பாவையிலிருந்து 11 பாடல்கள்

அலகு - II : சங்கஇலக்கியம்

அ). எட்டுத்தொகை

நற்றிணை. 1. இலை இல பிடவம், திணை - முல்லை,

ஆசிரியர் - விழிக்கட் பேதைப் பெருங்கண்ணனார்.

2. மடல் மா ஊர்ந்து, திணை - குறிஞ்சி, ஆசிரியர் - மடல் பாடிய மாதங்கீரனார்.

குறுந்தொகை : 1. உள்ளார் கொல்லோ, திணை - பாலை, ஆசிரியர் - பெருங்கடுங்கோ.

2. யாரினும் இனியன், திணை - மருதம், ஆசிரியர் - வடமவண்ணக்கன் தாமோதரனார்.

ஐங்குறுநூறு : 1. நுண்ணேர் புருவத்த, திணை - குறிஞ்சி, ஆசிரியர் - கபிலர்.

2. அவறொறுந் தேரை, திணை - முல்லை, ஆசிரியர் - பேயனார்.

பதிற்றுப்பத்து - ததைந்த காஞ்சி, ஆசிரியர் - பாலைக் கௌதமனார்.

பரிபாடல் - வையை - திரை இரும் பனிப் பெளவம், ஆசிரியர் - மையோடக் கோவனார்.

கலித்தொகை - கடும் புனல் கால் பட்டு, திணை - பாலை, ஆசிரியர் - பெருங்கடுங்கோ.

அகநானூறு - 1. ஆடு அமைக் குயின்ற, திணை - குறிஞ்சி, ஆசிரியர் - கபிலர்.

2. யான் எவன் செய்கோ தோழி, திணை - பாலை, ஆசிரியர் - நோப்பாடியார்.

புறநானூறு - 1. சிறப்பில் சிதடு முறுப்பில், திணை - பொதுவியல்,

ஆசிரியர் - உறையூர் முதுகண்ணன் சாத்தனார்.

2. இளையரு முதியரும் வேறுபுலம் படா - ஆசிரியர் - கயமனார்.

ஆ). பத்துப்பாட்டு - சிறுபாண் ஆற்றுப்படை - கடையெழு வள்ளல்களின் சிறப்பு,
நல்லியக்கோடனின் சிறப்பு, ஈகைத் திறம்.

அலகு - III : காப்பியங்கள்

1. மணிமேகலை - பாத்திரம் பெற்ற காதை - தீவதிலகை, மணிமேகலைக்குச் சொல்லியது,
சிறைக்கோட்டம் அறக்கோட்டமாக்கிய காதை - மணிமேகலை வேண்ட,
மாவண்கிள்ளி, சிறைக்கோட்டத்தை அறக்கோட்டமாக்கியது.

2. கம்பராமாயணம் - இலக்கியநயம் மிக்க, தேர்ந்தெடுக்கப்பெற்ற 41 பாடல்கள்.

அலகு - IV : கட்டுரைகள்

1. திருக்குறளில் மனிதவள மேலாண்மைக் கருத்துக்கள் - திருமிகு ஹரி விஜயலட்சுமி.
2. தமிழர் வளர்த்த நுண்கலைகள்: சிற்பமும் ஓவியமும் - தொ.மு. பாஸ்கரத் தொண்டைமான்.
3. சமயமும் தமிழும் - பேராசிரியர் அ.ச.ஞானசம்பந்தன்.
4. தமிழில் அறிவியல் - ஒரு பார்வை - பேராசிரியர் சிவகுமார்.
5. இன்றைய நெருக்கடிப் பிரச்சனைகள் - நீர்வளம் - முனைவர் ச. முத்துக்குமரன்.

அலகு - V : இலக்கணமும் மொழிப்பயிற்சியும்

1. எழுத்து, சொல், பொருள் இலக்கண எழுத்துப்பயிற்சிகள்

2. பொதுக் கட்டுரைகள்

பாட நூல்: கற்பகச்சோலை - தமிழ் ஏடு. கற்பகம் பல்கலைக்கழகத் தமிழ்த் துறை வெளியீடு.

idia

Course Objectives:

- To enable the learners to acquire English language skills through literature.
- To familiarize them with English literature.
- To acquire Grammar knowledge.
- To help learners imbibe cultural values.
- To acquire skill of making correct sentences.
- To reflect originality on the application of soft skills and express in writing their views.

Course Outcomes:

1. Learn to enjoy the ecstasy of literature.
2. The select literary pieces will develop the confidence level of the learners.
3. To get the social values.
4. To know the importance of communication
5. Get sound knowledge in English
6. Trained to communicate well for business purpose.

Unit I:

Prose: The Unexpected- Robert Lynd

Poetry: The Village Schoolmaster – Oliver Goldsmith

Short Story: The Lion's Share – Arnold Bennett

Vocabulary: Homonyms

Grammar: Irregular Verbs

Unit II:

Prose: Travel by Train – J. B. Priestly

Poetry: The Gift of India – Sarojini Naidu

Grammar: Sentence patterns

Composition: Reading Comprehension

Unit III:

Prose: Women's Education is Almost More Important than the Education of Boys and Men – Indira Gandhi

Short Story: The Necklace – Guy De Maupassant

One-Act Play: The Referee – W.H. Andrews and Geoffrey Dearmer

Vocabulary: Similes

Grammar: Discourse Markers

Composition: Report Writing

Unit IV:

Poetry: Ozymandias – P.B. Shelley

One-Act Play: The Pot of Broth- W.B. Yeats

Vocabulary: Collective Nouns

Grammar: Correction of Sentences

Composition: Picture Reading

Unit V:

Short Story: The Silver Butterfly– Pearl S. Buck

One-Act Play: The Bear – Anton Chekov

Vocabulary: Acronyms

Grammar: Question Tags

Composition: Drafting Advertisement

Text Book

1. Wings of Communication 2014. Board of Directors. Emerald Publishers: Chennai

Reference Book

1. Syamala, V. English for Communication. 2006. Emerald Publishers: Chennai.

Course Objectives

- To understand how C++ improves C with object-oriented feature.
- To learn the basic oops concepts
- To learn the syntax and semantics of classes in C++ programming language.
- To learn how to perform operator overloading and inheritance.
- To learn how to design C++ using pointers.
- To learn file handling in C++.

Course Outcomes (COs)

Upon completion of this course the students will be able to :

1. Understand the difference between top-down and bottom-up approach.
2. Apply the oops concept in the respective fields.
3. Apply the concepts of object-oriented programming in constructor and destructor.
4. Understand how to apply the major object-oriented concepts to implement inheritance and polymorphism.
5. Apply pointer concepts in C++
6. Use the concepts of preprocessor directives and macros.

Unit I

Principles of Object Oriented Programming: Basic concepts of object oriented programming – benefits of OOP – structure of c++ program – Declaration of variables. Control statements – Decision making statements – if ..else, jump, goto, break, continue- switch case statements – do-while – while statement, for statement. Inline functions – function overloading.

Unit II

Classes and Objects: Specifying a class – defining member functions Inside the Class – Defining member functions Outside the class - static data members – static member functions - array of objects – friendly functions. Constructors and destructors: - Constructors – multiple constructors in a class – constructors with default arguments - copy constructor – destructors.

Unit III

Operator Overloading: Defining operator overloading – overloading unary operators – overloading binary operators – overloading binary operators using friends – type conversions. Inheritance :- Inheritance – defining derived classes – single, multilevel, multiple, hierarchical inheritance- hybrid inheritance – virtual base classes – abstract classes.

Unit IV

Pointers: Pointers to objects – this pointer – pointers to derived classes – virtual function. Managing console I/O operations: - C++ streams – C++ stream classes – unformatted I/O operations – formatted console I/O operations – Managing output with manipulators.

Unit V

Files: Classes for file stream operations – opening and closing a file – sequential input and output operations – updating a file random access – command line arguments. Templates: - Templates – class templates – function templates – member function templates.

3. www.cppreference.com/

Instruction Hours / week: L: 0 T: 0 P: 5 C: 3**Marks: Internal: 40 External: 60 Total: 100****End Semester Exam: 3 Hours****Course Objectives**

- To understand how C++ improves C with object-oriented feature.
- To learn the syntax and semantics of classes in C++ programming language.
- To learn how to perform operator overloading
- To learn how to perform inheritance.
- To learn how to design C++ using pointers.
- To learn file handling in C++.

Course Outcomes (COs)

After the completion of this course, a successful student will be able to:

1. Understand the difference between top-down and bottom-up approach.
2. Apply the concepts of object-oriented programming in constructor and destructor.
3. Understand how to apply the major object-oriented concepts to implement inheritance and polymorphism.
4. Apply pointer concepts in C++
5. Use the concepts of preprocessor directives and macros.
6. Apply inheritance in the programming

List of Programs:

1. Create a class to implement the data structure STACK. Write a constructor to initialize the top of the stack to zero .write a member function PUSH () to insert an element and a member function POP () to delete an element. Check for overflow and underflow conditions.
2. Create a class ARITH which consists of a FLOAT and an INTEGER variable. write member functions ADD(),SUB(),MUL(),DIV(),MOD() to perform addition, subtraction, multiplication, division and modulus respectively. Write member functions to get and display MAT () object values.
3. Create a class MAT as a 2D matrix and R, C represents rows and columns of the matrix. Overload the operators +,-,* to add, subtract, multiply two matrices. Write member functions to get and display MAT () object values.
4. Create a class STRING. Write member functions to initialize to get and display strings. overload the operator + to concatenate two strings, == to compare two strings and a member function to find the length of the strings.
5. Create a class which consist of EMPLOYEE detail like eno, ename, dept, basic salary, grade. Write member functions to get and display them. Derive a class PAY from the above class and write a member functions to calculate da , hra, pf depending on the grade and display the pay slip in a neat format using console I/O.
6. Create a class SHAPE which consist of two virtual functions cal_Area() and cal_Peri() to calculate area & perimeter of various figures. Derive three classes SQUARE, RECTANGLE and TRIANGLE from the class SHAPE and calculate area and perimeter of each class separately and display the result.

7. Create two classes which consist of two private variables, one integer and one float variable in each class. Write member functions to get and display them. Write a FRIEND function common to both classes which takes the object of the above two classes as arguments and the integer and float values of both the objects separately and display the result.
8. Write a user-defined function USERFUN() which has the formatting commands like setw(), showpos(), precision(). Write a program which prints an multiplication table and uses userfun() for formatting using inheritance.
9. Write a program to perform insertion, deletion and updating using files.
10. Write a program which takes a file as arguments and copies into another file with line numbers using command line arguments.

Course Objectives

- To understand the fundamentals of computer organization.
- To learn about the processor and memory concept.
- To learn about the peripherals
- To learn the system architecture of a computer.
- To learn installation and preventive maintenance.
- To learn about the assembling of a system

Course Outcomes (COs)

Upon completion of this course the students will be able to :

1. Understand the concept of computer organization and hardware.
2. Able to perform installation, configuration and upgrading of hardware and software.
3. Able to install/connect associated peripherals.
4. To assemble/setup personal computers.
5. Understand and implement maintenance tasks.
6. Diagnose troubleshoot in hardware and software and other equipments of a system

Unit I

Micro Computer System: Introduction to Micro Computer System – Computer Organization – Number Systems and Codes Memory – Arithmetic and Logic Unit – Control Unit.

Unit II

Peripheral Devices: Introduction to Peripheral Devices – Keyboard – CRT Display monitor – Printer – Magnetic Storage Devices – Floppy Disk Drive – Hard Disk Drive – Peripherals Interfaces and Controller – Keyboard Interface

Unit III

Display Adapter: CRT Display — CRT Controller –Auxiliary Subsystems – Data Communication fundamentals – Serial Port in PC – Real time clock (RTC) – Magnetic Tape Subsystems – LAN – Memory Expansion Options

Unit IV

Installation and Preventive Maintenance: Pre Installation Planning – Installation Practice – Routine Checks – Special Configurations – Memory Up Gradation

Unit V

Trouble shooting: Troubleshooting – Computer faults – Nature of faults – Types of Faults Diagnostic Programs and Tools — Faults in Elimination Process – Systematic Troubleshooting – POST (Power on Self Test)

Text Book

- 1 IBM PC and Clones, B. Govindarajalu, Tata McGraw Hill Publishing Company, Second Edition, 2011. [UNIT I & II]
- 2 Introduction to PC Hardware and Troubleshooting, Michael Meyers, The Mike Meyers' Computer Skills, McGraw Hill, First Edition, 2003. [UNIT III - V]

Reference Book

- 1 Hardware and Software of Personal Computers, Sanjay K. Bose, New Age International Publishers, 1999.

Course Objectives

This course enables the students to

- understand the basic concepts of statistical methods
- develop the mathematical skills in the areas of measures.
- learn the mathematical knowledge in hypothesis testing
- gains the numerical techniques as powerful tool in scientific computing.
- understand the basic concepts of statistical correlation.
- Understand the basics of SPSS.

Course Outcomes (COs)

On successful completion of the course, students will be able to

1. develop and apply the appropriate numerical techniques for frequency distribution and diagrammatic presentation.
2. understand the various measures such as mean, median, mode techniques.
3. understand the basics of correlation and regression methods
4. understand the concepts of probability theory and theoretical distribution
5. understand the concepts of significance tests and apply to the fields.
6. Understand SPSS and apply in the respective field.

Unit-I

Meaning and definition of statistics – Classification of data - Frequency distribution - Diagrammatic Presentation – Bar diagram and Pie diagram – Graphic Presentation – Histogram, Frequency Polygon, Frequency curve and Ogives.

Unit – II

Measures of central tendency – Arithmetic mean, median and mode. Measures of dispersion-Range, standard deviation, Coefficient of variation.

Unit – III

Correlation – Meaning and definition - Scatter diagram –Karl pearson's correlation coefficient. Rank correlation.

Regression: Regression in two variables – Regression coefficient problems – uses of regression.

Unit – IV

Probability theory : Axioms of Probability–Addition theorem – Multiplication theorem– conditional Probability.

Theoretical Distribution: Basic Concepts - Binomial distribution, Poisson Distribution & Normal distribution (No derivations) and simple problems.

Unit – V

Test of significance: Tests based on Means only-Both Large sample and Small sample tests - Chi square test - goodness of fit.

Text Book:

1. R.S.N.Pillai , Bagavathy. “Statistics”, S. Chand & Company Ltd. New Delhi, 2002.

References:

1. Jerrold H.Zar, 2003, Bio-Statistical Analysis, Fourth Edition, Pearson Education, (Pte) .Ltd, New Delhi.
2. PA.Navnitham. 2006. Business Mathematics and Statistics, Jai Publishers, Trichy - 21,
3. S.P. Gupta . “Statistical methods”. Sultan Chand & Sons, New Delhi,2001.

Course objectives:

- To make the students learn the basic concepts, conventions, nature of accounting
- To know about the income and assets over time.
- To understand the financial performance.
- To understand the concepts of tax strategies.
- To learn about the quality management activities.
- To learn about to post ledger and prepare trial balance.

Course outcomes:

- Comprehend the accounting concepts, principles and to comply the accounting standards.
- Understand the role of accounting and its limitations.
- Compute the economic information conveyed in financial statements.
- Understand the links among the economic characteristics and strategies of a business.
- Compute the assessments of its profitability and market valuation.
- Able to prepare trial balance, profit and loss account and balance sheet.

Unit I

Accounting – Definition- Fundamentals of Book Keeping – Branches of Accounting – Nature of Accounts - Accounting Concepts and Conventions – Journal – Ledger.

Unit II

Subsidiary books – Introduction – Types of subsidiary books - purchases book - sales book- returns book - cash book - single column cash book – Two column cash book - Three column Cash book - petty cash book

Unit III

Trial balance - Errors and their rectification - Final accounts of a sole trader with adjustments - Trading and Profit and Loss Account - Balance Sheet – Difference between Profit and Loss Account and Balance Sheet.

Unit IV

Depreciation- Definition- Methods of depreciation- straight line method- written down value method- annuity value method- sinking fund method- provisions and reserves

Unit V

Accounts for Non Profit organization- Receipts and Payments and income and expenditure account and Balance sheet – Difference between Receipts and Payments and income and expenditure account and Balance sheet.

Note: Distribution of Marks between problems and theory shall be 75% and 25%.

Instruction Hours / week: L: 0 T: 0 P: 3 C: 2
Total: 100

Marks: Internal: 40 External: 60

End Semester Exam: 3 Hours

Course Objectives

- To understand the fundamentals of computer organization.
- To learn about the processor and memory concept.
- To learn about the peripherals
- To learn the system architecture of a computer.
- To learn installation and preventive maintenance.
- To learn about the assembling of a system

Course Outcomes (COs)

Upon completion of this course the students will be able to :

1. Understand the concept of computer organization and hardware.
2. Able to perform installation, configuration and upgrading of hardware and software.
3. Able to install/connect associated peripherals.
4. To assemble/setup personal computers.
5. Understand and implement maintenance tasks.
6. Diagnose troubleshoot in hardware and software and other equipments of a system

List of Programs:

1. Identifying External Ports and Interfacing
2. Identifying PC cards and Interfacing.
3. Assembling of PC
4. Preventive Maintenance of a PC
5. Trouble Shooting of SMPS
6. Keyboard Servicing
7. Study of CRT
8. Communication and Bus Interfacing
9. Partitioning and Formatting Hard disks.
10. Installing System And Application Software

Instruction Hours / week: L: 0 T: 0 P: 3 C: 2**Marks: Internal: 40 External: 60 Total: 100
End Semester Exam: 3 Hours****Course Objectives**

This course enables the students to

- understand the basic concepts of statistical methods
- develop the mathematical skills in the areas of measures.
- learn the mathematical knowledge in hypothesis testing
- gains the numerical techniques as powerful tool in scientific computing.
- understand the basic concepts of statistical correlation.
- Understand the basics of SPSS.

Course Outcomes (COs)

On successful completion of the course, students will be able to

1. develop and apply the appropriate numerical techniques for frequency distribution and diagrammatic presentation.
2. understand the various measures such as mean, median, mode techniques.
3. understand the basics of correlation and regression methods
4. understand the concepts of probability theory and theoretical distribution
5. understand the concepts of significance tests and apply to the fields.
6. Understand SPSS and apply in the respective field.

List of Programs:

1. Using SPSS Package, to draw bar diagram and pie diagram for discrete series.
2. Using SPSS Package, to draw mutable bar diagram for discrete series.
3. Using SPSS Package, to calculate the Mean for individual, discrete.
4. Using SPSS Package, to calculate the Mean for continuous series.
5. Using SPSS Package, to calculate the Median for individual and discrete series.
6. Using SPSS Package, to calculate the Mode for individual and discrete series.
7. Using SPSS Package, to calculate the Standard deviation.
8. Using SPSS Package, to calculate the Karl Pearson's Correlation.
9. Using SPSS Package, to calculate the Rank Correlation Coefficient for Untied Rank.
10. Using SPSS Package, to calculate the Rank Correlation Coefficient for Tied Rank.

Instruction Hours / week: L: 0 T: 0 P: 3 C: 2**Marks: Internal: 40 External: 60 Total: 100**
End Semester Exam: 3 Hours**Course Objectives:**

- To make the students learn the basic concepts, conventions, nature of accounting
- To know about the accounting process and preparation of final accounts of a sole trader.
- To understand the cost concepts, types of costing and preparation of cost sheet.
- To understand the concepts of management accounting
- To compute financial statement analysis
- To learn about to create a company and prepare all accounting reports

Course Outcomes:

1. Comprehend the accounting concepts, principles and to comply the accounting standards.
2. Prepare the final accounts of a sole trader.
3. Know the cost concepts, types of costing and preparation of cost sheet.
4. Understand the concepts of management accounting
5. Compute financial statement analysis
6. Apply the concepts in the respective field.

List of Programs:

1. Create a new company in integrate accounts mode and account with inventory mode
2. Create a primary and sub groups using single or multiple ledger mode
3. Create minimum 10 ledgers using single or multiple ledger, and alter and delete any 2 ledger
4. Create a new company, ledger and record minimum 10 transactions without adjustment
5. Create a new company, ledger and record minimum 10 transactions with any five adjustments and display the relevant results
6. Enter the following voucher
 - Payment vouchers
 - Receipt
 - Purchase
 - Sales
 - Credit note
 - Debit note
 - Journals
 - Memo
 - Optional

7. Prepare trail balance for the company
8. Prepare profit & loss a/c and balance sheet

Course Objectives

- To create the awareness about environmental problems among people.
- To create the awareness about renewable and non renewable resources of the region.
- To understand the environmental acts, rights, rules legislation.
- To develop an attitude of concern for the environment.
- To motivate public to participate in environment protection and improvement.
- To understand forestation and deforestation.

Course Outcomes (COs)

Upon completion of this course the students will be able to:

1. Understand the ecological and physical sciences and apply in environmental problem solving.
2. Understand the concepts of the design and evaluation of environmental policies and institutions.
3. Known to appreciate the ethical, cross-cultural, and historical context of environmental issues.
4. Motivating public to participate in environment protection and improvement.
5. Apply systems concepts and methodologies to analyze and understand interactions between social and environmental processes.
6. Understand the values of global warming and how to save our environment.

Unit - I: Eco system and natural resources: Environment – Definition – components - Ecosystem - Definition, Concept, Scope, importance, structure and functions of ecosystem. Energy flow, Ecological succession. Food chains and food webs. Classification of ecosystem. Natural resources: Forest resources; water resources

Unit - II: Environmental pollution: Cause, effects and control measures of Air pollution, water pollution, soil pollution, marine pollution, noise pollution, thermal pollution and nuclear hazards pollution. Solid waste management.

Unit - III: Biodiversity and its conservation: Introduction- Definition, genetic, species and ecosystem diversity, biogeographical classification of India- Value of biodiversity: Consumptive, productive uses; social, ethical, aesthetic and option values. Threats to biodiversity: habitat loss, poaching of wildlife, man-wildlife conflicts.

Unit - IV: Social issues and the environment: Urban problems related to energy- water conservation and management -Rain water harvesting- water shed management. Resettlement and Rehabilisaion. Natural resources and associated problems and sustainable utilization. Environmental Education.

Unit - V: Environment ethics: Environmental Ethics - Gender equity, ethical basis of environment education and awareness, conservation ethic and traditional value systems of India. Valuing nature, cultures, social justice, Human heritage, equitable use of resources, preserving resources for future generation, common property resources, Ecology and its uses and its degradation, Introduction to Environmental Protection Act (EPA).

Text Books

3. Shaw, R and Krishnamurthy, R.R. 2009. Disaster management: global challenges and local solutions Universities Press (India) Private Ltd, Hyderabad.
4. Sorokin Pitirim. A, 1942. Man and Society In Calamity. New York: Dutton, 1942
5. Patrick L.Abbott, 2008. Natural Disasters, Mc Graw Hill, New York. Page: 1-7.

Course Objective:

- To train students to understand the basic concepts of Quantitative Ability
- To understand the number series, analysis problems.
- To acquire knowledge about the analytical, verbal and logical reasoning.
- To practice to evaluate various real-life situations
- To develop the knowledge on communication
- To develop the presentation skills.

Course Outcome:

After the completion of this course, a successful student will be able to:

1. Understand the basic concepts of quantitative ability
2. Understand the basic concepts of logical reasoning skills
3. Acquire satisfactory competency in use of verbal reasoning
4. Solve campus placements aptitude papers covering Quantitative Ability, Logical Reasoning and Verbal Ability
5. Compete in various competitive exams like TNPSC, UPSC.etc.
6. Improve the communication skill

Unit - I

Introduction to Quantitative Aptitude, Speed Maths, Problems on Numbers, Averages, Ratios and Proportions, Problems on Ages

Unit - II

Number Series, Blood Relation, Image Analysis, Direction Sense, Syllogism, Coding and Decoding

Unit – III

Percentages, Data Interpretation, Profit and Loss, Simple Interest and Compound Interest

Unit – IV

Parts of Speech, Tense, Subject Verb Agreement, Active and Passive Voice, Articles, Prepositions

Unit - V

Conditional Clause, Degrees of Comparison, Goal Setting, Interpersonal Skills

Course Objectives:

- To develop confidence to respond in English during situations where the use of English is imperative.
- To develop fluency in actual conversation in the English language.
- To develop speech skills necessary for confident and intelligent participations in Group Discussions and develop skills related to teamwork in work places.
- To develop confidence to respond in English during situations where the use of English is imperative.
- To develop fluency in actual conversation in the English language.
- To develop knowledge about business communication.

Course Outcomes:

1. Students learnt the basics and purposes of listening skill.
2. Students understand importance of speaking.
3. Students developed the speaking skills on telephone, business and also in travel
4. Learnt some effective vocabulary learning strategies.
5. Students will able to communicate clearly and effectively and
6. Student will be able to handle their day to day affairs well with their knowledge of language skills.

Unit I

Listening: Listening comprehension – Listening for Specific Information –Note Taking – Interpreting Charts and Diagrams.

Unit II

Speaking: Essentials of effective communication – Greeting and Introducing – Making requests – Asking for permission – Giving and Denying Permission – Offering and Accepting Help – Asking for and Declining Help – Giving Instructions and Orders - Talking about likes and dislikes.

Telephone Skills – Understanding telephone conversation – handling calls – leaving messages – making requests - giving instructions and orders

Discussion Skills – Giving your opinion – agreeing and disagreeing – Making suggestions – Interrupting – questioning – reporting – Dealing with questions.
(Completing dialogues)

Unit III

Reading: Reading – Reading with a purpose –Skimming and Scanning – locating main points – reading critically – Sequencing of sentences – Reading comprehension.

Unit IV

Writing: Paragraph Writing – Descriptive and Narrative. Safety Instructions/ Suggestions. Expansion of Abbreviations – Spellings- Report writing.

Translation- Translating short sentences and passages from English to Tamil and from Tamil to English.

Unit V

Vocabulary: Improve English vocabulary: Synonyms – Antonyms – Prefixes – Suffixes – Idioms – Collocations – Different types of English – British and American (Choose the best answer type from a database of 50 words each for each topic)

Functional Grammar: Forming questions, getting answers – Articles – Parts of Speech – Punctuation – Common mistakes in English (Homophones)(Exercise based)

REFERENCE BOOKS:

1. Language in Use: Kenneth Anderson, Cambridge University Press.
2. Study Speaking: A course in Spoken English for Academic Purpose: Kenneth Anderson, Joan MacLean and Tony Lynch, Cambridge University Press, 2008.
3. Spoken English Part I & II (for Tamil speakers), Orient Longman Pvt. Ltd.
4. Dr. J. John Love Joy, Dr.Francis M.Peter S.J. “Lets Communicate – Basic English for Everyone”, Vaigarai Publications, 1st edition, Dindigul 2007.

Course Objectives

- To understand the fundamental concepts of data structures
- To Learn linear data structures – lists, stacks, and queues
- To apply Tree and Graph structures
- To understand sorting, searching and hashing algorithms
- To develop application using data structures.
- To learn about the space and time complexity.

Course Outcomes (COs)

Upon completion of this course, the student will be able to:

1. Implement abstract data types for linear data structures.
2. Apply the different linear and non-linear data structures to problem solutions.
3. Analyze the applications of tree.
4. Implement graph theory over various data structures.
5. Critically analyze the various sorting algorithms.
6. Understand the concepts of data structure and implement them.

Unit I

Introduction: Introduction to Algorithms- Analyzing Algorithms- Creating the Algorithms; Arrays: Representation of Arrays- Stacks and Queues- Multiple Stacks and Circular Queue- Sparse Matrices- Polynomial Addition; Infix to Postfix Conversions- Evaluation of Expression

Internal Sorting: Insertion sort – Quick sort- Selection sort – Shell sort – 2-Way Merge sort

Searching: Linear Search

Unit II

Linked list: Singly Linked List: Insertion and Deletion in Singly Linked List- Linked Stacks and Queues;

Doubly Linked List: Insertion and Deletion in Doubly Linked List - Sparse Matrices- Polynomial Addition;

Dynamic Storage Management: Allocating blocks- Freeing Blocks.

Unit III

Non Linear Structures: Trees: Basic Terminology; Binary Trees: Binary Tree Representations- Binary Tree Traversals - Threaded Binary Trees

Searching and Sorting: Binary Search- Heap sort

Application of Trees: B Trees- Tree indexing.

Unit IV

Non Linear Structures: Graphs: Basic Terminology– Graph Representation- Traversals- Spanning Tree- Kruskal's Algorithm

Applications of Graph: Shortest Path: Single Source All Destinations- All Pairs Shortest

Unit V

Sorting: External Sorting: K-Way Merge Sort- Sorting with tapes: Balanced Merge sort, Polyphase Merge .Static Tree – Dynamic Tree. Hash Tables: Hashing Functions – Overflow handling.

2. <http://www.cs.sunysb.edu/~skiena/214/lectures/>
3. www.amazon.com/Teach-Yourself-Structures-Algorithms

Course Objectives

- To describe a good introduction to the discipline of database management systems.
- To give a good formal foundation on the data models and E-R model.
- To demonstrate the principles database constraints behind systematic database design by covering normalization concept.
- To introduce the concepts of basic SQL as a universal Database language.
- To have an introductory knowledge about the PL/SQL concept.
- To learn about the URL concept

Course Outcomes (COs)

Upon completion of this course, students will be able to:

1. Demonstrate an understanding of the elementary features of RDBMS
2. Design conceptual models of a database using ER modeling for real life applications
3. Analyze the existing design of a database schema and apply concepts of normalization to design an optimal database
4. Able to develop structured query language (SQL) queries to create, read, update, and delete relational database
5. Design efficient PL/SQL programs to access Oracle databases
6. Understand and apply the database normalization concepts.

Unit I

Databases and Database Users --Characteristics of the Database Approach - Actors on the Scene- Workers behind the Scene- Advantages of Using the DBMS Approach- A Brief History of Database Applications- Database System Concepts and Architecture : Data Models, Schemas, and Instances - Three-Schema Architecture and Data Independence- Database Languages and Interfaces- The Database System Environment- Centralized and Client/Server Architectures for DBMSs- Classification of Database Management Systems.

Unit II

Data Modeling Using the Entity-Relationship (ER) :Conceptual Data Models for Database Design -A Sample Database Application -Entity Types, Entity Sets, Attributes, and Keys -Relationship Types, Relationship Sets, Roles,and Structural Constraints -Weak Entity Types -ER Diagrams, Naming Conventions, and Design Issues. The Enhanced Entity-Relationship: Subclasses, Superclasses, and Inheritance - Specialization and Generalization - Constraints and Characteristics of Specialization and

Generalization Hierarchies -Modeling of UNION Types Using Categories- Data Abstraction, Knowledge Representation.

Unit III

Relational Algebra: Relational Algebraic Operations-Aggregate Function-Update Operations.SQL: Characteristics-Advantages& Action-Data types and Literals-Types of SQL Commands:DDL,DML,DQL,DCL,DAS,TCS-SQL Operators-Arithmetic, Comparison, Logical& Set Operator-Operator Precedence. Tables, view and Indexes: Introduction-View-Indexes. Queries and subqueries: Introduction-Subqueries-Aggregate Function-Insert, update and Delete Operations.

Unit IV

Overview – declaration section – executable command section: conditional logic, loops, CASE statements – exception handling section. Triggers: definition – types: row level, statement level, before and after, instead of – syntax – enabling and disabling triggers - replacing and dropping triggers. Cursors – definition – open – fetch – close – cursor attributes- select for update – types : implicit, explicit. Procedures, Functions, and Packages: Local and global – procedures vs. functions – stored procedures, functions – create procedure syntax - create function syntax – package header – package body – calling procedures, functions, package members. Replacing and dropping procedures, functions, packages.

Unit V

Database Design Theory and Normalization: Basics of Functional Dependencies and Normalization for Relational Databases-Informal Design Guidelines for Relation Schemas-Functional Dependencies-Normal Forms Based on Primary Keys-General Definitions of Second and Third Normal Forms-Boyce-Codd Normal Form-Multivalued Dependency and Fourth Normal Form-Join Dependencies and Fifth Normal Form.

5. Design efficient PL/SQL programs to access Oracle databases
6. Understand and apply the database normalization concepts.

List of Programs:

1. Create a table with following fields:
Staff table:

Field name	Constraint	Type	Size
Staff_no	Primary key	Character	6
Staff_name	Not Null	Character	30
Gender	Check	Character	1
Dob		Date	
Dept_code	Foreign key	Character	4
Designation		Character	15
Basic		Number	7,2

Department table:

Field name	constraint	Type	Size
Dept_code	Primary key	Character	4
Dept_name		Character	30

Execute the following queries:

- Insert records for all the staff.
 - Select the records for male staff.
 - Select the staff whose name start with S.
 - Update the records.
 - To list the staff who joined 2 years back.
 - To list the staff in computer science dept.
 - To list the staff_name and the dept_name in which he/she works.
 - To list the maximum and minimum salary in each dept.
 - To list the dept along with the total amount spent on salary
 - To list the name of the staff who draw the salary more than the average salary.
2. Perform queries using string functions.
 3. Perform queries using mathematical functions.
 4. Perform queries using date functions.
 5. Perform queries using aggregate and set functions.
 6. Creation the following
 - Views
 - Objects
 - Sequence
 - Synonyms.
 7. Create a table with the following fields:

Book table:

Field name	Constraint	Type	Size
Access_no	Primary key	Character	6
Title		Character	30
Author		Character	30
Publisher		Character	30
Subject		Character	10
Price		Number	6,2

Execute the following queries:

- List the C and C++ books.
- List the books written by a particular author.
- List the books which costs between Rs.300/- and Rs.500/-

- List the no of books available in each subject.
- List the books in the decreasing order of the cost.
- Calculate the total cost and average cost of the available books
- List the books of minimum cost and maximum cost.

8. Perform different types of join operations between the two tables.
9. Create a table to store the salary details of the employees in a company. Use Cursor to update the employee salary.
10. Write a PL/SQL program to calculate the Fibonacci series, factorial, Palindrome string on user choice.
11. Create a table master book to contain the information of magazine_code, magazine_name, and publisher, Weekly/biweekly/monthly, price. Write PL/SQL block to perform insert, update and delete operations on the above table.
12. Create a table to contain phone number, user name, address of the phone user. Write a function to search for a address using phone numbers.
13. Create a table with the following fields:

Account table:

Field name	Constraint	Type	Size
Acc_no	Primary key	Character	4
Cust_name		Character	30
Branch_name		Character	30
Cust_city		Character	30

Borrower table:

Field name	Constraint	Type	Size
Acc_no	Foreign key	Character	30
Branch_name		Character	30
Amount		Number	8,2

Write the procedure to update the records of the tables.

14. Write a package to perform arithmetic operations.
15. Creating triggers.

Course Objectives

This course enables the students to

- Understand the basic concepts of numerical methods
- Develop the mathematical skills in the areas of numerical methods.
- The numerical techniques as powerful tool in scientific computing.
- To develop the mathematical skills of the students in the areas of numerical methods.
- To teach theory and applications of numerical methods in a large number of engineering subjects which require solutions of linear systems, finding eigen values, eigenvectors, interpolation and applications, solving ODEs, PDEs and dealing with statistical problems like testing of hypotheses.
- To lay foundation of computational mathematics for post-graduate courses, specialized studies and research.

Course Outcomes (COs)

On successful completion of the course, students will be able to

1. Develop and apply the appropriate numerical techniques for the problem, interpret the results, and assess accuracy.
2. Understand the basics of Numerical Differentiation & Integration and numerical solutions of ordinary differential equations.
3. Understand the concepts of difference operators and the use of Interpolation.
4. Apply numerical methods to find our solution of algebraic equations using different methods under different conditions, and numerical solution of system of algebraic equations
5. Apply various interpolation methods and finite difference concepts.
6. Work numerically on the partial differential equations using different methods through the theory of finite differences.

Unit I

Solution of algebraic and transcendental equations: Bisection method –Regula Falsi method – Newton Raphson method. Polynomoial Equations – Graeffe's root squaring method.

Unit II

Solution of simultaneous linear algebraic equations: Gauss elimination method – Gauss Jordan method – Method of triangularization – Gauss-Jacobi method – Gauss-seidel method.

Unit III

Interpolation: Gregory Newton Forward and Newton Backward interpolation formula –Interpolation with unequal intervals — Lagrange’s interpolation formula – Inverse interpolation formula.

Unit IV

Numerical Differentiation and Integration: Newton’s Forward and backward differences to compute derivatives – Trapezoidal rule, Simpson’s 1/3 & 3/8 rule.

Unit-V

Numerical methods for solving ordinary differential equations – Taylor series(I order) – Euler and Modified Euler method – Runge kutta methods (II order , III order and IV order).

Text Book

1. Venkataraman .M.K., Fifth Edition,2001. Numerical Methods in Science and Engineering, National publishing Company ,Madras. (Unit I – V)

References

1. Kandaswamy. P., Thilagavathy K., and K.Gunavathy., 2013 .Numerical Methods, S. Chand & Company Ltd., New Delhi.
2. Vedamurthy V.N.,N.CH.S.N.Iyenger., 1999. Numerical Methods,Vikas Publishing House Pvt Ltd, New Delhi.

Instruction Hours / week: L: 4 T: 0 P: 0 C: 4**Marks: Internal: 40 External: 60 Total: 100
End Semester Exam: 3Hours****Course Objectives:**

- To learn about the basics of Open Source Technology
- To know the importance of Open source in the development of software
- To know the role of open source in development and distribution of higher quality, better reliability, more flexibility, and lower cost software.
- learn the open source ideals in order to apply those principles
- learn about the open source software and hardware and free software
- learn about the open source database mysql.

Course Outcome:**The student should able to**

1. Gain knowledge about common open source licenses and the impact of choosing a license
2. Able to explain open source project structure and how to successfully setup a project
3. install open source server and handle open source database package
4. Be competent with distributed software engineering tools and processes such as test-driven
5. Development, issues tracking, unit testing, code review, distributed version control, and continuous integration
6. Apply the knowledge and manage the database in mysql

Unit I

Why open source, what is Open source, open source principles, open standards requirements for software, open source successes, free software, what is free software?, what are some example of free software?, free software license provider, free software Vs Open source software, Public Domain , FOSS DOES not Mean any cost, proprietary Vs Open Source Licensing Model.

Principles and Open Source Methodology: History, open source initiatives, open standards principles-methodologies, philosophy, software freedom, open source software, development, Licenses, copyright.

Unit II

Open source projects: Starting and maintaining an open source project, open source hardware- open source design-open source teaching (OST).Open Source Ethics: Open Source Vs Closed Source-Open source Government-The ethics of open source-social and financial impacts of open source technology-shared software, shared source.

Unit III

Apache Web Server: Introduction-Starting, Stopping, and Restarting Apache-Configuration-Securing Apache Create the Web Site-Apache Log Files

Unit IV

MySQL: Introduction-Tutorial-Database Independent Interface-Table Joins-Loading and Dumping a Database

Unit V

Perl: Introduction-Perl Documentation-Perl Syntax Rules-A Quick Introduction To Object-Oriented Programming-What We Didn't Talk About

Text Book:

1. Open source Technologies, Kailashvadera, Vhavyesh Gandhi, Published by University Science Press, Lakshmi Publications, 1st Edition 2009. [UNIT I – III]
2. Open Source Web Development with LAMP: Using Linux, Apache, MySQL, Perl, and PHP, James Lee, Brent Ware, Publisher: Addison Wesley Date Published: December 17, 2002. [UNIT IV – V]

Reference Books:

1. Fadi P. Deek and James A. M. McHugh, Open Source Technology and Policy, 2007, Cambridge University Press.
2. Nick Wells, The Complete Guide to Linux System Administration, 2012, Delmar Cengage Learning.
3. Andrew M. St. Laurent, Understanding Open Source and Free Software Licensing, 2004, O'Reilly Media.
4. Dan Woods, Gautam Guliani, Open Source for the Enterprise, 2005, O'Reilly Media.

Course Objectives:

- To expand the knowledge of network.
- To know the importance of Web and Mobile security.
- To identify the threats and vulnerabilities.
- To learn about the commercial-grade hacking tools, techniques, and methodologies used by hackers and information.
- To learn the offensive penetration remedial technique.
- To learn Cryptography and Information Security.

Course Outcome:**The student should able to**

1. Demonstrate the ability to attack and defend network.
2. To plan a vulnerability assessment and penetration test for a network.
3. To execute a penetration test using standard **hacking** tools in an **ethical** manner.
4. To report on the strengths and vulnerabilities of the tested network.
5. To identify legal and ethical issues related to vulnerability and penetration testing.
6. Understand ethical hacking methodologies and apply cyber security concepts to discover and report vulnerabilities in a network.

Unit I

Ethical Overview – TCP/IP concepts overview – Network and Counter Attacks – Footprint and Social engineering – Port Scanning

Unit II

Linux Hacking: Basics – Vulnerabilities – Firewall in Linux – Linux operating system defense – Linux Loadable Kernel Modules; Linux Tools: Application Security – Encryption – Log and Traffic Managers – Security countermeasures; Hacking: Routers – Cable Modems – Firewalls – Tools

Unit III

Hacking Mobiles Devices: Types of Handheld Devices – Common OS in handheld devices – Vulnerabilities in Handheld devices – Defending Handheld devices; Bluetooth Hacking: Introduction – Attacks against Bluetooth – Blue Hacking Tools – Bluetooth Security Tools

Unit IV

Hacking Web Servers – Hacking Wireless Networks – Network protection system

Unit V

Penetration Testing – Reconnaissance – Scanning – Exploitation – Web-Based exploitation

Text Books

Instruction Hours / week: L: 4 T: 0 P: 0 C: 4**Marks: Internal: 40 External: 60 Total: 100
End Semester Exam: 3Hours****Course Objectives**

Enable the student

- To get knowledge and skills to master the NoSQL database mongoDB.
- To write programs using MongoDB
- To design an e-commerce data model
- To gain the knowledge on replication
- To know about Query language
- To know about query optimization

Course Outcomes(COs)

Upon completion of this course, the students will be able to:

1. Gain the right skills and knowledge needed to develop Applications on mongoDB
2. Run Applications on MongoDB
3. Do the query operation in MongoDB
4. Manipulate aggregate function
5. Design an e-commerce data model
6. Gain the knowledge on replication

Unit I

Getting Started: A database for the modern web – MongoDB through the JavaScript shell – Writing programs using MongoDB.

Unit II

Application Development: Document-oriented data – Principles of schema design – Designing an e-commerce data model – Nuts and bolts on databases, collections, and documents. Queries and aggregation – E-commerce queries – MongoDB's query language – Aggregating orders – Aggregation in detail.

Unit III

Updates, atomic operations, and deletes: A brief tour of document updates – E-commerce updates – Atomic document processing – MongoDB updates and deletes. Indexing and query optimization: Indexing theory – Indexing in practice – Query optimization.

Unit IV

Replication: Overview – Replica sets – Master-slave replication – Drivers and replication. Sharding: Overview – A sample shard cluster – Querying and indexing a shard cluster – Choosing a shard key – sharding in production.

Unit V

Deployment and administration: Deployment – Monitoring and diagnostics – Maintenance – Performance troubleshooting.

TEXT BOOK

1. Kyle Banker, 2012, “MongoDB in Action”, Manning Publications Co.

REFERENCE BOOKS

1. Rick Copeland, 2013, “MongoDB Applied Design Patterns”, First Edition, O’Reilly Media Inc.
2. Gautam Rege, 2012, “Ruby and MongoDB Web Development Beginner’s Guide”, Packt Publishing Ltd
3. Mike Wilson, 2013, “Building Node Applications with MongoDB and Backbone”, O’Reilly Media Inc.

WEBSITES

1. <http://www.mongodb.org/about/production-deployments/>
2. <http://docs.mongodb.org/ecosystem/drivers/>
3. <http://www.mongodb.org/about/applications/>
4. <http://www.mongodb.org/>

Course Objective:

- To train students to understand the basic concepts of Quantitative Ability
- To understand the number series, analysis problems.
- To acquire knowledge about the analytical, verbal and logical reasoning.
- To practice to evaluate various real-life situations
- To develop the knowledge on communication
- To develop the presentation skills.

Course Outcome:

After the completion of this course, a successful student will be able to:

1. Understand the basic concepts of quantitative ability
2. Understand the basic concepts of logical reasoning skills
3. Acquire satisfactory competency in use of verbal reasoning
4. Solve campus placements aptitude papers covering Quantitative Ability, Logical Reasoning and Verbal Ability
5. Compete in various competitive exams like TNPSC, UPSC.etc.
6. Improve the communication skill

Unit - I

Time, Speed and Distance, Time and Work, Pipes and Cisterns, Geometry, Data Arrangement

Unit – II

Analogy, Logic based Venn diagram, Probability, Permutation and Combination, Logarithms

Unit – III

Data Sufficiency, Clocks, Calendar, Reading Comprehension, Sentence Correction, Sentence Completion, Spotting the Errors, Jumbled Sentences

Unit – IV

Synonyms, Antonyms, Verbal Analogy, Statements and Assumptions, Group Discussion

Unit - V

Resume Writing, Introduction to HR rounds, Time Management, Attitude and Behaviour

Course Objectives:

- To train the students in understanding the concepts of communication.
- To be familiar with the four basic skills of English.
- To train students in developing their written communication.
- To train students in developing their presentation skills.
- To acquire the skill of making grammatically correct sentences.
- To reflect originality on the application of soft skill views and express in writing their views.

Course Outcome:

1. Students have acquired proficiency in communication.
2. Students have become adept in written communication and presentation skills.
3. Developed the skill of writing in English and that of public speaking.
4. Establish and maintain social relationships.
5. Develop communication skills in business environment.
6. Enhanced communication competency through LSRW skills

Unit I – Concept of Communication – Barrier to Communication –Body language – Personality Development – Etiquette and Manners- Soft Skills – Emotional Intelligence

Unit II – Listening Comprehension – Reading Comprehension – Paragraph writing – Precis Writing – Writing Resume and Covering Letter -Speaking – Welcome Address, Vote of Thanks, Compering, Debates, Role Play, Dialogues – Vocal Communication Techniques. Voice, Quality, Volume, Pitch

Unit III – Dicto Composition – Letter Writing (Informal, Letters to the Editor etc) – Term paper – Book reviews

Unit IV – Business Correspondence – Layout of Business Letter – Formal Styles of Business Letters – Letters of Acceptance, Appointment, Resignation, Complaint, Sending E-mails.

Unit V – Effective Presentation – Planning – Audience Analysis –Logical Sequencing – Timing of the Presentation – Conclusion – Answering Queries – Group Discussion – Interview.

Selley, John. Oxford Guide to Effective Writing and Speaking. 2005. OUP: New Delhi.

Instruction Hours / week: L: 6 T: 0 P: 0 C: 6**Marks: Internal: 40 External: 60 Total: 100
End Semester Exam: 3 Hours****Course Objectives:**

Enable the student

- To Study the basic concepts and functions of operating systems.
- To understand the structure and functions of OS.
- To Learn about Processes, Threads and Scheduling algorithms.
- To Understand the principles of concurrency, Deadlocks and Memory Management
- To Learn about the Protection and Security Concepts.
- Understand basic resource management techniques.

Course Outcome (COs):

Upon completion of this course the students will be able to:

1. Design various Scheduling algorithms.
2. Apply the principles of concurrency.
3. Design deadlock, prevention and avoidance algorithms.
4. Compare and contrast various memory management schemes.
5. Apply the Security Concepts based on Authentication.
6. Appreciate the role of operating system as System software.

Unit I

Introduction -Mainframe systems Desktop Systems – Multiprocessor systems – distributed systems – real time systems. Process: - Process concepts – Operation on process – cooperation process - Inter process Communication - Mutual Exclusion - Critical sections- primitives – Semaphores – Deadlock: System Model, Deadlock characterization, Deadlock prevention, avoidance, detection, recovery from deadlock.

Unit II

Storage management: Memory Management - swapping- Contiguous memory allocation – paging, segmentation – segmentation with paging – Virtual memory :Virtual storage organization – Demand Paging, Process Creation – Page replacement – Thrashing.

Unit III

Processor Scheduling : preemptive scheduling : - Scheduling Criteria – Scheduling Algorithms – FCFS- SJF- Priority – RoundRobin –Multilevel Queue – Multilevel Feedback Queue . Multiprocess schedule: Real time schedule, Algorithm evaluation: Deterministic Modeling, Queue Model, Simulation

Unit IV

File systems: Introduction – File System Concepts – Access Methods – Directory structure – File Sharing – Allocation Methods – Free space management –Efficiency and performance – Recovery
Disk Performance Optimization: Introduction – Disk structure – Disk scheduling – Disk management.

Unit V

Case studies: LINUX, Windows 7, Mobile OS: History- Design principles- File systems- Memory.

pages.cs.wisc.edu/~remzi/Courses/736/Fall2002/

Course Objectives

Enable the student

- To Create windows forms using arrays and flow control statements.
- To Learn to use Basic windows controls using Visual Basic.Net
- To Learn to use the classes and namespaces in the .NET Framework class library.
- To Develop Web Applications using Microsoft ASP.NET programming.
- To Understand the concept of Multiple Document Interface and the architecture of .NET
- To handle string operations

Course Outcomes (COs)

Upon completion of this course the students will be able to:

1. Develop Windows based applications using Visual Basic.Net
2. Learn various tools in .net applications
3. Implement ADO.Net concept in VB.Net and ASP.Net applications
4. Create server side web applications using ASP.NET
5. Understand the concept of data sources and data bound controls in VB.NET
6. Learn the concept of data sources and data bound controls ASP.NET

Unit-I

Getting Started With VB.NET: The Integrated Development Environment-IDE Components-Environment Options. Visual Basic: The Language -Variables-Constants-Arrays – Variables as Objects-Flow Control Statements.

Unit-II

Writing and Using Procedures: Module Coding – Arguments. Working with Forms:Appearance of Forms- Loading and Showing Forms -Designing Menus. Multiple Document Interface

Unit- III

Basic Windows Controls: Textbox Control- ListBox, CheckedListBox-Scrollbar and TrackBar Controls. More Windows Control: The common Dialog Controls-The Rich TextBox Control.The TreeView and ListView Controls: Examining the Advanced Controls-The TreeView Control-The ListView Control-Content Page Holder.

Unit IV

Handling Strings, characters and Dates: Handling Strings and Characters – Handling Dates. Working with Folders and Files: Accessing Folders and Files – Accessing Files. Drawing and Painting with Visual Basic: Displaying Images – Drawing with GDI – Co-ordinate Transformation – Bitmaps.

Unit V

Databases: Architecture and Basic Concepts: What is database? - Server Explorer – Structured Query Language – The Query Builder – Building database Application with ADO.Net: The Architecture of ADO.Net-Creating the dataset – Data Binding – Programming the Data Adapter Objects – The Command and Data Reader Object. Programming the ADO.Net objects: The Structure of the dataset – The DataForm Wizard – Transactions – Performing Update Operations.

Enable the student

- To Create windows forms using arrays and flow control statements.
- To Learn to use Basic windows controls using Visual Basic.Net
- To Learn to use the classes and namespaces in the .NET Framework class library.
- To Develop Web Applications using Microsoft ASP.NET programming.
- To Understand the concept of Multiple Document Interface and the architecture of .NET
- To handle string operations

Course Outcomes (COs)

Upon completion of this course the students will be able to:

1. Develop Windows based applications using Visual Basic.Net
2. Learn various tools in .net applications
3. Implement ADO.Net concept in VB.Net and ASP.Net applications
4. Create server side web applications using ASP.NET
5. Understand the concept of data sources and data bound controls in VB.NET
6. Learn the concept of data sources and data bound controls ASP.NET

List of Programs:

1. Write a VB.NET program to calculate Simple interest and compound Interest.
2. Write a VB.NET program to find mouse events and coordinates where the mouse is clicked.
3. Write a VB.NET program to implement Calculator.
4. Write a VB.NET program to implement Notepad
5. Write a VB.NET program to draw several shapes and fill with color.
6. Write a VB.NET program to perform the following in list box
 - a) Add an item
 - b) Delete an item
 - c) List count
 - d) Clear the List
7. Write a VB.NET program to calculate the days elapsed between the given two dates.
8. Write a VB.NET program to create Menu and link multiple forms with different colors.
9. Write a VB.NET program to animate the picture using animation control.
10. Write a VB.NET program to check whether given string is a Palindrome or not.
11. Write a VB.NET program to generate Fibonacci series for the input given using Input box.
12. Write a program to calculate the total marks of the student and print the grade.
13. Write a VB.NET Program to maintain details of students. Use Crystal Report to generate report.
14. Write a VB.NET Program to implement Employee Payroll.
15. Write a VB.NET program to create and manipulate a File.

Course Objectives

Enable the students

- To learn about the individual communication network.
- To Learn transmission systems, relay stations.
- To Learn about Tributary stations and data terminal equipments.
- To learn the basic concepts of various modulation and demodulation techniques.
- To learn about the electronics circuits used in communication systems.
- To learn about the Analog and Digital modulation circuits.

Course Outcomes (COs)

Upon completion of this course the students will be able to:

1. Understand the communication network.
2. Gain the knowledge about the transmission and relay systems.
3. Implement antenna theory in the respective field.
4. Implement receiver and tracking
5. Gain the knowledge about modulation and demodulation techniques.
6. Able to construct analog and digital circuits.

Unit I

Modulation Techniques: Introduction to Communication Systems - Information - Transmitter - Channel - Noise - Receiver - Amplitude Modulation: AM Theory- Frequency Spectrum of AM Wave - Representation of AM - Power Relations in AM wave -AM Transmitter Block Diagram - Frequency Modulation

Unit II

Wave Propagation: EM waves - Free Space Propagation - Surface Wave Propagation - Sky Wave Propagation - Space Wave Propagation - Tropospheric Scatter Propagation - Structure of Atmosphere - Virtual Height

Unit III

Antenna Theory: Electro Magnetic Radiations - Elementary Doublet - Current and Voltage Distribution - Resonant Antennas, Radiation Patterns and Length Calculations - Non Resonant Antennas - Antenna Gain and Effective Radiated Power - Bandwidth, Beam Width and Polarization .

Unit IV

Receiver: Introduction - Super Heterodyne Receiver - Choice of IF and Oscillator Frequencies - Image Rejection - Adjacent Channel Selectivity - Spurious Response - Tracking - AGC - Double Conversion Receiver

Unit V

Analog and Digital Modulation: Introduction to PAM, PPM, PWM and PCM-Binary Phase Shift Keying - Differential Phase Shift Keying - Quadrature Phase Shift Keying - Binary Frequency Shift Keying – Similarity of BFSK and BPSK.

TEXT BOOKS

- 1 Electronic Communication Systems, Kennedy and Davis, Tata McGraw Hill, Fifth Edition, 2012 [UNIT- I]
- 2 Antenna Wave Propagation, K.D. Prasad and Satyaprakahan, Pearson Education, Indian Reprint, 2012. [UNIT II & III]
- 3 Electronic Communications, Dennis Roddy and John Coolen, Pearson Education, Fourth Edition, 2008.[UNIT IV - V]

REFERENCE BOOKS

- 1 Principles of Communication Engineering, Anok Singh & A K Chhabra , S.chand Publications, Seventh Edition, 2010.

Course Objectives

Enable the student

- To solve LPP using computer language.
- To learn to enhance in optimal use of resources
- To learn performance measures of queues
- To learn about the optimal use of Inventory
- To learn about the Network scheduling with various applications in the problems of real times.
- to know problem- solving through (computer language) programming.

Course Outcomes (COs)

Upon completion of this course the students will be able to:

1. Familiarize with the programming environment for operations research.
2. Understand the mathematical concepts using in computer programming techniques.
3. To apply the knowledge in optimal use of resources like LPP, TP, Assignment problems etc.
4. To impart knowledge in concepts and tools of operation research.
5. To understand mathematical models
6. To apply the techniques to the business decisions.

Unit I

Linear Programming: Formulation of LPP – Graphical solution to LPP –Simplex method – Big M method and Duality in LPP.

Unit II

Transportation model: Introduction – Mathematical Formulation –Finding initial Basic Feasible solutions – Optimum solution for non degeneracy and degeneracy model - Unbalanced Transportation problems and Maximization case in Transportation problem

Unit III

The Assignment problem - Mathematical formulation of the problem – Hungarian method –Unbalanced Assignment problem- Maximization case in Assignment problem.

Queuing theory : Introduction – Characteristics of queuing system.Problems in (M/M/1):(∞/FIFO) and (M/M/1):(N/FIFO) models .

Unit IV

Inventory Control: Introduction – Costs involved in inventory – Deterministic EOQ models – Purchasing Model without and with shortage, Manufacturing Model without and with shortage -Price break.

Unit V

PERT and CPM: Network representation – Calculation of Earliest expected time, latest allowable occurrence time.CPM - various floats for activities – critical path.

PERT –Time estimates in PERT- Probability of meeting scheduled date of completion of projects .

TEXT BOOK

1. Kanthi Swarup, Gupta P.K., Man Mohan., 2006. Operations Research, Sultan Chand & Sons, New Delhi. (For Unit I – V)

REFERENCES

1. Sharma J.K., 2009.Operations Research: Theory and Applications, Macmillan publishers India Ltd, New Delhi.
2. Sundaresan V., Ganapathy Subramanian K.S., and Ganesan K., 2005(III edition), Resource Management Techniques, A. R. Publications, Nagapatinam.

Course Objectives

Enable the student

- To solve LPP using computer language.
- To learn to enhance in optimal use of resources
- To learn performance measures of queues
- To learn about the optimal use of Inventory
- To learn about the Network scheduling with various applications in the problems of real times.
- To know problem- solving through (computer language) programming.

Course Outcomes (COs)

Upon completion of this course the students will be able to:

1. describe the functions of banking.
2. Functions of central banking.
3. Describe the policy reforms in banking industry
4. Describe the recent developments in banking
5. To state the various social banking initiatives.
6. Understand the relationship between banker and customers.

Unit I

Banks: Origin of Banks – Definition of Bank – Classification of Banks – Banking system – UNIT Banking – Branch Banking – Functions of Modern Commercial Banks – Credit Creation by Commercial Banks.

Unit II

Central Banking: Functions – Credit Control Measures – Qualitative and quantitative credit control measures – Role of RBI in regulating and controlling banks.

Unit III

Development Banks: Functions, State Bank of India – Commercial banks and rural financing – Regional Rural Banks – Co-operative banks - NBFC-- IDBI – ICICI.-NBFC-NHB- IFCI

Unit IV

Services Banking: Automated Teller Machine – Merchant Banking – Mutual Fund – Factoring service – Privatization of commercial.

Unit V

E-Banking: E-Banking Services- ATM Card- Debit Card- Credit Card- Master Card-Visa Card- NEFT- RTGS-ECS.

Text Book

1. Natarajan, Parameswaran. (2013), Indian Banking,: S. Chand and sons, New Delhi

Reference Books

2. Sundaram K.P.M. and Sundaram E.N. (1996) Modern Banking, Sultan Chand and Sons, New Delhi.

Instruction Hours / week: L: 2 T: 0 P: 0 C:1

Marks: Internal: 100 External: Nil Total: 100

Course Objective:

Enable the student

- To train students to understand the basic concepts of Quantitative Ability
- To understand the number series, analysis problems.
- To acquire knowledge about the analytical, verbal and logical reasoning.
- To practice to evaluate various real-life situations
- To develop the knowledge on communication and
- To develop the presentation skills.

Course Outcome:

After the completion of this course, a successful student will be able to:

1. Understand the basic concepts of quantitative ability
2. Understand the basic concepts of logical reasoning skills
3. Acquire satisfactory competency in use of verbal reasoning
4. Solve campus placements aptitude papers covering Quantitative Ability, Logical Reasoning and Verbal Ability
5. Compete in various competitive exams like TNPSC, UPSC.etc.
6. Reinforcing competencies in soft skills which are crucial in a social setting

Unit - I

Time, Speed and Distance, Time and Work, Pipes and Cisterns, Geometry, Data Arrangement

Unit – II

Analogy, Logic based Venn diagram, Probability, Permutation and Combination, Logarithms

Unit – III

Data Sufficiency, Clocks, Calendar, Reading Comprehension, Sentence Correction, Sentence Completion, Spotting the Errors, Jumbled Sentences

Unit – IV

Synonyms, Antonyms, Verbal Analogy, Statements and Assumptions, Group Discussion

Unit - V

Resume Writing, Introduction to HR rounds, Time Management, Attitude and Behaviour

Instruction Hours / week: L: 5 T: 0 P: 0 C:5**Marks: Internal: 40 External: 60 Total: 100**
End Semester Exam : 3 Hours**Course Objectives**

Enable the student

- To study the basic taxonomy and terminology of the computer networking and enumerate the layers of OSI model and TCP/IP model.
- To learn the function of switching concepts.
- To read the fundamentals and basics concepts of Physical layer with real time examples
- To study data link layer concepts, design issues, and protocols.
- To learn the functions of network layer and the various routing protocols.
- To familiarize the functions and protocols of the Transport layer and Application layer.

Course Outcomes (COs)

Upon completion of this course the students will be able to:

1. Understand the functions of each layer in OSI and TCP/IP model.
2. Understand the knowledge of data transmission.
3. Explain the multiplexing, switching concept and types of transmission media with real time examples.
4. Understand the error detection and correction methods and can implement the data link layer protocols
5. Learn different medium access method to avoid collision and to learn about routing table.
6. Learn basic functionalities of transport layer and application layer.

Unit I

Data Communication: An Overview – Networks – Protocols and Standards. Network Models: The OSI Model and Layers – TCP/IP Protocol Suite – Addressing.

Unit II

Physical Layer: Multiplexing – Transmission Media – Switching – Circuit switched networks – Datagram Networks – Virtual circuit networks

Unit III

Data Link Layer: Error Detection and Correction – Framing – Flow and Error Control – Protocols

Unit IV

Network Layer: Ipv4 addresses – Internetworking – Ipv4 – Delivery and Forwarding – Unicast Routing Protocols.

Transport Layer: Process to Process Delivery – User Datagram Protocol – Transmission Control Protocol.

Unit V

Transport Layer: Data Traffic – Congestion Control – Quality of Service and Techniques. Application Layer: Electronic Mail – File Transfer – WWW and HTTP – Symmetric Key and Asymmetric Key Cryptography.

Course Objectives

Enable the student

- This course presents an introduction to computer graphics designed to give the student an overview of fundamental principles.
- The course makes the student to understand about the video and raster scan displays and their storage
- Methods for modeling objects as polygonal meshes or smooth surfaces, and as rendering such as hidden-surface removal, shading, illumination, and shadows will be investigated.
- To make the student to understand the usage of input devices and its working
- The course objective relies on the student to understand the line algorithm and 2D,3D Geometrical transformation.
- To make solutions to challenging problems in different application domains.

Course Outcomes (COs)

Upon completion of the course, students will be able to

1. Have a knowledge and understanding of the structure of an interactive computer graphics system, and the separation of system components.
2. Have a knowledge and understanding of geometrical transformations and 2D viewing.
3. Be able to create interactive graphics applications.
4. Have a knowledge and understanding of techniques for representing 3D geometrical objects.
5. Have a knowledge and understanding of the various clipping algorithms and visible surface detection algorithm.
6. Learn knowledge to provide students with distinguished knowledge in the field of two- and three-dimensional computer graphics for Animation

Unit I

A Survey of Computer Graphics - Video Display Devices - Refresh Cathode Ray Tubes -Raster Scan Displays - Random Scan Displays - Color CRT Monitors - Direct –View Storage Tubes - Flat Panel Displays - Raster Scan Systems - Three Dimensional Viewing Devices - Random Scan Systems.

Unit II

Input Devices: Keyboards - Mouse –Track Ball and Space ball – Joysticks - Data Glove – Digitizers - Image Scanners - Touch Panels - Light Pens - Voice Systems. Hard Copy Devices: Printers and Plotters.

Point and Lines - Line Drawing Algorithms: DDA Algorithm - Bresenham's Line Algorithm. Circle Generating Algorithms: Mid Point Circle Algorithm.

Unit III

Two Dimensional Geometric Transformations: Basic Transformations: Translation –Rotation – Scaling - Composite Transformations: Translations – Rotations - Scalings. General Pivot Point Rotation - General Fixed Point Scaling. Two – Dimensional Viewing: The Viewing Pipeline - Window to viewport Transformation - Clipping Operations: Point Clipping - Line Clipping - Cohen Sutherland Line Clipping - Polygon Clipping: Sutherland – Hodgeman Polygon Clipping - Text Clipping.

Unit IV

Three – Dimensional Display methods, Three – Dimensional Transformations : Translation –Rotation – Scaling, Three Dimensional viewing : Viewing pipeline - Viewing coordinates - Parallel Projection – . Perspective Projections.

Unit V

Visible Surface Detection Methods: Classification of Visible Surface Detection Algorithms - Back Face Detection - Depth Buffer Method - Area Sub division Method.

Computer Animation : Design of Animation Sequences-General Computer Animation functions – Raster Animations – Computer animation Languages – Key Frame Systems – Motion Specifications

Instruction Hours / week: L: 5 T: 0 P: 0 C: 5**Marks: Internal: 40 External: 60 Total: 100****End Semester Exam: 3Hours****Course Objectives**

Enable the student

- To design components, systems and/or processes to meet required specifications for a web presence.
- To introduce at student level the technologies, concepts and principles of ERP and various users and their role,.
- To learn the development of electronic business from its origins in electronic data interchange to its current growing importance.
- To secure & work as an effective member or leader of diverse teams within a multi-level, multi-disciplinary and multi-cultural setting for the Group Website Research Project.
- Be aware of global perspectives of M-Commerce(needs, rules/regulations, and specifications)
- Demonstrate effective and integrative team-work through mobile technology.

Course Outcomes (COs)

Upon completion of this course the students will be able to:

1. Discuss electronic commerce and the stakeholders and their capabilities and limitations in the strategic convergence of technology and business.
2. Gain the global nature and issues of electronic commerce as well as understand the rapid technological changes taking place and electronic payment options.
3. Identify advantages and disadvantages of E-security technology.
4. Demonstrate awareness of ethical, social and legal aspects of ERP
5. Analyse features of existing SAP businesses, and propose future directions or innovations for specific businesses
6. Identify the recent tools of SAP applications.

Unit I

ERP AND TECHNOLOGY: Introduction – Related Technologies – Business Intelligence – E-Commerce and EBusiness – Business Process Reengineering – Data Warehousing – Data Mining – OLAP – Product life Cycle management – SCM – CRM.

Unit II

ERP IMPLEMENTATION: Implementation Challenges – Strategies – Life Cycle – Pre-implementation Tasks – Requirements Definition – Methodologies – Package selection – Project Teams – Process Definitions – Vendors and Consultants – Data Migration – Project management – Post Implementation Activities.

Unit III

ERP IN ACTION & BUSINESS MODULES: Operation and Maintenance – Performance – maximizing the ERP System – Business Modules – Finance – Manufacturing – Human Resources – Plant maintenance – Materials Management – Quality management – Marketing – Sales, Distribution and service.

Unit IV

ERP MARKET: Marketplace – Dynamics – SAP AG – Oracle – PeopleSoft – JD Edwards – QAD Inc – SSA Global – Lawson Software – Epicor – Intuitive.

Unit V

Enterprise Application Integration – ERP and E-Business – ERP II – Total quality management – future Directions – Trends in ERP.

Course Objectives

Enable the students

- To understand the fundamentals of programming such as variables, conditional and iterative execution, methods, etc.
- To understand fundamentals of object-oriented programming in Java, including defining classes, invoking methods, using class libraries, etc.
- To use the Java SDK environment to create, debug and run simple Java programs.
- To use Java in various technologies in different platforms.
- To understand the fundamental of Packages and access modifiers and interface in java.
- To understand the fundamental of Exception Handling and AWT component and AWT classes.

Course Outcomes (COs)

Upon completion of this course the student will be able to:

1. Obtain knowledge of the structure and model of the Java programming language.
2. Use the Java programming language for various programming technologies (understanding)
3. Develop software in the Java programming language (application)
4. Evaluate user requirements for software functionality required to decide whether the Java programming language can meet user requirements (analysis)
5. Use the certain technologies by implementing them in the Java programming language to solve the given problem (synthesis)
6. Choose an engineering approach to solving problems, starting from the acquired knowledge of programming and knowledge of operating systems. (evaluation)

Unit I

Introduction to Object Oriented Programming: Object Oriented Paradigm and Concepts-Structured versus Object Oriented Approach. Java Language: Features of Java -Environment-Java Architecture-Java Development Kit-Types of Java Program. Variable Declaration and Arrays: Data Types-Java Tokens –Variable Declaration – Type Casting and Conversion – Arrays, Operators, And Control Statements: Selection Constructs – Iteration Constructs –Jump Statements.

Unit II

Introduction to classes: Instance variables, Class variables, Instance Methods, Constructors, Class methods, Declaring Objects, Garbage Collection, Method Overloading - Constructor Overloading - This Reference. Inheritance: Super class variables- Method Overriding - final Keyword, Abstract Classes and Interfaces.

Unit III

Packages and Access Modifiers: Package Declaration – import statement - Access Protection. Strings: Creation – Operation on strings - Character Extraction Methods – Comparison –Searching and Modifying –String Buffer Class. Collection and Utilities: Collection of Objects – Interfaces and Classes –Iterators – List, Set, Map Implementations.

Unit IV

Input Output Classes: I/O Operations –Hierarchy of Classes – File class – Input Stream, Output Stream, FilterInputStream, FilterOutputStream, Reader and Writer classes – Random Access File class –Stream Tokenizer. Applets: Basics – Life Cycle –Methods –Graphics Class- Color, Font, and Font Metrics Class.

Unit V

Exception Handling: Fundamentals – Hierarchy of Classes – Types of Exception. Multithreaded Programming: Thread Model – Runnable Interface - Thread Class – Synchronization and Deadlock. AWT Components: AWT Classes – Basic Component and Container Classes – Frame Window in an Applet.

- To use the Java SDK environment to create, debug and run simple Java programs.
- To use Java in various technologies in different platforms.
- To understand the fundamental of Packages and access modifiers and interface in java.
- To understand the fundamental of Exception Handling and AWT component and AWT classes.

Course Outcomes (COs)

Upon completion of this course the student will be able to:

1. Obtain knowledge of the structure and model of the Java programming language.
2. Use the Java programming language for various programming technologies (understanding)
3. Develop software in the Java programming language (application)
4. Evaluate user requirements for software functionality required to decide whether the Java programming language can meet user requirements (analysis)
5. Use the certain technologies by implementing them in the Java programming language to solve the given problem (synthesis)
6. Choose an engineering approach to solving problems, starting from the acquired knowledge of programming and knowledge of operating systems. (evaluation)

List of Programs:

1. Write a program to find the sum of series $1+x+x^2+x^3+\dots$
2. Write a program to get a number using command line argument and find its factorial using recursion.
3. Write a program to find maximum and sum of an array.
4. Define a class for Employee with name and date of appointment. Create employee objects and sort them as per their date of appointment.
5. Write a program to perform string operations.
6. Write a program to accept more strings and arrange them in alphabetical order.
7. Write a program to create an applet and draw the shapes.
8. Write a program for multiplication tables by multithreading.
9. Write a program to create an exception for marks out of bounds. If mark is greater than 100 throw an exception.

10. Write an applet program to create menus.
11. Write a java code to generate key event when input is received from the keyboard.
12. Write a Java Program to design a registration Form using Applet with all the AWT controls.

Instruction Hours / week: L: 5 T: 0 P: 0 C: 5**Marks: Internal: 40 External: 60 Total: 100****End Semester Exam: 3 Hours****Course Objectives**

Enable the student

- To Understand Data Mining fundamentals and Characterize the kinds of patterns that can be discovered by association rule mining
- Understand the basic principles, concepts and applications of data warehousing and data mining
- To Compare and evaluate different data mining techniques like classification, prediction.
- To Cluster the high dimensional data for better organization of the data
- To describe complex data types with respect to spatial and web mining
- To Design data warehouse with dimensional modelling and apply OLAP operations.

Course Outcomes(COs)

Upon completion of this course the students will be able to:

1. Extract knowledge using data mining techniques and Implement Preprocess the data for mining applications and apply the association rules for mining the data
2. Design and deploy appropriate classification techniques and decision trees.
3. Understand the concept of clustering and its real time applications
4. Understand the design concept of data mining and its management.
5. Explore recent trends in data mining such as web mining, spatial-temporal mining
6. Able to know the basic concepts of data warehouse and OLAP operations

Unit I

Introduction : Fundamentals of data mining – Data Mining Functionalities – Classification of Data Mining systems – Major issues in Data Mining.

Data Warehouse and OLAP Technology: An Overview – Data Warehouse – Multidimensional Data Model – Data Warehouse Architecture

Unit II

Data Preprocessing: Needs Preprocessing the Data – Data Cleaning – Data Integration and Transformation – Data Reduction – Discretization and Concept Hierarchy Generation – Online Data Storage.

Preparing Data for Mining: Variable Measures.

Unit III

Mining Frequent Patterns, Associations and Correlations: Basic Concepts – Efficient and Scalable Frequent item set Mining Methods – From Association Mining to Correlation Analysis.

Unit IV

Classification and Prediction: Issues Regarding Classification and Prediction –Classification by Decision Tree Induction – Rule-based Classification – Prediction – Accuracy and Error Measures – Evaluating the Accuracy of a classifier or Predictor.

Unit V

Cluster Analysis Introduction :Types of Data in Cluster Analysis – A Categorization of Major Clustering Methods – Partitioning Methods – Model-Based Clustering Methods – Constraint-Based Cluster Analysis – Outlier Analysis. Applications and Trends in Data mining – Text Mining – Web Mining – Multimedia Mining-Spatial Mining – Visual data mining.

Course Objectives

Enable the student

- To know the fundamental concepts of big data and analytics.
- To explore tools and practices for working with big data
- To teach the fundamental techniques and principles in achieving big data analytics with scalability and streaming capability.
- To enable students to have skills that will help them to solve complex real-world problems in for decision support.
- To learn about stream computing.
- To know about the research that requires the integration of large amounts of data.

Course Outcomes (COs)

Upon completion of this course, the students will be able to:

1. Work with big data tools and its analysis techniques
2. Analyze data by utilizing clustering and classification algorithms
3. Learn and apply different mining algorithms and recommendation systems for large volumes of data
4. Perform analytics on data streams
5. Learn NoSQL databases and management.
6. Achieve adequate perspectives of big data analytics in various applications like recommender systems, social media applications etc.

Unit-I

Fundamentals of Big Data - The Evolution of Data Management Understanding the Waves of Managing Data- Defining Big Data - Big Data Management Architecture- The Big Data Journey -Big Data Types-Defining Structured Data-Defining Unstructured Data-Putting Big Data Together.

Unit-II

Big Data Stack- Basics of Virtualization - The importance of virtualization to big data -Server virtualization - Application virtualization - Network virtualization -Processor and memory virtualization - Data and storage virtualization-Abstraction and Virtualization-Implementing Virtualization to Work with Big Data.

Unit-III

Hadoop - Hadoop Distributed File System - Hadoop MapReduce- The Hadoop foundation and Ecosystem.

Unit-IV

Big Data Analytics-Text Analytics and Big Data-Customized Approaches for Analysis of Big Data

Unit-V

Integrating Data Sources-Real-Time Data Streams and Complex Event Processing-Operationalizing Big Data.

Course Objectives

Enable the student

- To understand the concept of cloud computing.
- To provide students with the fundamentals and essentials of Cloud Computing.
- To provide students a sound foundation of the Cloud Computing so that they are able to start using and adopting Cloud Computing services and tools in their real life scenarios.
- To appreciate the evolution of cloud from the existing technologies.
- To have knowledge on the various issues in cloud computing.
- To be familiar with the lead players in cloud.

Course Outcomes (COs)

Upon completion of this course, the students will be able to:

1. Articulate the main concepts, key technologies, strengths and limitations of cloud computing.
2. Learn the key and enabling technologies that help in the development of cloud.
3. Develop the ability to understand and use the architecture of compute and storage cloud, service and delivery models.
4. Explain the core issues of cloud computing such as resource management and security.
5. Be able to install and use current cloud technologies.
6. Evaluate and choose the appropriate technologies, algorithms and approaches for implementation and use of cloud.

Unit I

Introduction to Cloud Computing -Characteristics of Cloud Computing -Paradigm shift - Benefits of cloud computing - Disadvantages of cloud computing- Role of Open Standards-Cloud Computing Architecture: Cloud computing stack-Public cloud -Private cloud -Hybrid cloud -Community cloud

Unit II

Virtualization Technologies -Load Balancing and Virtualization -Advanced load balancing -The Google cloud - Hypervisors -Virtual machine types -VMware vSphere - Machine Imaging -Porting Applications -The Simple Cloud API - AppZero Virtual Application Appliance

Unit III

Infrastructure as a Service (IaaS) -Platform as a Service (PaaS) -Software as a Service (SaaS) -Identity as a Service (IDaaS) -Compliance as a Service (CaaS)- Cloud storage.

Unit IV

Cloud Information Security Objectives -Confidentiality, Integrity, and Availability -Cloud Security Services - Relevant Cloud Security Design Principles -Cloud Computing Risk Issues -The CIA Triad Privacy and Compliance Risks -Threats to Infrastructure, Data, and Access Control -Cloud Access Control Issues -Database Integrity Issues -Cloud Service Provider Risks Architectural Considerations General Issues- Trusted Cloud Computing -Identity Management and Access Control

Unit V

Case Study on Open Source and Commercial Clouds: Microsoft Azure- Amazon EC2-Google Web services.

Instruction Hours / week: L: 0 T: 0 P: 0 C: 3**Marks: Internal: External: 100 Total: 100
End Semester Exam: 3 Hours****Course Objectives:**

To help students to

- To Learn the E-Commerce Platform and its concepts
- To Understand the Technology, infrastructure and Business in E-Commerce
- To Understand the Security and Challenges in E-Commerce
- To Build an Own E-Commerce using Open Source Frameworks
- To Able to Understand the TCP/IP network, Electronic payment systems
- To able to understand E-Security principles

Course Outcome:

Upon completion of the course, the students will be able to:

1. Design Website using HTML CSS and JS
2. Design Responsive Sites
3. Manage, Maintain and Support Web Apps
4. Able to create XML and Web Databases
5. Implement Electronic payment systems
6. Implement E-Security systems

Unit I

E-business opportunities and risks-e-commerce vs e-business-significance of e-business and e-commerce- digital technologies for e-business and e-commerce-B2B and B2C companies-Management responses to e-business and e-commerce- e-commerce environment – portals – auctions – business models and revenue models – dot-com

Unit II

e-Business strategy strategic analysis – strategic objectivities – strategy definition – Strategy implementation - information system and e-business strategy

Unit III

Supply chain management – value chain – e-business to restructure supply chain – supply chain management implementations – procurement – risks and impact of e-procurement – electronic B2B market

Unit IV

Management issues in e-marketing – e-marketing – e-marketing planning – situation analysis – strategy – tactics

Unit V

Management issues in CRM – CRM – characteristics of interactive marketing communications – assessing marketing communications effectiveness – customer retention management – improving online service quality – customer extension – technology solutions for CRM

TEXTBOOK

1. Dave Chaffey, E-Business and E-Commerce Management, Pearson Publications India, 5th Impression 2012

REFERENCE BOOKS:

1. Ken Laudon, E-Commerce 2012, Course Smart eTextbook, 8/E, Prentice Hall
2. Henry Chan, Raymond Lee, Tharam Dillon, Elizabeth Chang, E-Commerce: Fundamentals and Applications, 2001, Paperback

Course Objectives

Enable the students

- To understand the methods used to evaluate and select projects for investment of funds .
- primary aim of thist concepts of project management related to managing software development projects.
- To gain knowledge on the principles and techniques of software project management
- To introduce organization behavior and general management techniques used for project Management.
- To implement a software project management activity
- To complete a specific project in time with the available budget

Course Outcomes (COs)

Upon completion of this course, students will be able to:

1. Apply the process to be followed in the software development life-cycle models.
2. Implement communication, modeling, construction & deployment practices in software development.
3. Analyze & design the software models using unified modeling language (UML).
4. Explain the concepts of various software testing methods & be able to apply appropriate testing approaches for development of software.
5. Explain the quality management & different types of metrics used in software development.
6. Apply the concepts of project management & planning.

Unit I

Introduction to Software Engineering: The Evolving Role of Software-Software-Software Myths- A Generic View of process: Software Engineering –A Layered Technology- Process Models: Prescriptive Models- Waterfall Model- Incremental process Models. Evolutionary Process Models: Prototyping, The Spiral Model. Specialized process Models- An agile view of Process-What is an Agile Process – Agile Process Models.

Unit II

Requirements engineering: requirements engineering tasks. Building the Analysis Model: Requirements Analysis-Analysis Modeling Approaches-Data Modeling Concepts: Data Objects-Data attributes-Relationships Cardinality and Modality-Flow Oriented Modeling: Creating Data Flow Model-Creating a Control Flow Model-The Control Specification-The Process Specification- Creating a Behavioral Model.

Unit III

Design Engineering: Design with the Context of Software Engineering-Design Process and Design Quality-Design Concepts-Creating An Architectural Design: Software Architecture-Data Design-Architectural Design- Assessing Alternative Architectural Designs-Mapping Data Flow into Software Architecture.

Unit IV

Performing User Interface Design: The Golden Rules- User Interface Analysis and Design- The Process- Interface Analysis: User Analysis - Task analysis and Modeling. Testing Tactics: Software Testing Fundamentals- Black –Box and White-Box Testing- White Box Testing-Basis Path Testing- Control Structure Testing: Condition Testing- Data Flow Testing-Loop Testing- Black Box Testing- Quality Concepts: Quality- Quality Control –Quality Assurance –Cost Of Quality.

Unit V

Project Evaluation: Strategic Assessment, Technical Assessment, cost-benefit analysis, Cash flow forecasting, cost-benefit evaluation techniques, Risk Evaluation. Risk Management: Nature of Risk, Managing Risk, Risk Identification and Analysis, Reducing the Risk. Resource Allocation: Scheduling resources, Critical Paths, Cost scheduling, Monitoring and Control: Creating Framework, cost monitoring, prioritizing monitoring.

End Semester Exam: 3 Hours**Course Objectives**

- The principles of scripting languages.
- Motivation for and applications of scripting.
- Difference between scripting languages and non- scripting languages.
- Types of scripting languages.
- Scripting languages such as PERL, TCL/TK, python and BASH.
- Creation of programs in the Linux environment.
- Usage of scripting languages in IC design flow.

Course Outcomes (COs)

Upon completion of this course, students will be able to:

1. Ability to create and run scripts using PERL/TCL/Python in IC design flow.
2. Ability to use Linux environment and write programs for automation of scripts in VLSI tool design flow
3. Construct web scraping scripts to programmatically obtain data and content from web pages.
4. Demonstrate the use of Python to manage applications using networking.
5. Control the keyboard and mouse with GUI automation.
6. Use Python to process Excel spreadsheets, PDF and CSV files, Word documents, and JSON data.

Unit I

HTML: Introduction - SGML - Outline of HTML Document - Head section-Body section - HTML forms.

Unit II

Introduction - Language elements - Object of java script - Other objects - Arrays.

Unit III

DHTML: Cascading style sheets - DHTML Document object model and collections - Event Handling - Filters and Transitions - Data binding

Unit IV

XML: Syntax of XML Document - XML Attributes - XML Validation - XML DTD - XML -DTD Elements - DTD Attributes - DTD Entities - DTD Validation

Unit V

PHP: Introduction to PHP - Syntax - Saving PHP files - Variables - Constants - If and Switch Statements - Operators - Loops and Strings.

2. [Http://en.wikipedia.org/wiki/script_language](http://en.wikipedia.org/wiki/script_language)
3. <http://www.mvps.org/scripting/languages>

Instruction Hours / week: L: 0 T: 0 P: 5 C: 3**Marks: Internal: 40 External: 60 Total: 100**
End Semester Exam : 3 Hours**Course Objectives**

Enable the student

- To write basic PHP syntax using various operators.
- To write PHP scripts to handle HTML forms.
- To analyze different tasks using PHP functions.
- To understand the regular expressions in PHP.
- To learn concept of extended markup language
- To learn array data structure using PHP scripts.

Course Outcomes (COs)

Upon completion of this course, students will be able to:

1. Write PHP scripts using operators to perform various functions
2. Design PHP scripts to handle HTML forms.
3. Implement different types of PHP functions.
4. Write regular expressions including modifiers, operators, and metacharacters.
5. Create webpage using different techniques.
6. Create PHP scripts using array.

List of Programs :

1. Create a form to reserve a ticket in the railways if the source and destination place is given.
2. Create a web page to display student mark statement.
3. Design an home page for a company
4. Develop DHTML Script to illustrate Color and Background attribute.
5. Create a DHTML page using various filters on images, mask image, mask Text.
6. Design a PHP program to find greatest of three numbers.
7. Design an student application form using PHP program.
8. Write a java script program design a calculator
9. Develop a Java script program for display greetings based on Time
10. Create an XML document for student information with relevant attributes and validation.
11. Develop a program to copy the content of one file to another file using PHP program.
12. Develop an E-mail application using PHP program.

Course Objectives

Enable the student

- To understand the Object-based view of Systems
- Explain the principles and requirements of OOA and Design
- Describe the object-oriented approach to system development, modeling objects, relationships and interactions.
- Discuss software design in an object-oriented manner.
- Use the UML (Unified Modeling Language)
- Use case studies and tool for OOA and Design.

Course Outcomes (COs)

Upon completion of this course the students will be able to:

1. Identify suitable life cycle models to be used and translate a requirement specification to a design using an appropriate software engineering methodology.
2. Apply systematic procedure for software design and deployment.
3. Analyze a problem and identify and define the computing requirements to the problem.
4. Formulate appropriate testing strategy for the given software system.
5. Develop software projects based on current technology,
6. Test the software using testing tools.

Unit-I

The Object Model: The evolution of the object model – Elements of the object model – Applying object model. Classes and Objects: The nature of an object – Relationships among objects.

Unit-II

Classes and Objects: The nature of the class – Relationship among classes – The Interplay of Classes and Objects – On building quality classes and objects. Classification: The Importance of proper classification – Identifying proper classes and objects – Key abstraction mechanism.

Unit-III

The notation: Elements of the notation – class diagrams –state transition diagrams – object diagrams.

Unit-IV

The Process: First principles – The micro development process – The macro development process.

Unit-V

UML Overview: UML History – Goals of UML – UML concept areas – Syntax of Expressions and Diagrams.

Nature and purpose of Models: A Model – Levels of Models – Meaning of Model. UML Walkthrough: UML views – Static views – use case view – interaction views – state machine view – activity view – physical view – model management view- extensibility constructs.

2. <http://www.devshed.com/c/a/Practices/Introducing-UMLObjectOriented-Analysis-and-Design/>
3. <http://community.sparxsystems.com/tutorials/object-oriented-analysis-and-design>

Course Objectives

Enable the student

- To introduce the fundamental concepts of software engineering.
- To Analyze, specify and document software requirements for a software system.
- To understand different techniques and tools used in this area of software testing.
- To Design, select and apply the most appropriate software engineering process for a given project, plan for a software project, identify its scope and risks, and estimate its cost and time.
- Expose the criteria for test cases.
- Be familiar with test management and test automation techniques

Course Outcomes (COs)

Upon completion of this course the students will be able to:

1. Identify suitable life cycle models to be used and translate a requirement specification to a design using an appropriate software engineering methodology.
2. Apply systematic procedure for software design and deployment.
3. Analyze a problem and identify and define the computing requirements to the problem.
4. Formulate appropriate testing strategy for the given software system.
5. Enable to understanding the techniques, and tools in the area of software testing and its practice in the industry
6. Develop software projects based on current technology, and test the software using testing tools.

UNIT I

Procedures to build software testing organization – Minimizing risks – writing policy for software testing – Economics of testing – Building structured approach to software testing – Developing test strategy - Guidelines for software testing.

UNIT II

Customizing the software testing process -Integrating tools into the Tester's work processes – selecting and using test tools – Appointing tool managers – Building software tester competency – overview of the software testing process.

UNIT III

Organizing for testing: Do procedures – Reporting process; Developing test plan: Do procedures – check procedures.

UNIT IV

Verification testing: Do procedures – check procedures; Validating testing: Do procedures.

UNIT V

Analyzing and reporting test results: Input – Do procedures; Acceptance and operational testing; Post implementation analysis.

TEXT BOOK

1. William E. Perry, Effective Methods for Software Testing, 3rd Edition, Wiley Publications.

REFERENCE BOOKS:

1. Nageshwar Rao Pusuluri ,Software Testing Concepts and Tools , 2006,Paperback , Dreamtech Press
2. Dorothy Graham, Foundations of Software Testing ISTQB 2012, Paperback .

Course Objectives

Enable the student

- To understand multimedia in respect to many application including business, schools, home, education, and virtual reality.
- To understand the hardware and software needed to create projects using creativity and organization to create them.
- To develop multimedia skills understanding the principal players of individual players in multimedia teams in developing projects.
- Know the importance of images, sound.
- To understand working principles of video and learn copyright laws associated with multimedia.

Course Outcomes (COs)

Upon Completion of the course, the students will be able to

1. Students will be able to analyze various components of the multimedia systems.
2. Use technologies of different multimedia software
3. Able to know multimedia skills understanding the principal players of individual players in multimedia teams in developing projects.
4. Students will be able to design a multimedia system with the encoding and decoding techniques which they have been trained through this course.
5. Able to know clear know about animation software.
6. Design new real time applications

UNIT-I

Definition of multimedia – Introduction to making multimedia: the stages of a project –Basic software tools-Using Text in multimedia - font editing and design tools – hypermedia and hypertext.

UNIT-II

Introduction to Photoshop 6: Interfaces and Navigation-Tools-Text-Working in Photoshop-Creating new documents-Saving Files.

UNIT-III

Displaying the Images- Using Rulers, Guides and Grids – Making Selections- Layers and Types-Choosing Colors-Creating Brushes- painting & editing Tools- Making and Applying Gradients.

UNIT-IV

Introduction to Flash: Variables & data types- Data types in Action Script-Creating and placing variables – Buttons with text fields.

UNIT-V

Basic Actions: Play, stop, Back & forth- Between frames and scenes – Timelines – External scripts-Loops.

2. www.arena-multimedia.com/ -
3. www.nextwavemultimedia.com/

Course Objectives

Enable the student

- To understand the fundamentals of programming such as variables, conditional and iterative execution, methods, etc.
- To understand fundamentals of object-oriented programming in Java, including defining classes, invoking methods, using class libraries, etc.
- To use the Java SDK environment to create, debug and run simple Java programs.
- To use Java in various technologies in different platforms.
- To understand the fundamental of Packages and access modifiers and interface in java.
- To understand the fundamental of Exception Handling and AWT component and AWT classes.

Course Outcomes (COs)

Upon completion of this course the student will be able to:

1. Obtain knowledge of the structure and model of the Java programming language.
2. Use the Java programming language for various programming technologies (understanding)
3. Develop software in the Java programming language (application)
4. Evaluate user requirements for software functionality required to decide whether the Java programming language can meet user requirements (analysis)
5. Use the certain technologies by implementing them in the Java programming language to solve the given problem (synthesis)
6. Choose an engineering approach to solving problems, starting from the acquired knowledge of programming and knowledge of operating systems. (evaluation)

UNIT I

Introduction to Java Applications and Applets: Printing a line of text – Displaying text in a Dialog Box – Adding integers – Arithmetic – Decision Making – Drawing a String – Adding Floating Point Numbers. Control Statements: Pseudocode – Control Structures - if, if/else, while – Formulating Algorithms: Case studies: 1, 2 & 3 – Compound Assignment – Increment and Decrement Operators – Primitive types – for, do/while – switch –break and continue statements (simple & labeled) – Logical Operators - selection statements. Methods: Program Modules in Java – Method Declarations – Argument Promotion - Java API Packages – Scope of Declarations – Method Overloading – Recursion. Arrays: Declaring and Creating Arrays – REFERENCE BOOKS and Reference Parameters – Passing Arrays to Methods – Multidimensional Arrays.

UNIT II

Object-Based Programming: Implementing a Time Abstract Data Type with a Class – Class Scope – Controlling Access to members –‘this’- Constructors – Overloaded Constructors – set and get methods – Composition – Static Class Members – Creating Packages – Package Access. Object-Oriented Programming: Superclasses and Subclasses – protected Members – Constructors and Finalizers in Subclasses – Invoking Superclass Method from Subclass Objects - Using Superclass REFERENCE BOOKS with Subclass-Type Variables – Subclass Method Calls via Superclass-Type Variables – Inheriting Interface and Implementation – final Methods and classes Nested Classes – Type-Wrapper

Classes for Primitive Types. String and Characters: Fundamentals – Class String – Class StringBuffer – class Character – class StringTokenizer – Regular Expressions, Class Pattern and Class Matcher.

UNIT III

Graphics and Java2D: Graphics Contexts and graphics Objects – Color Control – Font Control – Drawing Lines, Rectangles, Ovals, Arcs, Polygons and Polylines – Java2D API. Graphical User Interface Components: Overview of Swing Components- JLabel – EventHandling – Textfields – How event handling works – JButton – JCheckBox and JRadioButton – JComboBox – JList – Multiple-Selection Lists – Mouse Event Handling – Adapter classes – Key Event Handling – Layout Managers – Panels – JTextArea – JPanel – JSlider – Using Menus with Frames – JPopupMenu – Pluggable Look-and-Feel. Exception Handling: Java Exception Hierarchy – Rethrowing and Exception – finally Clause – printStackTrace, getStackTrace and getMessage – Chained Exceptions.

UNIT IV

Multithreading: Life Cycle of a Thread – Thread Priorities and Thread Scheduling – Creating and Executing Thread – Thread Synchronization – Daemon Threads – Runnable Interface. Files and Streams: Data Hierarchy – Files and Streams – Class File – Creating a Sequential-Access File – Reading Data from a Sequential-Access File – Random-Access Files – Creating/Writing/Reading Random-Access Files – New I/O APIs for the Java Platform. Networking: Manipulating URLs – Reading a File on a Web Server –Client/Server Interaction with Stream Socket Connections. Multimedia: Loading, Displaying and Scaling Images – Animating a series of Images – Image Maps – Loading and Playing Audio Clips.

UNIT V

Java Utilities Package and Bit Manipulation: Vector Class and Enumeration Interface – Stack Class of Package java.util – Hashtable Class – Properties Class – Bit Manipulation and the Bitwise Operators – BitSet Class. Collections: Collections Overview – Class Arrays – Interface Collection and Class Collections – Lists – Sets – Maps. Java Database Connectivity with JDBC: Relational Database Overview – SQL – Manipulating Databases with JDBC – Stored Procedures. Servlets: Servlet Overview and Architecture – Handling HTTP get /post Requests – Redirecting Requests to other Resources – Multi-Tier Applications. JavaServer Pages: JavaServer Pages Overview – Implicit Objects – Scripting – Standard Actions – Directives.

3. www.java.net/

Course Objectives

Enable the student

- To study the basic taxonomy and terminology of the computer networking and enumerate the layers of OSI model and TCP/IP model.
- To read the fundamentals and basics concepts of Physical layer with real time examples
- To study data link layer concepts, design issues, and protocols.
- To learn the functions of network layer and the various routing protocols.
- To read the concepts of protocol on DHCP
- To familiarize the functions and protocols of the Transport layer and Application layer.

Course Outcomes (COs)

Upon completion of this course the students will be able to:

1. Understand the functions of each layer in OSI and TCP/IP model.
2. Explain the multiplexing, switching concept and types of transmission media with real time examples.
3. Understand the error detection and correction methods and can implement the data link layer protocols
4. Apply the clear knowledge of different types of protocol.
5. Learn different medium access method to avoid collision and to learn about routing table.
6. Learn basic functionalities of transport layer and application layer.

UNIT I

Introduction: WAN, WAN technologies - Internetworking concepts - Protocols and Standards - TCP/IP protocol suite - Internetworking Devices – Routing Concept - Classful IP Addressing – Subnetting – Supernetting – Classless Addressing

UNIT II

ARP & RARP – Proxy ARP – ARP over ATM – ARP and RARP Protocol Format. IP Datagram – Fragmentation – Options – IP Datagram Format – Routing IP Datagrams – Checksum. ICMP – Types of Messages - Message Format – Error Reporting – Query – Checksum - ICMP Package

UNIT III

Unicast Routing Protocol: Intra Domain and Inter Domain Routing – Distance Vector Routing – RIP – Link State Routing – OSPF – Path Vector Routing – BGP – Multicast Routing – Multicast Routing Protocols. Group Management – IGMP Message – IGMP Operation – Process to Process Communication – UDP Operation – TCP Services - Flow Control.

UNIT IV

BOOTP - DHCP – Address Discovery and Binding. DNS – Name Space – DNS in Internet – Resolution – Resource Records.

UNIT V

Remote Login - FTP – SMTP – SNMP. IP over ATM Wan – Cells – Routing the Cells – ATMARP – Logical IP Subnets. Mobile IP : Addressing – Agents – Agent discovery – Registration – Data Transfer - VPN

2. www.yale.edu/pclt/COMM/TCPIP.HTM
3. www.w3schools.com/tcpip/default.asp

Course Objectives

Enable the student

- Design good performing distributed database schemas.
- Create optimized query execution plan.
- Efficiently distribute and manage the data.
- manage distributed access control
- To understand the concepts of query processing
- Know how to make security to the databases.

Course Outcomes (COs)

Upon completion of this course the students will be able to:

1. Explain the architecture of a system based on distributed databases.
2. Develop a system to support distributed transactions in such databases.
3. Provide for competitive access to data in systems using distributed databases.
4. Propose solutions for increasing reliability and security of distributed database system.
5. Compare different systems for managing distributed databases (DDBMS).
6. Develop a real time project using different database tools.

UNIT - I

Database concepts : Data Models- Database Operations- Database Management-DB Clients, Servers, and Environments. **DBE Architecture :** Services- Components and Subsystems- Sites - Expected Services-Expected Subsystems- Typical DBMS Services– **DBE Taxonomy:** COS Distribution and Deployment- COS Closedness or Openness-Schema and Data Visibility- Schema and Data Control.

UNIT - II

Data Distribution Alternatives : Design Alternatives- Localized Data- Distributed Data. **Fragmentation:** Vertical Fragmentation- Horizontal Fragmentation. **Distribution Transparency:** Location Transparency-Fragmentation Transparency-Replication Transparency-Location, Fragmentation, and Replication Transparencies.

UNIT - III

Query Optimization: Sample Database- Query Processing in Centralized Systems: Query Parsing and Translation - Query Optimization- Query Processing in Distributed Systems- Heterogeneous Database Systems - Concurrency Control in Distributed Database Systems.

UNIT - IV

Deadlock Handling: Deadlock Definition- Deadlocks in Centralized Systems- Deadlocks in Distributed Systems- Distributed Deadlock Detection. **Replication Control:** Replication Control Scenarios. **Failure and Commit Protocols:** Terminology- Commit Protocols.

UNIT - V

DDBE Security: Cryptography- Securing Data . Traditional DDBE Architectures: Classifying the Traditional DDBMS Architecture- The MDBS Architecture Classifications- Approaches for Developing A DDBE- Deployment of DDBE Software.

TEXT BOOK

2. www.webopedia.com/TERM/D/distributed_computing.html
3. www.tech-faq.com/distributed-computing.shtml

Course Objectives

Enable the student

- To Study the basic concepts and functions of operating systems.
- To understand the structure and functions of OS.
- To Learn about Processes, Threads and Scheduling algorithms.
- To Understand the principles of concurrency, Deadlocks and Memory Management
- To Learn about the Protection and Security Concepts.
- To understand the concepts of authentication.

Course Outcomes (COs)

Upon completion of this course the students will be able to:

1. Design various Scheduling algorithms.
2. Apply the principles of concurrency.
3. Apply the memory management process.
4. Design deadlock, prevention and avoidance algorithms.
5. Compare and contrast various memory management schemes.
6. Apply the Security Concepts based on Authentication.

UNIT I

OS Design and Implementation: Introduction-Operating System Definition-Function-History of Operating System-Types of Operating System- Operating System Concepts- Operating System Structure-The nature of the Design problem-Interface Design-Implementation-Trends in Operating System Design.

UNIT II

Process and Threads: Process-Threads-Inter process communication-classical IPC Problems-Scheduling –Deadlocks: Detection and Recovery, Avoidance and Prevention.

UNIT III

File systems-Files-Directories-File System Implementation. Case Studies: Design of UNIX/LINUX, Windows 2000 and MSDOS.

UNIT IV

Distributed Operating System Concepts and Design: Fundamentals-Remote Procedure Calls-The RPC model-Transparency of RPC-Implementing RPC mechanism-Stub Generation-RPC Messages-Marshalling Arguments and Results-Server Management-Parameter-Passing Semantics-Call Semantics-Communication Protocol for RPCs. Distributed File System: Introduction-Desirable Features-File models-File Accessing-Models-Files-Sharing Semantics-File Caching Schemes-File Replication-Fault Tolerance-Atomic Transaction

UNIT V

Real Time Operating System and Micro Kernels: Characteristics of Real Time Systems-Micro kernel's and RTOS-Scheduling for real-time Systems.

TEXT BOOK

1. Andrew S Tannenbauml,"Modern Operating System",2nd Edition. Prentice Hall of India. New Delhi.2002.

REFERENCES

1. Pradeep K Sinha,"Distributed Operating Systems Concepts and Design", 2nd Edition. Prentice Hall of India. New Delhi.2002.
2. Promod Chandra P Bhat,"An Introduction to Operating Systems Concept and Practice", 1st Edition. Prentice Hall of India. New Delhi. 2004.

Instruction Hours / week: L: 3 T: 1 P: 0 C : 4 Marks: Internal: 40 External: 60 Total: 100
End Semester Exam: 3Hours

Course Objectives:

To make students

- understand the fundamental number system with its conversions
- gain knowledge about different codes, digital logic gates and Boolean operations
- acquire basic understanding about the Instruction Set Architecture
- understand the architecture of the basic functional units of the computer such as the input output system. memory systems and secondary storage systems.
- Learn the function of each element of a memory hierarchy.
- Study various data transfer techniques in digital computer.

Course Outcomes (Cos)

Upon completion of this Course, student will be able to:

1. Interpret the functional architecture of computing systems.
2. Identify, compare and assess issues related to ISA, memory, control and I/O functions.
3. Design and analyze solutions in the area of computer architecture.
4. Design an instruction encoding scheme for an ISA.
5. Build large memories using small memories for better performance.
6. Examine various inter connection structures of multi processors.

Unit I

Number System and Operations: Decimal, Binary, Octal and Hexadecimal numbers – Conversion – Floating point representation – Binary addition, subtraction, multiplication and division – 1's and 2's complements. Codes: Binary Coded Decimal (BCD) - Excess-3 – Gray Code – Error detection codes – Hamming codes – ASCII codes. Logic gates: OR, AND, NOT, NAND, NOR, EX-OR and EX-NOR gates. Boolean Logic Operations: Boolean functions - Basic laws – DeMorgans theorem – Sum of Products and Products of Sum – Karnaugh Map .

Unit II

Combinational Logic Circuit Design: Half adder – Full adder – Half Subtractor – Full Subtractor – Parallel binary adder – 4-bit binary adder/subtractor – BCD adder – Multiplexer – Demultiplexer – Decoders – Encoders .

Flip-flops: RS- D- JK Flip flops. Registers: Shift Registers. Counters: Ripple counters - Synchronous counters.

Unit III

Basic Structure of Computers: Functional units - basic operational concepts - bus structures. Machine instructions and Programs: Memory locations and addresses – Memory operations – Instructions and Instruction Sequencing – Addressing modes.

Unit IV

Input/Output Organisation: Accessing I/O Devices- Interrupts- Direct Memory Access – Interface Circuits – Standard I/O Interfaces. Computer Peripherals: Input devices – Output devices – Data transfer mechanism.

Unit V

The Memory System: Some Basic Concepts – Semiconductor RAM memories – Read-only memories – Cache memories – Virtual Memories – Secondary Storage.

Basic Processing Unit: Some fundamentals concepts – Execution of a complete Instruction – Multiple-Bus organization – Hardwired control – Microprogrammed control.

**Instruction Hours / week: L: 3 T: 1 P: 0 C : 4 Marks: Internal: 40 External: 60 Total: 100
End Semester Exam: 3Hours**

Course Objectives:

To enhance students with the knowledge of

- The behavior and flow of the software
- Planning, designing, developing, validating, and evaluating of software using contemporary practices.
- Software analyzing, coding, and Testing.
- To understand the nature of software development and software life cycle models
- To understand methods of capturing, specifying, visualizing and analyzing software requirements.
- To know basics of testing and understanding concept of software quality assurance and software configuration management process.

Course Outcomes(Cos)

Upon completion of this Course, student will be able to:

1. Describe software engineering layered technology and process framework.
2. Introduces theories, models, and techniques that provide a basis for the software development life cycle.
3. Introduces software testing approaches including verification and validation, static analysis, reviews, inspections, and audits.
4. Understanding of the role of project management including planning, scheduling, risk management, etc.
5. Work as an individual and/or in team to develop and deliver quality software.
6. Justify role of SDLC in Software Project Development.

Unit I

The Evolving role of software: - software - software crisis - software process model. Component based development: - The formal methods model – fourth generation techniques. Software Project Planning – Project Planning Objectives - Software Scope – Resources.

Unit II

Analysis concepts and Principles: Requirement analysis principles – The Information domain – modeling – partitioning – Essential and implementation views. Software prototyping methods and tools. Specification: Specification principles – representation – software requirements specification.

Unit III

Design concepts and principles: The Design process: design and software quality – The Evolution of Software Design. Design principles:- Design concepts – effective modular design – the design model – design documentation – Software Architecture.

Unit IV

The Golden rules: user interface design – task analysis and modeling – interface design activities – Implementation tools – design evaluation. Component level Design: - structured programming – comparison of design notation.

Unit V

Software testing techniques: software testing fundamentals – White box testing – basis path testing – control structure testing – Black box testing. Software testing strategies:- Unit testing – Validation testing.

1. <http://www.onesmartclick.com/engineering/software-engineering.html>
2. http://www.cc.gatech.edu/classes/AY2000/cs3802_fall/

Instruction Hours / week: L: 3 T: 1 P: 0 C:4 Marks: Internal: 40 External: 60 Total:100**End Semester Exam: 3Hours****Course Objectives:**

To provide students with

- Extensive knowledge of principles and modules of operating systems
- Fundamental operating system abstractions such as processes, threads, files, semaphores, IPC abstractions, shared memory regions, etc.
- The principles of concurrency and synchronization, and apply them to write correct concurrent programs/software
- Basic resource management techniques (scheduling or time management, space management) and principles and how they can be implemented. These also include issues of performance and fairness Objectives, avoiding deadlocks, as well as security and protection.
- To introduce the architecture of Linux operating system.
- To learn basic Unix commands and to write shell scripts

Course Outcomes(Cos)

Upon completion of this Course, student will be able to:

1. Learn various types of OS and also understand various functions of OS.
2. Learn operating system structures and processor management.
3. Understand how the operating system shares hardware resources between processes, tasks, threads, and users
4. Learn the process management and its storage in memory and disk.
5. Implement various memory management schemes, file system and I/O schemes.
6. Write and execute shell programs.

Unit I

OS Design and Implementation: Introduction-Operating System Definition-Function-History of Operating System-Types of Operating System- Operating System Concepts- Operating System Structure-The nature of the Design problem-Implementation-Trends in Operating System Design.

Unit II

Process and Threads: Process-Threads-Inter process communication-classical IPC Problems-Scheduling –Deadlocks: Introduction to Deadlocks, Detection and Recovery, Avoidance and Prevention.

Unit III

Memory Management: Basic Memory Management, Swapping, Virtual Memory, Page Replacement Algorithms, Segmentation. File systems-Files-Directories-File System Implementation.

Unit IV

Distributed Operating System: Distributed Operating Concepts and Design Fundamentals-Remote Procedure Calls-The RPC model-Transparency of RPC-Implementing RPC mechanism-Stub Generation-RPC Messages-Marshalling Arguments and Results-Server Management-Parameter-Passing Semantics-Call Semantics-Communication Protocol for RPCs

Unit V

Real Time Operating System and Micro Kernels: Characteristics of Real Time Systems-Micro kernel's and RTOS-Scheduling for real-time Systems.

Instruction Hours / week: L: 4 T: 0 P: 0 C:4 Marks: Internal: 40 External: 60 Total: 100
End Semester Exam: 3Hours

Course Objectives:

- To understand the major components of computer system, the types and functions of OS.
- To know about different programming languages and their corresponding Translators and to learn about the basic concepts of Networking.
- To understand the building blocks of C language like variables, data types, managing I/O etc.
- To understand the different statements like sequential, decision making, iterative such as if-else, loops.
- To understand derived data types like arrays and structures.
- Apply programming to solve simple numerical method problems, namely root finding of function, differentiation of function and simple integration.

Course Outcomes(Cos)

Upon completion of this Course, student will be able to:

1. Acquire knowledge about components of a computer system and fundamentals of Operating Systems and Networking.
2. Acquire knowledge about building blocks of C language like variables, data types, managing I/O etc.
3. Solve basic problems using different statements like sequential, decision making, iterative such as if-else, loops and derived data types like arrays and structures.
4. Apply Pointers, functions, file handling and dynamic memory allocation schemes for efficient programming.
5. Understand the dynamics of memory by the use of pointers.
6. Develop solutions to problems using derived data types and files.

Unit I

Introduction to Programming Languages- Introduction to C- Advantage of C- Identifier- Constants-Variable- Data Types- Variable declaration- Assignment operation- Expressions- Operators-Evaluation of Expression- Library functions- Mathematical- Character functions; Formatted and Unformatted Input and Output statements: Scanf(), Printf()- Character based functions.

Unit II

Decision Making and Branching: Simple IF statement- If Else statement- Nesting of If Else statements- Switch statement- Break- Conditional operator (?:) operator- GOTO statement; Looping statements: WHILE- DO-WHILE statement- FOR statement- Jumps in loops- Continue and Nested Looping Statements.

Unit III

Arrays: Single, Two and Multidirectional arrays- Strings and related library functions; Functions: Need of function-Types of functions-User-defined functions-Return values and their types-Calling a function-Category of functions-Recursion-functions with arrays-Storage classes.

Unit IV

Pointers: Pointer Arithmetic- Declaring and initializing pointers- Pointers and arrays- Pointers and Strings- Pointers and functions- Pointers and Multidimensional Arrays; Structures: Declaration- Array of structures- Nested structures- Structures and Functions- Unions- Typedef statement- Enumeration.

Unit V

Files: Types of Files- Functions related for FILE- Read/Write operations- Character, Word, Line and Structure based Read/Write operations- Random Files. Random access to files- Command line arguments-the preprocessor; Advanced Topics: Interrupts-BIOS/DOS function handling- Video RAM- TSR Programme.

Instruction Hours / week: L: 4 T: 0 P: 0 C:4 Marks: Internal: 40 External: 60 Total: 100
End Semester Exam: 3Hours

Course Objectives:

- Understand the fundamental concepts of logic.
- Analyze the four types of normal forms.
- Understand the fundamental concepts of formal languages and graph theory.
- To learn Algebraic Structures and their types and understand Cosets and Lagrange's theorem.
- To understand Graphs, their types and different algorithms based on Graph Theory.
- To provide the necessary back ground of discrete structures with particular reference to the relationships between discrete structures and their data structure counterparts including algorithm development.

Course Outcomes (COs)

Upon completion of this Course, student will be able to:

1. Apply set theory, functions, relations and lattices to solve computational problem.
2. Apply basic operation in propositions, validate the arguments and formalize the arguments in propositional logic.
3. Apply algebraic structure to prove theorems like Lagrange's theorem
4. Apply the core ideas of graph theory, trees and various algorithms to solve the problems based on the same.
5. Implement finite state machine, equivalent regular expression, and conversion of various machines like Moore, mealy etc.
6. Use of K-Maps and Truth Tables to construct and verify correctness of a Boolean expression .

Unit I

Mathematical Logic: Connectives – Statement formulas and truth tables - well formed formulas, tautologies, equivalence of formulas, tautological implications – Normal forms- Theory of inference for statement calculus - Validity using Truth Tables – Rules of Inference – Consistency of premises

Unit II

Predicate Calculus: Predicates - The statement functions, Variables and Quantifiers – Predicate Formulas - Free and bound variables.

Inference Theory of the Predicate Calculus: Valid formulas and equivalences – Special Valid formulas involving quantifiers –Theory of inference for Predicate calculus – Formulas involving more than one quantifiers.

Unit III

Relations and functions: Relations – Properties of relations – Equivalence relations - composition of relations, Closure of relations, Binary relations – Recurrence relations – Order relations – Partial order relations – Partitions – Functions - one-to-one, onto, one-to-one-onto functions – composition of functions, Inverse functions.

Unit IV

Formal languages and Automata: grammars- phrase – structure grammar, context-sensitive grammar, context-free grammar, regular grammar. Finite state automata- Deterministic finite automata and Non deterministic finite automata-conversion of non deterministic finite automata to deterministic finite automata.

Unit-V

Graph Theory: Directed and undirected graphs, connected graph, path, reachability, circuits. Matrix representation- adjacency matrix, incidence matrix, path matrix. Trees- binary tree Theorems - statement only (No Proof).

Text Book

1. Trembly J,P and R.Manohar. 2002. Discrete Mathematical structures with applications to Computer Science. Tata Macgraw Hill Book Company,New Delhi.

Reference

1. Sundaresan .V, K.S.Ganapathy Subramanian and K.Ganesan. 2002. Discrete Mathematics, A.R.Publications, Nagapatinam.

Instruction Hours / week: L: 0 T: 0 P: 5 C:2 Marks: Internal: 40 External: 60 Total: 100
End Semester Exam: 3 Hours

Course Objectives:

Enable the student

- To Learn the basics of OO analysis and design skills.
- To Be exposed to the UML design diagrams.
- To Learn to map design to code.
- To Be familiar with the various testing techniques
- To apply the knowledge of mathematics, basic science and engineering solving the real world computing problems to succeed higher education and professional careers.
- To develop the skills required to comprehend, analyze, design and create innovative computing products and solutions for real life problems.

Course Outcomes(COs)

Upon completion of this Course, student will be able to:

1. Write test suites for a given software.
2. Demonstrate testing process in Selenium IDE.
3. Test websites using eclipse.
4. Draw different UML diagrams.
5. Develop models using UML tools.
6. To Write the Simple applications with technologies like HTML,JavaScript,AJAX,PHP,Servlets and JSPs

List of Programs:**1. CASE tools**

Use of diagramming tools for system analysis, such as Turbo analyst, for preparing Data Flow diagrams and E-R diagrams. use of tools for relational database design such as relational Designer.

2. Application Development Tools:

Use of toots such as Power Builder, Delphi, Magic etc. in developing application software including interactive data-entry screens, transaction processing, report generations, etc.

3. Management Tools:

Use of tools for managing the process of software development such as Source Code Control System (SCCS), Revision Control System (RCS), Make etc.

4. Program Using Selenium Tool: [web: <http://docs.seleniumhq.org>]

- i. Using seleniumhq tool perform single webpage test case
- ii. Using seleniumhq tool perform testing for multiple webpage

Course Objectives:

To provide students with

- Extensive knowledge of principles and modules of operating systems
- Fundamental operating system abstractions such as processes, threads, files, semaphores, IPC abstractions, shared memory regions, etc.
- The principles of concurrency and synchronization, and apply them to write correct concurrent programs/software
- Basic resource management techniques (scheduling or time management, space management) and principles and how they can be implemented. These also include issues of performance and fairness Objectives, avoiding deadlocks, as well as security and protection.
- To introduce the architecture of Linux operating system.
- To learn basic Unix commands and to write shell scripts

Course Outcomes(Cos)

Upon completion of this Course, student will be able to:

1. Learn various types of OS and also understand various functions of OS.
2. Learn operating system structures and processor management.
3. Understand how the operating system shares hardware resources between processes, tasks, threads, and users
4. Learn the process management and its storage in memory and disk.
5. Implement various memory management schemes, file system and I/O schemes.
6. Write and execute shell programs.

List of Programs:

1. To write a Linux program to display process deadlock state.
2. To write a program to implement signal handling.
3. Write a Shell program to handle student data base with options given below:
 - a. Create data base. b) View Data Base. c) Insert a record d) Delete a record.
 4. e) Modify a record. f) Result of a particular student. g) Exit.
5. To write a simple Linux program using thread.
6. Deadlock avoidance using Banker's Algorithm.
7. To write a program to display the date & time using TCP Sockets.
8. To write a program to display the date & time using UDP Sockets.
9. Simulation of following CPU scheduling algorithms:
 - i. FCFS

- ii. SJF (preemptive and non-preemptive)
 - iii. Priority scheduling (preemptive and non-preemptive)
 - iv. Round Robin Scheduling
10. To write a Linux program to create a lock file.
11. To write a program to display the user information

Course Outcomes(Cos)

Upon completion of this Course, student will be able to:

1. Acquire knowledge about components of a computer system and fundamentals of Operating Systems and Networking.
2. Acquire knowledge about building blocks of C language like variables, data types, managing I/O etc.
3. Solve basic problems using different statements like sequential, decision making, iterative such as if-else, loops and derived data types like arrays and structures.
4. Apply Pointers, functions, file handling and dynamic memory allocation schemes for efficient programming.
5. Understand the dynamics of memory by the use of pointers.
6. Develop solutions to problems using derived data types and files.

List of Programs:

1. SIN and COS Series
2. Array Operations (Insert, Delete and Display)
3. Bubble Sorting .
4. Stack
5. Queue.
6. Implement String functions
7. Pointers and Arrays, Pointers and function
8. Recursive function
9. Dynamic Memory Allocation
10. Matrix Operations (Addition, Subtraction and Multiplication)
11. Linked List Operations.
12. Mark sheet preparation using array of structures

13. Electricity Bill Preparation using Files (Use structures)
14. Implement TWO Dos commands using Command line arguments
15. Design an application using VRAM
16. Display a message every 5 minutes using TSR programming

3. <http://www.iu.hio.no/~mark/CTutorial/CTutorial.html>

Course Objectives:

- To prepare object-oriented design for small/medium scale problems
- To demonstrate the differences between traditional imperative design and object-oriented design
- To explain class structures as fundamental, modular building blocks
- To understand the role of inheritance, polymorphism, dynamic binding and generic structures in building reusable code.
- To learn the object oriented programming concepts.
- To introduce the principles of inheritance and polymorphism and demonstrate how they are related to the design of abstract classes

Course Outcomes(Cos)

Upon completion of this Course, student will be able to:

1. Compare OOPS with other programming techniques
2. Implement C++ programs with constructors and destructors
3. Develop OOP involving polymorphism using operator overloading and method overloading
4. Implement programs with code reusability using inheritance
5. Develop Programs with file handling and templates
6. Apply OOP concepts to solve real world problems

Unit I

Introduction to Computers and C++ Programming: Computer Organization – History of C and C++ - C++ standard Library – Arithmetic- Decision making: Equality and Relational Operators.

Control Structures: Pseudocode- if, if/else selection structures – while, for, do while repetition structure- Assignment, Increment, Decrement operators – switch Multiple selection structure – break and continue statements – Logical, Equality, Assignment operators.

Functions: Function Definitions, Prototypes – Storage classes- Recursion- Functions with Empty Parameter Lists – Inline functions- REFERENCES and Reference Parameters – Default Arguments – Unary Scope Resolution Operator- Function overloading – Function Templates.

Unit II

Arrays: Declaring Arrays – Passing Arrays to Functions – Sorting Arrays – Linear Search and Binary Search.

Pointers and Strings : Pointer variable declaration and initialization- Pointer Operators- Calling functions by reference –Pointer expression and Pointer arithmetic- relationships between Pointer and Arrays – Arrays of Pointers – Function Pointers – Introduction to character and String Processing.

Classes and Data Abstraction : Structure Definitions- Class Scope and Accessing Class Members – Access Functions and Utility Functions- Constructors- Destructors.

Unit III

Classes : Part II : Introduction- friend functions and friend classes- this pointer- new, delete operator- static class members- Data abstraction and Information hiding- Container Classes and Iterators.

Operator Overloading : Fundamentals and restriction of operator overloading –Overloading Stream Insertion, Stream Extraction, Unary, Binary, ++ and – operators. Inheritance : Base Classes and derived Classes – Protected Members- casting base class pointers to derived class pointers- Using member Functions- public, protected, private inheritance – Direct Base classes and Indirect Base classes- Using constructors and Destructors in Derived Classes.

Unit IV

Virtual Functions and Polymorphism : Type Fields and switch statement – virtual functions- abstract base classes and concrete classes- polymorphism- New classes and Dynamic binding – virtual destructors. C++ Stream Input/Output : Introduction- Streams- Stream Output- Stream Input- Stream Manipulators- Stream Format states- Stream error states.

Templates : Function, Class templates – Overloading template functions- Templates and Inheritance, friends, static members.

Unit V

Exception Handling : Basics of C++ Exception handling: try, throw, and catch – Throwing, catching, and rethrowing an exception, Exception specifications.

File Processing: Data Hierarchy- files and streams- Creating, Reading, Updating sequential Access files and Random Access files.

The Preprocessor : #include, # define, #error, # pragma preprocessor directives.

Standard C++ Language Additions : Boolean data type- static_cast, const_cast, reinterpret_cast operator, namespaces.

2. www.cplusplus.com/
3. www.cppreference.com/

Course Objectives:

Enable the student

- Understand the role and nature of relational database management systems (RDBMS) in IT environment.
- Translate written business requirements into conceptual entity-relationship data models.
- Convert conceptual data models into relational database schemas using the SQL Data Definition Language (DDL).
- Query and manipulate databases using the SQL Data Manipulation Language (DML).
- to provide students with comprehensive and in-depth knowledge of architecture and functioning of database management systems.
- To design and build a database system and use computer and database management skills to implement a solution to a business case using database management systems.

Course Outcomes(COs)

Upon completion of this Course, student will be able to:

1. Introduces how to apply logical database design principles, including E-R/EE-R diagrams, conversion of ER diagrams to relations.
2. Familiarize students with the concepts of integrity constraints, relational algebra, relational domain & tuple calculus, data normalization.
3. Construct simple and moderately advanced database queries using Structured Query Language (SQL).
4. Familiarize students with the concept of a database transaction including concurrency control, backup and recovery, and data object locking.
5. Design and implementation of a small database project using Oracle.
6. Improve the database design by applying normalization techniques.

Unit I

Overview of Database Systems: Managing Data – A historical Perspective systems Vs DBMS-Advantages of DBMS- Describing and storing data in DBMS- Queries in DBMS- Transaction Management- Structure of DBMS; Database Design & ER Diagram: Entities-Attributes- Entity Sets-Relationship & Relationship set- Additional features of ER Model- Conceptual Design with ER Model.

Unit II

Relational Model: Integrity Constraints over relations- Enforcing integrity constraints- Querying relational data- Logical Database Design- ER to relation- Introduction to views- Destroying & Altering Tables & Views; Relational Algebra Calculus: relational algebra-relational calculus.

Unit III

SQL Queries Programming: The form of Basic SQL Query- UNION, INTERSECT and EXCEPT-Nested queries- Aggregate operations- Null values Complex integrity constraints in SQL- Triggers & Active databases; Transaction Management Overview: The ACID Properties- Transactions & Schedules- Concurrent Execution of Transactions- Lock Based Concurrency Control- Performance of Locking Transaction support in SQL.

Unit IV

An Introduction to PL/SQL: PL/SQL Overview- Declaration section- Executable Commands Section – Exception Handling Section; Triggers: Types of Triggers – Trigger Syntax – Enabling & Disabling Triggers – Replacing & Dropping Triggers; Procedures, Functions, and Packages- Required System & Table privileges – Procedures vs. Functions- Procedures vs. Packages – Create Function syntax – Create Package syntax - Compiling, Replacing, Dropping Procedures, Functions and packages.

Unit V

Schema Refinement and Normal Forms: Introduction to Scheme refinement- Functional Dependencies - Reasoning about functional dependencies- Normal form properties of decomposition –Normalization- Scheme refinement in database designing- other kinds of dependencies; Security: Introduction to database security- Access control- Mandatory access control- Additional issues security; Concurrent control: 2PI, serializability and Recoverability- Introduction to lock Management- Lock conversions- Specialized Locking Techniques- Concurrency control without locking.

Course Objectives:

Enable the student

- Use forms and controls to create a user interface.
- Create and use Sub and Function procedures, including predefined functions.
- Implement decision structures and loops by using conditional expressions.
- Enhance the user interface by adding menus, status bars, and toolbars.
- Access and manipulate data in a Microsoft Access or Microsoft SQL Server database by using Microsoft ADO
- Build, package, and deploy an application.

Course Outcomes(COs)

Upon completion of this Course, student will be able to:

1. Design, create, build, and debug Visual Basic applications .
2. Implement syntax rules in Visual Basic programs. And explain variables and data types used in program development and apply arithmetic operations for displaying numeric output.
3. Write and apply decision structures for determining different operations, loop structures to perform repetitive tasks, procedures, sub-procedures, and functions to create manageable code.
4. Create one and two-dimensional arrays for sorting, calculating, and displaying of data and to write Visual Basic programs using object-oriented programming techniques including classes, objects, methods, instance variables, composition, and inheritance, and polymorphism.
5. Students will be able to design Windows applications using forms, controls, and events.
6. Explore Visual Basic's Integrated Development Environment (IDE).

Unit I

Introduction-Visual Basic Environment-Element of Visual Basic-Statements and Expressions-Functions-String Functions-Literals-Constants-Variables-Operators-Arrays-Control Arrays-Subroutines and Functions-Looping and decision control structure-If/Then/Else, Select For Next, Do/Loop, While/Wend Structures.

Unit II

Intrinsic Controls: Pointer, Label, Frame, Checkbox, combo Box, Hscroll Bar, Timer, DirList Box, Shape, Image, OLE, Picture Box, List Box, Text Box, Command Button, Option Button, Vscroll Bar, Drive List Box, Line control usage and properties. Microsoft common control: Tree view control-List view control-Active X Control-Adding Control to form-SDI Forms-MDI Forms-Using Forms as Objects-Building class and collections.

Unit III

DDE-Methods, Properties, Events-Database programming: Data Tools-DAO, ADO, OLEDB and RDO Database Connections-Active X Commands.

Unit IV

Visual C++: Introduction to Windows-View Architecture-Document-GDI Components-Dialog Box-Device Context-GDI Objects-Printing and Print Preview.

Unit V

Database: Serialization-Accessing File-ODBC-DAO-MFE Database Classes-Record sets Querying - Internet Application: Using personal web server-Web browser-ISAPI Application-Active X Controls-ATL.

Text Books

1. Gray Cornell, Visual Basic 6 from the Ground Up, 2011, Tata McGraw Hill Publication. New Delhi. [Unit 1 to 3]
2. Ivor Horton's, Beginning Visual C++, 1st 2014, Wiley India Pvt. Ltd. (Wrox Beginning Guides), New Delhi, India [Unit 4 & 5]

Reference

1. Programming Microsoft Visual C++,2011, 5th Edition, Wiley India Pvt. Ltd., New Delhi, India

Course Objectives:

- Know fundamentals of computer graphics with different drawing techniques
- Relate 2D & 3D Geometric transformations, Matrices and vectors.
- Understand Scan Conversions, Hidden Surface Elimination
- Discusses about Curves and Surfaces
- Analyze Shading, Colour, Anti-aliasing, Texture Mapping
- To know the different algorithms for performing clipping process, scan conversions and hidden surface elimination.

Course Outcomes (Cos)

Upon completion of this Course, student will be able to:

1. Introduces core concepts of computer graphics.
2. Familiarize the students with graphics concepts, including 2D and 3D transformation, clipping, splines, objects modeling, colour modeling, lighting, textures, visible surface detection.
3. Algorithms to design, and create computer graphics scenes.
4. Describe the 3D object representation using primitives structures, curve structures etc
5. Implement the various illumination models
6. Explore Visual Basic's Integrated Development Environment (IDE).

Unit I

Introduction: The origins of computer graphics, Computer Aided Design, Visualization, Image Processing, Graphical User Interface, General-purpose graphics software. Point-Plotting Techniques: Co-ordinate systems, Incremental methods, Line-drawing Algorithms, Circle generators. Line drawing Displays: Display device and Controllers, CRT, Inherent-Memory devices, the storage tube display, The Refresh Line-Drawing Display.

Unit II

Graphical Input Devices: Point and Positioning Devices, the mouse, Keyboard, Trackball and Special ball, Joysticks, Digitizer, Image Scanner, Tablet, Light Pen, Three-Dimension Input devices. Graphical Input Technique: Positioning Techniques, Pointing and Selection, Inking and Painting, Online character Recognition. Event Handling: Polling, Interrupts, The Event Queue, Function of Handling Events, Polling Task Design, Light pen Interrupts. Input Function: Dragging and fixing, Hit Detection.

Unit III

Two-dimensional Transformation: Transformation Principles, Concatenation, Matrix Representation. Three Dimensional Transformation and Perspective: Transformations, Transformation in Modeling, Transformation in Viewing, Perspective Transformation. Clipping and Windowing: Line Clipping Algorithm, Midpoint subdivision, Clipping other

Graphic Entities, Polygon Clipping, Viewing Transformations, the Windowing Transformation.

Unit IV

Raster Graphics Fundamentals: Introduction to Random Scan Monitor and Raster Scan Monitor, Generating a Raster Image Frame Buffer Display, Representing a Raster Image, Scan converting Line drawings, Displaying characters, Speed of Scan Conversion, Natural Image. Solid Area scan conversion: Geometric Representation of Areas, Scan Converting Polygons, Priority, The Y-X Algorithm, Properties of Scan conversion algorithms. Raster-Graphics System: Representation, Raster Manipulation functions, System Using Raster representation, System using Geometric Representation. Raster Display Hardware: Raster Access Frame Buffer, real time Scan Conversation, Other Encoding Schemes.

Unit V

Realism in three-dimensional Graphics: Techniques for Achieving Realism, Modeling three-dimensional scenes, Modeling and Realism.

Curves and surfaces: Shape Description Requirements, Displaying Curves and Surfaces. Hidden-Surface Elimination: Two Approaches, The Depth-Buffer Algorithm, Geometric Computations, Scan-Line Coherence Algorithm, Area-Coherence Algorithm. Priority Algorithms, Sorting and Coherence. Shading: Shading Model, Applying the Shading Model, special effects.

2. [www.en.wikipedia.org/wiki/computer graphics](http://www.en.wikipedia.org/wiki/computer_graphics)
3. www.w3schools.com/ngws/default.asp

Course Objectives:

Enable the students

- Form and solve linear programming problems
- To solve transportation and assignment problems.
- Understand the meaning of queueing and inventory problems.
- Constructing network for the projects.
- applied decision theory.
- To know the Inventory control, Replacement models, Queuing models and Network Scheduling.

Course Outcomes(COs)

Upon completion of this Course, student will be able to:

1. Understand how to translate a real-world problem, given in words, into a Mathematical formulation.
2. Demonstrate the ability to optimize with tools from Linear Programming, Probability, Statistics, Simulation, Game Theory, Queuing Theory etc. in contexts involving uncertainty and scarce or expensive resources.
3. Formulate and solve Mathematical models (Linear programming problems) by applying the concept of Simplex method and its extensions.
4. Identify the resources required for a project and generate a plan and work schedule.
5. Learn to apply project management tools like CPM/PERT that ensures successful completion of projects.
6. Learn the comprehensive introduction of Linear Programming Problem.

Unit - I

Linear Programming : Formulation of LPP – Graphical solutions to LPP –Simplex method – Big M method -Duality in Linear programming Problem.

Unit - II

Transportation model: Mathematical formulation of the problem-Initial Basic Feasible solution - Optimum solution for nondegeneracy and degeneracy model - Unbalanced Transportation problems and Maximization case in Transportation problem

The Assignment problem : Mathematical formulation of the problem – Hungarian method – Unbalanced Assignment problem-Maximization case in Assignment problem Travelling Salesman Problem.

Unit - III

Inventory Control: Introduction – Costs involved in inventory, Deterministic models.EOQ models without and with shortage. Buffer stocks and Reorder level – Price Breaks models

Unit - IV

Replacement model: Introduction – Replacement of items that deteriorates gradually. Value of money does not change with time –value of money changes with time –Replacement of item that fails suddenly – Individual Replacement – Group replacement

Queuing theory : Introduction – Characteristics of queuing system-Markovian queuing models – Problems of single server with finite / infinite population model.

Unit - V

PERT and CPM: Network representation – Earliest expected time, latest allowable occurrence time - slack-critical path –Time estimates in PERT- Probability of meeting scheduled date of completion of projects – Calculations on CPM networks – various floats for activities – critical path.

Text Book

1. Kanthi Swarup., P.K. Gupta., and Man Mohan., 2000. Operations Research,Sultan Chand & Sons, New Delhi.

References

1. Sharma.J.K., 2004. Operations Research and Applications, Macmillan Ltd, New Delhi.
2. Sundaresan V., Ganapathy Subramanian K.S., and Ganesan K., 2005. Operations Research (Resource Management Techniques), A. R. Publications,Nagapatinam.

Course Objectives:

- To prepare object-oriented design for small/medium scale problems
- To demonstrate the differences between traditional imperative design and object-oriented design
- To explain class structures as fundamental, modular building blocks
- To understand the role of inheritance, polymorphism, dynamic binding and generic structures in building reusable code.
- To learn the object oriented programming concepts.
- To introduce the principles of inheritance and polymorphism and demonstrate how they are related to the design of abstract classes

Course Outcomes(Cos)

Upon completion of this Course, student will be able to:

1. Compare OOPS with other programming techniques
2. Implement C++ programs with constructors and destructors
3. Develop OOP involving polymorphism using operator overloading and method overloading
4. Implement programs with code reusability using inheritance
5. Develop Programs with file handling and templates
6. Apply OOP concepts to solve real world problems

List of Programs:

1. Create a class Date whose data members are Day, month, and Year. Write necessary member functions and perform the following operations using overload operators
Increment a date by a day
2. Compares two dates
3. Create a class String that has a character array as a data member and perform the following operations using overloaded operators.
 - '+' To add two strings
 - '+=' To concatenate one string with the other
 - '==' To compare two strings
4. Create a class Computer and derive two classes Client and Server from it. Have the data members of the classes as follows.
In the main () program, get the data about n clients and servers and print it back in a neat format.
5. Create four classes with the relationship and data members as in shown in the diagram.
In the main () program, have the facility to
 - Store the details of n inpatients and outpatients
 - Display the details in a neat format
6. Create a class staff that contains the name, designation, and years of experience of a staff member of a college. Using containership, create two more classes Teaching Staff and NonTeachingStaff according to the following specifications.

In addition to the properties of the staff class, the Teaching Staff class should contain the highest qualification the staff member possesses and the departments he belongs to. The NonTeachingStaff class needs to contain the properties of Staff only. In the main (), get data about some of the teaching and NonTeachingStaff members of your college and print the details in neat format.

7. Create a class Address as whose data members are Name, Street, City, Pincode and Phone Number of a person. In the main () program, using array of pointers, get addresses of n persons, sort it in alphabetical order of names and display it back in a neat format.
8. Create a class Shape that contains two data members of type double to hold the two dimensions of the shape.
Derive 3 more classes' circle, rectangle, And Triangle from the class Shape. Using appropriate member functions, get the values, calculate and print the area of different shapes using dynamic binding.
Hint:- write 2 member functions in all the derived classes: one to set the data and the other to calculate and display the area.
9. Create two classes British and Metric to store the measurements of distance in the British (feet and inches) and Metric (meters and centimeters) systems respectively.
In the main () program, perform the following:
 - Get two measurements: one in British and the other in Metric
 - Ask the user in which system (British or Metric) (s) he wants the output.
 - Add two input measurements and print the result according to the user's choice.
10. Create a class that copies the content of a text file into another file. Write the program in such a way that the program accepts command line arguments and make the program to execute in a way exactly the copy command in Dos works.
11. Create a class Student that could the name, register number and marks in the subjects of the semester. Have the program perform the following operations:
 - Store the data about n students in a data file.
 - Print the mark list of each student whenever requested.
 - Add details about some more students at any time.
12. Sort an integer and a floating –point array using function template.
13. Create a class template stack that accepts a generic data type as a parameter and performs the basic operations of a stack. Using the above class in the main () program, implement stacks for integer and floating point data types separately and perform the operations on the stack.

3. www.cppreference.com/

Course Objectives:

To help students to

- Understand the role and nature of relational database management systems (RDBMS) in IT environment.
- Translate written business requirements into conceptual entity-relationship data models.
- Convert conceptual data models into relational database schemas using the SQL Data Definition Language (DDL).
- Query and manipulate databases using the SQL Data Manipulation Language (DML).
- To provide students with comprehensive and in-depth knowledge of architecture and functioning of database management systems.
- To design and built a database system and use computer and database management skills to implement a solution to a business case using database management systems.

Course Outcomes(COs)

Upon completion of this Course, student will be able to:

1. Introduces how to apply logical database design principles, including E-R/EE-R diagrams, conversion of ER diagrams to relations.
2. Familiarize students with the concepts of integrity constraints, relational algebra, relational domain & tuple calculus, data normalization.
3. Construct simple and moderately advanced database queries using Structured Query Language (SQL).
4. Familiarize students with the concept of a database transaction including concurrency control, backup and recovery, and data object locking.
5. Design and implementation of a small database project using Oracle.
6. Improve the database design by applying normalization techniques.

List of Programs

Some sample applications which may be programmed, are given below

I Create following tables with appropriate constraints.

1. Write SQL statement for following queries.

- a. Age of employees.
- b. Employees whose take home salary is in the range Rs10,000 and 15,000
- c. Employees whose has put 10 years of service.
- d. Employees working under the department head RAGURAMAN
- e. Senior and youngest employee in each department.
- f. Employees who retires after one year.

2. Write cursors

- a. To raise the basic salaries by 25 percent
- b. To retain male employee in the existing employee table and to move female employees to a new table.

3. Create following views
 - a. For male employees of age more than 45 years.
 - b. For operator with the CHECK OPTION.
 - c. For Female employees working under the department head RAJARAMAN.
 - d. For male employees with the CHECK OPTION.
 4. Create a trigger which fires when one tries
 - a. To update records in employee table on Sundays.
 - b. To insert records in salary table with basic >30000
 5. Generate a pay slip where 40 percent, 20 percent and 15 percent of basic is given as HRA, TA and DA fro the employees.
- II Create following tables with appropriate constraints.
1. Take a stock report and list of books in circulation.
 2. Write SQL statements for following queries.
 - a. Authors of C and C++ books.
 - b. List of books issued for UG student
 - c. Title of books in computer science department.
 - d. Titles of book by the author 'DIETEL'.
 - e. Publishers of C and C++ books.
 - f. Number of book issued to each student
 - g. Publisher details of Commerce Department.
- III Write a cursor
- a. To move books costing more than Rs.1500 into a separate table, Reference table.
 - b. To move damaged books into a separate table damaged table.

Some sample PL/SQL Programs

1. Write a recursive program for finding the factorial of a given number.
2. Write a recursive program for finding the first n Fibonacci number.
3. Write a PL/SQL program for multiplication tables 3, 4, 5 and 6.
4. Write a recursive program for finding the reverse of a given number.
5. Write SQL queries to illustrate the string functions a mathematical functions.
6. Write a program for finding the reverse of a given string.

Course Objectives:

Enable the student

- Use forms and controls to create a user interface.
- Create and use Sub and Function procedures, including predefined functions.
- Implement decision structures and loops by using conditional expressions.
- Enhance the user interface by adding menus, status bars, and toolbars.
- Access and manipulate data in a Microsoft Access or Microsoft SQL Server database by using Microsoft ADO
- Build, package, and deploy an application.

Course Outcomes(COs)

Upon completion of this Course, student will be able to:

1. Design, create, build, and debug Visual Basic applications .
2. Implement syntax rules in Visual Basic programs. And explain variables and data types used in program development and apply arithmetic operations for displaying numeric output.
3. Write and apply decision structures for determining different operations, loop structures to perform repetitive tasks, procedures, sub-procedures, and functions to create manageable code.
4. Create one and two-dimensional arrays for sorting, calculating, and displaying of data and to write Visual Basic programs using object-oriented programming techniques including classes, objects, methods, instance variables, composition, and inheritance, and polymorphism.
5. Students will be able to design Windows applications using forms, controls, and events.
6. Explore Visual Basic's Integrated Development Environment (IDE).

List of Programs

1. Develop a Visual program to implement calculator.
2. Write a Visual basic Application for Banking using Data control
3. Write a visual basic application to implement Employee Pay Roll using Ado Data Control. Use MS Flex grid to display the Employee Details
4. Develop a Visual Basic Application to maintain the books in the library using ADO Data control. Uses Data Report to generate a report for Books availability in the library.
5. Write a Visual basic application to create a ActiveX Control for Calendar.
6. Write a Visual Basic Program to create a Screen saver application for windows,
7. Design a VC++ program to Create a window
8. Implement a Mouse Events
9. Write a VC++ program to create window with menu
10. Write a VC++ program to Store a records in the database for students.

11. Write a VC++ program to implement a mouse event using SDK
12. Write a VC++ program to transfer the file from source to destination using MFC.

Text Books

1. Gray Cornell, Visual Basic 6 from the Ground Up, 2011, Tata McGraw Hill Publication. New Delhi. [Unit 1 to 3]
2. Ivor Horton's, Beginning Visual C++, 1st 2014, Wiley India Pvt. Ltd. (Wrox Beginning Guides), New Delhi, India [Unit 4 & 5]

Reference Books

1. Programming Microsoft Visual C++, 2011, 5th Edition, Wiley India Pvt. Ltd., New Delhi, India

Course Objectives:

- To expose the students to the best object oriented programming paradigm, java and strengthen their OOP's fundamental knowledge.
- To Study the software and hardware requirement and installing the java.
- To understand Java programming constructs like variable, primitive data types, operators, type conversion, type casting etc.
- To develop program by using classes, object, nested classes, constructors etc.
- To create package, use of packages, adding a class to a package.
- To understand conversion of numbers and Strings, manipulations of strings, Unboxing and auto boxing

Course Outcomes(COs)

Upon completion of this Course, student will be able to:

1. Describe the features of Java
2. Design classes with object-oriented features
3. Describe advanced features of Java like exception handling, multithreading etc.
4. Write programs in JAVA featuring its core capabilities
5. Able to create objects, classes, packages and class libraries.
6. Ability to make use of members of classes found in the Java API (such as the Math class).

Unit I

Introduction to Java Applications and Applets: Printing a line of text – Displaying text in a Dialog Box – Adding integers – Arithmetic – Decision Making – Drawing a String – Adding Floating Point Numbers. Control Statements: Pseudocode – Control Structures - if, if/else, while – Formulating Algorithms: Case studies: 1, 2 & 3 – Compound Assignment – Increment and Decrement Operators – Primitive types – for, do/while – switch –break and continue statements (simple & labeled) – Logical Operators - selection statements. Methods: Program Modules in Java – Method Declarations – Argument Promotion - Java API Packages – Scope of Declarations – Method Overloading – Recursion. Arrays: Declaring and Creating Arrays – REFERENCES and Reference Parameters – Passing Arrays to Methods – Multidimensional Arrays.

Unit II

Object-Based Programming: Implementing a Time Abstract Data Type with a Class – Class Scope – Controlling Access to members –‘this’- Constructors – Overloaded Constructors – set and get methods – Composition – Static Class Members – Creating Packages – Package Access. Object-Oriented Programming: Superclasses and Subclasses – protected Members – Constructors and Finalizers in Subclasses – Invoking Superclass Method from Subclass Objects - Using Superclass REFERENCES with Subclass-Type Variables – Subclass Method Calls via Superclass-Type Variables – Inheriting Interface and Implementation – final Methods and classes Nested Classes – Type-Wrapper Classes for Primitive Types. String and Characters: Fundamentals – Class String – Class StringBuffer – class Character – class StringTokenizer – Regular Expressions, Class Pattern and Class Matcher.

Unit III

Graphics and Java2D: Graphics Contexts and graphics Objects – Color Control – Font Control – Drawing Lines, Rectangles, Ovals, Arcs, Polygons and Polylines – Java2D API. Graphical User Interface Components: Overview of Swing Components- JLabel – EventHandling – Textfields – How event handling works – JButton – JCheckBox and JRadioButton – JComboBox – JList – Multiple-Selection Lists – Mouse Event Handling – Adapter classes – Key Event Handling – Layout Managers – Panels – JTextArea – JPanel – JSlider – Using Menus with Frames – JPopupMenu – Pluggable Look-and-Feel. Exception Handling: Java Exception Hierarchy – Rethrowing and Exception – finally Clause – printStackTrace, getStackTrace and getMessage – Chained Exceptions.

Unit IV

Multithreading: Life Cycle of a Thread – Thread Priorities and Thread Scheduling – Creating and Executing Thread – Thread Synchronization – Runnable Interface. Files and Streams: Data Hierarchy – Files and Streams – Class File – Creating a Sequential-Access File – Reading Data from a Sequential-Access File – Random-Access Files – Creating/Writing/Reading Random-Access Files – New I/O APIs for the Java Platform. Networking: Manipulating URLs – Reading a File on a Web Server –Client/Server Interaction with Stream Socket Connections. Multimedia: Loading, Displaying and Scaling Images – Animating a series of Images – Image Maps – Loading and Playing Audio Clips.

Unit V

Java Utilities Package and Bit Manipulation: Vector Class and Enumeration Interface – Stack Class of Package java.util – Hashtable Class – Properties Class – Bit Manipulation and the Bitwise Operators – BitSet Class. Collections: Collections Overview – Class Arrays – Interface Collection and Class Collections – Lists – Sets – Maps. Java Database Connectivity with JDBC: Relational Database Overview – SQL – Manipulating Databases with JDBC – Stored Procedures.

2. www.en.wikipedia.org/wiki/Java
3. www.java.net/

Course Objectives:

Enable the student to

- Become familiar with layered communication architectures (OSI and TCP/IP).
- Understand the client/server model and key application layer protocols.
- Learn sockets programming and how to implement client/server programs.
- Understand the concepts of reliable data transfer and how TCP implements these concepts.
- Know the principles of congestion control and trade-offs in fairness and efficiency.
- Know the fundamentals of data communications networks, working of data transmission concepts

Course Outcomes(Cos)

Upon completion of this Course, student will be able to:

1. Independently understand basic computer network technology.
2. Understand and explain Data Communications System and its components. Different types of network topologies and protocols.
3. Enumerate the layers of the OSI model and TCP/IP. Explain the function(s) of each layer.
4. Identify the different types of network devices and their functions within a network. Understand and building the skills of subnetting and routing mechanisms.
5. Familiarity with the basic protocols of computer networks, and how they can be used to assist in network design and implementation.
6. Understand the various operation of all seven layers of OSI Model and the protocols used in each layer.

Unit I

Introduction: Introduction to Computer Network-OSI Reference Models-TCP/IP Reference Model-Example of Network. Physical Network: Theoretical Basics for Data Communication-Guided Transmission Media-Wireless Transmission-Communication Satellites-Mobile Phone System.

Unit II

Data Link Layer: Data Link Layer Design Issue-Error Detection and Correction Methods-Elementary data link protocol-Sliding window protocols-Example Data Link protocol. The channel Allocation problem-Multiple Access Protocols-Ethernet-Wireless LANs-IEEE 802 standards-High Speed LANs

Unit III

Network Layer: Network Layer Design Issue-Routing Algorithms-Congestion control Algorithms-Quality of service-Inter networking-Network Layer in Internet

Unit IV

Transport Layer: Transport service-Elements of transport protocols-Internet Transport protocols: UDP and TCP-Performance Issues

Unit V

Application Layer: The Domain Name System-Electronic Mail-World Wide Web-Multimedia-Compression Methods. Network Security: Cryptography-Symmetric and Asymmetric key algorithms-Digital signature-Simple Network Management protocol.

Course Objectives:

To make students to

- Understand the fundamental features of web applications.
- Understand the objects and components needed for a web designing.
- To identify which technologies can be used.
- Create a webpage
- To Understand the various steps in designing a creative and dynamic website.
- To Design dynamic and interactive web pages.

Course Outcomes(Cos)

Upon completion of this Course, student will be able to:

1. Design simple web applications and window applications.
2. Develop, implement and creating Applications with C#.
3. Develop, implement, and demonstrate Component Services, Threading, Remoting, Windows services.
4. Understand and be able to explain Security in the .NET framework and Deployment in the .NET.
5. Learn about the ADO.NET, the feature, controls and code to connect database with front end using ODBC, OLEDB, and SQL, and how to develop web form and data connectivity in ASP.NET.
6. Demonstrate technical skills required of Web Developers through use of W3C standards.

Unit I

Creating an HTML Document – creating list – creating links between document – linking to resources on the internet – working with hypertext attributes – working with fonts and text styles – tables – creating frameset – working with forms – working with cascading style sheets.

Unit II

JavaScript: Introduction to javascript – Programming fundamentals – Functions and objects – Navigator object model

Unit III

JavaScript: Form and form elements – Scripting frames and multiple windows – Event object – Functions and custom objects.

Unit IV

ASP: Client side scripting vs. Server side scripting- Variables & Constants- Procedures – Forms – Cookies – Application - #include – Global.asa - Functions-ASP object model: Response- Request- Application- Session – Server – Error – Array

Unit V

ASP: Collections & Control Structure-File system object: File System – Text Stream-Drive – File – Folder – Directory – ADO - sql & Databases for data driven applications-ASP Components: Ad Rotator – Browser Cap. – Content Linking – Content Rotator .

Course Objectives:

To help students to

- Understand the basic concepts techniques and applications of software agents.
- Understand how agent communications between them.
- Know the applications of agent.
- Understand software agents design tools.
- Introduce the concepts, techniques and applications of software agents.
- Evaluate current software agent systems.

Course Outcomes (COs)

Upon completion of this Course, student will be able to:

1. Know the pitfalls of Agent Development
2. Implement the interaction between the agents
3. Have an idea to develop an agent application
4. Describe the various agent application
5. Understand the Multiagent planning and Synchronization
6. Know about Agent oriented programming

Unit I

Introduction – Intelligent Agents – Environments – Intelligent agents – Agents and Objects – Agents and Expert Systems – Agents as Intentional Systems – Abstract Architectures for Intelligent Agents – How to tell an agent what to do – Synthesizing Agents

Unit II

Deductive Reasoning Agents – Agents as Theorem Provers – Agent-Oriented Programming – Concurrent Mutate.

Practical Reasoning Agents – Proactical Reasoning Equals Deliberation Plus Means-Ends Reasoning – Means-Ends Reasoning – Implementing a Practical Reasoning Agent -Homer – The Procedural Reasoning System

Reactive and Hybrid Agents- Brooks and the Subsumption Architecture – The Limitations of Reactive Agents – Hybrid Agents

Unit III

Multiagent Interactions – Utilities and Preferences – Multiagent Encounters – Dominant Strategies and Nash Equilibria – Competitive and Zero-Sum Interactions – The Prisoner's Dilemma – Other Symmetric 2 x 2 Interactions – Dependence Relations in Multiagent Systems

Reaching Agreements – Mechanism Design – Auctions – Negotiation – Argumentation Communication – Speech Acts – Agent Communication Languages – Ontologies for Agent Communication – Coordination Languages

Unit IV

Cooperative Distributed Problem Solving – Task Sharing – Combining Task and Result Sharing – Handling Inconsistency – Coordination – Multiagent planning and Synchronization

Unit V

Methodologies – Agent-Oriented Analysis and Design Techniques – Pitfalls of Agent Development – Mobile Agents-Applications of Agents

Text Book

1. Michael Wooldridge.2009. An Introduction to Multiagent Systems, John Wiley & Sons Ltd.

References

7. Gerhard Weiss, 2013, Multi-agent Systems, MIT Press, 2nd Edition
2. Walter Brenner et al, 2011, Intelligent Software agents: Foundations and Applications, Springer Verlag

Course Objectives:

Enable the student

- To Understand basics client/server architecture
- To Establish and use Database connectivity
- To gain the knowledge of CORBA
- This Subject deals with the C/S Computing, GUI.
- To apply the techniques and features of a client/server development language to construct a moderately complex client/server application.
- To learn the advantages of client-server systems over monolithic systems.

Course Outcomes(COs)

Upon completion of this Course, student will be able to:

- Know client server computing models and can establish communication between them
- Design a dynamic remote application with RMI and JDBC Connectivity
- Develop programming using C#.net
- Differentiate homogeneous and heterogeneous language communications.
- Develop real time projects by combining CORBA and database interfacing
- Differentiate between two-tier and three-tier architectures.

Unit I

A client-server computing-What is client/server? Server classification- FAT server- FAT client - 2 Tier versus 3 Tier- client/server building blocks- the road to bandwidth heaven- Advantages of client/server computing.

Unit II

Clients, servers and operating systems- NOS- Creating the single system Image- RPC, messaging and peer-to-peer. Client/server systems development- Software- Client/server systems development- Hardware.

Unit III

SQL database servers- SQL middleware and federated databases- Data warehouse- OLAP and multidimensional data- Client/server transaction processing- The magic of transaction- TP monitors.

Unit IV

Database connectivity solutions: ODBC – The need for Database Connectivity- Design overview of ODBC- Architecture- Components- Applications- Driver Manager- Drivers- Data sources- ODBC 2.5 and ODBC 3.0.

Unit V

Client/server groupware - CORBA- Compound Documents- Web Client/Server- 3 Tier Client/Server, Web-style- HTML 2.0's Web-based forms- CGI- Web security- The Java objects. Client Server Administration – Introduction to Windows NT- Architecture- Memory Architecture- Server and workstation- Installing Windows NT.

Text Book

1. Robert Orfali, Dan Harkey, Jeri Edwards. 2000, The Essential Client/Server Survival Guide. 2nd Edition. Galgotia Publication, New Delhi.

Reference

1. Patrick Smith, Steve Quengerich. Client/Server Computing. 2nd Edition. Prentice hall of India, New Delhi

Course Objectives:

Enable the student

- The Software perspective architectural and how it differs from lower-level design.
- Understand the need for a Software Architecture.
- To exploit the software architecture environment.
- To understand software engineering layered technology and Process frame work.
- To Understand Design Engineering, Web applications and Software Project Management.
- To Understand the software design concepts and know to Maintain the quality of software project

Course Outcomes (COs)

Upon completion of this Course, student will be able to:

1. Principles and Process of software development
2. Design various software architectures with visual notations
3. Evaluate the software design methods
4. Enumerate different software estimation and project scheduling techniques
5. Identify software requirements engineering activities.
6. Able to Verify and validate the problem of software programming

Unit I

Introduction – Software Architecture – Software Design levels – An Engineering Discipline for Software – The status of Software Architecture – Architectural styles – Pipes and filters – Data Abstraction and Object-oriented organization – Event based, implicit invocation – Layered systems – Repositories – Interpreters – Process Control – Other Familiar Architecture – Heterogeneous Architectures.

Unit II

Case studies - Key word is Context – Instrumentation Software – Mobile Robotics – Cruise Control – Three Vignettes in Mixed Style

Unit III

Shared Information Systems – Database Integration – Integration in Software Development Environments – Integration in the Design of Buildings – Architectural structures for shared Information Systems

Unit IV

Guidance for User-Interface Architectures – The quantified Design Space – The value of Architectural formalism – Formalizing the Architecture of a specific system – Formalizing an Architectural Style – Formalizing an Architectural Design Space – Towards a Theory of Software Architecture – Z Notation

Unit V

Requirements for Architecture – Description Languages – First class connectors – Adding Implicit Invocation to Traditional Programming Languages – Tools for Architectural Design – UniCon – Exploiting Style in Architectural Design Environments – Beyond definition/Use: Architectural Interconnection.

Text Books

1. Mary Shaw, David Garlan, Software Architecture – Perspectives on an Emerging Discipline, Prentice Hall of India, Eastern Economy Edition.

Reference:

1. Malveau, Mowbray ,Software Architecture Bootcamp. 2011,Prentice Hall.
2. Dave Hendricksen, 2011, 12 Essential Skills for Software Architects, Addison - Wesley.

Course Objectives:

Enable the students

- Basic multimedia concepts.
- Basic knowledge of 2D animation
- The knowledge of audio and video capture and editing tools
- The skill to design different application using flash.
- interface design, content design and creation with graphics, animation, audio and video materials, and software development using Flash.
- To learn various multimedia authoring systems.

Course Outcomes(COs)

Upon completion of this Course, student will be able to:

1. Comprehend multimedia system fundamentals.
2. Design and implement a multimedia application or identify a problem in certain multimedia area and provide a reasonable solution.
3. Know various multimedia software tools.
4. Design multimedia software that are suitable to Internet applications.
5. Design flash animations
6. Design and development of a multimedia application

Unit I

Introduction to Multimedia – Usage of Multimedia- Introduction to making Multimedia: Stages of a project- Need for making multimedia- Macintosh and windows production platforms- Multimedia Building block: Text

Unit II

Sound: Digital Audio- Audio file formats-MIDI-MIDI vs Digital Audio - Images: Making images-Color-Image File Formats-Animation: Animation Techniques & file formats- video

Unit III

Storage Media & Access – Data Compression Techniques: Some basic compression techniques, JPEG, MPEG, DVI

Unit IV

Flash: Introduction to Flash – Variables & Data types: Data types in Action Script, creating and placing variables, Buttons with Text Fields – Basic Actions: Play, Stop, Back & Forth between frames and Scenes, Timelines, External Scripts – Operators- Loops: Repeater Loops, Frame Loop, Structure Loops, Nested Loops.

Unit V

Handling Events: Mouse Event, Keyboard, Key Objects, Clip Events, MovieClip Objects, Colliding Objects – Properties & Functions: setting properties, property tests, passing Property Values, Functions in Flash, using Substrings, User Defined Functions – Specialized Objects: Color, Date, Math, Number, Sound, XML & XML Socket Objects – Creating a Movie

2. John .F..Koegel Buford. 2001. Multimedia Systems. 1st Edition, Pearson Education, New Delhi.(Unit I , II)
3. Ralf Steinmetz and Klara Nahrstedt. 2001 Multimedia: Computing, Communications, & Applications. 1st Edition, Pearson Education , New Delhi. (Unit III)
4. Bill Sanders. 2001 Flash5 ActionScript. 1st Edition, DreamTech Press, New Delhi (Unit IV , V)

Reference Books:

1. Ranjan Parekh. 2013 Principles of Multimedia, 2nd Edition, Tata McGraw Hill, New Delhi.
2. Bojkovic & Milovanovic Rao, 2009, Multimedia Communication Systems Techniques, Standards And Networks Paperback, Phi.

WEB SITES

- 1.en.wikipedia.org/wiki/Multimedia
- 2.www.arena-multimedia.com/ -
- 3.www.nextwavemultimedia.com/

Course Objectives:

Enable the student

- Understand basic communication systems.
- Acquire basic knowledge MAC Layer
- Wide knowledge about linux based operating systems
- Design different application on mobile based operating systems.
- Gain knowledge on mobile communication systems and depth knowledge of mobile operating systems.
- Learning about systems for mobile application distribution .

Course Outcomes(COs)

Upon completion of this Course, student will be able to:

- Understand and identify the GSM, GPRS and Bluetooth software model for mobile computing.
- The ability to develop applications that are mobile-device specific and demonstrate current practice in mobile computing contexts.
- Understanding of the characteristics and limitations of mobile hardware devices including their user-interface modalities
- Analyze QoS over wire and wireless channels
- Able to promote the awareness of the life-long learning,business ethics, professional ethics and currentmarketing scenarios.
- Student has knowledge concerning mobile operating systems and their architecture.

Unit I

Introduction to Mobile communication-Wireless communication-How wireless started-Worldwide mobile communications market-Wireless transmission - Radio transmission – frequencies-Regulations-Signals-Antennas- Signal propagation-Multiplexing- Modulation-Spread spectrum-Cellular system.

Unit II

Medium Access control: Introduction- Introduction -Reason for specialized MAC-SDMA FDMA- TDMA-CDMA-Telecommunication systems-GSM-Satellite System-GEO-LEO-MEO.Layers of Mobile Networks: Mobile IP-Mobile node (MN)-DHCP-Mobile Ad-hoc Networks-Mobile Transport Layer-Traditional TCP- Improvements to Classical TCP-TCP over 2.5/3G wireless networks-Performance enhancing proxies

Unit III

Linux Based Operating Systems: Access Linux-Android-DSLlinux- iPod Linux-Limo (Linux Mobile)-MeeGo-Mobilinux-OpenMoko-SHR-QT Extended- Ubuntu

Unit IV

Windows Based Operating Systems: Windows Phone-Windows Mobile.Other Operating Systems: BADA- Blackberry-Blackberry Tablet-iPhone-PALM-Palm's Web-Symbian

Unit V

Symbian programming-Installing the Qt Software -Create a Simple Mobile Application.
Windows Phone 7 Programming-Installing Visual Studio 2010- Installing Windows Phone 7 SDK- Create a Simple Mobile Application.Android Programming: Installing JDK -NetBeans Installation-Create a Simple Mobile Application

Text Books

1. Arash Habibi Lashkari, Mohammadreza Moradhaseli.2011. Mobile Operating Systems and Programming: Mobile Communications, VDM Publishing.

Reference Books

1. Mischa Schwartz. 2005. Mobile Wireless Communications. Cambridge University
2. Michael J Jipping . 2007.Smartphone Operating System Concepts With Symbian Os, willey India.
3. Press.R.Roger, J Lombarddo, Z Mednieks and B. Meike, 2010, Android Applications Development, O'Reilly, Shroft Publishers & Distributors Pvt Ltd, New Delhi.

Web sites:

- www.zdnet.com/.../beyond-android-and-ios-the-top-six-mobile-operatin..
- www.shoutmeloud.com/top-mobile-os-overview.html

Course Objectives:

Enable the students

- To give everybody a base level of finance knowledge that an MPA from a top business school should possess,
- To give everybody the ability and confidence to tackle common financial problems in practice
- To provide adequate preparation for future managers should organize their financial transactions effectively and with integrity.
- To understand and appreciate the basic Micro and Macroeconomics and their application to the business
- basics of Accounting Concepts and Principles to Prepare to Students to have the foot hold in Accounts.
- To know about ratio analysis

Course Outcomes(COs)

Upon completion of this Course, student will be able to:

1. Preparing financial statements in accordance with appropriate standards.
2. ledger accounts using double entry bookkeeping and record journal entries accordingly .
3. Interpreting the business implications of financial statement information
4. To understand theories of profit , profit maximization and analysis of Breack Even Point
5. To know law of diminishing proportion , product function , Economies of scale
6. To understand Pricing policy under Perfect Competition Monopoly,

Unit I

Accounting: Definition- Objectives- Advantages- Accounting Concepts- Accounting Conventions; Methods of Accounting: Single Entry and Double Entry System- Basic books of Accounts- Journal and Ledger- Preparation of Trial Balance; Final accounts: Trading and Profit and Loss Account and Balance Sheet of Sole Proprietary Concern; Depreciation- Meaning- Straight-Line Method-Diminishing Balance Method.

Unit II

Ratio Analysis: Meaning-Advantages-Limitations; Classification of Ratio: Profitability, Turnover and Solvency Ratios.

Unit III

Funds Flow Statement: Concept of funds- Funds Flow Statement- Uses and Limitations- Preparation of Fund Flow Statement- Cash Flow Statement.

Unit IV

Budget and Budgetary Control: Meaning and Definition- Objectives of Budgetary Control- Advantages and Limitation Preparation of Different Types of Budgets.

Unit V

Costing: Definition- Nature and Importance- Advantages and Limitations of Cost Accounting-Classifications of Cost - Preparation of Cost Sheet.

Marginal Costing: Meaning- Advantages- Cost-Volume Profit Analysis- Break Even analysis- Uses and assumptions- Applications of Marginal Costing.

Text Books

1. N.Vinayakam, Mani and Nagarajan, "Principles of Accountancy".
2. S.N.Maheswari, "Principles of Management Accounting".
3. S.P.Jain and Narang, "Cost Accounting".

Reference Books

1. Sharma and Sasi.K.Gupta, "Management Accounting".
2. T.S.Grewal, "Introduction to Accountancy".
3. Ramachandran and Srinivasan, "Management Accounting".

Course Objectives:

Enable the student

- To expose the students to the best object oriented programming paradigm, java and strengthen their OOP's fundamental knowledge.
- To Study the software and hardware requirement and installing the java.
- To understand Java programming constructs like variable, primitive data types, operators, type conversion, type casting etc.
- To develop program by using classes, object, nested classes, constructors etc.
- To create package, use of packages, adding a class to a package.
- To understand conversion of numbers and Strings, manipulations of strings, Unboxing and auto boxing

Course Outcomes(COs)

Upon completion of this Course, student will be able to:

1. Describe the features of Java
2. Design classes with object-oriented features
3. Describe advanced features of Java like exception handling, multithreading etc.
4. Write programs in JAVA featuring its core capabilities
5. Able to create objects, classes, packages and class libraries.
6. Ability to make use of members of classes found in the Java API (such as the Math class).

List of Programs:

1. Create an employee package to maintain the information about the employee. Use constructors to initialize the employee number and use overloading method to set the basic pay of the employee. By using this package, create a Java program.
2. Create a set of classes with the relationship as shown in the diagram and use inheritance relationship to define the sub classes.

Get and display the details of some of the two and four wheelers and display them in a neat format. Create a frame with user specific size and position it at user specific position (use command line argument). Then different shapes with different colors (use menus).
3. Java program to handle different mouse events.
4. Create an applet for a calculator application.
5. Java program to maintain the student information in text file.
6. Animate images at different intervals by using multi-threading concepts.
7. Program to send a text message to another system and receive the text message from the system (use socket programming)
8. Java program by using JDBC concepts to access a database.

9. Java program by using to implement the tree viewer.
10. Implementation of Binary Search Tree

Web Sites

1. java.sun.com/docs/books/tutorial/
2. www.en.wikipedia.org/wiki/Java
3. www.java.net/

Course Objectives:

To make students to

- Become familiar with layered communication architectures (OSI and TCP/IP).
- Understand the client/server model and key application layer protocols.
- Learn sockets programming and how to implement client/server programs.
- Understand the concepts of reliable data transfer and how TCP implements these concepts.
- Know the principles of congestion control and trade-offs in fairness and efficiency.
- Know the fundamentals of data communications networks, working of data transmission concepts

Course Outcomes(Cos)

Upon completion of this Course, student will be able to:

1. Independently understand basic computer network technology.
2. Understand and explain Data Communications System and its components. Different types of network topologies and protocols.
3. Enumerate the layers of the OSI model and TCP/IP. Explain the function(s) of each layer.
4. Identify the different types of network devices and their functions within a network. Understand and building the skills of subnetting and routing mechanisms.
5. Familiarity with the basic protocols of computer networks, and how they can be used to assist in network design and implementation.
6. Understand the various operation of all seven layers of OSI Model and the protocols used in each layer.

List of Programs:

1. Write a networking program in Java to implement a TCP server that provides services for a TCP Client.
2. Write a networking program to implement socket programming using User datagram Protocol in Java.
3. Implement an FTP server using socket programming.
4. Implement a chat server using socket programming.
5. Implement an ECHO server using socket programming.
6. Implement Address Resolution Protocol using socket programming.
7. Implement Ping server and Ping client using socket programming.
8. Using UDP to transfer a text file from one host to another.
9. Implement Remote Command Execution using network programming.
10. Simulate simple Web Browser.

11. Write a Java program to check whether the given DNS is found in the internet or not.
12. Write a network program using HTTP to print the document for the given URL.

2. www.amazon.com/Computer-Networks-Andrew-S-Tanenbaum/dp/0133499456
3. www.cs.rit.edu/~hpb/Lectures/98_445/all.html

Course Objectives:

Enable the students to

- Understand the fundamental features of web applications.
- Understand the objects and components needed for a web designing.
- To identify which technologies can be used.
- Create a webpage
- To Understand the various steps in designing a creative and dynamic website.
- To Design dynamic and interactive web pages.

Course Outcomes(Cos)

Upon completion of this Course, student will be able to:

1. Design simple web applications and window applications.
2. Develop, implement and creating Applications with C#.
3. Develop, implement, and demonstrate Component Services, Threading, Remoting, Windows services.
4. Understand and be able to explain Security in the .NET framework and Deployment in the .NET.
5. Learn about the ADO.NET, the feature, controls and code to connect database with front end using ODBC, OLEDB, and SQL, and how to develop web form and data connectivity in ASP.NET.
6. Demonstrate technical skills required of Web Developers through use of W3C standards.

List of Programs:

1. Develop a website for Karpagam University using HTML.
2. Write Online Quiz program (Include Style Sheets)
3. Create a simple animation using DHTML.
4. Write a program to apply Mask into an Image Using Filters in DHTML.
5. Generate web page that represents clock-every 60 see the page updated with server current time Using JavaScript.
6. Design a form and validate it using JavaScript.
7. Show the demo of AD Rotator Component
8. Write Database Access program using ASP.
9. Program to retrieve Cookies information using ASP
10. Program to count web page hits using ASP
11. Program to create Date & Time, String Manipulation using ASP
12. Write a program to find the visitor's Browser Type, IP Address and More Information.

4. www.aspnetutorials.com

Instruction Hours / week: L: 4 T: 0 P: 0 C: 4 Marks: Internal: 40 External: 60 Total: 100

End Semester Exam: 3Hours

Course Objectives:

Enable the student

- Be able to analyze algorithms
- Understand the fundamental skills in back tracking logic, dynamic programming.
- Understand the fundamental algorithms such as searching, and sorting
- To provide an introduction to basic techniques for designing efficient algorithms, analyzing their complexity
- Applying the algorithms to broad range of applications.
- Compute the complexity of various algorithms.

Course Outcomes(COs)

Upon completion of this Course, student will be able to:

1. Learn to analyze worst-case running times of algorithms using asymptotic analysis. Understand operations and applications of Stack and Queue.
2. Be able to analyze and use some fundamental data structures such as Binary search trees. Understand the concept of linked list.
3. Explain the major algorithms for sorting and searching.
4. Describe and synthesize the divide and conquer paradigm, dynamic programming paradigm and greedy paradigm.
5. Understand the concept of backtracking, deterministic and nondeterministic algorithms.
6. Determine and analyze the complexity of given Algorithms.

Unit I

Introduction: Algorithm - pseudo code for expressing algorithms – analysis - time complexity and space complexity - efficiency of algorithms - O-notation - Omega notation and Theta notation.

DIVIDE AND CONQUER: General method – binary search - merge sort - quick sort.

Unit II

Greedy Method: General method- Knapsack problem - job sequencing with deadlines - minimum-cost spanning trees : Prim's and Kruskal's algorithms - Single source shortest paths : Dijkstra's algorithm.

Unit III

Dynamic Programming: General method - Multistage Graphs – All pairs shortest paths, Single source shortest paths - optimal binary search trees - 0/1 Knapsack problem - Traveling sales person problem.

Unit IV

Back Tracking: General method - n-queen problem - sum of subsets problem - graph colouring - Hamiltonian cycles - Knapsack problem.

Unit V

Branch and Bound: Least Cost(LC) search, Bounding - LC branch and bound - FIFO branch and bound - Travelling sales person problem.

Text Book

1. E. Howrowitz and Sahni.2012. Fundamentals of computer algorithms, Galgotia publications.

Reference Books

1. Gilles Brassard and Paul Bratley. 1997. Fundamentals of Algorithm, Prentice Hall of India Pvt.Ltd.
2. Mark Allen Weiss. 2000. Data Structures and Algorithm Analysis in C,Addition-wesley, Third Indian Reprint.

Course Objectives:

Enable the student

- Understand J2EE as an architecture and platform for building and deploying web-based, n-tier, transactional, component-based enterprise applications
- Understand the fundamental concepts of XML and related technologies
- Acquire knowledge on how XML is currently being used in various application areas
- Know how to parse and transform XML documents via tools and through programming APIs
- Understand the EJB architecture and have a good grasp on when to use and how to use various EJB bean types and acquire relevant Java programming experience
- Learn Java web programming with J2EE.

Course Outcomes(COs)

Upon completion of this Course, student will be able to:

1. Develop Swing-based GUI
2. Update and retrieve the data from the databases
3. Develop distributed applications using RMI
4. Develop component-based Java software using JavaBeans
5. Develop server side programs in the form of servlets
6. To understand object-oriented programming with J2EE.

Unit I

J2EE Overview – Beginning of Java – Java Byte code – Advantages of Java –J2EE and J2SE. J2EE Multi Tier Architecture – Distributive Systems – The Tier – Multi Tier Architecture – Client Tier, Web Tier, Enterprise Java Beans Tier, Enterprise Information Systems Tier Implementation.

Unit II

J2EE Database Concepts:Data – Database – Database Schema. JDBC Objects: Driver Types – Packages – JDBC Process – Database Connection – Statement Objects – Result Set – Meta Data.

Unit III

Java Servlets: Benefits – Anatomy – Reading Data from Client –Reading HTTP Request Headers – Sending Data to client – Working with Cookies.

Unit IV

Enterprise Java Beans – Deployment Descriptors – Session Java Bean –Entity Java Bean – Message Driven Bean.

Unit V

Java Server Pages – Java Remote Method Invocation.

Text Book

3. Rod Johnson. 2004. J2EE Development without EJB, 1st Edition, Wiley Dream Tech India, New Delhi.
4. Rod Johnson. 2004.Expert One-On-One J2ee Design and Development , John Wiley & Sons, Incorporated.

Web Sites

1. java.sun.com/javaee/
2. java.sun.com/j2ee/1.4/docs/tutorial/doc/
3. www.j2eebrain.com/

Course Objectives:

Enable the student

- Become a good .NET programmer.
- Know how COM components and the .NET Framework interoperate with each other.
- Identify and use the classes and namespaces in the .NET Framework class library.
- Build WEB Applications using Microsoft ASP.NET programming.
- Understanding the components of the .NET Framework and the common language runtime (CLR)
- Know how COM components. Also provides better knowledge of Architecture

Course Outcomes(COs)

Upon completion of this Course, student will be able to:

1. Able to analyze program requirements
2. Develop programs with GUI interfaces
3. Code programs and develop interface using Visual Basic .Net,C#.Net,ASP.Net
4. Perform tests, resolve defects and revise existing code.
5. Able to develop projects using ASP .NET
6. Able to apply all the window controls.

Unit I

Introduction: Getting Started With VB.NET: The Integrated Development Environment-IDE Components-Environment Options.Visual Basic: The Language Variables-Constants-Arrays – Variables as Objects-Flow Control Statements.Working with forms: The appearance of Forms-Loading and Showing Forms-Designing Menus.

Unit II

Basic Windows Controls: Textbox Control- ListBox, CheckedListBox-Scrollbar and TrackBar Controls-More Windows Control-The common Dialog Controls-The Rich TextBox Control - Handling Strings, characters and Dates. The TreeView and ListView Controls: Examining the Advanced Controls-The TreeView Control-The ListView Control

Unit III

The Multiple Document Interface-Databases: Architecture and Basic Concepts-Building Database Application with ADO.NET-Programming with ADO.NET

Unit IV

Goal of ASP.NET –ASP.NET Web Server Control-Validation Server Controls-Themes and Skins -Content Page Holder

Unit V

Data Binding in ASP.Net: Data source Controls – Configuring data source control caching – storing connection information-Using Bound list controls with Data Source Controls – Other Databound Controls-Data Management with ADO.Net

Text Books

1. Evangelos Petroustos, Mastering Visual Basic.Net, BPB Publications, New Delhi.

1. Dave Mercer, ASP.Net Beginner's Guide . 2003. 2nd Edition McGraw Hill, New Delhi.
2. Duncan Mackenzie Kent Sharkey. 2006. Sams Teach yourself Visual Basic.JNet, 1st Edition, McGraw Hill, NewDelhi.
3. Shirish Chavan. 2007. Visual Basic.Net, 1st Edition, Pearson Education, New Delhi.

Web Sites

1. www.microsoft.com/NET/
2. www.en.wikipedia.org/wiki/.net
3. www.w3schools.com/ngws/default.asp
4. www.vbtutot.com

Course Objectives:

Enable the student

- Install and configure database
- Create users and assign roles
- Optimize schemas, tables, indexes and views
- Manage database services and clients
- Will be able to move the data from one database to another database.
- To keep database operational

Course Outcomes(COs)

Upon completion of this Course, student will be able to:

1. Design a data mart or data warehouse for any organization
2. Develop skills to write queries using DMQL
3. Extract knowledge using data mining techniques
4. Adapt to new data mining tools.
5. Explore recent trends in data mining such as web mining, spatial-temporal mining
6. Knowledge of monitoring performance of tasks

Unit I

Oracle DBA's: The Oracle DBA's Role- Oracle Database 10g Architecture: Oracle Databases and instances- Oracle Logical Storage structures – Oracle Logical Database structures – Oracle Physical Storage structures- Multiplexing Database Files - Oracle Memory Structures-Oracle Backup and Recovery – Security Capabilities – Tablespace Architecture – Oracle Tablespace installation – Traditional Disk Space Storage – Automatic Storage Management

Unit II

Common Space Management Problems – Oracle Segments, Extents and Blocks – Space Management Methodologies – SYSAUX monitoring and usage – Archived Redo Log File Management – Built in Space Management Tools: Segment Advisor – Undo Advisor and the Automatic Workload Repository – Index usage – Space Usage Warning Levels – Reusable space allocation – Managing alert and Trace Files with ADR – Transaction Basics – Undo Basics – Managing Undo Tablespaces – Flashback features

Unit III

Tuning Application Design – Tuning SQL – Tuning Memory Usage – Tuning Data Access – Tuning Data Manipulation – Tuning Physical Storage – Reducing Network Security – Database Authentication Methods

Unit IV

Database Authorization Methods – Auditing: Auditing Locations – Statement Auditing – Privilege Auditing Schema Object Auditing – Auditing Related Data Dictionary Views – Logical Backups – Physical Backups – Using Data Pump Export and Import – Data Pump Import Options – Integration of Backup Procedures

Overview of Oracle Net – Using the Oracle Net Configuration Assistant – Using the Oracle Net Manager – Starting the Listener Server Process – Controlling the Listener Server Process Using Data links

Unit-V

Creating Tablespaces in a VLDB Environment: Bigfile Tablespace Basics – Creating and Modifying Bigfile Tablespace – Bigfile Tablespace ROWID format – DBMS_ROWID and Bigfile Tablespaces.- Advanced Oracle Table Types – Using Bitmap Indexes – Oracle Data Pump

Remote queries – Remote Data Manipulation: Two Phase Commit – Managing Distributed Data – Managing Distributed Transactions – Monitoring and Tuning Distributed Database

Text Book

- Bob Bryla, Kevin Loney 2008 Oracle Database 11g DBA Handbook McGraw-Hill Osborne

Reference Book

1. Saikat Basak. 2010. Oracle DBA Concise Handbook ,Ensel Software

Web Sites :

1. www.oracle.com/technology/software/products/database/oracle10g/index.html
2. www.oracle-base.com/articles/10g/
3. www.adp-gmbh.ch/ora/misc/10g.html

Course Objectives:

Enable the student

- To teach fundamental aspects of security in a modern networked environment with the focus on system design aspects and cryptography in the specific context of network.
- To build protection mechanisms in order to secure computer networks.
- Write coding to encrypt “Plain Text” into “Cipher Text” and vice versa, using different encryption algorithms.
- The ability to choose a suitable ciphering algorithm according to the required security level.
- Build cryptosystems by applying encryption algorithms,
- Build secure authentication systems by use of message authentication techniques.

Course Outcomes(COs)

Upon completion of this Course, student will be able to:

1. Classify the symmetric encryption techniques
2. Illustrate various Public key cryptographic techniques
3. Evaluate the authentication and hash algorithms.
4. Summarize the intrusion detection and its solutions to overcome the attacks.
5. Demonstrate the basic concepts of system level security
6. understand the goals, issues, technologies, algorithms, protocols and design criteria used in cryptography and data security and solution.

Unit I

Introduction to Cryptography – Security Attacks – Security Services – Security Algorithm – Stream cipher and Block cipher – Symmetric and Asymmetric – Key Cryptosystem; Symmetric Key Algorithms: Introduction – DES – Triple DES – AES – IDEA – Blowfish – RC5.

Unit II

Public Key Cryptosystem: Introduction to Number Theory – RSA Algorithm – Key Management – Diffie-Hellman key exchange – Introduction to Elliptic Curve Cryptography; Message Authentication and Hash functions – Hash and Mac Algorithm – Digital Signatures and Authentication Protocol.

Unit III

Network Security Practice: Authentication Applications – Kerberos – X.509 Authentication Services and Encryption Techniques;; E-mail security – PGP – s/MIME – IP Security.

Unit IV

Web Security – Secure Socket Layer – Secure Electronic Transaction; System Security – Intruders and Viruses – Firewalls – Password Security.

Unit V

Case Study: Implementation of Cryptographic Algorithms – RSA – DSA – ECC (C / JAVA Programming). Network Forensic – Security Audit; Other Security Mechanism: Introduction to Stenography – Quantum Cryptography – Water Marking – DNA Cryptography.

Text Book

2. u.cs.biu.ac.il/~herzbea/book.html
3. www.flipkart.com/search-books/cryptography+and+network+security+William+stallings+ebook

Course Objectives:

- To perform test each time they are run, thereby eliminating human error.
- To test how the software reacts under repeated execution of the same operations.
- To program sophisticated tests which bring out hidden information from the application.
- To reuse tests on different versions of an application, even if the user interfaces changes.
- to provide stakeholders with information about the quality of the product or service under test.
- To know the Types of errors and fault models

Course Outcomes(COs):

Upon completion of this Course, student will be able to:

1. Test the software by applying testing techniques to deliver a product free from bugs
2. Evaluate the web applications using bug tracking tools.
3. Investigate the scenario and the able to select the proper testing technique
4. Explore the test automation concepts and tools
5. Deliver quality product to the clients by way of applying standards such as TQM, Six Sigma
6. Various test processes and continuous quality improvement

Unit I

Introduction: Purpose of Testing – Dichotomies - Model for Testing – consequences of bugs- Taxonomy for bugs

Unit II

Flow/Graphs and Path Testing : Path testing basics-predicates, path predicates and Achievable paths – Path sensitizing– path instrumentation-implementation and application of path testing

Unit III

Transaction flow testing: – Transaction flow - Transaction flow testing techniques – implementation comments – testability tips -Data flow testing basics- Data flow testing strategies.

Unit IV

Domains and paths-Nice Domains and Ugly Domains-Domain testing-Domains and interface testing-Domains and testability-Metrics-Linguistic metrics-structural metrics-Hybrid metrics-metrics implementations-Testability tips

Unit V

Risk Analysis : Benefits of Risk analysis – Project Management Strategies and Risk – MITs risk Analysis – MITs Ranking Criteria - Using Risk Ranking in Forensics –Test estimation process-MIT totals worksheet-Sizing worksheet

3. <http://www.softwaretesting fundamentals.com>
4. www.cs.cmu.edu
5. www.softwaretesting management.con

Course Objectives:

Enable the students to

- Be aware of a range of XML tools (Many of them are free).
- Know how to set out an XML document
- Define custom markup language
- Understand the purpose of using DTDs and Schemas to validate XML
- Use XSLT to write a style sheet for XML document to produce multiple output
- Combine XML with existing web technologies.

Course Outcomes(COs)

Upon completion of this Course, student will be able to:

1. Understand the use of web services in B2C and B2B applications.
2. Understand the design principles and application of SOAP and REST based web services.
3. Design collaborating web services according to a specification.
4. Implement an application that uses multiple web services in a realistic business scenario.
5. Use industry standard open source tools such as Apache Axis2, Tomcat, Derby and Eclipse to build, test, deploy and execute web services and web applications that consume them.
6. To learn how to create websites using XML, understand the essentials of the XML standards.

Unit I

World Wide Web: Introduction to the Internet and World Wide Web: W3C – History of Internet- World Wide Web- SGML – XML Resources – Internet and World Wide Web resources. Creating Mark up with XML: Introduction – Parsers and well formed XML Documents – Parsing an XML Document - Characters – Mark up – CDATA Sections – XML Namespaces

Unit II

Document Type Definition – Parsers, Well formed and valid XML documents – Element type declarations – Attribute declarations- Attributes Types. Schemas:- Schemas VS DTD's – MSXML Schemas, W3C XML Schema –Declaring Types and Elements –Attribute constraints and Defaults - Simple type - Empty elements -Mixed content elements – Creating Attribute Groups

Unit III

Document Object Model: DOM implementations – DOM with JavaScript – Components- Creating nodes – Traversing the DOM. Simple API for XML: DOM vs SAX – SAX based Parsers.

Unit IV

XML Path Language: Nodes – Location Paths; XSLT: Templates - Creating Elements and attributes – Iteration and Sorting – Conditional Processing – Copying Nodes – Combining style sheets – variables. XLink, XPointer, XInclude and XBase.

Unit V

XML Technologies and Applications: XML Query Language – Directory Services Markup Language – Resources Definition Framework – XML topic Maps – Virtual Hyper Glossary – Channel Definition Format – Information and Content Exchange Protocol – Platform for Privacy preferences – XML Metadata Interchange.

Text Book

2. Steve Holzner. 2001. Inside XML, 1st Edition, TechMedia, New Delhi.

Web Sites

1. en.wikipedia.org/wiki/XML
2. www.w3.org/XML/
3. www.w3schools.com/xml/default.asp

Course Objectives:

Enable the student

- Understand general concepts of transmission and wireless communication.
- Understand how mobility affects all layers of the Internet protocol stack, from the MAC layer up through the application layer.
- Understand the emerging applications enabled by wireless networks, and ad hoc mobile wireless networks.
- Work in groups to design and implement wireless applications.
- Routing protocols in WSN.
- Data centric and content-based networking.

Course Outcomes(COs)

Upon completion of this Course, student will be able to:

1. Understand and explain common wireless sensor node architectures.
2. Be able to carry out simple analysis and planning of WSNs.
3. Demonstrate knowledge of MAC protocols developed for WSN.
4. Demonstrate knowledge of routing protocols developed for WSN.
5. Understand and explain mobile data-centric networking principles.
6. Be familiar with WSN standards.

Unit I

Mobile Data Introduction: The Rise of Mobile Data-Key Services for the Mobile Internet- Overview of the WAP-The origins of the WAP- WAP architecture-WAP Internal Structure- Components of the WAP Standards- WAP Gateways-Network Infrastructure Services Supporting WAP Clients-WAP Architecture Design Principles –Relationship with other standards.

Unit II

The Wireless Markup Language: Overview-The WML Document Model-WML Authoring-URLS Identity Content-Mark Up Basics- WML Basics-Basic Content-Events, Tasks and Binding.

Unit III

Variables –Other Content you can include-Controls-Miscellaneous Markup- Sending Information-Application Security-Other Data; The Meta element- Document Type Declarations- Errors and browsers Limitations-Content generation- WML Version Negotiation.

Unit IV

User Interface Design: Making Wireless Applications, Easy to Use- Website Design- Computer Terminals Vs Mobile Terminals-Designing a usable WAP site-structured usability method-user interface design guidelines- Design guidelines for selected WML Elements.

Unit V

Wireless Telephony Applications: Overview of the WTA Architecture- WTA Client Framework –WTA Server and Security- Design Considerations- Application Creation Tool Box- Future of WTA Enhancements.

The Mobile Internet Future: Better Content- Easier Access-Beyond Browsing – Beyond Cellular- Mobile Data Unleashed.

3. www.w3schools.com/wap/

Course Objectives:

Enable the students

- To design good performing distributed database schemas.
- To create optimized query execution plan.
- To efficiently distribute and manage the data.
- To manage distributed access control
- To know how to make secure the databases.
- To expose the students to the architecture, design, and implementation of massive-scale data systems.

Course Outcomes(COs)

Upon completion of this Course, student will be able to:

1. Analyze the physical structure of the database to handle data
2. Apply the knowledge of design alternatives and fragmentation for data distribution
3. Demonstrate the concept of normalization of the database
4. Characterize the concepts of deadlock handling in real time transactions of database
5. Apply the knowledge of database security for protecting data security.
6. Apply concepts of distributed database theory including design and architecture, security, integrity, query processing.

Unit - I

Database concepts : Data Models- Database Operations- Database Management-DB Clients, COS Distribution and Deployment- COS Closedness or Openness-Schema and Data Visibility- Schema and Data Control.

Unit - II

Data Distribution Alternatives : Design Alternatives- Localized Data- Distributed Data. Fragmentation: Vertical Fragmentation- Horizontal Fragmentation. Distribution Transparency: Location Transparency-Fragmentation Transparency-Replication Transparency-Location, Fragmentation, and Replication Transparencies.

Unit - III

Query Optimization : Sample Database- Query Processing in Centralized Systems: Query Parsing and Translation - Query Optimization- Query Processing in Distributed Systems- Heterogeneous Database Systems - Concurrency Control in Distributed Database Systems.

Unit - IV

Deadlock Handling: Deadlock Definition- Deadlocks in Centralized Systems- Deadlocks in Distributed Systems- Distributed Deadlock Detection. Replication Control: Replication Control Scenarios. Failure and Commit Protocols: Terminology- Commit Protocols.

Unit - V

DDBE Security: Cryptography- Securing Data . Traditional DDBE Architectures: Classifying the Traditional DDBMS Architecture- The MDBS Architecture Classifications- Approaches for Developing A DDBE- Deployment of DDBE Software.

3. www.tech-faq.com/distributed-computing.shtml

Course Objectives:

Enable the students

- Learn about IPv4 forwarding and routing.
- Learn about host name resolution and the Domain Name System (DNS).
- Learn about IPv6 addresses.
- know Architectural Overview of the TCP/IP Protocol Suite
- Learn the basics of the layered TCP/IP stack architecture for IPv4
- Learn the key protocols in the TCP/IP suite

Course Outcomes(COs)

Upon completion of this Course, student will be able to:

1. Explain TCP/IP protocols, ports, sockets, and data encapsulation
2. Demonstrate the process of packet fragmentation and reassembly
3. Explain the key features and functions of TCP and UDP
4. Apply the knowledge of DNS queries, name resolution, zone data transfers and reverse DNS queries
5. Analyze the knowledge of TCP/IP routing for the working of routing protocols
6. Knowledge of IPv6 address auto configuration works for stateless address auto configuration

Unit I

Introduction: WAN, WAN technologies - Internetworking concepts - Protocols and Standards - TCP/IP protocol suite - Internetworking Devices – Routing Concept - Classful IP Addressing – Subnetting – Supernetting – Classless Addressing

Unit II

ARP & RARP – Proxy ARP – ARP over ATM – ARP and RARP Protocol Format. IP Datagram – Fragmentation – Options – IP Datagram Format – Routing IP Datagrams – Checksum. ICMP : Types of Messages - Message Format – Error Reporting – Query – Checksum - ICMP Package

Unit III

Routing and Routed Protocols - Autonomous Systems – Routing Table - Interior Gateway Protocols – Exterior Gateway Protocols – Routing in Internet. Group Management – IGMP Message – IGMP Operation – Process to Process Communication.

Unit IV

UDP Operation – TCP Services - Flow Control – Multicast Routing – Multicast Routing Protocols. BOOTP - DHCP – Address Discovery and Binding. DNS – Name Space – DNS in Internet – Resolution – Resource Records.

Unit V

Remote Login - FTP – SMTP – SNMP. IP over ATM Wan – Cells – Routing the Cells. Mobile IP : Addressing – Agents – Agent discovery – Registration – Data Transfer – VPN.

4. www.w3schools.com/tcpip/default.asp

Course Objectives:

- Use object-oriented technologies
- Use Unified Modeling Language 2.2
- Perform object-oriented analysis and design
- Explain how the Unified Modeling Language (UML) represents an object-oriented system using a number of modeling views.
- Construct various UML models (including use case diagrams, class diagrams, interaction diagrams, state chart diagrams, activity diagrams, and implementation diagrams) using the appropriate notation
- Concepts of Object Oriented Analysis and Design to solve problems

Course Outcomes(COs):

Upon completion of this Course, student will be able to:

1. Understand of programming language concepts;
2. Demonstrate the software engineering principles and the ability to apply them to software design;
3. Apply the knowledge of OOAD to complete large software project
4. Analyze the deployment of UML diagrams for software design
5. Apply the principles of software engineering quality principles for developing quality software
6. Apply the process of Object Oriented Analysis and Design documents for a given problem using Unified Modelling Language

Unit-I

Complexity: The structure of complex systems-the inherent complexity of software-The five attributes of a complex system-Organized and Disorganized complexity-Bringing order to Chaos-On Designing complex systems. The Object model: The evolution of the object model-Foundations of the object model-Elements of the object model-Appling the object model.

Unit II

Classes and Objects: The nature of an object-Relationship among objects-The nature of a class- Relationships among classes-The interplay of classes and objects-On building quality classes and objects. Classification: The importance of proper classification-Identifying classes and objects-Key abstraction and mechanisms.

Unit III

Notation: The unified modeling language-Package diagrams-Component diagrams-Deployment diagrams-Use case diagrams-Activity diagrams-Class diagrams-Sequence diagrams-Interaction overview diagrams-Composite structure diagrams -State machine diagrams-Timing diagrams-Object diagrams-communication diagrams.

Unit IV

Process: First principles-The Macro Process: The software development lifestyle- The Micro Process: The analysis and design process. Pragmatics: Management and planning-Staffing-Release management-Reuse-Quality assurance and metrics-Documentation-Tools-Special Topics- The benefits and risks of Object Oriented development.

Unit V

Introduction: Development Process –Class diagrams: The Essentials-Sequence Diagrams-Class Diagrams: Advanced Concepts-Object Diagrams-Package Diagrams-Deployment Diagrams-Use Cases-State machine Diagrams-Activity Diagrams-Communication Diagrams.

Course Objectives:

Enable the student

- Be able to describe the interoperable web services architecture
- Able to know the roles of SOAP and WSDL.
- Use lower-level SOAP and XML APIs for services and/or clients.
- Build and Host Web Services.
- Able to understand the web services architectures
- Learn the standard APIs

Course Outcomes(COs)

Upon completion of this Course, student will be able to:

1. Understand the use of web services in B2C and B2B applications.
2. Understand the design principles and application of SOAP and REST based web services.
3. Design collaborating web services according to a specification.
4. Implement an application that uses multiple web services in a realistic business scenario.
5. Use industry standard open source tools such as Apache Axis2, Tomcat, Derby and Eclipse
6. Develop , test, deploy and execute web services and web applications .

Unit I

Introduction: What are Web Services – Importance of web services – Web services and enterprises; XML Fundamentals:: XML Documents - Namespaces – Schema – Processing XML.

Unit II

SOAP: SOAP Model – messages – Encoding – RPC – Alternative SOAP encodings – Document, RPC, Literal, Encoded – SOAP, Web Services and the REST Architecture
WSDL: Structure – Using SOAP and WSDL. UDDI- UDDI Business Registry – Specification – Data Structures – Life cycle Management – Dynamic Access Point Management.

Unit III

Advanced Web Services Technologies and Standards: Conversation – Overview – Web Services Conversation Language – WSCL Interface Components- Workflow-Business Process Management – Workflow and Workflow Management systems – BPEL. Transaction –ACID transaction – Distributed Transaction – OASIS Business Transaction Protocol.

Unit IV

Security – Security Basics – Security Issues – Types of Security Attacks – WS –Security.
Mobile and Wireless – Mobile Web Services – Challenges with mobile – Proxy Based
Mobile Systems -Direct Mobile Web service access - J2ME Web Services.

Unit V

Building Real World Enterprise Web Service and Applications: Real World Web Service
Application Development – Development of Web services and Applications onto Tomcat
application Server and Axis Soap Server.

Web Sites

1. www.w3schools.com/webservices/default.asp
2. en.wikipedia.org/wiki/Web_service
3. www.webservices.org/

Course Objectives:

Enable the students

- To understand sensor network architectures
- Select appropriate routing algorithms for different network environments
- The various security practices and protocols of Ad-hoc and Sensor Networks.
- Deploy security mechanisms in the wireless ad-hoc and sensor networks
- To teach students the various fundamental layers in ad-hoc network, the issues pertaining to major obstacles in establishment
- To understand efficient, management of ad-hoc and sensor networks and applications of ad-hoc and sensor networks.

Course Outcomes(COs):

Upon completion of this Course, student will be able to:

- Analyze the architecture, merits and demerits of Wireless technologies like Infra Red, blue tooth, Wi-Fi, RFID and Wi-Max .
- Characterize the principles of mobile technologies like GPRS, GSM, CDMA, and TDMA
- Compare the characteristics and techniques MANET with VANET
- Analyze technology of 1G, 2G, 3G and 4G for gaining the working knowledge of four generation wireless technologies.
- Apply the features of Android programming for developing Android Applications
- Understand and explain common wireless sensor node architectures.

Unit I

Adhoc Networks Fundamentals And Mac Protocols- Fundamentals Of WLANs – IEEE 802.11 Architecture - Self Configuration And Auto Configuration Issues In Ad-Hoc Wireless Networks – MAC Protocols For Ad-Hoc Wireless Networks – Contention Based Protocols - TCP Over Ad-Hoc Networks-TCP Protocol Overview - TCP And MANETs – Solutions For TCP Over Ad-Hoc Networks

Unit II

Routing in Ad hoc Networks - Introduction - Topology-Based versus Position-Based Approaches - Topology-Based Routing Protocols - Proactive Routing Approach - Reactive Routing Approach - Hybrid Routing Approach - Comparison - Position-Based Routing - AD HOC & SENSOR NETWORKS - Principles and Issues - Location Services - Forwarding Strategies - Comparisons - Other Routing Protocols - Signal Stability Routing - Power Aware Routing - Associativity-Based Routing - QoS Routing

Unit III

Broadcasting, Multicasting and Geocasting - Introduction - The Broadcast Storm - Broadcasting in a MANET - Flooding-Generated Broadcast Storm - Rebroadcasting Schemes - Multicasting - Issues in Providing Multicast in a MANET - Multicast Routing Protocols - Comparison - Geocasting - Geocast Routing Protocols

Unit IV

TCP over Ad Hoc Networks - Introduction - TCP Protocol Overview - Designed and Fine-Tuned to Wired Networks - TCP Basics - TCP Header Format - Congestion Control - Round-Trip Time Estimation - TCP and MANETs - Effects of Partitions on TCP - Impact of Lower Layers on TCP - Solutions for TCP over Ad Hoc - Mobility-Related - Fairness-Related

Unit V

Security in Ad Hoc and Sensor Networks: Security Requirements - Security Solutions Constraints - Challenges - Authentication - Key Management - Conceptual Background - Diffie-Hellman Key Agreement -Party Diffie-Hellman Key Agreement - The Ingemarsson Protocol - The Burmester and Desmedt Protocol - The Hypercube Protocol - The Octopus Protocol - The CLIQUES Protocol Suite -The Tree-based Generalized Diffie-Hellman Protocol- Routing - Problems with Existing Ad Hoc Routing Protocols - Detect and Isolate Misbehaving Nodes - Information Leaking on Network Topology - Concealing Network Topology - Secure Routing Protocol - The Wormhole Attack. Intrusion Detection Systems: Overview - Unsuitability of Current IDS Techniques - An IDS Architecture for Ad Hoc and Sensor Networks.

Course Objectives:

Enable the students

- Understand J2EE as an architecture and platform for building and deploying web-based, n-tier, transactional, component-based enterprise applications
- Understand the fundamental concepts of XML and related technologies
- Acquire knowledge on how XML is currently being used in various application areas
- Know how to parse and transform XML documents via tools and through programming APIs
- Understand the EJB architecture and have a good grasp on when to use and how to use various EJB bean types and acquire relevant Java programming experience
- Learn Java web programming with J2EE.

Course Outcomes(COs)

Upon completion of this Course, student will be able to:

1. Develop Swing-based GUI
2. Update and retrieve the data from the databases
3. Develop distributed applications using RMI
4. Develop component-based Java software using JavaBeans
5. Develop server side programs in the form of servlets
6. To understand object-oriented programming with J2EE.

Lists of Programs:

1. Create a sign in form in servlets.
2. Write a servlet Program to lock a server.
3. Write a servlet program that returns list of information in table format.
4. Design a counter that counts number of times user has visited the site in current browsing session.
5. Write a program to retrieve cookies information
6. Build a JAVA Bean for opening an applet from JAR file.
7. Write a program to add controls in BEAN.
8. Design a counter in JAVA BEAN.
9. Write a program to stream contents of a file using JSP.
10. Write a program to insert a menu applet into JSP page.

Instruction Hours / week: L: 0 T: 0 P: 4 C : 2 Marks: Internal: 40 External: 60 Total: 100
End Semester Exam: 3 Hours

Course Objectives:

Enable the student

- Become a good .NET programmer.
- Know how COM components and the .NET Framework interoperate with each other.
- Identify and use the classes and namespaces in the .NET Framework class library.
- Build WEB Applications using Microsoft ASP.NET programming.
- Understanding the components of the .NET Framework and the common language runtime (CLR)
- Know how COM components. Also provides better knowledge of Architecture

Course Outcomes(COs)

Upon completion of this Course, student will be able to:

1. Able to analyze program requirements
2. Develop programs with GUI interfaces
3. Code programs and develop interface using Visual Basic .Net,C#.Net,ASP.Net
4. Perform tests, resolve defects and revise existing code.
5. Able to develop projects using ASP .NET
6. Able to apply all the window controls.

List of Programs:**VB.Net**

1. Write a Program to perform various string manipulation functions.
2. Using windows application form, Develop a program to create a form, place controls and manipulate data.
3. Write a program to create inventory control using class library.
4. Write a program to create Web Services Using Vb.Net.
5. Write a program to create a screen saver using controls
6. Create an ActiveX program with simple example.
7. Using windows Application: Design Employee Details, use Sql Server as back end and also use checked list box.

Asp.Net

1. Write a program to create an on-line quiz using content page holder.
2. Write a program to retrieve Cookies information.
3. Write a program to count web page hits.
4. Write program to retrieve environment variables browser capability information.
5. Write a program for database connectivity to retrieve student information

Web Sites

1. www.microsoft.com/NET/
2. www.en.wikipedia.org/wiki/.net
3. www.w3schools.com/ngws/default.asp
4. www.vbtutot.com

Course Objectives:

- Install and configure database
- Create users and assign roles
- Optimize schemas, tables, indexes and views
- Manage database services and clients
- Will be able to move the data from one database to another database.
- To keep database operational

Course Outcomes(COs)

Upon completion of this Course, student will be able to:

1. Design a data mart or data warehouse for any organization
2. Develop skills to write queries using DMQL
3. Extract knowledge using data mining techniques
4. Adapt to new data mining tools.
5. Explore recent trends in data mining such as web mining, spatial-temporal mining
6. Knowledge of monitoring performance of tasks

List of Programs:

1. Demo for Globalization Support
2. Setup Listener Security
3. Configuring Recovery Manager
4. Write a program Using Recovery Manager
5. Write a program for Managing Diagnostic Sources
6. Implement Database Recovery
7. Demo for Flashback Database
8. Implement User Error Recovery
9. Write a program for Dealing with Corruption
10. Show the demo for Automated Management
11. Creating a database and do the manipulation.
12. Managing index tables

Text Book

1. Bob Bryla, Kevin Loney 2008 Oracle Database 11g DBA Handbook McGraw-Hill Osborne

Reference Book

1. Saikat Basak. 2010. Oracle DBA Concise Handbook ,Ensel Software

Web Sites :

1. www.oracle.com/technology/software/products/database/oracle10g/index.html
2. www.oracle-base.com/articles/10g/
3. www.adp-gmbh.ch/ora/misc/10g.html

Course Objectives:

Enable the student

- To teach fundamental aspects of security in a modern networked environment with the focus on system design aspects and cryptography in the specific context of network.
- To build protection mechanisms in order to secure computer networks.
- Write coding to encrypt “Plain Text” into “Cipher Text” and vice versa, using different encryption algorithms.
- The ability to choose a suitable ciphering algorithm according to the required security level.
- Build cryptosystems by applying encryption algorithms,
- Build secure authentication systems by use of message authentication techniques.

Course Outcomes(COs)

Upon completion of this Course, student will be able to:

1. Classify the symmetric encryption techniques
2. Illustrate various Public key cryptographic techniques
3. Evaluate the authentication and hash algorithms.
4. Summarize the intrusion detection and its solutions to overcome the attacks.
5. Demonstrate the basic concepts of system level security
6. Understand the goals, issues, technologies, algorithms, protocols and design criteria used in cryptography and data security and solution.

List of Programs:

1. Write a program to convert your college name from plain text to cipher text using Transposition cipher method of encryption.
2. Write a program to convert your name from plain text to cipher text using the One Time Pads method of encryption.
3. Write a program to encrypt a paragraph using the Data Encryption Standard Algorithm.
4. Write a program to encrypt your biodata using the Advanced Encryption Standard Algorithm.
5. Write a program to decrypt the “Network Security” theory syllabus using the RSA Algorithm.
6. Write a program that takes a binary file as input and performs bit stuffing and Cyclic Redundancy Check Computation.
7. Write a program to Simulate the working of Sliding-Window protocol.
8. Write a program to find the shortest path in a network using Dijkstra's Algorithm.
9. Write a program to implement the Token Bucket Algorithm for Congestion Control.

10. Write a program for the following chat application:

One to One : Open a Socket connection and display what is written by one to another.

Many to Many : Each Client Opens a Socket connection to the client server and writes to the socket. Whatever is written by one can be seen by all. Implement symmetric key cryptography.

3. www.flipkart.com/search-books/cryptography+and+network+security+William+stallings+ebook

Course Objectives:

- To perform test each time they are run, thereby eliminating human error.
- To test how the software reacts under repeated execution of the same operations.
- To program sophisticated tests which bring out hidden information from the application.
- To reuse tests on different versions of an application, even if the user interfaces changes.
- to provide stakeholders with information about the quality of the product or service under test.
- To know the Types of errors and fault models

Course Outcomes (COs):

Upon completion of this Course, student will be able to:

1. Test the software by applying testing techniques to deliver a product free from bugs
2. Evaluate the web applications using bug tracking tools.
3. Investigate the scenario and the able to select the proper testing technique
4. Explore the test automation concepts and tools
5. Deliver quality product to the clients by way of applying standards such as TQM, Six Sigma
6. Various test processes and continuous quality improvement

Software Testing

1. Create a VB form with the following fields and create the database also for them. Insert 3 records. Using Win Runner tool record the above 3 transaction and test them and produce the Report. (Blackbox Testing).
2. Create a VB form and then add login dialog form. Using Win Runner tool check the Username and Password and produce the Report. (Security testing).
3. Create a VB form with the following fields and check the calculation is correct or not by using the test toll Win Runner. (Functional Testing) Fields – Name, Designation, Department, Basic, HRA, DA, PF and netsal.
4. using Win Runner test tool check the database values after changing. Using Flight database. (Regression testing).
5. Write a C program for Boundary Testing.
6. Write a C program for Loop Testing.
7. Write a C program for Integration Testing.
8. Write a C program for Interface Testing.
9. Write a C program for Unit testing.

Software Quality Assurance

1. To develop a banking application, perform the requirement analysis and give a quality status report.
2. Perform the system testing to develop a electricity application and give a quality status report.
3. Perform the report design and give a quality status report.
4. Develop a library management system and give a quality status report.
5. Develop a hospital management system and a quality status report and give a comparison performance report in Linux and windows operating system.

5. www.softwaretesting management.con

Course Objectives:

Enable the student

- Be aware of a range of XML tools (Many of them are free).
- Know how to set out an XML document
- Define custom markup language
- Understand the purpose of using DTDs and Schemas to validate XML
- Use XSLT to write a style sheet for XML document to produce multiple output
- Combine XML with existing web technologies.

Course Outcomes(COs)

Upon completion of this Course, student will be able to:

1. Understand the use of web services in B2C and B2B applications.
2. Understand the design principles and application of SOAP and REST based web services.
3. Design collaborating web services according to a specification.
4. Implement an application that uses multiple web services in a realistic business scenario.
5. Use industry standard open source tools such as Apache Axis2, Tomcat, Derby and Eclipse to build, test, deploy and execute web services and web applications that consume them.
6. to learn how to create websites using XML, understand the essentials of the XML standards.

List of Programs:

1. Create a menu in XML.
2. Create a demo for XSLT.
3. Display XML information in Tree structure format.
4. Integrate XML in Web Applications
5. Write a program to navigate the records in the file.
6. Write a database access with XML.
7. Write a program to save data to an XML file.
8. Write a program to show the function of CDATA.
9. Write a program to generate XML file on the server.
10. Write a program to generate XML file from the Database
11. Write a program to load a text file into a div element with XML HTTP.
12. List data from an XML file with XML HTTP.

Instruction Hours / week: L: 0 T: 0 P: 4 C :2 Marks: Internal: 40 External: 60 Total: 100
End Semester Exam: 3 Hours

Course Objectives:

- Understand general concepts of transmission and wireless communication.
- Understand how mobility affects all layers of the Internet protocol stack, from the MAC layer up through the application layer.
- Understand the emerging applications enabled by wireless networks, and ad hoc mobile wireless networks.
- Work in groups to design and implement wireless applications.
- Routing protocols in WSN.
- Data centric and content-based networking.

Course Outcomes(COs)

Upon completion of this Course, student will be able to:

1. Understand and explain common wireless sensor node architectures.
2. Be able to carry out simple analysis and planning of WSNs.
3. Demonstrate knowledge of MAC protocols developed for WSN.
4. Demonstrate knowledge of routing protocols developed for WSN.
5. Understand and explain mobile data-centric networking principles.
6. Be familiar with WSN standards.

List of Programs:

1. Demonstrate the creation of output files for Xgraph.
2. Illustrate NS2 script to send data between two nodes.
3. Create a simple simulation topology to generate TCP and UDP traffic
4. Simulate a NS2 scenario to handle link failures.
5. Write a NS2 script to handle Multicast traffic.
6. Demonstrate OSPF routing.
7. Create a simulation topology and analyze QOS parameters.
8. Demonstrate the creation of wireless topology.

2. www.wap.com
3. www.w3schools.com/wap/

Course Objectives:

Enable the student

- Understand the fundamentals of HTML
- Use of different formatting options
- Creation of tables and frames
- Know the importance of object oriented aspects of Scripting.
- To understand and practice embedded dynamic scripting on client side Internet Programming
- Relate with DHTML and CSS

Course Outcomes(COs)

Upon completion of this course, student will be able to :

1. Design web pages.
2. Use technologies of Web Programming.
3. Apply object oriented aspects to Scripting.
4. Create a basic website using HTML and Cascading Style Sheets.
5. Design and implement dynamic web page with validation using JavaScript objects and by applying different event handling mechanisms.
6. Design structure of the website including the information architecture, the layout or the pages and the conceptual design with branding.

Unit-I : HTML: Introduction to HTML- History Of HTML-Structure of HTML-Formatting Text :Font type, Font Size, Big ,Small, bold ,italic, color, superscript , Subscript, striking out, Underlining the text , Predefined fonts , Pre formatted Text, Blinking Text and Block Quotes. Lists: Ordered, Unordered and Definition List. Creating Link - Images.

Unit-II :Tables: Creating Table –Dividing Table into Columns- Dividing Table into RowsCreating Headers- Adding Border –Putting a Background Image- Heading across two or more columns- Changing color of the cell-aligning the content –Display of Tables. Frames-Forms: Working with forms-Creating forms-working with menus- working with Radio buttons- check boxes-textboxes-text areas- password boxes-submit buttonResetting the form.

Unit-III :DHTML: Heading and Horizontal line-Hidden Message-Message at the center of the page- Moving Boxes- Changeable Box- CSS: Introduction- Creating Style Sheets - Common Tasks with CSS- Colors-The Font Family.

Unit-IV :JavaScript: Introduction-Operators-Starting with JavaScript- Using Quotes-Using Alerts Functions-Variables-data types- Statements-Comments.

Unit-V

Objects: Working with Objects- Date Object-Math Object-String Object--Handling Events in JavaScript-Event Handling attributes-Window Events-Window Object – Document Object-Navigator Object

2. alexle.net/archives/category/web-technolgy

Course Objectives:

- Identify key elements of the cloud computing
- Understand and appreciate the need for cloud computing, and identify their use in industrial applications
- Analyse the current issues in cloud computing
- Develop an in-depth understanding of selected parts of the material
- Public cloud, private cloud and hybrid clouds
- Security and Privacy issues in the Cloud

Course Outcomes(COs)

Upon completion of this Course, student will be able to:

1. Elaborating the basic concepts of cloud computing and defining the basic terms
2. Understanding the various cloud implementations and migration techniques
3. To define the various industrial applications of cloud virtualization.
4. In depth learning of security challenges and preventive measures in cloud computing
5. Practical implementation of cloud computing and live case studies
6. Understand the cloud computing technologies for Infrastructure as a Service, Platform as a Service, Software as a Service, Physical Systems as a Service and cloud security.

Unit I

Introduction to Cloud Computing -Characteristics of Cloud Computing -Paradigm shift - Benefits of cloud computing - Disadvantages of cloud computing- Role of Open Standards- Cloud Computing Architecture: Cloud computing stack-Public cloud -Private cloud -Hybrid cloud -Community cloud

Unit II

Virtualization Technologies -Load Balancing and Virtualization -Advanced load balancing - The Google cloud - Hypervisors -Virtual machine types -VMware vSphere - Machine Imaging -Porting Applications -The Simple Cloud API - AppZero Virtual Application Appliance

Unit III

Infrastructure as a Service (IaaS) -Platform as a Service (PaaS) -Software as a Service (SaaS) -Identity as a Service (IDaaS) -Compliance as a Service (CaaS)- Cloud storage.

Unit IV

Cloud Information Security Objectives -Confidentiality, Integrity, and Availability -Cloud Security Services - Relevant Cloud Security Design Principles -Cloud Computing Risk Issues -The CIA Triad

Privacy and Compliance Risks -Threats to Infrastructure, Data, and Access Control -Cloud Access Control Issues -Database Integrity Issues -Cloud Service Provider Risks Architectural Considerations

General Issues- Trusted Cloud Computing -Identity Management and Access Control

Unit V

Case Study on Open Source and Commercial Clouds: Microsoft Azure- Amazon EC2- Google Web services.

2. www.ibm.com/cloud-computing/in/en/
3. www.oracle.com/CloudComputing
4. www.microsoft.com/en-us/cloud/default.aspx

Course Objectives: To help students to

- Get hands-on experience in scripting, debugging, testing.
- Establish a working environment for PHP web page development
- Use variables, constants, and environment variables in a PHP program
- Learn to create dynamic interactive pages with PHP.
- Learn to manipulate files with PHP.
- Understand how MySQL works.

Course Outcomes(COs)

Upon completion of this Course, student will be able to:

1. Implement regular expressions in PHP programming including modifiers, operators, and meta characters.
2. Create PHP programs that use various PHP library functions, and that manipulate files and directories.
3. Analyze and solve various database tasks using the PHP language.
4. Create server side web applications using PHP and MySQL
5. Implement SQL to output reports with MySQL
6. design a client-side programming

Unit I

Creating a Simple PHP Programs: How PHP Code Works- How Online PHP Programs Run Web; Communications: Internet Protocols and HTTP: TCP/IP- The HTTP Protocol; Using Variable in PHP Issues concerning Creating Variables-Defined Constants; Operators and Expressions: PHP Operators – PHP Expressions- Operators Types- Arrays

HTML Primer: The HTML Document type definition- The Form and Input Elements; Accessing PHP and HTTP Data: Predefined Variables- Variables in HTTP Request and Response- Super Global Arrays; Links; Query Strings; HTML(Web) Forms; HTML Form Elements-HTML Form Fields(Controls) and PHP; The Concept Of State: State Maintenance- Native Sessions in PHP.

Designing PHP Program Logic: Problem Statement- Writing Pseudo Code- Boolean Logic; Conditional Or Branching Statements: if statements- Switch statements- Loops and Arrays: Loops- Arrays.

Unit II

Testing and Debugging: Values that break your code- Basic error types; Debugging PHP Script: Understanding PHP error Messages- Syntax Errors- Logic Errors- Runtime Errors; Debugging and Handling Errors in PHP5: Preventing the display of private information-

Roll your-Own Debugging tools; Form Validation: Using the Exit statement- string validation and regular expressions- validating data entry- using reg exps to check file path parameters; Handling Errors: Gracefully- Configuring PHP for error handling- Try/Catch-New in PHP5.

Development planning: Formal software Development processes – optimizing your code- Using Coding standard; Writing user-defined functions in PHP: The Structure of Functions- Switching Functions – How Values Get Inside functions; Scope of variables: Global and Local Variables-Creating Static Function Variable-Nesting-Recursion-The Include and Require Statements-Things to be careful about with include and require.

Unit III

Files and Directories: Files and Directory Handling- Working with Files- Opening and Closing files-Getting Information about a file-reading and writing to files-Reading and writing characters in files-Reading Entire files-Random Access to file data-Getting Information on Files-Ownership and permissions; Working with files you own: Splitting the Name and path from a file-copying ,renaming and deleting files; Working with Directories: other Directory Functions –Traversing a directory hierarchy-creating a directory navigator-Building a Text Editor-Uploading Files.

Classes- Objects: Creating class- Adding a Method- Adding a Property- Protecting Access to Member Variables- Using `_get` and `_set`- Initializing objects- Destroying Objects-Inheritance- Overriding Methods- Interfaces- Encapsulation

Unit IV

The SQL Framework- Managing databases-Creating & Managing tables- Managing indexes; Inserting & Updating data in a MYSQL database-Deleting & Retrieving data from a MySQL database; SELECT statement- Optional clauses of a SELECT statement; Creating MySQL Expressions-using operators in expressions-Comparing and Converting Data; Managing different types of data: String functions-Numeric function- Date/Time functions-Summarizing date-Summary functions

Performing System Operations: Encryption functions- System related Functions- Query and Insert Functions; Accessing data from Multiple tables: Creating joins in your SQL statement- Creating subqueries in your SQL statements; Creating Unions that join SELECT statements.

Exporting, Copying and importing data; Managing transactions: Introducing transactions-Performing a transaction- Setting the auto commit mode and transaction isolation level-Locking Nontransactional tables

Unit V

Connecting to MySQL from a PHP application- Inserting and updating records in table-Deleting and retrieving data from table- Creating a user Registration Script. Structure of an E-Mail Message-sending E-mail with PHP- Working with Raster Images- Manipulating Raster Images- Using Text in Images

Course Objectives:

Enable the students

- The principles of mobile computing technologies;
- Knowledge of applications that mobile computing offers to people, employees, and businesses;
- Knowledge of GPRS network architecture and services .
- Future of mobile computing technologies and applications.
- Able to design, create, deploy, and test applications for the mobile phone platform.
- To explain how Android applications work, their life cycle, manifest, Intents, and using external resources.

Course Outcomes(COs)

Upon completion of this Course, student will be able to:

1. Analyze the architecture, merits and demerits of Wireless technologies like Infra Red, blue tooth, Wi-Fi, RFID and Wi-Max .
2. Characterize the principles of mobile technologies like GPRS, GSM, CDMA, and TDMA
3. Compare the characteristics and techniques MANET with VANET
4. Analyze technology of 1G, 2G, 3G and 4G for gaining the working knowledge of four generation wireless technologies.
5. Apply the features of Android programming for developing Android Applications
6. Implement a program in the Android environment.

Unit I

Mobile Computing- Middleware and Gateways-Developing Mobile Computing Applications-Security in Mobile Computing – Architecture of Mobile Computing-Three-Tier Architecture-Design Consideration for Mobile Computing-Mobile Computing through Internet- Mobile Computing through Telephone-Developing an IVR Applications

Unit II

Bluetooth-Rfid-Wireless Broadband (WiMax)- Mobile IP – IPV6-Java Card –Global System for Mobile Communications – GSM Architecture – Call Routing in GSM – GSM Addresses and Identifiers – Network Aspects in GSM – GSM Frequency Allocation – Authentication and Security- Mobile Computing Over SMS – SMS-Value Added Services through SMS.

Unit III

GPRS and Packet Data Network – GPRS Network Architecture – GPRS Network Operations –Data Services in GPRS- Applications for GPRS – Limitations of GPRS- Spread Spectrum Technology- CDMA Versus GSM – Wireless Data – Third Generation Networks – Applications on 3G – Wireless LAN Advantages – Wireless LAN Architecture- Mobility in Wireless LAN –Deploying Wireless LAN – Wireless LAN Security.

Unit IV

Mobile Phones – PDA- Design Constraints in Applications for Handheld Devices – Palm OS Architecture – Communications in Palm OS – Introduction to Symbian – Symbian OS Architecture– Applications for Symbian – Security on the Symbian OS- JAVA in the Handset – Java 2 Micro Edition Technology – Different Flavours of Windows CE- Windows CE Architecture.

Unit V

Android : Getting to know Android - Android development environment - Android development environment for real applications - start up code, M J Android applications- debugging Android applications

Course Objectives:

To help the students

- To Possess knowledge of the concepts and terminology associated with database systems, statistics, and machine learning
- To develop skills of using recent data mining software for solving practical problems.
- To gain experience of doing independent study and research.
- to teach the techniques for preprocessing data before mining
- To know the concepts related to data warehousing, on-line analytical processing (OLAP)
- To know the data generalization.

Course Outcomes(COs)

Upon completion of this Course, student will be able to:

1. To understand the data mining process of voluminous data using OLAP
2. To implement the preprocessing concept in data mining applications
3. To apply the data mining algorithms on big data to extract useful data
4. To implement data mining techniques for complex data types
5. To implement Decision Support System concept in data mining for developing intelligence business application.
6. To Understand the methods for mining frequent patterns, associations, and correlations.

Unit I

Introduction to Data Mining: Motivation and importance, Data Mining, Relational Databases, Data Warehouses, Transactional Databases, Advanced Database Systems and Advanced Database Applications, Data Mining Functionalities, Pattern Classification of Data Mining Systems, Major issues in Data Mining. Pre-process the Data- Data Cleaning, Data Integration and Transformation.

Unit II

Classification and Regression Algorithms : Naïve Bayes – Multiple Regression Analysis – Logistic Regression – k-Nearest Neighbour Classification – GMDH –Computing and Genetic Algorithms. Support Vector Machines : Linear SVM - SVM with soft margin – Linear kernel – Proximal SVM – Generating Datasets.

Cluster Analysis : Partitional Clusterings – k-medoids – Birch – DBSCAN – Optics – Graph Partitioning – CHAMELEON – COBWEB – GCLuto.

Unit III

Mining Association rule in large Databases Association Rule Mining, Mining Single - Dimensional Boolean Association Rules from Transactional Databases, Mining Multilevel Association Rules from Transaction Databases, Mining Multidimensional Association Rules from Relational Databases and Dataware houses, From Association Mining to Correlation Analysis, Constraint-Based Association Mining.

Unit IV

Mining Complex Types of Data : Mining Spatial Databases – Multimedia Databases – Time-series and Sequence Data – Text Databases – Web Data Mining – Search Engines.

Unit V

Data Warehouse and OLAP Technology for Data Mining. What is a Data Warehouse? Multi-Dimensional Data Model, Data Warehouse Architecture, Data Warehouse Implementation, Development of Data Cube Technology, Data Warehousing to Data Mining Data Preprocessing Data Warehousing: Failures of past Decision Support System- Operational vs. DSS- Building blocks: features- Data warehouse and Data Mart- Overview of the Components- Metadata Architectural Components: Distinguishing Characteristics- Architectural Framework- Technical Architecture.

3. www.thearling.com/text/dmwhite/dmwhite.htm

Course Objectives:

- Understand concepts and terminology associated with SNMP and TMN
- Decide routing protocol for complex network.
- Gain knowledge the internal architecture of routers
- Understand the fundamentals and requirements for packet routing in computer communication network.
- To teach the concepts and techniques of network architecture management
- Know how to Remote Network Monitoring in TCP/IP Networks

Course Outcomes(COs)

Upon completion of this Course, student will be able to:

1. To solve the problems in computer network system management
2. To analyze the challenges in the implementation of ATM networks
3. To implement SNMP Model in the management of computer networks
4. To configure routers using computer network software tools
5. To implement service level agreement in Computer Network management systems
6. To implement the architecture behind standards based network management

Unit I

Introduction: Objectives - Component architectures – Reference architecture – Architectural models; Addressing and Routing Architecture: Addressing mechanisms – Routing mechanisms – Addressing strategies – Routing strategies – Architectural considerations; Network Management Architecture: Defining Network Management – Network Management Mechanism - Architectural considerations; Performance Architecture; Developing goals – Performance mechanisms – Architectural considerations

Unit-II

Security And Private Architecture: Developing a security and privacy plan – Security and privacy Administration & Mechanism - Architectural considerations; Selecting Technologies for the Network Design: Goals – Design Concepts – Design Process – Vendor, Equipment and Service-Provider Evaluations – Network Layout – Design Traceability - Design Metrics.

Unit-III

Case history of Networking and Management: Challenges of Information Technology Managers – Goals, organization and functions – Network and System Management – Network Management System Platform; SNMP, Broadband and TMN Management: Network Management Standards & Model – Organization, Information and Communication Model – ASN.1 – Encoding structure – Macros – Functional model; Organization and Information Model: Managed Networks – The History of Network Management – Internet Organization and standards – SNMP Model – The Organization and Information Model; Communication and Functional Model: The SNMP Communication Model – Functional Model.

Unit-IV

SNMPv2 Management: Major changes – System architecture – Structure of Management Information – Management Information Base – SNMPv2 protocol – Compatibility; RMON: Remote monitoring – RMON1 – RMON2 – ATM remote monitoring; Broadband Network Management: ATM Networks - Network and Services – ATM Technology – ATM Network Management; Telecommunication Management Network: Operations systems – Conceptual model – Standards – Architecture – TMN Management service architecture – Integrated view of TMN – Implementation issues.

Unit-V

Network Management Tools and Systems: Network management tools – Network statistics measurement system – Network Management Systems – System Management; Network Management Applications: Configuration Management - Fault Management - Performance Management – Security Management – Accounting Management – Report Management - Policy Based Management – Service Level Management.

Text Books

- James D. Mc CABE. 2010 Network Analysis, Architecture and Design, 3rd Edition, Morgan Kaufmann Publishers.

Reference Books

1. Mani Subramanian. 2012. Network Management Principles and Practice, Pearson Education Asia Pvt. Ltd., 2nd Edition.
2. William Stallings. 2002. SNMP, SNMPv2, SNMPv3 and RMON 1 and 2, 3rd Edition, Pearson Education Asia Pvt. Ltd.

Course Objectives:

To help students to

- Design, select and apply the most appropriate software engineering process for a given project, plan for a software project, identify its scope and risks, and estimate its cost and time.
- Implement software.
- Analyze, specify and document software requirements for a software system.
- Express and understand the importance of negotiation, effective work habits, leadership
- Understand the good communication with stakeholders, in written and oral forms, in a typical software development environment.
- Understand the concept and techniques of project management for a broad range of systems

Course Outcomes (COs):

Upon completion of this Course, student will be able to:

1. Implement the concept of software effort estimation in developing software project.
2. Develop a responsible attitude towards the use of computer as well as the technology.
3. Evaluate the risks during the development of software projects
4. Understand the organization behavior in software project management.
5. Implement team management process in developing quality software
6. Apply project management concepts and techniques to an IT project.

Unit I

Introduction-Software Project Management -Project evaluation and programme Management- An overview of Project planning- Stepwise planning-Selection of an appropriate project Approach.

Unit II

Software effort estimation: Problems with over- and underestimates-Software effort estimation Techniques - Estimating by analogy -Albrecht function point analysis -Function points Mark II –COSMIC full function points - COCOMO 13: a parametric productivity model. Activity planning: The Objectives of activity Planning-Project schedules - Projects and activities - Sequencing and scheduling activities - Network planning models - Formulating a network model - Adding the time dimension - The forward pass - The backward pass - Identifying the critical path.

Unit III

Risk management: Introduction to Risk - Categories of risk - A framework for dealing with risk -Risk identification - Risk assessment - Risk planning - Risk management - Evaluating risks to the schedule - Applying the PERT technique - Monte Carlo simulation - Critical

chain concepts. Resource allocation :-Introduction -The nature of resources - Identifying resource requirements -Scheduling resources -Creating critical paths -Counting the cost - Being specific -Publishing the resource schedule - Cost schedules -The scheduling sequence.

Unit IV

Monitoring and control: Creating the framework-Collecting the data- Visualizing progress- Cost monitoring -Earned value analysis-Prioritizing monitoring - Getting the project back to target - Change control. Managing people in software environments: Understanding behavior -Organization behavior: a background - Selecting the right person for the job - Instruction in the best methods - Motivation - Stress -Health and safety -Some ethical and professional concern

Unit V

Working in teams: Becoming a team - Decision making - Organizational structures - Coordination dependencies - Dispersed and virtual teams - Communication genres - Communication plans - Leadership. Software quality: Introduction -The place of software quality in project planning - The importance of software quality - Defining software quality - ISO 9126 -Product versus process quality management -Quality management systems - Process capability models -Techniques to help enhance software quality -Testing -Quality plans

3. http://www.cc.gatech.edu/classes/AY2000/cs3802_fall/

Instruction Hours / week: L: 4 T: 0 P: 0 C : 4 Marks: Internal: 40 External: 60 Total: 100
End Semester Exam: 3 Hours

Course Objectives:

To help students to

- Develop server-side Ruby scripts for publishing on the Web
- Employ control structures, methods, procs, arrays and hashes to create Ruby programs
- Distinguish and use various Ruby datatypes
- Master the use of arrays and hashes
- Use the extensive pre bundled classes
- Use the I/O facilities of Ruby to read and write binary and text files

Course Outcomes(COs)

Upon completion of this Course, student will be able to:

1. Master the use of Iterators to loop through various data structures
2. Use Exceptions in handling various run time errors
3. Create Ruby modules
4. Use the wide variety of Ruby Modules that come with the Ruby distribution
5. Use object-oriented programming conventions to develop dynamic interactive Ruby applications
6. fundamental components of the Ruby Programming Language

Unit I

Introduction to Ruby: Installing Ruby - THE STRUCTURE AND EXECUTION OF RUBY PROGRAMS: Lexical Structure- Syntactic Structure - Block Structure in Ruby- File Structure - Program Execution. DATA TYPES: Numbers - Text - String Literals - Character Literals - String Operators - Accessing Characters and Substrings - Iterating Strings – Arrays – Hashes – Ranges – Symbols – True & False – Ruby Documentation: RDoc and ri.

Unit II

STATEMENTS AND CONTROL STRUCTURES: Conditionals – Loops - Iterators and Enumerable objects: custom iterators – enumerators – External iterators – Blocks: Variable scope – passing argument to blacks. Flow-altering statements like return and break- The special-case BEGIN and END statements. CLASSES : Creating and initializing class – Accessor and attributes – class methods – class variables – Defining operators. SUBCLASSING AND INHERITANCE: visibility – Overriding methods. OBJECTS: Object creation and initialization.

Unit III

METHODS: Defining a Method, Calling a Method; Undefined methods – Methods with Exception – Operator methods and names – Method Arguments – Method objects - Defining Attribute Accessor Methods - Dynamically Creating Methods. **EXCEPTIONS AND EXCEPTION HANDLING:** Hierarchy – Exception classes and objects – Raising Exception with raise – Handling Exception with rescue – Exception propagation – Else clause and ensure class.

Unit IV

MODULES: Namespaces - Modules as Mixins - Includable Namespace Modules - Loading and Requiring Modules - Executing Loaded Code. **Reflection and Meta programming:** Evaluating Strings and Blocks - Querying, Setting, and Testing Variables – Regular Expressions. **FILES AND DIRECTORIES:** Listing and manipulating Directories and testing files. **BASIC INPUT AND OUTPUT:** Opening Stream – Reading from a Stream – Writing to a stream – Random Access Methods – Closing, Flushing and testing streams.

Unit V

THREADS AND PROCESSES: Thread Life Cycle – Thread scheduling – Thread Exclusion – Deadlock. **Ruby Tk:** Introduction- Widgets and classes. **Networks:** A Very Simple Client - A Very Simple Server – Datagram - A Multiplexing Server - Fetching Web Pages. **Ruby on Rails:** Building a development Environment: Installation – Installing Databases – Code editors – web server Configuration – Creating an web application.

Course Objectives:

- To know the fundamental concepts of Wireless Communication Systems.
- To learn the latest technology of Mobile Communication.
- To provide a strong foundation in the field of Wireless Networks.
- To know about the various IEEE Standards.
- To know the transfer information over short distance or long distances
- To develop the application of wireless technology in today's world.

Course Outcomes (COs):

Upon completion of this Course, student will be able to:

1. Create a Sensor network environment for different type of applications
2. Design ad-hoc and sensor network architectures using QoS and Congestion control
3. mechanisms
4. Apply appropriate routing algorithms for different network environments
5. Analyze the working of ad-hoc and sensor network for various applications
6. Deploy security mechanisms in the wireless ad-hoc and sensor networks.

Unit I

Introduction-Wireless Transmission -Signal Propagation - Spread Spectrum - Satellite Networks - Capacity Allocation – FAMA - DAMA - MAC

Unit II

Mobile Networks-Cellular Wireless Networks - GSM-Architecture – Protocols - Connection Establishment - Frequently Allocation – Routing – Handover – Security – GPRA.

Unit III

Wireless Networks-Wireless LAN - IEEE 802.11 Standards – Architecture - Services-AdHoc Network- HiperLan - Blue Tooth Technology.

Unit IV

Routing -Mobile IP – DHCP - AdHoc Networks - Proactive and Reactive Routing Protocols - Multicast Routing – Sensor Networks.

Unit V

Transport and Application Layers-TCP over Ad Hoc Networks - WAP-Architecture - WWW Programming Model-WDP - WTLS - WTP – WSP – WAE - WTA Architecture – WML - WML scripts.

Text Books

1. William Stallings.2010.Wireless Communications and Networks, 5th Edition, Pearson Education

Reference Books

2. Benvenuto.2011.Principles of Communications Networks and Systems, 2nd Edition, Wiley India Pvt. Ltd.
3. Jochen Schiller. 2003. Mobile Communications, 2nd Edition, Pearson Education

Course Objectives: To impart to students the skills required

- To design scalable systems that can accept, store, and analyze large volumes of unstructured data.
- Fundamentals of big data analytics
- Methodologies used in storing, manipulating, and analyzing big data.
- To provide an overview of an exciting growing field of big data analytics.
- To introduce the tools required to manage and analyze big data like Hadoop, No Sql MapReduce.
- To teach the fundamental techniques and principles in achieving big data analytics with scalability and streaming capability.

Course Outcomes(COs)

Upon completion of this Course, student will be able to:

1. Analyze the big data analytic techniques for useful business applications.
2. Implement the concept of virtualization and abstraction in analyzing big data
3. Analyze the HADOOP and Map Reduce technologies associated with big data analytics
4. Understand the fundamentals of various bigdata analysis techniques
5. Implement the integration of data sources in operationalizing Big Data
6. Analyze the concept to solve complex real-world problems in for decision support.

Unit-I

Fundamentals of Big Data - The Evolution of Data Management Understanding the Waves of Managing Data- Defining Big Data - Big Data Management Architecture- The Big Data Journey -Big Data Types-Defining Structured Data-Defining Unstructured Data-Putting Big Data Together.

Unit-II

Big Data Stack- Basics of Virtualization - The importance of virtualization to big data - Server virtualization - Application virtualization - Network virtualization -Processor and memory virtualization - Data and storage virtualization-Abstraction and Virtualization-Implementing Virtualization to Work with Big Data.

Unit-III

Hadoop - Hadoop Distributed File System - Hadoop MapReduce- The Hadoop foundation and Ecosystem.

Unit-IV

Big Data Analytics-Text Analytics and Big Data-Customized Approaches for Analysis of Big Data

Unit-V

Integrating Data Sources-Real-Time Data Streams and Complex Event Processing-Operationalizing Big Data.

Text Book

5. en.wikipedia.org/wiki/Big_data
6. www.sap.com/solution/big-data.html

Course Objectives:

To help students to

- Understand the architecture and topology of network
- Understand the design process of a distributed systems
- Examine distributed and parallel computing operating system
- Know the need and challenges of distributed database
- to distinguish between local programming (on a single machine) and distributed programming using multiple components via a network
- To develop the applications in a distributed parallel computing environment.

Course Outcomes(COs)

Upon completion of this Course, student will be able to:

1. Distinguish between distributed computing and parallel computing
2. Understand concepts of SOA.
3. Demonstrate different cloud technologies
4. Designing security and storage in cloud technologies.
5. Demonstrate the understanding of advance data communication technologies
6. Demonstrate the understanding of protocol used for management of network.

UNIT – I

Introduction : Distributed Computing – Relation to multiprocessor and multi computer systems-message passing systems versus shared memory systems – primitives for distributed computing. Distributed Computations : distributed program – global state of a distributed system – models of process communications.

UNIT – II

Message ordering and Group Communication : message ordering paradigm – Asynchronous execution with synchronous communication – classification of application level multicast algorithm – distributed multicast algorithm at the network layer.

UNIT – III

System model for distributed computation – termination detection using distributed snapshots – termination detection in a faulty distributed system – Distributed mutual execution algorithm : Lamport's algorithm – Token Based algorithm – Raymond's tree-based algorithm.

UNIT – IV

DeadLock : system model – models of deadlocks – knapp's classification of distributed deadlock detection algorithms – chandy model – stable and unstable predicates – distributed algorithms for conjunctive predicates .

UNIT – V

Distributed shared memory : Abstraction – memory consistency – shared memory mutual execution – register hierarchy and wait free simulations- issues in failure recovery – check point based recovery – Authentication : protocols – password-based authentication-authentication protocol failures.

**Instruction Hours / week: L: 4 T: 0 P: 0 C: 4 Marks: Internal: 40 External: 60 Total: 100
End Semester Exam: 3 Hours**

Course Objectives: To help students to

- Understand the basic terminology and state fundamental facts about software metrics and process models.
- Identify the essential elements of a given metric or model, describe the interrelationships among its various elements
- Understand software process assessment cycles, complexity metrics and models.
- basis for the development and validation of models of the software development process
- to improve software productivity and quality.
- To understand the role and functioning of various system programs over application program.

Course Outcomes (COs):

Upon completion of this Course, student will be able to:

1. To analyze the importance of modeling and modeling languages
2. To apply the basic quality tools in software development
3. Analyze the software process metrics in the process of software testing
4. Implement function point metrics to measure software process improvement
5. Explain the business requirements pertaining to software development.
6. Identify risks, manage the change to assure quality in software projects.

Unit I

Introduction:- software quality-popular views-the role of the customer-software quality-Total quality management.Software development process models-the spiral model-iterative Development process-The Cleanroom Methodology-Process Maturity Framework and Quality standards. Fundamentals of Measurement theory-Level of measurement-Reliability and validity-Measurement Errors

Unit-II

Applying the seven basic quality tools in software development-Defect removal effectiveness-The rayleigh model-Exponential distribution and reliability growth models-Quality management models

Unit-III

In-process metrics for software testing-Complexity metrics and models-Metrics and lessons learned for object oriented projects-Availability metrics

Unit-IV

Measuring and analyzing customer satisfaction-Conducting in-process quality assessments

Unit-V

Software project assessments-Dos and don'ts of software process improvement-Using function point metrics to measure software process improvement-Concluding remarks

Text Books:

1. Stephen H.Kan . Metrics And Models In Software Quality Engineering. 2013. SECOND EDITION , Pearson India.

Reference Book

1. Norman Fenton, Software Metrics: A Rigorous and Practical Approach, Third Edition (Chapman & Hall/CRC Innovations in Software Engineering and Software Development Series) 2014
2. C. Ravindranath Pandian, Software Metrics: A Guide to Planning, Analysis, and Application, .2003Paperback.

Course Objectives:

- To represent data from a chosen problem in XML with appropriate semantic tags obtained or derived from the ontology.
- To understand the semantic relationships among these data elements using Resource.
- To design and implement a web services application that “discovers” the data and/or other Description Framework (RDF).web services via the semantic web
- Able to discover the capabilities and limitations of semantic web technology for many applications.
- to discover, classify and build ontology for searching.
- To build and implement a small ontology that is semantically descriptive of chosen problem domain.

Course Outcomes(COs)

Upon completion of this Course, student will be able to:

1. To have an appreciation for and understanding of both the achievements of AI and the theory underlying those achievements.
2. To have an appreciation for the engineering issues underlying the design of AI systems.
3. To have a basic proficiency in a traditional AI language including an ability to write simple to intermediate programs and an ability to understand code written in that language.
4. To have an understanding of the basic issues of knowledge representation.
5. To have a basic understanding of some of the more advanced topics of AI such as learning, natural language processing, agents and robotics, expert systems, and planning.
6. implement applications that can access, use and manipulate the ontology.

Unit I

Introduction : Introduction to the Syntactic web and Semantic Web – Evolution of the Web – The visual and syntactic web – Levels of Semantics – Metadata for web information - The semantic web architecture and technologies –Contrasting Semantic with Conventional Technologies –Semantic Modeling - Potential of semantic web solutions and challenges of adoption

Unit II

Ontological Engineering: Ontologies – Taxonomies –Topic Maps – Classifying Ontologies – Terminological aspects: concepts, terms, relations between them – Complex Objects – Subclasses and Sub-properties definitions – Upper Ontologies – Quality – Uses - Types of terminological resources for ontology building – Methods and methodologies for building ontologies – Multilingual Ontologies -Ontology Development process and Life cycle – Methods for Ontology Learning – Ontology Evolution – Versioning

Unit III

Structuring And Describing Web Resources :Structured Web Documents - XML – Structuring – Namespaces – Addressing – Querying – Processing - RDF – RDF Data Model – Serialization Formats- RDF Vocabulary –Inferencing - RDFS – basic Idea – Classes – Properties- Utility Properties – RDFS Modeling for Combinations and Patterns- Transitivity

Unit IV

Web Ontology Language :OWL – Sub-Languages – Basic Notions -Classes- Defining and Using Properties – Domain and Range – Describing Properties - Data Types – Counting and Sets- Negative Property Assertions – Advanced Class Description – Equivalence – Owl Logic.

Unit V

Semantic Web Tools And Applications :Development Tools for Semantic Web – Jena Framework – SPARL –Querying semantic web - Semantic Wikis - Semantic Web Services – Modeling and aggregating social network data - Ontological representation of social relationships, Aggregating and reasoning with social network data Understand semantic web basics, architecture and technologies

Instruction Hours / week: L: 4 T: 0 P: 0 C: 4**Marks: Internal: 40 External: 60 Total: 100****End Semester Exam: 3Hours****Course Objectives:**

- To understand about the ATM protocols
- To learn the latest technology ATM network.
- To provide a strong foundation in routing issues.
- To know about the various Real Time Transport Protocol.
- To introduce issues related to traffic engineering and capacity planning.
- To make learners aware about advances in computer networking technologies.

Course Outcomes(COs)

Upon completion of this Course, student will be able to:

1. Analyze ATM in terms of the technology as well as how it is applied to real-life applications.
2. .Identify appropriate algorithm to be applied for the various application like geometric modeling, robotics, networking, etc.
3. Analyze various algorithms.
4. Demonstrate the understanding of WAN Technology typically ATM .
5. Analyze issues of traffic requirements and perform capacity planning.
6. Demonstrate the understanding of protocol used for management of network.

Unit I

Introduction : ATM – Historical Perspective – Protocol Architecture – Logical Connections – Cells – Transmission of ATM Cells – SDH – SONET – Switches.

Unit II

ATM Protocol: Connection Setup – Routing Switching , Signaling , ATM Service Categories – QOS Parameters – Adaptation Layer.

Unit III

Routing Issues: Routing for High Speed Networks – RSVP, Traffic and Congestion Control – Achieving QOS – Traffic Shaping – Generic Cell Rate Algorithms – Rate Based Congestion Control – Connection Admission Control.

Unit IV

High Speed LANs: Fast Ethernet – ATM LAN's – LANE.

Unit V

Protocols Over ATM: Multiple Protocols Over ATM, IP Over ATM , TCP Over ATM – Real Time Transport Protocol – Wireless ATM – Current Trends.

Text Books

1. Rainer Handel, Manfred N.Huber, Stefan Schroder.1999.ATM Networks, Addison Wesley,1999.

References

1. William Stallings.1998.High Speed Networks TCP/IP and ATM Design Principles,Prentice Hall International.

3. William Stallings.1999. ISDN with Broad Lane ISDN with Frame Relay and ATM”,PHI,Fourth Edition.

Course Objectives:

To help students to

- Get hands-on experience in scripting, debugging, testing.
- Establish a working environment for PHP web page development
- Use variables, constants, and environment variables in a PHP program
- Learn to create dynamic interactive pages with PHP.
- Learn to manipulate files with PHP.
- Understand how MySQL works.

Course Outcomes(COs)

Upon completion of this Course, student will be able to:

1. Implement regular expressions in PHP programming including modifiers, operators, and meta characters.
2. Create PHP programs that use various PHP library functions, and that manipulate files and directories.
3. Analyze and solve various database tasks using the PHP language.
4. Create server side web applications using PHP and MySQL
5. Implement SQL to output reports with MySQL
6. design a client-side programming

List of Programs:

1. Design an online loan application form.
2. Design a form to submit your resume in net.
3. Design an application for Library Management System
4. Design form for online reservation in air ways.
5. Design form for online shopping
6. Design an application for creating an online Advertisement.
7. Design an application for student Information System.
8. Design an application to display cookies information.
9. Write a program for display environment variables in MySQL.
10. Write a program to count web page hits.
11. Design an email form that validates the inputs, produces errors when inputs are typed incorrectly, and send an email to you when submitted.
12. Design an application to upload multiple files

3. www.w3schools.com/PHP/DEfaULT.asP

Course Objectives:

To impart to students

- The principles of mobile computing technologies;
- Knowledge of applications that mobile computing offers to people, employees, and businesses;
- Knowledge of GPRS network architecture and services .
- future of mobile computing technologies and applications.
- Able to design, create, deploy, and test applications for the mobile phone platform.
- To explain how Android applications work, their life cycle, manifest, Intents, and using external resources.

Course Outcomes(COs)

Upon completion of this Course, student will be able to:

1. Analyze the architecture, merits and demerits of Wireless technologies like Infra Red, blue tooth, Wi-Fi, RFID and Wi-Max .
2. Characterize the principles of mobile technologies like GPRS, GSM, CDMA, and TDMA
3. Compare the characteristics and techniques MANET with VANET
4. Analyze technology of 1G, 2G, 3G and 4G for gaining the working knowledge of four generation wireless technologies.
5. Apply the features of Android programming for developing Android Applications
6. Implement a program in the Android environment.

List of Programs:

1. Write a program to build your first Android Application “Hello World” with common activity.
2. Write a program which will implement Sub menu in android application.
3. Write a program which will implement Context menu (Floating List of Menu Items) in android application.
4. Write a program to display the use of Relative Layout Views with different attributes.
5. Write a program to display the use of Linear Layout Views with different attributes.
6. Write a program to implement a Custom Button and handle the display message on button press.
7. Write a program to implement the List View in your android application.
8. Write a program to implement between animations and rotate the text in your android application.
9. Write a sample program to create a progress bar for your android applications.
10. Write a program to show how to use Date picker control of ADK in your android applications.

11. Write a program which enables you to draw an image using bitmap class object.
12. Write a program which allows you to get image from web and displayed them using the Image View.

3. www.tutorialspoint.com/android/
4. pl.cs.jhu.edu/oose/resources/android/Android-Tutorial.pdf

Course Objectives:

To help the students

- To Possess knowledge of the concepts and terminology associated with database systems, statistics, and machine learning
- To develop skills of using recent data mining software for solving practical problems.
- To gain experience of doing independent study and research.
- to teach the techniques for preprocessing data before mining
- To know the concepts related to data warehousing, on-line analytical processing (OLAP)
- To know the data generalization.

Course Outcomes(COs)

Upon completion of this Course, student will be able to:

1. To understand the data mining process of voluminous data using OLAP
2. To implement the preprocessing concept in data mining applications
3. To apply the data mining algorithms on big data to extract useful data
4. To implement data mining techniques for complex data types
5. To implement Decision Support System concept in data mining for developing intelligence business application.
6. To Understand the methods for mining frequent patterns, associations, and correlations.

List of Programs:

1. Use the following learning schemes, with the default settings to analyze the weather data (in weather.arff). For test options, first choose "Use training set", then choose "Percentage Split" using default 66% percentage split. Report model percent error rate
2. Using iris dataset preprocess and classify it with J4.8 and Naïve Bayes Classifier. examine the tree in the Classifier output panel
3. Using the datasets *ReutersCorn-Train* and *ReutersGrain-Train*. Classify articles using binary attributes and word count attributes.
4. Apply any two association rule based algorithm for the supermarket analysis
5. Using weka Experimenter perform comparison analysis of J48, oneR and ID3 for vote dataset
6. Using Weka Experimenter perform comparison analysis of Naïve Bayes with different datasets
7. Apply ZeroR, OneR, and J48, to classify the Iris data in an experiment using 10 train and test runs, with 66% of the data used for training and 34% used for testing.

8. Using Weka Knowledge flow Set up a flow to load an ARFF file (batch mode) and perform a cross-validation using J48 (WEKA's C4.5 implementation).
9. Draw multiple ROC curves in the same plot window, using J48 and RandomForest as classifiers.
10. Use any three clustering algorithm on Vehicle data set and find best among them
11. Perform Preprocessing, feature selection and apply any one of the algorithm each from clustering, Association and classification to find their performance
12. Examine the performance of different filters for the breast cancer dataset

Instruction Hours / week: L: 0 T: 0 P: 4 C: 2 Marks: Internal: 40 External: 60 Total: 100
End Semester Exam: 3 Hours

Course Objectives:

- Understand concepts and terminology associated with SNMP and TMN
- Decide routing protocol for complex network.
- Gain knowledge the internal architecture of routers
- Understand the fundamentals and requirements for packet routing in computer communication network.
- To teach the concepts and techniques of network architecture management
- Know how to Remote Network Monitoring in TCP/IP Networks

Course Outcomes(COs)

Upon completion of this Course, student will be able to:

1. To solve the problems in computer network system management
2. To analyze the challenges in the implementation of ATM networks
3. To implement SNMP Model in the management of computer networks
4. To configure routers using computer network software tools
5. To implement service level agreement in Computer Network management systems
6. To implement the architecture behind standards based network management

List of Programs:

1. Simple router configuration.
2. Access and utilize the router to set basic parameters.
3. Connect, configure, and verify operation status of a device interface.
4. Implement static and dynamic addressing services for hosts in a LAN environment.
5. Identify and correct common problems associated with IP addressing and host configurations.
6. Describe basic routing concepts (including: packet forwarding, router lookup process).
7. Configure, verify, and troubleshoot RIPv2.
8. Perform and verify routing configuration tasks for a static or default route given.
9. Configure, verify and troubleshoot DHCP and DNS operation on a router.
10. Configure and verify a PPP connection between routers.

Text Books

1. James D. Mc CABE. 2010 Network Analysis, Architecture and Design, 3rd Edition, Morgan Kaufmann Publishers.

Reference Books

1. Mani Subramanian. 2012. Network Management Principles and Practice, Pearson Education Asia Pvt. Ltd., 2nd Edition.
2. William Stallings. 2002. SNMP, SNMPv2, SNMPv3 and RMON 1 and 2, 3rd Edition, Pearson Education Asia Pvt. Ltd.

Course Objectives:

To help students to

- Design, select and apply the most appropriate software engineering process for a given project, plan for a software project, identify its scope and risks, and estimate its cost and time.
- Implement software.
- Analyze, specify and document software requirements for a software system.
- Express and understand the importance of negotiation, effective work habits, leadership
- Understand the good communication with stakeholders, in written and oral forms, in a typical software development environment.
- Understand the concept and techniques of project management for a broad range of systems

Course Outcomes(COs)

Upon completion of this Course, student will be able to:

1. Implement the concept of software effort estimation in developing software project.
2. Develop a responsible attitude towards the use of computer as well as the technology.
3. Evaluate the risks during the development of software projects
4. Understand the organization behavior in software project management.
5. Implement team management process in developing quality software
6. Apply project management concepts and techniques to an IT project.

List of Programs:

Prepare a more detailed, organized and easy-to-read documentation, for any application software, which should describe the following using Moodle tool:

1. User Requirement Documentation (USD)
2. Requirement Analysis Documentation. (RAD)
3. User Interfaces Specification. (UIS)
4. Object Oriented Design (OOD) or Low Level Design (LLD)
5. Code Documentation (CD)
6. Testing Documentation (TD)
7. User's Guide (UG)

Course Objectives:

To help students to

- Develop server-side Ruby scripts for publishing on the Web
- Employ control structures, methods, procs, arrays and hashes to create Ruby programs
- Distinguish and use various Ruby datatypes
- Master the use of arrays and hashes
- Use the extensive pre bundled classes
- Use the I/O facilities of Ruby to read and write binary and text files

Course Outcomes(COs)

Upon completion of this Course, student will be able to:

1. Master the use of Iterators to loop through various data structures
2. Use Exceptions in handling various run time errors
3. Create Ruby modules
4. Use the wide variety of Ruby Modules that come with the Ruby distribution
5. Use object-oriented programming conventions to develop dynamic interactive Ruby applications
6. fundamental components of the Ruby Programming Language

List of Programs:

1. Write a ruby program to perform basic array and hash operations
2. Write a code to choose random numbers and find the behaviour of the number
3. Develop a program which gets raised when you handle an exception
4. Write a ruby code to display grade sheet of students using case.
5. Write a ruby program to evaluate polynomial.
6. Write a ruby program to draw box and fill with special characters.
7. Write a program to copy each line from input file to output file.
8. Write a program to create a button and fill the button with colors.
9. Write a program to create different color balls and make it bounce on window.
10. Write ruby program to display notebook widget.
11. Develop a ruby program to manipulate text with font color and images.
12. Write ruby program to create a main thread and execute multiple process through the main thread.
13. Write a ruby code to display color pallet and open dialog with the help of tk controls.

14. Design an application form using tk classes and validate all fields on Rails framework.

4. www.ruby-lang.org/en/documentation/quickstart

Course Objectives:

- To know the fundamental concepts of Wireless Communication Systems.
- To learn the latest technology of Mobile Communication.
- To provide a strong foundation in the field of Wireless Networks.
- To know about the various IEEE Standards.
- To know the transfer information over short distance or long distances
- To develop the application of wireless technology in today's world.

Course Outcomes(COs)

Upon completion of this Course, student will be able to:

1. Create a Sensor network environment for different type of applications
2. Design ad-hoc and sensor network architectures using QoS and Congestion control
3. mechanisms
4. Apply appropriate routing algorithms for different network environments
5. Analyze the working of ad-hoc and sensor network for various applications
6. Deploy security mechanisms in the wireless ad-hoc and sensor networks.

List of Programs:

1. AM Modulation
2. AM Demodulation
3. FM Modulation
4. FM Demodulation
5. Pulse Amplitude Modulation and Detection
6. Pulse Width Modulation
7. Pulse Position Modulation and Detection
8. Pulse Code Modulation and Detection
9. Amplitude Shift Keying and Detection
10. Frequency Shift Keying and Detection

B.Sc. COMPUTER SCIENCE

CHOICE BASED CREDIT SYSTEM (CBCS)

Curriculum and Syllabus
Regular (2015 – 2016)

DEPARTMENT OF COMPUTER SCIENCE

FACULTY OF ARTS, SCIENCE AND HUMANITIES

KARPAGAM ACADEMY OF HIGHER EDUCATION

(Deemed to be University)

(Established Under Section 3 of UGC Act, 1956)

Eachanari (Post), Coimbatore – 641 021.

Tamilnadu, India

Phone No. 0422-2980011 - 15

Fax No: 0422-2980022-23

E mail ID: info@karpagam.com

Web: www.kahedu.edu.in

PROGRAM OUTCOMES (POs): The program must enable students to attain by the time of graduation

- a) An ability to apply knowledge of computing and mathematics appropriate to the program's student outcomes and to the discipline
- b) An ability to analyze a problem, and identify and define the computing requirements appropriate to its solution
- c) An ability to design, implement and evaluate a computer-based system, process, component or program to meet desired needs.
- d) An ability to function effectively on teams to accomplish a common goal
- e) An understanding of professional, ethical, legal, security and social issues and responsibilities
- f) An ability to communicate effectively with a range of audiences
- g) An ability to use current techniques, skills and tools necessary for computing practice
- h) An ability to use and apply current technical concepts and practices in the core information technologies of human computer interaction, information management, programming, networking and web systems and technologies
- i) An ability to effectively integrate IT-based solutions into the user environment
- j) An understanding of best practices and standards and their application

PROGRAM SPECIFIC OUTCOME (PSOs)

- k) Understand analyze and develop computer programs in the areas related to Database systems and Big data Analytics, cloud computing, soft computing, IoT, Image processing, Green computing, web designing, mobile computing and networking for efficient design of computer based system of varying complexity.
- l) Apply standard software Engineering practices and strategies in software project development using open-source programming environment to deliver a quality for business success.
- m) Be acquainted with the contemporary issues, latest trends in technological development and thereby innovate new ideas and solutions to existing problems.
- n) An ability to produce cost effective, quality and maintainable software products and solutions (services) meeting the global standards and requirements with the knowledge acquired and using the emerging techniques, tools and software engineering methodologies and principles and able to comprehend and write effective project reports in multidisciplinary environment in the context of changing technologies.

PROGRAMME EDUCATIONAL OBJECTIVES (PEOs)

- PEO I : To be a working Information Technology (IT) professional with core competencies that can be used on multi-disciplinary projects
- PEO II : To understand the importance of relationship building within the IT industry
- PEO III : To understand the need for lifelong learning in the exploration and journey in IT
- PEO IV : To understand, evaluate and practice ethical behavior within the IT industry
- PEO V : To be cognizant of security issues and their impacts on industry

MAPPING of PEOs and POs

Skill Development Oriented Courses -Red

கற்பகம்உயர்கல்விகலைக்கழகம்
பகுதி - I தமிழ்ப்பாடத்திட்டம் (2015 - 2016)

முதல்பருவம்

(இளநிலை அறிவியல் பட்டவகுப்புகளுக்குரியது)
(For I-UG Science Degree Classes) 15LSU101

பாடத்திட்டப் பொதுநோக்கம்

- கற்றல் வழி சிந்தனைத் திறனையும், கருத்து வெளிப்பாட்டுத் திறனையும், மேம்படுத்துதல்.
- ஆய்வுநோக்கைமேம்படுத்துதல்.
- இலக்கியங்கள் உணர்த்தும் வாழ்வின் நுட்பமான பகுதிகளை உணர்த்துதல்.
- மனித மனத்தினைப் பக்குவப்படுத்துதலில் இலக்கியம் தரும் பங்கினை உணர்த்துதல்.
- வளர்ந்து வரும் சமூகத்தில் அறஉணர்வு, பண்பாடு போன்றவை குறித்து அறிவூட்டல்.
- அரசுத் தேர்வுகளுக்கு மாணவர்களை ஆயத்தமாக்குதல்.

பாடத்திட்டப் பயன்விளைவு

- இந்திய குடியுரிமைப் பணி முதலான போட்டித் தேர்வுகளில், விருப்பப்பாடமாக இடம்பெறுகின்ற, 'தமிழ் இலக்கிய வரலாறு' குறித்த முழுமையான அறிமுகம் பெற்றிருத்தல்.
- கல்வெட்டியல், ஓலைச்சுவடியியல் மற்றும் தொல்லியல் சார்ந்த ஆவணத் தேடலுக்குரிய ஆய்வுமனப்பான்மையுடன், இலக்கியங்களை அணுகுதல்.
- தமிழின் வளர்ச்சித்துறையாகிய, 'அறிவியல் தமிழ்' ; 'இணையதமிழ்' குறித்த பன்னோக்கு அணுகுமுறையிலான ஆய்வுச் சிந்தனை மேம்பாடு.
- வேலைவாய்ப்புக்குரிய சுயதிறன் மேம்பாட்டுடன், படைப்பாக்கத்திறன் மேம்பாடும் பெற்றிருத்தல் .
- சமுதாய மற்றும் வாழ்வியல் மதிப்புகளைப் பேணுவதற்குக்கருவியாக இலக்கியங்களை நாடுகின்ற மனப்பான்மை வளர்ச்சி.
- மொழிபெயப்புத்துறை சார்ந்த வேலைவாய்புத் திறன் பெற்றிருத்தல்

தாள்கள்வரிசையும்தேர்வுச்செயல்திட்டமும்பகுதி-I தமிழ்

ஒன்று	I	4	3	40 / 60	100	4

அலகு - I : இக்கால இலக்கியம்

தத்துவம் : மகாகவி பாரதியார் - பகைவனுக்கு அருள்வாய்.

கவிஞர் ந.பிச்சமூர்த்தி - கிளிக்கூண்டு

இயற்கை : பாவேந்தர் பாரதிதாசன் - அழகின் சிரிப்பு - ஞாயிறு.

சமுதாயம் : கவிக்கோ அப்துல் ரகுமான் - இன்றைய நிலை

அறிவியல் : கவிஞர் சிற்பி பாலசுப்பிரமணியன் - காலம்.

பெண்ணியம் : கவிஞர் சிவரமணி - வையகத்தை வெற்றிகொள்ள

சூழலியல் : அன்பாதவன் - மரணம்

காதல் : வைரமுத்து - காதல் உயில்

தன்மப்பிக்கை பா.விஜய் - தன்மப்பிக்கை

அலகு - II : அற இலக்கியம்

1. திருக்குறள் - தேர்த்தெடுக்கப்பட்ட குறள்கள் 20

2. நான்மணிக்கடிகை - தேர்த்தெடுக்கப்பட்ட ஐந்து பாடல்கள்

3. திரிகடுகம் - தேர்த்தெடுக்கப்பட்ட ஐந்து பாடல்கள்

அலகு - III : சிற்றிலக்கியம்

1. நரிவிருத்தம் - அறன் வலியுறுத்தல்

2. தமிழ் விடு தூது - தமிழின் சிறப்புரைத்தல்

3. மதுரை மீனாட்சியம்மைப் பிள்ளைத்தமிழ் - தொடுக்கும் கடவுள் பழம்பாடல்

அலகு - IV : சிறுகதை

1. புதுமைப்பித்தன் - நிரும்பலை

2. தனுஷ்கோடி ராமசாமி - கந்தகக் கிடங்கிலே

3. கந்தர்வன் - தூண்டு

4. வாஸந்தி - வடிகால்

5. சி.ஆர். ரவீந்திரன் - வழுக்குமரம்

அலகு - V : மொழிப்பயிற்சி

1. விண்ணப்பங்கள் எழுதுதல் மற்றும் கடிதப் பயிற்சி

2. மொழிபெயர்ப்புப் பயிற்சி

பாட தூல்: கற்பகச்சோலை - தமிழ் ஏடு. கற்பகம் பல்கலைக்கழகத் தமிழ்த் துறை வெளியீடு.

(For all undergraduates students admitted from 2015 onwards)

Course Objectives:

- To enable the learners to acquire English language skills at a faster pace.
- To introduce different kinds of literary works
- To familiarize different genres of Literature
- To instruct moral values through literature.
- To improvise their productive and receptive skills
- To strengthen the basic knowledge about grammar.

Course Outcomes:

1. Learn to reflect on the literary works and communicate flexibly.
2. Reading and comprehending literary works
3. Genres of literature to provide moral education
4. Develop communication skills in business environment
5. Interpersonal skills will be developed.
6. Betterment of language competence

UNIT I:

Prose: Google Guys (Extract) – Richard L Brandt

Poetry: The Blind Pedlar – Osbert Sitwell

Short Story: A Garden So Rich – Christie Craig

Vocabulary: Prefixes, Antonyms, Sentence Completion

Grammar: Articles, Adverbs, Pronouns

Composition: Proverb Expansion

UNIT II:

Prose: Happiness 101 – Geeta Padmanabhan

Poetry: An Old Woman – Arun Kolatkar

Vocabulary: Suffixes, Analogies

Grammar: Nouns, Adjectives

Composition: Dialogue Writing

UNIT III:

Prose: Structured Procrastination – John Perry

Short Story: The Umbrella Man – Roald Dahl

One-Act Play: The Boy Who Stopped Smiling – Ramu Ramanathan

Vocabulary: Synonyms, Euphemisms, Word Definitions

Grammar: Verbs, Conjunctions and Interjection, Indirect/Reported Speech

UNIT IV:

Poetry: No Sentence – Anjum Hassan

One-Act Play: While the Auto Waits- O' Henry
Vocabulary: Words Often Confused, Anagrams
Grammar: Prepositions, Voice- Active and Passive
Composition: Letter Writing- Informal

UNIT V:

Short Story: The Bird – Amar Jalil
One-Act Play: The Cellphone Epidemic – Claudia I. Haas
Vocabulary: Portmanteau Words, One Word Substitute
Grammar: Questions, Pronunciation
Composition: Letter Writing- Formal

Prescribed Texts:

Rao, G. Chandralekha and et al. *Spring* 2013. Emerald Publishers: Chennai.

Reference

Syamala, V. English for Communication. 2006. Emerald Publishers: Chennai

Course Objectives

- To know the basic concepts of computers and its parts
- To impart adequate knowledge on the need of programming languages and problem solving techniques.
- To develop programming skills using the fundamentals and basics of C Language.
- To enable effective usage of arrays, structures, functions
- To learn effective usage of pointers and to implement the memory management concepts.
- To teach the issues in file organization and the usage of file systems.

Course Outcomes (COs)

After the completion of this course, a successful student will be able to do the following:

1. Understand the concept of a program in a high-level language being translated by a compiler into machine language program and then executed.
2. Develop programs using the basic elements like control statements, Arrays and Strings.
3. understand about the dynamic memory allocation using pointers which is essential for utilizing memory
4. Understand about the code reusability with the help of user defined functions.
5. Learn the basics of file handling mechanism that is essential for understanding the concepts in database management systems.
6. Understand the uses of preprocessors and various header file directives.

UNIT-I

Introduction to computers- characteristics- evolution of computers- computer generations- classification of computers-basic computer organization-software – types of software – overview of compilers & interpreters- Structure of C – C Tokens – Keywords and Identifier - Constants – Variables - Declarations of Variables – Data types – Type Conversion – Operators and Expressions - Formatted and Unformatted I/O Operations. Design a code to find range of fundamental data types.

UNIT-II

Decision Statements – Loop Control Statements – Arrays: Initialization of array – Characteristic of Array- Array types. Strings - String Handling Functions. Design a Calculator using Loop.

UNIT-III

Functions - Introduction - Definition of Functions - Function Declaration - Types of Functions – Recursion. Structures and Unions : Introduction - Defining a Structure -

Declaring Structure Variables - Arrays of Structure-Structures & Function- Typedef- Enumerated data type – Unions – Bit fields.

Design a code to reverse all the bits of an 32 bit integer.

UNIT-IV

Pointers – Introduction – Declaring Pointer Variables - Pointer and Arrays - Pointers and Strings – Array of Pointers - Functions and Pointers - Function Returning Pointers - Pointers to functions - Pointers and Structures. Storage Classes – Auto-extern-static-register.

UNIT-V

File Management in C – Introduction - Defining a File – Steps for file operations – Input/output operations on files - Error handling During I/O Operations - Random Access to Files - Command Line Arguments - The Preprocessor.

Design a code to shut down the computer.

Course Objectives

- To know the basic concepts of computers and its parts
- To impart adequate knowledge on the need of programming languages and problem solving techniques.
- To develop programming skills using the fundamentals and basics of C Language.
- To enable effective usage of arrays, structures, functions
- To learn effective usage of pointers and to implement the memory management concepts.
- To teach the issues in file organization and the usage of file systems.

Course Outcomes (COs)

After the completion of this course, a successful student will be able to do the following:

1. Understand the concept of a program in a high-level language being translated by a compiler into machine language program and then executed.
2. Develop programs using the basic elements like control statements, Arrays and Strings.
3. understand about the dynamic memory allocation using pointers which is essential for utilizing memory
4. Understand about the code reusability with the help of user defined functions.
5. Learn the basics of file handling mechanism that is essential for understanding the concepts in database management systems.
6. Understand the uses of preprocessors and various header file directives.

List of Programs

1. Swapping of two numbers without using third variable
2. Shift input data by two bits to the left.
3. Find that entered year is leap year or not.
4. To check the given string is palindrome or not.
5. To Print a Fibonacci series for any number
6. Print a table of any number.
7. Program to sort the given set of numbers in ascending order.
8. Convert a given number into words
9. Write a program to add two matrices.
10. Find factorial of a number using recursive functions.
11. Program to reverse a given number without using array.
12. Find a substring in the main string without using library function.
13. Find the maximum number in array using pointer.
14. Mark sheet preparation using array of structures.
15. Copy the content of one file to another file using command line arguments.

Course Objectives

- To enable the students to gain knowledge on the architecture of modern computer.
- To understand how computer stores positive and negative numbers and to perform arithmetic operation of positive and negative numbers.
- To learn about logic gates and solve problems using Boolean algebra.
- To understand the simplification of circuits like adders, subtractors, multiplexers, encoders.
- To understand the basic computer organization and design.
- To learn Cache memory and its importance

Course Outcomes (COs)

1. To provide a strong foundation in construction of Sequential and Combinational Circuits.
2. To familiarize with the function of Gates, Flip Flops, Shift Registers, Counters, A/D & D/A Converters and its Applications.
3. Solve the problems using Boolean algebra
4. Understand the basic computer organization and design.
5. learn about Cache memory and its importance
6. Solve the binary arithmetic problems and conversion among the number systems

UNIT I – Number System and Codes

Introduction to Digital concepts – Number Systems: Decimal, Binary, Octal and Hexadecimal Numbers – Conversion – 1's and 2's Complements of Binary Numbers – Binary Arithmetic with Signed and Unsigned Numbers – Codes: Binary Coded Decimal (BCD) — Excess-3 – Gray Code — ASCII Codes — Error Detection and Correction Codes.

UNIT II – Logic Gates and Boolean Algebra

Introduction to Logic Gates – OR, AND, NOT, NAND, NOR, EX-OR and EX-NOR Gates. Boolean Logic and Expression, Laws and Rules of Boolean Algebra, DeMorgan's Theorem – Simplification using Boolean Algebra – Karnaugh Map.

UNIT III – Combinational Logic Circuits

Basic overview of Logic functions – Basic Adders & Subtractor – Parallel Binary Adder – 4-bit Binary Adder/Subtractor – Comparators – Encoders and Decoders – Code Converters – Multiplexers and Demultiplexers — Parity Generators/Checkers.

UNIT IV – Sequential Logic Circuits

Flip-flops: RS – Clocked RS – Edge-triggered RS, D, and JK – JK Master-Slave flip flops – Registers and its Types – SISO, SIPO, PISO, PIPO – Shift Registers and its Types – Ring Counters – Asynchronous and Synchronous Counter – UP/DOWN Counter- Ring Counter.

UNIT V – D/A, A/D Converters

Digital to Analog converters: Resistor Networks - Binary Ladder – Analog to Digital converters: Counter type – Ramp type – Successive Approximation Type.

TEXT BOOK

- 1.Digital Electronics and its Principles, Salilvahanan, Tata McGraw Hill, Seventh Edition, 2014.
- 2.Digital Principles and Application, Albert Paul Malvino, Donald P. Leach and Goutam Saha, Tata McGraw Hill, Seventh Edition, 2010.
- 3.Digital Design: With an Introduction to Verilog HDL, Morris Mano, Pearson Education, Fifth Edition, 2013.

REFERENCES

- 1.Modern Digital Electronics, Jain R.P, Tata McGraw Hill Company, Fourth Edition, 2012.
2. Integrated Circuits, Botkar K.R, Khanna Publications, Fourth Edition, 2008.

Course Objectives

- To enable the students to gain knowledge on the architecture of modern computer.
- To understand how computer stores positive and negative numbers and to perform arithmetic operation of positive and negative numbers.
- To learn about logic gates and solve problems using Boolean algebra.
- To understand the simplification of circuits like adders, subtractors, multiplexers, encoders.
- To understand the basic computer organization and design.
- To learn Cache memory and its importance

Course Outcomes (COs)

1. To provide a strong foundation in construction of Sequential and Combinational Circuits.
2. To familiarize with the function of Gates, Flip Flops, Shift Registers, Counters, A/D& D/A Converters and its Applications.
3. Solve the problems using Boolean algebra
4. Understand the basic computer organization and design.
5. learn about Cache memory and its importance
6. Solve the binary arithmetic problems and conversion among the number systems

List of Experiments

(Any 8 Experiments)

1. Verification of basic gates
2. Realization of Logic Gates Using Universal Gates
3. Adder using Gates
4. Subtractor using Gates.
5. Multiplexer
6. Demultiplexer
7. Encoder
8. Decoder
9. Study of Flip-flops
10. Binary to Gray and Gray to Binary Converter

Instruction Hours/week: L: 2 T: 0 P: 0 Marks: Internal: 100 External: Nil Total: 100**Course Objectives**

- To teach and inculcate the importance of value based living and sustainable lifestyle.
- To give students a deeper understanding about the purpose of life.
- To teach and inculcate the essential qualities to become a good leader.
- To be responsible citizens with clear conviction to practice values and ethics in life.
- To create awareness about the values and their significance and role
- To imbibe the concept of discipline and freedom

Course Outcomes (COs)

1. Students will understand the importance of value based living.
2. Students will gain deeper understanding about the purpose of their life.
3. Students will understand and start applying the essential steps to become good leaders.
4. Students will emerge as responsible citizens with clear conviction to practice values and ethics in life.
5. Students will become value based professionals
6. Students will contribute in building a healthy nation

UNIT – I

Concept of Self, self-esteem and self-confidence. Concept of personality, determinants and disorganisation of it. Personality development – meaning.

UNIT – II

Goal setting – meaning and importance; steps in goal setting Manners and Etiquette – meaning need and importance; means to improve. Positive thinking.

UNIT – III

Discipline – meaning. Concept of Roles and Responsibility Time Management – Meaning and steps for effective time management.

UNIT – IV

Interpersonal relationship – meaning and importance; means to improve it. Healthy friendship.

UNIT – V

Family Relationship importance of it; Means to improve. Spirituality – meaning. Its relationship with Altruism, sacrifice, self control, tolerance and truthfulness.

TEXT BOOKS

1. Karpagam Academy of Higher Education, Study Material, 2015.

Course Objectives

- Students will be able to apply quantitative reasoning and mathematical analysis methodologies to understand and solve problems.
- To achieve the analytical and reasoning competencies and to improve their communication and presentation skills
- To impart knowledge on both Aptitude and Soft skills to the students
- To actively do mathematics—such as analyzing data, constructing hypotheses, solving problems, reflecting on their work, and making connections.
- To critically evaluate and demonstrate various principles involved in solving mathematical problems and to adopt new and faster methods of calculations.
- To reinforce competencies in soft skills which are crucial in a social setting

Course Outcomes(COs)

On successful completion of the course the students will be able to:

1. Understand the basic concepts of QUANTITATIVE ABILITY
2. Understand the basic concepts of LOGICAL REASONING Skills
3. Acquire satisfactory competency in use of VERBAL REASONING
4. Actively do mathematics—such as analyzing data, constructing hypotheses, solving problems, reflecting on their work, and making connections.
5. Solve campus placements aptitude papers covering Quantitative Ability, Logical Reasoning and Verbal Ability
6. Compete in various competitive exams like CAT, CMAT, GATE, GRE, GATE, UPSC, GPSC etc.

UNIT - I

Introduction to Quantitative Aptitude, Speed Maths, Problems on Numbers, Averages, Ratios and Proportions, Problems on Ages

UNIT - II

Number Series, Blood Relation, Image Analysis, Direction Sense, Syllogism, Coding and Decoding

UNIT – III

Percentages, Data Interpretation, Profit and Loss, Simple Interest and Compound Interest

UNIT – IV

Parts of Speech, Tense, Subject Verb Agreement, Active and Passive Voice, Articles, Prepositions

UNIT - V

Conditional Clause, Degrees of Comparison, Goal Setting, Interpersonal Skills

கற்பகம் உயர்கல்விகலைக்கழகம்
தமிழ்த்துறை
பகுதி - I தமிழ்ப்பாடத்திட்டம் (2015 - 2016)
இரண்டாம் பருவம்
(இளநிலை அறிவியல் பட்டவகுப்புகளுக்குரியது)
(For I-UG Science Degree Classes) 15LSU201

பாடத்திட்டப்பொதுநோக்கம்

- கற்றல் வழி சிந்தனைத் திறனையும், கருத்து வெளிப்பாட்டுத் திறனையும், மேம்படுத்துதல்.
- ஆய்வுநோக்கை மேம்படுத்துதல்.
- இலக்கியங்கள் உணர்த்தும் வாழ்வின் நுட்பமான பகுதிகளை உணர்த்துதல்.
- மனித மனத்தினைப் பக்குவப்படுத்துதலில் இலக்கியம் தரும் பங்கினை உணர்த்துதல்.
- வளர்ந்து வரும் சமூகத்தில் அறஉணர்வு, பண்பாடு போன்றவை குறித்து அறிவூட்டல்.
- அரசுத் தேர்வுகளுக்கு மாணவர்களை ஆயத்தமாக்குதல்.

பாடத்திட்டப்பயன்விளைவு

- இந்திய குடியுரிமைப் பணி முதலான போட்டித் தேர்வுகளில், விருப்பப்பாடமாக இடம்பெறுகின்ற, 'தமிழ் இலக்கிய வரலாறு' குறித்த முழுமையான அறிமுகம் பெற்றிருத்தல்.
- கல்வெட்டியல், ஓலைச்சுவடியியல் மற்றும் தொல்லியல் சார்ந்த ஆவணத் தேடலுக்குரிய ஆய்வுமனப்பான்மையுடன், இலக்கியங்களை அணுகுதல்.
- தமிழின் வளர்ச்சித்துறையாகிய, 'அறிவியல் தமிழ்' ; 'இணையதமிழ்' குறித்த பன்னோக்கு அணுகுமுறையிலான ஆய்வுச் சிந்தனை மேம்பாடு.
- வேலைவாய்ப்புக்குரிய சுயதிறன் மேம்பாட்டுடன், படைப்பாக்கத்திறன் மேம்பாடும் பெற்றிருத்தல் .
- சமுதாய மற்றும் வாழ்வியல் மதிப்புகளைப் பேணுவதற்குக்கருவியாக இலக்கியங்களை நாடுகின்ற மனப்பான்மை வளர்ச்சி.
- மொழிபெயப்புத்துறை சார்ந்த வேலைவாய்புத் திறன் பெற்றிருத்தல்

தாள்கள்வரிசையும் தேர்வுச்செயல்திட்டமும் பகுதி-I தமிழ்

பகுதி - I, தமிழ்

15LAU201 :

தமிழ் இரண்டாம் தாள்

பருவம் II

5-H,5-C

அலகு - I : பக்தி இலக்கியம்

1. சைவம் - மூவர் தேவாரத்திலிருந்து தேர்ந்தெடுக்கப்பெற்ற 15 பாடல்கள்
2. வைணவம் - ஆண்டாள் நாச்சியாரின் திருப்பாவையிலிருந்து 11 பாடல்கள்

அலகு - II : சங்கஇலக்கியம்

அ). எட்டுத்தொகை

நற்றிணை: 1. இலை இல பிடவம், திணை - முல்லை,

ஆசிரியர் - விழிக்கட் பேதைப் பெருங்கண்ணனார்.

2. மடல் மா ஊர்ந்து, திணை - குறிஞ்சி, ஆசிரியர் - மடல் பாடிய மாதங்கீரனார்.

குறுந்தொகை : 1. உள்ளார் கொல்லோ, திணை - பாலை, ஆசிரியர் - பெருங்கடுங்கோ.

2. யாரினும் இனியன், திணை - மருதம், ஆசிரியர் - வடமவண்ணக்கன் தாமோதரனார்.

ஐங்குறுநூறு : 1. நுள்ளேர் புருவத்த, திணை - குறிஞ்சி, ஆசிரியர் - கபிலர்.

2. அவறொறுந் தேரை, திணை - முல்லை, ஆசிரியர் - பேயனார்.

பதிற்றுப்பத்து - ததைந்த காஞ்சி, ஆசிரியர் - பாலைக் கௌதமனார்.

பரிபாடல் - வையை - திரை இரும் பளிப் பெளவம், ஆசிரியர் - மையோடக் கோவனார்.

கலித்தொகை - கடும் புளல் கால் பட்டு, திணை - பாலை, ஆசிரியர் - பெருங்கடுங்கோ.

அகநானூறு - 1. ஆடு அமைக் குயின்ற, திணை - குறிஞ்சி, ஆசிரியர் - கபிலர்.

2. யான் எவன் செய்கோ தோழி, திணை - பாலை, ஆசிரியர் - நோய்பாடியார்.

புறநானூறு - 1. சிறப்பில் சிதடு முறுப்பில், திணை - பொதுவியல்,

ஆசிரியர் - உறையூர் முதுகண்ணன் சாத்தனார்.

2. இளையரு முதியரும் வேறுபுலம் படா - ஆசிரியர் - கயமனார்.

ஆ). பத்துப்பாட்டு - சிறுபாண் ஆற்றுப்படை - கடையெழு வள்ளல்களின் சிறப்பு,

நல்லியக்கோடனின் சிறப்பு, ஈகைத் திறம்.

அலகு - III : காப்பியங்கள்

1. மணிமேகலை - பாத்திரம் பெற்ற காதை - தீவதிலகை, மணிமேகலைக்குச் சொல்லியது,

சிறைக்கோட்டம் அறக்கோட்டமாக்கிய காதை - மணிமேகலை வேண்ட,

மாவள்கின்னி, சிறைக்கோட்டத்தை அறக்கோட்டமாக்கியது.

2. கம்பராமாயணம் - இலக்கியநயம் மிக்க, தேர்ந்தெடுக்கப்பெற்ற 41 பாடல்கள்.

அலகு - IV : கட்டுரைகள்

1. திருக்குறளில் மனிதவள மேலாண்மைக் கருத்துக்கள் - திருமிகு ஹரி விஜயலட்சுமி.

2. தமிழர் வளர்த்த நுண்கலைகள்: சிற்பமும் ஓவியமும் - தொ.மு. பாஸ்கரத் தொண்டைமான்.

3. சமயமும் தமிழும் - பேராசிரியர் அ.ச.ஞானசம்பந்தன்.

4. தமிழில் அறிவியல் - ஒரு பார்வை - பேராசிரியர் சிவகுமார்.

5. இன்றைய நெருக்கடிப் பிரச்சனைகள் - நிர்வாகம் - முனைவர் ச. முத்துக்குமார்.

அலகு - V : இலக்கணமும் மொழிப்பயிற்சியும்

1. எழுத்து, சொல், பொருள் இலக்கண எழுத்துப்பயிற்சிகள்

2. பொதுக் கட்டுரைகள்

பாட நூல்: கற்பகச்சோலை - தமிழ் ஏடு. கற்பகம் பல்கலைக்கழகத் தமிழ்த் துறை வெளியீடு.

(For all undergraduates students admitted from 2015 onwards)

Course Objectives:

- To enable the learners to acquire English language skills through literature.
- To familiarize them with English literature.
- To acquire Grammar knowledge.
- To help learners imbibe cultural values.
- To acquire skill of making correct sentences.
- To reflect originality on the application of soft skills and express in writing their views.

Course Outcomes:

- Learn to enjoy the ecstasy of literature.
- The select literary pieces will develop the confidence level of the learners.
- To get the social values.
- To know the importance of communication
- Get sound knowledge in English
- Trained to communicate well for business purpose.

UNIT I:

Prose: The Unexpected- Robert Lynd

Poetry: The Village Schoolmaster – Oliver Goldsmith

Short Story: The Lion's Share – Arnold Bennett

Vocabulary: Homonyms

Grammar: Irregular Verbs

UNIT II:

Prose: Travel by Train – J. B. Priestly

Poetry: The Gift of India – Sarojini Naidu

Grammar: Sentence patterns

Composition: Reading Comprehension

UNIT III:

Prose: Women's Education is Almost More Important than the Education of Boys and Men – Indira Gandhi

Short Story: The Necklace – Guy De Maupassant

One-Act Play: The Referee – W.H. Andrews and Geoffrey Dearmer

Vocabulary: Similes

Grammar: Discourse Markers

Composition: Report Writing

UNIT IV:

Poetry: Ozymandias – P.B. Shelley
One-Act Play: The Pot of Broth- W.B. Yeats
Vocabulary: Collective Nouns
Grammar: Correction of Sentences
Composition: Picture Reading

UNIT V:

Short Story: The Silver Butterfly– Pearl S. Buck
One-Act Play: The Bear – Anton Chekov
Vocabulary: Acronyms
Grammar: Question Tags
Composition: Drafting Advertisement

Prescribed Texts

Wings of Communication 2014. Board of Directors. Emerald Publishers:
Chennai

Reference

Syamala, V. English for Communication. 2006. Emerald Publishers: Chennai.

Course Objectives

- To understand how C++ improves C with object-oriented features.
- To learn the syntax and semantics of the C++ programming language.
- To learn how to design C++ classes for code reuse.
- To learn how to implement copy constructors and class member functions.
- To learn how to overload functions and operators in C++.
- To learn how to design and implement generic classes with C++ templates.
- To learn how to use exception handling in C++ programs.

Course Outcomes(COs)

1. Identify importance of object oriented programming and difference between structured oriented and object oriented programming features.
2. Able to make use of objects and classes for developing programs.
3. understand the concept of data abstraction and encapsulation
4. Able to use various object oriented concepts to solve different problems
5. Using inheritance and virtual functions to implement dynamic binding with polymorphism.
6. Ability to use exception handling in debugging the programs

UNIT-I

Principles of Object Oriented Programming: A look at Procedure-oriented programming - Basic concepts of object oriented programming – benefits of OOP – structure of c++ program – Declaration of variables. **Control statements:** Decision making statements – if...Else, jump, go to, break, continue- switch case statements – do-while – while statement, for statement. Inline functions – function overloading. Design an array of 10 doubles and set all of them to 1.0.

UNIT-II

Classes and Objects: Specifying a class – defining member functions Inside the Class – Defining member functions outside the class - static data members – static member functions - array of objects –friendly functions. **Constructors and destructors:** Constructors – multiple constructors in a class – constructors with default arguments - copy constructor – destructors

UNIT-III

Operator Overloading: Defining operator overloading – overloading unary operators – overloading binary operators – overloading binary operators using friends – type conversions. **Inheritance:** Inheritance – defining derived classes – single, multilevel, multiple, hierarchical inheritance- hybrid inheritance – virtual base classes – abstract classes.

Design a code to perform arithmetic and comparison operation using operator overloading.

UNIT-IV

Pointers: Pointers to objects – this pointer – pointers to derived classes – virtual function. **Managing console I/O operations:** C++ streams – C++ stream classes – unformatted I/O operations – formatted console I/O operations – Managing output with manipulators.

UNIT-V

Files: Classes for file stream operations – opening and closing a file – sequential input and output operations – updating a file random access – command line arguments.

Templates: Templates – class templates – function templates – member function templates.

Course Objectives

- To understand how C++ improves C with object-oriented features.
- To learn the syntax and semantics of the C++ programming language.
- To learn how to design C++ classes for code reuse.
- To learn how to implement copy constructors and class member functions.
- To learn how to overload functions and operators in C++.
- To learn how to design and implement generic classes with C++ templates.
- To learn how to use exception handling in C++ programs.

Course Outcomes(COs)

1. Identify importance of object oriented programming and difference between structured oriented and object oriented programming features.
2. Able to make use of objects and classes for developing programs.
3. understand the concept of data abstraction and encapsulation
4. Able to use various object oriented concepts to solve different problems
5. Using inheritance and virtual functions to implement dynamic binding with polymorphism.
6. Ability to use exception handling in debugging the programs

List of programs

1. Create a class **Patient** with necessary data members. In the main () program, have the facility to
 - Store the details of n inpatients and outpatients
 - Display the details in a neat format
2. Create two classes **British** and **Metric** to store the measurements of distance in the British (feet and inches) and Metric (meters and centimeters) systems respectively. In the main () program, perform the following:
 - Get two measurements: one in British and the other in Metric
 - Ask the user in which system (British or Metric) (s) he wants the output.
3. Add two input measurements and print the result according to the user's choice Create a class **Date** whose data members are Day, month, and Year. Write necessary member functions and perform the following operations using overload operator.
 - Increment a date by a day
4. Create a class **Date** whose data members are Day, month, and Year. Write necessary member functions and perform the following operations using overload operator.
 - Compares two dates
5. Create a class **String** that has a character array as a data member and perform the following operations using overloaded operators.
 - '+' To add two strings
 - '==' To compare two strings
6. Create a class **Computer** and derive two classes **Client** and **Server** from it. In the main () program, get the data about n clients and servers and print it back in a neat format.

7. Create a class **Shape** that contains two data members of type double to hold the two dimensions of the shape. Derive 3 more classes' **Circle**, **Rectangle** and **Triangle** from the class Shape. Using appropriate member functions, get the values, calculate and print the area of different shapes using dynamic binding.
Hint:- Write 2 member functions in all the derived classes: one to set the data and the other to calculate and display the area.
8. Create a class **Staff** that contains the name, designation, and years of experience of a staff member of a college. Using containership, create two more classes **TeachingStaff** and **NonTeachingStaff** according to the following specifications. In addition to the properties of the staff class, the TeachingStaff class should contain the highest qualification, the staff member possesses and the departments he belongs to. The NonTeachingStaff class needs to contain the properties of Staff only. In the main (), get data about some of the teaching and NonTeachingStaff members of your college and print the details in neat format.
9. Create a class **Address** as whose data members are Name, Street, City, Pincode and Phone Number of a person. In the main () program, using array of pointers, get addresses of n persons, sort it in alphabetical order of names and display it back in a neat format.
10. Create a class that copies the content of a text file into another file. Write the program in such a way that the program accepts command line arguments and make the program to execute in a way exactly the copy command in DOS.
11. Create a class **Student** that could have the name, register number and marks in the subjects of the semester. Have the program to perform the following operations:
 - Store the data about n students in a data file.
 - Print the mark list of each student whenever requested.
 - Add details about some more students at any time.
12. Sort an integer and a floating –point array using function template.

Course Objectives

- To have knowledge about the basic working of a microcontroller system and its programming in assembly language.
- To provide experience to integrate hardware and software for microcontroller applications systems.
- To learn the various Concepts of Embedded System
- To acquire knowledge about microcontrollers embedded processors and their applications.
- To develop the Programming Skills in 8051 Microcontroller.
- To provide a strong knowledge in the field of Real Time Operating System.

Course Outcomes

1. Ability to understand the internal architecture and interfacing of different peripheral devices with Microcontrollers.
2. Ability to write the programs for microcontroller.
3. Understand the concepts of embedded systems
4. Understand the role of embedded systems in industry.
5. Understand the design concept of embedded systems
6. Integrate hardware and software for microcontroller applications systems.

UNIT I – 8051 Microcontroller

Introduction to Microcontroller and Embedded Processors – Microcontroller for Embedded Systems – Overview of 8051 Family – 8051 Architecture – 8051 flag bits and PSW Register - Register Bank and Stack.

UNIT II –8051 Programming

8051 Assembly and C Programming – Instruction Set –Address Modes - Loop and Jump Instructions - Arithmetic Instruction - Logic Instructions - Single Bit Instructions. Data Types and Directives - I/O Port Programming.

UNIT III – Internal Peripherals of 8051

Basic Registers of Timer - Programming 8051 Timer-Counter Programming – Basics of Serial Communication – 8051 Connection to RS232 - 8051 Serial Communication Programming – 8051 Interrupts - Programming External Hardware Interrupts.

UNIT IV – Applications

Interfacing LCD to the 8051 – Interfacing ADC – Sensors to 8051- Interfacing Stepper Motor - 8051 Interfacing to the Keyboard - Interfacing DAC to the 8051.

UNIT V – Real-Time Operating System

Survey of Software Architecture: Round Robin-Round Robin with Interrupts-Function – Queue Scheduling Architecture - Introduction of RTOS - RTOS Architecture

-Task and Task States - Task and Data - Semaphores and Shared Data - Message Queues, Mailboxes and Pipes - Timer Function – Events - Memory Management.

TEXT BOOK

1. The 8051 Microcontroller and Embedded Systems, Mohammed Ali Mazidi and Janice Gillispie Mazidi, Pearson Education, Singapore, Third Edition, 2008.
2. The 8051 Architecture and its Applications, Ayala, Prentice Hall of India, Sixth Edition, 2010, New Delhi.

REFERENCES

1. Embedded Microcontroller, Intel Manual – Volume I and II, 2008.
2. The 8051 Microcontroller and Embedded Systems, Dr. Rajiv Kapadia, Jaico, Publishing House, First Edition, 2004, Mumbai.

Course Objectives

- To learn the fundamentals of PC Hardware.
- To develop base knowledge in the installation of peripheral devices.
- To get a detailed knowledge of all the hardware components that make up a computer
- To understand the different interfaces required for connecting the hardware devices.
- To understand the components on the motherboard
- To provide a strong knowledge in Trouble shooting of PC

Course Outcomes (COs)

1. Understand the modern computer organization, processor and memory concept, Peripherals and recent system architecture
2. Identify the existing configuration of the computers and peripherals for upgrading the same as and when required.
3. Develop base knowledge in the installation of peripheral devices.
4. Knowledge of all the hardware components that make up a computer
5. Understand the different interfaces required for connecting the hardware devices.
6. Trouble shoots PC when required.

UNIT I – Micro Computer System

Introduction to Micro Computer System – Computer Organization – Number Systems and Codes Memory – Arithmetic and Logic Unit – Control Unit.

UNIT II – Peripheral Devices

Introduction to Peripheral Devices – Keyboard – CRT Display monitor – Printer – Magnetic Storage Devices – Floppy Disk Drive – Hard Disk Drive – Peripherals Interfaces and Controller – Keyboard Interface

UNIT III – Display Adapter

CRT Display — CRT Controller –Auxiliary Subsystems – Data Communication fundamentals – Serial Port in PC – Real time clock (RTC) – Magnetic Tape Subsystems – LAN – Memory Expansion Options

UNIT IV – Installation and Preventive Maintenance

Pre Installation Planning – Installation Practice – Routine Checks – Special Configurations – Memory Up Gradation

UNIT V – Trouble shooting

Troubleshooting – Computer faults – Nature of faults – Types of Faults
Diagnostic Programs and Tools — Faults in Elimination Process – Systematic
Troubleshooting – POST (Power on Self-Test)

.

TEXT BOOK

- 1 IBM PC and Clones, B. Govindarajalu, Tata McGraw Hill Publishing Company, Second Edition, 2011.
- 2 Introduction to PC Hardware and Troubleshooting, Michael Meyers, The Mike Meyers' Computer Skills, McGraw Hill, First Edition, 2003.

REFERENCES

- 1 Hardware and Software of Personal Computers, Sanjay K. Bose, New Age International Publishers, 1999.

Course Objectives

- To apply the fundamentals of assembly level programming of microprocessors.
- To build a program on a microprocessor using arithmetic & logical instruction set of 8086.
- To develop the assembly level programming using 8086 loop instruction set.
- To write programs based on string and procedure for 8086 microprocessor.
- To analyze abstract problems and apply a combination of hardware and software to address the problem
- To make use of standard test and measurement equipment to evaluate digital interfaces

Course Outcomes(COs)

1. Apply the fundamentals of assembly level programming of microprocessors.
2. Build a program on a microprocessor using arithmetic & logical instruction set of 8086.
3. Develop the assembly level programming using 8086 loop instruction set.
4. Write programs based on string and procedure for 8086 microprocessor.
5. Analyze abstract problems and apply a combination of hardware and software to address the problem
6. Make use of standard test and measurement equipment to evaluate digital interfaces

UNIT I – Introduction to 8-bit Microprocessor

Introduction to 8085 – Pin Diagram –Architecture – Demultiplexing the Bus –Generation of Control Signals – Fetching, Decoding and Execution of Instruction – Instruction Timing and Status Flag.

UNIT II – Addressing Modes

Instruction Set – Addressing Modes – Instruction Format – Simple Program – Memory Read Machine Cycle – Memory Unit s Machine Cycle.

UNIT III- Interfacing Concepts

Peripheral I/O Instructions – Device Selection And Data transfer – Types of Data Transfer - Input Interfacing – Input Interfacing Using Decoders – Output Interfacing: LED and 7 Segment Display – Interfacing Memory.

UNIT IV Peripheral Devices

Introduction to Programmable Peripheral Interface 8255 – Pin Diagram –Architecture – Modes of Operation: I/O and BSR – Architecture and Operation of 8251(USART). Architecture and Operation of Programmable Interrupt Controller (8259) – Architecture of 8254(8253) Programmable Interval Timer/Counter –DMA Controller(8279).

UNIT V- Applications

Time Delay Program – Traffic Light Control System – Water Level Controller – Stepper Motor Control – Interfacing DAC –Interfacing ADC – Temperature Measurement.

Course Outcomes

1. Ability to understand the internal architecture and interfacing of different peripheral devices with Microcontrollers.
2. Ability to write the programs for microcontroller.
3. Understand the concepts of embedded systems
4. Understand the role of embedded systems in industry.
5. Understand the design concept of embedded systems
6. Integrate hardware and software for microcontroller applications systems.

List of Experiments**(Any 8 Experiments)**

1. Addition of 8/16 Bit Array of Data
2. Subtract of 8/16 Bit Array of Data
3. Multiplication & Division
4. Ones and Two's Compliment
5. Data Transfer using Parallel Port
6. Sorting of Numbers
7. Stepper Motor Interface
8. Wave Form Generation
9. Biggest and Smallest Number in an Array
10. D/A Converter

Course Objectives

- To learn the fundamentals of PC Hardware.
- To develop base knowledge in the installation of peripheral devices.
- To get a detailed knowledge of all the hardware components that make up a computer
- To understand the different interfaces required for connecting the hardware devices.
- To understand the components on the motherboard
- To provide a strong knowledge in Trouble shooting of PC

Course Outcomes (COs)

1. Understand the modern computer organization, processor and memory concept, Peripherals and recent system architecture
2. Identify the existing configuration of the computers and peripherals for upgrading the same as and when required.
3. Develop base knowledge in the installation of peripheral devices.
4. Knowledge of all the hardware components that make up a computer
5. Understand the different interfaces required for connecting the hardware devices.
6. Trouble shoots PC when required.

List of Experiments**(Any 8 Experiments)**

1. Identifying External Ports and Interfacing
2. Identifying PC cards and Interfacing.
3. Assembling of PC
4. Preventive Maintenance of a PC
5. Trouble Shooting of SMPS
6. Keyboard Servicing
7. Study of CRT
8. Communication and Bus Interfacing
9. Partitioning and Formatting Hard disks.
10. Installing System And Application Software

Course Objectives

- To apply the fundamentals of assembly level programming of microprocessors.
- To build a program on a microprocessor using arithmetic & logical instruction set of 8086.
- To develop the assembly level programming using 8086 loop instruction set.
- To write programs based on string and procedure for 8086 microprocessor.
- To analyze abstract problems and apply a combination of hardware and software to address the problem
- To make use of standard test and measurement equipment to evaluate digital interfaces

Course Outcomes(COs)

1. Apply the fundamentals of assembly level programming of microprocessors.
2. Build a program on a microprocessor using arithmetic & logical instruction set of 8086.
3. Develop the assembly level programming using 8086 loop instruction set.
4. Write programs based on string and procedure for 8086 microprocessor.
5. Analyze abstract problems and apply a combination of hardware and software to address the problem
6. Make use of standard test and measurement equipment to evaluate digital interfaces

List of Experiments**(Any 8 Experiments)****MICROPROCESSOR LAB**

1. Addition of 8/16-bit and Array of Data
2. Subtraction of 8/16-Bit Number
3. Multiplication of 8-Bit Number
4. Division of 8-bit Number
5. Fill and Transfer an Array of Data.
6. Ascending and Descending of an Array.
7. Data Transfer using Parallel Ports.
8. Stepper Motor Interface
9. Traffic Light Controller
10. A/D Convertor and D/A Convertor

Course Objectives

- To create the awareness about environmental problems among people.
- To develop an attitude of concern for the environment.
- To motivate public to participate in environment protection and improvement.
- To understand the transnational character of environmental problems and ways of addressing them, including interactions across local to global scales.
- To apply systems concepts and methodologies to analyze and understand interactions between social and environmental processes.
- To reflect critically about their roles and identities as citizens, consumers and environmental actors in a complex, interconnected world.

Course Outcomes (COs)

1. Master core concepts and methods from ecological and physical sciences and their application in environmental problem solving.
2. Master core concepts and methods from economic, political, and social analysis as they pertain to the design and evaluation of environmental policies and institutions.
3. Appreciate the ethical, cross-cultural, and historical context of environmental issues and the links between human and natural systems.
4. Understand the transnational character of environmental problems and ways of addressing them, including interactions across local to global scales.
5. Apply systems concepts and methodologies to analyze and understand interactions between social and environmental processes.
6. Reflect critically about their roles and identities as citizens, consumers and environmental actors in a complex, interconnected world.

UNIT - I: Eco system and natural resources: Environment – Definition – components - Ecosystem -Definition, Concept, Scope, importance, structure and functions of ecosystem. Energy flow, Ecological succession. Food chains and food webs. Classification of ecosystem. Natural resources: Forest resources; water resources

UNIT - II: Environmental pollution: Cause, effects and control measures of Air pollution, water pollution, soil pollution, marine pollution, noise pollution, thermal pollution and nuclear hazards pollution. Solid waste management.

UNIT - III: Biodiversity and its conservation: Introduction- Definition, genetic, species and ecosystem diversity, biogeographical classification of India- Value of biodiversity: Consumptive, productive uses; social, ethical, aesthetic and option values. Threats to biodiversity: habitat loss, poaching of wildlife, man-wildlife conflicts.

UNIT - IV: Social issues and the environment: Urban problems related to energy-water conservation and management -Rain water harvesting- water shed management.

Resettlement and Rehabilitation. Natural resources and associated problems and sustainable utilization. Environmental Education.

UNIT - V: Environment ethics: Environmental Ethics - Gender equity, ethical basis of environment education and awareness, conservation ethic and traditional value systems of India. Valuing nature, cultures, social justice, Human heritage, equitable use of resources, preserving resources for future generation, common property resources, Ecology and its uses and its degradation, Introduction to Environmental Protection Act (EPA).

Course Objectives

- Students will be able to apply quantitative reasoning and mathematical analysis methodologies to understand and solve problems.
- To achieve the analytical and reasoning competencies and to improve their communication and presentation skills
- To impart knowledge on both Aptitude and Soft skills to the students
- To actively do mathematics—such as analyzing data, constructing hypotheses, solving problems, reflecting on their work, and making connections.
- To critically evaluate and demonstrate various principles involved in solving mathematical problems and to adopt new and faster methods of calculations.
- To reinforce competencies in soft skills which are crucial in a social setting

Course Outcomes(COs)

On successful completion of the course the students will be able to:

1. Understand the basic concepts of QUANTITATIVE ABILITY
2. Understand the basic concepts of LOGICAL REASONING Skills
3. Acquire satisfactory competency in use of VERBAL REASONING
4. Actively do mathematics—such as analyzing data, constructing hypotheses, solving problems, reflecting on their work, and making connections.
5. Solve campus placements aptitude papers covering Quantitative Ability, Logical Reasoning and Verbal Ability
6. Compete in various competitive exams like CAT, CMAT, GATE, GRE, GATE, UPSC, GPSC etc.

UNIT - I

Introduction to Quantitative Aptitude, Speed Maths, Problems on Numbers, Averages, Ratios and Proportions, Problems on Ages

UNIT - II

Number Series, Blood Relation, Image Analysis, Direction Sense, Syllogism, Coding and Decoding

UNIT – III

Percentages, Data Interpretation, Profit and Loss, Simple Interest and Compound Interest

UNIT – IV

Parts of Speech, Tense, Subject Verb Agreement, Active and Passive Voice, Articles, Prepositions

UNIT - V

Conditional Clause, Degrees of Comparison, Goal Setting, Interpersonal Skills

(For undergraduates students admitted from 2015 onwards)

Course Objectives

- To develop confidence to respond in English during situations where the use of English is imperative.
- To develop fluency in actual conversation in the English language.
- To develop speech skills necessary for confident and intelligent participations in Group Discussions and develop skills related to teamwork in work places.
- To develop confidence to respond in English during situations where the use of English is imperative.
- To develop fluency in actual conversation in the English language.
- To develop knowledge about business communication.

Course Outcomes (COs)

1. Students learnt the basics and purposes of listening skill.
2. Students understand importance of speaking.
3. Students developed the speaking skills on telephone, business and also in travel
4. Learnt some effective vocabulary learning strategies.
5. Students will able to communicate clearly and effectively and handle their day to day affairs well with their knowledge of language skills.

UNIT I

Listening: Listening comprehension – Listening for Specific Information –Note Taking – Interpreting Charts and Diagrams.

UNIT II

Speaking: Essentials of effective communication – Greeting and Introducing – Making requests – Asking for permission – Giving and Denying Permission – Offering and Accepting Help – Asking for and Declining Help – Giving Instructions and Orders - Talking about likes and dislikes.

Telephone Skills – Understanding telephone conversation – handling calls – leaving messages –making requests - giving instructions and orders

Discussion Skills – Giving your opinion – agreeing and disagreeing – Making suggestions – Interrupting – questioning – reporting – Dealing with questions. (Completing dialogues)

UNIT III

Reading: Reading – Reading with a purpose –Skimming and Scanning – locating main points – reading critically – Sequencing of sentences – Reading comprehension.

UNIT IV

Writing: Paragraph Writing – Descriptive and Narrative. Safety Instructions/ Suggestions. Expansion of Abbreviations – Spellings- Report writing.

Translation- Translating short sentences and passages from English to Tamil and from Tamil to English.

UNIT V

Vocabulary: Improve English vocabulary: Synonyms – Antonyms – Prefixes – Suffixes – Idioms – Collocations – Different types of English – British and American (Choose the best answer type from a database of 50 words each for each topic)

Functional Grammar: Forming questions, getting answers – Articles – Parts of Speech – Punctuation – Common mistakes in English (Homophones)(Exercise based)

Reference Books:

1. Language in Use: Kenneth Anderson, Cambridge University Press.
2. Study Speaking: A course in Spoken English for Academic Purpose: Kenneth Anderson, Joan MacLean and Tony Lynch, Cambridge University Press, 2008.
3. Spoken English Part I & II (for Tamil speakers), Orient Longman Pvt. Ltd.
4. Dr. J. John Love Joy, Dr. Francis M. Peter S.J. “Let's Communicate – Basic English for Everyone”, Vaigarai Publications, 1st edition, Dindigul 2007.

Course Objectives

- To understand the fundamental concepts of data structures
- To Learn linear data structures – lists, stacks, and queues
- To apply Tree and Graph structures
- To understand and apply sorting, searching algorithms
- To analyze algorithms using big-Oh notation
- To develop application using data structures

Course Outcomes (COs)

Upon completion of this course, the student will be able to:

1. Implement abstract data types for linear data structures.
2. Apply the different linear and non-linear data structures to problem solutions.
3. Analyze the applications of tree.
4. Implement graph theory over various data structures.
5. Critically analyze the various sorting algorithms.
6. Apply searching algorithms over various data structures.

UNIT I

Introduction: Introduction to Algorithms- Analyzing Algorithms- Creating the Algorithms; Arrays: Representation of Arrays- Stacks and Queues- Multiple Stacks and Circular Queue- Sparse Matrices- Polynomial Addition; Infix to Postfix Conversions- Evaluation of Expression

Internal Sorting: Insertion sort – Quick sort- Selection sort – Shell sort – 2-Way Merge sort

Searching: Linear Search

UNIT II

Linked list: Singly Linked List: Insertion and Deletion in Singly Linked List- Linked Stacks and Queues;

Doubly Linked List: Insertion and Deletion in Doubly Linked List - Sparse Matrices- Polynomial Addition;

Dynamic Storage Management: Allocating blocks- Freeing Blocks;

UNIT III

Non Linear Structures: Trees: Basic Terminology; Binary Trees: Binary Tree Representations- Binary Tree Traversals - Threaded Binary Trees

Searching and Sorting: Binary Search- Heap sort

Application of Trees: B Trees- Tree indexing.

UNIT IV

Non Linear Structures: Graphs: Basic Terminology– Graph Representation- Traversals- Spanning Tree- Kruskal's Algorithm

Applications of Graph: Shortest Path: Single Source All Destinations- All Pairs Shortest

UNIT V

Sorting: External Sorting: K-Way Merge Sort- Sorting with tapes: Balanced Merge sort, Polyphase Merge

Static Tree – Dynamic Tree

Hash Tables: Hashing Functions – Overflow handling.

Course Objectives

- To understand the fundamentals of programming such as variables, conditional and iterative execution, methods, etc.
- To understand fundamentals of object-oriented programming in Java, including defining classes, invoking methods, using class libraries, etc.
- To use the Java SDK environment to create, debug and run simple Java programs.
- To use Java in various technologies in different platforms.
- To understand the fundamental of Packages and access modifiers and interface in java.
- To understand the fundamental of Exception Handling and AWT component and AWT classes.

Course Outcomes (COs)

1. Student will obtain knowledge of the structure and model of the Java programming language.
2. How to use the Java programming language for various programming technologies (understanding)
3. Develop software in the Java programming language (application)
4. Evaluate user requirements for software functionality required to decide whether the Java programming language can meet user requirements (analysis)
5. Propose the use of certain technologies by implementing them in the Java programming language to solve the given problem (synthesis)
6. Choose an engineering approach to solving problems, starting from the acquired knowledge of programming and knowledge of operating systems. (evaluation)

UNIT-I

Introduction to Object Oriented Programming: Object Oriented Paradigm and Concepts-Structured versus Object Oriented Approach. Java Language: Features of Java - Environment-Java Architecture-Java Development Kit-Types of Java Program. Variable Declaration and Arrays: Data Types-Java Tokens –Variable Declaration – Type Casting and Conversion – Arrays, Operators, And Control Statements: Selection Constructs – Iteration Constructs –Jump Statements.

Design various approach to determine the integer is prime or not.

UNIT-II

Introduction to classes: Instance variables, Class variables, Instance Methods, Constructors, Class methods, Declaring Objects, Garbage Collection, Method Overloading - Constructor Overloading - This Reference. Inheritance: Super class variables- Method Overriding - final Keyword, Abstract Classes and Interfaces.

UNIT-III

Packages and Access Modifiers: Package Declaration – import statement - Access Protection. Strings: Creation – Operation on strings - Character Extraction Methods – Comparison –Searching and Modifying –String Buffer Class. Collection and Utilities: Collection of Objects –CORE Interfaces and Classes –Iterators – List, Set, Map Implementations.

Design a code to remove multiple spaces in a string.

UNIT-IV

Input Output Classes: I/O Operations –Hierarchy of Classes – File class – Input Stream, Output Stream, FilterInputStream, FilterOutputStream, Reader and Writer classes – Random Access File class –Stream Tokenizer. Applets: Basics – Life Cycle –Methods – Graphics Class- Color, Font, and Font Metrics Class.

UNIT-V

Exception Handling: Fundamentals – Hierarchy of Classes – Types of Exception. Multithreaded Programming: Thread Model – Runnable Interface - Thread Class-Thread Life Cycle. AWT Components: AWT Classes – Basic Component and Container Classes – Frame Window in an Applet.

Design a code to open notepad.

Course Objectives

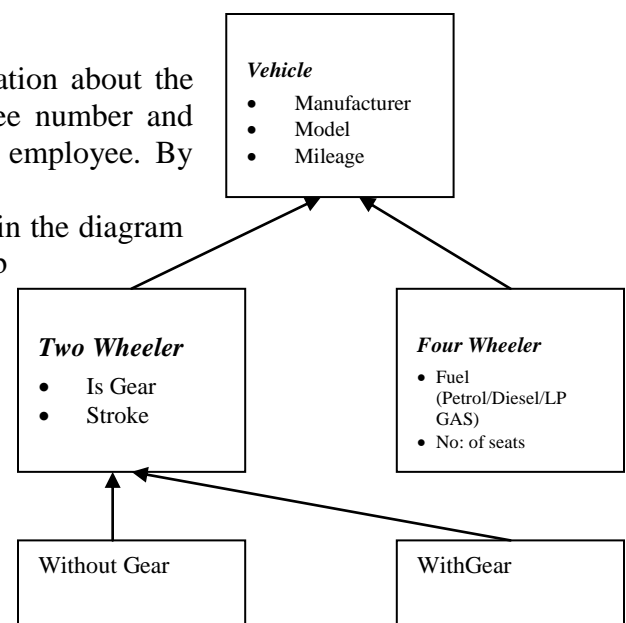

- To understand the fundamentals of programming such as variables, conditional and iterative execution, methods, etc.
- To understand fundamentals of object-oriented programming in Java, including defining classes, invoking methods, using class libraries, etc.
- To use the Java SDK environment to create, debug and run simple Java programs.
- To use Java in various technologies in different platforms.
- To understand the fundamental of Packages and access modifiers and interface in java.
- To understand the fundamental of Exception Handling and AWT component and AWT classes.

Course Outcomes (COs)

1. Student will obtain knowledge of the structure and model of the Java programming language.
2. How to use the Java programming language for various programming technologies (understanding)
3. Develop software in the Java programming language (application)
4. Evaluate user requirements for software functionality required to decide whether the Java programming language can meet user requirements (analysis)
5. Propose the use of certain technologies by implementing them in the Java programming language to solve the given problem (synthesis)
6. Choose an engineering approach to solving problems, starting from the acquired knowledge of programming and knowledge of operating systems. (evaluation)

Write a java program to solve the following:

1. Create an employee package to maintain the information about the employee. Use constructors to initialize the employee number and use overloading method to set the basic pay of the employee. By using this package, create a Java program.
2. Create a set of classes with the relationship as shown in the diagram and use inheritance relationship to define the sub classes.
Get and display the details of some of the two and four wheelers and display them in a neat format.
3. Create a frame with user specific size and position it at user specific position (use command line argument). Then different shapes with different colors (use menus).
4. Create an applet for a calculator application.

5. Java program to maintain the student information in text file.
6. Animate images at different intervals by using multi-threading concepts.
7. Write a program to accept more strings and arrange them in alphabetical order.
8. Write a program to create a window and draw cross lines.
9. Write a program to create an applet and draw the shapes.
10. Write a program to create a window with a background color and display a message.
11. Write a program for multiplication tables by multithreading.
12. Write a program to create an exception for marks out of bounds. If mark is greater than 100 throw an exception.

Course Objectives

This course enables the students to

- To understand the basic concepts of numerical methods
- To develop the mathematical skills in the areas of numerical methods.
- To understand numerical techniques as powerful tool in scientific computing.
- To provide suitable and effective methods called Numerical Methods, for obtaining approximate representative numerical results of the problems.
- To solve problems in the field of Applied Mathematics, Theoretical Physics and Engineering which requires computing of numerical results using certain raw data.
- To solve complex mathematical problems using only simple arithmetic operations. The approach involves formulation of mathematical models of physical situations that can be solved with arithmetic operations.

Course Outcomes (COs)

On completion of the course students will be able to

1. Apply Numerical analysis which has enormous application in the field of Science
2. Familiar with numerical integration and differentiation, numerical solution of ordinary differential equations.
3. Familiar with calculation and interpretation of errors in numerical method.
4. Develop and apply the appropriate numerical techniques for the problem, interpret the results, and assess accuracy.
5. Understand the basics of Numerical Differentiation & Integration and numerical solutions of ordinary differential equations.
6. Understand the concepts of difference operators and the use of Interpolation.

UNIT I

Solution of algebraic and transcendental equations: Bisection method –Regula Falsi method – Newton Raphson method. Polynomoial Equations – Graeffe’s root squaring method.

UNIT II

Solution of simultaneous linear algebraic equations: Gauss elimination method – Gauss Jordan method – Method of triangularization – Gauss-Jacobi method – Gauss-seidel method.

UNIT III

Interpolation: Gregory Newton Forward and Newton Backward interpolation formula – Interpolation with unequal intervals — Lagrange’s interpolation formula – Inverse interpolation formula.

UNIT IV

Numerical Differentiation and Integration: Newton’s Forward and backward differences to compute derivatives – Trapezoidal rule, Simpson’s 1/3 & 3/8 rule.

UNIT-V

Numerical methods for solving ordinary differential equations – Taylor series(I order) – Euler and Modified Euler method – Runge kutta methods (II order , III order and IV order).

TEXT BOOK

1. Venkataraman .M.K., Fifth Edition,2001. Numerical Methods in Science and Engineering, National publishing Company ,Madras. (Unit I – V)

2. Vedamurthy V.N.,N.CH.S.N.Iyenger., 1999. Numerical Methods,Vikas Publishing House Pvt Ltd, New Delhi.

Course Objectives

- To provide an understanding of the fundamental principles in compiler design
- To provide the skills needed for building compilers for various situations that one may encounter in a career in computer science.
- To learn the process of translating a modern high-level language to executable code required for compiler construction.
- To understand fundamentals of compiler and identify the relationships among different phases of the compiler.
- To understand the application of finite state machines, recursive descent, production rules, parsing, and language semantics.
- To analyze & implement required module, which may include front-end, back-end, and a small set of middle-end optimizations.

Course Outcomes(COs)

On successful completion of the course students will be able to:

1. Specify and analyze the lexical, syntactic and semantic structures of advanced language features
2. Separate the lexical, syntactic and semantic analysis into meaningful phases for a compiler to undertake language translation
3. Write a scanner, parser, and semantic analyzer without the aid of automatic generators
4. Turn fully processed source code for a novel language into machine code for a novel computer
5. Describe techniques for intermediate code and machine code optimization
6. Design the structures and support required for compiling advanced language features.

UNIT I

Introduction: Compilers - Analysis of the source program - phases of compiler - cousins of the compiler - Grouping of phases.

Simple one - pass compiler: - Overview - syntax definition - syntax directed translation - parsing - a translator for simple expressions - Incorporating a symbol table - symbol tables

UNIT II

Lexical Analysis: The role of the Lexical analyzer - Input buffering - specification of tokens - recognition of tokens.

Syntax Analysis: The role of the parser - context free grammars - writing a grammar - Top down parsing - Bottom up parsing - operator precedence parsing - LR parsers.

UNIT III

Syntax directed translation: Syntax directed definitions - construction of syntax trees - Bottom up evaluation of S-attributed definitions - L attributed definition. Type checking - Type systems - specification of simple type checker.

UNIT IV

Runtime Environments: Source language issues - storage organization - storage allocation strategies. Intermediate Code Generation: Intermediate languages - declarations - assignment statements.

UNIT V

Code Generation: Issues in the design of a code generator - The target machine - runtime storage management - Basic blocks and flow graphs.

Code optimization: Introduction - The principle sources of optimization.

4. engineeringppt.blogspot.com/2009/08/compiler-design-ppt.html

Course Objectives

- To introduce students the concepts and principles of system programming
- To provide students the knowledge about both theoretical and practical aspects of system programming, teaching them the methods and techniques for designing and implementing system-level programs.
- To train students in developing skills for writing system software with the aid of sophisticated OS services, programming languages and utility tools.
- To understand the basics of system programs like editors, compiler, assembler, linker, loader, interpreter and debugger.
- To describe the various concepts of assemblers and macroprocessors.
- To understand how linker and loader create an executable program from an object module created by assembler and compiler.

Course Outcomes(COs)

1. Understand different components of system software.
2. This course enables for good understanding of the role of system programming and the scope of duties and tasks of a system programmer.
3. This course enables to learn the concepts and principles of developing system-level software (e.g., compiler, and networking software)
4. Understand the basics of system programs like editors, compiler, assembler, linker, loader, interpreter and debugger.
5. Describe the various concepts of assemblers and macroprocessors.
6. Understand how linker and loader create an executable program from an object module created by assembler and compiler.

UNIT-I

Introduction – System Software and Machine Architecture – Simplified Instructional Computer (SIC) – CISC Machines – RISC Machines – **Assemblers:** Basic Assembler Functions – Machine Dependent Assembler Features - Machine Independent Assembler Features – Assembler Design Options – Implementation Examples: MASM Assembler.

UNIT-II

Loaders and Linkers: Basic Loader Functions - Machine Dependent Loader Features - Machine Independent Loader Features –Loader Design Options – Implementation Examples: MSDOS Linker.

UNIT-III

Compilers: Basic Compiler Functions - Machine Dependent Compiler Features - Machine Independent Compiler Features – Compiler Design Options – Implementation Examples: Sun OS C Compiler – Java Compiler and Environment.

UNIT-IV

Macro Processors: Basic Macroprocessor Functions - Machine Independent Macroprocessor Features – Macroprocessor Design Options – Implementation Examples: ANSI C Macro language.

UNIT-V

Operating System: Basic Operating System Functions - Machine Independent Operating System Features – Operating System Design Options – Implementation Examples: MSDOS - Sun OS.

Other System Software: Database Management Systems – Text Editors.

Course Objectives

- To gain a historical perspective of AI and its foundations.
- To become familiar with basic principles of AI toward problem solving, inference, perception, knowledge representation, and learning.
- To investigate applications of AI techniques in intelligent agents, expert systems, artificial neural networks and other machine learning models.
- To experience AI development tools such as an 'AI language', expert system shell, and/or data mining tool.
- To experiment with a machine learning model for simulation and analysis.
- To explore the current scope, potential, limitations, and implications of intelligent systems.

Course Outcomes (COs)

1. Demonstrate fundamental understanding of the history of artificial intelligence (AI) and its foundations.
2. Apply basic principles of AI in solutions that require problem solving, inference, perception, knowledge representation, and learning.
3. Demonstrate awareness and a fundamental understanding of various applications of AI techniques in intelligent agents, expert systems.
4. Understand the a basic concept of logical inference and use inference in propositional or predicate logic
5. Understand the concept of how expert systems work
6. Demonstrate an ability to share in discussions of AI, its current scope and limitations, and societal implications.

UNIT-I

Introduction: AI Problems-AI Techniques-Criteria for success-Problems, Problem spaces and search: Defining the problem as State space search-Production Systems-Problem characteristics-Issues in design of search.

UNIT-II

Heuristic Search Techniques: Generate and test-Hill Climbing-Best-First search-Problem Reduction-Constraint Satisfaction-Mean end analysis

UNIT- III

Knowledge Representation Issues: Representations and Mappings-Approaches to Knowledge representation-Issues to knowledge representation-Frame problem.

UNIT-IV

Using Predicate logic: Representing simple facts in logic-Representing Instance and ISA relationships-Computable functions and predicates-Resolution-Natural Deduction.

UNIT-V

Representing Knowledge using Rules: Procedural versus Declarative Knowledge-Logic Programming-Forward versus Backward Reasoning-Matching-Control Knowledge-Expert Systems.

Course Objectives

- Students will be able to apply quantitative reasoning and mathematical analysis methodologies to understand and solve problems.
- To achieve the analytical and reasoning competencies and to improve their communication and presentation skills
- To impart knowledge on both Aptitude and Soft skills to the students
- To actively do mathematics—such as analyzing data, constructing hypotheses, solving problems, reflecting on their work, and making connections.
- To critically evaluate and demonstrate various principles involved in solving mathematical problems and to adopt new and faster methods of calculations.
- To reinforce competencies in soft skills which are crucial in a social setting

Course Outcomes(COs)

On successful completion of the course the students will be able to:

1. Understand the basic concepts of QUANTITATIVE ABILITY
2. Understand the basic concepts of LOGICAL REASONING Skills
3. Acquire satisfactory competency in use of VERBAL REASONING
4. Actively do mathematics—such as analyzing data, constructing hypotheses, solving problems, reflecting on their work, and making connections.
5. Solve campus placements aptitude papers covering Quantitative Ability, Logical Reasoning and Verbal Ability
6. Compete in various competitive exams like CAT, CMAT, GATE, GRE, GATE, UPSC, GPSC etc.

UNIT - I

Time, Speed and Distance, Time and Work, Pipes and Cisterns, Geometry, Data Arrangement

UNIT – II

Analogy, Logic based Venn diagram, Probability, Permutation and Combination, Logarithms

UNIT – III

Data Sufficiency, Clocks, Calendar, Reading Comprehension, Sentence Correction, Sentence Completion, Spotting the Errors, Jumbled Sentences

UNIT – IV

Synonyms, Antonyms, Verbal Analogy, Statements and Assumptions, Group Discussion

UNIT - V

Resume Writing, Introduction to HR rounds, Time Management, Attitude and Behaviour

(For undergraduates students admitted from 2015 onwards)

Course Objectives:

- To train the students in understanding the concepts of communication.
- To be familiar with the four basic skills of English.
- To train students in developing their written communication.
- To train students in developing their presentation skills.
- To acquire the skill of making grammatically correct sentences.
- To reflect originality on the application of soft skill views and express in writing their views.

Course Outcome:

1. Students have acquired proficiency in communication.
2. Students have become adept in written communication and presentation skills.
3. Developed the skill of writing in English and that of public speaking.
4. Establish and maintain social relationships.
5. Develop communication skills in business environment.
6. Enhanced communication competency through LSRW skills

UNIT I – Concept of Communication – Barrier to Communication –Body language – Personality Development – Etiquette and Manners- Soft Skills – Emotional Intelligence

UNIT II – Listening Comprehension – Reading Comprehension – Paragraph writing – Precis Writing – Writing Resume and Covering Letter -Speaking – Welcome Address, Vote of Thanks, Compering, Debates, Role Play, Dialogues – Vocal Communication Techniques. Voice, Quality, Volume, Pitch

UNIT III – Dicto Composition – Letter Writing (Informal, Letters to the Editor etc) – Term paper – Book reviews

UNIT IV – Business Correspondence – Layout of Business Letter – Formal Styles of Business Letters – Letters of Acceptance, Appointment, Resignation, Complaint, Sending E-mails.

UNIT V – Effective Presentation – Planning – Audience Analysis –Logical Sequencing – Timing of the Presentation – Conclusion – Answering Queries – Group Discussion – Interview.

Course Objectives

- To describe a good introduction to the discipline of database management systems.
- To give a good formal foundation on the data models and E-R model.
- To demonstrate the principles database constraints behind systematic database design by covering normalization concept.
- To introduce the concepts of basic SQL as a universal Database language.
- To have an introductory knowledge about the PL/SQL concept
- To normalize the existing database to various levels

Course Outcomes (COs)

Upon completion of this course, students will be able to:

1. Demonstrate an understanding of the elementary features of RDBMS
2. Design conceptual models of a database using ER modeling for real life applications
3. Analyze the existing design of a database schema and apply concepts of normalization to design an optimal database
4. Able to develop structured query language (SQL) queries to create, read, update, and delete relational database
5. Design efficient PL/SQL programs to access Oracle databases
6. Demonstrate the principles database constraints behind systematic database design by covering normalization concept.

UNIT-I

Understanding Database Fundamentals: What is data, information, database, RDBMS. – Database environments – origin of database – database elements – design concepts – what makes a good database?- Database Models : flat file – hierarchical model – network model – relational model – object oriented model – object relational model. Relational database: characteristics – concepts – language (SQL).

UNIT-II

Entities and Entity Relationships: entities – relationships: one to one, one to many, many to many, recursive, mandatory, and optional – transformation of the entity in design – accessing the data – avoiding poor relationship constructs. ER Diagram: how ERD is used – typical ERD symbols – cardinalities – sample ERD.

Functional Dependencies: Introduction – definition – keys – inference axioms – redundant functional dependencies – membership algorithm. Closures, cover and equivalence of functional dependencies: closure of a set F - closure of a set of attributes – closure algorithm – Non Redundant cover algorithm.

UNIT-III

Objects : table – view – index – sequence – synonyms. Data types. Constraints – primary key, unique, not null, default, check, referential integrity constraints – table level – column level – naming constraints. E.F. Codd's rules.

Data Definition Language: create objects, CTAS – alter objects, add and drop columns and constraints; changing field size – drop objects – truncate table.

Data Manipulation Language : Insert, insert ... as – update – delete – select with where, group by, order by, having clauses- Simple sub queries –

Operators: arithmetic – relational – boolean – exists, like, in, all, not - assignment – concatenation . Set operators: intersect – minus – union – union all-Aggregate functions.

Data Control language: grant, revoke – simple privileges. Simple flashback queries: drop table

UNIT-IV

Overview of PL/SQL – declaration section – executable command section: conditional logic, loops, CASE statements – exception handling section: predefined and user defined exceptions.

Triggers: definition – types : row level, statement level, before and after, instead of – syntax – enabling and disabling triggers - replacing and dropping triggers.

Cursors – definition – open – fetch – close – cursor attributes- select for update – types : implicit, explicit.

Procedures, Local and global – procedures vs functions – stored procedures- syntax - calling procedures - replacing and dropping procedures.

Functions: stored functions - syntax - calling functions - replacing and dropping functions.

UNIT-V

Packages: Package header-package body- calling packages-replacing and dropping packages.

Overview of Normalization: advantages - disadvantages. Normal forms: first normal form – second normal form – third normal form – boyce- codd normal form – Introduction to fourth, fifth and sixth normal forms – denormalization.

Course Objectives

- To Study the basic concepts and functions of operating systems.
- To understand the structure and functions of OS.
- To Learn about Processes, Threads and Scheduling algorithms.
- To Understand the principles of concurrency, Deadlocks and Memory Management
- To Learn about the Protection and Security Concepts.
- To provide experience on MS Windows and LINUX environment.

Course Outcomes (COs)

Upon completion of this course the students will be able to:

1. Design various Scheduling algorithms.
2. Apply the principles of concurrency.
3. Design deadlock, prevention and avoidance algorithms.
4. Compare and contrast various memory management schemes.
5. Apply the Security Concepts based on Authentication.
6. Work in MS Windows and LINUX environment.

UNIT-I

Introduction - What is an OS? – Mainframe systems Desktop Systems – Multiprocessor systems – distributed systems – real time systems. Process: - Process concepts – Operation on process – cooperation process - Inter process Communication -Mutual Exclusion - Critical sections- primitives – Semaphores

UNIT-II

Storage management: Memory Management –Background-swapping- Contiguous memory allocation – paging, segmentation – segmentation with paging – Virtual memory :Background- Demand Paging, Process Creation – Page replacement – Thrashing.

UNIT-III

CPU Scheduling : Basic concepts : - Scheduling Criteria – Scheduling Algorithms – FCFS- SJF- Priority – RoundRobin –Multilevel Queue – Multilevel Feedback Queue -. Deadlock: Introduction, Examples of deadlock, Deadlock prevention, avoidance, detection, recovery from deadlock.

UNIT-IV

File systems: File System Concepts – Access Methods – Directory structure – File Sharing – Allocation Methods – Free space management –Efficiency and performance – Recovery-Disk Performance Optimization: Introduction – Disk structure – Disk scheduling – Disk management.

UNIT-V

Case Studies: Linux → Introduction-History-Design Principles-File System-Memory Management-Windows → History, Design Principles, File System and Networking-Android → Why develop for Android, Android Development Basics.

Course Objectives

- To describe a good introduction to the discipline of database management systems.
- To give a good formal foundation on the data models and E-R model.
- To demonstrate the principles database constraints behind systematic database design by covering normalization concept.
- To introduce the concepts of basic SQL as a universal Database language.
- To have an introductory knowledge about the PL/SQL concept
- To normalize the existing database to various levels

Course Outcomes (COs)

Upon completion of this course, students will be able to:

1. Demonstrate an understanding of the elementary features of RDBMS
2. Design conceptual models of a database using ER modeling for real life applications
3. Analyze the existing design of a database schema and apply concepts of normalization to design an optimal database
4. Able to develop structured query language (SQL) queries to create, read, update, and delete relational database
5. Design efficient PL/SQL programs to access Oracle databases
6. Demonstrate the principles database constraints behind systematic database design by covering normalization concept.

List of programs

1. Create a table, “Customer” with the following fields:

Field	Data type	Sample Values
Cust_name	Varchar2	Karpagam, Ananya
gender	Char	F or M
DOB	Date	
type	Varchar2	Credit or Cash
address	Varchar2	
city	Varchar2	
last_purchased	Date	

- a) Insert records into the table.
- b) List all male customers.
- c) List all female customers who live in Coimbatore.
- d) List all customers who bought things today for credit.

2. Create a parent table, “Suppliers” with the following fields:

Field	Data type	Constraints	Sample Values
Sup_code	Varchar2	Primary Key	A001, S001, A002
Name	Varchar2	Not null	Ananya, Shakthi, Ananth
gender	Char	Check (F / M)	F, M
type	Varchar2	Check (Credit / Cash)	Credit, Cash

address	Varchar2		
city	Varchar2		
Mobile	Number	unique	

Child table : Supply_items

Field	Data type	Constraints	Sample Values
Sup_code	Varchar2	Reference Key	
Item_Name	Varchar2	Not null	
Price	Number	Check (>=5 and <=250)	
Deliver_within	Number		1, 2, 3, ...

- Insert records into both the table.
 - List the suppliers name and city, who supply “Ice creams”
 - List the total number of different items along with the suppliers name.
 - List the suppliers name, who supply Biscuits within one day.
 - List all the female suppliers who supply for credit but do not supply Pepsi.
- Create the tables, Item (item_code, name, sell_price, qty_at_hand) and sales(item_code, s_date, qty_sold) with the required constraints.
 - Change the name of the item from “System” to “Computer System”.
 - Delete all the sales records if the item name is “Mouse”.
 - Insert a new attribute “Tax” to Sales table.
 - Fill the Tax field with the following value: 4% of selling price * sold quantity.
 - Delete the records from both the table, if the item have not been sold for the past 20 days.
 - Create a table, “Vehicle” with the following fields:

Field	Sample Values
V_code	B001, S001, C002, Auto,...
V_Name	Bike, Scooter, Car, Auto
Type	Only 2, 3, or 4. (Wheelers)
Company	
On_road_price	
Colour	Only Red,black, yellow or silver
Date_purchased	
Model	

- Insert the records. For V_code use sequence.
- Create a view on vehicle table, but only for silver colour four wheelers.
- Delete the vehicles whichever purchased before one year from the view.
- Select the records from the view, which have the on road rate between 3 and 7.5 lakhs.
- Drop the view
- Select all the silver colour cars. (observe the difference between view and a table)

5. Write a recursive program to find the factorial and Fibonacci for the given number using PL/SQL.

6. Create the following tables:

- (i) "Library_Books" with the following fields: Book_Acc_No (primary key), ISBN, Title, Author, Publication, Year_Pub (<=2008), Edition, Copies (minimum 1), Specification (CSC, Phy, Che, Eng, Fus, Bus,...)
- (ii) "Student" with the following fields: (primary key), Name, Gender(F / M), Course, (CSC, Phy, Che, Eng, Fus, Bus,...), Year(I, II, III)
- (iii) "Lend_Books" with the following fields: Book_Acc_No (Foreign key), Reg_no(Foreign key), Date_issued, Date_return. (Note: Book_Acc_No and Reg_no, both together provide uniqueness)

- a) Insert records in all the tables created.
- b) Write a trigger, to reduce the number of copies in the Library_Books table, whenever a book is lent to a student.
- c) List the books information, which is issued before Jan 1st, 2008, along with the student information who borrowed them.

7. Create a student detail database with roll number, name, date of birth, course, department, semester, percentage.

Field	Data type	Sample Values
RNo	Number	3
SName	Varchar2	15
DOB	Date	
Course	Varchar2	6
Dept	Varchar2	4
Semester	Varchar2	3
Percentage	Number	5,2

Insert 5 records into the database and perform the following operations.

1. Select all Records.
2. Select rollno, name, percentage from student.
3. Select distinct course and dept.
4. Select details of all students with percentage greater than 75.
5. Select roll number and name of all records sorted in order by percentage.
6. Select name of students belonging to 3rd semester MBA degree.
7. Select name, course and semester of all students not in MBA department.
8. Select all records where name is start with alphabet "A".

8. Create a table "Mobile", with the following fields: code (alphanumeric field), mobile_name, model, company, amount, warranty

- a) Generate the code automatically through a stored function. Code is an alphanumeric field. (Sample values : NOK001, SON001, SAM001, NOK002,...)
 - a. List all mobiles details, whose company name start with "S".

- b. Create another table “Nokia” from the Mobile table using CTAS concept, which includes only Nokia mobiles.
- c. Insert more records into Nokia table.
- d. Select all the records from both the table individually, to observe the link between these two tables.
- e. Select all the records from the Nokia table, which are not in Mobile table.
- f. Display the information about the second highest price Sony mobile.
- g. List the number of mobiles and the average price of each mobile company.
- h. List the mobiles information in company’s alphabetical order.
- i. List the mobile names and models, which have the palindrome model numbers.

9. Demonstrate a program for exceptional handling (using an employee database).

10. Consider the following database for a banking enterprise.

BRANCH(**branch_name**:string , branch_city:string , assets:real)

ACCOUNT(**accno**:int , branch_name:string , balance:real)

DEPOSITOR(**customer_name**:string , **accno**:int)

CUSTOMER(**customer_name**:string , customer_street:string , customer_city:string)

LOAN(**loan_number**:int , branch_name:string , amount:real)

BORROWER(**customer_name**:string , **loan_number**:int)

1) Create the above tables by properly specifying the primary keys and foreign keys.

2) Enter at least five tuples for each relation.

3) Find *all* the customers who have at least two accounts at the *main* branch.

4) Find all the customers who have an account at *all* the branches located in a specific city.

5) Demonstrate how you delete all account tuples at every branch located in a specific city.

11. Create table Department and Student with relevant fields and constraints. and enter the records. Create one more table : “Result”.

- Write a stored procedure using cursor, to get the input for Result table and enter into it.

12. Create the following tables:

- i) Parent table : “Department” with the following fields: Dept_code (primary key), Dept_name, Head
- ii) “Employee” : Fields – emp_code, dcode(foreign key), emp_name, basic_pay, experience, net_pay. [Note: primary key – emp_code, dcode, net_pay – default value is 0]
- iii) “Salary” (child table of Employee) : Fields – emp_id, dcode, Da, hra, cca, ia, ma, pf.
- iv) “Loan” (child table of Employee) : Fields – emp_id, dcode, house, vehicle, medical.

1. Insert records into Department and Employee tables.

2. Update net pay by calling a stored function.

3. Create a stored procedure to get the input for Loan table and enter the data as record into it.
4. Create a stored function, to calculate the DA, HRA, CCA, IA, MA and the Net pay of the employees. Enter the data as records into Salary table and update the net pay field in the Employee table.
5. Create a package including the above created procedure and function.

Calculation:

DA	103 % of Basic Pay
HRA	25 % of Basic Pay
CCA	1 % of Basic Pay
IA	1.1 % of Basic Pay
MA	8 % of Basic Pay
PF	12 % of Basic Pay
Net Pay	BP + DA + HRA + CCA + IA + MA – PF – Loan if any.

13. Normalize a student table (include the necessary filed) from 1NF to 4NF.

Some sample PL/SQL Programs

14. Write a recursive program for finding the factorial of a given number.
15. Write a recursive program for finding the first n Fibonacci number.
16. Write a PL/SQL program for multiplication tables 3, 4, 5 and 6.
17. Write a recursive program for finding the reverse of a given number.
18. Write SQL queries to illustrate the string functions and mathematical functions.
19. Write a program for finding the reverse of a given string.

Course Objectives

- To recognize the error in the number generated by the solution.
- To compute solution of algebraic and transcendental equation by numerical methods like Bisection method and Newton Rapshon method.
- To apply method of interpolation and extrapolation for prediction.
- To recognize elements and variable in statistics and summarize qualitative and quantitative data.
- To calculate mean, median and mode for individual series.
- To outline properties of correlation and compute Karl-Pearson's coefficient of correlation.

Course Outcomes (COs)

Upon completion of the course students shall be able to:

1. Recognize the error in the number generated by the solution.
2. Compute solution of algebraic and transcendental equation by numerical methods like Bisection method and Newton Rapshon method.
3. Apply method of interpolation and extrapolation for prediction.
4. Recognize elements and variable in statistics and summarize qualitative and quantitative data.
5. Calculate mean, median and mode for individual series.
6. Outline properties of correlation and compute Karl-Pearson's coefficient of correlation.

UNIT-I

Meaning and definition of statistics – Classification of data - Frequency distribution - Diagrammatic Presentation – Bar diagram and Pie diagram – Graphic Presentation – Histogram, Frequency Polygon, Frequency curve and Ogives.

UNIT – II

Measures of central tendency – Arithmetic mean, median and mode. Measures of dispersion-Range, standard deviation, Coefficient of variation.

UNIT – III

Correlation – Meaning and definition - Scatter diagram –Karl pearson's correlation coefficient. Rank correlation.

Regression: Regression in two variables – Regression coefficient problems – uses of regression.

UNIT – IV

Probability theory : Axioms of Probability–Addition theorem – Multiplication theorem–conditional Probability.

Theoretical Distribution: Basic Concepts - Binomial distribution, Poisson Distribution & Normal distribution (No derivations) and simple problems.

UNIT – V

Test of significance: Tests based on Means only-Both Large sample and Small sample tests - Chi square test - goodness of fit.

TEXT BOOK

1. R.S.N.Pillai , Bagavathy. “Statistics”, S. Chand & Company Ltd. New Delhi, 2002.

REFERENCES:

1. Jerrold H.Zar, 2003, Bio-Statistical Analysis, Fourth Edition, Pearson Education, (Pte) .Ltd, New Delhi.
2. PA.Navnitham. 2006. Business Mathematics and Statistics, Jai Publishers, Trichy - 21,
3. S.P. Gupta . “Statistical methods”. Sultan Chand & Sons, New Delhi,2001.

Course Objectives

This course enables the students to

- To learn the basic concepts and applications of linear programming.
- To impart knowledge in concepts and tools of Operations Research.
- To know the constructive techniques to make effective business decisions
- Define and formulate linear programming problems and appreciate their limitations
- To Identify and develop operational research models from the verbal description of the real system
- To Solve network models like the shortest path, minimum spanning tree, and maximum flow problems

Course Outcomes (COs)

On successful completion of the course, students will be able to

1. Understand the basic concepts and application of operation research in various fields.
2. Understand and analyze managerial problems in industry so that they are able to use resources (capitals, materials, staffing, and machines) more effectively
3. Define and formulate linear programming problems and appreciate their limitations
4. Recognize the importance and value of Operations Research and mathematical modeling in solving practical problems in industry
5. Identify and develop operational research models from the verbal description of the real system
6. Solve network models like the shortest path, minimum spanning tree, and maximum flow problems

UNIT I

Linear Programming: Formulation of LPP – Graphical solution to LPP –Simplex method – Big M method and Duality in LPP.

UNIT II

Transportation model: Introduction – Mathematical Formulation –Finding initial Basic Feasible solutions – Optimum solution for non degeneracy and degeneracy model - Unbalanced Transportation problems and Maximization case in Transportation problem

UNIT III

The Assignment problem - Mathematical formulation of the problem – Hungarian method –Unbalanced Assignment problem- Maximization case in Assignment problem.

Queuing theory : Introduction – Characteristics of queuing system.Problems in (M/M/1):(∞/FIFO) and (M/M/1):(N/FIFO) models .

UNIT IV

Inventory Control: Introduction – Costs involved in inventory – Deterministic EOQ models – Purchasing Model without and with shortage, Manufacturing Model without and with shortage -Price break.

UNIT V

PERT and CPM: Network representation – Calculation of Earliest expected time, latest allowable occurrence time.CPM - various floats for activities – critical path.

PERT –Time estimates in PERT- Probability of meeting scheduled date of completion of projects .

TEXT BOOK

1. Kanthi Swarup, Gupta P.K., Man Mohan., 2006. Operations Research, Sultan Chand & Sons, New Delhi. (For Unit I – V)

REFERENCES

1. Sharma J.K., 2009.Operations Research: Theory and Applications, Macmillan publishers India Ltd, New Delhi.
2. Sundaresan V., Ganapathy Subramanian K.S., and Ganesan K., 2005(III edition), Resource Management Techniques, A. R. Publications, Nagapatinam.
3. Shanthi Sophia Bharathi D.,1999(II edition),Operations Research/Resource management techniques, Charulatha Publications.

Course Objectives

This course enables the students to

- To learn the basic concepts of sets, types of sets, functions and relations
- To understand about Pigeonhole principle, Permutation and Combination, Mathematical Induction
- To solve the problems using Recurrence relations and generating functions.
- To know the basic concepts of Logical Connectives, Graphs and Trees.
- To express ideas using mathematical notation
- To solve problems with the help of tools of mathematical analysis.

Course Outcomes

On successful completion of the course, students will be able to

1. Familiar with elementary algebraic set theory.
2. Acquire a fundamental understanding of the core concepts in growth of functions.
3. Describe the method of recurrence relations.
4. Get wide knowledge about graphs and trees
5. Initiate to knowledge from inference theory
6. Solve problems with the help of tools of mathematical analysis.

UNIT-I

Mathematical logic: Connections well formed formulas, Tautology, Equivalence of formulas, Tautological implications, Duality law, Normal forms, Predicates, Variables, Quantifiers, Free and bound Variables.

UNIT-II

Relations: Properties of Binary relations – Equivalence relations - composition of relations, Closure of relations – Order relations – Partial order relations.

Functions: one-to-one, onto, one-to-one-onto functions – composition of functions, Inverse functions.

UNIT-III

Formal languages and Automata: Grammars: Phrase-structure grammar, context-sensitive grammar, context-free grammar, regular grammar. Finite state automata-Deterministic finite automata and Non deterministic finite automata-conversion of non deterministic finite automata to deterministic finite automata.

UNIT-IV

Lattices and Boolean algebra: Partial ordering, Poset, Lattices, Boolean algebra, Boolean functions, Theorems, Minimization of Boolean functions.

UNIT-V

Graph Theory: Directed and undirected graphs, Paths, Reachability, Connectedness, Matric representation, Euler paths, Hamiltonian paths, Trees, Binary trees simple theorems, and applications.

TEXT BOOK

1. Tremblay J.P., and R.P Manohar., 1975 . Discrete Mathematical Structures with applications to computer science, Tata Mc.Graw Hill, New Delhi. (For Unit I – V)

REFERENCES

1. Sundaresan V., Ganapathy Subramanian K.S., and Ganesan K., 2002. Discrete Mathematics, A.R. Publications, Nagapattinam.
2. Veerarajan T., 2007, Discrete mathematics with graph theory and combinatorics, Tata Mc-graw hill companies, New Delhi.
3. Sharma.J.K, 2005 , Discrete Mathematics, Second Edition , Macmillan India Ltd.

Course Objectives

- Students will be able to apply quantitative reasoning and mathematical analysis methodologies to understand and solve problems.
- To achieve the analytical and reasoning competencies and to improve their communication and presentation skills
- To impart knowledge on both Aptitude and Soft skills to the students
- To actively do mathematics—such as analyzing data, constructing hypotheses, solving problems, reflecting on their work, and making connections.
- To critically evaluate and demonstrate various principles involved in solving mathematical problems and to adopt new and faster methods of calculations.
- To reinforce competencies in soft skills which are crucial in a social setting

Course Outcomes(COs)

On successful completion of the course the students will be able to:

1. Understand the basic concepts of QUANTITATIVE ABILITY
2. Understand the basic concepts of LOGICAL REASONING Skills
3. Acquire satisfactory competency in use of VERBAL REASONING
4. Actively do mathematics—such as analyzing data, constructing hypotheses, solving problems, reflecting on their work, and making connections.
5. Solve campus placements aptitude papers covering Quantitative Ability, Logical Reasoning and Verbal Ability
6. Compete in various competitive exams like CAT, CMAT, GATE, GRE, GATE, UPSC, GPSC etc.

UNIT - I

Time, Speed and Distance, Time and Work, Pipes and Cisterns, Geometry, Data Arrangement

UNIT – II

Analogy, Logic based Venn diagram, Probability, Permutation and Combination, Logarithms

UNIT – III

Data Sufficiency, Clocks, Calendar, Reading Comprehension, Sentence Correction, Sentence Completion, Spotting the Errors, Jumbled Sentences

UNIT – IV

Synonyms, Antonyms, Verbal Analogy, Statements and Assumptions, Group Discussion

UNIT - V

Resume Writing, Introduction to HR rounds, Time Management, Attitude and Behaviour

Course Objectives

- To understand the visual platform and apply the power of .Net technologies in programming
- To Create windows forms using arrays and flow control statements.
- To Learn to use Basic windows controls using Visual Basic.Net
- To Learn to use the classes and namespaces in the .NET Framework class library.
- To Develop Web Applications using Microsoft ASP.NET programming.
- To Understand the concept of Multiple Document Interface and the architecture of .NET

Course Outcomes (COs)

Upon completion of this course the students will be able to:

1. Develop Windows based applications using Visual Basic.Net
2. Learn various tools in .net applications
3. Differentiate between the types of applications supported by .Net
4. Implement ADO.Net concept in VB.Net and ASP.Net applications
5. Create server side web applications using ASP.NET
6. Understand the concept of data sources and data bound controls in VB.NET and ASP.NET

UNIT-I

Getting Started With VB.NET: The Integrated Development Environment-IDE Components-Visual Basic: The Language -Variables-Constants-Arrays – Variables as Objects-Flow Control Statements- Writing and Using Procedures: Module Coding – Arguments-Working with Forms: Appearance of Forms- Loading and Showing Forms.

UNIT-II

Basic Windows Controls: Textbox Control- ListBox, CheckedListBox-Scrollbar and TrackBar Controls. More Windows Control: The common Dialog Controls-The Rich TextBox Control.The TreeView and ListView Controls -Designing Menus. Multiple Document Interface

UNIT- III

Handling Strings, characters and Dates: Handling Strings and Characters – Handling Dates. Working with Folders and Files: Accessing Folders and Files – Accessing Files. Drawing and Painting with Visual Basic: Displaying Images – Drawing with GDI – Co-ordinate Transformation – Bitmaps.

UNIT-IV

Web forms and ASP.NET: Web forms, web controls-ASP.NET Configuration, Scope and state- ASP.NET and state-The Application Object-ASP sessions-The Session object-ASP.NET objects and components-Active server components and controls.

UNIT-V

Web server and ASP.NET-ASP.NET and SQL server-Using SQL server, using database in ASP.NET applications, ActiveX data objects-The ADO.NET objects model.

4. <http://www.w3schools.com/>

Course Objectives

- To master the fundamentals of data communications networks by gaining a working knowledge of data transmission concepts.
- To study the basic taxonomy and terminology of the computer networking and enumerate the layers of OSI model and TCP/IP model.
- To read the fundamentals and basics concepts of Physical layer with real time examples
- To study data link layer concepts, design issues, and protocols.
- To learn the functions of network layer and the various routing protocols.
- To familiarize the functions and protocols of the Transport layer and Application layer.

Course Outcomes (COs)

Upon completion of this course the students will be able to:

1. Understand the functions of each layer in OSI and TCP/IP model.
2. Explain the multiplexing, switching concept and types of transmission media with real time examples.
3. Understand the error detection and correction methods and can implement the data link layer protocols
4. Understand channel error detection and correction, MAC protocols, Ethernet and WLAN.
5. Learn different medium access method to avoid collision and to learn about routing table.
6. Learn basic functionalities of transport layer and application layer.

UNIT-I

Data Communication: An Overview – Protocols and Standards. Network Models: The OSI Model and Layers – TCP/IP Protocol Suite – Addressing. Physical Layer: Analog and Digital Signals – Transmission Impairments.

UNIT-II

Physical Layer: Multiplexing – Frequency Division Multiplexing-Wavelength Division Multiplexing– Synchronous Time-Division Multiplexing– Statistical Time Division Multiplexing. Transmission Media - Guided Media- Twisted pair and coaxial cable - Fiber optic cable-Unguided Transmission Media Switching – Circuit Switched Networks-Datagram Networks – Virtual Circuit networks.

UNIT-III

Data Link Layer: Error Correction and Detection – Framing – Flow and Error Control – Protocols – Noisy and Noiseless Channel – Multiple Access.

UNIT-IV

Network Layer: IPv4 addresses – Internetworking – IPv4 – Delivery and Forwarding – Unicast Routing Protocols.

Transport Layer: Process to Process Delivery – User Datagram Protocol – Transmission Control Protocol.

UNIT-V

Transport Layer: Data Traffic – Congestion Control.

Application Layer: Electronic Mail – File Traffic – WWW and HTTP – Symmetric Key and Asymmetric Key Cryptography – Security Services – Message Integrity – Message Authentication – Digital Signature.

Course Objectives

- To describe characteristics and functioning of common graphics input/output devices
- To learn the basic principles of 3- dimensional computer graphics
- To Provide an understanding of how to scan convert the basic geometrical primitives, how to transform the shapes to fit them as per the picture definition
- To Provide an understanding of mapping from a world coordinates to device coordinates and projections.
- To extract scene with different clipping methods and its transformation to graphics display device.
- To explore projections and visible surface detection techniques for display of 3D scene on 2D screen

Course Outcomes(COs)

1. Understand the basics of computer graphics, different graphics systems and applications of computer graphics.
2. Discuss various algorithms for scan conversion and filling of basic objects and their comparative analysis.
3. Use of geometric transformations on graphics objects and their application in composite form.
4. Extract scene with different clipping methods and its transformation to graphics display device.
5. Explore projections and visible surface detection techniques for display of 3D scene on 2D screen.
6. Render projected objects to naturalize the scene in 2D view and use of illumination models for this..

UNIT-I

A Survey of Computer Graphics- Video Display Devices- Refresh cathode-Ray Tubes- Raster Scan Displays-Random Scan Displays-Color CRT Monitors-Direct –View Storage Tubes-Flat Panel Displays-Raster Scan Systems-Three Dimensional Viewing Devices-Random Scan Systems.

UNIT-II

Input Devices: Keyboards-Mouse –Joysticks- digitizers-Image Scanners- Touch Panels-Light Pens-Voice Systems-Wireless I/O devices **-Hard Copy Devices:** Printers and Plotters

UNIT-III

Point and Lines- Line Drawing Algorithms: DDA Algorithm- Bresenham's Line Algorithm. **Circle Generating Algorithms:** Mid Point Circle Algorithm. Two Dimensional Geometric Transformations: **Basic Transformations:** Translation-Rotation-

Scaling-Composite Transformations: Translations-Rotations- Scaling. General Pivot Point Rotation- General Fixed Point Scaling.

UNIT-IV

Two Dimensional Viewing: The Viewing Pipeline- Window to view port Transformation-**Clipping Operations**-Point Clipping -Line Clipping: Cohen Sutherland Line Clipping. Polygon Clipping: Sutherland –Hodgeman Polygon Clipping-Text Clipping.

UNIT-V

Three – Dimensional Display Methods-Parallel Projection- three Dimensional Geometric Transformations: Translation-Rotations- Scaling. **Projections:** Parallel Projections-Perspective Projections. **Visible Surface Detection Methods:** Classification of Visible Surface Detection Algorithms-Back Face Detection-Depth Buffer Method-Depth Buffer Method- Area Sub division Method.

Course Objectives

- To learn and understand technical aspect of Multimedia Systems.
- To understand the standards available for different audio, video and text applications.
- To Design and develop various Multimedia Systems applicable in real time.
- To learn various multimedia authoring systems.
- To understand various networking aspects used for multimedia applications.
- To develop multimedia application and analyze the performance of the same.

Course Outcomes (COs)

1. Developed understanding of technical aspect of Multimedia Systems.
2. Understand various file formats for audio, video and text media.
3. Develop various Multimedia Systems applicable in real time.
4. Design interactive multimedia software.
5. Apply various networking protocols for multimedia applications.
6. To evaluate multimedia application for its optimum performance.

UNIT-I

Definition of multimedia – Introduction to making multimedia: the stages of a project – Basic software tools-Using Text in multimedia - font editing and design tools – hypermedia and hypertext.

UNIT-II

Introduction to Photoshop 6: Interfaces and Navigation-Tools-Text-Working in Photoshop-Creating new documents-Saving Files.

UNIT-III

Displaying the Images- Using Rulers, Guides and Grids – Making Selections- Layers and Types-Choosing Colors-Creating Brushes- painting & editing Tools- Making and Applying Gradients.

UNIT-IV

Introduction to Flash: Variables & data types- Data types in Action Script-Creating and placing variables – Buttons with text fields.

UNIT-V

Basic Actions: Play, stop, Back & forth- Between frames and scenes – Timelines – External scripts-Loops.

Course Objectives

- To introduce students to the basic concepts and techniques of Data Mining.
- To understand data mining fundamentals and characterize the kinds of patterns that can be discovered by association rule mining
- To compare and evaluate different data mining techniques like classification, prediction, etc.
- To cluster the high dimensional data for better organization of the data
- To describe complex data types with respect to spatial and web mining
- To design data warehouse with dimensional modelling and apply OLAP operations.

Course Outcomes (COs)

Upon completion of this course students will be able to:

1. Understand the basic concepts and techniques of Data Mining
2. Extract knowledge using data mining techniques and Implement Preprocess the data for mining applications and apply the association rules for mining the data
3. Design and deploy appropriate classification techniques
4. Understand the concept of clustering and its real time applications
5. Explore recent trends in data mining such as web mining, spatial-temporal mining
6. Analyze the basic concepts of data warehouse and OLAP operations

UNIT I

Data Mining: Introduction: Basic Data Mining Tasks – Data Mining versus Knowledge Discovery in Database Mining Issues and Mechanisms. Data Mining Techniques: Statistical Perspective on Data Mining – Similarity Measures – Decision Trees – Neural Networks – Genetic Algorithms.

UNIT II

Classifications: Bayesian Classification – Distance Based Algorithms – K-Nearest Neighbor. Clustering: K-Means Clustering –Clustering with Genetic Algorithms – Clustering with Neural Networks. Association Rules – Basic Algorithms – Parallel and Distributed Algorithms – Comparing Approaches – Generalized and Multilevel Association Rules. Web Mining: Web Content Mining: Personalization.

UNIT III

Data Warehousing: Introduction – Architecture – System Process-Process Architecture.Design: Database Schema – Partitioning Strategy – Aggregations – Data Marting – Meta Data.

UNIT IV

Hardware and Operational Design : Hardware Architecture – Physical layout – Security – Backup and Recovery – Service Level Agreement – Operating and Data Warehousing.

UNIT V

Capacity planning – Tuning and Data Warehouse – Testing and Data Warehouse – Data Warehouse Futures. Application: Data warehousing and data mining in government: Introduction-national data warehouses-other areas for data warehousing and data mining.

Course Objectives

- To provide an overview of an exciting growing field of Big Data analytics.
- To discuss the challenges traditional data mining algorithms face when analyzing Big Data.
- To introduce the tools required to manage and analyze big data like Hadoop, NoSql MapReduce.
- To teach the fundamental techniques and principles in achieving big data analytics with scalability and streaming capability.
- To introduce to the students several types of big data like social media, web graphs and data streams.
- To enable students to have skills that will help them to solve complex real-world problems in for decision support

Course Outcomes(COs)

1. Explain the motivation for big data systems and identify the main sources of Big Data in the real world.
2. Demonstrate an ability to use frameworks like Hadoop, NOSQL to efficiently store retrieve and process Big Data for Analytics.
3. Implement several Data Intensive tasks using the Map Reduce Paradigm
4. Apply several newer algorithms for Clustering Classifying and finding associations in Big Data
5. Design algorithms to analyze Big dat a like streams, Web Graphs and Social Media data.
6. Design and implement successful Recommendation engines for enterprises.

UNIT-I

Fundamentals of Big Data - The Evolution of Data Management Understanding the Waves of Managing Data- Defining Big Data - Big Data Management Architecture- The Big Data Journey -Big Data Types-Defining Structured Data-Defining Unstructured Data-Putting Big Data Together.

UNIT-II

Big Data Stack- Basics of Virtualization - The importance of virtualization to big data - Server virtualization - Application virtualization - Network virtualization -Processor and memory virtualization - Data and storage virtualization-Abstraction and Virtualization-Implementing Virtualization to Work with Big Data.

UNIT-III

Hadoop - Hadoop Distributed File System - Hadoop MapReduce- The Hadoop foundation and Ecosystem.

UNIT-IV

Big Data Analytics-Text Analytics and Big Data-Customized Approaches for Analysis of Big Data

UNIT-V

Integrating Data Sources-Real-Time Data Streams and Complex Event Processing-Operationalizing Big Data.

Course Objectives

- To Provide a good understanding of the concepts, standards in Cloud computing
- To make the student understand about the cloud service providers and their usage.
- To learn how to secure the data in cloud depending.
- To understand the various service level agreements.
- To understand the cloud using various case studies.
- to portray the recent trends in the field of cloud computing and providing exposures to some open source and commercial clouds.

Course Outcomes (COs)

Upon completion of this course the students will be able to:

1. Portray the recent trends in the field of cloud computing and providing exposures to some open source and commercial clouds.
2. Know the architecture of the cloud and the usage of clouds.
3. Secure their data from the security issues.
4. Make the students to work based on the various service level agreements.
5. Work with the traditional cloud and Microsoft azure, etc.
6. Provide a good understanding of the concepts, standards and protocols in Cloud computing

UNIT-I

First Drive: Introduction-Essentials-Benefits-Why Cloud-Business and IT perspective-cloud and virtualization-cloud service requirements-cloud and dynamic infrastructure-cloud computing characteristics-cloud adoption-cloud rediments. **Cloud Deployment Models:** Introduction-Cloud characteristics-Measured service-Cloud deployment models-Security in a public cloud-Public versus Private clouds-cloud infrastructure self-service.

UNIT-II

Cloud as a service: Introduction-Gamut of cloud solutions-Principal technologies-Cloud strategy-Cloud design and implementation using SOA-Conceptual cloud model-Cloud service definitions. **Cloud solutions:** Introduction-Cloud ecosystem-cloud business process management-cloud service management- On-premise cloud orchestration and provisioning engines-computing on demand(CoD)-Cloud sourcing.

UNIT-III

Cloud offerings: Introduction-Information storage, retrieval, archive and protection-Cloud analysis-Testing under cloud-Information security-Virtual desktop infrastructure-Storage cloud. **Cloud management:** Governance-High availability and disaster recovery-Charging models, usage reporting, billing and metering.

UNIT-IV

Cloud virtualization technology: Introduction-Virtualization defined- Virtualization benefits-Server Virtualization- Virtualization for x86 architecture-Hypervisor management software- Virtual infrastructure requirements. **Cloud infrastructure:** Introduction-storage Virtualization-storage area networks- Network-Attached storage- Cloud server Virtualization-networking essential to cloud.

UNIT-V

Cloud and SOA: Introduction-SOA journey to infrastructure-SOA and cloud-SOA defined-SOA and IAAS- SOA-based cloud infrastructure steps. **Cloud mobility:** Introduction-the business problem-Mobile enterprise application platform-Mobile application platforms – Mobile application architecture overview.

2. www.ibm.com/cloud-computing/in/en/
3. www.oracle.com/CloudComputing
4. www.microsoft.com/en-us/cloud/default.aspx

Course Objectives

- To understand the visual platform and apply the power of .Net technologies in programming
- To Create windows forms using arrays and flow control statements.
- To Learn to use Basic windows controls using Visual Basic.Net
- To Learn to use the classes and namespaces in the .NET Framework class library.
- To Develop Web Applications using Microsoft ASP.NET programming.
- To Understand the concept of Multiple Document Interface and the architecture of .NET

Course Outcomes (COs)

Upon completion of this course the students will be able to:

7. Develop Windows based applications using Visual Basic.Net
8. Learn various tools in .net applications
9. Differentiate between the types of applications supported by .Net
10. Implement ADO.Net concept in VB.Net and ASP.Net applications
11. Create server side web applications using ASP.NET
12. Understand the concept of data sources and data bound controls in VB.NET and ASP.NET

VB.Net

1. Calculate Simple interest and compound Interest
2. Find mouse events and coordinates where the mouse is clicked.
3. Implement Notepad
4. Draw several shapes and fill with color.
5. Perform the following in list box
 - a) Add an item
 - b) Delete an item
 - c) List count
 - d) Clear the List
6. Calculate the days elapsed between the given two dates.
7. Create Menu and link multiple forms with different colors.
8. Animate the picture using animation control.
9. Implement Employee Payroll using ADO.
10. Create and manipulate a File.

ASP.Net

11. Write a program to create a Web-based calculator.
12. Write a program for database connectivity to retrieve student information.
13. Write a program to retrieve Cookies information.
14. Write a program to count web page hits.
15. Write a program to find Fibonacci series and Factorial of a given number.

Course Objectives

- To give the students a basic understanding of e-learning.
- To understand the standards available for different audio, video and text applications.
- To develop simple animations using Flash.
- To include audio files in animations and edit them in sound forge.
- To create and edit video files using Adobe Premiere
- To develop multimedia application and analyze the performance of the same.

Course Outcomes (COs)

1. Developed understanding of technical aspect of E-Learning.
2. Understand various file formats for audio, video and text media.
3. Develop simple animations using Flash.
4. Include audio files in animations and edit them in sound forge.
5. Create and edit video files using Adobe Premiere
6. Evaluate multimedia application for its optimum performance.

UNIT-I

E-Learning Evolution - Advantages and Disadvantages of E-Learning - Instructional design Models for E-Learning -Applying User-Centered Design to E-Learning - Methods and Measures to Retain Students Enrolled in Online Education -Choosing an Effective Communication Tool.

UNIT-II

Flash : Geometric shape tools – Drawing tools- fill and stroke controls- Selection Tools.

UNIT-III

Creating Animation and Effects: Animation strategies – TimeLine Animation – Character animation Techniques – fundamentals of Editing.

UNIT-IV

Sound: Import and Export formats – Importing sound to flash – adding sound to timeline – synchronizing audio to animations- stopping sounds – Working with sound forge.

UNIT-V

Video: Integrating and Importing Video – Editing video with Adobe Premiere – Organizing & Editing clips – Adding Transition between clips – Adding special effects to video.

Course Objectives

- To Apply their knowledge of mathematics, sciences, and computer science to the modeling, analysis, and measurement of software artifacts.
- To Work effectively as leader/member of a development team to deliver quality software artifacts.
- To Analyze, specify and document software requirements for a software system.
- To Implement a given software design using sound development practices.
- To Verify, validate, assess and assure the quality of software artifacts.
- To Design, select and apply the most appropriate software engineering process for a given project, plan for a software project, identify its scope and risks, and estimate its cost and time.

Course Outcomes(COs)

1. Apply their knowledge of mathematics, sciences, and computer science to the modeling, analysis, and measurement of software artifacts.
2. Analyze, specify and document software requirements for a software system.
3. Implement a given software design using sound development practices.
4. Verify, validate, assess and assure the quality of software artifacts.
5. Design, select and apply the most appropriate software engineering process for a given project, plan for a software project, identify its scope and risks, and estimate its cost and time.
6. Express and understand the importance of negotiation, effective work habits, leadership, and good communication with stakeholders, in written and oral forms, in a typical software development environment.

UNIT-I

Introduction to Software Engineering: The Evolving Role of Software-Software-Software Myths- A Generic View of process: Software Engineering –A Layered Technology-Process Models: Prescriptive Models- Waterfall Model- Incremental process Models. Evolutionary Process Models: Prototyping, The Spiral Model. Specialized process Models

UNIT-II

Building the Analysis Model: Requirements Analysis-Analysis Modeling Approaches-Data Modeling Concepts: Data Objects-Data attributes-Relationships Cardinality and Modality-Flow Oriented Modeling: Creating Data Flow Model-Creating a Control Flow Model-The Control Specification-The Process Specification- Creating a Behavioral Model.

UNIT-III

Design Engineering: Design with the Context of Software Engineering-Design Process and Design Quality-Design Concepts-Creating An Architectural Design: Software

Architecture-Data Design-Architectural Design- Assessing Alternative Architectural Designs-Mapping Data Flow into Software Architecture.

UNIT-IV

Performing User Interface Design: The Golden Rules: Place the User in Control-Reduce the User's Memory Load-Make the Interface Consistent- User Interface Analysis and Design: Interface Analysis and Design Models- The Process- Interface Analysis: User Analysis - Task analysis and Modeling. Interface Design Concepts-Appling Interface Design Steps-User Interface Design Patterns-Design Issues –Design Evolution.

UNIT-V

Testing Tactics: Software Testing Fundamentals- Black -Box and White-Box Testing- White Box Testing-Basis Path Testing- Control Structure Testing: Condition Testing- Data Flow Testing-Loop Testing- Black Box Testing- Quality Concepts: Quality- Quality Control –Quality Assurance –Cost Of Quality.

Course Objectives

- To understand the fundamentals of HTML and use different formatting options
- To creation of tables and frames
- To relate with DHTML and CSS
- To develop open source applications that deal with database and website development.
- To establish a working environment for PHP web page development
- To get Familiar with GUI, coded, modified controls

Course Outcomes(COs)

1. Understand the fundamentals of HTML and use different formatting options
2. Creation of tables and frames
3. Relate with DHTML and CSS
4. Develop open source applications that deal with database and website development.
5. Establish a working environment for PHP web page development
6. Familiarity with GUI, coded, modified controls

UNIT-I

HTML: Introduction to HTML- History Of HTML-Structure of HTML-Formatting Text :Font type, Font Size, Big ,Small, bold ,italic, color, superscript , Subscript, striking out, Underlining the text , Predefined fonts , Pre formatted Text, Blinking Text and Block Quotes. Lists: Ordered, Unordered and Definition List. Creating Link - Images. Tables: Creating Table –Dividing Table into Columns- Dividing Table into Rows- Creating Headers- Adding Border –Putting a Background Image- Heading across two or more columns- Changing color of the cell-aligning the content –Display of Tables. Frames

UNIT-II
